### **PROJECT OVERVIEW**

The Metro Gold Line Eastside Extension Project is a six-mile, dual track light rail system with eight new stations and one station modification. The system originates at Union Station in downtown Los Angeles, where it connects with the Pasadena Gold Line, traveling generally east to Pomona and Atlantic Boulevards. The system will bridge State Route 101 Freeway and traverse the existing 1st Street Bridge over the Los Angeles River. The system will travel south on Alameda Street and then east on 1st Street with two stations at Alameda and Utah Streets. East of the Los Angeles River and 1st and Utah Streets, the alignment transitions to tunnel for approximately 1.7 miles, and continues beneath 1st Street to underground stations at 1st Street and Boyle Avenue and 1st Street and Soto Street. The alignment returns to the surface near the intersection of 1st Street and Lorena Streets, then jogs to the south, transitioning to follow 3rd Street with stations at Indiana Street, Ford Boulevard, Mednik Avenue and Pomona and Atlantic Boulevards.

The Notice of Award to the construction contractor for Contract C0803 – Tunnel, Stations, Trackwork and Systems occurred on June 1, 2004. Following the acceptance of the Contractor's bonds and insurance, the Notice To Proceed (NTP) letter was issued to the Contractor on June 30, 2004 to authorize the Contractor to commence the Contract C0803 work starting on July 1, 2004

All advanced utility relocations are completed within the construction zones at the East and West Portals and at the two underground stations. Only miscellaneous peripheral utility work remains and will be completed by early August 2004.

Thirty-seven of the 42 grade crossing applications have been submitted to the California Public Utilities Commission (CPUC) for review. Of the 37 grade crossings, 29 have been approved. One grade crossing application (3<sup>rd</sup>/Ditman) is no longer required based upon the CPUC's initial review.

#### **PROJECT SCOPE**

Contract C0802 – 101 Freeway Bridge Overcrossing: The construction of the bridge has been combined with Caltrans freeway improvements project. While Caltrans will advertise and administer the construction, MTA will remain responsible for the design and construction costs of the bridge overcrossing.

Contract C0803 - Tunnel and Station Excavation (Design/Bid/Build): Construction of the 1.7 mile tunnel segment includes tunnel excavation using two Earth Pressure Balance Machines (EPBM) type, excavation of cross passages, concreting of the tunnels and cross passages, and the east and west portals construction.

Station excavation of the two underground stations, Boyle Heights/Mariachi Plaza and Soto, include drilling, placing and concreting the soldier piles that line the perimeter of the station box to be excavated. Construction also includes street decking. Boyle Heights/Mariachi Plaza will be the staging area for assembling the TBMs and all excavated materials will be removed from this location.

# PROJECT MASTER SCHEDULE CRITICAL PATH

#### **CRITICAL PATH NARRATIVE**

The critical path for construction begins with contract award and contract Notice to Proceed (NTP) and ends with the Revenue Operations Date (ROD).

The Notice of Award to the construction contractor for Contract C0803 – Tunnel, Stations, Trackwork and Systems occurred on June 1, 2004. Following the acceptance of the Contractor's bonds and insurance, the Notice To Proceed (NTP) letter was issued to the Contractor on June 30, 2004 to authorize the Contractor to commence the Contract C0803 work starting on July 1, 2004.

After the construction Notice To Proceed, there will be a 13-month lead time for the procurement of two Earth Pressure Balance Machines (EPBMs). Concurrent with the EPBM procurement, the project will proceed with design and construction mobilizations, submittals preparation and review, traffic control, utility relocations, ground treatments, pile installation, temporary decking and station box excavations. The station box excavations are scheduled to complete prior to EPBMs delivery.

The critical path continues with EPBMs assemblies, excavation of both tunnels, excavation of crosspassages, and tunnel invert and walkway construction. The critical path then follows Soto underground station construction. The systems equipment installation and local facilities testing is the last stage of the critical path prior to entering the final test stage where systems integration testing and pre-revenue operations are conducted.
