## INTRODUCTION

This report provides estimates of truck travel on the California State Highway System. The kilometers of travel estimates are stratified by truck axle group (2, 3, 4, and 5+), vehicle type (trucks, autos and pickups, and all vehicles), and geographical area (State, Caltrans District, and County).

The vehicle kilometers of travel (VKT) are based on the average daily traffic volume estimates prepared by Caltrans' Traffic Operations Program. This information is published annually in the following two reports:

- Traffic Volumes on California State Highways
- Annual Average Daily Truck Traffic on the California State Highway System

The vehicle classifications used in this report are the same as those used by the Traffic Operations Program. The 2-axle trucks include only those 2-axle vans and pickups with dual rear wheels. The 3, 4, and 5+ axle trucks include all single unit vehicles and truck/tractor-trailer combinations with the respective number of axles. Autos and pickups are defined as the difference between total vehicles and the sum of all trucks. Given these definitions, the TKT reported here could be termed "medium and heavy" duty truck kilometers of travel.

The report begins with a brief review of the methodology used to develop the vehicle kilometers of travel estimates. The results are then summarized in tabular and graphical format in the four appendix sections: Statewide, District, District by County, and County.

Since 1991 the truck kilometers of travel by axle groupings may vary more significantly from the previous years due to implementation of the Weigh-In-Motion (WIM) program. The WIM program utilizes hi-tech sensors embedded in the pavement to collect and classify truck data electronically and more accurately than hoses and manual classification counts.

Most Caltrans District Boundaries were changed in 1995, refer to Figures B-1R and B-1 on pages B-2 and B-3 respectively for the new and old District Boundaries. Due to the new Boundaries, there were significant increases or decreases in the District Kilometers of Travel from 1994 to 1995. Therefore the District-wide Kilometers of Travel should neither be compared to the previous years nor used to develop trends for truck travel forecasting.

The 2000 Truck Kilometers of Travel reported in this publication varies uncharacteristically from 1999 for certain counties. After detailed investigation and research it was concluded that the unexpected change in the truck volumes had resulted from major improvements and enhancements in the traffic count programs. For example, there are far more Weigh-In-Motion and Loop Detector devices installed throughout the State Highways providing additional electronic data to validate the estimated truck volumes.

## METHODOLOGY

Average daily traffic estimates were obtained from the Division of Traffic Operations for each year through 2001. The Headquarters Traffic Operations provides truck traffic by axle group and the total vehicle traffic for approximately 3800 selected points on the State Highway System. For these 3800 truck-volume points refer to FIGURE 1 on page 3. Each truck-volume point is identified by route number, county, and post mile within the county in the Traffic Operations' truck file. The post mile location represents the distance along the route as it traverses the county in either a south-to-north or west-to-east direction.

Truck kilometers of travel (TKT) and total vehicle kilometers of travel (VKT) on each highway segment, or link, between two consecutive post mile locations were computed by averaging the estimated traffic at two post mile location points, and then multiplying these averages by the distances between the two points. These data were then summed to arrive at county, district, and state totals. Since these data were in miles, they were converted to kilometers using the following conversion formula:

$$\text{Kilometers} = 1.6093 \times \text{Miles}.$$

The TKT and VKT calculations were performed with a series of computer programs developed for this project. These programs operate on two main files: the truck and total vehicle traffic by post mile file (described above) and a post mile distance adjustment file. The latter file allows the program to adjust the distance between historically established post miles in accordance with breaks-in-route and highway realignment or relocation projects. The distance adjustment file was constructed using the information provided in the TOP's annual publication, "Traffic Volumes on California State Highways".

## **Appendix C**

### **DAILY VEHICLE KILOMETERS OF TRAVEL BY DISTRICT AND COUNTY**

**On the California State Highway System  
For Years 1986 through 2001**

*Note:*

*In TABLE C, the total of 2-axle, 3-axle, 4-axle and 5+axle does not equal to all trucks. This is due to the Traffic Operations Program not having any adjustment factors for individual axle groupings. The TASAS adjustment factors are countywide and applied to all vehicles and all trucks only.*

TABLE C (Continued)

DAILY TRUCK AND TOTAL VEHICLE KILOMETERS OF TRAVEL BY DISTRICT AND COUNTY
