the Federal Highway Administration**

Acknowledgements

This report summarizes the results of a joint effort of the Division of Traffic Operations (DTO) and the Office of Traffic Improvement (OTI) of Caltrans to estimate truck miles of travel on the State Highway System.

The traffic count data used to develop the travel estimates were furnished by DTO. The computer software to translate the count data into travel estimates were developed by OTI. Data preparation and analysis and execution of the computer programs was performed by Herbert Jew and Leilani Downey of OTI with assistance from Emory Stoker of DTO. The report was prepared by Ray Lynch, Herbert Jew, and Leilani Downey who accept the responsibility for any omissions or errors in the results and findings.

I. INTRODUCTION

This is the ninth annual report designed to provide a convenient reference to historical estimates of truck miles of travel (TMT) on the California State Highway System, dating back to 1975. The TMT estimates are stratified by axle groups (2,3,4,5+) and by geographical areas (the State, Caltrans Transportation Districts, and County). If desired, the truck miles of travel estimates can be disaggregated to specific routes or major segments of a route. Because total vehicle miles of travel (VMT) is a direct output of the estimating procedure, historical estimates of total VMT (that by all vehicles), and VMT by autos and pickups are also reported for the three geographical areas.

The vehicle miles of travel estimates are based on the average daily traffic volumes which are estimated and published annually by the Caltrans Division of Traffic Operations in "Traffic Volumes on California State Highways" and "Annual Average Daily Truck Traffic on the California State Highway System".

The vehicle classifications reported here are the same as those used by the Division of Traffic Operations and reported in the above mentioned references. The 2-axle trucks include only those two axle vans and pickups with dual rear wheels; and 3,4, and 5+ axle trucks include all single unit vehicles and truck/tractor-trailer combinations with the corresponding number of axles. Autos and pickups are defined as the difference between total vehicles and the sum of 2,3,4, and 5+ axle trucks, as defined above. Under these definitions, the TMT reported here could be termed "medium and heavy" duty truck miles of travel.

The report first presents a brief overview of the methodology used to develop the vehicle miles of travel estimates. The results are then presented in tabular and graphical format in four appendix sections; Statewide, District, District by County, and County.

II. METHODOLOGY

Average daily traffic estimates were obtained from the Division of Traffic Operations on computer tapes. There was one tape for each of the years 1975 to 1990. The tapes list the estimated truck traffic by axle group and the total vehicle traffic at approximately 3800 selected locations on the State Highway System. Each location is identified by route number, county, and post mile within the county; with the post mile basically representing the mileage along the route as it traverses the county in either a general south-to-north or west-to-east direction.

Truck miles of travel (TMT) and total vehicle miles of travel (VMT) on each highway segment, or link, between two consecutive post miles were computed by averaging the estimated traffic at the two post mile points, and then multiplying these averages by the distance between the post miles. Appropriate summations of TMT and VMT for each post mile segment produced totals by county, district, and state.

The TMT and VMT calculations were performed with a computer program developed for the project. The Truck Miles of Travel Program (TMT Program) operates on two files: (a) the truck and total vehicle traffic by post mile file described above, and (b) a "post mile distance adjustment" file. The latter file allows the program to adjust the distance between historically established post miles in accordance with breaks-in-route and highway realignment or relocation projects. The distance adjustment file was constructed and updated on a yearly basis using information in the annual editions of "Traffic Volumes on California State Highways", which are published by the Division of Traffic Operations.

Caltrans' official estimates of total vehicle miles of travel on the State Highway System are produced annually by the Division of Traffic Operations using the computerized information system, "Traffic Accident Surveillance and Analysis System", or TASAS. To assure that statewide VMT from the TMT Program and TASAS were in agreement, the "raw" TMT and VMT estimates produced by the TMT Program were adjusted by the factors:

$$\text{Adjustment Factor} = (\text{TASAS VMT}) / (\text{TMT Program VMT}).$$

The adjustment factors and method of calculation are shown in Table 1. As can be seen, the factors lie in the range of 0.955 to 0.977. The size and consistency of the factors lend credence to the TMT and VMT estimation methodology described above.

All the TMT and VMT results shown in the rest of the report have been adjusted by the factors shown in Table 1.

Table 1
TMT PROGRAM MILEAGE ADJUSTMENT FACTORS

| Year | Annual VMT (Billions) | | Adjustment Factors |
|------|-----------------------|----------------|-----------------------|
| | TASAS | TMT Program | |
| 1975 | 72.450 | 74.647 | 0.97057 |

TRUCK MILES OF TRAVEL
ON THE CALIFORNIA STATE HIGHWAY SYSTEM
(1975-1990)

Truck miles of travel presented in this report are based on the data in the Division of Traffic Operations' (DTO) annual publication, "Annual Average Daily Truck Traffic on the California State Highway System". This year, DTO intends to publish two sets of truck traffic estimates for I-5: one based on the conventional procedure using manual counts and the other one based on continuous counts made with Weigh-In-Motion (WIM) equipment at six sites along the route. The WIM sites are: San Onofre, Newhall, Wheeler Ridge, Santa Nella, Lodi, and Mountain Gate. DTO is publishing the WIM-based traffic for comparison purposes only, as it may change as additional WIM sites come on line.

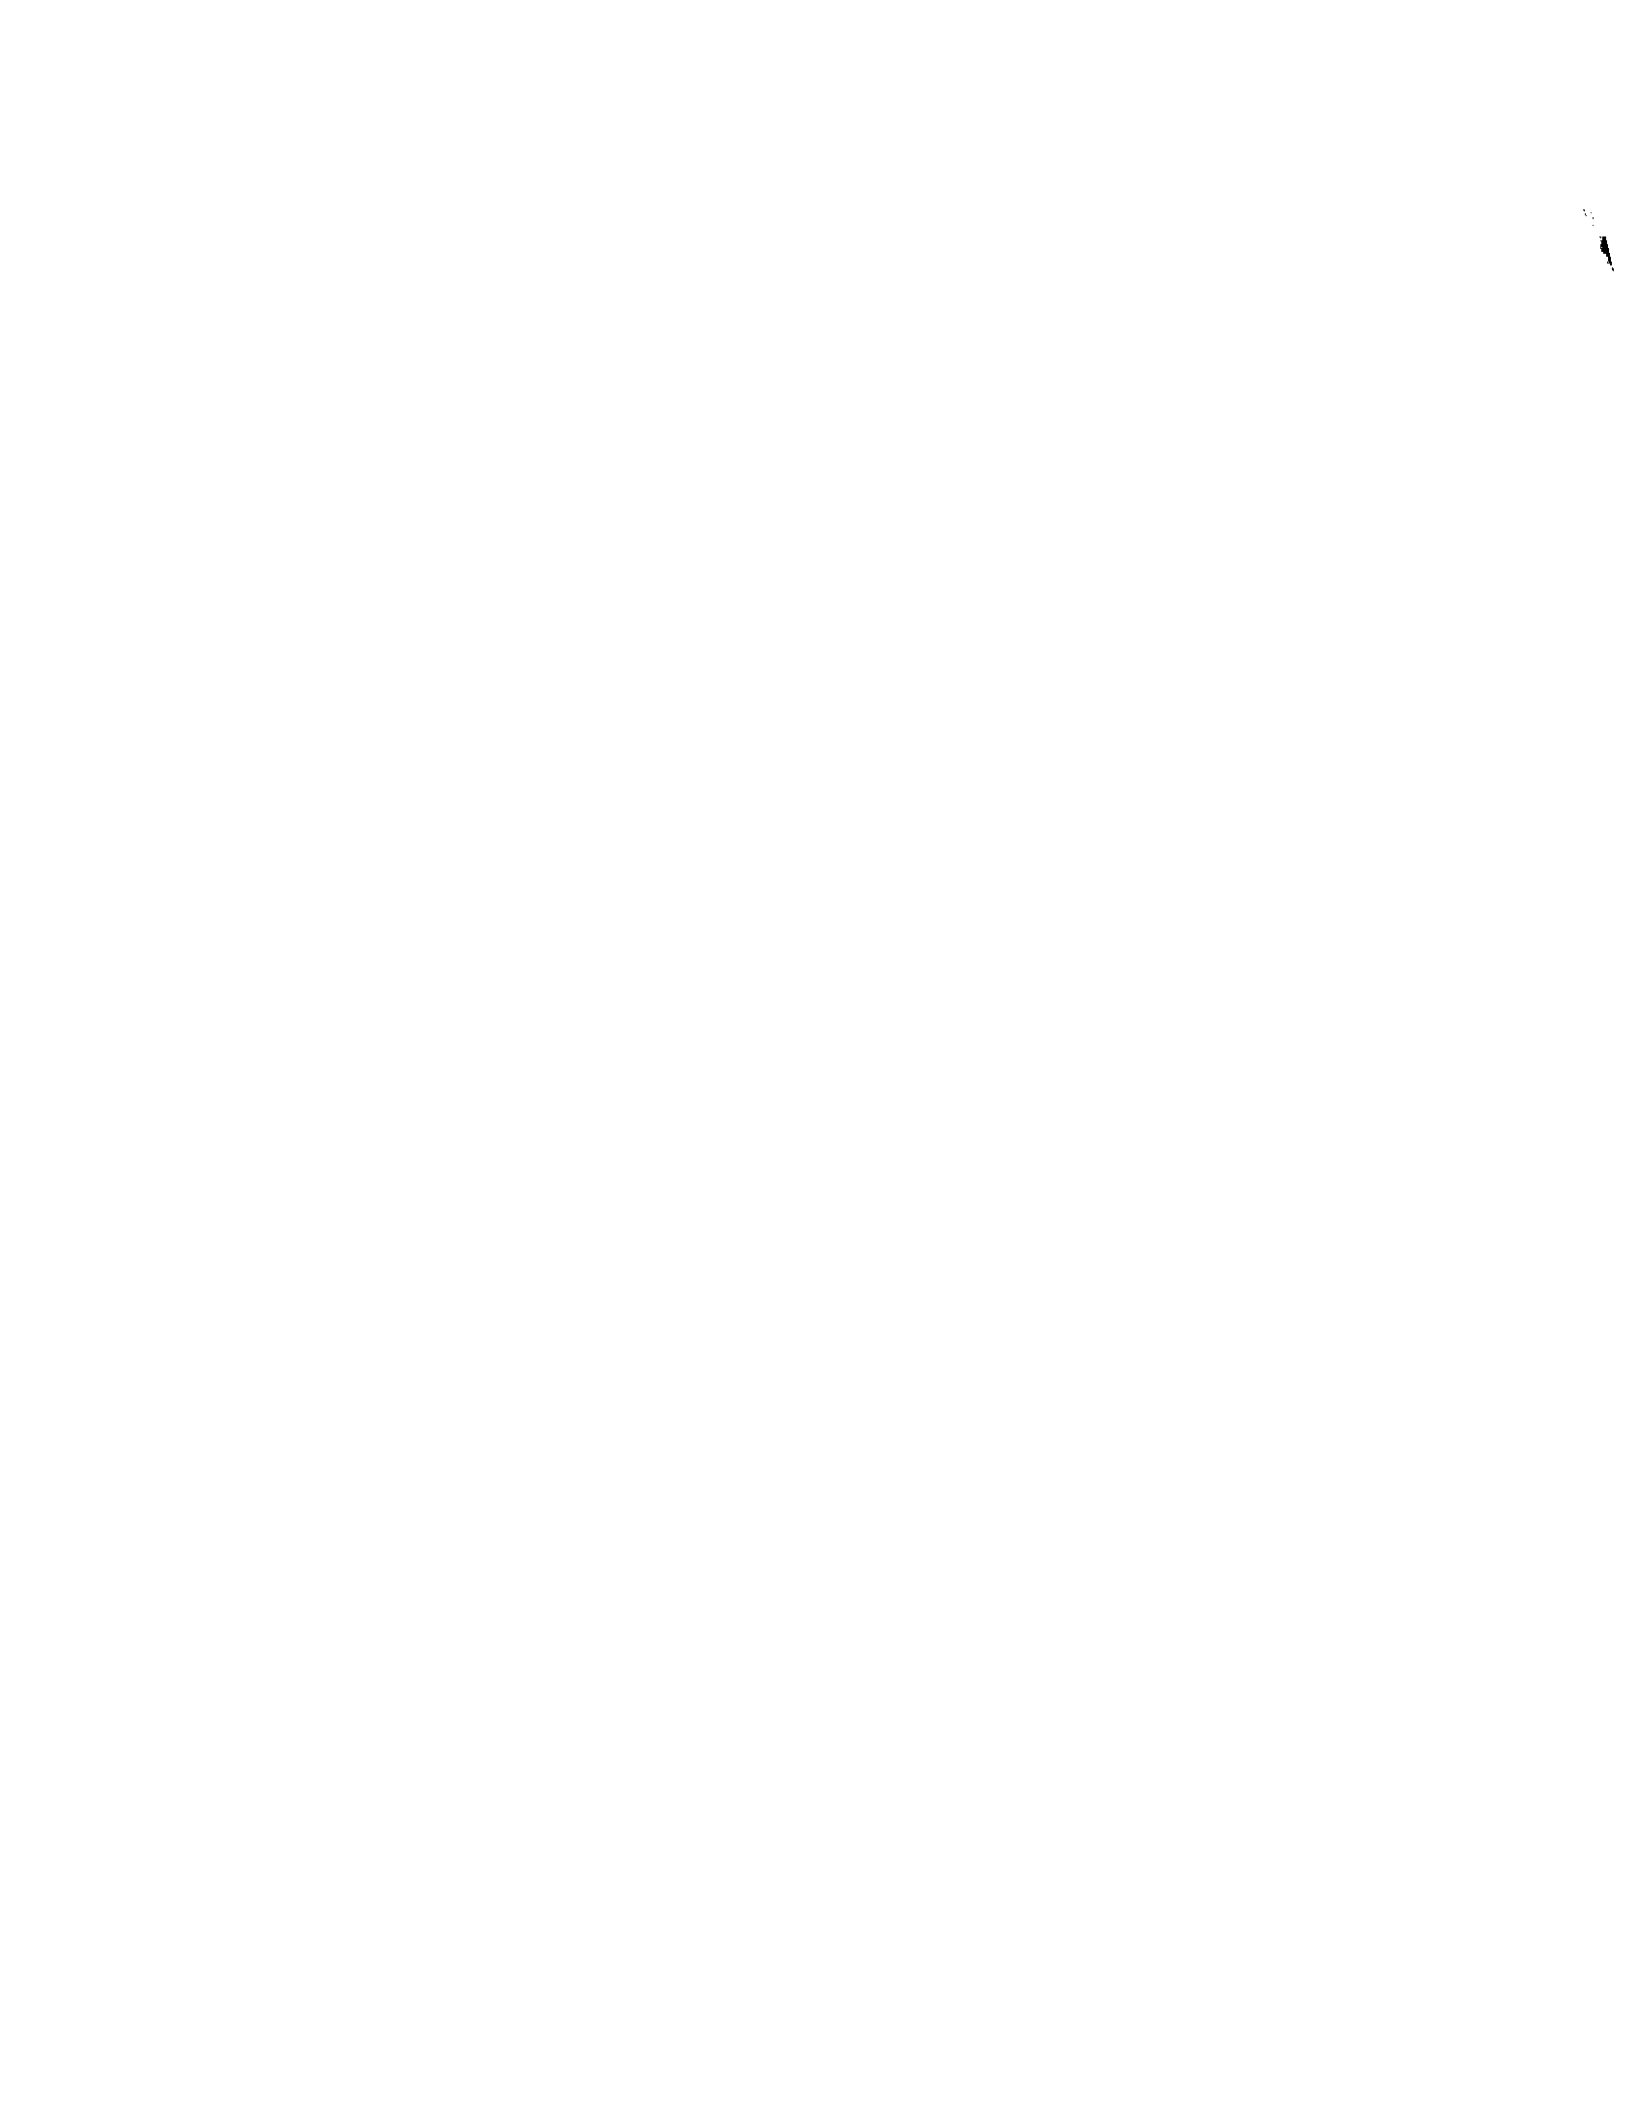

The new 1990 listing for I-5 reflects increases and decreases in the Districts' estimates of total truck traffic back and ahead of each WIM site for the distance believed to be influenced by the site. Total vehicle ADT remains unchanged. The new data show significantly lower total truck volumes for all points south of Yolo County and minor increases for points north of Yolo County. The distribution of truck traffic and travel between the axle group classes is also significantly changed. In general, the new data show a lower proportion of traffic by 2, 3, and 4 axle trucks and a higher proportion by 5+ axle trucks. Differences between the new and old data are being attributed to the old manual method of short term (6-hour) counts and the factors applied to expand these to 24-hour counts.

The scheduled completion date for the Truck Miles of Travel report and the planned schedule for the review and publication of the new listing for I-5 traffic precluded the incorporation of the new data in the body of the report. Therefore, the attached tables are provided to show the effects of the WIM-based data on truck miles of travel estimates at the county and statewide level. More detailed information may be obtained if it is required.

Average Daily Truck Miles of Travel (TMT) on I-5 By County
