OPERATIONS COMMITTEE
APRIL 17, 2008**SUBJECT: JUNE 2008 SERVICE CHANGES****ACTION: RECEIVE AND FILE REPORT****RECOMMENDATION**

Receive and file report on additional information regarding the June 2008 service changes.

ISSUE

The Board of Directors approved a motion at its March 27, 2008 meeting requesting information for the areas surrounding proposed service reductions and line eliminations in June 2008 as follows:

- Violent crime rates, gang reduction zones, gang injunction areas, and CLEAR sites;
- Percentage of population that is transit dependent;
- Identification of alternative bus/rail services;
- Identification of additional walk/bike access time to alternative services;
- Identification of additional walk/transfer time to alternative services; and
- Alternatives to canceling owl service or line segments that create areas uncovered by transit.

Staff was also requested to generate an alternative proposal- in addition to the current proposed June 2008 service changes- that reduces the same number of service hours within each sector without reducing or eliminating vital bus service in high crime/gang and transit dependent areas, including local hospitals.

Further, staff was directed to establish a formal consultation process with municipal and local operators for all future proposed service changes. This request will be addressed in a separate report at the April 17, 2008 Operations Committee.

DISCUSSION

To assist in evaluating June 2008 service changes, the Board requested that staff provide additional analysis on the impacts of the changes as well as alternatives to any changes in high crime areas, transit dependent areas, and affecting access to hospitals. This report provides detailed responses to each of the Board's concerns:

High Crime and Gang Areas

Staff was requested to identify high crime areas, gang reduction zones, gang injunction areas and CLEAR sites through which routes proposed for service reduction operate. High crime areas were to be identified on the basis of crime rates (usually expressed as a number of crimes per 1,000 or 10,000 residents) and differences by time of day were to be identified.

Crime data was obtained from archived statistical reports for the County Sheriff and the Los Angeles Police Department (LAPD). The most recent available data was for Calendar Year 2006 expressed as crime rates by reporting area. For the County Sheriff there are 23 reporting areas generally corresponding to the jurisdictions patrolled by each station (there are also reporting entities for Los Angeles Community College, Metro and Metrolink). These areas cover the unincorporated areas of the county, and about one-half of the incorporated cities for which the Sheriff provides contracted police services. For the City of Los Angeles there are 19 reporting areas corresponding to the precincts patrolled by each station.

The crime data used for this report is for Part 1 crimes (Homicide, Forcible Rape, Robbery, Aggravated Assault, Auto Theft, Burglary, Larceny (theft other than autos), and Arson). We were unable to obtain this data stratified by time of day. Crime rates (annual incidents per resident) for the areas patrolled by the County Sheriff (300 per 10,000 residents) and the LAPD (318 per 10,000 residents) were similar. Staff identified the reporting areas with higher than average crime rates and plotted those on the maps used in this report.

The locations and areas impacted by gang injunctions were obtained from LAPD's Planning and Research Division. There are presently 35 of these areas. CLEAR sites were obtained from the Engineering Bureau of the City of Los Angeles with the assistance of the City Attorney's Office. These Community Law Enforcement and Recovery areas are part of a federally funded program in eight areas. All of these locations are displayed on the maps used in this report, as well. An overview of all higher than average crime areas, gang injunction areas, and CLEAR sites in relation to the services proposed for reduction in June 2008 is provided in Attachment 1.

Transit Dependent Areas

Using data from the 2000 Census, tracts with higher than average shares of zero auto households were identified and mapped. This is a surrogate measure because there is no single Census statistic for transit dependence. Attachment 2 provides an overview of these areas in relation to the June 2008 service reductions.

Hospitals

All hospitals within one-quarter mile of routes proposed for reduction in June 2008 were identified and mapped. Attachment 3 shows an overview of the identified hospitals in relation to the affected routes. Attachment 4 provides a listing of the specific hospitals impacted by each route proposal.

Alternative Services

In each instance, staff was asked to identify alternative services to those proposed for reduction. For each alternative, information was requested on walk distance, waiting time and span of service. Attachment 5 shows in tabular form each route reduction proposal, the available alternative services, and the walk distance and wait time associated with each alternative. Of note is the fact that alternative services are available for all of the impacted routes with the exception of the proposed cancellation of Owl services. While no alternative service exists for the loss of Owl service on Routes 37 and 38, if only one of Routes 10 and 14 were to be cancelled then the other would provide an alternate service for at least some of the impacted riders. No other operators were contacted about Owl service alternatives because, except for the Silver Streak operated by Foothill Transit, there are no other Owl services provided by other than Metro.

Availability of Alternative Service Reduction Proposals

In order to determine for which of the proposed service reductions an alternative proposal should be considered staff prepared individual maps of each affected route. These maps (Attachment 6) show available alternate services together with their frequencies and span of service. The maps also consolidate information on all of the areas of concern expressed by the Board of Directors in its motion (crime areas, transit dependence and hospitals).

The last four columns of the Attachment 5 table provide an indication, respectively, of whether or not a route is significantly routed through crime areas, areas of transit dependence, whether or not it serves one or more hospitals, and the presence or absence of alternative services. By inspection of Attachments 5 and 6 it is obvious that all of the recommended service reduction proposals impact one or more of the areas of concern expressed in the Board's motion.

Each of the sectors was consulted to identify whether there might be alternatives to the recommended proposals. No alternatives were identified from those previously considered by the sector councils that were free of impacts in all of the areas of concern. Attachment 7 shows the original proposed service changes as well as the revised proposed service changes based on governance council action.

NEXT STEPS

No further action is required unless directed by the Board. Efforts will be made prior to implementation of the adopted service changes to inform impacted riders of the impending changes and available alternatives.
