Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.

Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Violation Description:	Failure of any person who recycles more than 100 kilograms per month of recyclable material under a claim that the material qualifies for exclusion or exemption, to provide the following information every two years: 1) The name, site address, mailing address, and telephone number of the owner or operator of any facility that recycles the material. 2) The name and address of the generator of the recyclable material. 3) Documentation that the requirements of any exemptions or exclusions pursuant to HSC 25143.2 are met, including the following: A) Where a person who recycles the material is not the same person who generated the recyclable material, documentation that there is a known market for disposition of the recyclable material and any products manufactured from the recyclable material. B) Where the basis for the exclusion is that the recyclable material is used or reused to make a product or as a safe and effective substitute for a commercial product, a general description of the material and products, identification of the constituents or group of constituents, and their approximate concentrations, that would render the material or product hazardous under the regulations adopted pursuant to HSC 25140 and 25141, if it were a waste, and the means by which the material is beneficially used.
Violation Notes:	Returned to compliance on 12/03/2015. OBSERVATION: The generator failed to provide all required information for recyclable materials to claim the exclusion or exemption for that material. The owner/operator claims that dirty coolant is recycled for reuse on-site and more than 100 kg/month is recycled, but a recyclable materials report has not

been submitted to the California Environmenal Reporting System (CERS). CORRECTIVE ACTION: The generator shall immediately provide all required information for every recyclable material for which the generator wishes to claim the exclusion or exemption and provide that information every two years to CERS. If the generator cannnot provide the required information, the materials must immediately be handled as a hazardous waste.

Violation Description: Failure to obtain and maintain a written assessment reviewed and certified by an independent, qualified, professional engineer stating the new hazardous waste tank system has sufficient structural integrity, is acceptable for the transferring, storing and treating of hazardous waste, and that the tanks and containment system including the foundation, structural support, seams, connections, and pressure controls (if applicable) are suitably designed and that the tank system has sufficient structural strength, compatibility with the waste(s) to be transferred, stored or treated, and corrosion protection so that it will not collapse, rupture, or fail. This assessment shall be obtained prior to placing the tank system in service, and shall be kept on file at the facility. The tank assessment shall be good for five years. This assessment shall also include, at a minimum, the following information: (1) Design standard(s) according to which the tank(s) and ancillary equipment are or will be constructed; (2) Hazardous characteristics of the waste(s) to be handled; (3) For new tank systems or components in which the external shell of a metal tank or any external metal component of the tank system is or will be in contact with the soil or with water, a determination by a corrosion expert of: (A) Factors affecting the potential for corrosion, including but not limited to: 1. Biennial Reports:

Last Biennial Reporting Year: 2017

Annual Waste Handled:

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
Amount (Lbs): 41408

Waste code: D003
Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
Amount (Lbs): 1320400

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Environmental Interest/Information System:

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of

events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Site History:	The site was operated by Major Paint Facility between 1950s to 1996 in a heavy industrial zone in Torrance. Site subsurface impacts were founded in 1984 during soil investigations. Soil and groundwater impacts have been completely characterized. The Discharger has completed all components of approved Remedial Action Work Plan, including soil remediation by over excavation to a depth of 52 feet bgs. Groundwater remediation (pump&treat) was operated between 1985 to 1996. Health Risk Assessment was completed as part of the Closure Report dated December 8, 1997. No-Furhter-Action for soil except for one isolated area UST-1 was issued by RWQCB on December 30, 1997. Four events of monitored natural attenuation groundwater sampling were completed. Groundwater data indicates that anaerobic biodegradation is occurring within the plume area. Discharge submitted a Confirmation Groundwater Sampling Work Plan to RWQCB on October 30, 2009. RWQCB approved the work plan on December 9, 2009. Subsequently the Confirmation Groundwater Monitoring Reports were submitted on February 9, 2010, may 20, 2014, and July 20, 2015, respectively. The Human Health Risk Assessment was updated on July 20, 2015. The Regional Board issued No-Further-Action letter dated January 5, 2016.

Environmental Interest/Information System:

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
OSHA ESTABLISHMENT
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
STATE MASTER
ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Potential Media Affected:	Aquifer used for drinking water supply
Potential Contaminants of Concern:	Trichloroethylene (TCE), Chromium
Site History:	Between 1959 and 2004, the former Cosmodyne facility used the Site for the design and manufacturing of cryogenic gas separation equipment. The facility was demolished in 2005, and the Site was sold and redeveloped as a business park. In 2006, shallow soil excavation and removal was conducted to address particular sources of chromium detected in soil at the Site. In 2005 and 2006, an extended soil vapor extraction (SVE) pilot study was conducted. The approved SVE system was then modified and expanded, and operated from 2006 to 2009. Approximately 464 pounds of VOCs were removed by the SVE system during this period, and soil vapor rebound tests conducted in 2009 confirmed that TCE concentrations were below California Human Health Screening Levels (CHHSLS) for commercial use in the shallow zone, and that SVE operations had reached asymptotic levels. Soil confirmation samples were collected in March 2010, and the Regional Board approved the removal of the SVE system in a letter dated October 19, 2010. Groundwater is approximately 85 feet below ground surface (bgs) and has been impacted by discharge of volatile organic compounds (VOCs) and chromium at the Site. Four on-site groundwater monitoring wells (MW-1 through MW-4) were installed in 2005. Additional on-site groundwater monitoring well (MW-5) and off-site groundwater monitoring well (MW-6) were installed in November and December 2008. Another additional off-site groundwater monitoring well (MW-7) was installed in October 2010. Since March 2007 groundwater sampling has been conducted on a quarterly basis.

Eval Type: Industrial Storm Water Compliance Evaluation
Eval Notes: Staff visited and inspected Phenomenex Campus to evaluate a proposal of filing NEC for the nine building campus. Staff met at the site with Dr. Sean Moghadam, Assistant Facility and Engineering Manager, (310) 212-0555, Mr, Rick Lemard, Environmental Compliance, (310) 212-0555 Ext. 2213, Mr. kevin Cosgrove, Consultant of Alta Environmental. They proposed to file NEC for just this Phenomenex Building No. 8. During the inspection was able to confirm that there is no exposure at this building. The building is used as an office, but manufacturing activities are planning to do at this building in the future. High tech electronic components will be manufactured at this building. Staff believed that a NEC for this building No. 8 is appropriate because storm water runoff from this building does not commingled with the other Phenomenex buildings of the campus. Outside the building is just a parking lot. No equipment was observed outdoors. Photos from this inspection are attached.

Environmental Interest/Information System:
NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.
TSCA SUBMITTER
US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

AIRGAS DRY ICE (Continued) **1000175598**

HAZARDOUS AIR POLLUTANT MAJOR
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.
STATE MASTER
ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.
SSTS (Section Seven Tracking System) evolved from the FIFRA and TSCA Enforcement System (FATES). SSTS tracks the registration of all pesticide-producing establishments and tracks annually the types and amounts of pesticides, active ingredients, and related devices that are produced, sold, or distributed each year.

Biennial Reports:

Last Biennial Reporting Year: 2017

Annual Waste Handled:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
Amount (Lbs): 214155

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
Amount (Lbs): 129266

Waste code: F003
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS

Environmental Interest/Information System:
NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.
US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Potential Media Affected: Aquifer used for drinking water supply, Indoor Air, Other Groundwater (uses other than drinking water), Soil, Soil Vapor, Surface water, Under Investigation
Potential Contaminants of Concern: Benzene, Toluene, Xylene, Chromium, Lead, Crude Oil, Diesel, Gasoline, Heating Oil / Fuel Oil, Kerosene, Methane, Other Petroleum, Stoddard solvent / Mineral Spriits / Distillates, Waste Oil / Motor / Hydraulic / Lubricating
Site History: The site is undergoing: 1. Site-wide groundwater monitoring of the perched zones, the Gage-Gardena Aquifer, and the Lynwood-Silverado

MOBIL OIL TORRANCE REFINERY (Continued) **S100215820**

Aquifer; 2. Removal of free hydrocarbon product (FHP) from the perched zones and the Gage-Gardena Aquifer via active pumps and mobile recovery units and vacuum truck recovery; 3. Pump and treat of the dissolved phase groundwater plume in the Gage-Gardena Aquifer at the southeastern portion of the Refinery; 4. Soil vapor monitoring at the Del Amo Boulevard and Van Ness Way area; 5. Soil vapor extraction at the Del Amo Boulevard and Van Ness Way area; and 6. Pilot testing for dual-phase extraction to treat LNAPL that has migrated to the north of the Refinery. The Torrance Refinery (Refinery) has been implementing phases of our requirements in our CAOs and has drilled hundreds of exploratory borings to delineate the extent of contaminated soil, excavated and treated several thousand cubic yards of contaminated soil, installed 103 groundwater monitoring wells in the perched zone, 138 groundwater monitoring wells in the Gage-Gardena Aquifer, and 7 in the Lynwood Aquifer. Currently, 86 wells in the perched zone, 164 wells in the Gage-Gardena Aquifer, and 7 wells in the Lynwood Aquifer are gauged and sampled semiannually. There are 49 free hydrocarbon product (FHP) monitoring wells installed in the perched zone, and 35 wells in the Gage-Gardena Aquifer. Free hydrocarbon product is being recovered with active pumps at 42 recovery systems, and via vacuum truck recovery, at plumes present beneath the refinery, and offsite, to the southeast. As of the end of 2017, approximately 1.37 million gallons and 18 millions gallons of free hydrocarbon product have been removed from the perched zones and theGage-Gardena Aquifer, respectively. Highly contaminated groundwater and FHP resulting from refinery operations have been reported within the shallow perched groundwater zone and the underlying Gage-Gardena Aquifer. A groundwater contaminant (dissolved benzene) plume flows southeast both onsite and approximately 4500 feet from the southeast corner of the Refinery. A total of 6 groundwater extraction wells (5 onsite and one offsite) have been installed and operated since 1988 to contain and prevent migration of the plume, and to treat the extracted water onsite. The Refinery groundwater extraction and treatment system utilizes an Envirex fluidized bed bioreactor, and granular activated carbon. Treated extracted groundwater is reused by the refinery. As of the end of 2017, approximately 26,000 acre-feet of groundwater has been extracted from onsite and offsite portions of the plume in the Gage-Gardena Aquifer and treated. Future Subsurface Investigations and Cleanup: The Regional Board has directed additional investigations in the southeast and southwest portions of the Refinery to address data gaps that exist in the monitoring well network. Step out investigations will be conducted to fully delineate the extent of wastes in areas where LNAPL or other contaminants have recently been detected in boundary monitoring wells. Additional detailed subsurface investigations of the lateral and vertical extents of contaminated soil, soil gas, FHP, and groundwater and additional future cleanup of these contaminated media may be required by the Regional Board for the 750-acre refinery containing several known and previously investigated and some potential or partially investigated sources of contamination including 160 aboveground storage tanks (ASTs), pipelines, process areas, equipment, and 34 material and waste storage, treatment and disposal facilities known as solid waste management units (SWMUs) and 7 Areas of Concern (AOCs). Some of the significant remaining tasks potentially include additional delineation and cleanup of the contaminated soil in the deeper vadose zone and smear zone, delineation of the onsite lateral

MOBIL OIL TORRANCE REFINERY (Continued) **S100215820**

and vertical extent of soil gas in the vadose zone and its remediation, additional delineation of potential FHP and contaminated groundwater in the Lynwood Aquifer, use of more aggressive technologies for cleanup of FHP and dissolved-phase groundwater cleanup in addition to the ongoing operation of FHP recovery and groundwater pump and treat systems.
