Enclosed is your copy of the report "Truck Kilometers of Travel on the California State Highway System, 1984-1999". The Division prepares this annual report in cooperation with the Division of Traffic Operations.

Based on vehicle counts and classification data, the report gives estimates of truck kilometers of travel by axle group (2, 3, 4, and 5+ axles) at three geographical levels: Statewide, Caltrans District, and County. Total vehicle kilometers of travel by autos and pickups are also included for convenience and comparison purposes.

To better serve our users, the Truck Kilometers of Travel publication has been made available on the Internet. You may download this and other useful reports from our web site at <http://www.dot.ca.gov/hq/tsip/docs.htm>. For questions regarding the content of this report or additional copies, contact Ayalew Adamu at (916) 653-2840.

INTRODUCTION

This report provides estimates of truck travel on the California State Highway System. The kilometers of travel estimates are stratified by truck axle group (2, 3, 4, and 5+), vehicle type (trucks, autos and pickups, and all vehicles), and geographical area (State, Caltrans District, and County).

The vehicle kilometers of travel (VKT) are based on the average daily traffic volume estimates prepared by Caltrans' Traffic Operations Program. This information is published annually in the reports, "Traffic Volumes on California State Highways" and "Annual Average Daily Truck Traffic on the California State Highway System".

The vehicle classifications used in this report are the same as those used by the Traffic Operations Program. The 2-axle trucks include only those 2-axle vans and pickups with dual rear wheels. The 3, 4, and 5+ axle trucks include all single unit vehicles and truck/tractor-trailer combinations with the respective number of axles. Autos and pickups are defined as the difference between total vehicles and the sum of all trucks. Given these definitions, the TKT reported here could be termed "medium and heavy" duty truck kilometers of travel.

The report begins with a brief review of the methodology used to develop the vehicle kilometers of travel estimates. The results are then summarized in tabular and graphical format in the four appendix sections: Statewide, District, District by County, and County.

Since 1991 the truck kilometers of travel by axle groupings may vary more significantly from the previous years due to implementation of the Weigh-In-Motion (WIM) program. The WIM program utilizes hi-tech sensors embedded in the pavement to collect and classify truck data electronically and more accurately than hoses and manual classification counts.

The TKT reports have been prepared according to the new Caltrans District Boundaries since the 1980 -1995 publication. Refer to Figures B-1R and B-1 on pages B-2 and B-3 respectively for the new and old District Boundaries. Due to the modified District Boundaries there were significant changes in some of the District Kilometers of Travel between 1994 and 1995. Therefore the District Kilometers of Travel data should neither be compared to the previous years nor used to develop trends for truck travel forecasting.

METHODOLOGY

Average daily traffic estimates were obtained from the Traffic Operations Program (TOP) for each year through 1999. The TOP provided estimated truck traffic by axle group and the total vehicle traffic for approximately 3800 selected locations on the State Highway System. For the 3800 Truck Counter Locations refer to FIGURE 1 on page 3. Each Truck Counter Location is identified by route number, county, and post mile within the county in the TOP's truck file. The post mile location represents the distance along the route as it traverses the county in either a south-to-north or west-to-east direction.

Truck kilometers of travel (TKT) and total vehicle kilometers of travel (VKT) on each highway segment, or link, between two consecutive post mile locations were computed by averaging the estimated traffic at two post mile location points, and then multiplying these averages by the distances between the two points. These data were then summed to arrive at county, district, and state totals. Since these data were in miles, they were converted to kilometers using the following conversion formula:

$$\text{Kilometers} = 1.6093 \times \text{Miles.}$$

The TKT and VKT calculations were performed with a series of computer programs developed for this project. The programs operate on two main files: the truck and total vehicle traffic by post mile file (described above) and a post mile distance adjustment file. The latter file allows the program to adjust the distance between historically established post miles in accordance with breaks-in-route and highway realignment or relocation projects. The distance adjustment file was constructed using the information provided in the TOP's annual publication, "Traffic Volumes on California State Highways".

Caltrans' official estimates of total VKT on the State Highway System are produced annually by TOP using the Traffic Accident Surveillance and Analysis System (TASAS). To assure that statewide VKT from the TKT program was consistent to the TASAS numbers, the TKT program estimates were adjusted using the following formula:

$$\text{Adjustment Factor} = (\text{TASAS VKT}) / (\text{TKT program VKT}).$$

The adjustment factors (statewide, county minimum & maximum) are shown in Table 1 on page 5. For the years 1983 through 1989, the TKT data were adjusted using statewide TASAS data as a control total. For the years 1990 through 1999, the TKT data were adjusted using county TASAS data as control totals that were then summed to the statewide total. The statewide factors have ranged from 0.955 to 0.999 during the years 1984-1999.

Appendix C

DAILY VEHICLE KILOMETERS OF TRAVEL BY DISTRICT AND COUNTY

On the California State Highway System

For Years 1984 through 1999

Note:

In TABLE C, the total of 2-axle, 3-axle, 4-axle and 5+axle does not equal to all trucks. This is due to the Traffic Operations Program not having any adjustment factors for individual axle groupings. The TASAS adjustment factors are countywide and applied to all vehicles and all trucks only.

TABLE C
