  **Model Is Setup For Calculation of Average CONCentration Values.
          DEPOSITION LOGIC -
  -- DEPOSITION LOGIC --
-- DEPOSITION DATA Provided.

**MO GAS DEPOSITION DATA Provided.

**MO PARTICLE DEPOSITION DATA Provided.

**Model Uses NO DRY DEPLETION. DRYDPLT = F

**Model Uses NO WET DEPLETION. WETDPLT = F
  **Model Uses RURAL Dispersion Only.
  **Model Allows User-Specified Options:
              Allows User-specified Options.

1. Stack-tip Downwash.

2. Model Assumes Receptors on FLAT Terrain.

3. Use Calms Processing Routine.

4. Use Missing Data Processing Routine.

5. No Exponential Decay.
```

```
**Model Assumes No FLAGPOLE Receptor Heights.
**Model Calculates 2 Short Term Average(s) of: 1-HR 8-HR
**This Run Includes: 1 Source(s); 1 Source Group(s); and 2505 Receptor(s)
**The Model Assumes A Pollutant Type of: CO
**Model Set To Continue RUNning After the Setup Testing.
**Output Options Selected:

Model Outputs Tables of Highest Short Term Values by Receptor (RECTABLE Keyword)

Model Outputs External File(s) of High Values for Plotting (PLOTFILE Keyword)
 **NOTE: The Following Flags May Appear Following CONC Values: c for Calm Hours
                                                                                                                                                                                     m for Missing Hours
b for Both Calm and Missing Hours
**Misc. Inputs: Base Elev. for Pot. Temp. Profile (m MSL) = 10.00; Decay Coef. = 0.000; Rot. Emission Units = GRAMS/SEC; Emission Rate Unit Factor = Output Units = PPM
**Approximate Storage Requirements of Model = 3.9 MB of RAM.

 *** MODEL SETUP OPTIONS SUMMARY
  **Model Is Setup For Calculation of Average CONCentration Values.
 -- DEPOSITION LOGIC --
**NO GAS DEPOSITION Data Provided.
**NO PARTICLE DEPOSITION Data Provided.
**MO PARTICLE DEPOSITION DATA PROPIDED = F*MOdel Uses NO REV DEPLETION. DRYDPLT = F
 **Model Uses URBAN Dispersion Algorithm for the SBL for 1 Source(s), for Total of 1 Urban Area(s):
Urban Population = 9862049.0; Urban Roughness Length = 1.000 m
  **Model Allows User-Specified Options:
             1. Stack-tip Downwash.
2. Model Assumes Receptors on FLAT Terrain.
```

```
3. Use Calms Processing Routine.
                     4. Use Missing Data Processing Routine.
5. No Exponential Decay.
6. Urban Roughness Length of 1.0 Meter Used.
**Model Assumes No FLAGPOLE Receptor Heights.
**Model Calculates 1 Short Term Average(s) of: 1-HR and Calculates ANNUAL Averages
**This Run Includes: 1 Source(s); 1 Source Group(s); and 2505 Receptor(s)
**The Model Assumes A Pollutant Type of: NOX
**Model Set To Continue RUNning After the Setup Testing.
**Output Options Selected:
                         Options Selected.

Model Outputs Tables of ANNUAL Averages by Receptor

Model Outputs Tables of Highest Short Term Values by Receptor (RECTABLE Keyword)

Model Outputs External File(s) of High Values for Plotting (PLOTFILE Keyword)
**NOTE: The Following Flags May Appear Following CONC Values: c for Calm Hours
                                                                                                                                                                                    m for Missing Hours
                                                                                                                                                                            b for Both Calm and Missing Hours
**Misc. Inputs: Base Elev. for Pot. Temp. Profile (m MSL) = 10.00; Decay Coef. = 0.000; Rot. Angle Emission Units = GRAMS/SEC; Emission Rate Unit Factor = 531.90 Output Units = PPM
**Approximate Storage Requirements of Model = 3.8 MB of RAM.

Urban Population = 9862049.0; Urban Roughness Length = 1.000 m
   **Model Allows User-Specified Options:
1. Stack-tip Downwash.
```

```
2. Model Assumes Receptors on FLAT Terrain.
                       3. Use Calms Processing Routine.
4. Use Missing Data Processing Routine.
5. No Exponential Decay.
6. Urban Roughness Length of 1.0 Meter Used.
**Model Assumes No FLAGPOLE Receptor Heights.
**Model Calculates 1 Short Term Average(s) of: 24-HR
**This Run Includes: 2 Source(s); 1 Source Group(s); and 2505 Receptor(s)
**The Model Assumes A Pollutant Type of: PM10.
**Model Set To Continue RUNning After the Setup Testing.
**Output Options Selected:
                         Model Outputs Tables of Highest Short Term Values by Receptor (RECTABLE Keyword)
Model Outputs External File(s) of High Values for Plotting (PLOTFILE Keyword)
 **NOTE: The Following Flags May Appear Following CONC Values: c for Calm Hours
                                                                                                                                                                                 m for Missing Hours
b for Both Calm and Missing Hours
**Misc. Inputs: Base Elev. for Pot. Temp. Profile (m MSL) = 10.00; Decay Coef. = 0.000; Rot. Angle = 0.0 Emission Units = GRAMS/SEC; Emission Rate Unit Factor = 0.10000E+07 Output Units = MICROGRAMS/M**3
**Approximate Storage Requirements of Model = 3.8 MB of RAM.
06/29/10
                                                                                                                                                                                                                                                                                                                                                   15:44:24

   **Model Uses URBAN Dispersion Algorithm for the SBL for 2 Source(s), for Total of 1 Urban Area(s):
Urban Population = 9862049.0; Urban Roughness Length = 1.000 m
   **Model Allows User-Specified Options:
1. Stack-tip Downwash.
```

```
2. Model Assumes Receptors on FLAT Terrain.
                      3. Use Calms Processing Routine.
4. Use Missing Data Processing Routine.
5. No Exponential Decay.
6. Urban Roughness Length of 1.0 Meter Used.
**Model Assumes No FLAGPOLE Receptor Heights.
**Model Calculates 1 Short Term Average(s) of: 24-HR
           and Calculates ANNUAL Averages
**This Run Includes: 2 Source(s);
                                                                                                                          1 Source Group(s); and 2505 Receptor(s)
**The Model Assumes A Pollutant Type of: PM2.5
**Model Set To Continue RUNning After the Setup Testing.
**Output Options Selected:
                          Options Selected:
Model Outputs Tables of ANNUAL Averages by Receptor
Model Outputs Tables of Highest Short Term Values by Receptor (RECTABLE Keyword)
Model Outputs External File(s) of High Values for Plotting (PLOTFILE Keyword)
**NOTE: The Following Flags May Appear Following CONC Values: c for Calm Hours
                                                                                                                                                                                   m for Missing Hours
b for Both Calm and Missing Hours
**Misc. Inputs: Base Elev. for Pot. Temp. Profile (m MSL) = 10.00; Decay Coef. = 0.000; Rot Emission Units = GRAMS/SEC; Emission Rate Unit Factor = Output Units = MICROGRAMS/M**3
**Approximate Storage Requirements of Model = 3.8 MB of RAM.
06/29/10
                                                                                                                                                                                                                                                                                                                                                         14:44:27

  **Model Is Setup For Calculation of Average CONCentration Values.
          DEPOSITION LOGIC -
  **NO GAS DEPOSITION Data Provided.

**NO PARTICLE DEPOSITION Data Provided.

**MOO PARTICLE DEPOSITION DATA PROVIDED:
**Model Uses NO DRY DEPLETION. DRYDPLT = F

**Model Uses NO WET DEPLETION. WETDPLT = F
  **Model Uses URBAN Dispersion Algorithm for the SBL for $\tt 1 Source(s)\tt,
     for Total of 1 Urban Area(s):
Urban Population = 9862049.0; Urban Roughness Length = 1.000 m
```

```
**Model Allows User-Specified Options:
         1. Stack-tip Downwash.
         1. Stack-tip Downwash.
2. Model Assumes Receptors on FLAT Terrain.
3. Use Calms Processing Routine.
4. Use Missing Data Processing Routine.
5. No Exponential Decay.
6. Urban Roughness Length of 1.0 Meter Used.
**Model Assumes No FLAGPOLE Receptor Heights.
**Model Calculates 2 Short Term Average(s) of: 1-HR 8-HR
**This Run Includes: 1 Source(s); 1 Source Group(s); and 448 Receptor(s)
**The Model Assumes A Pollutant Type of: CO
**Model Set To Continue RUNning After the Setup Testing.
**Output Options Selected:

Model Outputs Tables of Highest Short Term Values by Receptor (RECTABLE Keyword)

Model Outputs External File(s) of High Values for Plotting (PLOTFILE Keyword)
**NOTE: The Following Flags May Appear Following CONC Values: c for Calm Hours
                                                                              m for Missing Hours
b for Both Calm and Missing Hours
**Misc. Inputs: Base Elev. for Pot. Temp. Profile (m MSL) = 10.00; Decay Coef. = 0.000; Rot Emission Units = GRAMS/SEC; Emission Rate Unit Factor = Output Units = PPM
**Approximate Storage Requirements of Model = 3.6 \text{ MB} of RAM.

  **Model Is Setup For Calculation of Average CONCentration Values.
  **NO GAS DEPOSITION Data Provided.

**NO PARTICLE DEPOSITION Data Provided.
  **Model Uses NO DRY DEPLETION. DRYDPLT = F
**Model Uses NO WET DEPLETION. WETDPLT = F
  **Model Uses RURAL Dispersion Only.
  **Model Allows User-Specified Options:
             Allows User-Specified Openant
1. Stack-tip Domnwash.
2. Model Assumes Receptors on FLAT Terrain.
3. Use Calms Processing Routine.
```

```
4. Use Missing Data Processing Routine.
           5. No Exponential Decay.
**Model Assumes No FLAGPOLE Receptor Heights.
**Model Calculates 1 Short Term Average(s) of: 1-HR and Calculates ANNUAL Averages
**This Run Includes: 1 Source(s); 1 Source Group(s); and 448 Receptor(s)
**The Model Assumes A Pollutant Type of: NOX
**Model Set To Continue RUNning After the Setup Testing.
**Output Options Selected:
            Model Outputs Tables of ANNUAL Averages by Receptor
Model Outputs Tables of Highest Short Term Values by Receptor (RECTABLE Keyword)
Model Outputs External File(s) of High Values for Plotting (PLOTFILE Keyword)
**NOTE: The Following Flags May Appear Following CONC Values: c for Calm Hours
                                                                                      m for Missing Hours
b for Both Calm and Missing Hours
**Misc. Inputs: Base Elev. for Pot. Temp. Profile (m MSL) = 10.00 ; Decay Coef. = 0.000 ; R
Emission Units = GRAMS/SEC ; Emission Rate Unit Factor
Output Units = PPM
**Approximate Storage Requirements of Model = 3.6 MB of RAM.

   **MODELOPTS: NonDFAULT CONC
   *** MODEL SETUP OPTIONS SUMMARY ***
   **Model Is Setup For Calculation of Average CONCentration Values.
  **MO GAS DEPOSITION Data Provided.

**MO PARTICLE DEPOSITION Data Provided.

**MO PARTICLE DEPOSITION DATA Provided.

**Model Uses NO DRY DEPLETION. DRYDPLT = F

**Model Uses NO WET DEPLETION. WETDPLT = F
```

```
**Model Uses URBAN Dispersion Algorithm for the SBL for 2 Source(s),
     for Total of 1 Urban Area(s):
Urban Population = 9862049.0; Urban Roughness Length = 1.000 m
**Model Allows User-Specified Options:
1. Stack-tip Downwash.
2. Model Assumes Receptors on FLAT Terrain.
3. Use Calms Processing Routine.
4. Use Missing Data Processing Routine.
5. No Exponential Decay.
6. Urban Roughness Length of 1.0 Meter Used.
 **Model Assumes No FLAGPOLE Receptor Heights.
**Model Calculates 1 Short Term Average(s) of: 24-HR
**This Run Includes: 2 Source(s); 1 Source Group(s); and 2948 Receptor(s)
**The Model Assumes A Pollutant Type of: PM10.
**Model Set To Continue RUNning After the Setup Testing.
**Output Options Selected:
                         Model Outputs Tables of Highest Short Term Values by Receptor (RECTABLE Keyword)
Model Outputs External File(s) of High Values for Plotting (PLOTFILE Keyword)
 **NOTE: The Following Flags May Appear Following CONC Values: c for Calm Hours
                                                                                                                                                                                   m for Missing Hours
                                                                                                                                                                                b for Both Calm and Missing Hours
**Misc. Inputs: Base Elev. for Pot. Temp. Profile (m MSL) = 10.00; Decay Coef. = 0.000; Rot. Angle = 0.0 Emission Units = GRAMS/SEC; Emission Rate Unit Factor = 0.10000E+07 Output Units = MICROGRAMS/M**3
 **Approximate Storage Requirements of Model =

GHG Emissions (tons/year)				
Scenario	GHG			
NB v. TSM-BRT	-2,275			
NB v. BRT	-23,053			
NB v. LRT ⁵	3,249			

Vehicle miles traveled obtained from traffic analysis. Urban rail miles are identical (18,156) for each alternative.
 Auto emission factors obtained from EMFAC2007.
 CNG emission factors obtained from CARB.
 California Climate Action Registry, General Reporting Protocol, March 2007.
 Assumes 17 kilowatt-hours per train mile.

Title : Crenshaw - Operational Emissions (GHG)

Version : Emfac2007 V2.3 Nov 1 2006

Run Date : 2008/09/17 16:13:52

Scen Year: 2030 -- All model years in the range 1986 to 2030 selected

Season : Annual

Area : Los Angeles (SC)

Year: 2030 -- Model Years 1986 to 2030 Inclusive -- Annual

Emfac2007 Emission Factors: V2.3 Nov 1 2006

  **MODELOPTS: NonDFAULT CONC
  *** MODEL SETUP OPTIONS SUMMARY ***
  **Model Is Setup For Calculation of Average CONCentration Values.
  **MO GAS DEPOSITION Data Provided.

**MO PARTICLE DEPOSITION Data Provided.

**MO PARTICLE DEPOSITION DATA Provided.

**Model Uses NO DRY DEPLETION. DRYDPLT = F

**Model Uses NO WET DEPLETION. WETDPLT = F
```

```
**Model Uses URBAN Dispersion Algorithm for the SBL for 2 Source(s),
     for Total of 1 Urban Area(s):
Urban Population = 9862049.0; Urban Roughness Length = 1.000 m
**Model Allows User-Specified Options:
1. Stack-tip Downwash.
2. Model Assumes Receptors on FLAT Terrain.
3. Use Calms Processing Routine.
4. Use Missing Data Processing Routine.
5. No Exponential Decay.
6. Urban Roughness Length of 1.0 Meter Used.
 **Model Assumes No FLAGPOLE Receptor Heights.
**Model Calculates 1 Short Term Average(s) of: 24-HR and Calculates ANNUAL Averages
**This Run Includes: 2 Source(s); 1 Source Group(s); and 2948 Receptor(s)
**The Model Assumes A Pollutant Type of: PM2.5
**Model Set To Continue RUNning After the Setup Testing.
 **Output Options Selected:
                         Options Selected:
Model Outputs Tables of ANNUAL Averages by Receptor
Model Outputs Tables of Highest Short Term Values by Receptor (RECTABLE Keyword)
Model Outputs External File(s) of High Values for Plotting (PLOTFILE Keyword)
**NOTE: The Following Flags May Appear Following CONC Values: c for Calm Hours
                                                                                                                                                                                      b for Both Calm and Missing Hours
**Misc. Inputs: Base Elev. for Pot. Temp. Profile (m MSL) = 10.00; Decay Coef. = 0.000; Rot. Angle = Emission Units = GRAMS/SEC; Emission Rate Unit Factor = 0.10000E+07 Output Units = MICROGRAMS/M**3
 **Approximate Storage Requirements of Model =

        *** MODEL SETUP OPTIONS SUMMARY ***
  **Model Is Setup For Calculation of Average CONCentration Values.
      -- DEPOSITION LOGIC --
  **NO GAS DEPOSITION DATA Provided.

**NO PARTICLE DEPOSITION DATA Provided.

**MODEL USES NO DRY DEPLETION. DRYDPLT = F

**Model USES NO WET DEPLETION. WETDPLT = F
  **Model Uses URBAN Dispersion Algorithm for the SBL for $\tt 1 Source(s)$, for Total of <math display="inline">\tt 1 Urban Area(s)$:
```

```
Urban Population = 9862049.0 ; Urban Roughness Length = 1.000 m
**Model Allows User-Specified Options:
        Allows User-Specified Options.

1. Stack-tip Downwash.

2. Model Assumes Receptors on FLAT Terrain.

3. Use Calms Processing Routine.

4. Use Missing Data Processing Routine.

    No Exponential Decay.
    Urban Roughness Length of 1.0 Meter Used.

**Model Assumes No FLAGPOLE Receptor Heights.
**Model Calculates 2 Short Term Average(s) of: 1-HR 8-HR
**This Run Includes: 1 Source(s); 1 Source Group(s); and 450 Receptor(s)
**The Model Assumes A Pollutant Type of: CO
**Model Set To Continue RUNning After the Setup Testing.
         Model Outputs Tables of Highest Short Term Values by Receptor (RECTABLE Keyword)
         Model Outputs External File(s) of High Values for Plotting (PLOTFILE Keyword)
**NOTE: The Following Flags May Appear Following CONC Values: c for Calm Hours m for Missing Hours b for Both Calm and Missing Hours
**Misc. Inputs: Base Elev. for Pot. Temp. Profile (m MSL) = 10.00; Decay Coef. = 0.000 Emission Units = GRAWS/SEC ; Emission Rate Unit Output Units = PPM

  \ensuremath{^{\star\star}} \mathsf{Model} Is Setup For Calculation of Average CONCentration Values.
          DEPOSITION LOGIC --
  **NO GAS DEPOSITION Data Provided.

**NO FARTICLE DEPOSITION Data Provided.

**NO PARTICLE DEPOSITION DATA Provided.

**Model Uses NO DRY DEPLETION. DRYDPLT

**Model Uses NO WET DEPLETION. WETDPLT
  **Model Uses URBAN Dispersion Algorithm for the SBL for 1 Source(s),
     for Total of 1 Urban Area(s):
Urban Population = 9862049.0; Urban Roughness Length = 1.000 m
```

```
**Model Allows User-Specified Options:
           Allows User-Specified Uptions:
1. Stack-tip Downwash.
2. Model Assumes Receptors on FLAT Terrain.
3. Use Calms Processing Routine.
4. Use Missing Data Processing Routine.
5. No Exponential Decay.
6. Urban Roughness Length of 1.0 Meter Used.
**Model Assumes No FLAGPOLE Receptor Heights.
**Model Calculates 1 Short Term Average(s) of: 1-HR and Calculates ANNUAL Averages
**This Run Includes: 1 Source(s); 1 Source Group(s); and 450 Receptor(s)
**The Model Assumes A Pollutant Type of: NOX
**Model Set To Continue RUNning After the Setup Testing.
             Options Selected.

Model Outputs Tables of ANNUAL Averages by Receptor

Model Outputs Tables of Highest Short Term Values by Receptor (RECTABLE Keyword)

Model Outputs External File(s) of High Values for Plotting (PLOTFILE Keyword)
**NOTE: The Following Flags May Appear Following CONC Values: c for Calm Hours m for Missing Hours b for Both Calm and Missing Hours
**Misc. Inputs: Base Elev. for Pot. Temp. Profile (m MSL) = 10.00 ; Decay Coef. = 0.000 ; Ro

   **Model Is Setup For Calculation of Average CONCentration Values.
  -- DEPOSITION LOGIC --
**NO GAS DEPOSITION Data Provided.
**NO PARTICLE DEPOSITION Data Provided.
**Model Uses NO DRY DEPLETION. DRYDPLT = F
**Model Uses NO WET DEPLETION. WETDPLT = F
   **Model Uses URBAN Dispersion Algorithm for the SBL for 2 Source(s),
```

```
for Total of
                       1 Urban Area(s):
   Urban Population =
                              9862049.0 ; Urban Roughness Length = 1.000 m
**Model Allows User-Specified Options:
1. Stack-tip Downwash.
2. Model Assumes Receptors on FLAT Terrain.
3. Use Calms Processing Routine.
4. Use Missing Data Processing Routine.
5. No Exponential Decay.
6. Urban Roughness Length of 1.0 Meter Used.
**Model Assumes No FLAGPOLE Receptor Heights.
**Model Calculates 1 Short Term Average(s) of: 24-HR
**This Run Includes: 2 Source(s); 1 Source Group(s); and 450 Receptor(s)
**The Model Assumes A Pollutant Type of: PM10.
**Model Set To Continue RUNning After the Setup Testing.
**Output Options Selected:
            Model Outputs Tables of Highest Short Term Values by Receptor (RECTABLE Keyword) Model Outputs External File(s) of High Values for Plotting (PLOTFILE Keyword)
**NOTE: The Following Flags May Appear Following CONC Values: c for Calm Hours
                                                                                     m for Missing Hours
b for Both Calm and Missing Hours
**Misc. Inputs: Base Elev. for Pot. Temp. Profile (m MSL) = 10.00; Decay Coef. = 0.000; Rot. Angle = Emission Units = GRAMS/SEC; Emission Rate Unit Factor = 0.10000E+07

Output Units = MICROGRAMS/M**3
**Approximate Storage Requirements of Model =
                                                                 3.6 MB of RAM.

NODRYDPLT NOWETDPLT
  *** MODEL SETUP OPTIONS SUMMARY
  **Model Is Setup For Calculation of Average CONCentration Values.
  -- DEPOSITION LOGIC --
**NO GAS DEPOSITION Data Provided.
**NO PARTICLE DEPOSITION Data Provided.
**Mod luses NO DRY DEPLETION. DRYDPLT = F
**Model Uses NO WET DEPLETION. WETDPLT = F
```

```
**Model Uses URBAN Dispersion Algorithm for the SBL for 2 Source(s),
  for Total of 1 Urban Area(s):
Urban Population = 9862049.0; Urban Roughness Length = 1.000 m
**Model Allows User-Specified Options:
1. Stack-tip Downwash.
2. Model Assumes Receptors on FLAT Terrain.
3. Use Calms Processing Routine.
4. Use Missing Data Processing Routine.
5. No Exponential Decay.
6. Urban Roughness Length of 1.0 Meter Used.
**Model Assumes No FLAGPOLE Receptor Heights.
**Model Calculates 1 Short Term Average(s) of: 24-HR and Calculates ANNUAL Averages
**This Run Includes: 2 Source(s);
                                                   1 Source Group(s); and 450 Receptor(s)
**The Model Assumes A Pollutant Type of: PM2.5
**Model Set To Continue RUNning After the Setup Testing.
**Output Options Selected:
           Options Selected.

Model Outputs Tables of ANNUAL Averages by Receptor

Model Outputs Tables of Highest Short Term Values by Receptor (RECTABLE Keyword)

Model Outputs External File(s) of High Values for Plotting (PLOTFILE Keyword)
**NOTE: The Following Flags May Appear Following CONC Values: c for Calm Hours
                                                                               m for Missing Hours
b for Both Calm and Missing Hours
**Misc. Inputs: Base Elev. for Pot. Temp. Profile (m MSL) = 10.00; Decay Coef. = 0.000; Rot. Angle = Emission Units = GRAMS/SEC; Emission Rate Unit Factor = 0.10000E+07 Output Units = MICROGRAMS/M**3
**Approximate Storage Requirements of Model = 3.6 MB of RAM.
10/26/10
                                                                                                                                                    18:10:14

PHASE I ENVIRONMENTAL SITE ASSESSMENT REPORT CRENSHAW/LAX LIGHT RAIL TRANSIT PROPOSED MAINTENANCE FACILITY SITE 14: ARBOR VITAE/BELLANCA CITY OF LOS ANGELES, CALIFORNIA

Prepared For:

PB AMERICAS, INC.

444 South Flower Street, Suite 3700 Los Angeles, California 90071

Project No. 602019-003

July 13, 2011

July 13, 2011

Project No. 602019-003

To: PB Americas, Inc.

444 South Flower Street, Suite 3700 Los Angeles, California 90071

Attention: Mr. Dennis Henderson

Subject: Phase I Environmental Site Assessment Report, Crenshaw/LAX Light Rail

Transit Proposed Maintenance Facility, Site 14: Arbor Vitae/Bellanca, City of Los

Angeles, California

Leighton Consulting, Inc. (Leighton Consulting) is pleased to present this Phase I Environmental Site Assessment Report for the Crenshaw/LAX Light Rail Transit Maintenance Facility, Site 14, located at Arbor Vitae Street and Bellanca Avenue in the City of Los Angeles, California.

Leighton Consulting has the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Site. Leighton Consulting has developed and performed the all appropriate inquiries in conformance with the standards and practices prescribed in ASTM International E1527-05.

If you have any questions regarding this report, please do not hesitate to contact me. We appreciate the opportunity to be of service.

Respectfully submitted,

LEIGHTON CONSULTING, INC.

Meredill Church

Meredith Church, PG Project Geologist

Senior Reviewer: Richard Orr, PG

EXECUTIVE SUMMARY

Leighton Consulting, Inc. (Leighton Consulting) performed a Phase I Environmental Site Assessment (ESA) of the Crenshaw/Los Angeles International Airport (LAX) Light Rail Transit (LRT) Proposed Maintenance Facility, Site 14, located at Arbor Vitae Street and Bellanca Avenue in the City of Los Angeles, California (Figure 1, *Site Location Map*). The purpose of this Phase I ESA was to attempt to identify, to the extent feasible pursuant to the processes prescribed in ASTM International (ASTM) E1527-05, recognized environmental conditions (RECs) in connection with the Site. Exceptions to, or deletions from, this practice are described in Section 1.5 of the report.

Site 14 originally consisted of 12 pa rcel areas, identified as Parcels 1 t hrough 12, a nd collectively referred to as the "Site" (Figure 2, *Site Plan*). The Site boundaries have been revised to exclude Parcels 1 through 7. T hroughout this report, Parcels 1 through 12 are discussed; however, the conclusions and recommendations are based on P arcels 1 through 7 as being located offsite to the west, and Parcels 8 through 12 utilized as the proposed Maintenance Facility.

Parcels 1 through 12 are approximately 30.5 acres in size and are bounded by Arbor Vitae Street to the north, Airport Boulevard to the west, and Bellanca Avenue to the east. The Site is occupied primarily by cosmetics manufacturing and commercial businesses including a Super 8 Motel, Aliki's Greek Tavern, Neutrogena Cosmetics, Dollar Car Rental, Avis Car Rental administrative offices, Barthco International, and Gourmet Trading Company. In addition, there are three parcels that have been used for residential purposes, two of which have had the buildings removed and are currently vacant.

The Site appeared to be vacant and/or used for agricultural purposes prior to primary development by at least 1956. The Site has continued to be occupied by light manufacturing, commercial, and residential development to the present. A number of the properties have had, or have fuel underground storage tanks (USTs) onsite, and a summary of the status of USTs is included in Table 9, *UST Summary*. A brief summary of the historical land use of each parcel is included in Table 10, *Findings, Conclusions, and Recommendations*.

Parcels 8 through 12 were identified to have onsite RECs. Below is a brief summary of the RECs, for additional information, see Section 7.1 and Table 10.

- 1. Parcel 8, Avis Rent A Car, 5740 Arbor Vitae Street. Formerly occupied by several light industrial businesses, including an electronics business. Manufacturing may have occurred onsite.
- 2. Parcel 9, Dollar Rent A Car, 5630 Arbor Vitae Street. Formerly occupied by an avionics manufacturing and computer manufacturing company. Site uses currently include fuel dispensing, car washing, and auto repair.
- 3. Parcel 10, Gourmet Logistics Company, 9432 Bellanca Avenue. A UST is currently permitted onsite.
- 4. Parcel 11, Dollar Rent A Car, 9310 and 9340 Bellanca Avenue. Ongoing leaking underground storage tank (LUST) case of diesel and gasoline to groundwater, and remediation is ongoing. Current USTs may exist onsite.
- 5. Parcel 12, Gourmet Logistics Company, 9432 Bellanca Avenue. Formerly occupied by a dry cleaning facility. USTs were formerly reported onsite; however, closure reports were not available.

In addition, the following offsite locations that were identified to have releases that may have potentially migrated onto the Site. The primary affected media of concern is groundwater and soil vapor; although there is the potential for adjacent properties to have potentially affected the onsite soils as well. For additional information, see Table 4, $EDR^{®}$ Corridor Report, Database Review – Offsite Parcels.

- 1. Parcel 1, Surprise Rent A Car, 9204 Airport Boulevard, located approximately 0.1 miles west of Parcel 8. Former gas stations. One UST may remain onsite. There is reportedly an open LUST case and possible groundwater contamination.
- 2. Parcel 7, Neutrogena Corporation, 5800 Arbor Vitae Street, located adjacent to the west of Parcel 8. Cosmetics manufacturing. Formerly occupied by Space Technologies Laboratories. Residual diesel contamination from a UST removal and active manufacturing.
- 3. 9225 Aviation Boulevard, Los Angeles, Honeywell International Corp., located adjacent to the east across the railroad right-of-way from Parcels 11 and 12. Aerospace manufacturing facility. Release of high concentrations of VOCs to groundwater. The groundwater gradient has been reported to be towards the west.
- 4. 5755 West 96th Street, Los Angeles, Neutrogena Corporation, located adjacent to the south of Parcel 7. This facility has several USTs and is a large quantity generator of hazardous materials, including metals and solvents. There was not a documented release reported; however, there is the potential for these materials to exist on, or directly adjacent to Parcel 7.

- 5. 1237 West Arbor Vitae Street, and 9007 through 9121 Aviation Boulevard, Inglewood, Princeland Properties/Aviation Inglewood LLC/Collins Trust Property, located approximately 0.02 miles to the north-northeast of Parcel 11. Release of VOCs to groundwater.
- 6. 9131 Aviation Boulevard, Inglewood, Harry's Airport Garage, located approximately 0.06 miles to the north-northeast of Parcel 11. Release of fuel related compounds to the groundwater.
- 7. 425 Isis Avenue, Inglewood, Rho-Chem Corp, located approximately 0.3 miles northeast. Extensive release of VOCs to groundwater and the extent of the plume is not well-defined. Groundwater flow direction has been reported to be variable in the general vicinity.
- 8. 8600 Aviation Boulevard, Los Angeles, Tosco 76 Station, located approximately 0.4 miles to the north. R elease of high concentrations of fuel related compounds to the groundwater. Groundwater flow was reported to the southwest and the plume was not well defined.

To address the onsite and offsite RECs listed above, Leighton Consulting makes the following recommendations:

- <u>Site Specific Phase II ESA</u> Phase II ESAs, including soil, soil vapor sampling, and geophysical surveys for areas where the status of USTs is unknown, are recommended at the parcels listed above and in Table 10 that were identified to have onsite RECs. Groundwater is generally located approximately 90 to 150 feet bgs and would not be anticipated to be encountered during construction activities; however, based on the results of the soil sampling, it may be necessary to sample groundwater as well. There is the potential for impacts to groundwater from both onsite and offsite sources.
- <u>UST Removal</u> Existing USTs should be removed from the Site according to the Los Angeles Fire Department (LAFD) regulations, prior to Site redevelopment. In addition, subsurface clarifiers or hoists should be removed appropriately and confirmation soil sampling should be conducted beneath the removed features.
- <u>Parcel 11 G roundwater Remediation</u>: There is an open LUST case on Parcel 11 with groundwater remediation currently being conducted. Leighton Consulting recommends that the groundwater remediation continue under the guidance of the Regional Water Quality Control Board (RWQCB) until closure is granted.

In addition, Leighton makes the following general recommendations:

- <u>Hazardous Building Materials Surveys</u> Surveys for asbestos containing building materials, lead-based paint, and miscellaneous toxic material surveys should be conducted on buildings that will be demolished in association with Project construction, particularly in buildings constructed before the mid-1980s.
- <u>Hazardous Material and Debris Removal</u> Hazardous materials and waste were observed at several business locations that appeared to be stored appropriately. Tenants or owners should remove and/or dispose of these materials appropriately when their lease is terminated or their property is acquired. Hazardous materials, drums, and debris left by tenants/owners should be disposed of in accordance with regulatory guidelines prior to construction.
- Soil Mitigation Plan (SMP) A SMP should be prepared after Project construction plans are available that describe the engineering and geotechnical earthwork requirements, including the lateral and vertical extent of soil removals/recompaction. The soil mitigation plan should establish soil screening, sampling, stockpiling, reuse, disposal, and import soil screening criteria.
- Health and Safety Plan (HSP) A site-specific HSP should be developed for persons with potential exposure to the constituents of concern identified in the recommended Phase II ESA. Perched groundwater has been reported as shallow as 45 feet bgs within the vicinity of the Site. Due to prevalent groundwater contamination in the Project area, a construction Health and Safety Plan (HSP) should address proper handling procedures if groundwater is expected to be encountered. In addition, if dewatering will be required, groundwater sampling and analysis should be conducted prior to dewatering and/or disposal activities.
- <u>Construction Observations</u> In general, observations should be made during future
 development activities for features of concern or areas of possible contamination such as, but
 not limited to, the presence of underground facilities, buried debris, waste drums, tanks, soil
 staining or odorous soils. Further investigation and analysis may be necessary, should such
 materials be encountered.
- Additional Due Diligence Activities For properties purchased for this Project, Leighton Consulting recommends that a CERCLA compliant Phase I ESA that is conducted within 6 months of property purchase be conducted in order to be eligible for CERCLA liability protections, and that data gaps of this report be completed at that time, including interior site inspections, owner/tenant interviews and a review for environmental liens.

1.0 INTRODUCTION

1.1 Authorization

Leighton Consulting performed a Phase I ESA of the Crenshaw/Los Angeles International Airport (LAX) Light Rail Transit (LRT) Proposed Maintenance Facility, Site 14, located at Arbor Vitae Street and Bellanca Avenue in the City of Los Angeles, California, in accordance with authorization received from Parsons Brinckerhoff (PB).

1.2 <u>Purpose</u>

The purpose of the Phase I ESA was to identify, to the extent feasible pursuant to the processes prescribed in ASTM E1527-05, RECs in connection with the Site. RECs are defined as: the presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, groundwater, or surface water of the property. The term includes hazardous substances or petroleum products even under conditions in compliance with laws. The term is not intended to include de minimus conditions that generally do not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be de minimus are not recognized environmental conditions (ASTM E1527-05, 2005). References are included in Appendix A, References.

1.3 Scope of Work

The scope of work was performed in accordance with the Request for Proposal and Leighton Consulting's Phase I ESA ASTM compliance practices and included the following tasks:

- A reconnaissance-level visit from the public-right-of-way of the properties that
 comprise the Project (referred to collectively as Site) for evidence of release(s) of
 hazardous materials and petroleum products and to assess the potential for onsite
 releases of hazardous materials and petroleum products. Interior site inspections were
 not completed;
- Records Review (including review of previous environmental reports, selected governmental databases, and historical review);

- Interviews Due to site access issues and at the authorization of the client, interior site inspections, owner interviews, and tenant interviews were not conducted as part of this Phase I ESA.
- Preparation of a report presenting our findings.

1.4 <u>Significant Assumptions</u>

Leighton Consulting assumes that the information provided by the Client, regulatory database provider, and regulatory agencies is true and reliable.

1.5 <u>Limitations and Exceptions</u>

Site-specific activities performed by Leighton Consulting and information collected regarding these activities are summarized in Section 2.0 through 6.0. The findings of this ESA are presented in Section 7.0. Opinions, and conclusions drawn by Leighton Consulting, based on the information collected as part of the ESA, are presented in Sections 8.0 and 9.0, respectively.

This ESA was conducted in a manner consistent with that level of care and skill ordinarily exercised by members of the profession currently practicing in the same locality under similar conditions.

Due to site access issues and at the authorization of the client, interior site inspections, owner interviews, and tenant interviews were not conducted as part of this Phase I ESA. The site reconnaissance consisted of observing the property from public right-of-way areas. In addition, the scope of work for this Phase I ESA did not include environmental lien searches

The observations and conclusions presented in this report are professional opinions based on the scope of activities, work schedule, and information obtained through the ESA described herein. Opinions presented herein apply to Site conditions existing at the time of our study and cannot necessarily be taken to apply to Site conditions or changes that we are not aware of or have not had the opportunity to evaluate. It must be recognized that conclusions drawn from these data are limited to the amount, type, distribution, and integrity of the information collected at the time of the investigation, the methods utilized to collect and evaluate the data, and that a full and complete evaluation of environmental risks cannot be made. Although Leighton Consulting has taken steps to obtain true

copies of available information, we make no representation or warranty with respect to the accuracy or completeness of this information.

This practice does not address whether requirements in addition to all appropriate inquiry have been met in order to qualify for the landowner liability protections including the continuing obligation not to impede the integrity and effectiveness of activity and use limitations, or the duty to take reasonable steps to prevent releases, or the duty to comply with legally required release reporting obligations. Users should also be aware that there are likely to be other legal obligations with regard to hazardous substances or petroleum products discovered on the Site that are not addressed in this practice and that may pose risks of civil and/or criminal sanctions for non-compliance.

1.6 <u>Special Terms and Conditions</u>

The scope of work for this Phase I ESA did not include non-scope considerations, such as, but not limited to, those listed in Section 13 of ASTM E1527-05. This scope of work did not include items such as: testing of electrical equipment for the presence of polychlorinated biphenyls (PCBs) or collection of other environmental samples, such as, water, building materials, paint, or other media; assessment of natural hazards such as naturally occurring asbestos, radon gas, methane gas, or mold; assessment of the potential presence of radionuclides, biological agents, or lead in drinking water; assessment of indoor air quality (such as vapor intrusion assessment); assessment of nonchemical hazards such as the potential for damage from earthquakes or floods, or the presence of endangered species or wildlife habitats. This Phase I ESA also did not include an extensive assessment of the environmental compliance status of the Site or of businesses operating at the Site, or a health-based risk assessment.

1.7 User Reliance

This report is for the exclusive use of the Metropolitan Transportation Authority (Metro), PB, and Terry A. Hayes Associates, LLC (TAHA). Use of this report by other parties shall be at such party's sole risk.

1.8 Important Information about Geoenvironmental Reports

PB is referred to Appendix I regarding important information provided by ASFE on geoenvironmental studies and reports.

2.0 SITE DESCRIPTION

2.1 <u>Project Description and Location</u>

Site 14 is the proposed operations and maintenance facility for the Crenshaw/LAX LRT Project and is located to the southeast and southwest of the intersection of Arbor Vitae Street and Bellanca Avenue in the City of Los Angeles, California, and in this report is referred to as "the Site" (Figure 1, Site Location Map). Parcels 1 t hrough 12 a re approximately 30.5 acres and are bounded by Arbor Vitae Street to the north, Airport Boulevard to the west, and Bellanca Avenue to the east. The Site is occupied primarily by cosmetics manufacturing and commercial businesses including a Super 8 Motel, Aliki's Greek Tavern, Neutrogena Cosmetics, Dollar Car Rental, Avis Car Rental administrative offices, Barthco International, and Gourmet Trading Company. Site 14 is located within the area of the Los Angeles World Airports' (LAWA) noise abatement program. This program involves the purchase of residential uses which are located within the runway approach zones of LAWA and experience elevated noise levels. LAWA has been in the process of purchasing residential property contained in this area and there are several areas of vacant land located on the western portion of the Site that have been acquired. There is one remaining 29-unit multi-family residential development on the Site. Figure 2 shows the present layout of the Site, which has been divided into 12 parcel areas, identified as Parcels 1 through 12. It is important to note that the Site boundaries have been revised to exclude Parcels 1 through 7. Throughout this report, Parcels 1 t hrough 12 a re discussed; however, the conclusions and recommendations are based on Parcels 1 through 7 as being located offsite to the west, and Parcels 8 through 12 utilized as the proposed Maintenance Facility.

2.2 <u>Site and Vicinity General Characteristics</u>

The Site and general vicinity consists of light industrial/manufacturing, commercial, and residential properties, as well as transportation corridors. The Site elevation ranges from approximately 95 to 100 feet above mean sea level (msl) and is generally flat-lying, with a slight topographic gradient towards the southeast.

2.3 Current Use of the Site

The Site is used for residential, commercial, and cosmetics manufacturing purposes. In addition there are vacant areas occupied by trees and vegetation. Information regarding the existing use of the Site, as provided by the client and observed during the Site

reconnaissance is noted on Table 1, *Property Information*. Photographs of the Site are included as Appendix B, *Site Reconnaissance Photographs*.

2.4 <u>Descriptions of Structures, Roads and Other Improvements on the Site</u>

Information regarding the number of structures on the property and their year built, as provided by the client and observed during the site reconnaissance, is noted on Table 2, *Building Information*.

2.5 <u>Current Uses of Adjoining Properties</u>

Adjacent properties consist of light manufacturing/industrial, commercial, and residential properties, as well as transportation corridors. Adjacent property to the north, across Arbor Vitae Street from west to east, includes Hertz Club, two industrial warehouse buildings, a parking lot, and Merle Norman Cosmestics. A djacent property to the east, across the railroad right-of-way, includes a large parking lot and auto fueling center. The adjacent property to the south, from east to west, includes Wally Park, a vacant industrial warehouse, Avis Rent A Car, several buildings associated with Neutrogena, a residential property, and vacant land fronting Airport Boulevard. The adjacent property to the west, across Airport Boulevard, is occupied by Avis Rent A Car.

3.0 USER PROVIDED INFORMATION

The User of this Phase I ESA is identified as PB and Metro. PB provided known information regarding the Site via a file transfer protocol (FTP) service for Leighton Consulting to review.

3.1 Title Records

Title records were not provided as part of this assessment.

3.2 <u>Environmental Liens or Activity and Use Limitations</u>

Evidence of environmental liens or activity and use limitations was not disclosed by PB.

3.3 <u>Specialized Knowledge</u>

Specialized knowledge was not disclosed by PB.

3.4 <u>Commonly Known or Reasonably Ascertainable Information</u>

PB provided parcel and building information, which are included in Tables 1 and 2.

3.5 Valuation Reduction for Environmental Issues

Purchase negotiations had not been initiated with the owners at the time of this report and valuation reduction assessment was not applicable.

3.6 Owner, Property Manager, and/or Occupant Information

PB provided owner and tenant information which is included in Table 1.

3.7 Reason for Performing Phase I ESA

A Phase I ESA is required for proposed public transportation projects. The purpose of the Phase I ESA is to assess the Site for RECs and to make recommendations for additional work that should be performed for potential redevelopment of the Site, or a portion thereof, for transportation usage. Identified RECs should also be taken into consideration for the health and safety of the workers present during the construction phase.

In addition, the purpose of this ESA is to provide appropriate inquiry into the previous ownership so that the Client may qualify for Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) landowner liability protections as defined in CERCLA, 42 United States Code [USC] §9601(35) (B).

3.8 Other

No additional information was provided to Leighton Consulting for review.

4.0 RECORDS REVIEW

4.1 <u>Physical Setting Source(s)</u>

Leighton Consulting reviewed pertinent maps and readily available literature for information on the physiography and hydrogeology of the Site. A summary of this information is presented in the following subsections.

4.1.1 Topography

The topography ranges in elevation from approximately 100 feet above msl in the west to 95 feet above msl at the southeastern corner, and slopes gently towards the southeast (Appendix C, *Topographic Maps*).

4.1.2 Surface Water

Centinela Creek is located approximately 1.3 miles north of the Site. The Pacific Ocean is located approximately 3.9 miles west of the Site.

4.1.3 Geology and Soils

The near-surface native soils within the subject area are Holocene and Pleistocene-age non-marine alluvium comprised of varying proportions of gravel, sand, silt, and clay deposited by the Los Angeles River, Rio Hondo, San Gabriel River, and ancestral Santa Ana (Yerkes, 1965). Much of this sediment was deposited as sand, silt, and clay as the rivers meandered across the floodplain of the Los Angeles Basin. These deposits are anticipated to be on the order of several hundred feet in thickness, subsequently underlain within the Southwestern Block by a thick (several thousands of feet) sequence of Tertiary age sedimentary rock formations locally intruded by igneous rocks of middle Miocene age overlying Cretaceous age basement rocks belonging to the Catalina Schist. Underlying the near-surface Quaternary sediments within the Central Block are a sequence of Tertiary age sedimentary rocks anticipated to be on the order of 16,000 to 31,000 feet thick and are subsequently underlain by basement rocks consisting of granodiorite, gneissic metadiorite, and meta-igneous rocks.

The geologic structure of alluvial materials is anticipated to be generally massive; however, it can be interpreted based on a geologic depositional environment typical of flood plain and alluvial deposits that cross-stratification (channel trough

cross-stratification or transverse bar-tabular cross-stratification) sedimentary structure exists at depth. Possible relevance of these sedimentary features could include local impermeable zones with the potential for perched groundwater.

4.1.4 <u>Hydrogeology</u>

The Site is located within the Torrance Plain portion of the Coastal Plain of the Los Angeles Basin (CDWR, 1961). The Los Angeles Basin is a northwest-trending structural trough and alluvial lowland plain approximately 50 miles long and 20 miles wide. Mountains and hills that generally expose Late Cretaceous to Late Pleistocene sedimentary and igneous rocks bound the Basin along the north, northeast, east and southeast (Yerkes, 1965). The Basin is part of the Peninsular Ranges geomorphic province of California that is characterized by sub-parallel blocks sliced longitudinally by young, steeply dipping northwest-trending fault zones. The Basin, located at the northerly terminus of the Peninsular Ranges, is the site of active sedimentation and the strata is interpreted to be as much as 31,000 feet thick in the center of the synclinal trough of the Central Block of the Los Angeles Basin.

Based on a review of a number sites on Geotracker, a regulatory database for environmental cleanup sites maintained by the State Water Resources Control Board (SWRCB), depth to groundwater in the vicinity of the Site generally is estimated to be approximately 90 t o 100 feet below ground surface (bgs); although, there is a discontinuous perched zone at some locations between approximately 45-60 feet bgs (Mactec, 2009). There are a number of releases that have contributed to a plume of volatile organic compound (VOC)-impacted groundwater that is likely to underlie much of the Site (Geotracker, 2010). The general surface topography slopes gently towards the southeast. Groundwater gradient has been reported to be primarily towards the east, southeast, and southwest based on a review of sites listed on the Geotracker website.

4.1.5 Oil and Gas Fields

No evidence of oil or gas wells or oil field-related facilities was observed on or adjacent to the Site during the reconnaissance. Leighton Consulting reviewed the California Department of Conservation, Division of Oil, Gas, and Geothermal Resources (DOGGR), Oil and Gas Map Regional Wildcat Map 1-5 (DOGGR, 2006) and no oil or gas wells were depicted on or adjacent to the Site. According to the City of Los Angeles, Bureau of Engineering Navigate LA website, the Site is

not located within the City of Los Angeles Methane Zone or the Methane Buffer Zone (City of LA, 2010).

4.2 Standard Environmental Record Sources

A search of selected government databases was conducted by Leighton Consulting using the EDR[®] Radius Map Report with GeoCheck (EDR[®] Radius Report), an environmental database report system, prepared by Environmental Data Resources, Inc. (EDR[®]), dated May 18, 2010. Details of the database search along with descriptions of each database researched, and maps identifying the location of sites listed in the regulatory database, are provided in Appendix D, *EDR*[®] *Radius Report*.

Development of the Classification Criteria

For this study, Leighton Consulting has established classification criteria to assist in identifying the potential impacts of each contaminated or potentially contaminated facility that was identified in the EDR® Corridor Report. Each facility was given a hazard ranking of high, moderate, or low that considered facility operation, proximity to the Site, the anticipated hydrogeologic gradient, field observations, and regulatory information. In general, the classification criteria are:

- <u>High</u> facilities with known or probable soil/groundwater contamination (i.e. leaking underground storage tanks [LUSTs]), and facilities where remediation is incomplete or undocumented, and the contamination is known or suspected to exist on the Site. In addition, onsite properties that currently have underground storage tanks (USTs) or historical USTs with an unknown status are generally ranked as High or Moderate.
- <u>Moderate</u> facilities with identified or potential soil contamination (i.e., LUSTs), remediation is in progress, or groundwater contamination that does not appear to be migrating and has not been reported on the Site. Facilities with a heavy industrial/manufacturing background that typically use or have used significant quantities of hazardous materials may also be classified as Moderate.
- <u>Low</u> facilities that completed remediation, have not reported releases of hazardous substances, or have historically utilized only small amounts of known contaminants (i.e. small quantity generators) and are unlikely to negatively affect the Site.

4.2.1 Site

The Site was identified on the EDR® Radius Report under several different databases. Table 3, EDR® Radius Report – Database Review, Onsite Parcels, summarizes the databases listed for the addresses known for the onsite parcels and their hazard potential to impact the Site. The hazard ranking for Table 3 was considered preliminary and the final hazard ranking, included in Table 10, for a parcel may have change based on file reviews.

The onsite parcels that were given a hazard ranking of Moderate to High include the following:

- Parcel 9, 5630 Arbor Vitae Street, Los Angeles, Dollar Rent A Car. Listed as an active UST site and a generator of tetrachloroethylene (PCE) waste.
- Parcel 10, 9323 Bellanca Street, Los Angeles, Western Federal Credit Union. UST(s) reported onsite.
- Parcel 11, 5 600 Arbor Vitae Street and 9320 Bellanca Avenue, Los Angeles, King Delivery Inc. and Allan Jonas. Historical USTs, USTs and open LUST case.
- Parcel 12, 9432 Bellanca Avenue, Flying Tiger Inc. Historical USTs reported onsite.

4.2.2 Offsite

Numerous offsite properties were identified on the EDR® Radius Report. The facilities with reported environmental cases and spill sites were reviewed and given a hazard ranking based on their potential to negatively affect the Site, and are summarized in Table 4, EDR® Report Database Review - Offsite Parcels. Facilities that were reported on the maps provided by EDR® to be greater than 0.25 miles from the Site and/or to have been granted regulatory closure were given a Low hazard ranking and are not included on Table 4. The Geotracker and Envirostor databases were reviewed for facilities with open cases or where additional information was helpful in establishing a hazard ranking and this information is also included in Table 4.

The parcels that were given a hazard ranking of Moderate to High (potential to have caused contamination to soil, soil vapor, or groundwater at the Site) include the following:

- Parcel 1, 9 204 Airport Boulevard, Los Angeles, National Car Rental Systems. Open LUST case and USTs.
- Parcel 7, 5800 Arbor Vitae Avenue, Los Angeles, Neutrogena Facility. Closed diesel LUST case, potential for residual contamination.
- 9225 Aviation Boulevard, Los Angeles, Honeywell International Corp., located adjacent to the east across the railroad right-of-way from Parcels 11 and 12.
 Aerospace manufacturing facility. Release of high concentrations of VOCs to groundwater. The groundwater gradient has been reported to be towards the west.
- 5755 West 96th Street, Los Angeles, Neutrogena Corporation, located adjacent to the south of Parcel 7. This facility has several USTs and is a large quantity generator of hazardous materials, including metals and solvents. There was not a documented release reported; however, there is the potential for these materials to exist on, or directly adjacent to Parcel 7.
- 1237 West Arbor Vitae Street, and 9007 through 9121 Aviation Boulevard, Inglewood, Princeland Properties/Aviation Inglewood LLC/Collins Trust Property, located approximately 0.02 miles to the north-northeast of Parcel 11.
 Release of VOCs to groundwater.
- 9131 Aviation Boulevard, Inglewood, Harry's Airport Garage, located approximately 0.06 miles to the north-northeast of Parcel 11. R elease of fuel related compounds to the groundwater.
- 425 Isis Avenue, Inglewood, Rho-Chem Corp, located approximately 0.3 miles northeast. Extensive release of VOCs to groundwater and the extent of the plume is not well-defined. Groundwater flow direction has been reported to be variable in the general vicinity.
- 8600 Aviation Boulevard, Los Angeles, Tosco 76 Station, located approximately
 0.4 miles to the north. Release of high concentrations of fuel related compounds
 to the groundwater. Groundwater flow was reported to the southwest and the
 plume was not well defined.

4.3 Additional Environmental Record Sources

4.3.1 Regulatory Agency Consultations

Leighton Consulting requested regulatory records from the following regulatory agencies:

- Department of Toxic Substance Control (DTSC)
 - Cypress Division
 - Chatsworth Division
- Los Angeles Regional Water Quality Control Board (LARWQCB)
 - o Site Cleanup Program (LARWQCB-SCP)
 - o Underground Storage Tank Division (LARWQCB-UST)
 - o Spills, Leaks, Investigations, & Cleanup Unit (LARWQCB-SLIC-2)
- Los Angeles Fire Department (LAFD)
 - o Underground Storage Tank Division (LAFD-UST)
 - o Hazardous Material Division (LAFD-Haz Mat)
- Los Angeles City Sanitation

Leighton Consulting requested regulatory records for the addresses provided by the Client and address ranges obtained from the site reconnaissance, the Sanborn Maps, and the City of Los Angeles Department of City Planning, Zone Information and Map Access System (ZIMAS).

In addition, the Site vicinity and addresses were reviewed on the following online regulatory databases:

- South Coast Air Quality Management District (SCAQMD).
- Geotracker (maintained by the SWRCB, includes LUSTs, land disposal sites, other releases, military sites, and permitted USTs).
- Envirostor (maintained by the DTSC, includes DTSC cleanup sites, hazardous waste permitted sites).

A summary of the agency requests and responses is included in Table 5, *Regulatory Agency Requests and Responses*. A summary of the records reviewed is included in Table 6, *Regulatory Agency Review Summary*. Copies of selected documents available for the files reviewed, are included in Appendix E, *Regulatory Agency Documents*.

State of California Radon Survey

In 2005, the California Geological Survey for the State of California Department of Health Services (CDHS) prepared a "Radon Potential Zone Map for Southern Los Angeles County, California", the map indicates that the Site is located within a an area with "low potential for indoor radon levels above 4.0 pi coCuries per liter of air (pCi/L)" (CDHS, 2005).

The CDHS maintains an online database of California indoor radon levels sorted by zip code (CDHS, 2010). According to this database, 55 radon tests have been conducted within the Site zip code of 90045 and only four tests detected radon at greater than 4 pCi/L.

Based on the above information, the potential for elevated levels of naturally occurring radon at the Site appears to be low.

4.4 <u>Historical Use Information on the Property</u>

Leighton Consulting reviewed selected historical information on the Site. These references were reviewed for evidence of activities that would suggest the potential presence of hazardous substances at the Site, and to evaluate the potential for the Site to be impacted by offsite sources of contamination. The following paragraphs are a chronological summary of the review.

4.4.1 Aerial Photographs

Historical aerial photographs were reviewed for information regarding past Site uses. Aerial photographs were reviewed for the following years: 1928, 1938, 1947, 1956, 1965, 1976, 1989, 1994, 2002, and 2005 (EDR, Aerial Photographs, 2010). Copies of the aerial photographs are included in Appendix F, *Aerial Photographs*. A summary of the aerial photograph review is included in Table 7.

The Site appeared to be vacant and/or used for agricultural purposes prior to primary development by at least 1956. The Site has continued to be occupied by light manufacturing, commercial, and residential development to the present.

4.4.2 <u>Historical Topographic Maps</u>

Historical topographic maps were reviewed for information regarding past Site uses. Topographic maps were reviewed for the following years: 1896, 1901, 1924, 1930, 1948, 1950, 1964, 1972, and 1981 (EDR, Topographic Maps, 2010). Copies of the topographic maps are included in Appendix C. A summary of the topographic map review is included in Table 7.

1896, 1901, 1924, 1930, 1948, and 1950: No structures were depicted on the Site. The Topeka and Santa Fe Railroad was depicted running north to south to the east of the Site. Adjacent properties were either vacant or sparsely occupied by small square structures, likely residential. Increased residential and commercial development was observed on adjacent properties in the 1950 topographic map.

1964, 1972, and 1981: The Site and adjacent properties were depicted in a red-shaded area where only primary structures were shown. Two large structures were depicted on the eastern portion of the Site in the topographic maps.

4.4.3 <u>Fire Insurance Maps</u>

Fire insurance maps, or Sanborn® maps, are detailed city plans showing building footprints, construction details, use of structure, street address, etc. The maps were designed to assist fire insurance agents in determining the degree of hazard associated with a particular property. S anborn maps were produced from approximately 1867 to the present for commercial, industrial, and residential sections of approximately 12,000 cities and towns in the United States.

Sanborn® map coverage was not available for the Site. A portion of the adjacent property to the north was available for 1969 and was depicted as an athletic field and a Merle Norman Cosmetics Manufacturing and Warehouse facility. Copies of the maps are included in Appendix G, *Sanborn Maps*.

4.4.4 <u>Historical City Directories</u>

City Directories have been published for cities and towns across the US since the 1700s. Originally a list of residents, the City Directory developed into a tool for locating individuals and businesses in particular. For each street address listed, the directory recorded the name of the resident or business that operated from this addresses. While City Directory coverage is usually comprehensive for major cities, it may be sporadic for rural areas and small towns. The purpose of the City Directory research was to attempt to determine the businesses that were historically located onsite.

City Directory information obtained for the Site and surrounding vicinity is included in the EDR[®] City Directory Abstract, dated June 1, 2010 (Appendix H, *City Directory*). The address listed in Table 1 and their ranges were utilized for the City Directory search and the results are summarized in Table 8, *City Directory Review*.

Facilities identified that have the potential to store hazardous materials or waste included a gas station, car rental companies, a construction company, freight and distribution warehouses, a computer company, and a publishing company.

4.4.5 Property Tax Files

Property tax files were not reviewed as they are not reasonably ascertainable.

4.4.6 Recorded Land Title Records

Chain of Title Reports were not provided by Metro for review as part of this Phase I ESA.

4.4.7 <u>Building Department, Zoning and/or Land Use Records</u>

Building permits were not reviewed as part of this assessment.

4.4.8 Other Historical Sources

Additional resources were not researched as a part of this assessment

4.4.9 Summary of Historical Land Use

The Site appeared to be vacant and/or used for agricultural purposes prior to primary development by at least 1956. The Site has continued to be occupied by light manufacturing, commercial, and residential development to the present. A number of the properties have had, or have fuel USTs onsite, and a summary of the status of USTs on each parcel is included in Table 9, *UST Summary*. A brief summary of the historical land use of each parcel is included in Table 10, *Findings, Conclusions, and Recommendations*.

5.0 SITE RECONNAISSANCE

5.1 <u>Methodology and Limiting Conditions</u>

On May 25, 2010, a representative of Leighton Consulting, Ms. Meredith Church, a California licensed Professional Geologist, conducted a reconnaissance—level assessment of the Site. The Site reconnaissance consisted of the observation and documentation of existing Site conditions and neighboring property development within 0.25-miles of the Site. The Site reconnaissance was conducted from the property perimeter and public right-of-way areas. A ccess was not available for site inspections of the property and building interiors. Photographs of the Site are presented in Appendix B and their view directions are noted on Figure 2, *Site Plan*.

5.2 General Site Setting and Observations

The Site and general vicinity consists of light industrial/manufacturing, commercial, and residential properties, as well as transportation corridors. The Site elevation ranges from approximately 95 to 100 feet above mean sea level (msl) and is generally flat-lying and has a slight topographic gradient towards the southeast.

5.3 <u>Exterior and Interior Observations</u>

5.3.1 Hazardous Substances, Drums, and Other Chemical Containers

A small portable diesel generator, diesel AST, and several 55-gallon drums, likely filled with waste oil and car maintenance-related product, was observed on the eastern portion of Parcel 11 (Photo Nos. 11 and 12). Two large empty plastic ASTs were also observed on the southern portion of Parcel 11 (Photo No. 10).

Interior site inspections were not conducted; however, there is the potential that hazardous materials usage may be associated with the Sunrise Rent A Car on Parcel 1, Neutrogena Corporation on Parcel 7, A vis Rent A Car on Parcel 8, Dollar Rent A Car on Parcels 9 and 11, and Gourmet Logistics Company, a food transportation and distribution company, on Parcel 12. Barthco, located on Parcel 10, is a customs broker, special warehousing and storage, and freight forwarding services company and may also utilize hazardous materials onsite.

The remaining parcels are occupied by a restaurant, motel, and vacant land, and are unlikely to utilize significant quantities of hazardous materials beyond common janitorial and maintenance supplies in retail packaging.

5.3.2 Storage Tanks

A small portable diesel generator, diesel AST, and several 55-gallon drums, likely filled with waste oil and car maintenance-related product, was observed on the eastern portion of Parcel 11 (Photo Nos. 11 and 12). Two large empty plastic ASTs were also observed on the southern portion of Parcel 11 (Photo No. 10).

An AST that appeared to contain water for car washing purposes by Dollar Rent A Car was observed on Parcel 9, and it is likely that one or more clarifiers are located on the property (Photo Nos. 8 and 9). An AST also appeared to be located on the roof of the structure at Parcel 9, product unknown (Photo No. 8)

Parcel 1 appeared to be a former gasoline service station; however, no current tanks were observed on the property.

At least seven ASTs, product unknown, were observed to the south of Parcel 7 on the Neutrogena property (Photo No. 13).

5.3.3 Polychlorinated Biphenyls (PCBs)

PCBs were once used as industrial chemicals whose high stability contributed to both their commercial usefulness and their long-term deleterious environmental and health effects. PCBs can be present in coolants or lubricating oils used in older electrical transformers, hydraulic systems, and other similar equipment. In 1979, the USEPA generally prohibited the domestic use of PCBs in electrical capacitors, electrical transformers, vacuum pumps, hydraulic pumps, and gas turbines.

Several pole-mounted transformers were observed on the property and it is likely that pad-mounted transformers exist on several of the parcels that may contain PCBs. In addition, many of the buildings likely contain PCB containing building materials, such as fluorescent light tubes. There is also the potential for hydraulic hoists associated with the rental car companies if auto repair is conducted onsite.

5.3.4 Waste Disposal

Typical waste bins were observed on several of the parcels and is presumed to be associated with each parcel, with the exception of the vacant land on Parcels 4 and 5.

5.3.5 Dumping

Evidence of dumping was not observed onsite.

5.3.6 Pits, Ponds, Lagoons, Septic Systems, Wastewater, Drains, Cisterns, and Sumps

Evidence of pits, ponds, lagoons, septic systems, wastewater, drains, and cisterns and sumps was not observed onsite; however, a car wash was observed on Parcel 9 and it is likely that there are drains and/or clarifiers located onsite. There may also be drains located inside the structures that are likely connected to the sanitary sewer system.

5.3.7 <u>Pesticide Use</u>

Pesticides were not observed or reported on the Site.

5.3.8 Staining, Discolored Soils and/or Corrosion

Evidence of staining and discolored soils and/or corrosion was not observed onsite.

5.3.9 Stressed Vegetation

Stressed vegetation was not observed onsite.

5.3.10 Unusual Odors

Unusual odors were not detected onsite.

5.3.11 Onsite Wells

Oil, gas production, or groundwater monitoring wells were not observed on onsite; however, Geotracker indicates that four groundwater monitoring wells are

located on the northeast corner of Parcel 11. Numerous groundwater monitoring wells are also shown to be located on the adjacent property to the east.

5.3.12 Other Observations

No additional observations were noted for the Site.

6.0 INTERVIEWS

6.1 <u>Interviews with Owners</u>

Leighton Consulting did not interview property owners as part of this assessment.

6.2 <u>Interview with Site Property/Manager and Occupants</u>

Leighton Consulting did not interview tenants or property managers as part of this assessment.

6.3 <u>Interviews with Local Government Officials</u>

Leighton Consulting did not interview employees of local government agencies to request information regarding historic and current uses of the Site with the exception of those noted in Section 4.2.

6.4 <u>Interviews with Others</u>

Leighton Consulting did not conduct other interviews for this Phase I ESA.

7.0 FINDINGS

This investigation has identified historical and current, onsite and offsite facilities and/or property uses and related environmental issues that have the potential to affect the Site and to affect project construction activities. A list of the findings for each parcel is included in Table 10, *Findings*, *Conclusions*, and *Recommendations*.

7.1 Onsite

The following table summarizes RECs identified onsite that were considered to have a Moderate to High potential to adversely affect the Project. For additional information, see Table 10.

Parcel	Facility	Finding
ID	Name/Address	
8	Avis Rent A Car 5740 Arbor Vitae St Los Angeles	Constructed in 1954. Occupied by FMA Inc. from at least 1964 to 1972, an electronics business. Occupied by several other light industrial businesses. Building may currently be used for offices only; however, it may be used for auto repair. Eastern portion used for parking cars.
9	Dollar Rent A Car 5630 Arbor Vitae St Los Angeles	Constructed in 1958. Occupied by Bendix Computer Company at least in 1962 (manufacturing avionics, etc.) and Control Data Corporation (manufactured computers) from at least 1971 to 1986. Occupied by Dollar Rent-A-Car from at least 1991 to the present, including fuel dispensing, car wash, and auto repair.
10	Gourmet Logistics Co. 9432 Bellanca Ave Los Angeles	Constructed by at least 1956. Property uses largely unknown with the exception that it was formerly used by Western Federal Credit Union, and currently occupied by Barthco, a Customs Broker that also offers freight forwarding services. A UST is permitted to this site.

Parcel	Facility	Finding
ID	Name/Address	
11	Dollar Rent A Car 9310/9430 Bellanca Ave Los Angeles	Occupied by a number of light industrial facilities from at least 1953 to late 2000, including freight, printing, and sheet metal fabrication. King Delivery, Inc., located at the northeastern portion of the site had two fuel (gasoline and diesel) USTs removed in 1987 and a release to soil and groundwater was discovered. The historical UST database indicated this facility had four fuel USTs and the status of the additional two USTs is unknown. The LUST case is open and the 4th quarter 2008 monitoring report detected gasoline up to 110,000 micrograms per liter (ug/L) and benzene up to 18,000 ug/L. The plume has migrated offsite to the southeast and comingled with a chlorinated plume at the Hertz property located at 9225 Aviation Blvd. Currently, an SVE test system is proposed to address the deep contaminants from the former UST area and a series of injection wells are proposed with Regenox and ORC to be injected. DTG Operations, located at 9310 Bellanca Ave in the central portion of the property, had a service station permit in 2007 to store and dispense gasoline; however, the number, content, and status of the UST(s) is unknown at this time. In addition, Allan Jonas, located at 9320 Bellanca Ave, and Blanca Air Freight, located at 9326 Bellanca Ave, both in the central portion of the site, are listed as having historical USTs; however, the number, content, and status of the UST(s) are unknown at this time. The site is currently utilized by Dollar Rental Car, primarily for parking purposes, and all former structures have been removed from the site, with the exception of one small shed. There are outdoor areas used for storage, including several 55-gallon drums of waste oil and a diesel AST observed in the east-central portion of the site.
12	Gourmet Logistics Co. 9432 Bellanca Ave Los Angeles	Constructed in 1969 and occupied by Perfect Towel and Linen Supply Co. from at least 1969 to 1976. This facility washed sheets and towels and had a cooling tower for a dry cleaning solvent unit. Occupied by cargo/freight businesses from at least
		1980 to 1986. Flying Tiger Line, Inc. was listed on historical UST databases and the site was listed as inactive with no current USTs. GLC specializes in refrigeration and handling of perishable products and food transportation and distribution.

7.2 Offsite

The following table summarizes offsite locations that were identified to have releases that may have potentially migrated onto the Site. The primary affected media of concern is groundwater and soil vapor; although there is the potential for adjacent properties to have potentially affected the onsite soils as well. For additional information, see Table 4.

~Location	Facility Name/Address	Finding
Parcel 1. 0.13 miles west of Parcel 8.	Surprise Rent A Car 9204 Airport Blvd Los Angeles	Former gas station from 1954 to 1975 and used for car rental purposes from 1975 to the present. At least two fuel USTs have been removed from the site, and the status of a third UST is unknown. Listed on the EDR® Radius Report as a LUST site; however, Geotracker and the RWQCB did not have files for the site.
Parcel 7. Adjacent to west of Parcel 8	Neutrogena Corp 5800 Arbor Vitae St Los Angeles	Originally developed in approximately 1955. Occupied by the U.S. Air Force Contract Management Division and Employment Office from at least 1967 to 1971, and Space Technologies Laboratory from at least 1958 to 1961. Occupied by Northrop University from at least 1986 to 1990. A 2,000-gallon diesel UST was removed in 1993 and granted closure in 1997. Some residual contamination remained at 55 feet bgs; however, the case was granted closure in 1997.
Adjacent to east across railroad right-of-way	Honeywell International Corp. 9225 Aviation Blvd Los Angeles	Aerospace manufacturing facility. Release of high concentrations of VOCs to groundwater. The groundwater gradient has been reported to be towards the west.
Adjacent to south of Parcel 7	Neutrogena Corporation 5755 West 96 th Street Los Angeles	This facility has several USTs and is a large quantity generator of hazardous materials, including metals and solvents. There was not a documented release reported; however, there is the potential for these materials to exist on, or directly adjacent to Parcel 7.
0.02 miles north- northeast of Parcel 11	Princeland Properties/Aviation Inglewood LLC/Collins Trust 11237 Arbor Vitae Street & 9007- 9121 Aviation Blvd, Inglewood	Release of VOCs to groundwater.
0.06 miles north- northeast of Parcel 11	Harry's Airport Garage 9131 Aviation Boulevard Inglewood	Release of fuel related compounds to the groundwater.
0.3 miles northeast	Rho-Chem Corporation 425 Isis Avenue Inglewood	Extensive release of VOCs to groundwater and the extent of the plume is not well-defined.
0.4 miles north	Tosco 76 Station 8600 Aviation Boulevard Los Angeles	Release of high concentrations of fuel related compounds to the groundwater and the plume was not well defined.

7.3 <u>Data Gaps</u>

ASTM E1527-05 requires review of standard historical sources (SHS) at approximate five-year intervals from at least 1940 to the present, or the earliest development of the site. The availability of extensive historical information varies significantly between locations and it is common to have gaps in the data for one or more of the periods where historical property uses are unknown or uncertain. There is also a potential for unidentified uses to have occurred between data points, or prior to the earliest acquired data.

The earliest data acquired for the Site indicating past property usage was from 1924. There were intermittent gaps throughout the data collected, where historical property uses are unknown or uncertain. These data gaps where property use is unknown could be significant if a REC was associated with one of these gaps; however, reasonably ascertainable information has been reviewed and data gaps cannot be wholly eliminated from a project of this size. Existing data gaps include the following:

- Owner and tenant interviews were not conducted on any of the parcels. Owners and tenants may have additional information as to the status of USTs, location of hazardous materials use and storage areas, prior environmental reports, etc.
- Site inspections were conducted from the property border and public right-of-ways. Interior site inspections were not conducted, and such inspections would assist in identifying locations where hazardous materials are use and stored, and the location of possible underground features such as drains, USTs, and/or clarifiers.
- Building permits were not reviewed as part of this assessment. B ased on files
 reviewed from other agencies and the amount of historical information reviewed, this
 data gap has a low potential to alter the conclusions or recommendations of this
 report.
- Evidence of environmental liens, or activity and land use limitations were not reviewed. It is the responsibility of the User to verify the status of environmental liens, or activity and use limitations in order to qualify for CERCLA landowner liability protections.

8.0 OPINION

8.1 Onsite

It is Leighton Consulting's opinion that RECs have been identified onsite as stated in Section 7.1, and that a comprehensive Phase II ESA program should be initiated prior to property purchase to address the identified RECs. It is also Leighton Consulting's opinion that a CERCLA compliant Phase I ESA, that is conducted within 6 months of property purchase, be conducted in order to be eligible for CERCLA liability protections, and that interior site inspections and owner/tenant interviews be conducted at this time, as well as a review for environmental liens.

8.2 Offsite

It is Leighton Consulting's opinion that this assessment has identified offsite areas of potential environmental concern that have a potential to impact the subject property, as identified in Section 7.2 that warrant further investigation prior to property purchase.

9.0 CONCLUSIONS AND RECOMMENDATIONS

Leighton Consulting has performed a Phase I ESA in accordance with the scope and limitations of ASTM Practice E1527-05 of the Crenshaw/LAX LRT Maintenance Facility, Site 14, located at Arbor Vitae Street and Bellanca Avenue in the City of Los Angeles, California. Exceptions to, or deletions from this practice are described in Section 1.5 of this report.

Leighton Consulting concludes that the onsite and offsite findings listed in Section 7.1 constitute RECs and makes the following recommendations to address the RECs:

- <u>Site Specific Phase II ESA</u> Phase II ESAs, including soil, soil vapor sampling, and geophysical surveys for areas where the status of USTs is unknown, are recommended at the following locations to address identified RECs (current business names listed):
 - o Parcel 8, Avis Rent A Car, 5740 Arbor Vitae Street, Los Angeles
 - o Parcel 9, Dollar Rent A Car, 5630 Arbor Vitae Street, Los Angeles
 - o Parcel 10, Gourmet Logistics Company, 9432 Bellanca Avenue, Los Angeles
 - o Parcel 11, Dollar Rent A Car, 9310 and 9340 Bellanca Avenue, Los Angeles
 - o Parcel 12, Gourmet Logistics Company, 9432 Bellanca Avenue, Los Angeles

Based on numerous onsite and offsite sources releases of petroleum hydrocarbons and VOCs to groundwater, Leighton recommends that a Site wide soil vapor survey be conducted, particularly in areas where onsite structures are planned. Groundwater is generally located approximately 90 to 150 feet bgs and would not be anticipated to be encountered during construction activities; however, based on the results of the soil sampling, it may be necessary to sample groundwater as well. There is the potential for impacts to groundwater from both onsite and offsite sources.

- <u>UST Removal</u> Existing USTs should be removed from the Site according to LAFD regulations, prior to Site redevelopment. In addition, subsurface clarifiers or hoists should be removed appropriately and confirmation soil sampling should be conducted beneath the removed features.
- <u>Parcel 11 G roundwater Remediation</u>: There is an open LUST case on Parcel 11 with groundwater remediation currently being conducted. Leighton Consulting recommends that the groundwater remediation continue under the guidance of the RWQCB until closure is granted.

In addition, Leighton makes the following general recommendations:

- <u>Hazardous Building Materials Surveys</u> Surveys for asbestos containing building materials, lead-based paint, and miscellaneous toxic material surveys should be conducted on buildings that will be demolished in association with Project construction, particularly in buildings constructed before the mid-1980s.
- <u>Hazardous Material and Debris Removal</u> Hazardous materials and waste were observed at several business locations that appeared to be stored appropriately. Tenants or owners should remove and/or dispose of these materials appropriately when their lease is terminated or their property is acquired. Hazardous materials, drums, and debris left by tenants/owners should be disposed of in accordance with regulatory guidelines prior to construction.
- Soil Mitigation Plan (SMP) A SMP should be prepared after Project construction plans are available that describe the engineering and geotechnical earthwork requirements, including the lateral and vertical extent of soil removals/recompaction. The soil mitigation plan should establish soil screening, sampling, stockpiling, reuse, disposal, and import soil screening criteria. The soil mitigation plan should also discuss SCAQMD permits and requirements, and present methods for controlling fugitive dust and VOC emissions. Soil screening should be performed using visual observation, and photo-ionization detectors (PIDs) for VOCs during grading or excavation activities. Soils that are suspected of contamination based on field observations and PID readings are recommended to be segregated, stockpiled, and sampled for analysis for suspected chemicals by a California certified laboratory. Contaminated soil that does not meet the reuse criteria should be removed, transported, and disposed at an approved disposal location or recycling facility in accordance with state and federal laws.
- Health and Safety Plan (HSP) A site-specific HSP should be developed for persons with potential exposure to the constituents of concern identified in the recommended Phase II ESA. Perched groundwater has been reported as shallow as 45 feet bgs within the vicinity of the Site. Due to prevalent groundwater contamination in the Project area, a construction Health and Safety Plan (HSP) should address proper handling procedures if groundwater is expected to be encountered. In addition, if dewatering will be required, groundwater sampling and analysis should be conducted prior to dewatering and/or disposal activities. Contaminated groundwater, if identified, could be transported to an appropriate water treatment facility, or could be treated on-site prior to discharge to the municipal sewer system or storm drain under an approved National Pollutant Discharge Elimination System (NPDES) permit.

- <u>Construction Observations</u> In general, observations should be made during future development activities for features of concern or areas of possible contamination such as, but not limited to, the presence of underground facilities, buried debris, waste drums, tanks, soil staining or odorous soils. Further investigation and analysis may be necessary, should such materials be encountered.
- Additional Due Diligence Activities For properties purchased for this Project, Leighton
 Consulting recommends that a CERCLA compliant Phase I ESA that is conducted within 6
 months of property purchase be conducted in order to be eligible for CERCLA liability
 protections, and that interior site inspections and owner/tenant interviews be conducted at
 this time, as well as a review for environmental liens.

10.0 DEVIATIONS

Leighton Consulting did not deviate from or alter the scope of work, as defined in Section 1.3 of this report.

11.0 ADDITIONAL SERVICES

Leighton Consulting did not perform work outside the scope of work as defined in Section 1.3 of this report.

12.0 QUALIFICATIONS OF ENVIRONMENTAL PROFESSIONALS

12.1 <u>Corporate</u>

Leighton Consulting, Inc. is a California corporation, providing geotechnical and environmental consulting services throughout California. We are solely a consulting firm without interests in real property other than our eight offices in Southern California. We provide professional environmental consulting services including application of science and engineering to environmental compliance, hazardous materials/waste assessment and cleanup, and management of hazardous, solid, and industrial waste. P hase I Environmental Site Assessments are a part of this practice area and have been conducted by us.

12.2 Individual

The qualifications of the Project Manager and the other Leighton Consulting environmental professionals involved in this Phase I ESA meet the Leighton corporate requirements for performing Phase I ESAs as specified by ASTM E1527-05. In addition, Ms. Meredith Church is a Registered Professional Geologist.

12.3 <u>Environmental Professional Statement</u>

I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined by §312.10 of 40 CFR Part 312.

I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Site. I have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Meredill Church

Project Geologist
