CHAPTER 1 INTRODUCTION

1.1 PROJECT OVERVIEW

The Los Angeles County Metropolitan Transportation Authority (Metro) is preparing a Draft Environmental Impact Report (EIR) for the K Line Northern Extension Transit Corridor Project (the Project) (Figure 2-1). The Project would provide a northern extension of the Metro light rail transit (LRT) K Line from the Metro E Line (Expo) to the Metro D Line (Purple) and B Line (Red) heavy rail transit lines. The Project would serve as a critical regional connection, linking the South Bay, the Los Angeles International Airport (LAX) area, South Los Angeles, Inglewood, and Crenshaw corridor to Mid-City, Central Los Angeles, West Hollywood, and Hollywood, allowing for further connections to points north in the San Fernando Valley via the Metro B Line. The Project would also connect major activity centers and areas of high population and employment density.

1.2 TECHNICAL REPORT SUMMARY

This technical report evaluates the Project's environmental impacts as they relate to cultural, archaeological, and paleontological resources. It describes existing conditions, the current applicable regulatory setting, potential impacts from construction and operation of the alignment alternatives, stations, design option, and maintenance and storage facility (MSF), as well as mitigation measures where applicable. This technical report was conducted in compliance with the California Environmental Quality Act (CEQA) (Sections 21000 et seq.) and the CEQA Guidelines (Section 15000 et seq.), which require state and local agencies to identify the significant environmental impacts of their actions, including significant impacts associated with cultural, archaeological, and paleontological resources, and to avoid or mitigate those impacts, when feasible.

The technical report is organized into eight chapters:

- Chapter 1 – Introduction, provides an overview of the Project and a summary of the technical report's contents.
- Chapter 2 – Project Description, provides a description of the Project's alignment alternatives, stations, design option, and MSF. This section also describes the construction approach for the Project.
- Chapter 3 – Regulatory Framework, discusses applicable federal, state, and local regulatory requirements, including plans and policies relevant to Project jurisdictions.
- Chapter 4 – Methodology and Significance Thresholds, describes the analysis methodologies applied for this Project and provides a summary of CEQA significance thresholds adopted by state and local jurisdictions.
- Chapter 5 – Existing Setting, describes the existing conditions as relevant to the Project's alignment alternatives, stations, design option, and MSF.
- Chapter 6 – Impacts and Mitigation Measures, discusses the impact analyses conducted for the Project's alignment alternatives, stations, design option, and MSF, and discusses

applicable mitigation measures. It also discusses any project measures that would be implemented as part of design and construction of the Project.

- Chapter 7 – Cumulative Impacts, discusses the cumulative impacts for the Project's alignment alternatives, stations, design option, and MSF.
- Chapter 8 – References, lists the references used to prepare this technical report.

CHAPTER 2 PROJECT DESCRIPTION

This section provides information pertinent to the components of the Project as evaluated in the technical report. The Project components for evaluation in this technical report include three light rail alignment alternatives with stations, one design option, and one MSF.

2.1 ALIGNMENT ALTERNATIVES

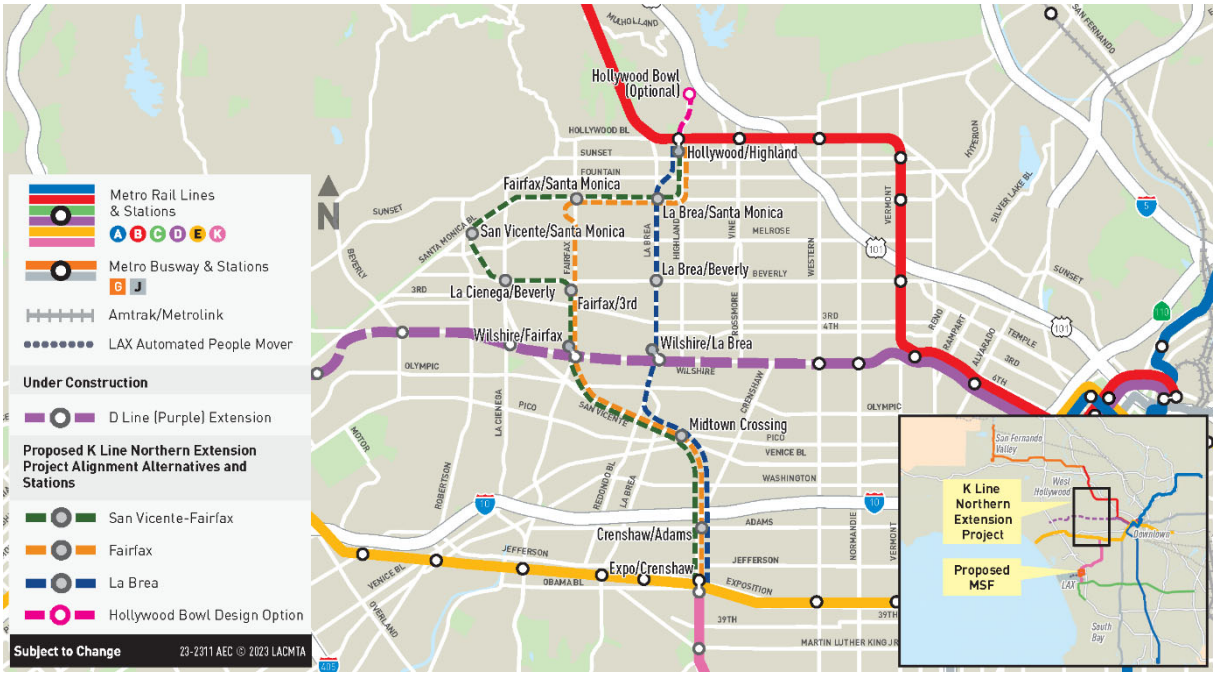

As shown in Figure 2-1, each of the three alignment alternatives would provide a northern extension of the Metro K Line from its current terminus at the Expo/Crenshaw Station to the Metro B Line Hollywood/Highland Station. All three alignment alternatives would operate entirely underground in parallel twin-bore tunnels with some station elements at the surface, including the station entrance and ventilation structures. Due to the project length and pending funding availability, the alignment alternatives would be constructed sequentially in sections.

The alignment alternatives are as follows:

- Alignment Alternative 1: San Vicente–Fairfax. This alignment alternative would travel north from the existing Metro K Line Expo/Crenshaw Station before heading northwest under San Vicente Boulevard, with a connection to the future Metro D Line Wilshire/Fairfax Station. It would continue north under Fairfax Avenue before turning west under Beverly Boulevard to rejoin San Vicente Boulevard. The alignment would then turn east under Santa Monica Boulevard, and then turn north just east of La Brea Avenue to follow Highland Avenue north to connect to the Metro B Line at the Hollywood/Highland Station.
- Alignment Alternative 2: Fairfax. This alignment alternative would travel north from the existing Metro K Line Expo/Crenshaw Station before heading northwest under San Vicente Boulevard and north under Fairfax Avenue, where it would connect with the future Metro D Line Wilshire/Fairfax Station. It would continue north under Fairfax Avenue and turn east under Santa Monica Boulevard. The alignment would then turn north just east of La Brea Avenue to follow Highland Avenue north to connect to the Metro B Line at the Hollywood/Highland Station.
- Alignment Alternative 3: La Brea. This alignment alternative would travel north from the existing Metro K Line Expo/Crenshaw Station before heading northwest under San Vicente Boulevard and north under La Brea Avenue, where it would connect with the future Metro D Line Wilshire/La Brea Station. From there, it would continue north under La Brea Avenue and turn northeast north of Fountain Avenue to follow Highland Avenue to connect with the Metro B Line at the Hollywood/Highland Station.

Table 2-1 provides a summary of the characteristics of each of the alignment alternatives and Table 2-2 identifies which stations would be constructed under each alignment alternative. In total, 12 station areas are identified, including the option to extend to the Hollywood Bowl.

2.2 HOLLYWOOD BOWL DESIGN OPTION

For every alignment alternative, there is one design option under consideration. The Hollywood Bowl Design Option includes an alternate terminus station at the Hollywood Bowl, north of the proposed Hollywood/Highland Station, as shown in Figure 2-2.

FIGURE 2-2. HOLLYWOOD BOWL DESIGN OPTION

Source: Connect Los Angeles Partners 2023

2.3 MAINTENANCE AND STORAGE FACILITY

An MSF would be constructed that would expand the Division 16 Maintenance Yard (Division 16), the existing MSF for the Metro K Line near LAX, as shown in Figure 2-3. The MSF would provide equipment and facilities to accommodate daily servicing and cleaning, inspection and repairs, and storage of light rail vehicles that are not in service. The MSF would be the primary physical employment center for rail operation employees, including train operators, maintenance workers, supervisors, administrators, security personnel, and other roles. If the Project is opened in sections, operation of the extended K Line from the Expo/Crenshaw Station to the Metro D Line could be accommodated within the existing Division 16 site with four new storage tracks.

FIGURE 2-3. MAINTENANCE AND STORAGE FACILITY

Source: Connect Los Angeles Partners 2023

2.4 CONSTRUCTION APPROACH

The Project would be constructed in sections that would be built sequentially, depending on available funding. The development of the Project would employ conventional construction methods, techniques, and equipment similar to other Metro projects that require underground tunneling. Detailed information on construction techniques can be found in the KNE Construction Approach Report.. Major construction activities for the Project include surveys and pre-construction, which consist of local business surveys, building and utility assessments, and site preparations; right-of-way acquisition; tunnel construction, including tunnel boring machine (TBM) excavation and segmental lining and installation; utility relocation and installation work; station, crossover, and connection box construction; MSF construction, including site grading, maintenance building construction, and storage and access track construction; street restorations, including paving and sidewalks; ventilation and emergency egress construction; systems installation and facilities, including trackbed, rail, overhead contact system, conduit, electrical substation, and communications and signaling construction; and construction of other ancillary facilities.

The tunnels would be bored with TBMs, and the stations and track crossover boxes would be constructed via cut-and-cover methods, which entail excavating down from the ground surface and stabilizing the ground with an excavation support, then placing temporary decking surfaces above the excavation and conducting all excavation inside the supported area. The tunnel and station associated with the Hollywood Bowl Design Option would be constructed by sequential excavation method (SEM), which entails conventional mining techniques and equipment for hard rock excavation, which would reduce surface impacts.

Construction staging areas have been identified at each of the station locations, both of which are described and illustrated in Appendix A of the KNE Construction Approach Report. In order to construct a station, a minimum of one to two acres of construction staging sites would be needed for the duration of the station construction period. A larger construction staging site of three to four acres would be required if the site is also used to launch the TBMs and support tunneling activities. The TBM launch sites have been identified at the Midtown Crossing, San Vicente/Santa Monica, and La Brea/Santa Monica Stations. Temporary street, lane, sidewalk and bike lane closures as well as street reconfigurations will be part of construction activities. Construction and operational impacts on cultural, archaeological, and paleontological resources are identified and discussed in this technical report.

CHAPTER 3 REGULATORY FRAMEWORK

3.1 CULTURAL RESOURCES

The following are relevant federal, state, and local laws, regulations, and ordinances pertaining to cultural resources.

3.1.1 FEDERAL REGULATIONS

3.1.1.1 NATIONAL HISTORIC PRESERVATION ACT

The National Historic Preservation Act (NHPA) (54 United States Code [USC] 300101 et seq.) establishes a program for the preservation of historic properties throughout the United States and provides a framework for identifying and treating historical and archaeological resources under CEQA. Section 106 of the NHPA (54 USC 306108) and its implementing regulations (36 Code of Federal Regulations [CFR] Part 800) requires that federal projects or projects under federal jurisdiction consider the effects of an undertaking on historic properties, defined as those eligible for or included in the National Register of Historic Places (NRHP). Historic properties that are listed in or eligible for the NRHP are considered historical resources for the purposes of CEQA.

3.1.1.2 NATIONAL REGISTER OF HISTORIC PLACES

The NHPA establishes the NRHP, which is "an authoritative guide to be used by federal, state, and local governments, private groups and citizens to identify the nation's cultural resources and to indicate what properties should be considered for protection from destruction or impairment" (36 CFR 60.2). To be eligible for listing in the NRHP, a property must be at least 50 years old (or have reached 50 years old by the project completion date) and possess significance in American history and culture, architecture, or archaeology to meet one or more of four established criteria (36 CFR 60.4):

- Criterion A. Associated with events that have made a significant contribution to the broad patterns of our history;
- Criterion B. Associated with the lives of persons significant in our past;
- Criterion C. Embodies the distinctive characteristics of a type, period, or method of construction, or that represent the work of a master, or that possess high artistic values, or that represent a significant and distinguishable entity whose components may lack individual distinction; and/or
- Criterion D. Has yielded, or may be likely to yield, information important in prehistory or history.

Historic resources eligible for listing in the NRHP are considered "historic properties" and may include buildings, sites, structures, objects, and historic districts. Properties less than 50 years of age may be eligible under NRHP Criteria Consideration G if it can be demonstrated that sufficient time has passed to understand its historic importance (National Register Bulletin 15, page 43). To be eligible for listing in the NRHP, a property must also have integrity, which is defined as "the ability of a property to

convey its significance." The NRHP recognizes seven aspects or qualities that, in various combinations, define integrity: feeling, association, workmanship, location, design, setting, and materials (National Register Bulletin 15, pages 44–45).

The Section 106 implementing regulations include a provision for early and effective communication with interested parties, including Native American tribes. Under provision 36 CFR 800.2(c)(2)(ii)(A) the lead agency is responsible for contacting local Native American representatives and informing them of the project's intent and nature. The Native American representative is then provided "a reasonable opportunity to identify its concerns about historic properties; advise on the identification and evaluation of historic properties, including those of traditional religious and cultural importance; articulate its views on the undertaking's effects on such properties; and participate in the resolution of adverse effects."

3.1.2 STATE REGULATIONS

3.1.2.1 CALIFORNIA ENVIRONMENTAL QUALITY ACT

CEQA (California Public Resources Code [PRC] Sections 21000 et seq.) is intended to prevent significant impacts to the environment by evaluating feasible alternatives or mitigation measures for those impacts. If cultural resources are identified within the vicinity of the Project, the sponsoring agency must take those resources into consideration when evaluating project effects. The level of consideration may vary with the importance of the cultural resource.

The CEQA Guidelines (Title 14, CCR, Sections 15000 et seq.,) are administrative regulations governing implementation of the CEQA and reflect the requirements set forth in the PRC. The CEQA Guidelines (Title 14, California Code of Regulations [CCR] Section 15064.5(a)) define a "historical resource" as the following:

- California properties formally determined eligible for, or listed in, the California Register of Historical Resources (CRHR).
- Those resources included in a local register of historical resources, as defined in Section 5020.1(k) of the PRC, or identified as significant in a historical resources survey meeting the requirements of Section 5024.1(g) of the PRC.
- Those resources that a lead agency determines to be historically significant provided the determination is based on substantial evidence.

Resources not listed in or previously determined eligible for listing in the state or local registers but determined by a lead agency as historical resources as defined in PRC Sections 5020.1(j) or 5024.1.

CEQA also requires lead agencies to consider whether a project will have an impact to "unique archaeological resources." PRC Section 21083.2(g) defines a unique archaeological resource as "an archaeological artifact, object, or site about which it can be clearly demonstrated that, without merely

adding to the current body of knowledge, there is a high probability that it meets any of the following criteria:

- Contains information needed to answer important scientific research questions and that there is a demonstrable public interest in that information.
- Has a special and particular quality, such as being the oldest of its type or the best available example of its type.
- Is directly associated with a scientifically recognized important prehistoric or historic event or person."

3.1.2.2 CALIFORNIA REGISTER OF HISTORICAL RESOURCES

The CRHR was designed to be used by state and local agencies, private groups, and citizens to identify existing historical resources within the state and to indicate which of those resources should be protected, to the extent prudent and feasible, from substantial adverse change. The CRHR consists of properties that are listed automatically as well as those that must be nominated through an application and public hearing process. Properties eligible for listing in the CRHR may include buildings, sites, structures, objects, and historic districts. It is possible that properties may not retain sufficient integrity to meet the criteria for listing in the NRHP, but they may still be eligible for listing in the CRHR. An altered property may still have sufficient integrity for the CRHR if it maintains the potential to yield significant scientific or historical information or specific data (CCR Section 4852 (c)). To be eligible for listing in the CRHR, a property must be at least 45 years of age and possess significance at the local, state, or national level, under one or more of the following four criteria:

1. Associated with events that have made a significant contribution to the broad patterns of local or regional history, or the cultural heritage of California or the United States;
2. Associated with the lives of persons important to local, California, or national history;
3. Embodies the distinctive characteristics of a type, period, or method of construction or represents the work of a master, or possesses high artistic values; and/or
4. Has yielded, or has the potential to yield, information important in the prehistory or history of the local area, California, or the nation.

A resource less than 45 years of age may be eligible if it can be demonstrated that sufficient time has passed to understand its historic importance. While the enabling legislation for the CRHR is less rigorous than the NRHP with regard to the issue of integrity, there is the expectation that properties reflect their appearance during their period of significance (PRC Section 4852).

3.1.2.3 CALIFORNIA PUBLIC RESOURCES CODE

Archaeological and historical sites are protected pursuant to policies and regulations enumerated under the PRC. PRC Sections 5020–5029.5 redefine the former Historical Landmarks Advisory Committee as the State Historical Resources Commission. PRC Sections 5079–5079.65 define the functions and duties of the Office of Historic Preservation (OHP). The OHP is responsible for the administration of federally and state-mandated historic preservation programs in California and the

California Heritage Fund. PRC Sections 5097.9–5097.991 provide protection to Native American historical and cultural resources and sacred sites and identify the powers and duties of the Native American Heritage Commission (NAHC). It also requires notification to descendants of discoveries of Native American human remains and provides for treatment and disposition of human remains and associated grave goods. PRC Section 21083.2(g) protects archaeological resources. PRC Sections 21083.2(b) and 21083.2(c) and CEQA Guidelines Section 15126.4 provide information regarding the mitigation framework for archaeological and historic resources, including examples of preservation-in-place mitigation measures. Preservation in place is the preferred manner of mitigating impacts to significant archaeological sites because it maintains the relationship between artifacts and the archaeological context and may also help avoid conflict with religious or cultural values of groups associated with the archaeological site(s).

3.1.2.4 HEALTH AND SAFETY CODE SECTION 7052 AND 7050.5

Section 7052 of the California Health and Safety Code states that the disturbance of human remains is a felony. Section 7050.5 requires that construction or excavation be stopped in the vicinity of discovered human remains until the coroner can determine whether the remains are those of a Native American. If the remains are determined to be Native American, the coroner must contact the California NAHC.

California Health and Safety Code Section 7050.5 requires that, in the event of discovery or recognition of any human remains in any location other than a dedicated cemetery, there shall be no further excavation or disturbance of the site or any nearby area reasonably suspected to overlie adjacent remains until the coroner of the county in which the human remains are discovered has determined that the remains are not subject to the provisions of Section 27491 of the California Government Code or any other related provisions of law concerning investigation of the circumstances, manner, and cause of any death. If the coroner determines that the remains are not subject to his or her authority and if the coroner recognizes the human remains to be those of a Native American or has reason to believe that they are those of a Native American, he or she shall contact, by telephone within 24 hours, the NAHC. The NAHC shall identify the most likely descendant (MLD), who shall be consulted regarding treatment or repatriation of the remains.

3.1.2.5 CALIFORNIA NATIVE AMERICAN HISTORICAL, CULTURAL, AND SACRED SITES ACT

The California Native American Historical, Cultural, and Sacred Sites Act applies to both state and private lands. This law requires that if human remains are discovered, construction or excavation activity must cease, and the county coroner must be notified. If the remains are of a Native American, the coroner must notify the NAHC. The NAHC then notifies those persons most likely to be descended from the Native American whose remains were discovered (i.e., the MLD). The California Native American Historical, Cultural, and Sacred Sites Act stipulates the procedures the descendants may follow for treating or disposing of the remains and associated grave goods.

3.1.3 LOCAL REGULATIONS

3.1.3.1 COUNTY OF LOS ANGELES

The Historic Preservation Ordinance establishes a local register and a Historical Landmarks and Records Commission (HLRC) to oversee the enforcement of preservation policies that relate to planning, demolition, alteration, and new construction. Actions to resources that are locally registered or eligible for registration are reviewed by the HLRC for appropriateness.

3.1.3.2 CITY OF LOS ANGELES

CITY OF LOS ANGELES ENVIRONMENTAL QUALITY ACT GUIDELINES

The City of Los Angeles Environmental Quality Act Guidelines (1981, amended July 31, 2002) contains three articles. Article I declares that, in 2002, the city adopted the state CEQA Guidelines, contained in Title 14, CCR, Sections 15000 et seq., and incorporates all future amendments and additions to those guidelines as may be adopted by the state. Article II defines the activities by city agencies that are exempt from the requirements of CEQA. Article III defines the categorical exemptions, which are organized by classes of projects that have been determined not to have a significant effect on the environment and are therefore exempt from the provisions of CEQA.

CITY OF LOS ANGELES, ADMINISTRATIVE CODE, DIVISION 22, CHAPTER 9, ARTICLE 1 (ORDINANCE NO. 178402), 1962

Ordinance No. 178402 established the Cultural Heritage Commission to identify and protect architectural, historical, and cultural buildings, structures, and sites that are important to the city's history and cultural heritage. The Cultural Heritage Commission oversees the designation and protection of Los Angeles Historic-Cultural Monuments (LAHCMs), which are defined as any site (including significant trees or other plant life located on site), building, or structure of particular historic or cultural significance to the city, including historic structures or sites, that:

- Reflect or exemplify the broad cultural, political, economic, or social history of the nation, state, or community; or
- are identified with historic personages or important events in the main currents of national, state, or local history; or
- embody the distinguishing characteristics of an architectural-type specimen, are inherently valuable for a study of a period, style, or method of construction; or
- are notable works of a master builder, designer, or architect whose individual genius influenced his or her age.

Ordinance No. 185472 amended Section 22.171 of Article 1, Chapter 9, Division 22 of the Los Angeles Administrative Code to clarify LAHCM designation criteria, enhance due process and notification procedures affecting property owners, and provide for extensions of time limits.

CITY OF LOS ANGELES, MUNICIPAL CODE, CHAPTER I, ARTICLE 2, SECTION 12.20.3 (ORDINANCE NO. 175891), 1979 (AMENDED 2004)

Ordinance No. 175891 contains procedures for the designation and protection of new Historic Preservation Overlay Zones (HPOZs) for any area of the city with buildings, structures, landscaping, natural features, or lots having historic, architectural, cultural, or aesthetic significance. The ordinance describes the powers and duties of HPOZ boards and the review processes for projects within HPOZs. The City Department of Planning establishes and administers HPOZs in concert with the city council.

CITY OF LOS ANGELES, GENERAL PLAN, CONSERVATION ELEMENT, 2001

The Conservation Element contains the following objectives pertaining to the protection of the archaeological, paleontological, cultural, and historic resources in the city:

- Protect the city's archaeological and paleontological resources for historical, cultural, research and/or educational purposes.
- Protect important cultural and historical sites and resources for historical, cultural, research, and community educational purposes.

The identification and protection of significant archaeological and paleontological sites and/or resources known to exist or identified during land development, demolition, or property modification activities is to be achieved through the establishment of permit processing, monitoring, enforcement, and periodic revision of regulations and procedures by the departments of Building and Safety, City Planning, and Cultural Affairs (City Planning Commission 2001).

3.2 PALEONTOLOGICAL RESOURCES

The following section summarizes the applicable state and local laws and regulations pertaining to paleontological resources, as well as professional standards provided by the Society of Vertebrate Paleontology (SVP 2010).

3.2.1 FEDERAL REGULATIONS

There are no federal regulations applicable to this Project regarding paleontological resources.

3.2.2 STATE REGULATIONS

3.2.2.1 CALIFORNIA ENVIRONMENTAL QUALITY ACT

CEQA (PRC Sections 21000–21177) is intended to prevent significant avoidable impacts to the environment by requiring feasible alternatives or mitigation measures.

CEQA Guidelines (Appendix G) include consideration of paleontological resources as part of the analysis of geology and soils by stating the question of whether or not a project would "directly or indirectly destroy a unique paleontological resource or site or unique geologic feature." Treatment of paleontological resources under CEQA is generally similar to treatment of cultural resources, requiring evaluation of resources, assessment of potential impacts on significant or unique resources, and

development of mitigation measures for potentially significant impacts, which may include monitoring combined with data recovery and/or avoidance.

3.2.2.2 PUBLIC RESOURCES CODE SECTION 5097.5 AND SECTION 30244

PRC Section 5097.5 and 30244 prohibit the removal of any paleontological site or feature from public lands without permission of the jurisdiction agency, define the removal of paleontological sites or features as a misdemeanor, and require reasonable mitigation of adverse impacts to paleontological resources from development on public (state, county, city, district) lands.

3.2.3 LOCAL REGULATIONS

3.2.3.1 CITY OF LOS ANGELES GENERAL PLAN

The Conservation Element of the City of Los Angeles General Plan recognizes paleontological resources in Section 3: "Archaeological and Paleontological" (II-3), and identifies protection of paleontological resources as an objective (II-5), stating: "Pursuant to CEQA, if a land development project is within a potentially significant paleontological area, the developer is required to contact a bona fide paleontologist to arrange for assessment of the potentially impact and mitigation of potential disruption of or damage to the site. If significant paleontological resources are uncovered during project excavation, authorities are to be notified and the designated paleontologist may order excavations stopped, within reasonable time limits, to enable assessment, removal, or protection of the resources" (City of Los Angeles, 2001).

3.2.4 SOCIETY OF VERTEBRATE PALEONTOLOGY STANDARDS

The SVP has established standard guidelines (SVP 1995, 2010) that outline professional protocols and practices for conducting paleontological resource assessments and surveys; monitoring and mitigation; data and fossil recovery; sampling procedures; and specimen preparation, identification, analysis, and curation. State regulatory agencies with paleontological regulations and standards typically accept and use the professional standards set forth by the SVP.

The SVP (2010) defines significant paleontological resources as:

> Fossils and fossiliferous deposits, here defined as consisting of identifiable vertebrate fossils, large or small, uncommon invertebrate, plant, and trace fossils, and other data that provide taphonomic, taxonomic, phylogenetic, paleoecologic, stratigraphic, and/or biochronologic information. Paleontological resources are considered to be older than recorded human history and/or older than middle Holocene (i.e., older than about 5,000 radiocarbon years).

Thus, any identifiable vertebrate fossil is considered significant.

Paleontological potential is the potential for the presence of significant paleontological resources. All sedimentary rocks, some volcanic rocks, and some low-grade metamorphic rocks have potential to yield significant paleontological resources. Paleontological potential is determined only after a field survey of a rock unit in conjunction with a review of available literature and relevant paleontological

locality records from the entire rock unit. In its "Standard Procedures for the Assessment and Mitigation of Adverse Impacts to Paleontological Resources," the SVP (2010) defines four categories of paleontological potential for rock units to contain significant paleontological resources:

- High Potential – Rock units from which vertebrate or significant invertebrate, plant, or trace fossils have been recovered are considered to have a high potential for containing additional significant paleontological resources. These units include, but are not limited to, sedimentary formations and some volcaniclastic (e.g., ashes or tephras) formations, and some low-grade metamorphic rocks which contain significant paleontological resources anywhere within their geographical extent, and sedimentary rock units temporally or lithologically suitable for the preservation of fossils (e.g., middle Holocene and older, fine-grained fluvial sandstones, argillaceous and carbonate-rich paleosols [ancient soils], cross-bedded point bar sandstone, etc.). Paleontological potential comprises both (a) the potential for yielding abundant or significant vertebrate fossils or for yielding a few significant fossils, large or small, vertebrate, invertebrate, plant, or trace fossils, and (b) the importance of recovered evidence for new and significant taxonomic, phylogenetic, paleoecologic, taphonomic, biochronologic, or stratigraphic data. Rock units which contain potentially datable organic remains older than late Holocene, including deposits associated with animal nests or middens, and rock units which may contain new vertebrate deposits, traces, or trackways are also classified as having high potential.
- Undetermined Potential –Rock units for which little information is available concerning their paleontological content, geologic age, and depositional environment are considered to have undetermined potential. Further study is necessary to determine if these rock units have high or low potential to contain significant paleontological resources. A field survey by a qualified professional paleontologist to specifically determine the paleontological resource potential of these rock units is required before a paleontological resource impact mitigation program can be developed. In cases where no subsurface data are available, paleontological potential can sometimes be determined by strategically located excavations into subsurface stratigraphy.
- Low Potential – Reports in the paleontological literature or field surveys by a qualified vertebrate paleontologist may allow determination that some rock units have low potentials for yielding significant fossils. Such rock units will be poorly represented by specimens in institutional collections, or based on the general scientific consensus only preserve fossils in rare circumstances and the presence of fossils is the exception not the rule, (e.g., basalt flows or Recent colluvium).
- No Potential – Some rock units have no potential to contain significant paleontological resources, for instance high-grade metamorphic rocks (such as gneisses and schists) and plutonic igneous rocks (such as granites and diorites).

In general terms, for geologic units with high or undetermined potential, an adequate program for mitigating the impact of development is implemented and may include measures such as intensive field survey and surface salvage prior to earth moving, monitoring by a qualified paleontological resource monitor, salvage of 3-4 unearthed fossil remains, screen washing to recover small specimens, preparation of salvaged fossils to a point of being ready for curation, appropriate curation and

provision for repository storage of prepared fossil specimens, and final reporting. For geologic units with low potential, protection or salvage efforts typically are not required. Rock units with no potential require no protection nor impact mitigation measures relative to paleontological resources.

SVP (2010) summarizes the difference between archaeological and paleontological resources and their assessments:

> It is important to distinguish between archaeological and paleontological resources when discussing the paleontological potential of rock units. The boundaries of an archaeological resource site define the areal/geographic extent of an archaeological resource, which is generally independent from the rock unit on which it sits. However, paleontological sites indicate that the containing rock unit or formation is fossiliferous. Therefore, the limits of the entire rock unit, both areal and stratigraphic, define the extent of the paleontological potential.

CHAPTER 4 METHODOLOGY AND SIGNIFICANCE THRESHOLDS

4.1 METHODOLOGY

The purpose of this assessment is to evaluate the Project against thresholds of significance as the basis for determining the level of impacts related to cultural and paleontological resources.

4.1.1 CULTURAL RESOURCES

The methodology used to assess potential impacts on cultural resources, specifically historical resources, archaeological resources, and human remains, included delineation of the Resource Study Area (RSA) as discussed in Section 5.2; consultation with various interested parties; and identification of cultural resources through archival research and a targeted field survey.

4.1.1.1 INTERESTED PARTY CONSULTATION

Metro will seek information, as appropriate, from individuals and organizations likely to have knowledge of or concerns about cultural resources in the vicinity of the Project to identify issues related to potential impacts on historical and archaeological resources. Letters were sent to the parties listed below on October 4, 2023, describing the RSA and the United States Geological Survey (USGS) topographic maps of the alignment alternatives.

The full contact information can be found in Appendix B. Native American consultation is discussed in the KNE Tribal Cultural Resources Technical Report.

4.1.1.2 ARCHIVAL RESEARCH

Archaeologists, historians, and architectural historians who meet the Secretary of the Interior's Professional Qualification Standards (36 CFR Part 61) and are familiar with resources in the vicinity of the Project and research considerations conducted the archival research for this study.

SOUTH CENTRAL COASTAL INFORMATION CENTER RECORDS SEARCH

A records search for the Project was conducted at the South Central Coastal Information Center (SCCIC) of the California Historical Resources Information System, California State University, Fullerton on January 13, 18, and 19, and February 22, 2023. The SCCIC, an affiliate of the OHP, is the official state repository of cultural resources records and studies for Los Angeles County. The search included a review of all previously recorded prehistoric archaeological, historic archaeological, and built environment resources and previous cultural resource reports on file within a 0.25-mile radius of the RSA. In addition, the California Points of Historical Interest, the California Historical Landmarks, the CRHR, the NRHP, the California State Historic Resources Inventory, and local registers were reviewed. Historical USGS quadrangle maps were also reviewed.

NATIVE AMERICAN HERITAGE COMMISSION SACRED LANDS FILE SEARCH

A Sacred Lands File (SLF) search was conducted by the NAHC on January 19, 2023, to identify any Native American cultural resources that may be Traditional Cultural Properties or tribal cultural resources and that might be affected by the Project, as required by CEQA as amended by Assembly Bill (AB) 52.

Metro is conducting mandated AB 52 consultation, which is be summarized in the KNE Tribal Cultural Resources Technical Report.

4.1.1.3 FIELD SURVEY

A targeted field survey was conducted on March 8 and 17, 2023, by a qualified architectural historian and archaeologist (36 CFR Part 61) to identify cultural resources in the RSA.

BUILT ENVIRONMENT RESOURCES

Due to the primarily underground nature of the Project, the built environment survey focused on proposed station locations, TBM launch and retrieval sites, and construction staging areas with aboveground Project elements. The built environment survey was undertaken to identify architectural resources, which include the man-made features that comprise the recognizable built environment. This typically includes extant aboveground buildings and structures that date from the earliest territorial settlements until the present day.

To capture all potential historical resources through the duration of the Project, the built environment component of the survey included all resources that would be at least 45 years old at project construction, which is estimated to begin in 2041. Therefore, all resources that were or appeared to be constructed by 1996 were included in the survey. Building construction dates were identified using Los Angeles County Tax Assessor information and verified in field and desktop surveys. All significant built environment resources newly identified during the survey were formally recorded on Department of Parks and Recreation (DPR) series 523 forms (see Appendix E for DPR523 Forms). DPR updates on previously recorded properties were also prepared as needed if previous documentation was inadequate or the resource had been substantially altered. Properties that were identified as ineligible resources were exempted from evaluation (see Appendix F for Properties Exempted List).

ARCHAEOLOGICAL RESOURCES

The archaeological component of the field survey included accessible areas of exposed ground surface along the Project footprint. Because a majority of the vicinity of the Project is developed, prior to the survey a desktop review of the RSA was conducted to identify potential areas with exposed ground surface that could be inspected for evidence of material culture. Satellite imagery was used to map undeveloped lots and landscaped areas along roads, sidewalks, and other public areas in the RSA that could be examined for traces of archaeological resources.

Archaeological resources represent evidence of past human behavior and include portable artifacts such as stone tools, glass bottles, and tin cans; non-portable “features” such as cooking hearths,

foundations, and privies; and residues such as food remains and charcoal. Archaeological remains can be virtually any age, from recent historic-period materials to prehistoric deposits that are thousands of years old.

4.1.2 PALEONTOLOGICAL RESOURCES

The methodology used for paleontological resources included delineation of the RSA, as discussed in Section 5.2, review of geologic maps, a paleontological records search, and a literature review. Because the RSA surface is largely obscured by urbanization, a comprehensive field survey was not warranted.

4.1.2.1 GEOLOGIC MAP REVIEW

Because paleontological sensitivity is derived from the known fossil data collected from the entire geologic unit, not just from a specific survey, geologic mapping by Dibblee and Ehrenspeck (1991a, 1991b) and Dibblee and Minch (2007) were reviewed to determine the geology and stratigraphy of the RSA. Results are summarized in the Geologic Setting (Section 5.1.1).

4.1.2.2 NATURAL HISTORY MUSEUM OF LOS ANGELES RECORDS SEARCH

A paleontological collections records search was conducted by the Vertebrate Paleontology Section of the Natural History Museum of Los Angeles County (NHMLA, also LACM) of the museum's locality database on January 22, 2023, to identify any known fossil localities within the Project vicinity.

4.1.2.3 LITERATURE REVIEW

Not mentioned in the records search is a Topanga Formation locality that produced a mandible of *Desmostylus* sp., a strange and extinct amphibious mammal, near the Hollywood Bowl (Lander 2000). Other fossils from the Topanga Formation include numerous invertebrate and vertebrate remains from both marine and terrestrial settings, including sharks, bony fishes, birds, whales, dolphins, and land mammals (Koch et al. 2004; Yerkes 1980; Whistler and Lander 2003).

There have been several recent discoveries near the proposed Midtown Crossing Station. The paleontological records search report (Bell 2023) lists vertebrate paleontology locality 1226 at La Brea Boulevard near Pico Boulevard, which produced a bison fossil in "blue sandy clay." This locality is slightly over 1,500 feet southwest of that station. In current usage, those deposits would be assigned to the Lakewood Formation, as defined by the California Department of Water Resources (1961). Recent construction projects in Los Angeles have produced significant paleontological resources that could not have been included in the LACM records search report because the resulting collections have not yet been curated.

Approximately 2.85 miles southwest of the Midtown Crossing Station lie newly constructed buildings that have produced fossils in the Lakewood Formation. The most productive was the 8777 Washington Project, which produced more than 100 Pleistocene invertebrate and vertebrate fossils in "bluish gray silty sand and clay" (ESA 2020). The deposit dates to a time that the sea covered that area, but it lay

very near the coast. Bison, pine, and numerous rodent fossils had washed out to sea via Ballona Creek and were mixed with marine mollusk, whale, and sealion remains, and deposited there. Even in Pleistocene times, Ballona Creek drained the area around Rancho La Brea. At the Washington National Project, across the street from the 8777 Washington Project, numerous marine mollusks and some bones of camels were encountered (SWCA 2016). Whether microvertebrate fossils were preserved there is unknown; it is unclear whether sediment samples were processed. These fossils were preserved in "green to gray-green silt and sandy silt deposits."

It is very likely that the fossil from LACM VP-1226 was preserved in the same blue sandy clay near-shore marine sediment as the sites on Washington Boulevard. Thus, it is probable that additional fossils will be encountered in the "blue sand clay" during the construction of the proposed Midtown Crossing Station. Furthermore, the footprint of that proposed station straddles the historic bed of Ballona Creek, near which all these localities lie.

4.2 CEQA SIGNIFICANCE THRESHOLDS

In accordance with Appendix G of the 2022 CEQA Guidelines, the Project would have a significant impact related to cultural, archaeological, or paleontological resources if it would:

- Impact CUL-1: Cause a substantial adverse change in the significance of a historical resource pursuant to CCR Section 15064.5.
- Impact CUL-2: Cause a substantial adverse change in the significance of a unique archaeological resource pursuant to CCR Section 15064.5.
- Impact CUL-3: Disturb any human remains, including those interred outside of dedicated cemeteries.
- Impact PAL-1: Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature.

CHAPTER 5 EXISTING SETTING

5.1 REGIONAL SETTING

The Project is located in a relatively flat area of the Los Angeles Basin. The basin is formed by the Santa Monica Mountains to the northwest, the San Gabriel Mountains to the north, and the San Bernardino and San Jacinto Mountains to the east. The basin was formed by alluvial and fluvial deposits derived from these surrounding mountains. Today, the vicinity of the Project is located in a densely populated and heavily developed city landscape.

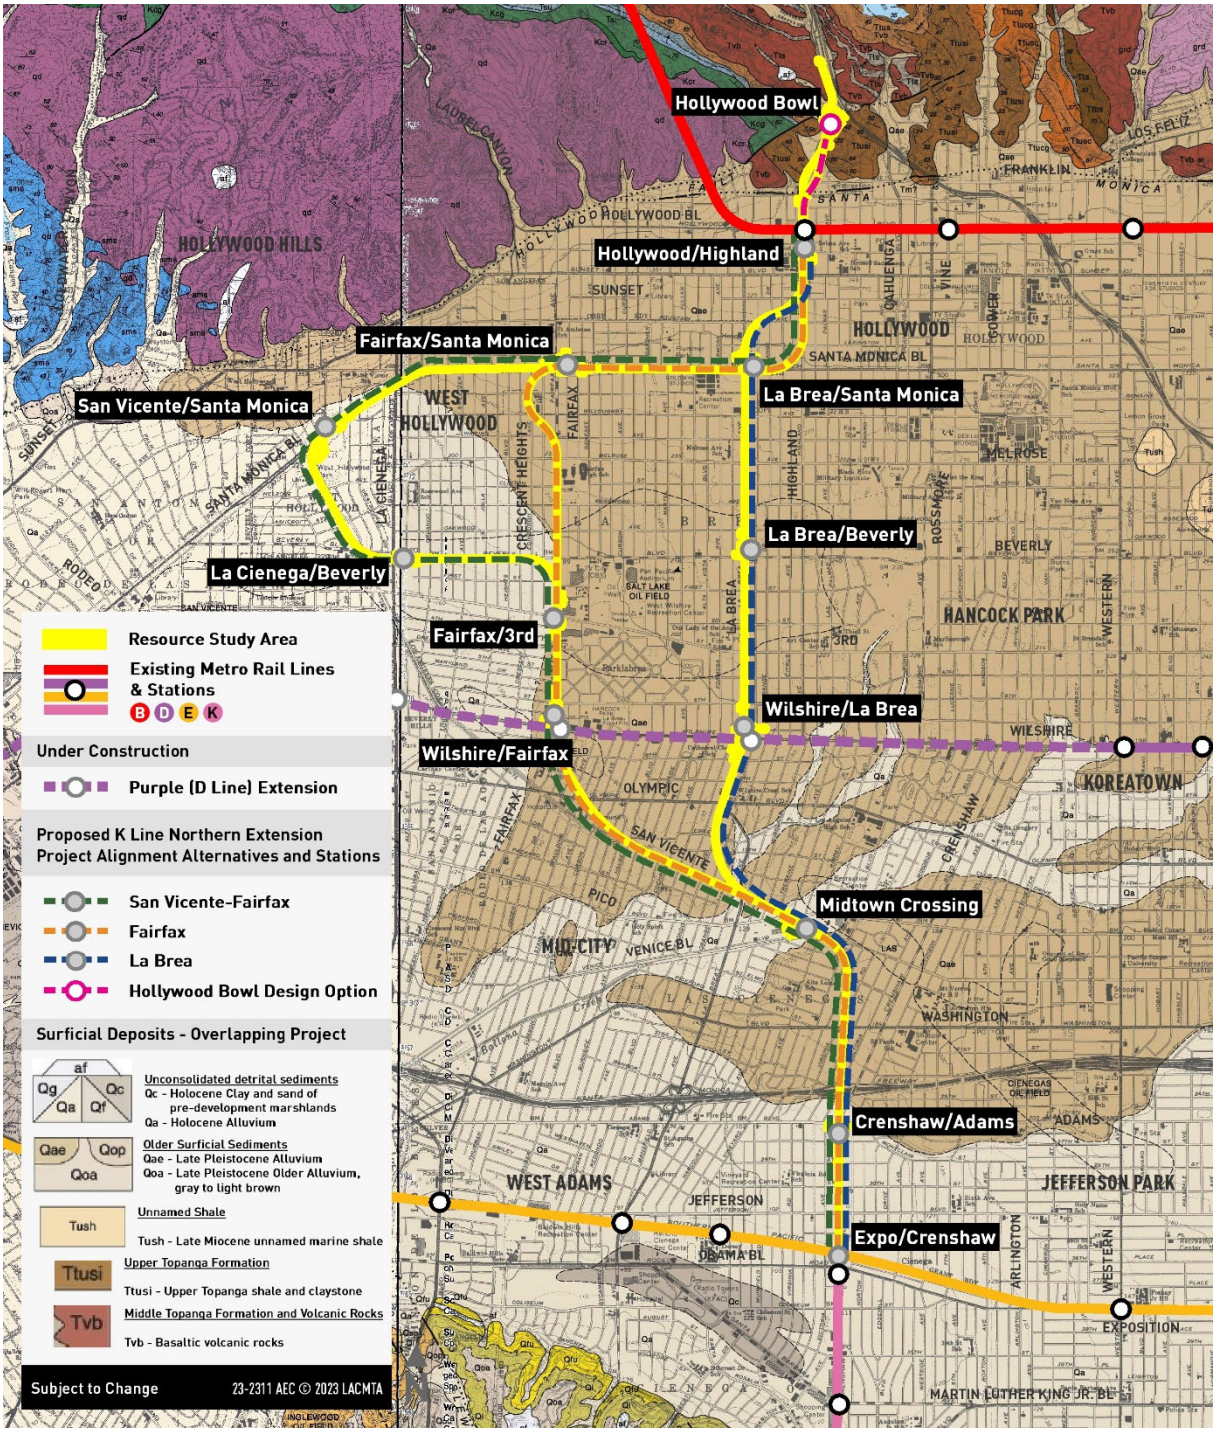

The climate in this region is classified as Mediterranean, with dry, warm summers and mild winters with only occasional storms. This mild climate has a temperature range from approximately 80 degrees Fahrenheit in August and September, to mid-40s in January and December. The rainy season typically falls between October and April, with wetter months (exceeding two inches per month) from December through March (Western Regional Climate Center 2006).

5.1.1 GEOLOGIC SETTING

The Los Angeles Basin is a structural depression approximately 50 miles long and 20 miles wide in the northernmost Peninsular Ranges Geomorphic Province of California (Ingersoll and Rumelhart 1999). The Los Angeles Basin developed as a result of tectonic forces and the San Andreas fault zone, with subsidence occurring 18 to three million years ago (Ma) (Critelli et al. 1995). While sediments dating back to the Cretaceous (66 Ma) are preserved in the basin, continuous sedimentation began in the middle Miocene (around 13 Ma) (Yerkes et al. 1965). Since that time, sediments have been eroded into the basin from the surrounding highlands, resulting in thousands of feet of accumulation (Yerkes et al. 1965). Most of these sediments were marine, until sea level dropped in the Pleistocene Epoch and deposition of the alluvial sediments that compose the uppermost units in the Los Angeles Basin began.

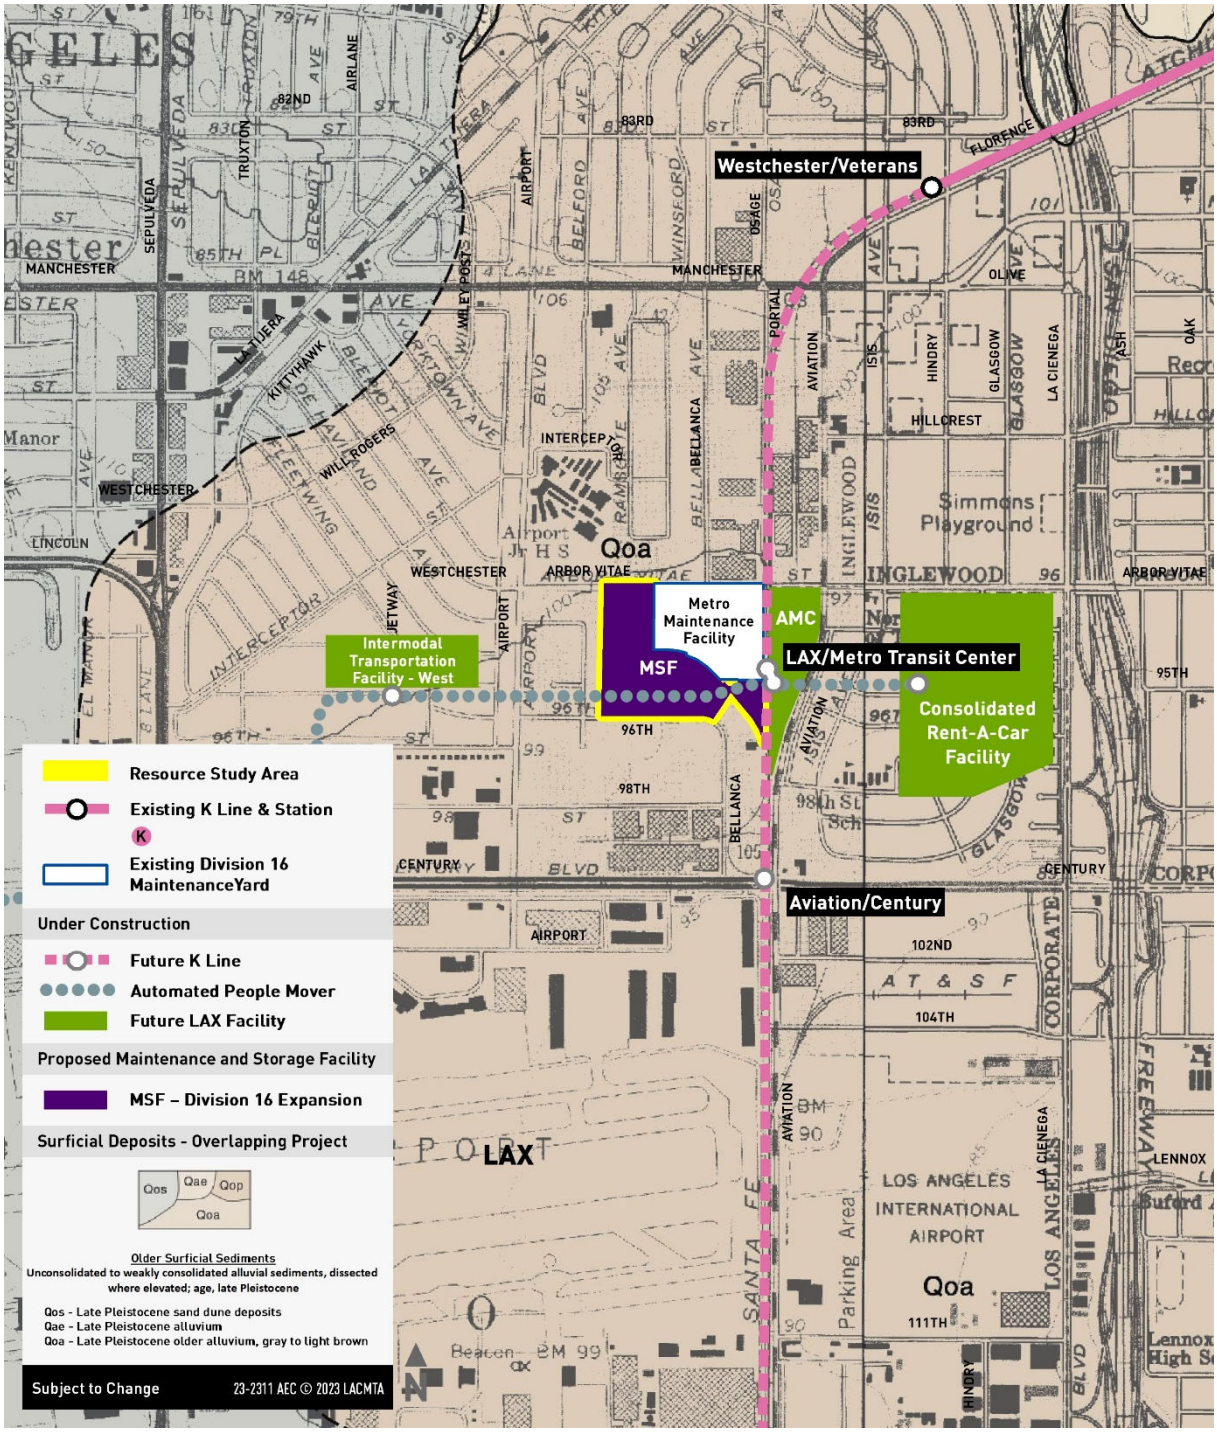

Geologic mapping indicates that most of the surface in the vicinity the Project is covered with Pleistocene-aged (11,700 before present (BP) to 2.58 Ma) alluvium, alluvial fan, and valley deposits (mapped as Qae in Figure 5-1 and Figure 5-2). A small portion of the Project is covered by Holocene-aged (less than 11,700 BP) alluvium mapped as Qa. At the very northern tip of the Project, outcrops of the Topanga Formation cross the RSA. It is important to emphasize that subsurface geology may not accurately reflect the mapping of surficial sediments. Drilling and construction excavations have repeatedly yielded Pleistocene fossils in Qae sediment beneath surficial sediments mapped as Qa. According to the rating system of paleontological potential used by the SVP (2010), which is based on the age of the geologic unit and the fossils known to exist within those units, sediments mapped as Qa are assigned a rating of low paleontological potential. Those sediments mapped as Qae and Qof are assigned a rating of high paleontological potential. Generally, Qa sediments are too young to produce significant paleontological resources.

FIGURE 5-1. SURFICIAL DEPOSITS NEAR THE ALIGNMENT ALTERNATIVES

Source: Dibblee & Ehrenspeck 1991; Connect Los Angeles Partners 2023

FIGURE 5-2. SURFICIAL DEPOSITS NEAR THE MSF

Source: Dibblee & Minch 2007; Connect Los Angeles Partners 2023

Recent alluvial deposits (Qa) are common throughout the northern half of the Project. This younger alluvium is characterized by deposits of gravel and sand that form active parts of alluvial valleys. Holocene-aged alluvium deposits, particularly those younger than 5,000 years old, are generally too young to contain fossilized material (SVP 2010); however, they may overlay sensitive older deposits at unknown depths.

Late Pleistocene deposits (Qae) contain deposits of unsorted boulders, cobbles, gravel, and sand that form inactive parts of alluvial fans. Pleistocene-aged alluvial fan deposits cover large portions of the vicinity of the Project. In general, these alluvial sediments are composed of tan to reddish-brown sandstone and siltstone deposited during the late to middle Pleistocene. Pleistocene-aged deposits have proven to yield scientifically significant paleontological resources throughout Southern California. It should be mentioned that in the Ballona Creek drainage, green to blue Pleistocene sediments underlie the Qae sediments, and these reflect fluctuating river and marine depositional conditions. Pleistocene sediments mapped as Qoa occur near LAX.

The upper claystone unit of the Topanga Formation is identified as occurring as extensive outcrops that make up the hills at the northern end of the Project. This unit consists of micaceous clay shale or claystone (Ttusi) with thin sandstone interbedded basalt (Tvb). The Topanga Formation is interpreted to represent wave-dominated coastal deposits grading into river-dominated deltaic deposits and fluvial deposits in the upper parts of the formation (Critelli and Ingersoll 1995). The Topanga Formation dates to the middle Miocene, around 20 to 16 million years ago. Fossils from the Topanga Formation include numerous invertebrate and vertebrate remains from both marine and terrestrial settings, including *Desmostylus* (McLeod, pers. com., 2023), sharks, bony fishes, birds, whales, dolphins, and land mammals (Koch et al. 2004; Yerkes 1980; Whistler and Lander 2003).

Table 5-1 provides a summary of the geologic units that the various Project components would cross and the paleontological potential for each.

TABLE 5-1. PALEONTOLOGICAL POTENTIAL OF RSA GEOLOGIC UNITS

GEOLOGIC GROUP	ABBREVIATION	UNIT DESCRIPTION	PALEONTOLOGICAL POTENTIAL
Unconsolidated detrital sediments	Qa	Holocene alluvium	Low
	Qc	Holocene sand and clay of pre-development marshlands	Low
Older surficial sediments	Qae	Late Pleistocene alluvial fan sediments	High
	Qoa	Late Pleistocene older alluvium	High
Late Miocene sediments	Tush	Unnamed Shale	High
Middle Miocene sediments	Ttusi	Upper Topanga Formation	High
	Tvb	Basaltic volcanic rocks	Low

Source: Dibblee & Ehrenspeck 1991; Dibblee & Minch 2007

5.1.2 PREHISTORIC CONTEXT

Following the seminal work of William Wallace (1955) and Claude Warren (1968), the prehistory of the Southern California coastal region is typically divided into Early, Middle, and Late Periods, with an initial Paleo-Indian period dating to the late Pleistocene and early Holocene.

5.1.2.1 PALEO-INDIAN PERIOD (13,000 TO 10,000 BP)

The limited contextualized evidence of Paleo-Indian hunting technology observed in the California archaeological record and the more recent identification of early sites along the Pacific Coast of the United States indicate that the earliest people to colonize California likely arrived along the shores and settled into these rich coastal environments (Erlandson et al. 2007:53; Willis and Des Lauriers 2011). In the Southern California coastal region, the earliest evidence of human occupation comes from a handful of sites with early tools and some human remains that have been dated from 7,000 to around 13,000 years old (Erlandson 2012:21).

These include the Arlington Spring and Daisy Cave sites, located on the northern Channel Islands, which have produced human remains dating to 12,000 years in age and artifacts dating to around 9,500 cal BP. Other mainland coastal sites adjacent to the northern Channel Islands have produced a number of deposits that date to around 8,000 and 7,000 years in age (Erlandson et al. 2007:57). In the Los Angeles region, the lower component of the Malaga Cove site has been estimated at approximately 8,000 years old (Glassow et al. 2007:192). The first people to settle into Southern California appear to have practiced a generalized hunting, gathering, and fishing subsistence strategy that relied heavily on fish and shellfish. This period is characterized by small sites and assemblages with expedient stone tools, unifacial stone tools, leaf-shaped or stemmed bifaces and projectile points, crescents, bone fish gorges, and spire removed Olivella beads, with no evidence of milling implements (Erlandson et al. 2007; Glassow et al. 2007; Willis and Des Lauriers 2011).

5.1.2.2 EARLY PERIOD (9000 TO 3000 BP)

Although people are known to have inhabited what is now Southern California beginning at least 13,000 years BP (Arnold et al. 2004), the first solid evidence of human occupation in the Los Angeles Basin dates to roughly 9000 BP and is associated with a period known as the Early Period or the Millingstone Horizon (Wallace 1955; Warren 1968). Millingstone populations established permanent settlements located primarily on the coast and in the vicinity of estuaries, lagoons, lakes, streams, and marshes where a variety of resources, including seeds, fish, shellfish, small mammals, and birds, were exploited. Early Period occupations are typically identified by the presence of handstones (manos) and millingstones (metates). Sites from this time period typically contain shell middens; large numbers of milling implements; crude core and cobble tools; flaked stone tools; distinctive cogged stone implements; and infrequent side-notched dart points (Fenenga 1953). The focus at inland sites appears to be in plant food processing and hunting. Along the coast, populations invested in maritime food gathering strategies, including near-shore and deep-sea fishing, as well as shellfish collection (Grenda 1997).

5.1.2.3 MIDDLE PERIOD (2550 BP TO 800 BP)

Although many aspects of Millingstone culture persisted, by 3000 BP, a number of socioeconomic changes occurred, as understood through changes in material culture (Erlandson 1994; Wallace 1955; Warren 1968). These changes are associated with the period known as the Middle Period or Intermediate Horizon (Wallace 1955). The mortar and pestle were introduced during this period, suggesting an increased reliance on hard plant foods such as acorns (Altschul and Grenda 2002). Increasing population size coincides with intensified exploitation of terrestrial and marine resources (Erlandson 1994). This was accomplished, in part, through use of new technological innovations such as the circular shell fishhook on the coast, and, in inland areas, use of the mortar and pestle to process an important new vegetal food staple, acorns, and the dart and atlatl, resulting in a more diverse hunting capability (Warren 1968). A shift in settlement patterns from smaller to larger and more centralized habitations is understood by many researchers as an indicator of increasingly territorial and sedentary populations (Erlandson 1994). During the Middle Period, specialization in labor emerged, trading networks became an increasingly important means by which both utilitarian and non-utilitarian materials were acquired, and travel routes were extended.

5.1.2.4 LATE PERIOD (800 TO 400 BP)

The Late Prehistoric period, spanning from approximately 800 years ago to the Spanish Mission era, is the period associated with the florescence of contemporary Native American groups. The Late Period is notable for a dramatic increase in the number of habitation and food processing sites. These sites include more bone tools, numerous types of Olivella shell beads, circular fishhooks, and occasional pottery vessels (Miller 1991). Between 800 and 200 years BP, small arrow-sized projectile points, of the Desert side-notched and Cottonwood triangular series, were adopted along what is now the Southern California coast (Altschul and Grenda 2002). Following European contact, glass trade beads and metal items also appeared in the archaeological record. Burial practices shifted to cremation in what is now the Los Angeles Basin and northern Orange County. However, at many coastal and most Channel Island sites, interment remained the common practice (Moratto 1984).

Some researchers argue that the changes seen at the beginning of this period reflect the movement of Shoshonean speakers from the eastern deserts into the area that is now the Southern California coast. Some researchers, though, suggest that the movement of desert-adapted Shoshonean speakers occurred as much as 2,000 years earlier (Bean and Smith 1978; Sutton 2009).

At the time of European contact, the vicinity of the Project was occupied by Shoshonean-speaking Gabrieliño people who controlled what is now the Los Angeles Basin and Orange County down to Aliso Creek (Kroeber 1925). The northern San Fernando Valley was the northernmost extent of the territory occupied by people who the Spanish referred to as the Fernadeño, a name derived from nearby Mission San Fernando. The Fernadeño spoke one of four regional Uto-Aztecan dialects of Gabrieliño, a Cupan language in the Takic family, and were culturally identical to the Gabrieliño. The Tataviam and Chumash, of the Hokan Chumashan language family, lived to the north and west of this territory, respectively, and it is likely that the territorial boundaries between these linguistically distinct groups fluctuated in prehistoric times (Bean and Smith 1978; Shipley 1978).

Occupying what is now the southern Channel Islands and adjacent mainland areas of Los Angeles and Orange Counties, the Gabrieliño were second only to their Chumash neighbors in terms of population size, regional influence, and degree of sedentism[1] (Bean and Smith 1978). The Gabrieliño are estimated to have numbered around 5,000 in the pre-contact period (Kroeber 1925). Maps produced by early explorers indicate the existence of at least 40 villages, but as many as 100 may have existed prior to contact with Europeans (Bean and Smith 1978; McCawley 1996; Reid 1939[1852]).

Gabrieliño villages are reported by early explorers to have been most abundant near the Los Angeles River, in the area north of what is now downtown, known as the Glendale Narrows, and those areas along the river's various outlets into the ocean. The nearest documented villages include *Koruuvanga,* approximately five miles west of the northern end of the Project; *Maawnga* located approximately six miles west; and *Ya'angn*a and *Geveronga*, which may be approximately five miles west of the northern extent of the Project (McCawley 1996). *Saa'anga* is approximately two miles from the proposed MSF at the far south end of the Project.

The vicinity of the Project does not appear to include any documented historic villages or place names identified in the ethnographic record. However, the full extent and exact location of these villages are not well defined. The Kirkman – Harriman pictorial and historical map of Los Angeles County: 1860 A.D. 1937 A.D. (1938) depicts unnamed villages in the northern vicinity of the RSA that do not appear to correspond with the ethnohistoric settlements discussed above. Two symbols for Native American villages are located at the southwest mouth of Cahuenga Pass, with the northernmost Project components extending into the area of the eastern village marker in the Hollywood Hills. Another unnamed village symbol is present about 1.6 miles northwest of the western Project boundary near the confluence of Franklin and Coldwater Canyons. No Rancho or village markers were observed on other historic maps that were reviewed, including General Land Office survey plat maps from the 1870s and 1880s (Bureau of Land Management 2006).

Prehistoric subsistence consisted of hunting, fishing, and gathering. Small terrestrial game was hunted with deadfalls, rabbit drives, and by burning undergrowth, and larger game such as deer were hunted using bows and arrows. Fish were taken by hook and line, nets, traps, spears, and poison (Bean and Smith 1978; Reid 1939[1852]). The primary plant resources were the acorn, gathered in the fall and processed with mortars and pestles, and various seeds that were harvested in late spring and summer and ground with manos and metates. The seeds included chia and other sages, various grasses, and islay or holly leafed-cherry (Reid 1939[1852]). Other natural resources important to Native life included sources of fresh water, such as spring and creeks, and locations of stone and mineral deposits used to make a variety of tools and other implements.

Historic maps indicate the Project crosses several unnamed watercourses that drain into the Los Angeles Basin, which would have provided lush riparian corridors with abundant plants and animals used by tribes. The 1894 Los Angeles, California 15-minute quadrangle shows the southern extent of the Project extends to a marshy confluence with standing water from which Ballona Creek flows. The proposed San Vicente/Santa Monica Station is also in a marshy flat at the confluence of creeks

[1] Sedentism refers to the practice of living in one place permanently.

draining from Franklin Canyon, Coldwater Canyon, and other unnamed canyons. These marshy environments would have provided ideal locations for the acquisition of resources. Though many of the watercourses have been eradicated or channelized, in the past they would have provided sources of fresh water that created ideal conditions for certain plant resources and local fauna. Temporary camps and activity areas were also commonly established near reliable sources of fresh water. While no known such sites have been identified within 0.25 mile of the RSA, the presence of washes and drainages in the vicinity indicate the potential for encountering prehistoric sites.

The La Brea Tar Pits are located along the central portion of the Project and were a significant mineral deposit used by Native people. The tar pits were an important source of asphaltum, which was used by Native people to waterproof baskets and boats, among other things. The use of this source by the Gabrieliño people was noted by the Portolá expedition, and archaeological investigations have identified dart shafts and cog stone artifacts in the vicinity (Heizer 1949). The remains of a woman dating to at least 9,000 years ago (Fuller et al. 2016) has also been identified within one of the tar pits, attesting to the antiquity of their importance.

5.1.3 HISTORIC CONTEXT

5.1.3.1 THE LOS ANGELES REGION

The Los Angeles area is bordered by the Santa Monica Mountains to the northwest, the San Gabriel Mountains to the north, and the San Bernardino and San Jacinto Mountains to the east. The historical era in California began with Spanish colonization and is often divided into three distinctive chronological and historical periods: the Spanish or Mission Period (1542 to 1821), the Mexican or Rancho Period (1821 to 1848), and the American Period (1848 to present). The history of Los Angeles is characterized by population influx and diversity, as well as infrastructural and architectural developments.

In 1781, a small group of pobladores, or townspeople of African, Native American, and Spanish descent settled the west bank of the Los Angeles River (Rio Porciúncula) and established the Pueblo de la Reina de Los Angeles (the Pueblo of the Queen of the Angels, or Los Angeles) (National Park Service (NPS) 2021). The pueblo was an outpost for the Spanish, who intended to create a series of civilian pueblos and military presidios to support Catholic religious missions and expand colonial influence in the area. The Los Angeles pueblo slowly gained importance as a center of commerce and hosted a population of 315 by 1800. After Mexico won its independence from Spain in 1821, the authority of the California missions began to decline, ending with their secularization in 1834. In response, Spain initiated a series of land grants to colonize Alta California in the long term. These land grants, also known as ranchos, commonly fell under ownership of Spanish loyalists. Until the American Period began in 1848 with the signing of the Treaty of Guadalupe Hidalgo, the Pueblo de la Reina de Los Angeles and its surrounding area continued to operate as a center of economic activity and farmland and was virtually unaffected by any political changes (Robinson 1981).

The beginning of the American Period and the subsequent Gold Rush resulted in a boom to the Southern California cattle industry in response to the demand for goods and services by Northern

California miners. In the 1860s, many rancho families lost titles to their land, creating room for development by new U.S. settlers. By the 1870s, Los Angeles expanded beyond the original pueblo with new subdivisions and tracts. In that period, Southern California's citrus industry flourished, and the San Fernando Valley emerged as a center for wheat cultivation. Between 1876 and 1887, the completion of the Southern Pacific Railroad and the Atchison, Topeka, and Santa Fe Railway ignited a real estate boom that created hundreds of new towns and further expanded Los Angeles. The city's population grew from 5,700 in 1870 to 50,000 in 1890. By the turn of the twentieth century, Los Angeles had become a leading West Coast metropolis (Fogelson 1967).

In the first half of the twentieth century, Los Angeles continued to grow as agriculture became a crucial part of the local economy. In 1915, the City of Los Angeles annexed the neighboring San Fernando Valley, a rapidly growing agricultural center due to the new water supply from William Mulholland's Los Angeles Aqueduct completed in 1913. By the 1920s, the citrus industry fueled the local economy, driving the price of land for orange and lemon orchards as high as $5,000 an acre, eight times greater than the cost of other land. Other local crops included olives, alfalfa, apricots, asparagus, barley, hay, beans, beets, cabbage, citrus, corn, lettuce, melons, peaches, potatoes, pumpkins, squash, tomatoes, and walnuts (County of Los Angeles n.d.).

During the first three decades of the twentieth century, more than two million people moved to Los Angeles County, transforming it from a largely agricultural region into a major metropolitan area. By 1945, Los Angeles had undertaken 95 annexations, expanding from a 28-square-mile agrarian pueblo into a densely populated city, covering more than 450 square miles (Robinson 1979). Following World War II, developers increasingly purchased large portions of agricultural land in response to the city's growing population. The 1950s experienced large tracts of land developing into new neighborhoods and the construction of the city's complex freeway system. During the post-war era, Los Angeles developed as a sprawling metropolis that came to represent modern American culture with its freeway system, entertainment industry, affordable neighborhoods, and high-tech aqueducts (Robinson 1979).

5.1.3.2 NEIGHBORHOODS AND COMMUNITIES WITHIN THE VICINITY OF THE PROJECT

WEST ADAMS

Development of the West Adams neighborhood began in the late 1880s with residential subdivisions along the major throughfares of Crenshaw Boulevard, Western Avenue, and Adams Boulevard. By 1910, due to the rapid development spurred by construction of multiple streetcar lines, only small sections of the area remained agricultural (City of Los Angeles 2010a). However, with the rising popularity of the automobile in the 1920s, the demographics of the neighborhood changed, mansions were converted to apartments and boardinghouses, and commercial corridors were expanded (Cooper et al. 2008).

Restrictive covenants instituted in other sections of Los Angeles led to settlements of several neighborhoods in South Los Angeles by African Americans (City of Los Angeles 2010a). By 1920, most of Los Angeles's African American population lived in one district "stretching approximately thirty

blocks down Central Avenue and several blocks east" (City of Los Angeles 2010a). In the 1940s, many of the covenants were overturned, allowing African Americans and others to move west to neighborhoods along Adams and other thoroughfares (City of Los Angeles 2010a). The construction of the Interstate 10 (I-10) (the Santa Monica Freeway) in 1957 bisected the West Adams neighborhood. During the 1960s, the neighborhood began to decline with many of the streets in disrepair and the commercial corridors were abandoned (Cooper et al. 2008). Oil extraction in West Adams began in 1965 near 21st, 22nd, and 23rd Streets.

JEFFERSON PARK

The neighborhood of Jefferson Park was first developed in the early 1880s. The arrival of the streetcar stimulated residential development in Jefferson Park, with service stretching west along Adams Street to Arlington Avenue as early as 1899 (City of Los Angeles 2011). The neighborhood features numerous Arts and Crafts-inspired single-story bungalows constructed during the early 1900s to accommodate the city's growing middle class. Much of the area was subdivided and developed during the early twentieth century with commercial development largely concentrated on Jefferson Boulevard and Western Avenue. Although these areas were initially slated for residential development, lots with frontage along Western and Jefferson became valuable commercial properties, with some single-family residences intermixed (City of Los Angeles 2011).

With the decline of streetcar services and the growing use of automobiles, the community's development patterns changed. World War II industries related to aviation and manufacturing drew people to Los Angeles, and it was during this time that African Americans began to settle in Jefferson Park (City of Los Angeles 2011). While Los Angeles's African American population dates to founding of the pueblo in the eighteenth century and neighborhoods with identifiable populations of African American residents developed as early as 1900, it took the demand of World War II industries to bring African Americans to the city in large numbers (City of Los Angeles 2011). After the war, African Americans continued to be attracted to Los Angeles by its reputation for promising economic and social opportunities and began to settle in Jefferson Park and several South Los Angeles neighborhoods (City of Los Angeles 2011).

During the 1950s, Japanese Americans began moving to Jefferson Park. The area was a working middle class neighborhood. The elimination of racially restrictive covenants or deed restrictions in Jefferson Park in the 1940s attracted Japanese and African American families to the neighborhood. Deed restrictions would target non-white working-class families through targeting minimum values for construction of residences, eliminating multi-family houses, and leases that prevented renting to minorities (City of Los Angeles 2011). With the removal of these restrictions, the community became more diverse. Popular professions during this period for Jefferson Park residents included teachers, salesclerks, carpenters, painters, and laborers. There were also residents who worked as lawyers and doctors, and within the real estate industry as brokers, agents, and salesmen. Commercial development in Jefferson Park reflected the shifting demographics as African American and Japanese American owned businesses opened in the commercial corridors along Jefferson Boulevard and Western Avenue (Architectural Resources Group 2009).

ARLINGTON HEIGHTS

The neighborhood of Arlington Heights is north of the I-10 freeway and roughly bounded by Arlington Avenue, Crenshaw Boulevard, Washington Boulevard, and Pico Boulevard. Similar to the West Adams and Jefferson Park neighborhoods, Arlington Heights was developed as a streetcar suburb during the late 1880s with residential and commercial corridors.

The Arlington Heights subdivision was created from the Gray Tract of Rancho Las Ciénegas in 1887 (City of Los Angeles 2010a). It was promoted by the Arlington Heights Land and Water Company and real estate developers Wiesendanger and Bonsall as a picturesque plateau with a view from Los Angeles to the Pacific Ocean and having soil ideal for grapes and tomatoes (Los Angeles Times 1887). The neighborhood is largely composed of single-family residences in American Foursquare, Craftsman Bungalow, and Spanish Colonial Revival styles. Commercial corridors within the neighborhood are located along Washington Boulevard and Pico Boulevard.

MID-CITY

Mid-City Los Angeles is north of the I-10 freeway and roughly bounded by Pico Boulevard, Crenshaw Boulevard, Washington Boulevard, National Boulevard, Robertson Boulevard, Cadillac Avenue, and La Cienega Boulevard. The RSA traverses the La Fayette Square Tract within Mid-City. The Crenshaw Security Company subdivided La Fayette Square, originally part of the Rancho Las Ciénegas in 1913, from barley fields and pastures (City of Los Angeles 2008).

Mid-City was an integral part of the early streetcar system in Los Angeles. The Junction rail center (Mid-City Center) by the Los Angeles Railway ("LARy") or Yellow Streetcar lines, was a system of narrow-gauge streetcars. This network included the W line to Highland Park via Washington Boulevard, the P line to City Terrace via Pico Boulevard, and to Echo Park via Adams Boulevard. The LARy Rimpau Loop in Mid-City was an important terminus, and the streetcar lines operated from 1900 to 1963.

The majority of the residential development is confined to 1913 to 1963. The residential architecture in Mid-City includes a variety of Period Revival and Modern Movement styles. Commercial development in the Mid-City area includes mid-twentieth century storefronts along Washington Boulevard and Pico Boulevard.

MIRACLE MILE/MID-WILSHIRE

The Miracle Mile/Mid-Wilshire neighborhood was a part of the Rancho Las Ciénegas and Rancho Rodeo de Las Aguas land grants. The area had a development boom during the 1920s and 1930s triggered by the explosive commercial development of Wilshire's Miracle Mile, a massive population influx, and rising prominence of the automobile (City of Los Angeles 2016). The Miracle Mile stretches from La Brea Avenue to Fairfax Avenue and initially functioned as a service road to nearby oil wells in the Wilshire District. In 1921, developer Alvah Warren Ross purchased 18 acres in the area and began commercial development. The development of this commercial corridor was dubbed a "miracle" because it occurred in spite of restrictive residential zoning, and it was developed in absence of a previously established residential or retail community (Daly and Sikes 2012). Miracle Mile was

developed around automobile transportation and has a variety of commercial buildings in Art Deco and Streamline Moderne styles.

The Mid-Wilshire neighborhood, stretching west to Fairfax Avenue between Wilshire Boulevard and Pico Boulevard, included earlier subdivisions such as Oxford Square (1907) and Fremont Place (1911), but the bulk of its residential construction happened in the 1920s, corresponding with an immense population and real estate boom (City of Los Angeles 2016). Although built in relative proximity to streetcar lines, these neighborhoods largely catered to the automobile including detached rear garages and driveways with curb cuts (City of Los Angeles 2016). Multi-family residential neighborhoods (later including Minimal Traditional properties along with the dominant Period Revival) boasted an array of duplexes, triplexes, fourplexes, apartment houses, and courtyard apartments (City of Los Angeles 2016).

During the mid-twentieth century, the Miracle Mile/Mid-Wilshire neighborhood became home to a variety of immigrant groups. Pre-World War II, U.S. census data indicated the neighborhood had a significant Jewish population. Building permits and the 1950 Sanborn maps show several additional Jewish institutions built in and near the Miracle Mile HPOZ from the late 1940s to the early 1950s (City of Los Angeles 2016). Changes in U.S. immigration law in 1965 also led to the new immigrants coming to Los Angeles. For instance, Ethiopian immigrants established businesses along Miracle Mile during the 1980s, and the area from Fairfax Avenue between Pico Boulevard and Olympic Boulevard was designated by the city as Little Ethiopia in 2002 (Wallach 2013).

In the 1970s, the commercial businesses along Miracle Mile began to decline, as many major companies left for newer developments in San Fernando Valley and San Gabriel Valley. During the 1980s, Miracle Mile underwent a period of urban renewal hailed at the time as the “Renaissance on Miracle Mile” or the “Miracle on the Miracle Mile” (Los Angeles Times 1987). During this period, commercial office properties were renovated, including the Museum Square office building (1983), and new properties were constructed such as the Wilshire Courtyard Office Plaza (1987) (Los Angeles Times 1987).

HANCOCK PARK

Hancock Park is located in the southeastern portion of the original rancho (City of Los Angeles 2007). Rancho La Brea, named for the La Brea Tar Pits, was granted to Antonio Jose Rocha and Nemisio Dominguez in 1828, though ultimately deeded to the Hancock family (Kielbasa 1998).

In 1901 the successful Rancho La Brea Oil Company was established. The oil wells were extremely productive from 1905 to 1910, and their revenues, which coincided with the increasing popularity of the automobile, provided the base for the Hancock family fortune (City of Los Angeles 2007). By the late 1910s, the decline of oil supplies spurred the Hancock family to develop the property for residential use. They subdivided it and established streets and utility lines. Also in the 1910s, George Allan Hancock granted the Los Angeles County Museum of History, Science, and Art the exclusive right to dig and collect fossils at Rancho La Brea. In 1924, the La Brea Tar Pits property was gifted to Los Angeles County and named Hancock Park (McNassor 2011).

The Hancock Park neighborhood of Los Angeles was largely developed between the 1920s and 1950s. By 1930, the residential subdivision was almost entirely sold. The architecture of the area includes Period Revival styles, including Tudor Revival, English Revival, Spanish Colonial Revival, and Mediterranean Revival styles. There are also a few Monterey Revival, Colonial Revival, and even the French Revival residences represented in the area (City of Los Angeles 2007). The success of Hancock's residential subdivision fueled the rapid growth of Hancock's commercial subdivision along Wilshire Boulevard in the 1930s, known as the Miracle Mile (City of Los Angeles 2007).

WINDSOR SQUARE

The Windsor Square neighborhood of Los Angeles was significantly developed between the 1910s and 1920s. The area was purchased as a homestead in 1868 by Canadian Captain John C. Plummer (City of Los Angeles 2019). In 1885, a syndicate called the Windsor Square Land Company bought 200 acres of the Plummer Homestead, bounded today by Plymouth Boulevard, Bronson Avenue, Wilshire Boulevard, and Beverly Boulevard (City of Los Angeles 2019). Development of residential tracts began in 1911. The majority of the neighborhood is residential; however, commercial properties are located along Wilshire Boulevard and Larchmont Boulevard.

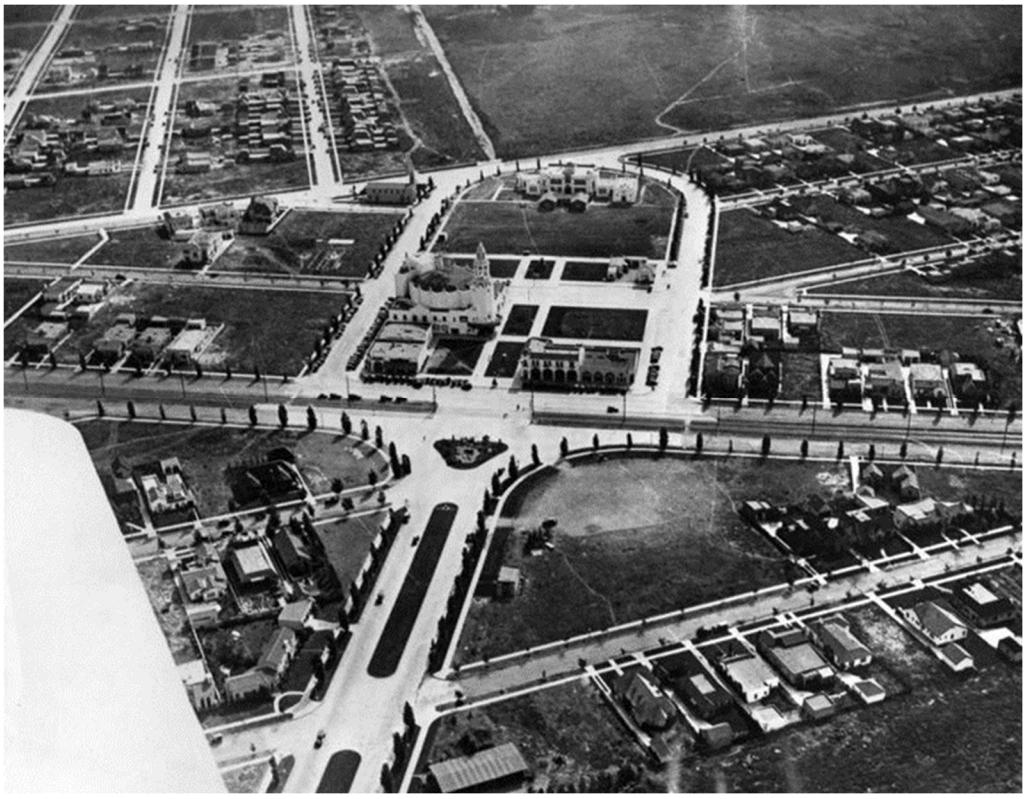

Windsor Square was the first area in the city to have power lines below ground and had other innovative improvements including streets (featuring unusual concrete surfaces, some of which remain today), sidewalks, and elaborate electroliers (City of Los Angeles 2019). The ornamental light fixtures were designed by the City's Bureau of Street Lighting and were inscribed with "WS" at the base. The residential tracts included large lots with setbacks from the street and a variety of trees. The streetscape continuity is based upon well-landscaped, raised front yards, with gentle manicured slopes, often with brick or concrete steps, landings, and walkways to formal entrances (City of Los Angeles 2019). Architectural styles within the area include Craftsman, Beaux Arts or Classical Revival, Italian Renaissance Revival and Tudor Revival styles.

CARTHAY

The Carthay neighborhood of Los Angeles was part of the Rancho San Antonio Rodeo de Las Aguas land grant. The name Carthay was derived from the Carthay addition situated between Olympic Boulevard and to the south and east of Fairfax Avenue and Wilshire Boulevard (City of Los Angeles 2010b). It was annexed and development began on May 17, 1923. A single tract, recorded on October 22, 1922, would form most of this area (City of Los Angeles 2010b). The Carthay neighborhood was developed during the 1920s and 1930s and is generally bounded by Wilshire Boulevard, Pico Boulevard, Fairfax Avenue, and La Cienega Boulevard. The area includes residential properties in Spanish Revival and Art Deco styles, and commercial properties located along Wilshire Boulevard and La Cienega Boulevard include Modern Movement, Googie, and mid-twentieth century storefronts.

Carthay includes the smaller enclaves of Carthay Circle, South Carthay, and Carthay Square. Carthay Circle, originally called Carthay Center, is one of the first planned communities in Los Angeles (Los Angeles Conservancy 2020a). Real estate developer J. Harvey McCarthy, hoped to rival the Miracle Mile by designing Carthay Circle with an attractive shopping complex and hotel surrounded by an enclosed neighborhood of Spanish Colonial Revival and Mediterranean-style homes (Plate 1) (Los Angeles Conservancy 2020a). His designers master-planned 136 acres with curved residential streets oriented toward a central shopping plaza (Los Angeles Conservancy 2020a). South Carthay was considered a later infill development. South Carthay was originally agricultural land and was not significantly developed until the mid-1930s. The majority of the residential properties in South Carthay are Spanish Colonial Revival-style buildings. Carthay Square has gridded streets, single- and multi-family residences constructed in the 1920s and 1930s, and landscaped parkways. Architectural styles in Carthay Square include Spanish Colonial Revival, Tudor Revival, Mediterranean Revival, Monterey Revival and French Revival styles.

PLATE 1. AN AERIAL VIEW OF THE CARTHAY CIRCLE THEATER AND ITS SURROUNDINGS CIRCA 1930

Source: Los Angeles Public Library, ca. 1930

BEVERLY GROVE

The Beverly Grove neighborhood of Los Angeles was part of the Rancho La Brea land grant. The area was agricultural into the early twentieth century and was named for its orchards. It was subdivided in the 1920s with residential properties constructed in Period Revival styles including Spanish Colonial

and Tudor styles. Infill development from the 1940s and 1950s includes Minimal Traditional and Modern Movement styles.

MID-CITY WEST/FAIRFAX DISTRICT

The Mid-City West/Fairfax District area of Los Angeles was part of the Rancho La Brea land grant. The roots of the Beverly-Fairfax area can be traced to the discovery of oil on the land of a dairy farmer named Arthur F. Gilmore in the 1890s, which revealed a massive underlying oil field known as the Salt Lake Oil Field (NPS 2018). Harvesting the area's oil was a relatively short-lived endeavor, as the entrepreneurs ultimately found more value in subdividing and developing the less productive portions of the land (NPS 2018). The area was subdivided for residential development during the 1920s and because it was at the outer reaches of the streetcar system, the neighborhood was even more automobile-focused. Commercial and institutional development occurred along Melrose Avenue, Fairfax Avenue, Beverly Boulevard, and La Brea Avenue.

The area is also associated with the westward shift of Los Angeles's Jewish diaspora starting in the 1920s and proved crucial to the development of Fairfax Avenue at Beverly Boulevard as a Jewish commercial and institutional hub (NPS 2018). Its attractive multi-family residences, lack of racially restrictive covenants, and opportunities for property ownership drew residents from older Jewish enclaves on the east side of town and made it one of the first areas in the western suburbs to see a Jewish influx during a period of massive growth for the city (NPS 2018). Due to its large Jewish-American population, the neighborhood became a sanctuary for numerous Holocaust survivors, where they settled and rebuilt their lives after World War II (Los Angeles Conservancy 2020b).

HOLLYWOOD

Prior to the 1880s, the area of Hollywood, a neighborhood located in northern Los Angeles, included a semi-arid agrarian community that produced a variety of crops, like vegetables and citrus (Gudde 1949:151; Wanamaker and Nudelman 2007:10). In 1886, Harvey H. Wilcox surveyed and plotted the land, originally known as Hollywoodland. In 1910, Los Angeles annexed Hollywoodland and, in 1923, it was officially named Hollywood. Hollywood in the 1920s became characterized by the burgeoning movie industry, which attracted more people to the area. As the population expanded, new housing was built, and industrial and commercial properties were developed. During the 1920s and 1930s, lavish moving picture palaces and commercial buildings were constructed along Hollywood Boulevard, and the effect of the entertainment industry on the region is exemplified by its varied domestic and commercial architecture (Gebhard and Winter 2003:173).

In the 1910s and 1920s, the motion picture industry, which created the most accessible and dominant form of mass entertainment, established itself in Hollywood. As a result, Hollywood-adjacent commercial businesses, which catered to both celebrities and local residents, became as well-known as their famous clientele. Businesses utilized mass media, like radio, award ceremonies, and magazines, to advertise the fantasy of Hollywood. As a result, Hollywood manifested a wave of tourism and commercial establishments. Commercial centers established themselves along corridors like Hollywood Boulevard and Vine Street, as well as Sunset Boulevard (SurveyLA 2020).

Hollywood Boulevard is typically classified as a thematic district, centering on the significant commercial "main street" during the 1920s and 1930s, the period when the community achieved worldwide attention as the entertainment capital of the world. Between 1915 and 1930, Hollywood Boulevard transformed from a residential community to a bustling commercial center—a boulevard reminiscent of its developmental role in the early entertainment industry. Hollywood Boulevard's built environment demonstrates eclectic examples of classic Beaux Arts Revival styles that symbolize the district's financial and professional solidity, exotic modernism in new building types, flamboyant designs related to the movie industry in fantasy and Art Deco examples, and Period Revival Chateauesque and Spanish Colonial Revival used in retail (McAvoy 1984).

In 1955, the Hollywood Chamber of Commerce (HCC) produced one of the most successful marketing ideas that became an internationally recognized Hollywood icon—the Walk of Fame. On August 15, 1958, the HCC and city unveiled eight stars at the intersection of Hollywood Boulevard and Highland Avenue. Their intention was to create excitement and demonstrate to the local community what the Walk of Fame would look like. The original eight stars included Olive Borden, Ronald Colman, Louise Fazenda, Preston Foster, Burt Lancaster, Edward Sedgwick, Ernest Torrence, and Joanne Woodward (HCC 2022). On February 8, 1960, actual construction began on the entirety of the Walk of Fame. Stanley Kramer became the first new star to be laid at the intersection of Hollywood Boulevard and Gower Street. The Walk of Fame was dedicated on November 23, 1960, and by spring 1961, the Board of Public Works accepted the completed project with the first 1,558 stars (HCC 2022).

HOLLYWOOD HILLS

The development of Hollywood can be traced to 1886, when Harvey Wilcox surveyed and plotted the land. Daeida Wilcox, Harvey's wife, is credited with naming the Cahuenga Valley ranch, "Hollywood" (City of Los Angeles 2010c). The Wilcoxes were determined that Hollywood would be a center of culture and morality; they offered incentives to churches that would locate there and banned movies, liquor, and other forms of "vice" in the community (City of Los Angeles 2010c). Planner and developer Hobart Johnston Whitley, known as the "Father of Hollywood," was instrumental in laying the plans for the new city and naming its streets (City of Los Angeles 2010c). Hollywood incorporated on November 14, 1903. By the 1920s, the burgeoning movie industry attracted more people to settle in the area and the Hollywood Hills was popularized for its Mediterranean hillsides and seclusion from the city.

The Hollywood Bowl area was originally known as the Daisy Dell and was a natural bowl-shaped area within Bolton Canyon and surrounded by the Hollywood Hills. The property was purchased circa 1918 by the Theatre Arts Alliance Inc. to build a community park and art center (Water and Power Associates 2022). Originally called "The Park" and the "Daisy Dell," the Hollywood Bowl was renamed in 1920. The Hollywood Bowl property was deeded to the County of Los Angeles in 1924, and in 1926 Architect Myron Hunt was contracted to redesign the amphitheater space. However, Hunt's elliptical band shell was short-lived, as it was deemed acoustically unsatisfactory (as well as visually unfashionable, with its murals of sailing ships) (Water and Power Associates 2022). In 1927, Lloyd Wright (the son of Frank Lloyd Wright), built a pyramidal shell from left-over lumber from a production of Robin Hood; then in 1928 Wright built the semicircular segmental arched fiberglass shell (Water

and Power Associates 2022). The Hollywood Bowl's fourth shell was constructed in 1929 by Allied Architects using a transite skin over a metal frame.[2] The fourth shell remained until 2003 (Plate 2).

PLATE 2. AERIAL PHOTOGRAPH OF HOLLYWOOD BOWL AND VICINITY IN 1954

Source: Los Angeles Public Library, 1954

The Whitley Heights subdivision of the Hollywood Hills is within the RSA. The Whitley Heights area was built just as the fame of Hollywood and its film industry was being internationally recognized (City of Los Angeles 2010c). Many screen stars, directors, writers, producers, musicians, art and set designers, and cameramen lived on the hill in the 1920s, and established Whitley Heights as a celebrity neighborhood (City of Los Angeles 2010c). The Whitley Heights was primarily developed from the 1910s into the 1940s, with infill development constructed during the 1980s west of the freeway.

[2] Transite is a mixture of asbestos and concrete. Johns Manville originally manufactured the material in the 1920s; however, it quickly faded out through the 1980s. The material can commonly be found on house cladding, sheds, garages, and roofing, as well as piping, HVAC ducts, lab hoods and tables, and gutter systems (Indoor Science n.d.).

CITY OF WEST HOLLYWOOD

The City of West Hollywood is bounded by the City of Beverly Hills in the west, as well as the Hollywood Hills, Hollywood, the Fairfax District, and Beverly Grove neighborhoods in the City of Los Angeles. West Hollywood was part of the Rancho La Brea land grant. U.S. Senator and San Francisco-based lawyer Cornelius Cole assisted Henry Hancock in securing the land patent. In return, Hancock granted Cole a 500-acre segment of the rancho. During the land boom of 1888, Cole subdivided his property and created the eponymous community of Colegrove with its main intersection at Santa Monica Boulevard and Vine Street. Cole Avenue and other streets in the vicinity are named for Cole and his family members (Masters 2013).

West Hollywood was also known as the Town of Sherman, named after Moses H. Sherman; Mr. Sherman brought the electric railway, the Pasadena and Pacific, to the area in 1896. The line connected Los Angeles to Santa Monica. From the rail yard sprouted a small working-class town populated by railroad workers and their families, just to the west of today's San Vicente Boulevard (Masters 2011). Pacific Electric Railway tracks were added in 1911 running down the center of Santa Monica Boulevard. They then remained largely unused for decades, serving the occasional Southern Pacific freight train through the 1970s, then were removed in 1999 (Water and Power Associates 2022).

Sherman's population began to increase during the 1920s as the agricultural fields of neighboring Colegrove were developed. By the mid-1920s the area near the intersection of Santa Monica Boulevard and La Brea Avenue was developed as a district of motion picture studios. The town was renamed West Hollywood in 1925. During the 1960s West Hollywood became a music hub, with the addition of nightclubs such as the Troubadour nightclub (1957) playing an important role in the early careers of numerous musicians (Water and Power Associates 2022).

West Hollywood was incorporated as a city in 1984. Gays and lesbians sought refuge from the regressive policies of Los Angeles and other cities in the island of county-administered land (Masters 2011). On Election Day 1984, with a population consisting of approximately 85 percent renters and perhaps 50 percent gays and lesbians, West Hollywood voted for incorporation and elected a majority of openly gay city council members (Masters 2011).

5.2 RESOURCE STUDY AREAS

The Built Environment RSA is defined as the area necessary to construct, operate, and maintain the alignment alternatives and design option, and includes all proposed right-of-way (ROW) and acquisition and construction areas, and all parcels adjacent to permanent site improvements and facilities, including TBM launch sites, stations, and power substations; parking facilities; and maintenance yards and buildings. Where new infrastructure is constructed or would require above-grade elements, the Built Environment RSA includes the first tier of parcels or buildings adjacent to the alignment footprint within a reasonable viewshed of the new construction (i.e., the introduction of new infrastructure would have the potential to cause new visual, audible, or atmospheric intrusions on the setting of adjacent cultural resources). For built environment resources, property acquisitions and adjacent areas where the Project has the potential to indirectly impact historic resources are also included. Due to the underground nature of most of the Project (with the exception of the MSF), the Built Environment RSA within the

underground alignments was exempted for built environment resources because no construction impacts or permanent visual impacts to these resources would occur. Typically, the Built Environment RSA extends out from the alignment approximately 50 feet, or from one to three parcels, depending on parcel sizes, intervening landscape elements, and buildings, and whether the historic land use is sensitive to the proposed change in setting.

The Archaeological and Paleontological RSAs encompass areas where temporary or permanent ground disturbance may occur and include all proposed ROW, acquisition, and construction areas.

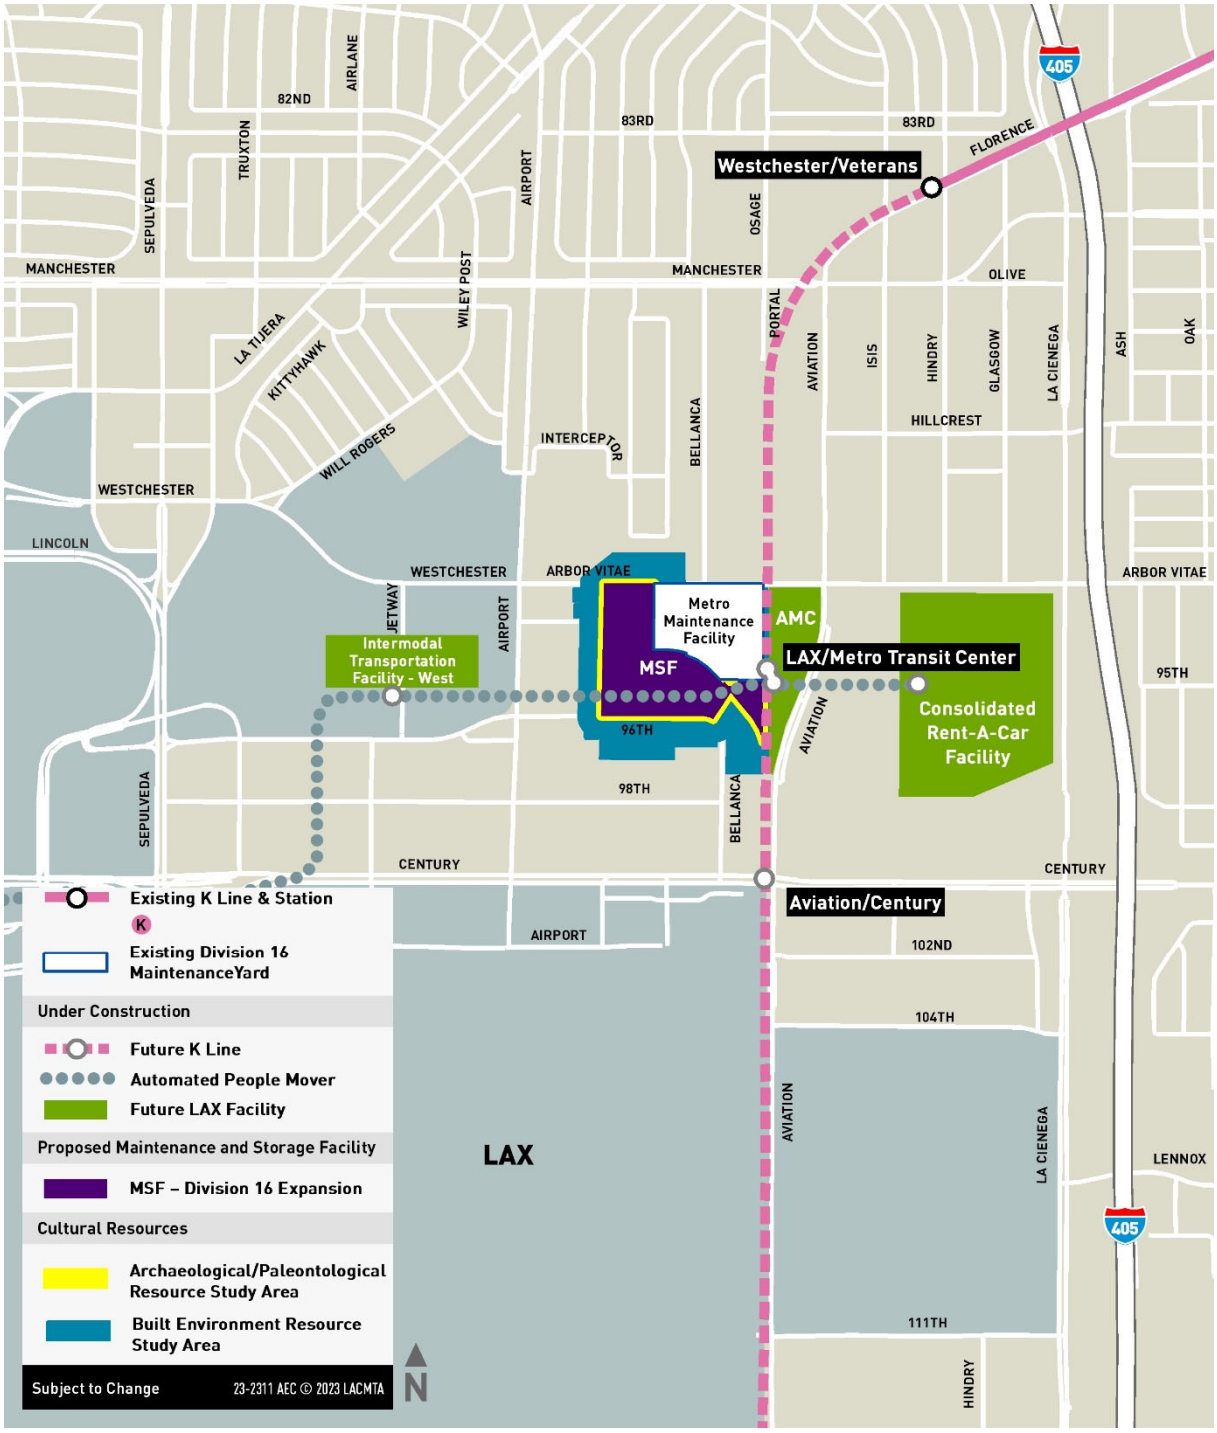

An overview of both the Archaeological/Paleontological and Built Environment RSAs is provided on Figure 5-3 and Figure 5-4, and a more detailed series of RSA maps documenting the built environment resources is provided in Appendix A.

5.3 INVENTORY RESULTS

5.3.1 CULTURAL RESOURCES

5.3.1.1 ARCHIVAL RESEARCH

SOUTH CENTRAL COASTAL INFORMATION CENTER RECORDS SEARCH

The SCCIC records search identified 144 previous cultural resources studies within a 0.25-mile radius of the RSA. Of the 144 studies, 80 studies intersect the Built Environment RSA.

The SCCIC records search identified 134 previously recorded resources within 0.25-mile radius of the RSA. Of the 134 resources (128 built environment, five archaeological, and one multi-component resource), 61 resources intersect the Built Environment RSA, 36 of which intersect the Archaeological RSA. Table 5-2 provides a list of these results per each alternative, and brief discussions of the resources are provided below. Results of the SCCIC records search are provided in Appendix C.

TABLE 5-2. SCCIC PREVIOUSLY RECORDED RESOURCES WITHIN THE BUILT ENVIRONMENT RSA

PROJECT ELEMENT	BUILT ENVIRONMENT RESOURCES	ARCHAEOLOGICAL RESOURCES	TOTAL
San Vicente–Fairfax Alignment Alternative	42	2	44
Fairfax Alignment Alternative	39	2	42
La Brea Alignment Alternative	35	1	36
Hollywood Bowl Design Option	8	0	8
MSF	0	0	0

Source: SCCIC 2023

BUILT ENVIRONMENT RESOURCES

The SCCIC records search identified 128 built environment resources and one multi-component (built environment and archaeological) resource within a 0.25-mile radius of the RSA, of which 61 intersect the Built Environment RSA. Of these 61 built environment resources, 29 were identified as eligible and/or listed historical resources. Built environment resources range from historic districts, such as the Whitley Heights Historic District, Miracle Mile Historic District, and Hollywood Boulevard Commercial and Entertainment District, to commercial buildings, such as the Zephyr Club, Rexall Drug Store, Lee Drug Co., and Johnie's Coffee Shop. Other building types include civic resources, such as the Hollywood High School Auditorium, the West Hollywood Library, and the Cahuenga Pass Transportation Center, to residential resources, such as the Samuel Freeman House, the Highland-Camrose Bungalow Village, and the De Keyser Residence. Many of these resources overlap with multiple alignment alternatives and the design option.

ARCHAEOLOGICAL RESOURCES

The SCCIC records search identified six archaeological sites within the 0.25-mile radius of the Archaeological RSA (Table 5-3). Two historic archaeological sites (P-19-003045 and P-19-003302) are within the Archaeological RSA, one historic archaeological site (P-19-002964) is within the Built Environment RSA but outside the Archaeological RSA, and three archaeological sites (P-19-000159, P-19-001261, and P-19-002393) are outside both RSAs. Resources are discussed below in order of proximity to the Archaeological RSA.

TABLE 5-3. SCCIC PREVIOUSLY RECORDED ARCHAEOLOGICAL RESOURCES

PRIMARY NUMBER (P-19-)	RESOURCE NAME/ DESCRIPTION	CONSTRUCTION DATE/TIME PERIOD	ELIGIBILITY/ EVALUATION STATUS FOR CRHR/NRHP	LOCATION
000159	La Brea Tar Pits - prehistoric archaeological materials and human remains	Prehistoric	Unevaluated	0.25-mile buffer
001261	La Brea Tar Pits – historic-age refuse in historic mining pit	Late 19th to early 20th Century	Unevaluated	0.25-mile buffer
002393	Historic-age refuse in redwood-lined privy or well	1902-1911	Unevaluated	0.25-mile buffer
002964	Historic-age trash deposit and brick lined structure	1901-1950	Unevaluated	Built Environment RSA; La Brea Alignment Alternative
003045	Gilmore Adobe and associated archaeological deposits	1852	Locally Significant	Archaeological RSA; La Brea Alignment Alternative
003302	Historic-age trash deposit	Unknown	Unevaluated	Destroyed

Source: SCCIC, 2023

P-19-003045 consists of the Gilmore Adobe and associated archaeological deposits located on the surrounding lands. A portion of the site extends into the Archaeological RSA within the La Brea Alignment Alternative. The Gilmore Adobe, also known as the La Brea Adobe, was originally constructed circa 1852 and purchased in 1880 by Arthur Gilmore, who occupied the adobe and used the lands for a dairy farm until oil was discovered on the property circa 1904. The land was then used to drill and refine oil. Starting in 1934, a farmers' market was established near the adobe, and the surrounding property was home to a variety of other features including a baseball stadium, drive-in theater, and nursery. The farmers' market remains an ongoing attraction today, located adjacent to the proposed Fairfax/3rd Station. The Gilmore family has continued to occupy the adobe through the years, and currently operates it as the headquarters for the A.F. Gilmore Company (Cogstone 2002; Gilmore 2020). Archaeological components representing all phases of historic occupation were discovered in 2002 during construction monitoring. Archaeological finds were encountered up to four feet below ground surface and included features such as manholes, pipes, and a wooden structure of unknown use. Trash deposits and scatters of refuse were also observed, which dated from the early nineteenth century to the 1970s and included glass bottles; historic ceramics; livery

items; gardening tools; metal hardware; building debris; and faunal bone from cows, pigs, and goats (Cogstone 2002).

P-19-003302 was documented in 2003 as a historic trash pit encountered below Hollywood Boulevard east of Highland Avenue during construction monitoring. The trash deposit was destroyed by grading activities but was recorded as measuring approximately two feet in diameter with an unknown depth. The deposit contained undated alcohol bottles, metal, a porcelain cup, one green glass shard, and a clear glass bottle. The site record indicates that artifacts were collected. This resource appears to no longer exist, but it was initially observed in an area that the Archaeological RSA overlaps (Avalos 2003).

P-19-002964 consists of one historic feature and diffuse historic refuse scatters documented during construction monitoring at the northeast and northwest portions of Park La Brea. Cultural materials were observed up to approximately five feet below ground surface. The single feature consists of a brick- lined structure containing bottles from the 1930s. Most artifacts observed at the site were scattered across highly disturbed soils and consisted primarily of glass bottles and ceramic artifacts. Collected artifacts with temporally diagnostic elements range from 1877 to present day, with a majority of the artifacts dating to between 1930 and 1950 and a small number dating between 1901 and 1911 (Hale 2002). This archaeological site is located within the Built Environment RSA within the La Brea Alignment Alternative, but outside of the Archaeological RSA.

P-19-000159 and P-19-001261 represent prehistoric and historic archaeological components documented in the vicinity of the La Brea Tar Pits at Hancock Park. These resources are not located within the Archaeological RSAs but fall within the 0.25-mile radius of the Archaeological RSA. P-19-000159 was originally recorded in 1949 by R.F. Heizer to describe prehistoric archaeological materials collected from the asphalt seeps of the La Brea Tar Pits. Human remains were recovered from one pit and several types of artifacts, including wooden fore shaft bunts, dart shafts, and a stone “cog” were recovered from other pits. Nearby, P-19-001261 represents a “Civil War Period” asphalt mine that was later used as a trash pit during the late nineteenth century and early twentieth century. Materials observed included glass bottles, pottery, metal objects, horseshoes, utility objects, mammal and fish bone, and asphalt chips and clods from the mine operation. The refuse was interpreted as a possible trash dump used by the Hancock family, whose residence was just east of the pit. The site was encountered during fossil salvage operations, and the historic materials were collected at that time. The site record indicates that the western portion of the site was destroyed by museum excavations, but the eastern portion of the site remains intact under overburden (Salls 1986).

P-19-002393 consists of an infilled and truncated redwood-lined privy or well that dates between the late nineteenth and early twentieth century and is likely related to the operation of the Hollywood Hotel constructed in 1902. Artifacts encountered in the three-meter-square feature included hotel wares; stemware fragments; stoneware crocks; bedroom chamber basins; electric bulb, glass lamp chimneys; sham bottom shot glasses; and several glass bottles with a variety of finishes, including hand- tooled, ball, and screw top. The feature was encountered during construction monitoring underneath the subterranean story of a parking structure north of Hollywood Boulevard and east of Orchid Avenue (Greenwood and Associates 1995). The site is not located within the RSA and is at least 415 feet west of the nearest Project element.

BUILT ENVIRONMENT RESOURCE DIRECTORY

In addition to information from the SCCIC, archival research included a review of the Built Environment Resources Directory (BERD). The BERD is an inventory of built environment resources maintained by the OHP and contains many built resources that are not indicated on the SCCIC's maps.

The BERD search identified 209 resources within the Built Environment RSA, many of which overlap multiple Project alignment alternatives and the design option. Table 5-4 includes a summary of these results by Project alignment alternative, the design option, and the MSF. Documents pertaining to the BERD search are provided in Appendix C.

TABLE 5-4. BERD RESOURCES WITHIN THE BUILT ENVIRONMENT RSA

PROJECT ELEMENT	NUMBER OF BERD RESOURCES*
San Vicente–Fairfax Alignment Alternative	174
Fairfax Alignment Alternative	159
La Brea Alignment Alternative	101
Hollywood Bowl Design Option	21
MSF	0

Source: BERD 2023
* Although there are 209 BERD resources in the RSA, multiple BERD resources overlap in the alignment alternatives and the design option; therefore, the resources identified in this table for all of the project components are more than 213.

LOS ANGELES HISTORIC RESOURCES INVENTORY

A search of the Los Angeles Historic Resources Inventory (HistoricPlacesLA) was also conducted. HistoricPlacesLA contains information on LAHCMs, HPOZs, and properties identified as eligible for listing in the NRHP or CRHR, or as an LAHCM or a HPOZ through the Los Angeles Historic Resources Survey, known as SurveyLA. The HistoricPlacesLA search identified five HPOZs within the Built Environment RSA: Carthay Circle HPOZ, La Fayette Square HPOZ, Miracle Mile HPOZ, Miracle Mile North HPOZ, and Whitley Heights HPOZ. A review of SurveyLA identified two additional historical resources: the Park La Brea Garden Apartments and the Firestone Tire Building. Table 5-5 summarizes these results by alignment alternative and design option. No HPOZs were identified within the MSF RSA.

TABLE 5-5. HISTORIC PRESERVATION OVERLAY ZONES WITHIN THE BUILT ENVIRONMENT RSA

In addition, the HistoricPlacesLA search identified 18 listed LAHCMs within the Built Environment RSA. Table 5-6 summarizes these results by alignment alternative and design option. No LAHCMs were identified within the MSF RSA.

NATIVE AMERICAN HERITAGE COMMISSION SACRED LANDS FILE SEARCH

The results of the SLF search indicate that the region contains Native American cultural resources, Traditional Cultural Properties, and/or tribal cultural resources. The NAHC also identified 10 Native American representatives for AB 52 consultation efforts and recommended contacting the Fernandeno Tataviam Band of Mission Indians and the Gabrieleno/Tongva San Gabriel Band of Mission Indians for additional information. Documents pertaining to the SLF search are included in Appendix D and a summary of AB 52 consultation is included in the KNE Tribal Cultural Resources Technical Report.

5.3.1.2 FIELD SURVEY

BUILT ENVIRONMENT RESOURCES

As a result of the pedestrian surveys, 16 previously documented built environment resources were updated, and 50 new built environment resources were recorded.

ARCHAEOLOGICAL RESOURCES

Unpaved areas within station locations, TBM launch and retrieval sites, and construction staging areas, and locations identified during the desktop review were inspected closely during the archaeological survey. Where necessary, transects no more than 15 meters wide were walked along unpaved areas. However, most of the exposed surfaces consisted of narrow landscaping elements that were too small to require transects. Observed soils varied across the survey area but generally consisted of heavily disturbed native soil or imported fill. Vegetation consisted of non-native grasses and non-native landscaping plants, including trees, shrubs, and flowers. Modern or temporally undiagnostic refuse was observed in many locations and included plastic or paper food and beverage container waste, glass fragments, building materials (e.g., brick, concrete, tile, etc.), and various metal scrap. Approximately 90 percent of the unpaved areas, and about two percent of the total Archaeological RSA, was inspected. No new or previously documented archaeological resources were observed during the survey.

5.3.2 PALEONTOLOGICAL RESOURCES

5.3.2.1 NATURAL HISTORY MUSEUM OF LOS ANGELES RECORDS SEARCH

The results of the NHMLA records search revealed that there have been two invertebrate localities recovered from the Topanga Formation and six vertebrate localities from Pleistocene sediments within or very near to the Paleontological RSA. Furthermore, there are 13 additional vertebrate localities from Pleistocene sediments very near to the RSA. In addition, six nearby vertebrate localities have been recovered from brea (asphalt) deposits. Results of the NHMLA records search are provided in Confidential Appendix G.

5.4 SIGNIFICANT RESOURCES WITHIN THE RSAS

5.4.1 CULTURAL RESOURCES

5.4.1.1 BUILT ENVIRONMENT RESOURCES

The cultural resources study identified 64 built environment resources within the Built Environment RSAs that qualify as historical resources for the purposes of CEQA, including one with an archaeological component. There are a total of 45 historical resources within the San Vicente–Fairfax Alignment Alternative RSA, 42 within the Fairfax Alignment Alternative RSA, 28 within the La Brea Alignment Alternative RSA, and 10 within the Hollywood Bowl Design Option RSA. Many of these resources overlap with multiple alignment alternatives and the design option. Table 5-7 lists these resources and the alignment alternative(s) that they overlap with, and resources descriptions are provided below. No historical resources have been identified within the MSF Alternative RSA.

Each of the 64 resources described below includes a map reference and figure number that corresponds to a resource number identified in the figures provided in Appendix A.

FIRST UNITED METHODIST CHURCH OF HOLLYWOOD (FIGURE 1, MAP REFERENCE 1)

First United Methodist Church of Hollywood (P-19-169321), located at 6817 Franklin Avenue and constructed between 1926 and 1929, is NRHP/CRHR eligible and significant under Criterion C/3 for its English Gothic Revival architecture and association with Thomas P. Barber, an English-born architect who design the property. The building features a rectangular plan with irregularities that center around a central interior courtyard; sits on a concrete foundation; includes a front facing gable clad in asphalt composition shingles and a truncated square bell tower with corner turrets; and includes exterior walls constructed of concrete masonry unit block clad in stucco with fixed and sash windows, as well as large pointed arched window openings that house stained glass and tracery.

HOLLYWOOD WAX MUSEUM (FIGURE 1, MAP REFERENCE 2)

Hollywood Wax Museum (P-19-167577), located at 6765 Hollywood Boulevard and constructed in 1928, is individually eligible for the NRHP and significant under Criterion C for its Spanish Colonial Revival design. The building is also listed in the NRHP as a contributing resource to the designated Hollywood Boulevard Commercial and Entertainment District. The building features a rectangular plan on a concrete foundation; is constructed of concrete clad in stucco; and includes Churrigueresque detailing and decorative brackets beneath the eaves, balconettes with original sash window openings, and five storefronts.

LOS ANGELES FIRST FEDERAL, SECURITY PACIFIC BANK (FIGURE 1, MAP REFERENCE 3)

Los Angeles First Federal, Security Pacific Bank building (P-19-167578), located at 6777 Hollywood Boulevard and constructed built in 1925, is individually eligible for the NRHP and significant under Criterion C for its Gothic Revival and Art Deco designs, as well as its association with architects Meyer & Holler. The building is also listed as a contributing resource to the designated Hollywood Boulevard Commercial and Entertainment District. The building features a rectangular plan on a concrete

foundation and is characterized by a central projecting tower on the south facing façade, stepped parapets, medieval figures, floral patterns, and medallions.

SIVANANDA YOGA COMMUNITY (FIGURE 4, MAP REFERENCE 4)

Sivananda Yoga Community building (P-19-168032), located at 1538 McCadden Place and constructed in 1922, is individually eligible for the local register significant for its Spanish Eclectic Revival design and local significance (assigned CRHR Status Code 5S2). The building features a rectangular plan on a concrete foundation and includes exterior stucco cladding, as well as red Spanish tile roof cladding along the eaves and a gabled partial porch entry.

HOLLYWOOD HIGH SCHOOL HISTORIC DISTRICT (FIGURE 4, MAP REFERENCE 5)

Hollywood High School Historic District (P-19-189990), located at 1521 N. Highland Avenue and constructed in 1903, was designated in the NRHP by the Keeper of the Register in 2012 and is significant under Criterion A for its association with historic events in Hollywood and under Criterion C for its Modern architectural styles. The period of significance is 1900-1924, 192501949, and 1950-1974 (NRIS # 11000989). Character-defining features include its architectural details, like glass block, stucco cladding, and rounded corners, as well as its spatial arrangement and landscape elements.

HOLLYWOOD HIGH SCHOOL LIBERAL ARTS BUILDING (FIGURE 4, MAP REFERENCE 6)

Hollywood High School Liberal Arts Building, located at 1521 N. Highland Avenue and constructed in 1938, is individually eligible for the NRHP and is a contributing resource to the NRHP-listed Hollywood High School Historic District. The building is significant under Criterion C for its monumental form, fenestration details, and Modern Movement architectural design elements. The two-story building features a rectangular plan on a concrete foundation; is constructed of concrete clad in stucco; and exhibits character-defining features like three primary entrances on its east facing façade with decorative concrete elements in bas relief, as well as original sash windows.

6806 HOLLYWOOD BOULEVARD (FIGURE 2, MAP REFERENCE 7)

The building at 6806 Hollywood Boulevard (P-19-168608), constructed in 1922, is listed in the NRHP as a contributing resource to the NRHP-listed Hollywood Boulevard Commercial and Entertainment District. The building is significant under Criterion C for its Art Deco architectural style. The single-story building features a rectangular plan with a flat roof and an Art Deco belt cornice, sash windows, and six storefronts.

REXALL DRUG STORE, LEE DRUG COMPANY (FIGURE 2, MAP REFERENCE 8)

Rexall Drug Store, Lee Drug Company, located at 6800 Hollywood Boulevard and constructed built in 1935, is NRHP eligible as a contributor to the Hollywood Boulevard Commercial and Entertainment District and is significant under Criteria A and C for its association with historic events and trends, as well as for its Art Deco architectural design. The two-story building features a rectangular plan on a concrete foundation and includes a flat roof with parapets, horizontal banding and Art Deco detailing within the concrete, and a pronounced vertical sign above the roofline.

MAX FACTOR MAKEUP SALON (FIGURE 2, MAP REFERENCE 9)

Max Factor Makeup Salon (P-19-167596), located at 1666 N. Highland Avenue and constructed in 1916, is NRHP eligible and significant under Criterion A for its association with commercial development in Hollywood and Criterion C for its distinctive Art Deco design. The four-story building features a rectangular plan on a concrete foundation and is characterized by fluted pilasters, curved pediment-like parapets, floral motifs, swags, and ornamentation.

BANK OF AMERICA (FIGURE 2, MAP REFERENCE 10)

Bank of America building (P-19-167579), located at 6780 Hollywood Boulevard, constructed in 1914 and remodeled in 1935, is individually eligible for the NRHP and is significant under Criterion C for its mixture of Neoclassical and Spanish Colonial Revival designs. The building is also listed as a contributing resource to the NRHP-listed Hollywood Boulevard Commercial and Entertainment District. The single-story building features a rectangular plan on a concrete foundation and is characterized by classical detailing, Corinthian pilasters on the façade, a decorated frieze, and a projecting cornice.

HOLLYWOOD HIGH SCHOOL AUDITORIUM (FIGURE 4, MAP REFERENCE 11)

Hollywood High School Auditorium (P-19-171030), located at 1521 N. Highland Avenue and constructed in circa 1954, is NRHP/CRHR eligible and is significant under Criterion C/3 for its New Formalism architectural design. The one to three-story building features a rectangular plan on a concrete foundation and is characterized by tile mosaic details and a symmetrical façade with projecting pilasters and an exterior mural.

HOLLYWOOD WALK OF FAME (FIGURE 2 AND 3, MAP REFERENCE 12)

Hollywood Walk of Fame (P-19-167544), located on Hollywood Boulevard between Goer Street and La Brea Avenue, and Vine Street between Sunset Boulevard and Yucca Street, and constructed in 1955, is an approximately 1.3-mile public sidewalk. The sidewalk is individually listed at the local level as Los Angeles Historic-Cultural Monument No. 194 for its association with Hollywood's entertainment industry and representation of the community's significant past. Its significant features include more than 2,600 terrazzo and brass stars along 15 blocks of sidewalk that honor individuals in the entertainment industry within the five categories of motion picture, television, radio, live theater, and recording.

HOLLYWOOD BOULEVARD COMMERCIAL AND ENTERTAINMENT DISTRICT (FIGURE 2 AND 3, MAP REFERENCE 13)

Hollywood Boulevard Commercial and Entertainment District (P-19-174178) is located on Hollywood Boulevard and extends 1.8 miles east to west from North Gower Street to North La Brea Avenue; it also extends north to south 0.4-mile from the intersections of Vine Street and Yucca Street to Vine Street and Sunset Boulevard. The Hollywood Boulevard Commercial and Historic District was listed in the NRHP in 1985 (NRIS # 85000704). The district is significant under NRHP Criterion A for its association with the commercial development of Hollywood and the history of the entertainment industry in California. The district is also significant under NRHP Criterion C for its excellent examples of the predominant architectural styles of the 1920s and 1930s, which include a mix of Classical

Revival, Spanish Colonial Revival, and Art Deco. When listed in 1985, the district included 102 contributing resources with a period of significance from 1915 to 1939.

1145 N. SYCAMORE AVENUE (FIGURE 4, MAP REFERENCE 14)

The building at 1145 N. Sycamore Avenue, constructed in 1923, is a contributor to a multi-component resource that is eligible for local listing or designation (assigned CRHR Status Code 5D2). The building is significant for its Craftsman-style details. The single-story building features a sharp side gable with deep eaves, a partial porch entry, and exterior horizontal wood siding.

1143 N. SYCAMORE AVENUE (FIGURE 4, MAP REFERENCE 15)

The building at 1143 N. Sycamore Avenue (P-19-169141), constructed in 1925, is a contributor to a multi-component resource that is eligible for local listing or designation (assigned CRHR Status Code 5D2). The building is significant for its Mission Revival details. The single-story building features a rectangular plan and includes exterior stucco cladding, stepped parapets, and an arched, partial porch entry.

1133 N. DETROIT STREET (FIGURE 4, MAP REFERENCE 16)

The building located at 1133 N. Detroit Street, constructed in 1962, is NRHP/CRHR eligible and significant under Criterion C/3 for its distinctive Stucco Box/Dingbat architectural design. The two-story apartment building is characterized by soft-story parking and Modern design elements on its east facing façade, as well as flat surfaces and smooth stucco cladding.

FORMOSA CAFÉ (FIGURE 4, MAP REFERENCE 17)

Formosa Café (P-19-189256), located at 7118 Santa Monica Boulevard, and constructed in 1921, is NRHP/CRHR eligible and significant under Criterion A/1 for its association with the move business and move celebrities. The building is characterized by a rectangular plan and includes stucco exterior cladding, fenestration details, and original signage.

LEXINGTON AVENUE SINGLE-FAMILY RESIDENCES (FIGURE 4, MAP REFERENCE 18)

Lexington Avenue Single-Family Residences (P-19-168948), located at the 6800-7000 blocks of Lexington Avenue and constructed in the 1920s, is a contributing resource to a multi-component resource that is eligible for local list or designation (assigned CRHR Status Code 5D2). The residences include Colonial Revival, Mission Revival, and Craftsman styles. Significant features include single-story massing and unifying landscape elements.

JOHNIE'S COFFEE SHOP (FIGURE 10, MAP REFERENCE 19)

Johnie's Coffee Shop (P-19-189263), located at 6101 Wilshire Boulevard and constructed in 1956, is NRHP/CRHR eligible and is significant under Criterion C/3 for its Futurist-Googie architectural style. The building occupies the southeast corner of the parcel at the corner of South Fairfax Avenue and Wilshire Boulevard and features an expressive roof form, asymmetrical façade, fixed fenestration details, and rough-cut stone veneer cladding.

MAY COMPANY BUILDING (FIGURE 10, MAP REFERENCE 20)

May Company Building (P-19-173051), located at 6067 Wilshire Boulevard and constructed between 1939 and 1940, is NRHP/CRHR eligible and significance under Criterion C/3 for its Streamline Moderne architectural style. The building is four-stories, features a rounded designed element at the corner of S. Fairfax Avenue and Wilshire Boulevard, and fixed storefront windows along the ground level.

6132 ORANGE STREET FIGURE 10 (MAP REFERENCE 21)

The building located at 6132 Orange Street, constructed in 1930, is NRHP/CRHR eligible and is significant under criteria C/3 for its Spanish Colonial Revival design. The building features a rectangular plan and includes red Spanish tile roof cladding, stucco wall cladding, arched entryways, terra cotta breeze block, bracketed wall protections, and wrought iron fenestration details.

7900 SANTA MONICA BOULEVARD (FIGURE 5, MAP REFERENCE 22)

The two-story Italianate style commercial building located at 7900 Santa Monica Boulevard was constructed in 1924. The resource was identified as a contributor to a multi-component resource that is eligible for local listing or designation (assigned NRHP Status Code 5D2). Significant features include Italianate details, fenestration, and exterior finishes. The building at 7900 Santa Monica Boulevard, constructed in 1924 is a contributor to a multi-component resource that is eligible for local listing or designation (assigned CRHR Status Code 5D2). The three-story commercial building features a rectangular plan and a flat roof with Italianate details and exterior brick veneer cladding.

UNITED STATES POST OFFICE (FAIRFAX AVENUE) (FIGURE 5, MAP REFERENCE 23)

United States Post Office (Fairfax Avenue) building, located at 1125 N. Fairfax Avenue and constructed in 1947, is NRHP/CRHR eligible and significance under Criterion A/1 for its role in the development of West Hollywood and under Criterion C/3 for its Streamline Moderne architectural style. The building features a rectangular plan and includes curved walls, brick exterior cladding, signage, and fenestration.

PACIFIC DESIGN CENTER (FIGURE 7, MAP REFERENCE 24)

Pacific Design Center (P-19-176757), located at 8687 Melrose Avenue and constructed in 1975, is NRHP/CRHR eligible and is significant under Criterion C/3 for its Postmodern design. The building features free-style arrangements of simplified and oversized (larger scale and proportion) examples of classical elements like archways and loggia, pediments and moldings, and chimneys and rooflines.

7916-7922 SANTA MONICA BOULEVARD (FIGURE 5, MAP REFERENCE 25)

The building at 7916-7922 Santa Monica Boulevard, constructed in 1926, is NRHP eligible and significant under Criterion C for its Two-Park Commercial Block design with Italianate influence. The building features a two-story mass with ornate detailing and wrought iron fenestration details on its north facing façade.

CAMPBELL BUILDING (FIGURE 5, MAP REFERENCE 26)

Campbell Building (P-19-171023) located at 7906-7914 Santa Monica Boulevard and constructed in 1926, is NRHP eligible and significant under Criterion C for its Two-Part Commercial Block style. Significant features include brick exterior cladding with decorative patterns and fenestration as well as its overall rectangular plan and two-story massing.

7900-7904 SANTA MONICA BOULEVARD (FIGURE 5, MAP REFERENCE 27)

The building at 7900-7904 Santa Monica Boulevard, constructed in 1924, is NRHP eligible and significant under Criterion C/3 as a contributing resource to a multi-component resource through survey evaluation (assigned CRHR Status Code 3D). The building is significant for its Two-Park Commercial Block and Classical design. The two-story building features a rectangular plan and includes exterior brick cladding and Classical design elements.

PLUMMER PARK AND OLDEST HOUSE IN HOLLYWOOD (FIGURE 5, MAP REFERENCE 28)

Plummer Park and the Oldest House in Hollywood, located at 7377 Santa Monica Boulevard and constructed circa 1870, is California Historical Landmark No. 160. The Folk Victorian building includes elements of wood frame construction, as well as significant landscape features.

UNITED ARTIST/SAMUEL GOLDWYN STUDIOS (FIGURE 4, MAP REFERENCE 29)

United Artist/Samuel Goldwyn Studios (P-19-176758) building, located at 7200 Santa Monica Boulevard and constructed in 1919, is NRHP eligible and significant under Criterion A for its association with Hollywood's movie history, such as serving as the Pickford-Fairbanks Studios, and the home of Mary Pickford and Douglas Fairbanks, in 1922, and as the Samuel Goldwyn Studios. The building features a rectangular plan and features a Colonial Revival and Italianate style with hipped roofs and wide eave overhangs, as well as exterior stucco wall cladding.

SANTA MONICA BOULEVARD COMMERCIAL GROUPING (FIGURE 5, MAP REFERENCE 30)

Santa Monica Boulevard Commercial Grouping (P-19-176879), located at 7900-7936 Santa Monica Boulevard, is eligible for the local register for its architectural significance (assigned CRHR Status Code 5S1). The resource includes a collection of commercial buildings with adjoining facades that features a combination of Classical and Spanish Colonial Revival designs.

SANTA PALM CAR WASH (FIGURE 7, MAP REFERENCE 31)

Santa Palm Car Wash, located at 8787 Santa Monica Boulevard and constructed in 1965, is NRHP/CRHR eligible at the local level and significant under Criterion A/1 for its association with commercial and social development of West Hollywood. The Contemporary car wash features a rectangular plan and includes stone veneer cladding, open rafters, and original commercial signage.

8851 SANTA MONICA BOULEVARD (FIGURE 7, MAP REFERENCE 32)

The building at 8851 Santa Monica Boulevard (P-19-176829), constructed in 1926, is individually eligible for the local register or designation. The building is significant for its Classical Revival design (assigned CRHR Status Code 5S2). The building features a rectangular plan and includes exterior brick veneer cladding and fixed fenestration details.

8701 SANTA MONICA BOULEVARD (FIGURE 7, MAP REFERENCE 33)

The property located at 8701 Santa Monica Boulevard (P-19-176759, constructed in 1928, is NRHP eligible and significant under Criterion C for its Gothic Revival design (assigned CRHR Status Code 3S). The two-story building features a rectangular plan with exterior stucco cladding with stone finishes, bay windows, and a storefront system along the ground level.

8703 SANTA MONICA BOULEVARD (FIGURE 7, MAP REFERENCE 34)

The building at 8703 Santa Monica Boulevard (P-19-189255), constructed in 1928, is NRHP/CRHR eligible and significant under Criterion C/3 for its Gothic Revival architectural elements. The two-story building features a rectangular plan with exterior stucco cladding with stone finishes, bay windows, and a storefront system along the ground level.

WHITLEY HEIGHTS HPOZ HISTORIC DISTRICT (FIGURE 2, MAP REFERENCE 35)

Whitley Heights HPOZ Historic District was established in 2017. The Whitley Heights HPOZ includes the Whitley Heights subdivision of the Hollywood Hills, which was primarily developed from the 1910s into the 1940s. The boundary for the NRHP-listed Whitley Heights Historic District (Map Reference 44) overlaps with the entirety of this resource. Therefore, the Whitley Heights HPOZ/ Whitley Heights Historic District is a historical resource for the purposes of CEQA.

HOLLYWOOD BOWL (FIGURE 2, MAP REFERENCE 36)

Hollywood Bowl (P-19-171018), designed by Frank Lloyd Wright and constructed in 1929, is an entertainment outdoor amphitheater located directly west of Cahuenga Boulevard in the Hollywood Hills. The property was listed in the CRHR in 1982, significant under CRHR Criterion 1 for its association with the arts and leisure activities in the early twentieth century. Significant features include the acoustical shell, concrete seating, and associated structures.

HOLLYWOOD BOWL PEDESTRIAN TUNNEL (FIGURE 2, MAP REFERENCE 37)

Hollywood Bowl Pedestrian Tunnel was constructed in 1953 and extends beneath Highland Avenue, providing safe pedestrian access to the Hollywood Bowl from nearby surface parking lots. The tunnel is eligible for listing in the NRHP and CRHR and is significant under Criterion C/3 as a rare example of a 1950s pedestrian tunnel in Los Angeles. Significant features include concrete construction and date of construction inscriptions at tunnel portal entrances.

LASKY DEMILLE STUDIO BARN (FIGURE 2, MAP REFERENCE 38)

Lasky DeMille Studio Barn (P-19-166802), located at 2100 N. Highland Avenue and constructed in 1913 and relocated in 1927, was listed as a California Historical Landmark in 1956, significant for its association with Cecil B. DeMille, who converted the barn to a studio to film the first feature-length motion picture in Hollywood. The property is listed in the NRHP and is significant under Criterion A for its association with art, communications, entertainment, recreation, and industry and under Criterion B for its association with Cecil B. Demille (NRIS# 14000034). Significant features include wood construction, symmetrical arrangement, and fenestration.

HIGHLAND-CAMBROSE BUNGALOW VILLAGE (FIGURE 2, MAP REFERENCE 39)

Highland-Cambrose Bungalow Village (P-19-173461), located at 2103-2115 1/2 North Highland Avenue, 6814-6836 Alta Loma Terrace, and 6819 Camrose Avenue and constructed in the 1920s, is listed in the NRHP and significant under Criterion C for its collection of Craftsman-style Bungalows with Hillside Bungalow landscape designs (NRIS# 89000198). The resources are also listed at the local level (LAHCM 291) The resource includes 14 residential buildings. Significant features include architectural design elements and landscape features.

PALAZZO VERDE APARTMENTS (FIGURE 2, MAP REFERENCE 40)

Palazzo Verde Apartments, located at 2040 N. Highland Avenue and constructed in 1920, is NRHP/CRHR and local register eligible and significant under Criterion C/3 for its garden courtyard apartment design (assigned CRHR Status Codes 5S3, 3S, and 3CS). Significant features include stucco exterior cladding, fenestration, two-story massing, and landscape features.

VALENTINO APARTMENTS (FIGURE 2, MAP REFERENCE 41)

Valentino Apartments (P-19-169329), located at 2000 N. Highland Avenue, and constructed in 1926, is NRHP eligible and significant under Criterion C for its garden courtyard apartment design (assigned CRHR Status Code 3S). Significant features include stucco exterior cladding, fenestration, and complex form.

ROMAN GARDENS (FIGURE 2, MAP REFERENCE 42)

Roman Gardens, located at 2000 N. Highland Avenue and constructed in 1926 is locally listed (LAHCM No. 397) as a significant example of a 1920s courtyard apartment in Los Angeles. The building is significant for its Spanish Colonial Revival-style courtyard and features tile roofs, stucco exterior cladding, and Spanish Colonial Revival elements.

EL GRECO APARTMENT (FIGURE 5, MAP REFERENCE 43)

El Greco Apartment (P-19-166804) located at 817 North Hayworth Avenue and constructed in 1929. was listed in the NRHP in 1988 (NRIS# 88002017) and is significant under Criterion C for its Mediterranean Revival design and association with master architects F. Pierpont Davis and Walter S. Davis. Significant features include Mediterranean Revival elements, and decorative brick masonry and terra cotta tiles.

WHITLEY HEIGHTS HISTORIC DISTRICT (FIGURE 2, MAP REFERENCE 44)

Whitley Heights Historic District (P-19-167483) is bounded by Franklin Avenue on the south, Highland Avenue on the west, and Cahuenga Avenue on the east, converging to an apex on the north at Cahuenga Pass. The district was listed in the NRHP in 1982 (NRIS# 82002189) and is significant under Criterion A, B, and C for its hillside community planning and its theatrical film and cultural heritage as a residential area for celebrities; for its association with land developer H.J. Whitley; and for its Mediterranean architecture. The district includes 163 contributing resources and has a period of significance of 1918-1928. The boundary for the Whitley Heights HPOZ (Map Reference 35) overlaps with the entirety of this resource.

SAMUEL FREEMAN HOUSE (FIGURE 2, MAP REFERENCE 45)

Samuel Freeman House (P-19-167177), located at 1962 Glencoe Way and constructed in 1925, was listed in the NRHP in 1971 (NRIS# 71000146) and is significant as a textile block residence designed by Frank Lloyd Wright, one of only four examples of its type. The building is listed under Criterion C for its concrete block design and as the work of a master architect. Significant features include textile block elements, fenestration, and associated landscape features.

WEST BOULEVARD SEPARATOR (FIGURE 13, MAP REFERENCE 46)

West Boulevard Separator (P-19-187574/Bridge No. 53C1380), located at West Boulevard over Venice Boulevard and constructed in 1933, is NRHP eligible and is significant under Criterion C for its Art Deco design. The bridge includes concrete construction and Art Deco detailing along the guardrails and supports.

HAIG M, PRINCE/FAIRFAX BUILDING (FIGURE 9, MAP REFERENCE 47)

Haig M. Prince/Fairfax Building (P-19-152504), located at 7901 Beverly Boulevard and constructed in 1930, is NRHP eligible and is significant under Criterion C for its Art Deco design. The building features a rectangular plan with concrete construction, Art Deco detailing, and fixed storefront and sash windows.

CLEM WILSON/MUTUAL OF OMAHA BUILDING (FIGURE 12, MAP REFERENCE 48)

Clem Wilson/Mutual of Omaha Building (P-19-173045), located at 5217-5231 Wilshire Boulevard and 672-678 La Brea Avenue, and constructed in 1930, is NRHP/CRHR eligible and is significant under Criterion C/3 for its Art Deco and Streamline Moderne architecture features. The 12-story commercial building includes a rectangular plan with irregularities, concrete construction, and original fenestration details.

FIRESTONE TIRE BUILDING (FIGURE 12, MAP REFERENCE 49)

Firestone Tire Building, located at 800 S. La Brea Avenue and constructed in 1937, is NRHP/CRHR eligible and significant under Criterion C/3 for its Streamline Moderne design. The building is also locally listed (LAHCM No. 1020). Significant features include Streamline Moderne ornamentation, rooftop signage, and curved roof and walls.

ZEPHYR CLUB (FIGURE 12, MAP REFERENCE 50)

Zephyr Club (P-19-170998), located at 5209 Wilshire Boulevard and constructed in 1929, is NRHP eligible and is significant under Criterion C for its Art Deco design. Significant features include a rectangular plan with concrete construction, obelisk columns, stepped columns, and zigzag motifs.

5352-5354 WILSHIRE BOULEVARD (FIGURE 12, MAP REFERENCE 51)

The commercial building located at 5352-5354 Wilshire Boulevard (P-19-175237), constructed in 1937 is NRHP/CRHR eligible and is significant under C/3 for its Art Deco design. Significant features include an irregular L-shape plan, Art Deco elements, concrete construction, and a fixed windows and glass block.

330 N. LA BREA AVENUE (FIGURE 11, MAP REFERENCE 52)

The building located at 330 N. La Brea Avenue, constructed in 1928, is NRHP/CRHR eligible and significant under Criterion C/3 for its Two-Part Commercial Block design with Art Deco and Mission Revival-style influences. The building is characterized by a Two-Part Commercial Block design, Mission style parapet, Spanish tile, exterior lattice work and banding, and ornate Islamic designs.

453 S. LA BREA AVENUE (FIGURE 11, MAP REFERENCE 53)

The building located at 453 S. La Brea Avenue, constructed in 1937, is NRHP/CRHR eligible and significance under Criterion C/3 for its Streamline Moderne commercial design. Significant features include angled storefronts, glass block, metal single-entry doors, blade signage, and metal flashing.

571 S. FAIRFAX AVENUE (FIGURE 9 AND 10, MAP REFERENCE 54)

The building located at 571 S. Fairfax Avenue, constructed in 1929, is NRHP/CRHR eligible and is significant under Criterion C/3 for its Spanish Eclectic design. Significance features include single-story massing, Spanish Eclectic features, concrete construction, and fixed storefront windows.

575 S. FAIRFAX AVENUE (FIGURE 9 AND 10, MAP REFERENCE 55)

The commercial building located at 575 S. Fairfax Avenue, constructed in 1929, is NRHP/CRHR eligible and is significance under Criterion A/1 for its association with the commercial development of Central Los Angeles, the historical urban region of the City of Los Angeles. The building is a two-story, Spanish Eclectic-style property with concrete construction, commercial signage, and fixed storefront windows.

6122 ORANGE STREET (FIGURE 10, MAP REFERENCE 56)

The building located at 6122 Orange Street, constructed in 1926, is NRHP/CRHR eligible and is significant under Criterion C/3 for its Spanish Eclectic architectural style. The two-story, multi-family building features a rectangular plan, Spanish Eclectic-style elements, concrete construction, and sash window details with ornate concrete surrounds.

6148 ORANGE STREET (FIGURE 10, MAP REFERENCE 57)

The building located at 6148 Orange Street, constructed in 1926, is NRHP/CRHR eligible and is significant under Criterion C/3 for its Spanish Eclectic architectural style. The two-story, multi-family building features a rectangular plan, Spanish Eclectic features, concrete construction, and sash window details.

WILSHIRE CENTER BUILDING (FIGURE 10, MAP REFERENCE 58)

Wilshire Center Building, located at 6200 Wilshire Boulevard and constructed in 1970, is NRHP/CRHR eligible and is significant under Criterion C/3 for its Contemporary-style architectural design. Significant features include the free-standing high-rise elements, as well as the honeycombed details on the façade.

357 N. LA BREA AVENUE (FIGURE 11, MAP REFERENCE 59)

The commercial building located at 357 N. La Brea Avenue, constructed in 1930, is NRHP/CRHR eligible and is significant under Criterion C/3 for its Art Deco architectural design. The building features a rectangular plan and concrete construction, Art Deco elements, and fixed storefront windows.

MORRIS MEMORIAL (FIGURE 14, MAP REFERENCE 60)

Morris Memorial, located at 4450 W. Adams Boulevard and constructed in 1930, is NRHP/CRHR eligible and is significant under Criterion C/3 for its Italian Renaissance architectural design. The building features a rectangular plan with concrete construction and significant features include Italian Renaissance details and Classical elements like columns and entablatures.

7760 SANTA MONICA BOULEVARD (FIGURE 5, MAP REFERENCE 61)

The commercial building at 7760 Santa Monica Boulevard, constructed in 1935, is NRHP/CRHR eligible and is significant under Criterion C/3 for its commercial Art Deco architecture. The building features a rectangular plan and concrete construction with Art Deco elements like fluting, zigzags, and stylized motifs.

PARK LA BREA GARDEN APARTMENTS (FIGURE 9 AND 10, MAP REFERENCE 62)

Park La Brea Garden Apartments, located at 555 S. Ogden Drive and constructed between 1943 and 1951, is NRHP/CRHR eligible and is significant under Criterion C/3 for its garden apartment design. The apartment complex includes 31 two-story buildings constructed in 1943 and 18 thirteen-story high rises constructed in 1951; the buildings include Colonial Revival and Modern designs, as well as landscaped and hardscape elements.

FARMERS MARKET AND RANCHO LA BREA ADOBE (FIGURE 9, MAP REFERENCE 63)

Farmers Market and Rancho La Brea Adobe, located at 6333 W. 3rd Street, is a market complex displaying Colonial Revival and Spanish Eclectic architectural styles. The La Brea Adobe, also known as the Gilmore Adobe, was constructed in 1852, and the Farmers Market was constructed in 1935.

Historic-age archaeological materials have also been documented in association with this property as part of site P-19-003045 and are described in more depth below (Section 5.2.2.1). The Farmers Market and Rancho La Brea Adobe property are locally listed (LAHCM No. 543). Significant features include Colonial Revival and Spanish Eclectic elements, clock tower, and spatial arrangement.

HOLLYWOOD THEATER (FIGURE 2, MAP REFERENCE 64)

Hollywood Theater (P-19-167576), located at 6766 Hollywood Boulevard and constructed in 1935, is individually eligible for the NRHP and significant under Criterion A for its association with the development of Hollywood. The Streamline Moderne building is also a contributing resource to the NRHP-listed Hollywood Boulevard Commercial and Entertainment District. Significant features include vertical pylon signage and a recessed entrance.

5.4.1.2 ARCHAEOLOGICAL RESOURCES

As discussed in Section 5.3.1 and Table 5-2, two archaeological resources, P-19-003045 and P-19-003302, have been identified within the Archaeological RSA for the Project. Both resources consist of historic-age refuse deposits encountered below ground surface in the course of construction activities. The resources were documented in the field and artifacts were collected prior to the destruction of observed archaeological components. Documents reviewed at the SCCIC do not indicate that either site has been evaluated to be determined a historical resource or a unique archaeological resource under CEQA. The following discussion addresses the CEQA status for previously documented archaeological resources in the Archaeological RSA and the potential to encounter previously unidentified archaeological resources within the Archaeological RSA during Project construction.

P-19-003045

P-19-003045 consists of the Gilmore Adobe and associated archaeological deposits. The Gilmore Adobe, also known as the La Brea Adobe, and Original Farmers Market has been determined to be a built environment historical resource under CEQA and is listed as Los Angeles Historic-Cultural Monument No. 543, as discussed above. The archaeological deposit for P-19-003045 consists primarily of dispersed historic-age trash scatters and limited subsurface utility features across a wide area surrounding the adobe and farmers market, which date to all phases of historic occupation of the site. The existing 2002 site record on file with the SCCIC does not evaluate the eligibility of the archaeological component of the site but it should be treated as a historical resource under CEQA based on the status of the associated structures. While no artifacts or features associated with this site appear to have been previously recorded within the Archaeological RSA, the dispersed nature of the archaeological deposit recorded for this resource suggests there is potential to encounter portions of the site that have not been previously documented during Project construction.

P-19-003302

P-19-003302 consisted of a discrete, two-foot-diameter, trash pit of undetermined age that was completely removed as a result of archaeological monitoring and construction activities. This resource

cannot be evaluated and is not considered eligible for listing as a historical resource or a unique archaeological resource under CEQA.

ARCHAEOLOGICAL SENSITIVITY OF THE RSA

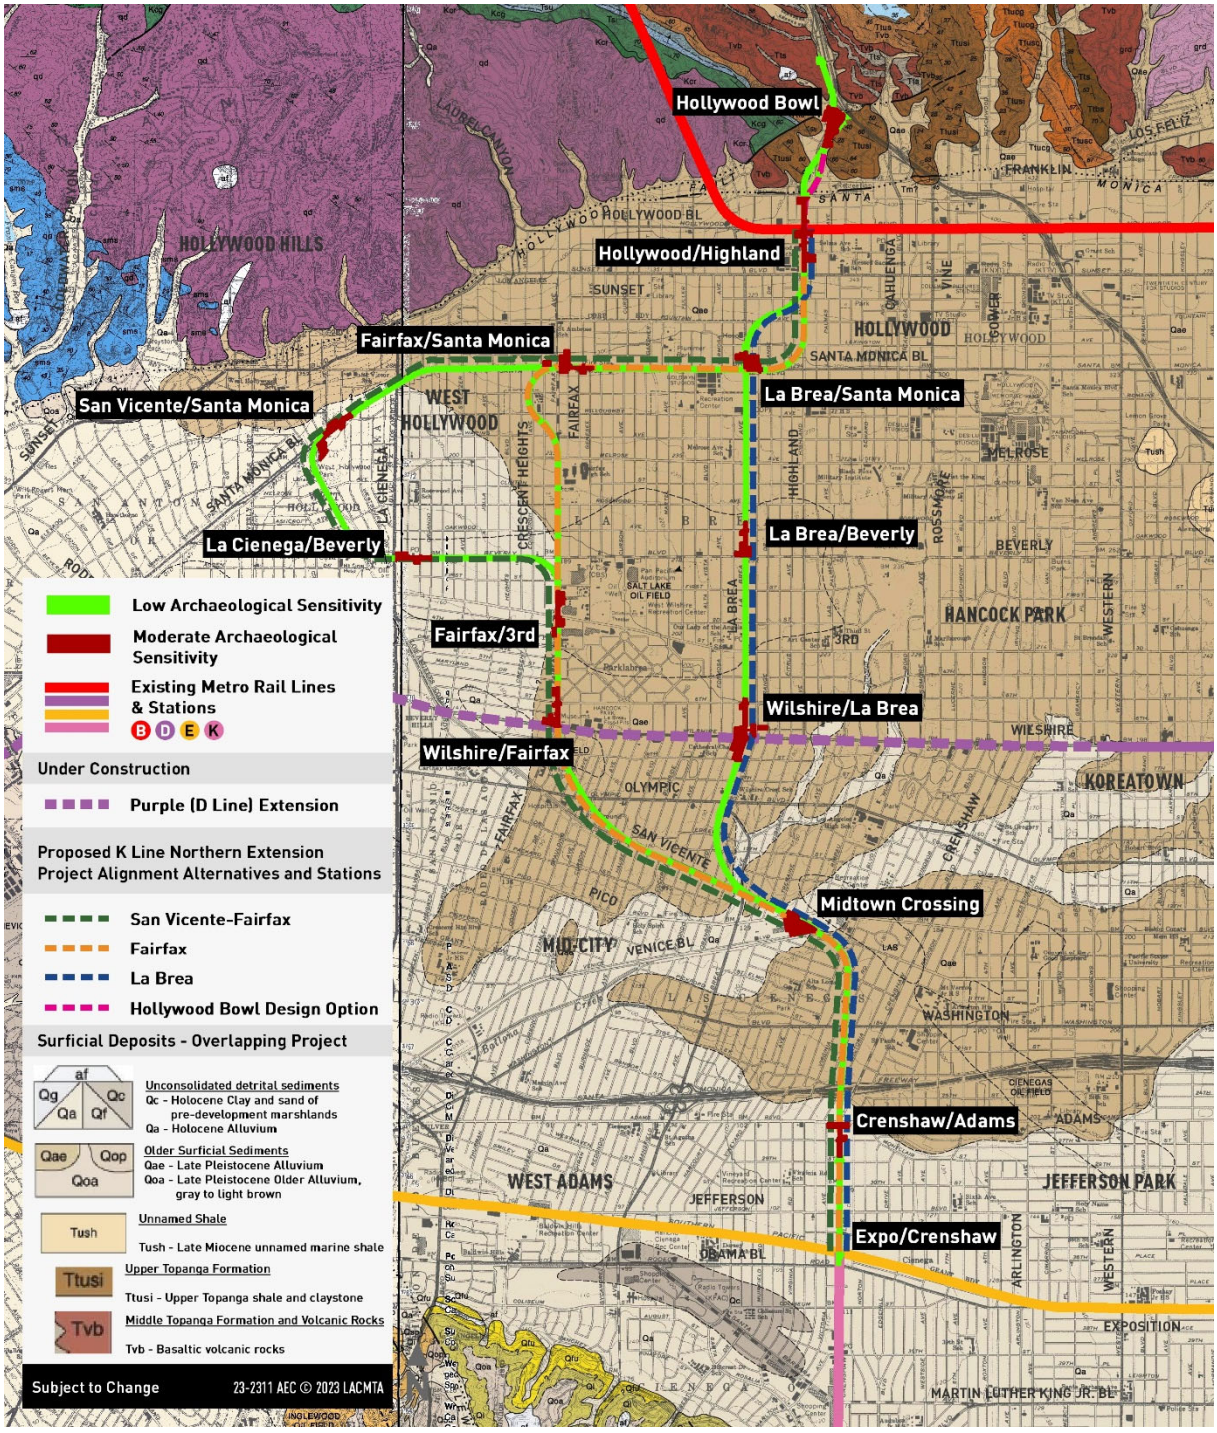

No archaeological resources were observed during the cultural field survey; however, a majority of the Archaeological RSA is paved, and exposed surfaces available for inspection consisted primarily of landscape features, which are often small and contain heavily disturbed soils or imported fill.

Archival research indicates that a majority of archaeological deposits recorded within the RSAs and a 0.25-mile radius were encountered below ground surface during construction activities. Site records for archaeological resources identified at the SCCIC indicate there is potential for Project-related construction activities to encounter historic-age refuse and archaeological features within the first five feet below ground surface underlying existing developments, with some features extending much further below surface.

While no prehistoric archaeological resources have been identified within the Archaeological RSA, one prehistoric resource, the La Brea Tar Pits (P-19-000159) is located within 0.25 mile of the RSAs. Most of the Archaeological RSA is in an alluvial depositional environment. Geologic mapping indicates that the majority of the Archaeological RSA is situated on late Holocene to middle Pleistocene-aged alluvial fan and landslide deposits (Figure 5-5). The young age of the Holocene soils indicates that the sediments that they formed on were deposited in the last 5,000 years and; therefore, have a moderate potential for burial of older archaeological deposits. Generally, the younger a surficial alluvial landform is, the higher its potential for preservation of buried archaeological deposits. People are known to have inhabited the region beginning at least 13,000 years ago, indicating soils from the late Pleistocene through the late Holocene have potential to contain archaeological resources. Older Pleistocene soils present at depth in the Archaeological RSA are not likely to contain archaeological resources. In addition, it has been demonstrated that archaeological sites are not distributed randomly across the landscape, but tend to correlate with certain environmental factors, including slope (flatter being more positively correlated) and distance to water and other resources.

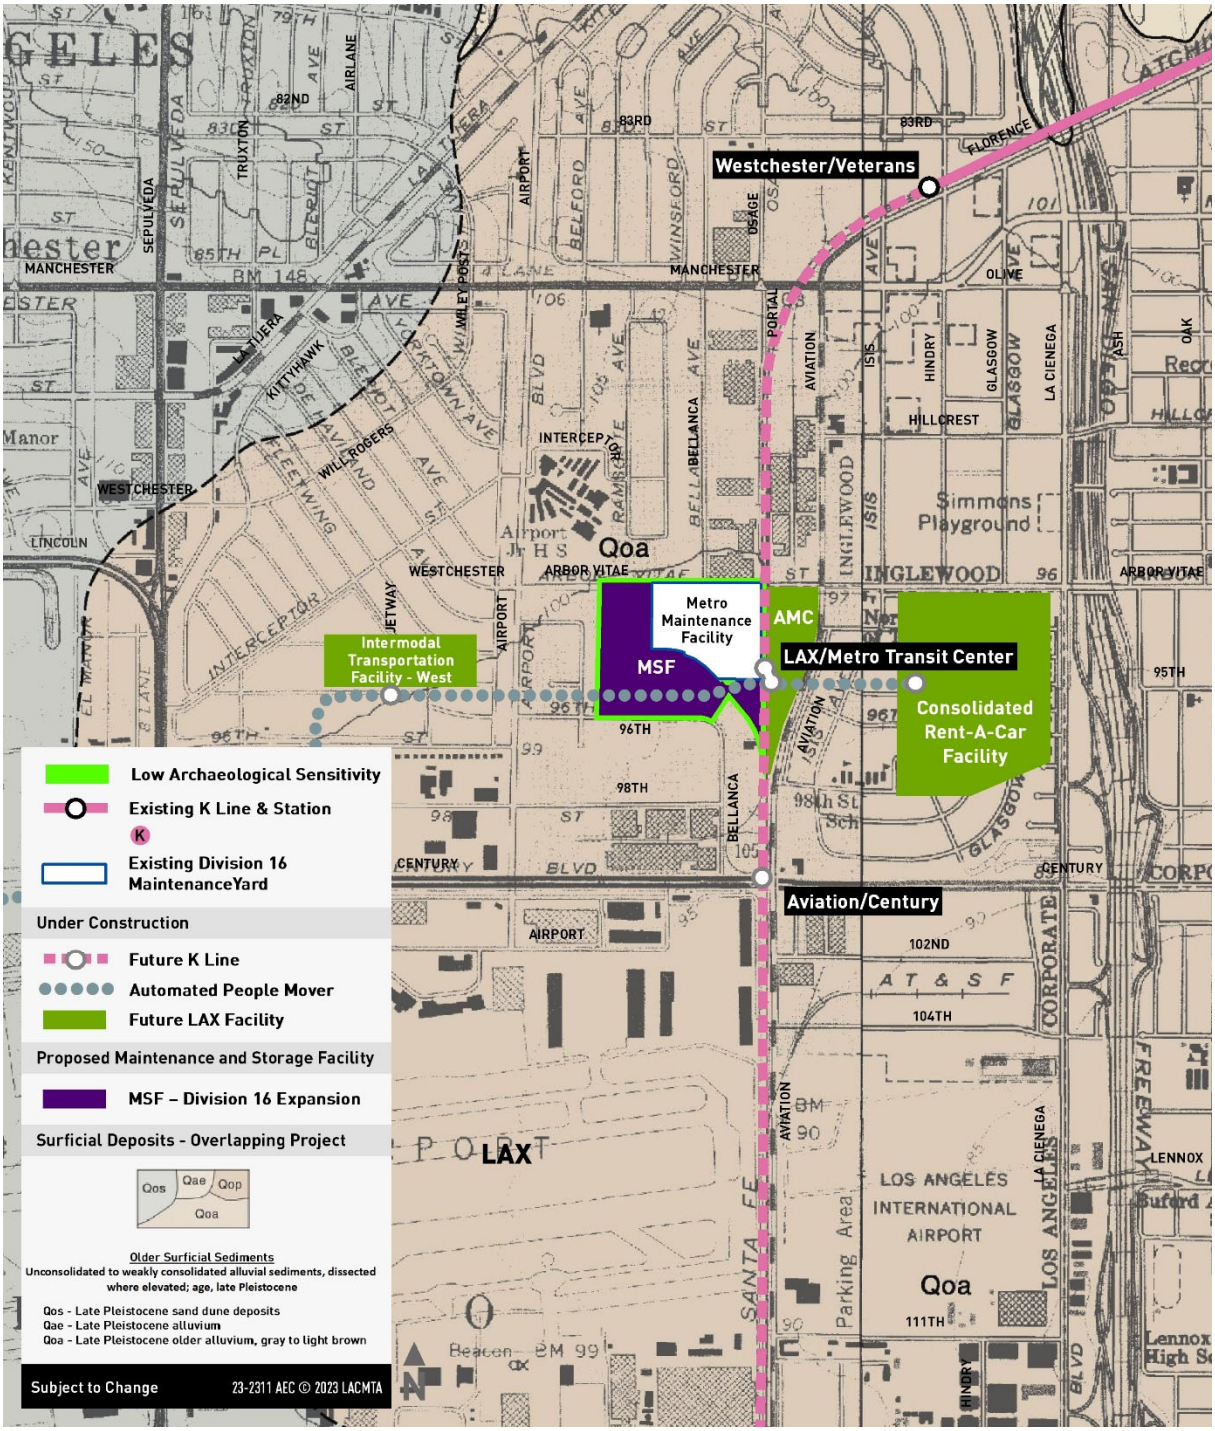

The archaeological sensitivity of the Archaeological RSA is considered to range from low to moderate (Figure 5-5 and Figure 5-6). The degree and depth of previous ground disturbance across the Archaeological RSA is not known, but a majority of the Archaeological RSA has been subject to prior construction and development. Areas with low potential for archaeological resources include older geologic deposits, such as Project components to be constructed at great depth or near surface components in areas with older surficial deposits, and areas with high levels of previous subsurface ground disturbance. Areas with moderate potential to encounter archaeological resources include portions of the Project with limited previous ground disturbance in younger alluvial soils and areas in proximity to previously recorded archaeological resources in or near the Archaeological RSA.

FIGURE 5-5. ARCHAEOLOGICAL SENSITIVITY MAP FOR ALIGNMENTS AND STATIONS

Source: Dibblee & Ehrenspeck 1991; Connect Los Angeles Partners 2023

FIGURE 5-6. ARCHAEOLOGICAL SENSITIVITY MAP FOR THE MSF

Source: Dibblee & Minch 2007; Connect Los Angeles Partners 2023

While the exact depth and degree of previous subsurface ground disturbance for the Archaeological RSA is not known, grading for roads, rails, and parking lots, and construction of utilities and building foundations found across the Project are likely to have had impacts reaching depths of approximately five feet below ground surface. It is anticipated that the degree of ground disturbance required to construct shallow project components, such as those proposed at the MSF, is consistent with the level of previous shallow ground disturbance expected to be present in the area. Work anticipated to be shallow and predominantly located in previously disturbed soils, such as for the MSF, have low potential to encounter intact buried archaeological deposits that may constitute a unique archaeological resource or significant archaeological historic resource. Tunnel construction is estimated to occur 50 to 70 feet below surface in older geological deposits which have low sensitivity for archaeological deposits.

Other proposed construction activities, such as mass excavation required for the new stations and TBM launch and extraction sites, could encounter deeper, intact archaeological deposits in the RSA, and are considered to have moderate archaeological sensitivity. Project components with proximity to P-19-003045 and P-19-000159, including the important asphaltum source at the La Brea Tar Pits, contribute to the sensitivity of station and TBM launch and extraction locations in the vicinity of the resources.

5.4.1.3 HUMAN REMAINS

This analysis, consisting of an SCCIC records search, additional archival research, and archaeological field survey, did not identify any human remains within any of the RSAs for any of the alignment alternatives and stations, the design option, or the MSF. One archaeological site with remains from a single individual (P-19-000159) was identified approximately 0.23 mile from the nearest Project component. No human remains were identified in the RSA.

5.4.2 PALEONTOLOGICAL RESOURCES

As discussed above (Section 5.1.1, Table 5-1, and Figure 5-1 and Figure 5-2), portions of the alignment alternatives and stations, the design option, and the MSF would cross geologic units with high paleontological potential (Qae, Qoa, Ttusi). Additionally, the LACM paleontological records search revealed extensive records of paleontological localities (fossil localities) near the various Project elements, and one that directly overlap with the RSA (see Section 5.3.2). Furthermore, a paleontological literature search revealed additional localities not listed in the records search report (see Section 4.1.2.2).

5.4.2.1 ALIGNMENT ALTERNATIVE 1: SAN VICENTE–FAIRFAX

The San Vicente–Fairfax Alignment Alternative originates at the Metro K Line Expo/Crenshaw Station in Qa sediments. It then passes into Qae sediments just south of the I-10. Just over 1.2 miles west of Crenshaw Boulevard on Jefferson Boulevard lie two LACM vertebrate localities. LACM 336 produced a camel fossil and LACM 3369 produced a horse fossil. Although the surficial geology at these locations is mapped as Qa, the fossils come from subsurface Pleistocene deposits. North of I-10, the alignment begins at a curve to the west and crosses a narrow belt of Qa sediment (Ballona Creek Valley). This

narrow belt of Qa sediments corresponds to the historic path of Ballona Creek, and one LACM vertebrate fossil locality (7137) falls both within the alternative and within path of the creek. Two other localities (1226 and 1783) lie in Qae sediments, but very near the Qa sediments of Ballona Creek. Localities 7137 and 1226 produced bison fossils. Locality 1783 produced ground sloth, horse, camel, and bison fossils. From Ballona Creek, the alignment continues in Qae sediments northwest along San Vicente Boulevard, and then curves northward toward Wilshire Boulevard at Fairfax Avenue.

Near the intersection of Fairfax Avenue and Wilshire Boulevard are many Pleistocene brea (asphalt) deposits, some of them part of the world famous La Brea Tar Pits. There are many Pleistocene fossil localities, particularly in and around the Rancho La Brea Tar Pits in Hancock Park. These localities occur in asphaltic sands and silts and those deposits producing extinct organisms dated from 11,000 to 38,000 years old. These occur from ground surface to perhaps 45 feet deep. Hundreds of animal and plant species have been found there. Mammoths, mastodons, ground sloths, camels, saber-tooth cats, and dire wolves are among the animal species that attract public interest. The location and accessibility of these deposits make them truly unique (see Turner 2006). This area and the fossils it produced have been the subject of intensive research on geology, paleontology, and archaeology for over 150 years. In 1951, this general site was designated as the type locality for the Rancholabrean North American Land Mammal Age, meaning it is the site of reference for fossils between 240,00 and 11,000 years ago in North America. The site was also formally recognized by the NPS as a National Natural Landmark in 1964. Many newspaper accounts have featured fossils found while excavating the Wilshire/Fairfax station for the Metro D Line.

At 3rd Steet, the alignment then continues north along Fairfax Avenue and passes into Qa sediments. Between 3rd Street and Beverly Boulevard, the alignment passes five LACM vertebrate fossil localities. Construction of the Grove at the Original Farmers Market unearthed a variety of fossils including mammoth, camel, bison, horse, rodents and turtle. The surficial sediments there are mapped as Qae. Another locality from construction at the Grove produced a rodent fossil at a depth of 46 feet. The sediments at that depth are assigned to the Palos Verdes Sand (a marine formation). West of Fairfax Avenue lie three localities in Qa sediments. Proboscidean fossils were recovered at a depth of 20 feet near 3rd Street and Edinburgh Avenue. A bit farther west, proboscidean fossils were found both at 5th Street and San Vicente Boulevard, and at Colgate Avenue and San Vicente Boulevard.

Still in Qa sediments, the alignment turns west at Beverly Boulevard. Proboscidean fossils were found at Kilkea Drive and Beverly Boulevard. Deer and Proboscidea remains were found at 3rd Street and San Vicente Boulevard. Then the alignment turns northwest at San Vicente Boulevard. Two vertebrate fossil localities lie east of San Vicente Boulevard. At 375 North La Cienega Boulevard, 150 specimens of plant, invertebrate, and multiple mastodon fossils were found. A horse fossil was found at the intersection of Rosewood Avenue and Westbourne Drive. The alignment turns northeast under Santa Monica Boulevard, and the San Vicente–Fairfax Alternative terminates at Fairfax Avenue. It should be emphasized that all the localities along this alignment west of Fairfax Avenue lie in Qae sediment beneath surficial Qya sediments. No localities lie between the San Vicente/Santa Monica Station and the Hollywood/Highland Station.

5.4.2.2 ALIGNMENT ALTERNATIVE 2: FAIRFAX

The Fairfax Alternative is confluent with the San Vicente–Fairfax Alignment Alternative from the current Metro K Line terminus at Expo/Crenshaw to the Fairfax/3rd Station between Beverly Boulevard and 3rd Street. Thus, it shares all the nearby paleontological localities with the San Vicente–Fairfax Alignment Alternative up to that point. No localities lie between the Fairfax/3rd Station and the Fairfax/Santa Monica Station. The Fairfax Alignment Alternative continues north on Fairfax Avenue to Santa Monica Boulevard, where it goes through a sigmoid curve to join Highland Avenue and then terminates at the Hollywood/Highland Station.

5.4.2.3 ALIGNMENT ALTERNATIVE 3: LA BREA

The La Brea Alignment Alternative is confluent with the San Vicente–Fairfax Alignment Alternative from the Metro K Line Expo/Crenshaw Station to the Midtown/Crossing Station. That segment is all within sediments mapped as Qa. The alignment proceeds northeast as it becomes confluent with Redondo Boulevard. One block east of where Redondo Boulevard intersects with La Brea Avenue and one block south of Olympic Boulevard, lies a vertebrate fossil locality (LACM 1814). Asphaltic sediment at that location (mapped as Qae) produced a fossil of a shrub ox at a depth of six feet. From the intersection of Redondo Boulevard and La Brea Avenue to Santa Monica Boulevard, the alignment is in Qae sediments. There are no recorded localities along that segment. From there, the alignment makes a sigmoid curve to the east, then north, joins Highland Avenue, and terminates at the Hollywood/Highland Station. There are no recorded localities along this last segment.

5.4.2.4 HOLLYWOOD BOWL DESIGN OPTION

From the Hollywood/Highland Station to about Camrose Drive, the path is mapped as Qae sediments. From south of Camrose Drive to the Hollywood Bowl Station Highland Option, the RSA lies in a valley with Qae sediment on the surface. However, Ttusi sediments (Upper Topanga Formation) may be affected at a shallow depth. The northern extension of track north of the station follows the boundary between Qae sediments and Tvb volcanic rocks. The nearest known paleontological localities are invertebrate localities (LACM IP 22304 and 22305) in the vicinity of the Pilgrimage Bridge. Mollusk fossils were found at these sites. The nearest vertebrate fossil locality is 1.5 miles northwest of the proposed station. A *Desmostylus* fossil was found there. The invertebrate localities are on the US-101 freeway opposite of this design option (east of the US-101 Freeway).

5.4.2.5 MAINTENANCE AND STORAGE FACILITY

The MSF site lies in sediments mapped as Qoa. LACM VP locality 7332 is 2,200 feet northwest of the proposed MSF. LACM VP locality 4942 lies 2,800 feet to the north, and LACM VP locality 3789 lies 1,425 feet to the south.

5.4.3 ALIGNMENTS AND STATIONS

5.4.3.1 ALIGNMENT ALTERNATIVE 1: SAN VICENTE–FAIRFAX

The cultural resources study identified 45 built environment historical resources, including one with an archaeological component, within the Built Environment RSA for the San Vicente–Fairfax Alignment Alternative. See Appendix A for map references and Table 5-7 for historical resources by project component. No unique archaeological resources or human remains were identified within the Archaeological RSA for this alignment alternative.

The San Vicente–Fairfax Alignment Alternative crosses Qa and Qae sediments. One paleontological vertebrate fossil locality (LACM 7137) was identified within the Paleontological RSA for the San Vicente–Fairfax Alignment Alternative (see Section 5.3.2).

5.4.3.2 ALIGNMENT ALTERNATIVE 2: FAIRFAX

The cultural resources study identified 42 built environment historical resources, including one with an archaeological component, within the Built Environment RSA for the Fairfax Alignment Alternative. See Appendix A for map references and Table 5-7 for historical resources by project component. No unique archaeological resources or human remains were identified within the Archaeological RSA for this alignment alternative.

The Fairfax Alignment Alternative crosses Qa and Qae sediments. One paleontological vertebrate fossil locality (LACM 7137) was identified within the Paleontological RSA for the Fairfax Alignment Alternative (see Section 5.3.2).

5.4.3.3 ALIGNMENT ALTERNATIVE 3: LA BREA

The cultural resources study identified 28 built environment historical resources within the Built Environment RSA for the La Brea Alignment Alternative. See Appendix A for map references and Table 5-7 for historical resources by project component. No unique archaeological resources or human remains were identified within the Archaeological RSA for this alignment alternative.

The La Brea Alignment Alternative crosses Qa and Qae sediments. One paleontological vertebrate fossil locality (LACM 7137) was identified within the Paleontological RSA for the La Brea Alignment Alternative (see Section 5.3.2).

5.4.4 HOLLYWOOD BOWL DESIGN OPTION

The cultural resources study identified 10 built environment historical resources within the Built Environment RSA for the Hollywood Bowl Design Option. See Appendix A for map references and Table 5-7 for historical resources by project component.

The design option crosses Qa, Qae, and possibly Tvb sediments. No unique archaeological resources, human remains, or unique paleontological resources were identified within the Archaeological/Paleontological RSA for the design option.

5.4.5 MAINTENANCE AND STORAGE FACILITY

The MSF site lies in Qoa surficial sediments. No built environment historical resources, unique archaeological resources, human remains, or paleontological resources were identified within the MSF RSA.

CHAPTER 6 IMPACTS AND MITIGATION MEASURES

6.1 IMPACT ANALYSIS

This section presents the evaluation of impacts related to the cultural and paleontological resources discussed in Chapter 5, as well as the corresponding mitigation measures, where applicable. Both construction and operational impacts are evaluated. Table 6-5 in Section 6.1.5 provides a summary of the impact conclusions.

Project measures are design features, best management practices, or other commitments that Metro implements as part of all alignment alternatives and stations, design option, and MSF to reduce or avoid environmental effects associated with the Project. Project measures are not the same as mitigation measures, which are used to reduce an environmental impact's significance level. Where applicable, project measures are identified here as part of the evaluation of environmental impacts in this chapter.

There are no measures specific to cultural, archaeological, or paleontological resources that have been identified to date.

6.1.1 IMPACT CUL-1: HISTORICAL RESOURCES

Impact CUL-1: Would the Project cause a substantial adverse change in the significance of a historical resource pursuant to CCR Section 15064.5?

6.1.1.1 ALIGNMENT ALTERNATIVE 1: SAN VICENTE–FAIRFAX

The SCCIC records search, additional archival research, property-specific research, and field survey identified 45 historical resources within the San Vicente–Fairfax Alignment Alternative Built Environment RSA (Section 5.4.1.1, Table 5-7, Appendix A).

CONSTRUCTION IMPACTS

Significant Impact. Project activities during construction of the San Vicente–Fairfax Alignment Alternative would include property acquisitions, demolition of existing structures, and new construction of permanent Project features. Potential impacts to historical resources would be related to the construction of new infrastructure that would require their immediate surroundings to be demolished or altered.

Significant impacts would occur to 25 historical resources within the Built Environment RSA of the San Vicente–Fairfax Alignment Alternative (Table 6-1). Of the 25 historical resources, five would be acquired and demolished, as shown in the table. Physical demolition would materially impair the significance of the historical resource and would result in a significant impact.

Due to the underground nature of the improvements, no permanent visual impacts on 18 of the 25 historical resources or their setting are anticipated from the addition of the underground alignment. However, construction of the stations, use of TBM launch and extraction sites, and use of construction

staging areas has the potential to cause vibrations and ground settlement that could affect these adjacent historical resources. Additionally, the Original Farmers Market/Rancho La Brea Adobe contains a subsurface archaeological component that could be physically affected by construction activities, which would result in a significant impact. Impacts to the archaeological component of this resources is discussed in Section 6.1.2. Table 6-1 indicates the specific design elements of the San Vicente–Fairfax Alignment Alternative that would be associated with the significant impacts to the 25 historical resources.

TABLE 6-1. SAN VICENTE–FAIRFAX ALIGNMENT ALTERNATIVE SIGNIFICANT IMPACTS

MAP REFERENCE NO.*	RESOURCE NAME	ADDRESS	PRIMARY NO. (P-)	CONSTRUCTION DATE	DESIGN ELEMENT	IMPACT
1	First United Methodist Church of Hollywood	6817 Franklin Ave, Los Angeles, CA	19-169321	1928	Staging Area/TBM extraction site at Franklin Avenue and Highland Avenue	Vibrations and ground settlement
2	Hollywood Wax Museum	6765 Hollywood Blvd, Los Angeles, CA	19-167577	1928	Hollywood/Highland Station	Construction Vibration
3	Los Angeles First Federal, Security Pacific Bank	6777 Hollywood Blvd, Los Angeles, CA	19-167578	1927	Hollywood/Highland Station	Construction Vibration
4	Sivananda Yoga Community	1538 McCadden Ln, Los Angeles, CA	19-168032	1922	Staging Area at the southeast corner of Highland Ave and Selma Ave	Construction Vibration
5	Hollywood High School Historic District	1521 N. Highland Ave, Los Angeles, CA	19-189990	1904-1956	Staging Area at the southeast corner of Highland Ave and Selma Ave	Construction Vibration
6	Hollywood High School Liberal Arts Building	1521 N. Highland Ave, Los Angeles, CA	N/A	1938	Staging Area at the southeast corner of Highland Ave and Selma Ave	Construction Vibration
7	6806 Hollywood Blvd	6806 Hollywood Blvd, Los Angeles, CA	19-168608	1922	Hollywood/Highland Station Entrance Option 1 SW; Entrance Option 2 SE	Demolition
8	Rexall Drug Store, Lee Drug Company	6800 Hollywood Blvd, Los Angeles, CA	19-167580	1935	Hollywood/Highland Station Entrance Option 1 SW; Entrance Option 2 SE	Demolition

MAP REFERENCE NO.*	RESOURCE NAME	ADDRESS	PRIMARY NO. (P-)	CONSTRUCTION DATE	DESIGN ELEMENT	IMPACT
9	Max Factor Makeup Salon	1666 N. Highland Ave, Los Angeles, CA	19-167596	1931	Hollywood/Highland Station	Construction Vibration
10	Bank of America	6780 Hollywood Blvd, Los Angeles, CA	19-167579	1933; 1936	Hollywood/Highland Station Entrance Option 2 SE	Demolition
11	Hollywood High School Auditorium	1521 N Highland Ave, Los Angeles, CA	19-171030	1954	Staging Area at the southeast corner of Highland Ave and Selma Ave	Construction Vibration
12	Hollywood Walk of Fame	Hollywood Blvd and Vine St, Los Angeles, CA	19-167544	1958	Hollywood/Highland Station	Construction Vibration
13	Hollywood Boulevard Commercial and Entertainment District	6200-7000 Hollywood Blvd; with adjacent parcels on N Vine St, N Highland Ave, and N Ivar St, Los Angeles, CA	19-174178	1915-1939	Hollywood/Highland Station	Construction Vibration
14	1145 N Sycamore Ave	1145 N. Sycamore Ave, Los Angeles, CA	19-169143	1923	La Brea/Santa Monica Station	Construction Vibration
15	1143 N Sycamore Ave	1143 N. Sycamore Ave, Los Angeles, CA	19-169141	1925	La Brea/Santa Monica Station	Construction Vibration
16	1133 N Detroit St	1133 N. Detroit St, West Hollywood, CA	N/A	1962	La Brea/Santa Monica Station (TBM launch site)	Vibrations and ground settlement
19	Johnie's Coffee Shop	6101 Wilshire Blvd	19-189263	1956	Wilshire/Fairfax Station Staging Area	Construction Vibration
20	May Company Building	6067 Wilshire Blvd	19-173051	1939-1940	Wilshire/Fairfax Station Staging Area	Construction Vibration
23	U.S. Post Office (Fairfax Avenue)	1125 N. Fairfax Ave, West Hollywood, CA	N/A	1947	Fairfax/Santa Monica Station	Construction Vibration
31	Santa Palm Car Wash	8787 Santa Monica Blvd, West Hollywood, CA	N/A	1964	San Vicente/Santa Monica Station (Construction Staging Area; Entrance Option 2 – North)	Demolition
32	8851 Santa Monica Boulevard	8851 Santa Monica Blvd, West Hollywood, CA	19-176829	1926; 1946	San Vicente/Santa Monica Station	Construction Vibration

MAP REFERENCE NO.*	RESOURCE NAME	ADDRESS	PRIMARY NO. (P-)	CONSTRUCTION DATE	DESIGN ELEMENT	IMPACT
60	Morris Memorial	4450 W. Adams Blvd, Los Angeles, CA	N/A	1930; 1940	Crenshaw/Adams Station	Construction Vibration
61	7760 Santa Monica Boulevard	7760 Santa Monica Blvd, West Hollywood, CA	N/A	1935	Fairfax/Santa Monica Station	Construction Vibration
63	Original Farmers Market and Rancho La Brea Adobe	6333 W. 3rd St, Los Angeles, CA	N/A	1935	Fairfax/3rd Station	Construction Vibration
64	Hollywood Theater	6766 Hollywood Blvd, Los Angeles, CA	19-167576	1914; 1935	Hollywood/ Highland Station Entrance Option 2 – SE	Demolition

Source: Connect Los Angeles Partners 2023
* Refer to Appendix A for maps showing the locations of the historical resources identified in this table.
Note: SE = southeast

No construction-related impact would occur to the remaining 20 historical resources within the Built Environment RSA of the San Vicente–Fairfax Alignment Alternative because they are located either along the underground portions of the proposed alignment or at a considerable distance from the station, construction staging area, and TBM launch and extraction sites.

As described above, construction of the San Vicente–Fairfax Alignment Alternative would cause substantial adverse changes in the significance of a historical resource pursuant to CCR Section 15064.5. Therefore, the potential impacts to historical resources related to construction of the San Vicente–Fairfax Alignment Alternative would be significant and mitigation is required (see Section 6.2).

OPERATIONAL IMPACTS

Less Than Significant Impact. Operational activities associated with the San Vicente–Fairfax Alignment Alternative would be limited to operation and maintenance of the Project. Potential impacts to historical resources would be related to visual, audible, or atmospheric effects resulting from operation and maintenance activities, as well as new pedestrian traffic at these locations. Therefore, operational impacts to historical resources within the Built Environment RSA of the San Vicente–Fairfax Alignment Alternative would be less than significant.

6.1.1.2 ALIGNMENT ALTERNATIVE 2: FAIRFAX

The SCCIC records search, additional archival research, property-specific research, and field survey identified 42 historical resources within the Fairfax Alignment Alternative Built Environment RSA (Section 5.4.1.1, Table 5-7, Appendix A).

CONSTRUCTION IMPACTS

Significant Impact. Project activities during construction of the Fairfax Alignment Alternative would include property acquisitions, demolition of existing structures, and new construction of permanent Project features. Potential impacts to historical resources would be related to the construction of new infrastructure that would require historical resources and/or their immediate surroundings to be demolished or altered.

Significant impacts would occur to 23 historical resources within the Fairfax Alignment Alternative Built Environment RSA (Table 6-2). Of the 23 historical resources, four would be acquired and demolished, as shown in the table. Physical demolition would materially impair the significance of the historical resource and would result in a significant impact.

Due to the underground nature of the improvements, no permanent visual impacts on 17 of the 23 historical resources or their setting is anticipated from the addition of the underground alignment. However, construction of the stations, use of TBM launch and extraction sites, and use of construction staging areas has the potential to cause vibrations and ground settlement that could have impacts to these adjacent historical resources. Additionally, the Original Farmers Market/Rancho La Brea Adobe contains a subsurface archaeological component that could be physically affected by construction activities, which would result in a significant impact. Impacts to the archaeological component of this resource is discussed in Section 6.1.2. Table 6-2 indicates the specific design elements of the Fairfax Alignment Alternative that would be associated with the significant impacts to the 23 historical resources.

TABLE 6-2. FAIRFAX ALIGNMENT ALTERNATIVE SIGNIFICANT IMPACTS

MAP REFERENCE NO.	RESOURCE NAME	ADDRESS	PRIMARY NO. (P-)	CONSTRUCTION DATE	DESIGN ELEMENT	IMPACT

Source: Connect Los Angeles Partners 2023
* Refer to Appendix A for maps showing the locations of the historical resources identified in this table.
Note: SE = southeast

No construction-related impact would occur to the remaining 19 historical resources within the Fairfax Alignment Alternative Built Environment RSA because they are located either along the underground portions of the alignment or at a considerable distance from the station, construction staging area, and TBM launch and extraction sites.

As described above, the Fairfax Alignment Alternative would cause substantial adverse changes in the significance of a historical resource pursuant to CCR Section 15064.5. Therefore, the potential impacts to historical resources related to construction of the Fairfax Alignment Alternative would be significant and mitigation is required (see Section 6.2).

OPERATIONAL IMPACTS

Less Than Significant Impact. Operational activities associated with the Fairfax Alignment Alternative would be limited to the operation and maintenance of the Project. Potential impacts on historical resources would be related to visual, audible, or atmospheric effects resulting from operation and maintenance activities and new pedestrian traffic at these locations. Therefore, operational impacts to historical resources within the Built Environment RSA of the Fairfax Alignment Alternative would be less than significant.

6.1.1.3 ALIGNMENT ALTERNATIVE 3: LA BREA

The SCCIC records search, additional archival research, property-specific research, and field survey identified 28 historical resources within the La Brea Alignment Alternative Built Environment RSA (Section 5.4.1.1, Table 5-7, Appendix A).

CONSTRUCTION IMPACTS

Significant Impact. Project activities during construction of the La Brea Alignment Alternative would include property acquisitions, demolition of existing structures, and new construction of permanent Project features. Potential construction impacts on historical resources would be related to the construction of new infrastructure that would require historical resources and/or their immediate surroundings to be demolished or altered.

Significant impacts would occur to 23 historical resources within the Built Environment RSA for the La Brea Alignment Alternative (Table 6-3). Of these 23 historical resources, four would be acquired and demolished, as shown in the table. Physical demolition would materially impair the significance of the historical resource and would result in a significant impact.

Due to the underground nature of the improvements, no permanent visual impacts on 19 of the 23 historical resources or their setting are anticipated from the addition of the underground alignment. However, construction of the stations, use of TBM launch and extraction sites, and use of construction staging areas has the potential to cause vibrations and ground settlement that could impact these adjacent historical resources, which would result in a significant impact. Table 6-3 indicates the specific design elements of the San Vicente–Fairfax Alignment Alternative that would be associated with the significant impact to the 23 historical resources.

TABLE 6-3. LA BREA ALIGNMENT ALTERNATIVE SIGNIFICANT IMPACTS

MAP REFERENCE NO.	RESOURCE NAME	ADDRESS	PRIMARY NO. (P-)	CONSTRUCTION DATE	DESIGN ELEMENT	IMPACT

Source: Connect Los Angeles Partners 2023
* Refer to Appendix A for maps showing the locations of the historical resources identified in this table.
Note: SE = southeast

No construction-related impact would occur to the remaining five historical resources within the La Brea Alignment Alternative Built Environment RSA because they are located either along the underground portions of the alignment or at a considerable distance from the station, construction staging area, and TBM launch and extraction sites.

As described above, construction of the La Brea Alignment Alternative would cause substantial adverse changes in the significance of a historical resource pursuant to CCR Section 15064.5. Therefore, the potential impacts to historical resources related to construction of the La Brea Alignment Alternative would be significant and mitigation is required (see Section 6.2).

OPERATIONAL IMPACTS

Less Than Significant Impact. Operational activities associated with the La Brea Alignment Alternative would be limited to the operation and maintenance of the Project. Potential operational impacts to historical resources would be related to visual, audible, or atmospheric effects, resulting from operation and maintenance activities, and new pedestrian traffic at these locations. Therefore, operational impacts to historical resources within the Built Environment RSA of the La Brea Alignment Alternative would be less than significant.

6.1.1.4 HOLLYWOOD BOWL DESIGN OPTION

The SCCIC records search, additional archival research, property-specific research, and field survey identified 10 historical resources within the Design Option Built Environment RSA (Section 5.4.1.1, Table 5-7, Appendix A). Due to the proximity of the design option to the alignment alternatives and similar Built Environment RSAs, many resources identified below are also in the discussion of the alignment alternatives in Section 6.1.1.1 through Section 6.1.1.3.

CONSTRUCTION IMPACTS

Significant Impact. Project activities during construction of the design option would include property acquisitions, demolition of existing structures, and new construction of permanent Project features. Potential impacts to historical resources would be related to the construction of new infrastructure

that would require historical resources and/or their immediate surroundings to be demolished or altered.

As shown in Table 6-4, significant impacts would occur at two historical resources within the Built Environment RSA of the Hollywood Bowl Design Option: the Hollywood Bowl Pedestrian Tunnel and the Lasky DeMille Studio Barn. Neither of these resources would be physically demolished, destroyed, relocated, or altered. Due to the underground nature of the improvements, no permanent visual impacts on these historical resources or their setting is anticipated from the addition of stations or the underground alignment. However, construction of the stations, use of TBM launch and extraction sites, and use of construction staging areas has the potential to cause adjacent vibrations and ground settlement that could affect these historical resources.

No construction-related impact would occur to the remaining eight historical resources because they are located either along the underground portions of the proposed alignment or at a considerable distance from the station, construction staging area, and TBM launch and extraction sites.

As described above, construction of the Hollywood Bowl Design Option would cause substantial adverse changes in the significance of a historical resource pursuant to CCR Section 15064.5. Therefore, the potential impacts to historical resources related to construction of the design option would be significant and mitigation is required (see Section 6.2).

OPERATIONAL IMPACTS

Less Than Significant Impact. Operational activities associated with the Hollywood Bowl Design Option would be limited to the operation and maintenance of the Project. Potential operational impacts on historical resources would be related to visual, audible, or atmospheric effects resulting from operation and maintenance activities, as well as new pedestrian traffic at these locations. Therefore, operational impacts to historical resources within the Built Environment RSAs for the design option would be less than significant.

TABLE 6-4. HOLLYWOOD BOWL DESIGN OPTION SIGNIFICANT IMPACTS

MAP REFERENCE NO.*	RESOURCE NAME	ADDRESS	PRIMARY NO. (P-)	CONSTRUCTION DATE	DESIGN ELEMENT	IMPACT
37	Hollywood Bowl Pedestrian Tunnel	N/A	N/A	1950	Hollywood Bowl Station (underground tunnel excavation)	Vibrations and ground settlement
38	Lasky DeMille Studio Barn	2100 N Highland Ave, Los Angeles, CA	P-19-166802	1927	Hollywood Bowl Station (Station vent shaft and construction staging area)	Construction Vibration

* Refer to Appendix A for maps showing the locations of the historical resources identified in this table.

6.1.1.5 MAINTENANCE AND STORAGE FACILITY

The SCCIC records search, additional archival research, property-specific research, and field survey identified no historical resources within the Built Environment RSA for the MSF.

CONSTRUCTION IMPACTS

No Impact. There are no built environment resources in the Built Environment RSA for the MSF that meet the NRHP/CRHR criteria for eligibility and are considered historical resources for the purposes of CEQA. Therefore, there would be no construction impacts to historical resources associated with the MSF.

OPERATIONAL IMPACTS

No Impact. There are no built environment resources in the Built Environment RSA for the MSF that meet the NRHP/CRHR criteria for eligibility and are considered historical resources for the purposes of CEQA. Therefore, there would be no operational impacts to historical resources associated with the MSF.

6.1.2 IMPACT CUL-2: ARCHAEOLOGICAL RESOURCES

Impact CUL-2: Would the Project cause a substantial adverse change in the significance of a historical resource pursuant to CCR Section 15064.5?

6.1.2.1 ALIGNMENT ALTERNATIVE 1: SAN VICENTE–FAIRFAX

The SCCIC records search, additional archival research, and archaeological field survey did not identify any unique archaeological resources eligible for listing in the CRHR or in a local register of historical resources within the San Vicente–Fairfax Alignment Alternative Archaeological RSA (Section 5.4.1.2); however, the study identified one historical resource (Original Farmers Market/Rancho La Brea Adobe) with an archaeological component (P-19-003045) in the RSA, as discussed in Section 6.1.1. One archaeological resource (P-19-003302) that does not constitute a unique archaeological resource under CEQA was also previously documented in the Archaeological RSA for the San Vicente–Fairfax Alignment Alternative; however, the resource was completely removed during construction monitoring and does not require further treatment. Gabrieliño villages, burials, important prehistoric resource areas, and prehistoric and historic-age archaeological resources have been identified nearby (P-19-000159, P-19-001261, P-19-002393, and P-19-002964).

CONSTRUCTION IMPACTS

Significant Impact. As described in Section 5.4.1.2 and depicted on Figure 5-5 and Figure 5-6, the archaeological sensitivity in the Archaeological RSA ranges from low to moderate, which indicates construction activities associated with the San Vicente–Fairfax Alignment Alternative have a low to moderate potential to encounter previously unidentified archaeological resources below ground surface. No prehistoric archaeological sites and only two historic-age archaeological sites have been identified within the Archaeological RSA for this alternative. However, the sediments present across

the alignment consist of younger and older quaternary alluvium that have potential to contain archaeological deposits.

Locations considered to have low potential to encounter archaeological resources are those in older geologic deposits, such as Project components to be constructed at great depth, and areas with high levels of previous subsurface ground disturbance. Locations considered to have moderate potential to encounter archaeological deposits are those in younger soils, such as Project components constructed in shallower depths, and with low or unknown levels of previous disturbance. Proximity to previously recorded archaeological resources and water sources also increases sensitivity.

Additionally, the KNE Tribal Cultural Resources Technical Report prepared for this Project indicates that an NAHC SLF search confirmed that the region contains Native American cultural resources. Therefore, it is possible that unknown unique archaeological resources may be buried within the Archaeological RSA of the San Vicente–Fairfax Alignment Alternative.

Buried archaeological resources may exist within the Archaeological RSA of the San Vicente–Fairfax Alignment Alternative, and it is possible these resources could be unearthed during ground-disturbing activities. The proposed alignment for this alternative is largely within public ROW that has already been disturbed by utility and street construction, but these disturbances were relatively shallow. As a result, shallow construction work associated with the San Vicente–Fairfax Alignment Alternative would have lower potential to encounter intact archaeological resources due to these prior disturbances. Tunnel construction is estimated to occur 50 to 110 feet below surface in older geological deposits that have low sensitivity for archaeological deposits. Other proposed construction activities, such as mass excavation required for the new stations and TBM launch and extraction sites, could encounter deeper, intact archaeological deposits in the Archaeological RSA, and are considered to have moderate archaeological sensitivity (see Section 5.4.1.2, Figure 5-5). P-19-003045, the historic-age archaeological deposit with potential to extend into the Archaeological RSA, and P-19-000159, the nearest prehistoric resource located over 300 meters from the Archaeological RSA, contribute to the sensitivity of station and TBM launch and extraction locations in the vicinity of the resources.

Based on this analysis, construction of the San Vicente–Fairfax Alignment Alternative has the potential to cause a substantial adverse change in the significance of a unique archaeological resource listed or eligible for listing in the CRHR or in a local register of historical resources. The potential impacts to archaeological resources related to construction of the alignment alternative would be significant and mitigation is required (see Section 6.2).

OPERATIONAL IMPACTS

No Impact. Operational activities associated with the San Vicente–Fairfax Alignment Alternative would be limited to the operation and maintenance of the Project and would not include further ground-disturbing activities. As a result, operation of the San Vicente–Fairfax Alignment Alternative would not cause a substantial adverse change in the significance of a unique archaeological resource. Therefore, there would be no operational impacts to a unique archaeological resource listed or eligible for listing in the CRHR or in a local register of historical resources.

6.1.2.2 ALIGNMENT ALTERNATIVE 2: FAIRFAX

The SCCIC records search, additional archival research, and archaeological field survey did not identify any unique archaeological resources eligible for listing in the CRHR or in a local register of historical resources within the Archaeological RSA of the Fairfax Alignment Alternative (Section 5.4.1.2); however, the study did identify one historical resource (Original Farmers Market/Rancho La Brea Adobe) with an archaeological component (P-19-003045) in the Archaeological RSA, as discussed in Section 6.1.1. One archaeological resource (P-19-003302) that does not constitute a unique archaeological resource under CEQA was also previously documented in the Archaeological RSA for the Fairfax Alignment Alternative; however, the resource was completely removed during construction monitoring and does not require further treatment. Gabrieliño villages, burials, important prehistoric resource areas, and prehistoric and historic-age archaeological resources have been identified nearby (P-19-000159, P-19-001261, P-19-002393, and P-19-002964).

CONSTRUCTION IMPACTS

Significant Impact. As described in Section 5.4.1.2 and shown on Figure 5-5, the archaeological sensitivity in the Archaeological RSA ranges from low to moderate, which indicates construction activities associated with the Fairfax Alignment Alternative have a low to moderate potential to encounter previously unidentified archaeological resources below ground surface. No prehistoric archaeological sites and only two historic-age archaeological sites have been identified within the Archaeological RSA for this alternative. However, the sediments present across the alignment consist of younger and older quaternary alluvium that have potential to contain archaeological deposits.

Locations considered to have low potential to encounter archaeological resources are those in older geologic deposits, such as Project components to be constructed at great depth, and areas with high levels of previous subsurface ground disturbance. Locations considered to have moderate potential to encounter archaeological deposits are those in younger soils, such as Project components constructed in shallower depths, and with low or unknown levels of previous disturbance. Proximity to previously recorded archaeological resources and water sources also increases sensitivity.

Additionally, the KNE Tribal Cultural Resources Technical Report prepared for this Project indicates that an NAHC SLF search confirmed that the region contains Native American cultural resources. Therefore, it is possible that unknown unique archaeological resources may be buried within the Fairfax Alignment Alternative RSA.

Buried archaeological resources may exist within the Fairfax Alignment Alternative Archaeological RSA, and it is possible these resources could be unearthed during ground-disturbing activities. The proposed alignment for this alternative is largely within the public ROW that has already been disturbed by utility and street construction, but these disturbances were relatively shallow. As a result, shallow construction work associated with the Fairfax Alignment Alternative would have lower potential to encounter intact archaeological resources due to these prior disturbances. Tunnel construction is estimated to occur 50 to 110 feet below surface in older geological deposits that have low sensitivity for archaeological deposits. Other proposed construction activities, such as mass excavation required for the new stations and TBM launch and extraction sites, could encounter

deeper, intact archaeological deposits in the Archaeological RSA and are considered to have moderate archaeological sensitivity (see Section 5.4.1.2, Figure 5-5). P-19-003045, the historic-age archaeological deposit with potential to extend into the Archaeological RSA, and P-19-000159, the nearest prehistoric resource located over 300 meters from the Archaeological RSA, contribute to the sensitivity of station and TBM launch and extraction locations in the vicinity of the resources.

Based on this analysis, construction of the Fairfax Alignment Alternative has the potential to cause a substantial adverse change in the significance of a unique archaeological resource listed or eligible for listing in the CRHR or in a local register of historical resources. The potential impacts to archaeological resources related to construction of the alignment alternative would be significant and mitigation is required (see Section 6.2).

OPERATIONAL IMPACTS

No Impact. Operational activities associated with the Fairfax Alignment Alternative would be limited to the operation and maintenance of the Project and would not include further ground-disturbing activities. As a result, operation of the Fairfax Alignment Alternative would not cause a substantial adverse change in the significance of a unique archaeological resource. Therefore, there would be no operational impacts to a unique archaeological resource listed or eligible for listing in the CRHR or in a local register of historical resources.

6.1.2.3 ALIGNMENT ALTERNATIVE 3: LA BREA

The SCCIC records search, additional archival research, and archaeological field survey did not identify any unique archaeological resources eligible for listing in the CRHR or in a local register of historical resources, within the La Brea Alignment Alternative Archaeological RSA (Section 5.4.1.2). One archaeological resource (P-19-003302) that does not constitute a unique archaeological resource under CEQA was previously documented in the Archaeological RSA for the La Brea Alignment Alternative; however, the resource was completely removed during construction monitoring and does not require further treatment. Gabrieliño villages, burials, important prehistoric resource areas, and prehistoric and historic-age archaeological resources have been identified nearby (P-19-000159, P-19-001261, P-19-002393, and P-19-002964).

CONSTRUCTION IMPACTS

Significant Impact. As described in Section 5.4.1.2 and depicted on Figure 5-5, the archaeological sensitivity in the Archaeological RSA ranges from low to moderate, which indicates construction activities associated with the La Brea Alignment Alternative have a low to moderate potential to encounter previously unidentified archaeological resources below ground surface. No prehistoric archaeological sites and only one historic-age archaeological site has been identified within the Archaeological RSA for this alternative. However, the sediments present across the alignment consist of younger and older quaternary alluvium that have potential to contain archaeological deposits.

Locations considered to have low potential to encounter archaeological resources are those in older geologic deposits, such as Project components to be constructed at great depth and areas with high

levels of previous subsurface ground disturbance. Locations considered to have moderate potential to encounter archaeological deposits are those in younger soils, such as Project components constructed in shallower depths and with low or unknown levels of previous disturbance. Proximity to previously recorded archaeological resources, important prehistoric resource areas, and water sources also increases sensitivity.

Additionally, the KNE Tribal Cultural Resources Technical Report prepared for this Project indicates an NAHC SLF search confirmed that the region contains Native American cultural resources. Therefore, it is possible that unknown unique archaeological resources may be buried within the La Brea Alignment Alternative Archaeological RSA.

Buried archaeological resources may exist within the La Brea Alignment Alternative Archaeological RSA, and it is possible these resources could be unearthed during ground-disturbing activities. The proposed alignment for this alternative is largely within the public ROW that has already been disturbed with utility and street construction, but these disturbances were relatively shallow. As a result, shallow construction work associated with the La Brea Alignment Alternative would have lower potential to encounter intact archaeological resources due to prior disturbance. Tunnel construction is estimated to occur 50 to 110 feet below surface in older geological deposits that have low sensitivity for archaeological deposits. Other proposed construction activities, such as mass excavation required for the new stations and TBM launch and extraction sites, could encounter deeper, intact archaeological deposits in the RSA, and are considered to have moderate archaeological sensitivity (Section 5.4.1.2, Figure 5-5). P-19-000159, the nearest prehistoric resource and asphaltum source located over 900 meters from the Archaeological RSA, contributes to the sensitivity of station and TBM launch and extraction locations in the vicinity of the resources. Based on this analysis, construction of the La Brea Alignment Alternative has the potential to cause a substantial adverse change in the significance of a unique archaeological resource listed or eligible for listing in the CRHR or in a local register of historical resources. Impacts would be potentially significant. See Section 6.2 for proposed mitigation and impacts after incorporation of mitigation.

OPERATIONAL IMPACTS

No Impact. Operational activities associated with the La Brea Alignment Alternative would be limited to the operation and maintenance of the Project and would not include further ground-disturbing activities. As a result, operation of the La Brea Alignment Alternative would not cause a substantial adverse change in the significance of a unique archaeological resource. Therefore, there would be no operational impacts to a unique archaeological resource listed or eligible for listing in the CRHR or in a local register of historical resources.

6.1.2.4 HOLLYWOOD BOWL DESIGN OPTION

The SCCIC records search, additional archival research, and archaeological field survey did not identify any unique archaeological resources eligible for listing in the CRHR or in a local register of historical resources within the Archaeological RSA for the design option. One archaeological resource (P-19-003302) that does not constitute a unique archaeological resource under CEQA was previously

documented in the Archaeological RSA for the design option; however, this resource was completely removed during construction monitoring and does not require further treatment. Gabrieliño villages, burials, important prehistoric resource areas, and prehistoric and historic-age archaeological resources have been identified nearby but outside of the Archaeological RSA for the design option (P-19-000159, P-19-001261, P-19-002393, and P-19-002964).

CONSTRUCTION IMPACTS

Significant Impact. As described in Section 5.4.1.2 and depicted on Figure 5-5, the archaeological sensitivity in the Archaeological RSA ranges from low to moderate, which indicates construction activities associated with the design option have a low to moderate potential to encounter previously unidentified archaeological resources below ground surface. No prehistoric archaeological sites and only one historic-age archaeological site has been identified within the Archaeological RSA for the design option. However, the sediments present across the design option consist of younger and older quaternary alluvium that have potential to contain other archaeological deposits.

Locations considered to have low potential to encounter archaeological resources are those in older geologic deposits, such as Project components to be constructed at great depth and areas with high levels of previous subsurface ground disturbance. Locations considered to have moderate potential to encounter archaeological deposits are those in younger soils, such as Project components constructed in shallower depths and with low or unknown levels of previous disturbance. Proximity to previously recorded archaeological resources, important prehistoric resource areas, and water sources also increases sensitivity.

Additionally, as described in the KNE Tribal Cultural Resources Technical Report prepared for this Project, an NAHC SLF search confirmed that the region contains Native American cultural resources. Therefore, it is possible that unknown unique archaeological resources may be buried within the design option RSA.

Buried archaeological resources may exist within the design option RSA, and it is possible these resources could be unearthed during Project excavation activities. The proposed underground alignment for the design option is largely within the public ROW that has already been disturbed with utility and street construction, but those disturbances were relatively shallow and the shallow construction work associated with the design option would have lower potential to encounter intact archaeological resources due to those prior disturbances. Tunnel construction would occur 50 to 110 feet below ground surface in older geological deposits that have low sensitivity for archaeological deposits. Other proposed construction activities, such as mass excavation required for the new stations, could encounter deeper, intact archaeological deposits in the Archaeological RSA in areas that are considered to have moderate archaeological sensitivity (Section 5.4.1.2, Figure 5-5).

Based on this analysis, construction of the Hollywood Bowl Design Option has the potential to cause a substantial adverse change in the significance of a unique archaeological resource listed or eligible for listing in the CRHR or in a local register of historical resources. Therefore, the potential impact during construction of the design option would be significant, and mitigation is required (Section 6.2).

OPERATIONAL IMPACTS

No Impact. Operational activities associated with Hollywood Bowl Design Option would be limited to the operation and maintenance of the Project and would not include further ground-disturbing activities. As a result, operation of the design option would not cause a substantial adverse change in the significance of a unique archaeological resource. Therefore, there would be no operational impacts to a unique archaeological resource listed or eligible for listing in the CRHR or in a local register of historical resources.

6.1.2.5 MAINTENANCE AND STORAGE FACILITY

The SCCIC records search, additional archival research, and archaeological field survey did not identify any unique archaeological resources eligible for listing in the CRHR or in a local register of historical resources within any of the MSF Alternative RSAs. However, Gabrieliño villages, burials, important prehistoric resource areas, and prehistoric and historic-age archaeological resources have been identified nearby.

CONSTRUCTION IMPACTS

Less than Significant Impact. As described in Section 5.4.1.2 and depicted on Figure 5-6, the archaeological sensitivity in the Archaeological RSA is low, which indicates construction activities associated with the MSF have a low potential to encounter previously unidentified archaeological resources below ground surface. No previously recorded prehistoric or historic-age archaeological sites have been identified within the Archaeological RSA for the MSF based on data available at the SCCIC. While the sediments present across the MSF site consist of older quaternary alluvium that has the potential to contain archaeological deposits, a review of satellite images and targeted field survey shows all portions of the MSF site have been subject to development for the construction of buildings, structures, parking lots, roads, and railways. The exact depth and degree of previous subsurface ground disturbances at the MSF site is not known, but grading for roads, rails, and parking lots, and construction of utilities and building foundations are likely to have had impacts reaching depths of approximately 5 feet below ground surface.

Light rail tracks and structures for storage and maintenance of light rail vehicles are proposed to be constructed on the selected MSF site. It is anticipated that the degree of ground disturbance required to construct project components is consistent with the level of previous shallow ground disturbance expected to be present in the area. Because work is anticipated to be shallow and predominantly located in previously disturbed soils, the MSF has low potential to encounter intact buried archaeological deposits that may constitute a unique archaeological resource or significant archaeological historic resource. While it is unlikely that ground-disturbing activities would encounter intact archaeological resources, the potential does exist that construction may encounter archaeological resources.

The KNE Tribal Cultural Resources Technical Report prepared for this Project indicates an NAHC SLF search confirmed that the region does contain Native American cultural resources. Therefore, it is possible that unknown unique archaeological resources may be buried within the three MSF Alternative Archaeological RSAs.

Because the MSF Archaeological RSA is almost entirely developed, the minimal and/or shallow construction work that would be required would be unlikely to encounter intact unique archaeological resources. Construction of the MSF has a low potential to cause a substantial adverse change in the significance of a unique archaeological resource. Therefore, impacts to unique archaeological resources listed or eligible for listing in the CRHR or in a local register of historical resources would be less than significant.

OPERATIONAL IMPACTS

No Impact. Operational activities associated with the MSF would be limited to the operation and maintenance of the Project and would not include further ground-disturbing activities. As a result, operation of any of the MSF would not cause a substantial adverse change in the significance of a unique archaeological resource. Therefore, there would be no operational impacts to a unique archaeological resource listed or eligible for listing in the CRHR or in a local register of historical resources.

6.1.3 IMPACT CUL-3: DISTURBANCE OF HUMAN REMAINS

Impact CUL-3: Would the Project disturb any human remains, including those interred outside of formal cemeteries?

6.1.3.1 ALIGNMENT ALTERNATIVE 1: SAN VICENTE–FAIRFAX

Although no known cemeteries or archaeological sites including human remains have been identified within the Archaeological RSA for the San Vicente–Fairfax Alignment Alternative, archaeological resources where human remains have been identified are located nearby (Section 5.3.1.1).

CONSTRUCTION IMPACTS

Significant Impact. There are no known cemeteries or archaeological sites including human remains within the Archaeological RSA for the San Vicente–Fairfax Alignment Alternative. However, unknown human burials may exist within the Archaeological RSA, and it is possible these burials could be encountered during Project excavation activities. Therefore, construction of the San Vicente–Fairfax Alignment Alternative has the potential to cause a substantial adverse change to an unknown burial. Disturbance of unknown burial sites would result in a significant impact and mitigation is required (Section 6.2).

OPERATIONAL IMPACTS

No Impact. Operational activities associated with the San Vicente–Fairfax Alignment Alternative would be limited to the operation and maintenance of the Project and would not include further ground-

disturbing activities. As a result, operation of the San Vicente–Fairfax Alignment Alternative would not have the potential to disturb any human remains, including those interred outside of formal cemeteries. Therefore, there would be no operational impacts to human remains.

6.1.3.2 ALIGNMENT ALTERNATIVE 2: FAIRFAX

Although no known cemeteries or archaeological sites including human remains have been identified within the Archaeological RSA for the Fairfax Alignment Alternative, archaeological resources where human remains have been identified are located nearby (Section 5.3.1.1).

CONSTRUCTION IMPACTS

Significant Impact. There are no known cemeteries or archaeological sites, including human remains, within the Archaeological RSA for the Fairfax Alignment Alternative. However, unknown human burials may exist within the Archaeological RSA, and it is possible these burials could be encountered during Project excavation activities. Therefore, construction of the Fairfax Alignment Alternative has the potential to cause a substantial adverse change to an unknown burial. Disturbance of unknown burial sites would result in a significant impact and mitigation is required (Section 6.2)

OPERATIONAL IMPACTS

No Impact. Operational activities associated with the Fairfax Alignment Alternative would be limited to the operation and maintenance of the Project and would not include further ground-disturbing activities. As a result, operation of the Fairfax Alignment Alternative would not have the potential to disturb any human remains, including those interred outside of formal cemeteries. Therefore, there would be no operational impacts to human remains.

6.1.3.3 ALIGNMENT ALTERNATIVE 3: LA BREA

Although no known cemeteries or archaeological sites including human remains have been identified within the Archaeological RSA of the La Brea Alignment Alternative, archaeological resources where human remains have been identified are located nearby (Section 5.3.1.1).

CONSTRUCTION IMPACTS

Significant Impact. There are no known cemeteries or archaeological sites, including human remains, within the Archaeological RSA of the La Brea Alignment Alternative. However, unknown human burials may exist within the Archaeological RSA, and it is possible these burials could be encountered during Project excavation activities. Therefore, construction of the La Brea Alignment Alternative has the potential to cause a substantial adverse change to an unknown burial. Disturbance of unknown burial sites would result in a significant impact and mitigation is required (Section 6.2)

OPERATIONAL IMPACTS

No Impact. Operational activities associated with the La Brea Alignment Alternative would be limited to the operation and maintenance of the Project and would not include further ground-disturbing activities. As a result, operation of the La Brea Alignment Alternative would not have the potential to disturb any human remains, including those interred outside of formal cemeteries. Therefore, there would be no operational impacts to human remains.

6.1.3.4 HOLLYWOOD BOWL DESIGN OPTION

Although no known cemeteries or archaeological sites including human remains have been identified within the Archaeological RSA for the design option, archaeological resources where human remains have been identified are located nearby (Section 5.3.1.1).

CONSTRUCTION IMPACTS

Significant Impact. There are no known cemeteries or archaeological sites including human remains within the Archaeological RSA of the Hollywood Bowl Design Option. However, unknown human burials may exist within the Archaeological RSA, and it is possible these burials could be encountered during Project excavation activities. Therefore, construction of the design option has the potential to cause a substantial adverse change to an unknown burial. Disturbance of unknown burial sites would result in a significant impact and require mitigation (Section 6.2).

OPERATIONAL IMPACTS

No Impact. Operational activities associated with the Hollywood Bowl Design Option would be limited to the operation and maintenance of the Project and would not include further ground-disturbing activities. As a result, operation of the design option would not have the potential to disturb any human remains, including those interred outside of formal cemeteries. Therefore, there would be no operational impacts to human remains.

6.1.3.5 MAINTENANCE AND STORAGE FACILITY

Although no known cemeteries or archaeological sites including human remains have been identified within the Archaeological RSA of the MSF, archaeological resources where human remains have been identified are located nearby (Section 5.3.1.1).

CONSTRUCTION IMPACTS

Significant Impact. There are no known cemeteries or archaeological sites including human remains within the Archaeological RSA of the MSF. However, unknown human burials may exist within the Archaeological RSA, and it is possible these burials could be encountered during Project excavation activities. Therefore, construction activities within the Archaeological RSA of the MSF have the potential to cause a substantial adverse change to an unknown burial. Disturbance of unknown burial sites would result in a significant impact and would require mitigation (Section 6.2).

OPERATIONAL IMPACTS

No Impact. Operational activities associated with the MSF would be limited to the operation and maintenance of the Project and would not include further ground-disturbing activities. As a result, operation of the MSF would not disturb any human remains, including those interred outside of formal cemeteries. Therefore, there would be no operational impacts to a unique archaeological resource listed or eligible for listing in the CRHR or in a local register of historical resources.

6.1.4 IMPACT PAL-1: PALEONTOLOGICAL RESOURCES

Impact PAL-1-4: Would the Project directly or indirectly destroy a unique paleontological resource, site or unique geologic feature?

6.1.4.1 ALIGNMENT ALTERNATIVE 1: SAN VICENTE–FAIRFAX

The San Vicente–Fairfax Alignment Alternative is the longest of the three proposed alternatives, with a total of 9.7 miles of boring, of which 6.4 miles would be in Qa sediments (low paleontological potential) and 3.3 miles in Qae sediments (high paleontological potential). Additionally, LACM vertebrate fossil 7137 was identified within the Paleontological RSA, and many other paleontological localities are known along the route, several of which are located in areas mapped as Qa, indicating that older Pleistocene sediments lie beneath younger Holocene sediments (Section 5.4.2.1).

CONSTRUCTION IMPACTS

Significant Impact. This alignment alternative lies in Qae sediments that have been assigned high paleontological potential, and paleontological resources are known to exist within the Paleontological RSA and surrounding area. Therefore, construction of the San Vicente–Fairfax Alignment Alternative would directly or indirectly destroy a unique paleontological resource, site, or unique geologic feature pursuant to Appendix G of CEQA Guidelines. Potential impacts to paleontological resources related to construction of the San Vicente–Fairfax Alignment Alternative would be significant and mitigation is required (Section 6.2)

OPERATIONAL IMPACTS

No Impact. Operational activities associated with the San Vicente–Fairfax Alignment Alternative would be limited to the operation and maintenance of the Project and would not include ground-disturbing activities. As a result, operation of the San Vicente–Fairfax Alignment Alternative would not directly or indirectly destroy a unique paleontological resource, site, or unique geologic feature. Therefore, there would be no operational impacts to paleontological resources.

6.1.4.2 ALIGNMENT ALTERNATIVE 2: FAIRFAX

The Fairfax Alignment Alternative has a total of 7.8 miles of boring, of which 6.4 miles would be in Qa sediments (low paleontological potential) and 3.3 miles in Qae sediments (high paleontological potential). Additionally, LACM vertebrate fossil 7137 was identified within the Paleontological RSA, and many other paleontological localities are known along the route, several of which are located in

areas mapped as Qa, indicating that older Pleistocene sediments lie beneath younger Holocene sediments (Section 5.4.2.2).

CONSTRUCTION IMPACTS

Significant Impact. This alignment alternative lies in Qae sediments that have been assigned a high paleontological potential, and paleontological resources are known to exist within the Paleontological RSA and surrounding area. Therefore, construction of the Fairfax Alignment Alternative would directly or indirectly destroy a unique paleontological resource, site, or unique geologic feature pursuant to Appendix G of the CEQA Guidelines. Potential impacts to paleontological resources related to the construction of the Fairfax Alignment Alternative would be significant and mitigation is required (Section 6.2).

OPERATIONAL IMPACTS

No Impact. Operational activities associated with the Fairfax Alignment Alternative would be limited to the operation and maintenance of the Project and would not include ground-disturbing activities. As a result, operation of the Fairfax Alignment Alternative would not directly or indirectly destroy a unique paleontological resource, site, or unique geologic feature. Therefore, there would be no operational impacts to paleontological resources.

6.1.4.3 ALIGNMENT ALTERNATIVE 3: LA BREA

The La Brea Alternative is the shortest of the three proposed alignments with a total of 6.2 miles of boring, of which 2.3 miles are in Qa (low paleontological potential) and 3.9 miles in Qae (high paleontological potential). Additionally, LACM vertebrate fossil 7137 was identified within the Paleontological RSA, and many other paleontological localities are known along the route, several of which are located in areas mapped as Qa, indicating that older Pleistocene sediments lie beneath younger Holocene sediments (Section 5.4.2.3).

CONSTRUCTION IMPACTS

Significant Impact. This alignment alternative lies in Qae sediments that have been assigned high paleontological potential, and paleontological resources are known to exist within the Paleontological RSA and surrounding area. Therefore, construction of the La Brea Alignment Alternative would directly or indirectly destroy a unique paleontological resource, site, or unique geologic feature pursuant to Appendix G of CEQA Guidelines. Potential impacts to paleontological resources related to construction of the La Brea Alignment Alternative would be significant, and mitigation is required (Section 6.2).

OPERATIONAL IMPACTS

No Impact. Operational activities associated with the La Brea Alignment Alternative would be limited to the operation and maintenance of the Project and would not include ground-disturbing activities. As a result, operation of the La Brea Alignment Alternative would not directly or indirectly destroy a unique paleontological resource, site, or unique geologic feature. Therefore, there would be no operational impacts to paleontological resources.

6.1.4.4 HOLLYWOOD BOWL DESIGN OPTION

Although no paleontological resources were identified within the design option RSA, the site of the design option is in Qae (high paleontological potential) sediment (see Section 5.4.2.4).

CONSTRUCTION IMPACTS

Significant Impact. The Hollywood Bowl Design Option location lies in sediments designated as having high paleontological potential (Qae sediment). Additionally, paleontological resources are known to exist in the vicinity of the Paleontological RSA. Therefore, construction of the design option would directly or indirectly destroy a unique paleontological resource, site, or unique geologic feature pursuant to Appendix G of CEQA Guidelines. Potential impacts to paleontological resources related to construction of the design option would be significant and mitigation is required (Section 6.2).

OPERATIONAL IMPACTS

No Impact. Operational activities associated with the Hollywood Bowl Design Option would be limited to the operation and maintenance of the Project and would not include ground-disturbing activities. As a result, operation of the design option would not directly or indirectly destroy a unique paleontological resource, site, or unique geologic feature. Therefore, there would be no operational impact to paleontological resources.

6.1.4.5 MAINTENANCE AND STORAGE FACILITY

The MSF site lies in Qoa (high paleontological potential) sediments, and while no vertebrate localities were identified within the Paleontological RSA for the MSF (Section 5.4.2.5) LACM vertebrate localities 4942, 3789, and many other paleontological localities are known in the vicinity.

CONSTRUCTION IMPACTS

Significant Impacts. The MSF site lies in Qoa sediments that have been assigned high paleontological potential, and paleontological resources are known to exist in the vicinity. Therefore, construction of the MSF would directly or indirectly destroy a unique paleontological resource, site, or unique geologic feature pursuant to Appendix G of CEQA Guidelines. Potential impacts to paleontological resources related to construction of the MSF would be significant and mitigation is required (Section 6.2).

OPERATIONAL IMPACTS

No Impact. Operational activities associated with the MSF would be limited to the operation and maintenance of the Project and would not include ground-disturbing activities. As a result, operation of the MSF would not directly or indirectly destroy a unique paleontological resource, site, or unique geologic feature. Therefore, there would be no operational impacts to paleontological resources.

6.1.5 SUMMARY OF IMPACT CONCLUSIONS

Table 6-5 provides a summary of the impact conclusions discussed in this section.

TABLE 6-5. IMPACT CONCLUSION SUMMARY TABLE

IMPACT SIGNIFICANCE THRESHOLD	IMPACT CONCLUSION				
	ALIGNMENT ALTERNATIVE 1: SAN VICENTE–FAIRFAX	ALIGNMENT ALTERNATIVE 2: FAIRFAX	ALIGNMENT ALTERNATIVE 3: LA BREA	HOLLYWOOD BOWL DESIGN OPTION	MAINTENANCE AND STORAGE FACILITY
Impact CUL-1: Would the Project cause a substantial adverse change in the significance of a historical resource pursuant to CCR Section 15064.5?	Construction: Significant Operations: Less Than Significant	Construction: Significant Operations: Less Than Significant	Construction: Significant Operations: Less Than Significant	Construction: Significant Operations: Less Than Significant	Construction: No Impact Operations: No Impact
Impact CUL-2: Would the Project cause a substantial adverse change in the significance of a historical resource pursuant to CCR Section 15064.5?	Construction: Significant Operations: No Impact	Construction: Significant Operations: No Impact	Construction: Significant Operations: No Impact	Construction: Significant Operations: No Impact	Construction: Less Than Significant Operations: No Impact
Impact CUL-3: Would the Project disturb any human remains, including those interred outside of formal cemeteries?	Construction: Significant Operations: No Impact	Construction: Significant Operations: No Impact	Construction: Significant Operations: No Impact	Construction: Significant Operations: No Impact	Construction: Significant Operations: No Impact
Impact PAL-1: Would the Project directly or indirectly destroy a unique paleontological resource site or unique geologic feature?	Construction: Significant Operations: No Impact	Construction: Significant Operations: No Impact	Construction: Significant Operations: No Impact	Construction: Significant Operations: No Impact	Construction: Significant Operations: No Impact

6.2 MITIGATION MEASURES

The following mitigation measures are provided to reduce significant project impacts identified in Section 6.1 to less than significant levels. However, as identified below, some construction impacts would remain significant and unavoidable after mitigation.

6.2.1 IMPACT CUL-1: HISTORICAL RESOURCES

6.2.1.1 ALIGNMENT ALTERNATIVE 1: SAN VICENTE–FAIRFAX

CONSTRUCTION MITIGATION MEASURES

MM CUL-1: PROTECTION MEASURES – DIFFERENTIAL SETTLEMENT/VIBRATION/TBM SPECIFICATIONS

Metro shall conduct a pre-construction baseline survey, implement building protection measures, and conduct a post-construction survey of First United Methodist Church of Hollywood (6817 Franklin Avenue) and 1133 N Detroit Street in relation to TBM launch and TBM extraction, and underground construction adjacent to these two historical resources. Building protection measures shall be implemented in conjunction with project measure PM NOI-1 and mitigation measure MM NOI-1 and will be included in the Cultural Resources Monitoring and Mitigation Plan (CRMMP) described in mitigation measure MM CUL-5 below.

This measure will include the following elements:

- Metro shall conduct a pre-construction survey to establish baseline pre-construction conditions and building category and to assess the potential for ground-borne vibration to cause damage. Geotechnical investigations shall be undertaken to evaluate soil, groundwater, seismic, and environmental conditions along the alignment. These investigations shall inform the development of appropriate support mechanisms for cut-and-cover construction areas or areas that could experience differential settlement as a result of using a TBM in proximity to the historical resource. An architectural historian or historical architect who meets the Secretary of the Interior's Professional Qualification Standards (36 CFR Part 61) shall review final design documents prior to implementation of measures.
- Metro shall implement building protection measures such as underpinning, soil grouting, or other forms of ground improvement, and use lower-vibration equipment and/or construction techniques. If the historical resource has the potential to be affected by differential settlement caused by TBM construction, Metro shall require the use of an earth pressure balance or slurry shield TBM.
- In addition, as part of final design, geotechnical construction recommendations and instrumentation and monitoring plans will be developed by a qualified engineer. These recommendations will be documented in the geotechnical design reports and will be incorporated in structural design and construction drawings, as required per the Metro Rail Design Criteria. Refer to the KNE Geology and Soils Technical Report for additional detail and evaluation.

- A post-construction survey shall also be undertaken to ensure that no significant impacts had occurred to historical resources. An architectural historian or historical architect who meets the Secretary of the Interior's Professional Qualification Standards (36 CFR Part 61) shall prepare an assessment of the implementation of the mitigation measures.

MM CUL-2: CONSTRUCTION VIBRATION PROTECTION MEASURES –HISTORICAL RESOURCES

Metro shall conduct a pre-construction baseline survey, implement building protection measures, and conduct a post-construction survey of these historical resources in relation to construction staging and construction vibration and cut-and-cover activities adjacent to these historical resources. This measure will include the following elements:

- Metro shall conduct a pre-construction survey to establish baseline pre-construction conditions and to assess the potential for damage related to improvements adjacent to the historical resources listed below. An architectural historian or historical architect who meets the Secretary of the Interior's Professional Qualification Standards (36 CFR Part 61) shall review proposed protection measures.
- Metro shall implement building protection measures such as fencing or sensitive construction techniques based on final Project design.
- A post-construction survey shall be undertaken to ensure that no significant impacts had occurred to the historical resources. An architectural historian or historical architect who meets the Secretary of the Interior's Professional Qualification Standards (36 CFR Part 61) shall prepare an assessment of the implementation of the mitigation measure.

These protection measures will be included in the CRMMP (see mitigation measure MM CUL-5) for the relevant historical resources.

For the San Vicente–Fairfax Alignment Alternative, this mitigation measure will be implemented for the following 20 historical resources:

- First United Methodist Church of Hollywood (6817 Franklin Avenue)
- Hollywood Wax Museum (6765 Hollywood Boulevard)
- Los Angeles First Federal, Security Pacific Bank (6777 Hollywood Boulevard)
- Sivananda Yoga Community (1538 McCadden Place)
- Hollywood High School Historic District (1521 N Highland Avenue)
- Hollywood High School Liberal Arts Building (1521 N Highland Avenue)
- Max Factor Makeup Salon (1666 N Highland Avenue)
- Hollywood High School Auditorium (1521 N Highland Avenue)
- Hollywood Walk of Fame
- Hollywood Boulevard Commercial and Entertainment District
- 1145 N Sycamore Avenue
- 1143 N Sycamore Avenue

- 1133 N Detroit Street
- Johnie's Coffee Shop (6101 Wilshire Boulevard)
- May Company Building (6067 Wilshire Boulevard)
- US Post Office (Fairfax Avenue) [1125 N Fairfax Avenue]
- 8851 Santa Monica Boulevard
- Morris Memorial
- 7760 Santa Monica Boulevard
- Original Farmers Market and Rancho La Brea Adobe

MM CUL-3: HISTORICAL RESOURCE ARCHIVAL DOCUMENTATION

Metro shall provide archival documentation of historical resource(s) following the guidelines of the National Park Service's Historic American Buildings Survey/Historic American Engineering Record/Historic American Landscape Survey (HABS/HAER/HALS) program. Documentation requirements will be outlined in the CRMMP (see mitigation measure MM CUL-5) and at a minimum shall consist of:

- Large-format photography including negatives and archival prints
- Written narrative following the HABS/HAER/HALS short format
- Site plan

For the San Vicente–Fairfax Alignment Alternative, this mitigation measure will be implemented for the following five resources:

- 6806 Hollywood Boulevard
- Rexall Drug Store, Lee Drug Company (6800 Hollywood Boulevard)
- Bank of America (6780 Hollywood Boulevard)
- Hollywood Theater (6766 Hollywood Boulevard)
- Santa Palm Car Wash (8787 Santa Monica Boulevard)

Metro shall provide copies of the documentation to the City of Los Angeles and City of West Hollywood for archival purposes. Large-format photography shall be completed prior to any demolition activities that would affect these resources. The documentation shall be prepared so that the original archival-quality documentation could be donated for inclusion in the Library of Congress if the National Park Service accepts these materials. Copies of documentation shall also be offered to the Los Angeles Public Library and local historical societies upon request.

MM CUL-4: INTERPRETIVE PROGRAM

Metro shall provide interpretive materials in the form of an exhibit, pamphlet, website, or similar material that describe and/or illustrate the historic significance of the following historical resources, per the CRMMP (see mitigation measure MM CUL-5):

- 6806 Hollywood Boulevard
- Rexall Drug Store, Lee Drug Company (6800 Hollywood Boulevard)
- Bank of America (6780 Hollywood Boulevard)
- Hollywood Theater (6766 Hollywood Boulevard)
- Santa Palm Car Wash (8787 Santa Monica Boulevard)

Interpretive materials shall be provided to the City of Los Angeles and City of West Hollywood for public education purposes. Copies of interpretive materials shall also be offered to the Los Angeles Public Library and local historical societies upon request.

IMPACT SIGNIFICANCE AFTER MITIGATION

With implementation of the mitigation measures identified above, in addition to MM CUL-5 (CRMMP), the significant construction impacts to the historical resources described in Section 6.1.1.1 would be reduced to a less than significant level, except for the following properties, for which the San Vicente–Fairfax Alignment Alternative would result in a significant and unavoidable impact related to demolition even after mitigation:

- 6806 Hollywood Boulevard
- Rexall Drug Store, Lee Drug Company (6800 Hollywood Boulevard)
- Bank of America (6780 Hollywood Boulevard)
- Hollywood Theater (6766 Hollywood Boulevard)
- Santa Palm Car Wash (8787 Santa Monica Boulevard)

OPERATIONAL MITIGATION MEASURES

As described in Section 6.1, there would be no significant operational impacts to historical resources; therefore, no mitigation measures are required for operation of the San Vicente–Fairfax Alignment Alternative.

6.2.1.2 ALIGNMENT ALTERNATIVE 2: FAIRFAX

CONSTRUCTION MITIGATION MEASURES

MM CUL-1: PROTECTION MEASURES – DIFFERENTIAL SETTLEMENT/VIBRATION/TBM SPECIFICATIONS

Refer to Section 6.2.1.1 for a description of mitigation measure MM CUL-1.

MM CUL-2: CONSTRUCTION VIBRATION PROTECTION MEASURES –HISTORICAL RESOURCES

Metro shall conduct a pre-construction baseline survey, implement building protection measures, and conduct a post-construction survey of these historical resources in relation to construction staging and construction vibration and cut-and-cover activities adjacent to these historical resources. This measure will include the following elements:

- Metro shall conduct a pre-construction survey to establish baseline pre-construction conditions and to assess the potential for damage related to improvements adjacent to the historical resources listed below. An architectural historian or historical architect who meets the Secretary of the Interior's Professional Qualification Standards (36 CFR Part 61) shall review proposed protection measures.
- Metro shall implement building protection measures such as fencing or sensitive construction techniques based on final Project design.
- A post-construction survey shall be undertaken to ensure that no significant impacts had occurred to the historical resources. An architectural historian or historical architect who meets the Secretary of the Interior's Professional Qualification Standards (36 CFR Part 61) shall prepare an assessment of the implementation of the mitigation measure.

These protection measures will be included in the CRMMP (see mitigation measure MM CUL-5) for the relevant historical resources.

For the Fairfax Alignment Alternative, this mitigation measure will be implemented for the following 19 historical resources:

- First United Methodist Church of Hollywood (6817 Franklin Avenue)
- Hollywood Wax Museum (6765 Hollywood Boulevard)
- Los Angeles First Federal, Security Pacific Bank (6777 Hollywood Boulevard)
- Sivananda Yoga Community (1538 McCadden Place)
- Hollywood High School Historic District (1521 N Highland Avenue)
- Hollywood High School Liberal Arts Building (1521 N Highland Avenue)
- Max Factor Makeup Salon (1666 N Highland Avenue)
- Hollywood High School Auditorium (1521 N Highland Avenue)
- Hollywood Walk of Fame
- Hollywood Boulevard Commercial and Entertainment District
- 1145 N Sycamore Avenue
- 1143 N Sycamore Avenue
- 1133 N Detroit Street
- Johnie's Coffee Shop (6101 Wilshire Boulevard)
- May Company Building (6067 Wilshire Boulevard)
- US Post Office (Fairfax Avenue) [1125 N Fairfax Avenue]
- Morris Memorial
- 7760 Santa Monica Boulevard
- Original Farmers Market and Rancho La Brea Adobe

MM CUL-3: HISTORICAL RESOURCES ARCHIVAL DOCUMENTATION

Metro shall provide archival documentation of historical resource(s) following the guidelines of the National Park Service's Historic American Buildings Survey/Historic American Engineering Record/Historic American Landscape Survey (HABS/HAER/HALS) program. Documentation requirements will be outlined in the CRMMP (see mitigation measure MM CUL-5) and at a minimum shall consist of:

- Large-format photography including negatives and archival prints
- Written narrative following the HABS/HAER/HALS short format
- Site plan

For the Fairfax Alignment Alternative, this mitigation measure will be implemented for the following four resources:

- 6806 Hollywood Boulevard
- Rexall Drug Store, Lee Drug Company (6800 Hollywood Boulevard)
- Bank of America (6780 Hollywood Boulevard)
- Hollywood Theater (6766 Hollywood Boulevard)

Metro shall provide copies of the documentation to the City of Los Angeles and City of West Hollywood for archival purposes. Large-format photography shall be completed prior to any demolition activities that would affect these resources. The documentation shall be prepared so that the original archival-quality documentation could be donated for inclusion in the Library of Congress if the National Park Service accepts these materials. Copies of documentation shall also be offered to the Los Angeles Public Library and local historical societies upon request.

MM CUL-4: INTERPRETIVE PROGRAM

Metro shall provide interpretive materials in the form of an exhibit, pamphlet, website, or similar material, that describe and/or illustrate the historic significance of the following historical resources, per the CRMMP (see mitigation measure MM CUL-5):

- 6806 Hollywood Boulevard
- Rexall Drug Store, Lee Drug Company (6800 Hollywood Boulevard)
- Bank of America (6780 Hollywood Boulevard)
- Hollywood Theater (6766 Hollywood Boulevard)

Interpretive materials shall be provided to the City of Los Angeles and City of West Hollywood for public education purposes. Copies of interpretive materials shall also be offered to the Los Angeles Public Library and local historical societies upon request.

IMPACT SIGNIFICANCE AFTER MITIGATION

With implementation of the mitigation measures identified above, in addition to MM CUL-5 (CRMMP), the significant construction impacts to the historical resources described in Section 6.1.1.2 would be

reduced to a less than significant level, except for the following properties, for which the Fairfax Alignment Alternative would result in a significant and unavoidable impact related to demolition even after mitigation:

- 6806 Hollywood Boulevard
- Rexall Drug Store, Lee Drug Company (6800 Hollywood Boulevard)
- Bank of America (6780 Hollywood Boulevard)
- Hollywood Theater (6766 Hollywood Boulevard)

OPERATIONAL MITIGATION MEASURES

As described in Section 6.1, there would be no significant operational impacts to historical resources; therefore, no mitigation measures are required for operation of the Fairfax Alignment Alternative.

6.2.1.3 ALIGNMENT ALTERNATIVE 3: LA BREA

CONSTRUCTION MITIGATION MEASURES

MM CUL-1: PROTECTION MEASURES – DIFFERENTIAL SETTLEMENT/VIBRATION/TBM SPECIFICATIONS

Refer to Section 6.2.1.1 for a description of mitigation measure MM CUL-1.

MM CUL-2: CONSTRUCTION VIBRATION PROTECTION MEASURES –HISTORICAL RESOURCES

Metro shall conduct a pre-construction baseline survey, implement building protection measures, and conduct a post-construction survey of these historical resources in relation to construction staging and construction vibration and cut-and-cover activities adjacent to these historical resources. This measure will include the following elements:

- Metro shall conduct a pre-construction survey to establish baseline, pre-construction conditions and to assess the potential for damage related to improvements adjacent to the historical resources listed below. An architectural historian or historical architect who meets the Secretary of the Interior's Professional Qualification Standards (36 CFR Part 61) shall review proposed protection measures.
- Metro shall implement building protection measures such as fencing or sensitive construction techniques based on final Project design.
- A post-construction survey shall be undertaken to ensure that no significant impacts had occurred to the historical resources. An architectural historian or historical architect who meets the Secretary of the Interior's Professional Qualification Standards (36 CFR Part 61) shall prepare an assessment of the implementation of the mitigation measure.

These protection measures will be outlined in the CRMMP (see mitigation measure MM CUL-5) for the relevant historical resources.

For the La Brea Alignment Alternative, this mitigation measure will be implemented for the following 19 historical resources:

- First United Methodist Church of Hollywood (6817 Franklin Avenue)
- Hollywood Wax Museum (6765 Hollywood Boulevard)
- Los Angeles First Federal, Security Pacific Bank (6777 Hollywood Boulevard)
- Sivananda Yoga Community (1538 McCadden Place)
- Hollywood High School Historic District (1521 N Highland Avenue)
- Hollywood High School Liberal Arts Building (1521 N Highland Avenue)
- Max Factor Makeup Salon (1666 N Highland Avenue)
- Hollywood High School Auditorium (1521 N Highland Avenue)
- Hollywood Walk of Fame
- Hollywood Boulevard Commercial and Entertainment District
- 1145 N Sycamore Avenue
- 1143 N Sycamore Avenue
- 1133 N Detroit Street
- Clem Wilson/Mutual Omaha Building
- Zephyr Club
- 5352-5354 Wilshire Boulevard
- 330 N La Brea Avenue
- 357 N La Brea Avenue
- Morris Memorial

MM CUL-3: HISTORICAL RESOURCE ARCHIVAL DOCUMENTATION

Metro shall provide archival documentation of the historical resource(s) following the guidelines of the National Park Service Historic American Buildings Survey/Historic American Engineering Record/Historic American Landscape Survey (HABS/HAER/HALS) program. Documentation requirements shall be described in the CRMMP (see mitigation measure MM CUL-5) and at a minimum consist of:

- Large-format photography including negatives and archival prints
- Written narrative following the HABS/HAER/HALS short format
- Site plan

For the La Brea Alignment Alternative, this mitigation measure will be implemented for the following four resources:

- 6806 Hollywood Boulevard
- Rexall Drug Store, Lee Drug Company (6800 Hollywood Boulevard)

- Bank of America (6780 Hollywood Boulevard)
- Hollywood Theater (6766 Hollywood Boulevard)

Metro shall provide copies of the documentation to the City of Los Angeles and City of West Hollywood for archival purposes. Large-format photography shall be completed prior to any demolition activities that would affect these resources. The documentation shall be prepared so that the original archival-quality documentation could be donated for inclusion in the Library of Congress if the National Park Service accepts these materials. Copies of documentation shall also be offered to the Los Angeles Public Library and local historical societies upon request.

MM CUL-4: INTERPRETIVE PROGRAM

Metro shall provide interpretive materials in the form of an exhibit, pamphlet, website, or similar, that describe and/or illustrate the historic significance of the following historical resources, per the CRMMP (see mitigation measure MM CUL-5):

- 6806 Hollywood Boulevard
- Rexall Drug Store, Lee Drug Company (6800 Hollywood Boulevard)
- Bank of America (6780 Hollywood Boulevard)
- Hollywood Theater (6766 Hollywood Boulevard)

Interpretive materials shall be provided to the City of Los Angeles and City of West Hollywood for public education purposes. Copies of interpretive materials shall also be offered to the Los Angeles Public Library and local historical societies upon request.

IMPACT SIGNIFICANCE AFTER MITIGATION

With implementation of the mitigation measures identified above, in addition to MM CUL-5 (CRMMP), the significant construction impacts to the historical resources described in Section 6.1.1.3 would be reduced to a less than significant level, except for the following properties, for which the La Brea Alignment Alternative would result in a significant and unavoidable impact related to demolition even after mitigation:

- 6806 Hollywood Boulevard
- Rexall Drug Store, Lee Drug Company (6800 Hollywood Boulevard)
- Bank of America (6780 Hollywood Boulevard)
- Hollywood Theater (6766 Hollywood Boulevard)

OPERATIONAL MITIGATION MEASURES

As described in Section 6.1, there would be no significant operational impacts to historical resources; therefore, no mitigation measures are required for operation of the La Brea Alignment Alternative.

6.2.1.4 HOLLYWOOD BOWL DESIGN OPTION

CONSTRUCTION MITIGATION MEASURES

MM CUL-1: PROTECTION MEASURES – DIFFERENTIAL SETTLEMENT/VIBRATION/TBM SPECIFICATIONS

Metro shall conduct a pre-construction baseline survey, implement building protection measures, and conduct a post-construction survey of the Lasky DeMille Studio Barn and the Hollywood Bowl Pedestrian Tunnel in relation to TBM launch and TBM extraction, and underground construction adjacent to these two historical resources. Building protection measures shall be implemented in conjunction with project measure PM NOI-1 and mitigation measure MM NOI-1 and will be included in the Cultural Resources Monitoring and Mitigation Plan (CRMMP) described in mitigation measure MM CUL-5 below.

This measure will include the following elements:

- Metro shall conduct a pre-construction survey to establish baseline pre-construction conditions and building category and to assess the potential for ground-borne vibration to cause damage. Geotechnical investigations shall be undertaken to evaluate soil, groundwater, seismic, and environmental conditions along the alignment. These investigations shall inform the development of appropriate support mechanisms for cut-and-cover construction areas or areas that could experience differential settlement as a result of using a TBM in proximity to the historical resource. An architectural historian or historical architect who meets the Secretary of the Interior's Professional Qualification Standards (36 CFR Part 61) shall review final design documents prior to implementation of measures.
- Metro shall implement building protection measures such as underpinning, soil grouting, or other forms of ground improvement, and use lower-vibration equipment and/or construction techniques. If the historical resource has the potential to be affected by differential settlement caused by TBM construction, Metro shall require the use of an earth pressure balance or slurry shield TBM.
- In addition, as part of final design, geotechnical construction recommendations and instrumentation and monitoring plans will be developed by a qualified engineer. These recommendations will be documented in the geotechnical design reports and will be incorporated in structural design and construction drawings, as required per the Metro Rail Design Criteria. Refer to the KNE Geology and Soils Technical Report for additional detail and evaluation.
- A post-construction survey shall also be undertaken to ensure that no significant impacts had occurred to historical resources. An architectural historian or historical architect who meets the Secretary of the Interior's Professional Qualification Standards (36 CFR Part 61) shall prepare an assessment of the implementation of the mitigation measures.

MM CUL-2: CONSTRUCTION VIBRATION PROTECTION MEASURES –HISTORICAL RESOURCES

Metro shall conduct a pre-construction baseline survey, implement building protection measures, and conduct a post-construction survey of these historical resources in relation to construction staging and construction vibration and cut-and-cover activities adjacent to these historical resources. This measure will include the following elements:

- Metro shall conduct a pre-construction survey to establish baseline pre-construction conditions and to assess the potential for damage related to improvements adjacent to the historical resources listed below. An architectural historian or historical architect who meets the Secretary of the Interior's Professional Qualification Standards (36 CFR Part 61) shall review proposed protection measures.
- Metro shall implement building protection measures such as fencing or sensitive construction techniques based on final Project design.
- A post-construction survey shall be undertaken to ensure that no significant impacts had occurred to the historical resources. An architectural historian or historical architect who meets the Secretary of the Interior's Professional Qualification Standards (36 CFR Part 61) shall prepare an assessment of the implementation of the mitigation measure.

These protection measures will be included in the CRMMP (see mitigation measure MM CUL-5) for the relevant historical resources.

This mitigation measure will be implemented for the following historical resources:

- Hollywood Bowl Pedestrian Tunnel
- Lasky DeMille Studio Barn

IMPACT SIGNIFICANCE AFTER MITIGATION

With implementation of the mitigation measures identified above, in addition to MM CUL-5 (CRMMP), the significant construction impacts to the historical resources described in Section 6.1.1.4 would be reduced to a less than significant level.

OPERATIONAL MITIGATION MEASURES

As described in Section 6.1, there would be no significant operational impacts to historical resources; therefore, no mitigation measures are required for operation of the design option.

6.2.1.5 MAINTENANCE AND STORAGE FACILITY

CONSTRUCTION MITIGATION MEASURES

There are no historical resources within the Built Environment RSA for the MSF. There would be no construction impacts on historical resources; therefore, no construction mitigation measures are required.

OPERATIONAL MITIGATION MEASURES

There are no historical resources within the Built Environment RSA for the MSF. There would be no operational impacts on historical resources; therefore, no mitigation measures are required.

6.2.2 IMPACT CUL-2: ARCHAEOLOGICAL RESOURCES

6.2.2.1 ALIGNMENT ALTERNATIVE 1: SAN VICENTE–FAIRFAX

CONSTRUCTION MITIGATION MEASURES

MM CUL-5: CULTURAL RESOURCES MONITORING AND MITIGATION PLAN (CRMMP)

To mitigate impacts to archaeological resources that may be encountered in the RSA during construction activities, a CRMMP shall be developed and implemented by Metro. The CRMMP shall provide information on Project personnel roles and responsibilities, establish procedures for cultural resources training for construction personnel (see mitigation measure MM CUL-6), include guidelines for treatment of unanticipated discoveries and human remains, and outline monitoring requirements and protocols (see mitigation measures MM CUL-7 and MM CUL-8).

The CRMMP shall require that an archaeologist meeting the Secretary of the Interior's Professional Qualification Standards (36 CFR Part 61) in prehistoric and historical archaeology be retained prior to ground-disturbing activities to implement CRMMP requirements.

The CRMMP shall provide details on procedures to follow when encountering unanticipated archaeological resources. If buried archaeological resources, such as flaked or ground stone, historic debris, building foundations, or non-human bone, are discovered during Project-related ground-disturbing activities within any part of the RSA, work will stop in that area and within 50 feet of the find until a qualified archaeologist can assess the significance of the find and, if necessary, develop appropriate treatment measures. Work may continue in other areas of the Project. The CRMMP shall include a detailed prehistoric and historic context that clearly states the themes under which any subsurface deposits identified during construction would be determined significant under CEQA. Treatment measures typically include development of avoidance strategies, capping with fill, or mitigation of impacts through data recovery programs such as excavation or detailed documentation. A Native American monitor shall be retained if treatment involves work at a prehistoric site, or at other locations determined appropriate during tribal consultation.

Archaeological and Native American monitoring shall be required at locations with moderate sensitivity for buried archaeological deposits, including areas of new station construction and TBM launch and extraction sites (see mitigation measures MM CUL-7 and MM CUL-8), protocols for which will be established in the CRMMP. If during cultural resources monitoring the qualified archaeologist determines that the sediments being excavated are previously disturbed or unlikely to contain significant cultural materials, the qualified archaeologist can specify that monitoring be reduced or eliminated.

Additionally, the CRMMP shall outline and describe in depth the mitigation measures (see mitigation measures MM CUL-1 through MM CUL-4) dedicated to mitigating Project impacts for the built environment resources that qualify as historical resources for the purposes of CEQA. Protocol for inadvertent discoveries of human remains (see MM CUL-9) shall also be outlined and describe in depth.

MM CUL-6: CULTURAL RESOURCE TRAINING

Prior to any ground-disturbing activities, all construction personnel involved in ground-disturbing activities shall be provided with appropriate cultural resources training in accordance with the Project CRMMP (see mitigation measure MM CUL-5). The training will instruct the personnel regarding the legal framework protecting cultural resources, typical kinds of cultural resources that may be found within the RSA , and proper procedures and notifications if cultural resources are inadvertently discovered.

MM CUL-7: ARCHAEOLOGICAL MONITORING

Project-related ground-disturbing activities shall be monitored by a qualified archaeologist, in accordance with the Project CRMMP (see mitigation measure MM CUL-5). If archaeological artifacts are discovered, then work shall be halted in the immediate vicinity of the find and a qualified archaeologist shall assess the significance of the find and, if necessary, develop appropriate treatment measures, per the CRMMP (see mitigation measure MM CUL-5).

MM CUL-8: NATIVE AMERICAN MONITORING

Project-related ground-disturbing activities conducted in areas identified as having moderate sensitivity for buried archaeological deposits, and other locations determined appropriate through AB 52 consultation, shall be monitored by a Native American representative from an NAHC identified tribe, in accordance with the Project CRMMP detailed in mitigation measure MM CUL-5. The tribal monitor shall be ancestrally affiliated with the RSA and vicinity and qualified by their tribe to monitor for tribal cultural resources.

In the event that an archaeological resource discovered during Project construction is determined to be potentially of Native American origin based on the initial assessment of the find by a qualified archaeologist pursuant to California PRC Section 21083.2(i), the Native American tribes that consulted on the Project pursuant to AB 52 shall be notified and be provided information about the find to allow for early input from the tribal representatives with regard to the potential significance and treatment of the resource. Resources shall be treated with culturally appropriate dignity, taking into consideration the tribal cultural values and meaning of the resource. The input of all consulting tribes shall be considered in the preparation of any required treatment plan activities prepared by the qualified archaeologist for any prehistoric archaeological resources or tribal cultural resources identified during the Project. Work in the area of the discovery may not resume until evaluation and treatment of the resource is completed and/or the resource is recovered and removed from the site. Construction activities may continue on other parts of the construction site while evaluation and treatment of the resource takes place.

IMPACT SIGNIFICANCE AFTER MITIGATION

Implementation of mitigation measures MM CUL-5 through MM CUL-8 during construction of the San Vicente–Fairfax Alignment Alternative would reduce impacts to P-19-003045 and unknown archaeological historical resources or unique archaeological resources to a less than significant level.

OPERATIONAL MITIGATION MEASURES

As the impact analysis in Section 6.1 demonstrates, operation of the San Vicente-Fairfax Alignment Alternative would result in no impact related to archaeological resources. Therefore, no mitigation is required under CEQA.

6.2.2.2 ALIGNMENT ALTERNATIVE 2: FAIRFAX

CONSTRUCTION MITIGATION MEASURES

MM CUL-5: CULTURAL RESOURCES MONITORING AND MITIGATION PLAN (CRMMP)

Refer to Section 6.2.2.1 for a description of mitigation measure MM CUL-5.

MM CUL-6: CULTURAL RESOURCE TRAINING

Refer to Section 6.2.2.1 for a description of mitigation measure MM CUL-6.

MM CUL-7: ARCHAEOLOGICAL MONITORING

Refer to Section 6.2.2.1 for a description of mitigation measure MM CUL-7.

MM CUL-8: NATIVE AMERICAN MONITORING

Refer to Section 6.2.2.1 for a description of mitigation measure MM CUL-8.

IMPACT SIGNIFICANCE AFTER MITIGATION

Implementation of mitigation measures MM CUL-5 through MM CUL-8 would reduce impacts to P-19-003045 and unknown archaeological historical resources or unique archaeological resources to a less than significant level for construction of the Fairfax Alignment Alternative.

OPERATIONAL MITIGATION MEASURES

As the impact analysis in Section 6.1 demonstrates, operation of the Fairfax Alignment Alternative would result in no impact related to archaeological resources. Therefore, no mitigation is required under CEQA.

6.2.2.3 ALIGNMENT ALTERNATIVE 3: LA BREA

CONSTRUCTION MITIGATION MEASURES

MM CUL-5: CULTURAL RESOURCES MONITORING AND MITIGATION PLAN (CRMMP)

Refer to Section 6.2.2.1 for a description of mitigation measure MM CUL-5.

MM CUL-6: CULTURAL RESOURCE TRAINING

Refer to Section 6.2.2.1 for a description of MM CUL-6.

MM CUL-7: ARCHAEOLOGICAL MONITORING

Refer to Section 6.2.2.1 for a description of mitigation measure MM CUL-7.

MM CUL-8: NATIVE AMERICAN MONITORING

Refer to Section 6.2.2.1 for a description of mitigation measure MM CUL-8.

IMPACT SIGNIFICANCE AFTER MITIGATION

Implementation of mitigation measures MM CUL-5 through MM CUL-8 would reduce impacts to P-19-003045 and unknown archaeological historical resources or unique archaeological resources to a less than significant level for construction of the La Brea Alignment Alternative.

OPERATIONAL MITIGATION MEASURES

As the impact analysis in Section 6.1 demonstrates, operation of the La Brea Alignment Alternative would result in no impact related to archaeological resources. Therefore, no mitigation is required under CEQA.

6.2.2.4 HOLLYWOOD BOWL DESIGN OPTION

CONSTRUCTION MITIGATION MEASURES

MM CUL-5: CULTURAL RESOURCES MONITORING AND MITIGATION PLAN (CRMMP)

Refer to Section 6.2.2.1 for a description of mitigation measure MM CUL-5.

MM CUL-6: CULTURAL RESOURCE TRAINING

Refer to Section 6.2.2.1 for a description of mitigation measure MM CUL-6.

MM CUL-7: ARCHAEOLOGICAL MONITORING

Refer to Section 6.2.2.1 for a description of mitigation measure MM CUL-7.

MM CUL-8: NATIVE AMERICAN MONITORING

Refer to Section 6.2.2.1 for a description of mitigation measure MM CUL-8.

IMPACT SIGNIFICANCE AFTER MITIGATION

Implementation of mitigation measures MM CUL-5 through MM CUL-8 would reduce impacts to unknown archaeological historical resources or unique archaeological resources to a less than significant level for construction of the Hollywood Bowl Design Option.

OPERATIONAL MITIGATION MEASURES

As the impact analysis in Section 6.1 demonstrates, operation of the design option would result in no impact related to archaeological resources. Therefore, no mitigation is required under CEQA.

6.2.2.5 MAINTENANCE AND STORAGE FACILITY

CONSTRUCTION MITIGATION MEASURES

As the impact analysis in Section 6.1 demonstrates, construction of the MSF would result in a less than significant impact related to archaeological resources. Therefore, no mitigation is required under CEQA.

OPERATIONAL MITIGATION MEASURES

As the impact analysis in Section 6.1 demonstrates, operation of the MSF would result in no impact related to archaeological resources. Therefore, no mitigation is required under CEQA.

6.2.3 IMPACT CUL-3: DISTURBANCE OF HUMAN REMAINS

6.2.3.1 ALIGNMENT ALTERNATIVE 1: SAN VICENTE–FAIRFAX

CONSTRUCTION MITIGATION MEASURES

MM CUL-5: CULTURAL RESOURCES MONITORING AND MITIGATION PLAN (CRMMP)

Refer to Section 6.2.2.1 for a description of mitigation measure MM CUL-5.

MM CUL-9: UNANTICIPATED DISCOVERY OF HUMAN REMAINS

If human remains are discovered, work in the immediate vicinity of the discovery shall be suspended and the Los Angeles County Coroner contacted. If the remains are deemed Native American in origin, the coroner shall contact the NAHC and identify an MLD pursuant to PRC Section 5097.98 and CCR Section 15064.5. The MLD may inspect the site within 48 hours of being notified and issue recommendations for scientific removal and nondestructive analysis. If the MLD fails to make recommendations, then Metro and/or the landowner may rebury the remains in a location not subject to further disturbance at their discretion. Work may be resumed at the landowner's discretion but will

only commence after consultation with the Los Angeles County Coroner, the MLD, and Metro have been concluded and treatment of the remains has been resolved. Work may continue on other parts of the Project while consultation and treatment are conducted.

IMPACT SIGNIFICANCE AFTER MITIGATION

Implementation of mitigation measure MM CUL-5 and MM CUL-9 during construction of the San Vicente–Fairfax Alignment Alternative would reduce impacts to unknown buried human remains, including those interred outside formal cemeteries, to a less than significant level.

OPERATIONAL MITIGATION MEASURES

As described in Section 6.1, there would be no operational impacts to buried human remains, including those interred outside formal cemeteries during operations; therefore, no mitigation measures are required for the operation of the San Vicente–Fairfax Alignment Alternative.

6.2.3.2 ALIGNMENT ALTERNATIVE 2: FAIRFAX

CONSTRUCTION MITIGATION MEASURES

MM CUL-5: CULTURAL RESOURCES MONITORING AND MITIGATION PLAN (CRMMP)

Refer to Section 6.2.2.1 for a description of mitigation measure MM CUL-5.

MM CUL-9: UNANTICIPATED DISCOVERY OF HUMAN REMAINS

Refer to Section 6.2.3.1 for a description of mitigation measure MM CUL-9.

IMPACT SIGNIFICANCE AFTER MITIGATION

Implementation of mitigation measure MM CUL-5 and MM CUL-9 during construction of the Fairfax Alignment Alternative would reduce impacts to unknown buried human remains, including those interred outside formal cemeteries, to a less than significant level.

OPERATIONAL MITIGATION MEASURES

As described in Section 6.1 there would be no operational impacts to buried human remains, including those interred outside formal cemeteries during operations; therefore, no mitigation measures are required for the operation of the Fairfax Alignment Alternative.

6.2.3.3 ALIGNMENT ALTERNATIVE 3: LA BREA

CONSTRUCTION MITIGATION MEASURES

MM CUL-5: CULTURAL RESOURCES MONITORING AND MITIGATION PLAN (CRMMP)

Refer to Section 6.2.2.1 for a description of mitigation measure MM CUL-5.

MM CUL-9: UNANTICIPATED DISCOVERY OF HUMAN REMAINS

Refer to Section 6.2.3.1 for a description of mitigation measure MM CUL-9.

IMPACT SIGNIFICANCE AFTER MITIGATION

Implementation of mitigation measure MM CUL-5 and MM CUL-9 during construction of the La Brea Alignment Alternative would reduce impacts to unknown buried human remains, including those interred outside formal cemeteries, to a less than significant level.

OPERATIONAL MITIGATION MEASURES

As described in Section 6.1, there would be no impacts to buried human remains, including those interred outside formal cemeteries during operations; therefore, no mitigation measures are required for the operation of the La Brea Alignment Alternative.

6.2.3.4 HOLLYWOOD BOWL DESIGN OPTION

CONSTRUCTION MITIGATION MEASURES

MM CUL-5: CULTURAL RESOURCES MONITORING AND MITIGATION PLAN (CRMMP)

Refer to Section 6.2.2.1 for a description of mitigation measure MM CUL-5.

MM CUL-9: UNANTICIPATED DISCOVERY OF HUMAN REMAINS

Refer to Section 6.2.3.1 for a description of mitigation measure MM CUL-9.

IMPACT SIGNIFICANCE AFTER MITIGATION

Implementation of mitigation measure MM CUL-5 and MM CUL-9 during construction of the Hollywood Bowl Design Option would reduce impacts to unknown buried human remains, including those interred outside formal cemeteries, to a less than significant level.

OPERATIONAL MITIGATION MEASURES

As described in Section 6.1, there would be no impacts to buried human remains, including those interred outside formal cemeteries during operations; therefore, no mitigation measures are required for the operation of the design option.

6.2.3.5 MAINTENANCE AND STORAGE FACILITY

CONSTRUCTION MITIGATION MEASURES

MM CUL-5: CULTURAL RESOURCES MONITORING AND MITIGATION PLAN (CRMMP)

Refer to Section 6.2.2.1 for a description of mitigation measure MM CUL-5.

MM CUL-9: UNANTICIPATED DISCOVERY OF HUMAN REMAINS

Refer to Section 6.2.3.1 for a description of mitigation measure MM CUL-9.

IMPACT SIGNIFICANCE AFTER MITIGATION

Implementation of mitigation measure MM CUL-5 and MM CUL-9 during construction of the MSF would reduce impacts to unknown buried human remains, including those interred outside formal cemeteries, to a less than significant level.

OPERATIONAL MITIGATION MEASURES

As described in Section 6.1, there would be no impacts to buried human remains, including those interred outside formal cemeteries during operations; therefore, no mitigation measures are required for the operation of the MSF.

6.2.4 IMPACT PAL-1: PALEONTOLOGICAL RESOURCES

6.2.4.1 ALIGNMENT ALTERNATIVE 1: SAN VICENTE–FAIRFAX

CONSTRUCTION MITIGATION MEASURES

MM PAL-1: PALEONTOLOGICAL RESOURCES MONITORING AND MITIGATION PLAN (PRMMP)

To mitigate impacts to paleontological resources that may be encountered in the Paleontological RSA during construction activities associated with the Project, a PRMMP shall be developed and implemented by Metro. The PRMMP shall be prepared by a qualified paleontologist (Project Paleontologist) prior to ground-disturbing activities, and include the following:

- Qualifications for Project Paleontologist and Paleontological Monitor(s)
- Procedures for paleontological resources training for construction personnel (mitigation measure MM PAL-2)
- Monitoring protocol (mitigation measure MM PAL-2)
- Stop-work authority to temporarily stop construction activities within 50 feet of a discovered paleontological resource
- Treatment measures for discovered paleontological resources
- Curation requirements of recovered fossil materials
- Collection and testing strategies for microfossils
- Reporting requirements

MM PAL-2: WORKER EDUCATION

Prior to construction, the Project Paleontologist or Paleontological Monitor shall inform construction personnel who will be involved with earth-moving activities that paleontological resources may be encountered during ground-disturbing activities and shall prepare and provide construction personnel

with a Project-Specific Worker Environmental Awareness Plan outlining the requirements and procedures triggered in the event paleontological resources are uncovered during construction activities.

MM PAL-3: PALEONTOLOGICAL MONITORING

The Project Paleontologist shall supervise the Paleontological Monitor to monitor excavation in areas identified as likely to contain paleontological resources, per the Project PRMMP (mitigation measure MM PAL-1). These areas are defined as all areas within the older alluvium in the RSA where planned excavation will exceed three feet below the surface or three feet into undisturbed sediments and all areas within the younger alluvium in the RSA where planned excavation will exceed 10 feet below the surface or 10 feet into undisturbed sediments. The Project Paleontologist shall retain the option to reduce monitoring if, in his or her professional opinion, sediments being monitored are previously disturbed. Monitoring may also be reduced if the potentially fossiliferous units, previously described, are determined to have low potential to contain fossil resources.

IMPACT SIGNIFICANCE AFTER MITIGATION

Implementation of mitigation measures MM PAL-1 through MM PAL-3 during construction of the new stations associated with the San Vicente–Fairfax Alignment Alternative would reduce impacts to paleontological resources to a less than significant level. However, in areas where TBMs are used for tunnel construction, these mitigation measures cannot reduce impacts to a less than significant level. Therefore, the San Vicente–Fairfax Alignment Alternative, which would use TBMs for tunneling, would have significant and unavoidable impacts during construction.

OPERATIONAL MITIGATION MEASURES

Because there would be no ground-disturbing activities during operational activities, as described in Section 6.1, there would be no operational impacts to paleontological resources; therefore, no mitigation measures are required for the operation of the San Vicente–Fairfax Alignment Alternative.

6.2.4.2 ALIGNMENT ALTERNATIVE 2: FAIRFAX

CONSTRUCTION MITIGATION MEASURES

MM PAL-1: PALEONTOLOGICAL RESOURCES MONITORING AND MITIGATION PLAN (PRMMP)

Refer to Section 6.2.4.1 for a description of mitigation measure MM PAL-1.

MM PAL-2: WORKER EDUCATION

Refer to Section 6.2.4.1 for a description of mitigation measure MM PAL-2.

MM PAL-3: PALEONTOLOGICAL MONITORING

Refer to Section 6.2.4.1 for a description of mitigation measure MM PAL-3.

IMPACT SIGNIFICANCE AFTER MITIGATION

Implementation of mitigation measures MM PAL-1 through MM PAL-3 during construction of the new stations associated with the Fairfax Alignment Alternative would reduce impacts to paleontological resources to a less than significant level. However, in areas where TBMs are used for tunnel construction, these mitigation measures cannot reduce impacts to a less than significant level. Therefore, the Fairfax Alignment Alternative, which would use TBMs for tunneling, would have significant and unavoidable impacts during construction.

OPERATIONAL MITIGATION MEASURES

Because there would be no ground-disturbing activities during operational activities, as described in Section 6.1, there would be no operational impacts to paleontological resources; therefore, no mitigation measures are required for the operation of the Fairfax Alignment Alternative.

6.2.4.3 ALIGNMENT ALTERNATIVE 3: LA BREA

CONSTRUCTION MITIGATION MEASURES

MM PAL-1: PALEONTOLOGICAL RESOURCES MONITORING AND MITIGATION PLAN (PRMMP)

Refer to Section 6.2.4.1 for a description of mitigation measure MM PAL-1.

MM PAL-2: WORKER EDUCATION

Refer to Section 6.2.4.1 for a description of mitigation measure MM PAL-2.

MM PAL-3: PALEONTOLOGICAL MONITORING

Refer to Section 6.2.4.1 for a description of mitigation measure MM PAL-3.

IMPACT SIGNIFICANCE AFTER MITIGATION

Implementation of mitigation measures MM PAL-1 through MM PAL-3 during construction of the new stations associated with the La Brea Alignment Alternative would reduce impacts to paleontological resources to a less than significant level. However, in areas where TBMs are used for tunnel construction, these mitigation measures cannot reduce impacts to a less than significant level. Therefore, the La Brea Alignment Alternative, which would use TBMs for tunneling, would have significant and unavoidable impacts during construction.

OPERATIONAL MITIGATION MEASURES

Because there would be no ground-disturbing activities during operational activities, as described in Section 6.1, there would be no operational impacts to paleontological resources; therefore, no mitigation measures are required for the operation of the La Brea Alignment Alternative.

6.2.4.4 HOLLYWOOD BOWL DESIGN OPTION

CONSTRUCTION MITIGATION MEASURES

MM PAL-1: PALEONTOLOGICAL RESOURCES MONITORING AND MITIGATION PLAN (PRMMP)

Refer to Section 6.2.4.1 for a description of mitigation measure MM PAL-1.

MM PAL-2: WORKER EDUCATION

Refer to Section 6.2.4.1 for a description of mitigation measure MM PAL-2.

MM PAL-3: PALEONTOLOGICAL MONITORING

Refer to Section 6.2.4.1 for a description of mitigation measure MM PAL-3.

IMPACT SIGNIFICANCE AFTER MITIGATION

Implementation of mitigation measures MM PAL-1 through MM PAL-3 during construction of the new station associated with the Hollywood Bowl Design Option would reduce impacts to paleontological resources to a less than significant level. However, in areas where the SEM is used for tunnel construction, these mitigation measures cannot reduce impacts to a less than significant level. Therefore, the Hollywood Bowl Design Option, which would use SEM for tunneling, would have significant and unavoidable impacts during construction.

OPERATIONAL MITIGATION MEASURES

Because there would be no ground-disturbing activities during operational activities, as described in Section 6.1, there would be no operational impacts to paleontological resources; therefore, no mitigation measures are required for the operation of the design option.

6.2.4.5 MAINTENANCE AND STORAGE FACILITY

CONSTRUCTION MITIGATION MEASURES

MM PAL-1: PALEONTOLOGICAL RESOURCES MONITORING AND MITIGATION PLAN (PRMMP)

Refer to Section 6.2.4.1 for a description of mitigation measure MM PAL-1.

MM PAL-2: WORKER EDUCATION

Refer to Section 6.2.4.1 for a description of mitigation measure MM PAL-2.

MM PAL-3: PALEONTOLOGICAL MONITORING

Refer to Section 6.2.4.1 for a description of mitigation measure MM PAL-3.

IMPACT SIGNIFICANCE AFTER MITIGATION

Implementation of mitigation measures MM PAL-1 through MM PAL-3 during construction activities associated with the MSF would reduce impacts to paleontological resources to a less than significant level.

OPERATIONAL MITIGATION MEASURES

Because there would be no ground-disturbing activities during operational activities associated with the MSF, as described in Section 6.1, there would be no operational impacts to paleontological resources; therefore, no mitigation measures are required for the operation of the MSF.

CHAPTER 7 CUMULATIVE IMPACTS

7.1 INTRODUCTION

Under the state CEQA Guidelines, cumulative impacts are defined as two or more individual impacts that, when considered together, are considerable or would compound and increase other environmental impacts (Section 15355). These cumulative impacts must be discussed in an EIR when the project's incremental effect is "cumulatively considerable" (Section 15130). "Cumulatively considerable" is defined as when the incremental effects of an individual project are significant when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects (Section 15065(a)(3)).

CEQA Guidelines Section 15130(b)(1) includes two methodology approaches for assessing cumulative impacts. One approach is a "list of past, present, and probable future projects producing related or cumulative impacts" (CEQA Guidelines Section 15130(b)(1)(A)). The other approach is a "summary of projections contained in an adopted local, regional, or statewide plan, or related document, that describes or evaluates conditions contributing to the cumulative effect" (CEQA Guidelines Section 15030 (b)(1)(B)). For the purposes of this analysis, the latter approach is used due to the long Project implementation time. The forecasted Project completion timeframe is in the mid- to late-2040s based on Metro Measure M funding. Due to the long-term nature of the Project's implementation, a list of land use and transportation projects is insufficient for the cumulative analysis since the currently known projects would be completed and operational by the Project's forecasted completion. In addition, it is highly likely many additional projects will be proposed and constructed between now and project implementation in 20 years; therefore, any project list developed now would be incomplete and incorrect.

The SCAG 2020-2045 Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS) Plan is the adopted long-range forecast for population, households, and employment within the six-county Southern California region, which includes all Project elements. The Project is also included in the SCAG 2020 RTP/SCS Plan, as well as Metro's 2020 Long Range Transportation Plan. The RTP/SCS was adopted in 2020 and proposes land use and transportation strategies to improve mobility options and achieve a more sustainable growth pattern (SCAG 2020). SCAG worked in close coordination with decision-makers and the public across multiple jurisdictions throughout the SCAG region to create the plan. The population, household, and employment growth projections from this plan are used to assess regional growth and its cumulative impact within the vicinity of the Project.

For the cumulative analysis, the RSA is defined as a half-mile radius from the stations, the design option, and the MSF. The half-mile radius is used for all resources to ensure consistency in evaluating cumulative effects. Table 7-1 shows the projected net growth in population, households, and employment between 2019 and 2045 for a half-mile radius from all Project stations, the design option, and the MSF. The data in the table were calculated by merging the SCAG 2020 RTP/SCS growth projections with the SCAG Tier 2 Transportation Analysis Zone boundaries for Los Angeles County, then assessed for a half-mile radius around the stations, the design option, and the MSF. The data show the projected growth from transportation and development projects, as well as associated infrastructure, that when combined with the Project's construction and operation, could result in cumulative effects.

TABLE 7-1. SCAG PROJECTED PERCENT GROWTH FOR HALF-MILE BUFFER AREAS, 2019-2045

HALF-MILE BUFFER AREA	POPULATION % GROWTH	HOUSEHOLD % GROWTH	EMPLOYMENT % GROWTH
STATIONS			
Expo/Crenshaw	46.0	65.9	26.4
Crenshaw/Adams	35.6	56.3	19.6
Midtown Crossing	20.2	33.1	21.1
Wilshire/Fairfax	19.8	21.2	6.2
Fairfax/3rd	21.9	23.1	6.5
La Cienega/Beverly	30.7	31.3	6.1
San Vicente/Santa Monica	11.5	11.4	46.2
Fairfax/Santa Monica	7.2	7.7	49.5
La Brea/Santa Monica	16.0	17.2	42.6
Hollywood/Highland	16.2	15.0	3.0
Wilshire/La Brea	22.8	24.3	9.4
La Brea/Beverly	17.9	24.5	14.5

7.2 CUMULATIVE IMPACTS

The geographical cumulative impact area for this analysis consists of the RSA where cultural and paleontological resources are protected by federal, state, and local regulations, as outlined in Chapter 3.

7.2.1 ALIGNMENTS AND STATIONS

Based on the results of this analysis, the alignment alternatives and stations have the potential to cause a significant impact related to historical resources. Development of the alignments and stations in combination with other projects located in the adjacent area would increase the potential for impacts to historical resources and could contribute to the loss of such resources in the region. The potential that other development consistent with local plans would affect cultural resources during construction is determined by a variety of factors, including the type of development that is proposed. Impacts from the alignments and stations combined with surrounding development would be cumulatively significant.

The alignments and stations also have the potential to cause a significant impact related to archaeological resources and human remains. Development of the alignments and stations in combination with other projects located in the adjacent area would increase the potential for impacts to archaeological resources

and human remains and could contribute to the loss of such resources in the region. The potential that other development consistent with local plans would affect archaeological resources and human remains during construction is determined by a variety of factors, including the type of development that is proposed. However, impacts from the alignments and stations combined with surrounding development would be cumulatively less than significant with implementation of Project-specific mitigation measures.

Additionally, the alignments and stations have the potential to cause a significant impact related to paleontological resources. Tunneling in areas of unknown soils with high paleontological sensitivity could directly or indirectly destroy paleontological resources. Development of the alignments and stations in combination with other projects located in the adjacent area would increase the potential for impacts to paleontological resources and could contribute to the loss of such resources in the region. The potential that other development consistent with local plans would affect paleontological resources during construction is determined by a variety of factors, including the type of development that is proposed. Impacts from the alignment alternatives and stations, combined with surrounding development, would be cumulatively significant.

7.2.2 HOLLYWOOD BOWL DESIGN OPTION

Based on the results of this analysis, construction and operation of the Hollywood Bowl Design Option has the potential to cause significant impacts related to historical resources. In addition, development of the design option in combination with other projects located in the adjacent area would increase the potential for impacts to historical resources and could contribute to the loss of such resources in the region. The potential that other development consistent with local plans would have impacts on cultural resources during construction is determined by a variety of factors, including the type of development that is proposed. However, impacts from the design option along with any surrounding development would be cumulatively significant.

The design option has the potential to cause a significant impact related to archaeological resources and human remains. Development of the design option in combination with other projects located in the adjacent area would increase the potential for impacts to archaeological resources and human remains and could contribute to the loss of such resources in the region. The potential that other development consistent with local plans would affect these resources during construction is determined by a variety of factors, including the type of development that is proposed. However, impacts from the design option combined with any surrounding development would be cumulatively less than significant with implementation of Project-specific mitigation measures.

Additionally, the design option has the potential to cause a significant impact related to paleontological resources. Tunneling in areas of unknown soils with high paleontological sensitivity could directly or indirectly destroy paleontological resources. Development of the design option in combination with other projects located in the adjacent area would increase the potential for impacts to paleontological resources and could contribute to the loss of such resources in the region. The potential that other development consistent with local plans would affect paleontological resources during construction is determined by a variety of factors, including the type of development that is proposed. However, impacts from the design option combined with any surrounding development would be cumulatively significant.

7.2.3 MAINTENANCE AND STORAGE FACILITY

Based on the results of this analysis, the MSF has the potential to cause significant impacts related to historical resources, archaeological resources, human remains, and paleontological resources. In addition, development of the MSF in combination with other projects located in the adjacent area would increase the potential for impacts to these resources and could contribute to the loss of such resources in the region. The potential that other development consistent with local plans would affect these resources during construction is determined by a variety of factors, including the type of development that is proposed. However, impacts from the MSF combined with any surrounding development would be cumulatively less than significant with implementation of Project-specific mitigation measures.

7.3 CUMULATIVE MITIGATION MEASURES

7.3.1 ALIGNMENTS AND STATIONS

Implementation of Project-specific mitigation measures pertaining to historical resources would not mitigate cumulative impacts to a less than significant level. Consequently, the incremental effects of the alignment alternatives and stations would be cumulatively considerable with respect to historical resources. Therefore, the alignment alternatives and stations, combined with past, present, and reasonably foreseeable projects, would result in a cumulatively significant and unavoidable impact to historical resources.

The incremental effects of the alignment alternatives and stations on archaeological resources and human remains would not be cumulatively considerable after Project-specific mitigation. Therefore, the alignment alternatives and stations, combined with past, present, and reasonably foreseeable projects, would not result in a cumulatively significant impact to archaeological resources and human remains.

Implementation of Project-specific mitigation measures pertaining to paleontological resources would not mitigate cumulative impacts to a less than significant level. Consequently, the incremental effects of the alignment alternatives and stations would be cumulatively considerable with respect to paleontological resources. Therefore, the alignment alternatives and stations, combined with past, present, and reasonably foreseeable projects, would result in a cumulatively significant and unavoidable impact to paleontological resources.

7.3.2 HOLLYWOOD BOWL DESIGN OPTION

Implementation of Project-specific mitigation measures pertaining to historical resources would not mitigate cumulative impacts to a less than significant level. Consequently, the incremental effects of the design option would be cumulatively considerable with respect to historical resources. Therefore, the design option, combined with past, present, and reasonably foreseeable projects, would result in a cumulatively significant and unavoidable impact to historical resources.

The incremental effects of the design option on archaeological resources and human remains would not be cumulatively considerable after Project-specific mitigation. Therefore, the design option, combined

with past, present, and reasonably foreseeable projects, would not result in a cumulatively significant impact to archaeological resources and human remains.

Implementation of Project-specific mitigation measures pertaining to paleontological resources would not mitigate cumulative impacts to a less than significant level. Consequently, the incremental effects of the design option would be cumulatively considerable with respect to paleontological resources. Therefore, the design option, combined with past, present, and reasonably foreseeable projects, would result in a cumulatively significant and unavoidable impact to paleontological resources.

7.3.3 MAINTENANCE AND STORAGE FACILITY

The incremental effects of the MSF, after project-specific mitigation, as noted in Section 6.2, would not be cumulatively considerable with respect to historical resources, archaeological resources, human remains, or paleontological resources. Therefore, the MSF, combined with past, present, and reasonably foreseeable projects, would not result in a cumulatively significant impact to historical resources, archaeological resources, human remains, or paleontological resources.

   City Los Angeles, CA Zip 90024 Ownership is: Public ___ Private X
6. Present Use: Fairfax Theater Original use: Fairfax Theater

DESCRIPTION

7a. Architectural style: Zig Zag Moderne

7b. Briefly describe the present *physical description* of the site or structure and describe any major alterations from its original condition:

The Haig M. Prince Building is a two story poured concrete structure housing the Fairfax Theater and several small commercial storefronts. The screen for the theater extends to a height of four stories on the north facade. Two towers extend beyond the parapet roofline on the theater entrance side of the building. Generally the roof is flat. The marquee is a guyed box extending over the sidewalk.

A totally enclosed ticket booth is centrally located in the recessed entrance. Comprised of aluminum or sheet metal, a floral motif has been appliqued in plaster. Decorative trim of sweeping floral lines outline the windows and front of the booth. A door is at the rear of the booth and the color scheme is red and brown.

The speckled marble tile entry is gray, black and white, in the pattern of a sunburst radiating from the central door. There are five double doors providing access to the foyer. These are wooden framed glass panes etched with stylized vertical floral motifs. Also in the entry hangs a large square chandelier in an overlapping leaf design. Colors are green, black and white and appears to be copper, wrought iron and aluminum, but may be a light-weight (continued)

Public Works project ___ Other: ___

17. Is the structure: On its original site? X Moved? ___ Unknown? ___

18. Related features: None noted

SIGNIFICANCE

19. Briefly state historical and/or architectural importance (include dates, events, and persons associated with the site.)

The Fairfax Building was originally built to serve as a theatre for Fairfax Amusement Company, one of a chain of Fox West Coast Theatres. In 1929, in response to President Hoover's appeal for national industrial stabilization, Harold B. Franklin, head of the western division of Fox Theatres, announced the construction of several new theatres in the Los Angeles area.

In the first months of 1930, construction was begun on the theatre at Fairfax and Beverly. The Fairfax Theatre was a reinforced concrete and steel structure which would seat 1800 people. Other characteristics of the structure included ornamental iron decoration, plate glass and copper storefronts, vitralite glass tile, hardwood floors, terrazo work, bronze thresholds, and marble and tilework.

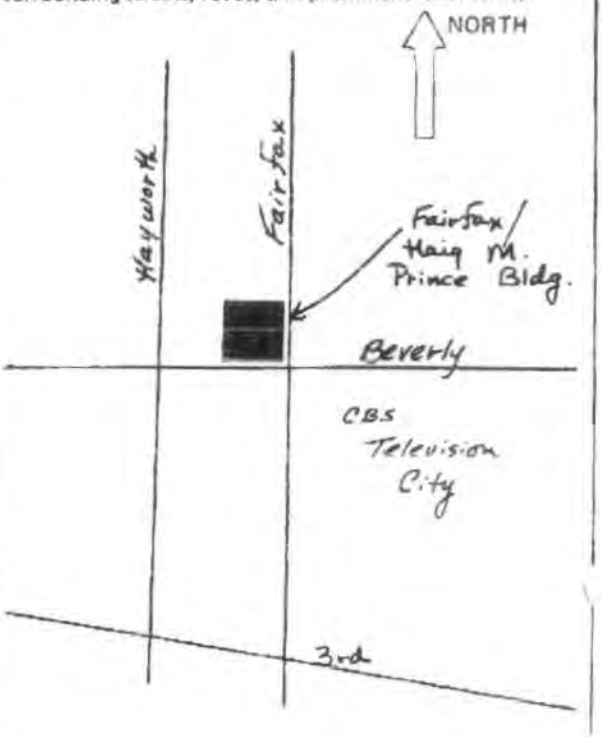

The Fairfax Theatre serves as an excellent example of the ZigZag Moderne style and is one of the few remaining, unaltered Fox chain theatres in Los Angeles.

20. Main theme of the historic resource. (If more than one is checked, number in order of importance.)
Architecture 1 Arts & Leisure 2
Economic/Industrial ___ Exploration/Settlement ___
Government ___ Military ___

REGISTERED LANDMARK NUMBER 554

DATE July 10, 1956

APPLICATION FOR REGISTRATION OF HISTORICAL POINT OF INTEREST

Name of Historical Point CECIL B. DEMILLE STUDIO BARN

Location PARAMOUNT STUDIOS

Name of Owner PARAMOUNT PICTURES CORPORATION

Street 5451 MARATHON STREET

City HOLLYWOOD, CALIFORNIA

HISTORY AND DESCRIPTION

The structure originally stood at the corner of Selma and Vine Streets in Hollywood, as part of an estate then owned by Jacob Stern (1913). He owned all of the land across from the current Broadway Department Store, and the area rented by Mr. DeMille extended from Vine to Argyle Streets, and south to Sunset Boulevard. The first day of operation of the barn as a studio was December 16, 1913. One section of the barn, which had been a dairy, now housed horses. Mr. DeMille was charged $25.00 a month rental, plus a small fee for the privilege of removing some inconveniently-placed orange trees. It is recalled that every time the harness and equipment was washed down in the tack room, Mr. DeMille was forced to avoid the inter-office deluge by placing his feet in a wastepaper basket as he worked at his desk.

Stella Stray, a current employee of the Paramount accounting department was one of the first persons hired (December 26, 1913). She remembers the building as being a little larger than it is now, but doesn't recall what segment might have been removed.

HISTORY AND DESCRIPTION (Continued)

Mr. DeMille's segment was partitioned into offices for one Fred Kley and a Miss Ethel Powell, in charge of casting. Miss Powell, later Mrs. Wales, had also worked for William DeMille, and for Jesse Lasky in the vaudeville production of "The Girl With The Green Eyes."

The first cameraman was Alfred E. Gandolfi, still living in New York, and one of the first directors was Oscar Apfel. The latter had done some short subjects. Mr. DeMille, up to this point, never directed a film until he did "The Squaw Man," the script for which he began to dictate on Friday, February 13, 1914, and completed two days later.

In 1927, the Lasky company bought the area of the barn, which was removed to a Melrose site owned by Robert Brunton. The plant here was Paralta Pictures, but Brunton sold out and returned to Edinburgh.

When removed to Paralta, later Paramount, in 1927, it was placed behind the comissary, where it remained until January of 1956. Jim Davies of the physical training department, moved into the barn in 1929 to develop the building as a gymnasium, and it has been there ever since.

It used to be an annual event for Mr. DeMille to issue invitations to all of his old stars for a reunion in the barn. They met around a horseshoe table set up on the stage where "The Squaw Man" was filmed, and had a yearly lunch. The custom, however, has been discontinued in recent years.

In January of 1956, the barn was again moved a few hundred feet away, and it continues as a gymnasium under Mr. Davies' direction.

June 18th 1956

Mr. Aubrey Neasham, Historian
Historical Landmarks Advisory Committee
P. O. Box 2390
Sacramento 11, California

Dear Mr. Neasham:

This letter is to serve as an official statement from Paramount Pictures Corporation, authorizing the California State Park Commission, on the approval of the Director of Natural Resources, to register and number the Cecil B. DeMille Studio Barn as a State Historical Landmark.

In the event that at some future time Paramount deems it unfeasible to preserve the Studio Barn, this letter shall also serve as reassurance that the California State Park Commission has the privilege of removing the structure from its present Paramount location, at no expense to the studio, to any location they so desire.

Suggested wording for the official plaque should be as follows:

HOLLYWOOD'S FIRST MAJOR FILM COMPANY STUDIO

ONE HALF OF THIS STRUCTURE, THEN IN USE AS A BARN, WAS RENTED BY CECIL B. DeMILLE AS THE STUDIO IN WHICH WAS MADE THE FIRST FEATURE-LENGTH MOTION PICTURE IN HOLLYWOOD, "THE SQUAW MAN," IN 1913. IT WAS ORIGINALLY LOCATED AT THE CORNER OF SELMA AND VINE AND IN 1927 WAS TRANSFERRED TO PARAMOUNT STUDIOS. ASSOCIATED WITH MR. DeMILLE IN MAKING"THE SQUAW MAN" WERE SAMUEL GOLDWYN AND JESSE LASKY SR.

On behalf of Paramount Pictures Corporation may I extend an appreciation of the interest displayed by the California State Park Commission.

Sincerely,

Paramount Pictures Corporation
Y F Freeman Vice Pres.

SITE OF CECIL B. DeMILLE STUDIO BARN

Approved: Carl J. Wheat,

This is a close case, in my opinion. The structure has been moved time and again, and the present owner offers no guaranty of permanent location.

Also, I do not note any statement as to just where the plaque would be placed, or what type of access would be allowed the public. I would be glad to be
Disapproved: advised on this.

Movies and Big Industry Brought Greatness

19-166802

Los Angeles' history-in-the-making in the late years of the 19th century and after the turn was laying the foundation for bigness and greatness. The railroad, oil, a harbor, water—allowed expansion of industry and population.

According to the experts the founding of industry constituted the last two of the 10 most important historical events of Los Angeles County. Number 9, a majority of the historians agree, was the founding of the moving picture industry in 1910.

The last, chronologically, of the 10 most important events was the founding of a great industrial economy. The historians agree that this industrialization was a continuing event, still underway, but its start may have been in the 1920s with the establishment of the rubber industry and then the coming of aircraft, first flying and then building.

By ART HEWITT

When movie makers first started to come to Hollywood about 1910, none of the eastern-made movies had even been shown there. Such entertainment of dubious morality was frowned upon.

Although the first motion picture shot here of Roy Knabenshue's famous airship either late in 1904 or early 1905 at Chutes Park, that short strip was never shown.

In 1909 the old Bison Co. turned out an average of three westerns each two days at Edendale. Then the Biograph Co. with D. W. Griffith as director arrived in 1910. With him were Mack Sennett, Arthur Johnson, Owen Moore, Mary Pickford, Florence Lawrence, Marjorie Favor and Lee Dougherty. That same year Essanay and then Kalem came to the West Coast.

Although outdoor shots may have been made in Hollywood, the Horsley brothers, David and William, are generally conceded to have established the first studio there.

In 1911, giving up the weather gloom of New Jersey, they arrived here and went directly to Hollywood, leaving the old Blondeau tavern and barn at the corner of Sunset and Gower for their Nester Co. They got down to business. They had to, for their cash on hand was only $2500.

First picture made in Hollywood's first studio was "The Law of the Range," directed by Milton Fahrney and written by his wife, Alexandra Phillips.

Movie 'Fad' Was Deplored

Critics of the day didn't take to the movie crowd. They charged that the movie fad was "almost exclusively in the hands of the lowest type of businessmen, the lowest type of actors and the lowest type of writers; to wit, honky-tonk impresarios, hams and hacks."

In 1912 Universal took over the Nestor Studio. It moved to its present site in 1914. This period saw the entrance of Jesse Lasky, Cecil B. de Mille, William Farnum and Charlie Chaplin.

In 1915 there was generation of respect for the industry. Mary Pickford was drawing $1000 a week, and the first million dollar colossal had been produced by D. W. Griffith, "The Birth of a Nation."

But growing up was difficult for the industry. In the early 1920s there was a wave of scandals—the Fatty Arbuckle incident, Wallace Reid's death and the Taylor murder. The movie makers called on Will H. Hays, who left President Harding's cabinet, to head up public relations and become the movie czar.

Money Poured In From Films

Revenue to producers was fabulous, even with the advent of sound and color which revolutionized the industry and boosted considerably production costs.

Movie makers actually didn't know what to do with all their money. The players were ready to take a share, and it added to the glamor of Hollywood.

Star salaries went up to 5, 10 and 20 thousand a week. Writers, directors, producers and technicians also were cut in. It could be charged to publicity. It brought fame to Hollywood.

As an industry, movie making was soon as famous as the orange.

Hollywood, in its own right, drew thousands of tourists yearly, and still does. Studios created allied industries—a style center for women's apparel that now rivals Paris; radio and television, for here was the nation's talent, and the technical trades, all offsprings of the movie camera.

On another industrial front, Dr. Arnold O. Beckman, president of the Los Angeles Chamber of Commerce, paid tribute to the rubber industry which was the forerunner of Southern California's total industrial development whose leaders recognized the tremendous economic and industrial potential here.

The Samson Tire & Rubber Co., a local firm, began operations in 1918. The Goodyear company followed with a plant in 1920. Firestone and others were not far behind.

Beckman, at a meeting of rubber industry men, declared, "When you commenced your activities in Southern California, there must have been little to inspire you—other than a bold pioneering spirit and a blind, but well-guided, faith in the future of the west.

"Population of Southern California at that time was only 1,500,000. There were no aircraft plants, no automobile plants and, in fact, virtually no manufacturing industry of any kind...We literally were a desert outpost."

Historians have picked out the rubber industry as the pioneer of industry here because "it has played a vibrant role in the miraculous development of Southern California and in contributing to transforming Los Angeles into the mighty industrial empire of international stature."

Now Leads U.S. In Aircrafts

Today aircraft manufacture and allied industries make up the top industry, and production outclasses every area of the nation.

Back in 1928 the Los Angeles Chamber of Commerce was declaring that the county had more airplanes in proportion to population than any other county of the United States. It was boasting of the success of the 1928 National Air Races which attracted 200,000 persons.

The boom was on to make Los Angeles an aviation center, but until the mid-1930s the state's best-known contribution was that Charles Lindberg's Spirit of St. Louis had been assembled and conditioned at San Diego.

But then the aircraft plants began to pour in. They were Douglas, Lockheed and North American. There was plenty of electric power, and Southern California climate allowed sprawling plants and open weather for year-around test flights. By the end of 1930 this industry accounted for 10 per cent of the state's industrial employment.

Expansion was the keynot during the war. The federa government put up $150 millio for new plant space, and privat capital accounted for anothe $79 million. From 20,000 em ployes in these plants, includin suppliers, in 1939, the wartim peak was reached in 1943 wit 243,000 workers.

These facts are modern his tory, but this industry and th others are continuing to mak history today. As Dr. Glenn S Dumke, dean of faculty at Occi dental College, commented:

"It may not be considered a single event, but certainly the industrialization of the county, beginning in the 1920s and reaching a tremendous climax after World War II, is far more significant (as an historical event) than many of the others."

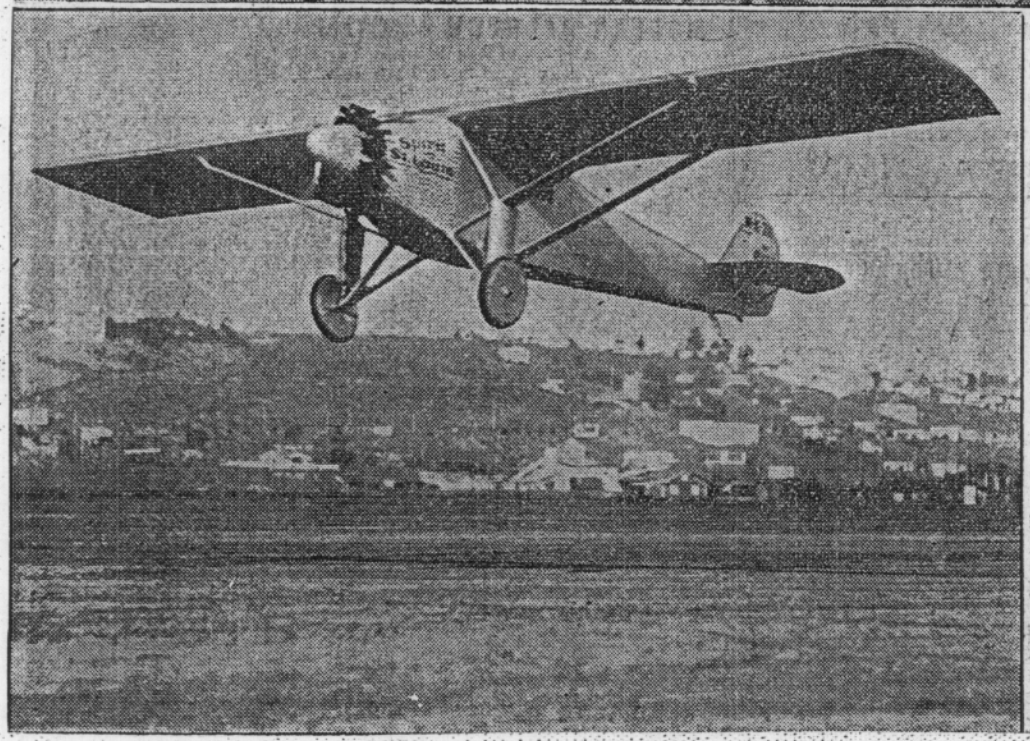

(THE END)

Hollywood's infant movie industry soon moved indoors and great studios sprang up here and there about the city. The Fox Studios, south of Sunset boulevard and west of Western avenue, is shown in aerial photo above. Picture was taken in 1918. Note the orange groves still prevalent in the area.

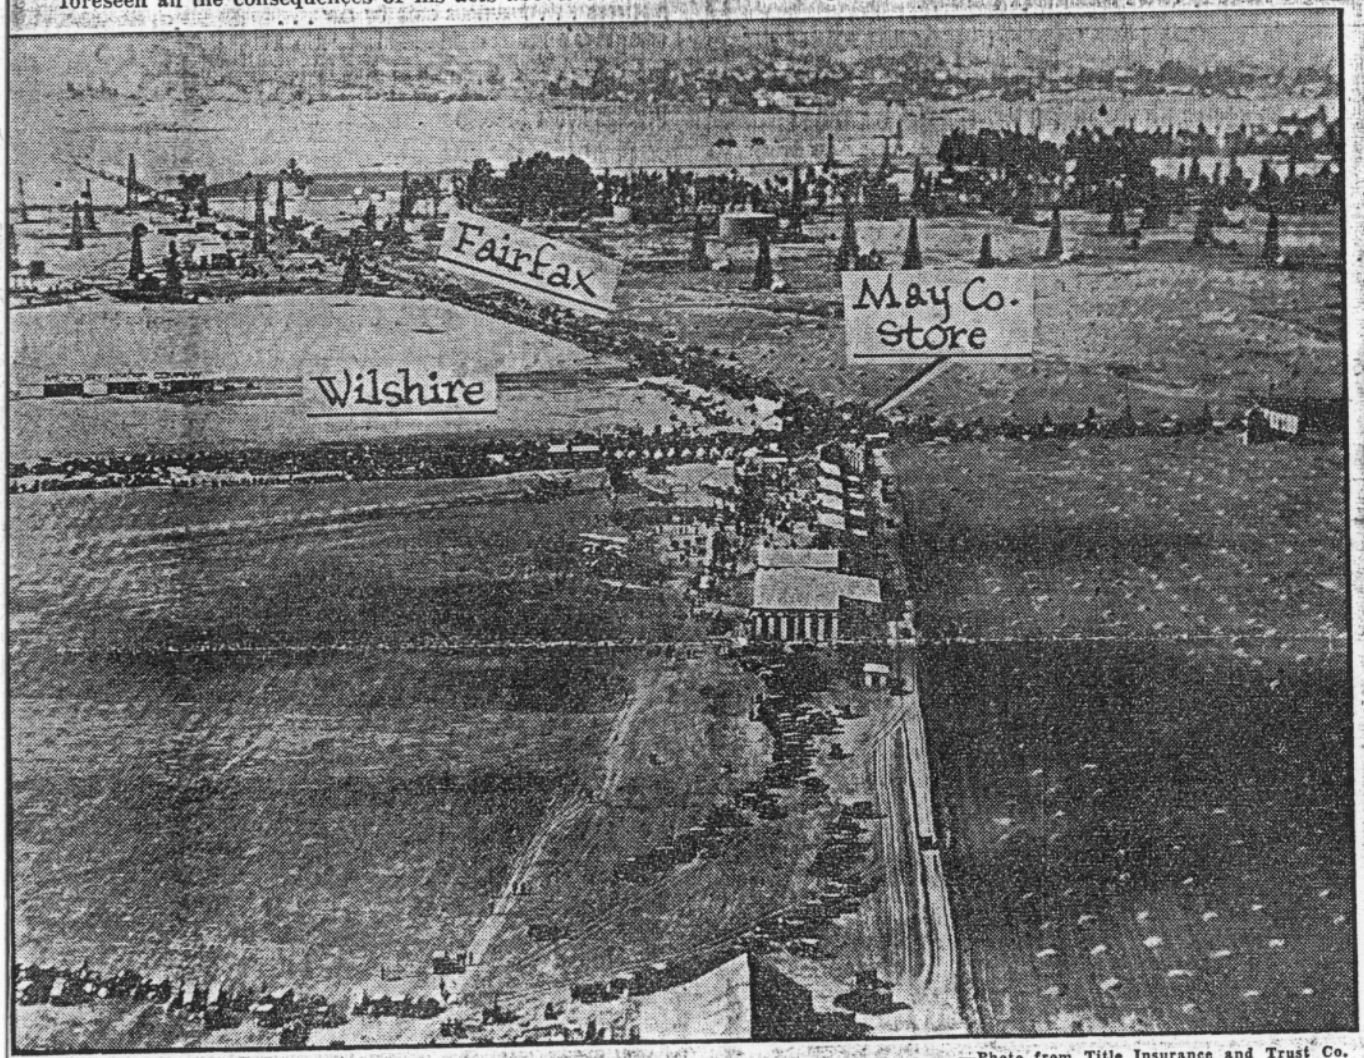

Southern California's climate and electric power attracted aircraft plants, which began pouring in in the 1930's. Until then, the state's best-known contribution to aviation was the Lindbergh flight. His plane, the Spirit of St. Louis, was assembled and conditioned at San Diego. It is pictured leaving San Diego. Ten days later, it was on the historic flight to Europe.

me out to our studio, and he said, 'Sorry, boss, never heard of it. He went into conference with other drivers at the old Alexandria Hotel and they gave him directions on how to find Hollywood.

"The Hollywood Hotel was the only structure on Hollywood boulevard, but the clerk there had never heard of the company or our director-general, Cecil B. DeMille, but he said that if I would drive down Hollywood boulevard—then a dirt road—I would come to a street called Vine.

"I couldn't miss it, he said, because there was a row of huge pepper trees down the center. 'You'll come to a barn,' he said, 'on the left hand side of the road. That might be it, because there are some movie folks working there'."

First Photo of Film Magnate

Lasky found his company working on a wooden stage in the center of an orange grove.

"Cecil halted operations, lined up the company and introduced its president to the assemblage. Cecil had the cameraman take my picture.

"I'm told it is the first picture ever taken of a movie magnate arriving in Hollywood, and it was the proudest moment of my life."

The Lasky company specialized in making films from well known plays and novels, the first of the film-makers to recognize the importance of the story element.

Lasky bought 10 plays from David Belasco and another 10 from Sir James Barrie, including "Peter Pan." In 1916 the company merged with Adolph Zukor's Famous Players, becoming Famous Players-Lasky Corp., which formed the corporate parent of Paramount Pictures.

Lasky remained with Paramount as head of production until 1933, during which time he bought the property and built the present Paramount studio at 5451 Marathon st. Over his 20 year reign he was responsible for the production of more than 1000 Paramount pictures. Like DeMille and Goldwyn he became an independent producer.

Covered Wagon Among Greatest

At Fox he made "Berkeley Square" and "The Power and the Glory" — the films which brought Leslie Howard and Spencer Tracy to cinematic fame — and 16 others.

He regards "Covered Wagon" —which he bought largely out of sentimental recollection of the stories his grandfather told about crossing the plains in 1850 —"Wings," "Beau Geste" and "Old Ironsides" as among the greatest of his production achievements.

What he calls "my third fortune" was made by "Sergeant York," which was released through Warner Bros.

Screen biography has always been Lasky's specialty, he pointed out, for he also produced "Rhapsody in Blue," the story of George Gershwin; "Adventures of Mark Twain" and "The Great Caruso," on which he was co-producer at MGM.

A painstaking and perfectionist producer like Goldwyn and DeMille, Lasky has spent the past two years preparing "The Big Brass Band," which goes into production next June, and is also working on his autobiography, "I Blow My Own Horn." He is a devoted family man, having two sons—Jesse jr. is a top-flight writer—and a daughter. Jesse jr. worked for many months on the screen play of DeMille's current film, "The Ten Commandments."

Proud of Part In Nome Rush

Bill, his second son, is an assistant director at MGM and his daughter, Betty is a film critic for a suburban newspaper. Mrs. Bessie Lasky has devoted her life to painting and has exhibited in London, Paris, New York and many American cities. She just completed painting all the California missions—the first woman painter to achieve this. The pictures soon will go on tour throughout the country.

Lasky is still light on his feet, and is rather proud of the fact he was one of the first 10 men to reach Nome when gold was discovered among the black sands of the Alaskan beaches.

Few men in show business have had a more varied career. Lasky was a cornetist in the celebrated Royal Hawaiian band and manager of Herman the Great, a magician, before becoming a vaudeville and film producer.

He still has a youthful enthusiasm for show business, explaining:

"You're never through learning in this business. I constantly keep my finger on the pulse of the public. I travel and take seats in the balconies of theaters in medium-sized towns. I try to find out what they want. The strongest hunch of my life is that the public is going to want 'The Big Brass Band.'

"Sure, I play hunches, although I call it a sixth sense, a sense of guidance.

"I don't talk much about my spiritual side, but I have never gone wrong when I listened to that quiet inner life."

Lasky, DeMille, Goldwyn... Three men who came west and helped convert a youthful vision into a great industry.

THE END

VOL. LXXXV WEDNESDAY, AUG. 17, 1955 ★ NO. 12

How Movies Came to L. A.

Jesse L. Lasky Is Third of Trio in Flickers to Fame

This is the third and last of a series on the great pioneers of Hollywood's film industry. The first two dealt with Cecil B. DeMille and Samuel Goldwyn. Today's subject is their partner in the days when they came west and established a studio in a Hollywod barn—Jesse L. Lasky.

By DICK O'CONNOR and EDDY JO BERNAL

When Jesse L. Lasky was finally persuaded to enter the infant film industry as a producer by his partners, Samuel Goldwyn and Cecil B. DeMille, the Hollywood of America was a quaint little town on the New Jersey Palisades across the river from Manhattan.

That's where "The Great Train Robbery" and other jumpy, flickering classics of the early screen were produced. And that's where Lasky, DeMille and Goldwyn intended to make "The Squaw Man," until they decided a western background might be more appropriate for a western picture.

In those days, Lasky was a vaudeville producer, had just built the Fulton Theater in New York, where he lost his first fortune; Goldwyn was a glove salesman and DeMille was Lasky's writer, friend and co-worker.

Goldwyn, then Lasky's brother-in-law, was the first to be bitten by the movie bug, and as Lasky recalls:

"Every night Sam would say to me at dinner, 'We should go into the movies.' I always said I'd have nothing to do with those 'chases,' as the movies were then called."

They were only good to put at the end of a vaudeville show because they made the audiences get up and exit. People would start walking out as soon as the one and two reelers flashed on the screen."

It was DeMille, the restless and mercurial, who swayed Lasky to the Hollywood venture. Lasky recalls:

"Cecil and I were like Damon and Pythias. We lunched together every day, and took camping trips to Maine.

"One day Cecil said he was fed up with New York and was going to Mexico because there was a revolution there and he wanted to write about it.

"I was dumbstruck at the thought of losing my best friend. I wanted to keep him in the city at any expense. If you want adventure, I said, let's go into the movies. Without hesitating, he grasped my hand and said, 'Let's!' "

Formed Lasky Feature Players

"So we formed the Jesse L. Lasky Feature Players Co. I nominated myself president. Sam was vice president and general sales manager.

"Cecil was given the unique title of director-general. I was the showman of the outfit. Sam was a wonderful salesman, Cecil was the creative genius. A perfect combination."

One of the great days of Lasky's life began the morning he arrived here to visit DeMille at the studio during the filming of "The Squaw Man."

"I told the cabdriver to take

(Continued on Page C-5, Col. 3)

County Condemns Malibu Beach Kelp Harvesting

Careless harvesting of kelp off the Malibu beaches was condemned today in a resolution by the Board of Supervisors.

A motion by Supervisor Burton W. Chace called for immediate action by the state Fish and Game commission to halt the practice. He said that beach cities have complained that kelp is littering the areas and becoming a health menace as its rots.

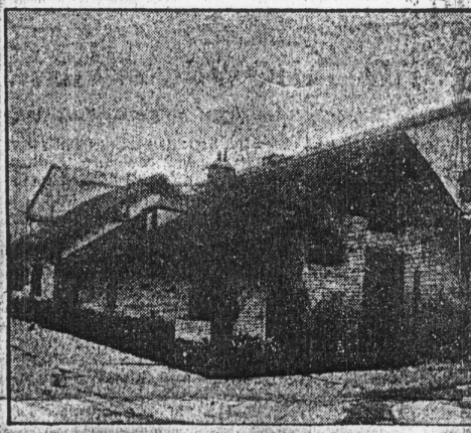

In addition, the destruction to offshore kelp beds threatens fishing, it was noted. The board action will be presented to the state commission at a special hearing here on Aug. 20.

duce, and Lasky was to be the chief executive.

"We decided to make the picture where it actually occurred. Farnum and I took a train to Flagstaff, Ariz., but the scenic background wasn't right. We decided on Los Angeles. It wasn't because it was raining in Flagstaff as legend has it. We had heard of film activity here and kept going west.

D. W. Griffith Led the Way

It was D. W. Griffith, the Daniel Boone of Hollywood, who first came out here with his cameras—partly because of the sunshine and partly to get away from the patent wars in the east. Before Griffith moved out in 1912, the movies had been scattered over most of New York's boroughs, Long Island, Fort Lee, N. J., Chicago, Florida and Cuba.

DeMille rented a barn here for $25 a month as his studio and wired the news to his partners.

"Jesse and Sam replied it was okay but make no long-term commitments."

Farnum, the star, was equally cautious about the prospects of "The Squaw Man." Offered a percentage deal, he insisted on taking his $250-a-week salary. The picture made about $250,000.

Louis B. Mayer Bought 'Rights'

The new firm was on its way, and a Bostonian named Louis B. Mayer, who saw its bright prospects, prospered thereby. As DeMille recalls the advent of Mayer:

"In those days we sold state rights to the release of our films. Mayor bought the New England rights on 'Old Wives For New'—and his success with it became the foundation of an important career."

Soon the barns and vacant lots of rural Hollywood were lively with gesticulating directors, flamboyant actors, weeping ingenues being thrust into paper snowstorms, capering comedians.

But that didn't mean the end of pioneering.

The technical problems of telling a story on film absorbed DeMille as it did the other great pioneers like Griffith.

"Everything was a problem. There was no tradition to go by. One of the greatest steps forward was taken by Griffith—not just because of 'Birth of a Nation' but because he was the man who discovered how to photograph thought."

Story-Telling Ability Big Aid

DeMille believes it was his ability as a story-teller that formed his greatest contribution to the development of the cinematic art. "Whether it was on the stage or in the movies, knew how to tell a story. You can have all the technical knowledge in the world and not be able to make a successful film if you can't tell a story.

"I always used a written script"—many directors shot off the cuff, making up their stories as they went along—"and followed it exactly."

Much of his respect for the written word, of course, came from his training as a writer for the theater.

DeMille also started the practice of making two negatives on each of his films—the positive prints distributed in the theaters are made from them—instead of one.

—instead of one.

"One day I saw a little piece of film burn up. I thought, 'My goodness, everything I own in the world is in this film. We'd all be ruined if something happened to it.' I began taking each scene twice. I took the second negative

ADVERTISEMENT

negative [illegible] in the darkroom. I took the second negative to Philadelphia, cutting it on the train, and that saved us all."

Pioneered on Interior Lighting

DeMille also pioneered the use of interior lighting, borrowing a spotlight from the Mason Opera House. "I lit one side of Raymond Hatton's face and let the other side go dark. When Goldwyn saw it, he said, 'You've ruined us—the exhibitors will pay only half price for the picture'."

"I wired back to Goldwyn, 'Don't they know Rembrandt lighting when they see it?'

"And Goldwyn replied, 'If that's what it is, they'll pay double.'

"And they did."

He also pioneered the use of a camera boom to take moving shots of scenes; color in a feature ("Joan the Woman" with each frame hand-painted); the first film to have a musical score; the "blimp" which soundproofed cameras when talkies came in. Little wonder that his first barn studios, at Selma and Vine, have been enshrined on the Paramount lot, along with the first camera he used in "The Squaw Man."

"At first the novelty was what sold movies. The plots were all the same. First reel the Indian chased the cowboy. Second reel, the cowboy chased the Indian and finally shot him."

Many Battles Over 'Novelty'

In continuing to provide "novelty," DeMille has had his share of front-office battles.

"One battle I've had continually with executives and my own people is length of film and cost. When I made the first 'Ten Commandments' and spent $1,300,000, they canceled my contract."

And then, DeMille recalls, "the money started pouring in."

His independent film-producing company, in the various corporate shifts, became one of the foundation stones of Paramount Pictures, through which he now releases his films.

But it isn't money and corporations and balance sheets that tell the DeMille contribution to film-making. His story is written, with a bold pioneering sweep, in the films which have borne the legend: "Produced and Directed by Cecil B. DeMille."

(Tomorrow: Second Chapter of the Hollywood Pioneering Story.)

DeMille Used Barn For Studio; Gave Hollywood 'Firsts'

(This is the story of Hollywood in its cradle, the beginnings of the film industry as viewed through the recollections of three of its leading pioneers—Cecil B. DeMille, Samuel Goldwyn and Jesse Lasky. Their joint story of how they came west to the orange groves, dusty streets and vacant lots of Hollywood before World War I has never been told before. The first of three articles, today's installment deals with the contribution of DeMille, the Napoleon of the sound stages.)

By DICK O'CONNOR
And EDDY JO BERNAL

The Hollywood Film Rush has often been depicted as a mad, Klondike-type stampede, with Southern California suddenly swarming with camera-laden prospectors, dancing girls, mustachioed gamblers, desperado directors colorfully costumed and bellowing commands.

Actually it was a sedate and rather tentative affair. The pioneers of Hollywood were business-like men, serious about their careers, when they appeared among the orange groves in the several years preceding World War I. The playboys, rogues and sinners came much later, when the pioneering was finished and prosperity had set in.

Three of the greatest of these pioneers—Cecil B. DeMille, Jesse Lasky sr. and Samuel Goldwyn sr.—are still alive and active in the motion picture industry. They were associated in one of the first films shot in Hollywood — that amorphous designation which takes in part of San Fernando Valley, Culver City, Westwood and even a few parts of the geographical Hollywood.

The real story of Hollywood's pioneering days has never been told before. Bits and pieces, scandal and gossip, much of it contradictory, has been passed along much like the history of the gold rushes and the conquest of the west.

Now, in their own words, DeMille, Lasky and Goldwyn tell the story of how they and a few other men laid the foundations of the film industry and how it developed from an almost furtive, back-alley enterprise into a multi-million dollar combination of the creative and the industrial. In comparison, it is as if Phil Sheridan, Wyatt Earp, George Crook, Geronimo and Crazy Horse got together to provide a history of the frontier.

The first to speak his piece is Cecil B. De Mille, Hollywood's man of destiny. At 70-plus he is producing and directing "The Ten Commandments," the biggest picture of his long career, and he was interviewed between takes on its sets.

DeMille, the son of a successful Broadway playwright and a mother who founded a New York play agency, was "born into the theater," as he says. He broke in as an actor but also collaborated with his brother, William, on "The Royal Mounted" and with David Belasco, his father's old partner, on "The Return of Peter Grimm."

His first glimpse of Southern California came after he married Constance Adams, an actress is a play in which he was touring, and they came to Los Angeles on their honeymoon, appearing with E. H. Sothern in "If I Were King" at the Mason Opera House.

Movie Venture Horrified Kin

It was with "a certain amount of horror" that his family learned he had decided to venture into movie-making. The flickers, dramatically speaking, lived on the wrong side of the tracks. People of the legitimate theater appeared in them most furtively, often under assumed names and under layers of makeup.

DeMille, however, made his move boldly and openly.

With $20,000 in capital, he formed a company with Lasky and Goldwyn to make a film version of "The Squaw Man" with Dustin Farnum. The $20,000 was "everything we had in the world."

"When I told my brother that Lasky, Goldwyn and I were going out west to make a picture, my brother was frightfully shocked. He called them galloping tintypes. We offered him a quarter interest in the company but he said he'd keep his money and pay my fare home," DeMille recalls.

"In our organization, Goldwyn was to take charge of selling and distributing the film, I was to direct and pro-

Dear Mrs. Gualtieri:

The Los Angeles County Historical Landmarks and Records Commission did not meet in July due to the lack of a quorum. However, two of our Commissioners have review the applications and commented that they favor placement on the National Register of Historic Places. Their comments are as follows:

✓ El Greco Apartments, Los Angeles: recommended for nomination because of the historical importance of the architects. The documentation submitted was excellent.

Mission San Fernando Rey de Espana Conventa Building, Mission Hills: recommended for nomination with special regard for the architectural significance. The complete packet was exceptionally well prepared and should be recommended.

Very truly yours,

Barbara A. Henderson

RECEIVED
JUL 25 1988
OHP

Dear Maryln:

As per your request, we are enclosing:

1) A site plan that shows how the building sits on the lot, its footprint, etc.

2) An assessor's map that outlines the two lots on Hayworth.

3) Photos of the front of the El Greco.

Maryln, I hope this is helpful. Please call me if you need anything else.

And, I would appreciate talking with you when you receive this. Would you please give me a call? Thanks so much.

My very best,

Dear Ms. Witkin:

To complete our National Register nomination file for the El Greco Apartments we will need a sketch map of the property with the footprint of all features drawn in. The map should have a scale and a north arrow. We would also appreciate an assessor's parcel map for the property, with the subject lots outlined.

In order for us to provide the State Historical Resources Commission with a complete package we will need the maps by July 25.

If you have any questions or comments, please call me at (916) 322-9601.

Sincerely,

Maryln Bourne Lortie

Please see attached list of properties.

The National Register of Historic Places Program is administered in California by the State Office of Historic Preservation. The property indicated above has been submitted for the Register.

[X] The State Historical Resources Commission will consider this property and make a judgment as to whether or not it meets the criteria on August 5, 1988 at 9:00 a.m. in Planning Commission Hearing Room, 1st Floor, 10 Civic Center Plaza, Santa Ana, CA

[ ] The State Historical Resources Commission recommended the nomination of the property to the National Register. It will be presented to the State Historic Preservation Officer for formal nomination. The final decision will be made by the Keeper of the National Register, National Park Service, U.S. Department of the Interior, P.O. Box 37127, Washington, D.C. 20013-7127.

[ ] The property was placed on the National Register_____

[ ] The property was determined eligible for placement on the National Register_____

Placement on the National Register affords a property the honor of inclusion in the nation's official list of cultural resources worthy of preservation and provides a degree of protection from adverse effects resulting from federally funded or licensed projects. Registration provides a number of incentives for preservation of historic properties, including special building codes to facilitate the restoration of historic structures, and certain tax advantages. There are no restrictions placed upon a private property owner with regard to normal use, maintenance, or sale of a property listed in the National Register; however, proposals to demolish registered properties may require a standard review in compliance with local ordinances or the California Environmental Quality Act.

Sincerely,

Kathryn Gualtieri

El Greco Properties
a California Limited Partnership
937 North Fairfax Ave.
West Hollywood, CA 90046

El Greco Apartments

We are pleased to inform you that the above property will be considered by the State Historical Resources Commission for nomination to the National Register of Historic Places. The National Register is the Federal Government's official list of historic buildings and other cultural resources worthy of preservation. Listing in the National Register provides recognition and assists in preserving our Nation's heritage. Enclosed is a copy of the criteria under which properties are evaluated.

Listing in the National Register provides the following benefits to historic properties:

—Consideration in the planning for federally assisted projects. Section 106 of the National Historic Preservation Act of 1966 provides that the Advisory Council on Historic Preservation be given an opportunity to comment on projects affecting such properties.

—Eligibility for Federal tax benefits. If a property is individually listed in the National Register, or determined a contributing structure within a National Register district, certain tax provisions may apply. The Tax Treatment Extension Act of 1980 includes provisions regarding charitable contributions for conservation purposes of partial interests in historically important land areas or structures, including archeological sites and private residences. The Tax Reform Act of 1986 contains provisions intended to encourage preservation of depreciable historic structures by allowing favorable Federal tax provisions for rehabilitation. Beginning January 1, 1987, the Tax Reform Act of 1986 replaces the rehabilitation tax incentives available under prior law with a 20% investment tax credit for rehabilitations of certain historic commercial, industrial, and residential rental buildings.

—Consideration of historic values in the decision to issue a surface coal mining permit where coal is located, in accord with the Surface Mining and Control Act of 1977.

—Qualification for Federal grants for historic preservation when funds are available.

Owners of private properties nominated to the National Register of Historic Places must be given an opportunity to concur in or object to listing in accord with the National Historic Preservation Act Amendments of 1980 and Federal regulations 36 CFR Part 60. Any owner or partial owner of private property who chooses to object to listing is required to submit to the State Historic Preservation Officer a notarized statement certifying that the party is the sole or partial owner of the private property, as appropriate, and objects to the listing. For a single privately owned property with one owner, the property will not be listed if the owner objects. In nominations with multiple ownership of a single property, the property will not be listed if a majority of the owners objects. Each owner or partial owner of private property has one vote regardless of what part of the property that party owns. If the property cannot be listed because the owner or a majority of owners objects prior to the submission of a nomination

The National Register is the Federal Government's official list of historic buildings and other cultural resources, worthy of preservation. Listing in the National Register provides recognition and assists in preserving our Nation's heritage. Enclosed is a copy of the criteria under which properties are evaluated.

Listing in the National Register provides the following benefits to historic properties:

—Consideration in the planning for federally assisted projects. Section106 of the National Historic Preservation Act of 1966 provides that the Advisory Council on Historic Preservation be given an opportunity to comment on projects affecting such properties.

—Eligibility for Federal tax benefits. If a property is individually listed in the National Register, or determined a contributing structure within a National Register district, certain tax provisions may apply. The Tax Treatment Extension Act of 1980 includes provisions regarding charitable contributions for conservation purposes of partial interests in historically important land areas or structures, including archeological sites and private residences. The Tax Reform Act of 1986 contains provisions intended to encourage preservation of depreciable historic structures by allowing favorable Federal tax provisions for rehabilitation. Beginning January 1, 1987, the Tax Reform Act of 1986 replaces the rehabilitation tax incentives available under prior law with a 20% investment tax credit for rehabilitations of certain historic commercial, industrial, and residential rental buildings.

—Consideration of historic values in the decision to issue a surface coal mining permit where coal is located, in accord with the Surface Mining and Control Act of 1977.

—Qualification for Federal Grants for historic preservation when funds are available.

Owners of private properties nominated to the National Register of Historic Places must be given an opportunity to concur in or object to listing in accord with the National Historic Preservation Act Amendments of 1980 and Federal regulations 36 CFR Part 60. Any owner or partial owner of private property who chooses to object to listing is required to submit to the State Historic Preservation Officer a notarized statement certifying that the party is the sole or partial owner of the private property, as appropriate, and objects to the listing. For a single privately owned property with one owner, the property will not be listed if the owner objects. In nominations with multiple ownership of a single property, the property will not be listed if a majority of the owners objects. In the case of a district nomination, the district will not be listed if a majority of the owners objects to listing. Each owner or partial owner of private property has one vote regardless of how many properties or what part of one property that party owns. If the property or district cannot be listed because the owner or a majority of owners objects prior to submission of a nomination by the State, the State Historic Preservation Officer shall submit the nomination to the Keeper of the National Register for a determination of the eligibility of the property or district for inclusion in the

The National Register of Historic Places Program is administered in California by the State Office of Historic Preservation. The property indicated above was placed on the National Register November 3, 1988.

Placement on the National Register affords a property the honor of inclusion in the nation's official list of cultural resources worthy of preservation and provides a degree of protection from adverse effects resulting from federally funded or licensed projects. Registration provides a number of incentives for preservation of historic properties, including special building codes to facilitate the restoration of historic structures, and certain tax advantages. There are no restrictions placed upon a private property owner with regard to normal use, maintenance, or sale of a property listed in the National Register; however, proposals to demolish registered properties may require a standard review in compliance with local ordinances or the California Environmental Quality Act.

Sincerely,

Kathryn Gualtieri

Describe the present and original (if known) physical appearance

The El Greco Apartment, designed by F. Pierpont Davis and Walter S. Davis in 1929, is a rectangular two-story Mediterranean Revival style courtyard apartment house. The wood frame and stucco building was organized around a central patio containing a reflecting pool, brick paving, and planting areas. The twelve single and one bedroom apartments featured open beam ceilings, decorative tiles, and French doors leading to the courtyard or exterior balconies. Modifications to the apartment house were confined primarily to kitchen and bathroom alterations. The site also contained a 1930 one-story four-car garage that was modified in 1940 with the addition of a second floor containing two apartments and a one-story two-car garage that appears to date from the 1950s. In 1985, the apartment house was moved to a new site and the two garage buildings were demolished. The apartment building, courtyard, and entrance terrace have been restored preserving the extant original fabric. Modifications include the addition of a second entrance passage to the courtyard and orientation of the building so that it now faces east rather than west.

The El Greco was originally built on a 70' x 161' lot at 1028 Tiverton Street in the Westwood section of Los Angeles. The building was situated near the front of the lot separated from the sidewalk by a narrow planting strip and raised brick terrace. A narrow sidewalk separated the south side of the building from the adjacent apartment house. A single lane concrete driveway located on the north side of the structure led to a concrete paved automobile court and garages that took up the remaining space at the back of the lot. Landscaping was limited to planting strips in the courtyard and along the facade walls.

The El Greco was composed of three two-story wings and a one-story wing organized around a central rectangular courtyard. The one- and two-story apartment units opened directly to the patio on the ground level or from the balconies and stairhalls on the second floor. The entrance facade featured symmetrically arranged doors and windows on either side of a round headed archway. A passage with a cross vaulted ceiling connected the entrance to the courtyard. The facades around the central patio were arranged in an informal manner utilizing wood balconies, a one-story "ell" and a symmetrically arranged door and windows gave a picturesque flavor to the composition. A long rectangular pool on axis with the entrance passage was the focal point of the courtyard. The patio floor was paved with bricks laid in a flat basket weave pattern. The landscaping featured small planting strips around the perimeter of the court and containers of flowers and leafy plants arranged informally around the pool. The exterior walls along the sides and the back were simple stucco walls punctuated by steel frame windows.

		___ invention		

Specific dates 1929 **Builder/Architect** F. Pierpont and Walter S. Davis

Statement of Significance (in one paragraph)

The El Greco Apartment is a significant example of the courtyard apartment house that was developed in Los Angeles in the 1920s and the 1930s. It is one of a small number of courtyard apartments that were designed by well known architects of the time. The Spanish style used for the building was an important facet of the Mediterranean Rivival style that was the dominant architectural motif employed during the period between World War I and World War II in Southern California. The architects of the building, F. Pierpont Davis and Walter S. Davis in their combined and separate practices were influential architects in Los Angeles. They were known for their interest in developing new forms of multi-family housing that were suitable for California, their advocacy of using architectural motifs from the Mediterranean world as being the most appropriate form for Southern California architecture (known as the California style) and their involvement in the design of prominent public and religious structures from the 1920s to the 1940s.

The courtyard apartments that were built in Los Angeles in the 1920s and 1930s were a unique response to the problem of providing low rise medium density housing appropriate to Southern California. It is one aspect of the many contributions that Southern California architects have made to exploring new forms of residential architecture in the twentieth century. The courtyard apartment is related to the development of the bungalow court that emerged during the first decade of the twentieth century as a way to organize single or semi-detached residences around a central open space. While these early attempts were often built to provide residences for winter visitors to Southern California, the form was also used for modest worker and middle class housing. As the format was adapted to single or double lots, it was found that greater density could be achieved by building a continuous one-story or two-story building around a central open space. Although courtyard housing was built primarily by contractors, a few prominent Southern California architects, such as F. Pierpont Davis and Walter S. Davis, were retained to design these buildings.

The development of the mature courtyard apartment form coincided with the emergence of the Mediterranean Revival (California style) in the 1920s. Although the California style drew upon the whole body of architecture from the Mediterranean world, the preferred architectural (CONTINUED)

(Description of Physical Appearance continued)

The Spanish flavor of the composition was reinforced through the use of clay roof tiles, polychrome glazed tiles in the stairs, terra cotta screens in selected window openings, decorative brick and plaster chimneys, wrought iron balcony railings, turned wood balusters on the balcony, and wood roof rafters with decorative ends.

Within the apartment units special features included beam ceilings, polychrome tiled fireplaces, two story spaces in various livingrooms, vaulted plaster ceilings and built-in dining tables and benches in the kitchen, and glazed tiles in the bathrooms.

The original site contained a one story four car garage that was built in 1930. In 1940 a second floor containing two apartments was added to the wood frame and stucco stucture. At a later date, possibly in the 1950's, a one story two car garage was erected on the site. Neither building was moved to the new site.

The area in which the El Greco was built contained numerous apartment houses. By the late 1970's the buildings were being purchased by developers who were assembling land packages to erect much larger apartment structures. In 1979 Richard Selby and Company was negotiating with the owners of the El Greco and the adjacent apartment house for the purpose of obtaining the two lots, demolishing the two buildings and erecting a 26-unit condominium. The tenants of the El Greco formed the El Greco Preservation Group and nominated the building for designation by the City of Los Angeles Cultural Heritage Board on December 13, 1979. Unknown to the preservation group, Selby and Company had obtained a demolition permit for the building a few days earlier although they did not take title to the building until January 1980. Given the critical threat to the building, the Cultural Heritage Board acted on the nomination at their December 19, 1979 meeting and initiated the procedures for designating the El Greco. The building was designated Cultural Monument No. 231 by the City Council on June 30, 1980.

When the City of Los Angeles Planning Commission approved the tract map for the new condominium project in September 1980 they stipulated that the El Greco could not be demolished. They required that the building be moved to another site and maintained as rental units for a minimum of five years. In November 1981 the Selby Company advised the City that they would move the apartment to 523 West 127th

Street in the Athens Height district of Los Angeles. Despite the year of intense activity the Selby Company did not proceed with their plans to move the El Greco or build the condominium.

In July 1984 the Selby Company advised the Cultural Heritage Board that they had applied for another demolition permit for the El Greco and that the Cultural Heritage Board had 180 days to show cause why the demolition permit should not be acted upon. Since it was clear that the Selby Company had no intention of saving the apartment on its original site the El Greco Preservation Group initiated a search to find a group that would preserve the building by moving it to another site. In September 1984 they advised the Cultural Heritage Board that through the efforts of Councilman Zev Yaroslavsky they had found a group, Alternative Living for the Aging ("ALA"), interested in restoring the building for elderly housing.

Although ALA wanted to keep the building on the original site, the Selby Company reiterated that they wanted the lot on which the building stood as part of a larger land package for a new apartment project. They advised Councilman Yaroslavsky and ALA that they would not consider selling the lot to the non-profit group. The Selby Company made it clear that the only way that the building could be preserved would be to move it to a new site.

ALA began its search for land in September 1984. The time constraint caused by the scheduled expiration of the demolition moratorium on February 2, 1985 required ALA to select and purchase a site within a very short period. ALA began to look for a site in the Hollywood/Fairfax area where the organization carries out its programs. They required a flat double lot in a neighborhood that was secure and close to public transportation, health facilities, shopping and community services for the elderly. In addition, ALA wanted to locate the building in a neighborhood where the other buildings would be sympathetic to the scale, configuration and style of the El Greco.

ALA also constrained its search to property that was already vacant. While private developers seeking project sites often assemble sufficient land by purchasing improved property, and relocating tenants and demolishing existing housing, this would have been contrary to ALA policy as well as that of the City of Los Angeles (through whom funding was being sought). Although vacant double lots are very scarce

in this older and densely built area of Los Angeles they were able to find a few sites that were large enough for the building.

ALA evaluated these lots against various criteria, including property at the corner of Fairfax and Fountain, 1212 N. Gower, and 817 N. Hayworth. Cost and heavy traffic concerns caused ALA to eliminate consideration of the Fairfax/Fountain property. The Gower property appeared promising at the time of submission of ALA's proposal to the City of Los Angeles for consideration under the State Historic Preservation Grant Program. However, as many buildings in this neighborhood are marked by graffiti, this property was dropped due to concern over its safety for seniors, and the impact that the neighborhood could have on the physical structure, its marketability, and its ability to command sufficient rents to insure financial feasibility of the project.

The Gower site would have allowed the apartment building to be oriented in the same direction as the original location, however, the surrounding area was not architecturally compatible to the El Greco. The only remaining site, the Hayworth property in the Fairfax district, had none of the limitations of the Gower site. The area is friendly for seniors and the surrounding streets contained houses and multi-family residential units that had been built in the 1920's in the Mediterranean Revival style. While the orientation of the site was different from the Tiverton location, given the impending expiration of the moratorium, ALA selected this lot since it fulfilled all of their other requirements. They paid a premium for the land due to the scarcity of double lots in the area.

In a meeting on December 31, 1984, with a new site secured, ALA met with the Selby Company and were able to convince them that relocation of the El Greco was viable. As a result, Selby Company agreed not to oppose ALA's request to the Cultural Heritage Board for additional time in which to complete the actual move of the El Greco. This gave ALA the opportunity to prepare architectural drawings, secure needed variances, obtain funding, solicit and receive contractors' bids, etc. If ALA had not been able to demonstrate that it had secured a site at this time, it is doubtful that it would have been able to obtain this critical extension. In January of 1985, the Cultural Heritage Commission granted an additional 180 day demolition moratorium, and the El Greco was saved from the wrecking ball.

(Description of Physical Appearance continued)

The new site, which measures 100 feet x 132 feet, was wider and shorter than the original location. Since the new site was 29 feet shorter than the original lot, ALA was required to place the parking to one side of the building and obtain variances in order to locate the building and the entrance terrace in the same relationship to the Hayworth Street as it had on Tiverton Street. The eleven parking places which fit on the new lot did not meet City requirements and, hence, additional variances were required in order to eliminate the need for an underground parking garage beneath the building. The new parking lot is located behind a stucco covered wall. Plant materials appropriate to the period have been selected for the planting strips adjacent to the building and paved areas.

In order to move the building, the four sides were cut apart, the roof tiles and roof framing were taken apart, all of the brick from the entrance terrace and patio were salvaged, and the wood balcony was dismantled. The interiors of the apartments were not disturbed.

The building has been restored utilizing all of the extant intact fabric and the salvagable materials. Plaster and stucco finishes have been reconstructed where necessary. New HVAC, plumbing and electrical systems have been installed. While changes to the building have been minimal, they were generally required by code or designed to meet special consideration requirements for elderly housing. The most major change has been the required addition of the second exit from the courtyard. The passage is located on the north side of the building. Wrought iron railings have been installed at the entrances to the apartments for seniors' safety and a wrought iron security gate has been added at the entrance.

Note: The use of the past tense in this description does not indicate that the property has been altered in ways other than described specifically in this section.

(Statement of Significance continued)

source for courtyard apartments like the El Greco was Spanish architecture. The vernacular architectural details, materials and composition of the Andalusian casa de vecinos (apartments), urban patio houses, urban callejon (dead-end streets) and rural haciendas (freestanding form complexes) provided the vocabulary for many of the California courtyard apartment projects including the El Greco. In the case of the El Greco Apartments, the name selected for the composition was meant to reinforce the style of the building.

Although the designers of the courtyard apartments turned to the past to provide the architectural vocabulary for their buildings, their plans responded to the contemporary requirements for the Industrial Age. By the 1920's the automobile was becoming an important factor in the design of low rise medium density housing. Although automobile parking was not provided for all tenants, projects such as the El Greco included off street parking facilities as part of the site development plan. At the El Greco the automobile court and garage at the back of the site took up most all of the site that was not covered by the apartment.

After World War II the courtyard apartment form was investigated by a new generation of architects and builders. Through the 1940's and 1950's the preferred architectural motif for the courtyard apartment was International Style Modern. The courtyard fountain was replaced by the swimming pool and the automible played an increasingly significant role in the design of the building and the site. By the mid 1960's the courtyard apartment format was no longer a prominent architectural form in Southern California housing.

F. Pierpont Davis (1884-1953) and Walter S. Davis (1887-1973), the architects of the El Greco were the sons of a Baltimore architect, Henry Davis. F. Pierpont Davis studied with his father and came to Los Angeles to practice architecture in 1905. Walter S. Davis studied architecture at the Massachusetts Institute of Technology and graduated in 1911. He received an MIT traveling fellowship and spent the year 1911-1912 traveling in Spain, France and Italy. At the end of his fellowship he came to Los Angeles to join his brother. They established a joint practice in 1915.

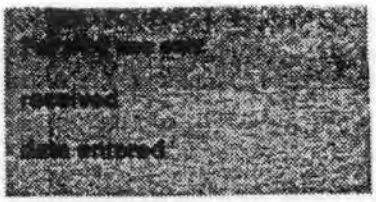

Inspired by the Garden City concept, Walter S. Davis, along with his brother Henry, a landscape architect, H. Scott Gerity and

(Statement of Significance continued)

Loyale F. Wilson wrote California Garden City Houses. The 1915 book articulated architectural concepts that would appear later in the work of the Davis brothers. The book contained plans to bungalow court housing, houses built around patios and called for the development of a new California architectural style based on the architecture of the Mediterranean world.

During the next fifteen years the work by F. Pierpont Davis and Walter S. Davis brought to fruition many of the ideas expressed in that book and its subsequent editions such as Ideal Homes in Garden Communities: A book of House Plans. Their interest in promoting the Mediterranean Revival style can be seen in such buildings as the Eltinge House (1916) in the Silverlake area and the award winning La Venta Inn (1923) in Palos Verdes. When the brothers designed St. John's Episcopal Church (1921-1923) they turned to Italian Romanesque for the major reinforced concrete ecclesiastical structure.

The interest of the Davis Brothers in multi-family housing and the use of Mediterranean details came together in the three major courtyard apartments they designed in the 1920's: Roman Gardens (Hollywood 1926), the Villa d'Este (West Hollywodd 1928) and the El Greco (Westwood 1929). Both the El Greco and the Villa d'Este were published in the Architect and Engineer as the example of the innovations in Southern California housing. Both apartments are considered among the most important examples of courtyard apartment buildings in Los Angeles.

F. Pierpont Davis joined Myron Hunt, Summer P. Hunt, William Richards and Edward Bergstrom to form Allied Architects of Los Angeles. Their work included a Beaux Artes site proposal for the Los Angeles Civic Center (1924) and the designs for the Hall of Justice (1925), Patriotic Hall (1926), the Los Angeles County/USC Medical Center (1928-1933), and the Music Shell for the Hollywood Bowl (1929). Walter S. Davis' interest in multi-family housing continued throughout his career. In 1941, he worked with a team of architects that included Lloyd Wright, Ralph C. Flewelling, Eugene Weston and George G. Adams to design Ramona Gardens. This 610 unit complex was the first public housing prospect built in Los Angeles utilizing funds created by the 1937 Lanham Act. From 1941 to 1953 the same team designed Aliso Village, one of the largest public housing projects at the time in Los Angeles.

INTERVIEWS

The information on the preservation efforts of the El Greco was obtained from the files of the Cultural Heritage Board, Department of Cultural Affairs, City of Los Angeles; interviews with Janet Witkin, Executive Director, Alternative Living for the Aging; and interviews with Adam Nemory, a member of the El Greco Preservation Group and Board member of Alternative Living for the Aging;

Information on the restoration of the building was obtained from interviews with Stephanos Polyzoides, partner of the firm Polyzoides and DeBrettville, the architects for the project.

Information on F. Pierpont Davis and Walter S. Davis was obtained in interviews with Dr. Robert Winter, Occidental College and Allison Clark, Librarian, Architecture and Fine Arts Library, University of Southern California.

County LOS ANGELES

Name A&M RECORDS (FORMER CHARLIE CHAPLIN STUDIO & HOME)

Location 1416 NORTH LA BREA, HOLLYWOOD, CALIF. CORNER OF LA BREA AND SUNSET BLVD

Historical Significance:

THE GROUUNDS WHERE CHARLIE CHAPLIN LIVED AND WORKED IS NOW THE HOME OF A&M RECORDS (OWNER JERRY MOSS AND HERB ALPERT) THE STUDIO WILL CELEBRATE 50 YEARS VERY SOON.

Charlie Chaplin built his home (now destroyed) on La Brea Avenue facing Sunset Boulevard and the offices now on the Avenue were used as his guest house. He had an Olympic-size swimming pool, where Stage 3 is now situated. Pictures were made here until the 1930's. Mr. Chaplin left, but his footprints in concrete still can be seen in front of Sound Stage 03.

Despite the modernization which has taken place to accommodate A & M's operational needs, it is interesting to note that the original structures built in 1919 have been adapted successfully to a thriving business five decades later.

THIS POINT OF HISTORICAL INTEREST IS NOT A STATE REGISTERED HISTORICAL LANDMARK.

DESCRIBE THE PRESENT AND ORIGINAL *(if known)* PHYSICAL APPEARANCE

The two-story hillside house is constructed of concrete block cast with a design on the faces, and these designs are exposed on interior and exterior walls; some of the blocks are pierced to admit light.

Between the house and garage is a covered loggia leading to the main entrance; a long hall paralleling the kitchen and lighted from perforations in the concrete block walls, leads to the living room. A portion of the living room roof is raised to provide for clerestories; beside two corner windows and another, there are large French doors on the south to a shallow balcony. On the lower level are bedrooms and baths. From the living room is a wide view of the city through french doors and corner windows.

The plan and the structure of the house are as originally designed. However, the laundry room below the garage was remodeled as an apartment in 1932 by R.M. Schindler; and in 1940 he inserted panels of plywood in a portion of the broad opening between kitchen and living room and built shelves on the living room side. The kitchen was remodeled by architect Robert Clark in 1956 and a steel-framed window was substituted for the wooden one. Architect John Lautner replaced wood frames of the corner windows in the living room with steel ones in 1968; this repair did not change the proportions of the window divisions.

STATEMENT OF SIGNIFICANCE

One of four textile block houses designed by Frank Lloyd Wright in the early 1920s for Southern California, of wide interest to architects and historians because they are unique in Wright's work. They come out of a Wright period characterized by surface and applied ornament, beginning with the 1914 Midway Gardens, Chicago and lasting through the textile block houses. Wright at the time was preoccupied with "common" materials -- the lava stone of Japan which was "underfoot," and which he used for the Imperial Hotel, Tokyo (1916-1922); concrete block, a "gutter" material, as he called it, and he proposed to lift it from the gutter and make of it a noble material.

The Barnsdall house, Los Angeles (1916-1922) and the four textile block houses derive their insloping walls and the character of their ornament from Maya temples in Yucatan; the overall textile effect of the concrete block cast in an ornamental pattern is similar to the overall decoration of the limestone blocks of the Baroque Period of Maya architecture (Palace of Masks, near Uxmal).

Wright conceived these four houses as expressions of the semi-arid climate of Southern California. Each of the four has a different motif, drawn from nature, carried out (along with Maya motifs) throughout the houses. The houses represent a variation on a structural theme that offers an insight into the creative process of America's foremost genius in the field of architecture.

SIGNIFICANCE

18. BRIEFLY STATE HISTORICAL AND/OR ARCHITECTURAL IMPORTANCE. INCLUDE DATES, EVENTS, AND PERSONS ASSOCIATED WITH THE SITE. THE LIVING ROOM OF THIS LOS ANGELES HISTORIC-CULTURAL MONUMENT AND NATIONAL REGISTER MONUMENT HAS BEEN DESCRIBED AS ONE OF THE GREATEST OF FRANK LLOYD WRIGHT'S SMALL SPACES. THE HOUSE REMAINS THE PUREST EXAMPLE OF THE TEXTILE-BLOCK SYSTEM AND ITS TECHNICAL, POLEMICAL AND AESTHETIC CONNOTATIONS. WITH ITS TWO-STORY MITRED-GLASS CORNER WINDOWS, STRONG VERTICAL PIERS, AND DRAMATIC HORIZONTAL PLANE OF THE ROOF SLICING THROUGH THE CONCRETE UPRIGHTS, IT ALSO SEALS WRIGHT'S TRANSITION FROM AN ARCHITECT OF THE ARTS AND CRAFTS, TO A MODERNIST INNOVATOR OF NEW FORMS AND MATERIALS.

IN ADDITION, THE HOUSE HAS PLAYED A SIGNIFICANT ROLE IN THE HISTORY OF THE AVANT-GARDE IN LOS ANGELES. FOR MANY YEARS, A WIDE RANGE OF ARTISTS, ARCHITECTS, ACTORS, SCIENTISTS, AND POLITICAL FIGURES VISITED THE "SALON" AT THE FREEMAN HOUSE. FROM EDWARD WESTON TO XAVIER CUGAT, BELLA LEWITSKY TO FRITZ ZWICKY, RUDOLPH SCHINDLER, TO RUDI GERNREICH, THE SOUTHERN CALIFORNIA CULTURAL LANDSCAPE OF THE PAST 50 YEARS WAS REFLECTED BY THE FREEMANS AND THE FREEMAN HOUSE. THE ARCHITECTURAL HISTORY OF THE HOUSE ITSELF IS, IF ANYTHING, EVEN MORE ASTONIOSHING. DESIGNED BY FRANK LLOYD WRIGHT, AND BUILT BY FRANK LLOYD WRIGHT, JR., IT WAS MODIFIED BY RUDOLPH SCHINDLER, JOHN LAUTNER, AND ERIC LLOYD WRIGHT-ALL AT THE REQUEST OF THE ORIGINAL CLIENTS.

USC ARCHITECTURE

6 January 1992

State Department of Recreation & Parks
State Historical Resources Commission
Box 2390
Sacramento, CA 95811

Dear Commission Members:

On behalf of the School of Architecture at the University of Southern California, I am delighted to support the nomination of Frank Lloyd Wright's Freeman House as a California State Historical Landmark. I authorize the Department of Recreation & Parks to register and number the Freeman House as a state landmark and to erect notices to that effect.

Sincerely,

Robert S. Harris, FAIA
Dean

DPR 26B (Rev. 6/75)

A BRIEF DESCRIPTION

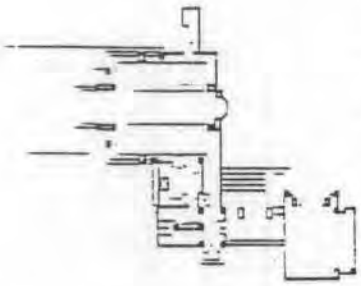

The Freeman House is one of Frank Lloyd Wright's three textile-block houses built in 1924 as an experiment in low-cost housing, and as a part of his search for a new architectural vocabulary appropriate to the southwestern United States and to the Modern Era. The building is listed on the National Register of Historic Places, and is a City of Los Angeles Cultural Monument. However, because of its location in Los Angeles, away from the focus of most research on Frank Lloyd Wright, and the fact that it remained an out-of-the-way building, owned by a somewhat reclusive couple, and (unfortunately) indifferently maintained, the true importance of the building to Wright's work, and in the history of modern architecture in Los Angeles, has not been widely recognized. The case can be made that it is one of Wright's seminal works, marking his transition from the Prairie style and the Arts and Crafts to the Modern Movement. Further, because of the relationship of Wright to Schindler and Neutra, the Freeman House became part of a foundation for the explosion of modern architecture which followed in Los Angeles, both because of the family and affectional relationships of the clients, and through the recurrent appearance of architectonic gestures in later works which are first seen in the Freeman House.

The Freeman House is the smallest of the textile-block houses (approximately 2,500 square feet), constructed on the smallest site (c. 7,000 sq. ft.), with the smallest budget ($9,100, which grew to $23,000). In some ways, these constraints forced Wright to design in the Freeman House the clearest, most efficient expression of his ideas for the block home. It also led to several elements of the design never being built. Partially because of the difficulties which arose during construction, and partially because of the Freemans' changing needs, Rudolph Schindler was called in around 1928 to make some furnishings for the house, and some alterations in the plan. This commenced a 25-year relationship in which Schindler did many things in and to the Freeman House. Sam Freeman died in the house in 1981. In 1983, Harriet arranged for the Freeman House to be given to the School of Architecture at the University of Southern California. She died in the house in 1986. Since that time, the House has been the subject of research leading towards its restoration, continued in use as a residence, and been the site of tours, classes and other events.

The south facade of the Freeman House in 1950, showing its green fascias, and prior to the metal roofing being applied to the parapets. Compare the dense vegetation to the photograph on page 2, or the original rendering. (photo by John Reed)

The Samuel Freeman House is situated on a dramatic hillside lot, adjacent to "downtown" Hollywood. Wright may have helped to select the site. The uphill (northern) elevation of the house fronts a small, winding residential street--and is appropriately scaled to its neighbors. The downhill (southern) elevation shifts scale to reflect its visibility from the surrounding city, and terminates the axis of Highland Avenue, a major boulevard. Although situated within yards of one of the busiest intersections in Los Angeles, and only a few blocks from the Graumann's Chinese Theater and other Hollywood landmarks, the Freeman House is nestled into eucalyptus and pine trees, connected by winding paths and stairs to several other historic homes nearby, in a 'rural'

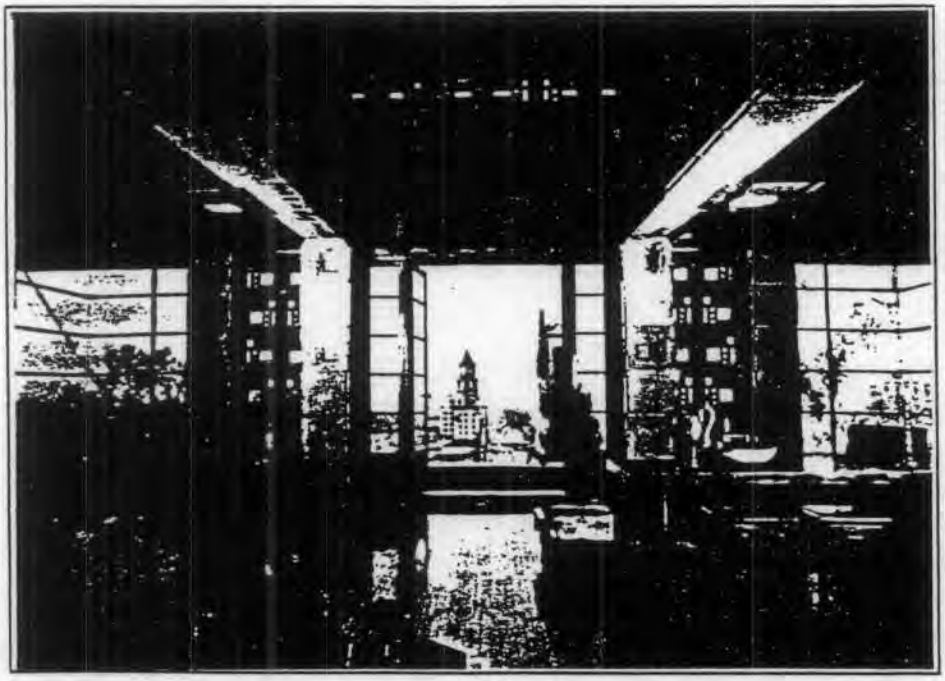

Upper floor plan, c. 1925

setting complete with skunk, possum, deer and other wild animals. It is thus paradigmatic for generations of Los Angeles hillside homes to follow, with their ambiguous relationships between independent country life, and the dynamic city(scape) from which they draw their very existence. It is also an example of the kind of urban/suburban scheme which Wright envisioned in his Broadacre City designs of the 1930s.

The *parti* of the two-story Freeman House, as originally built, consisted of two cubes: a living/dining room over two bedrooms and a sitting room, and the detached garage over a laundry/store room. The resulting composition is basically L-shaped, and is designed that way because of the L-shaped bend of the street at the house, and because the site slopes both to the south and to the east. Outside passages connected the cubes at both levels, and a stair tower was placed at the joint.

The separation of the two cubes allows the street to visually become the entry to the house, seeming to continue straight ahead between the garage and main building. Once in the entry area, the visitor finds himself on the edge of a cliff, with a view to the east, and the entry door on his right. Inside the front door is the stair tower. Serving as a knuckle to the whole composition, it contains the highest point of the house, and the greatest uninterrupted vertical surfaces.

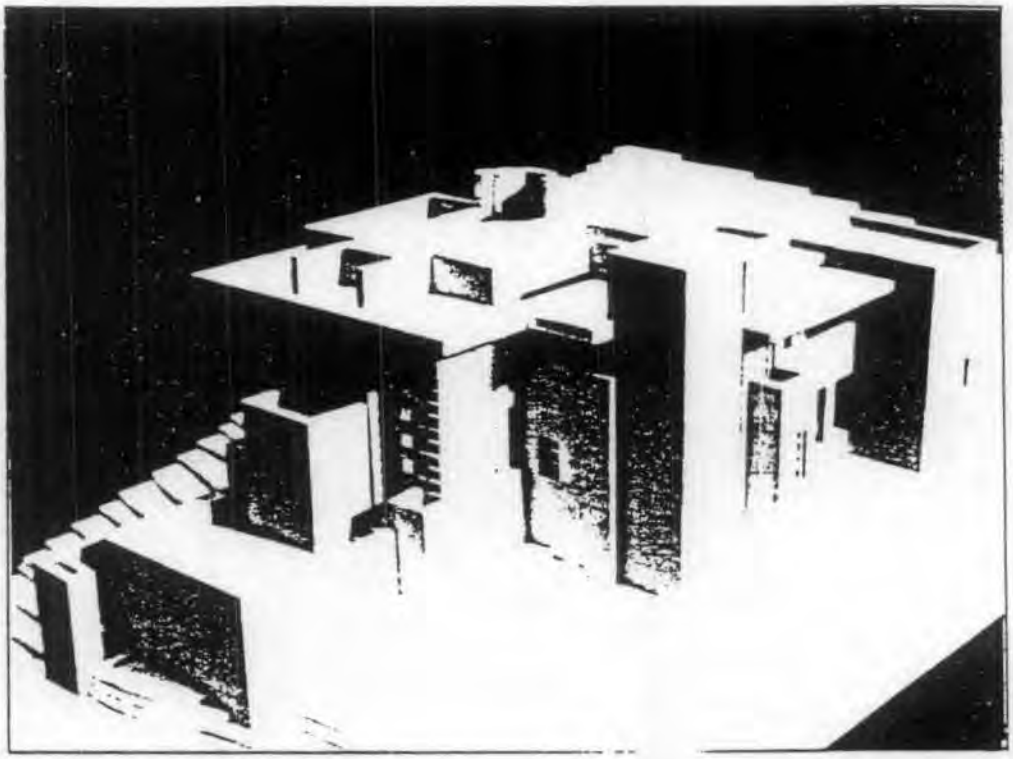

Also starting at the front door is the hallway leading to the living room. This hall, essentially a single loaded corridor, also provides a neutral surface along the street with openings which are perceived first as ornament, and then only later as windows. The kitchen is located on the south side of the corridor, and serves as secondary connection between the stairs and the living room.

The living room, looking south down Highland Avenue, c. 1950. Note the directionality of the beams, floor boards and ceiling battens all pointing towards the vanishing point. (photo by Julius Shulman)

The living room, typically for Wright, is entered on the diagonal. The solid north wall contains a large fireplace and implied inglenook. Directly opposite, the south wall contains a set of double doors leading to a small balcony, set between two columns and pierced-block screens, the only concrete left on a south facade which is largely glass. That transparency is reinforced by corner glass windows with a mitred-glass, mullionless joint. These windows are actually two stories tall, and their size shifts the scale of the house when viewed from below, so that it more forcefully commands its site.

The short wall between kitchen and living room originally consisted of swinging doors, panels and cabinetry, allowing for a sense of free flow between the two areas, and helping to break down the notion of separate service and served spaces. Glass-fronted cabinets in the kitchen had mullions which duplicated the mullions of the casement windows. The latter opened onto a large planter, for herbs and vegetables. Stairs to the roof rise from the small pantry area off the kitchen and entry. The roof was intended for use as an additional outside terrace.

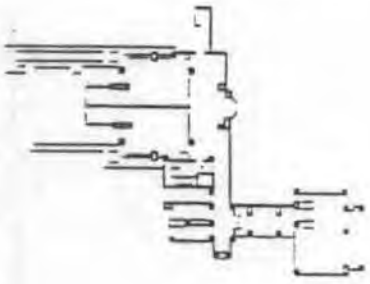

A model of the Freeman House, looking at the southeast corner. The complex series of volumes and planes are made up of very simple geometrical rules.

The stairs down to the lower level debouched at a landing, facing another double set of doors to the outside, directly under the front doors; in this case, the glass doors opening onto a loggia which led to the storage room and laundry under the garage. Two large closets were placed on either side of the stairs.

Proceeding down the hallway from the stair landing, the visitor descended another two steps to a sitting area formed by a widening of the passage. Off of this area opened the bathroom and the two bedrooms. The 'lounge' also contained a large fireplace and a large window.

Each of the bedrooms was a mirror image of the other. The bottom half of the house's two-story corner windows form the outside corner of each bedroom. The windows look out over planters. Each bedroom has a walk-in closet, which, together, form the balcony for the living room above. Each bedroom also has a glass door opening onto a short flight of steps which lead to a shared terrace. This terrace was originally intended to be used for sleeping outdoors. A further flight of stairs leads from the terrace to the hillside. The wall between the bedrooms and the 'lounge' had frosted glass panels above 5'-4" to bring additional light into the hallway.

Lower floor plan, c. 1925

The structure of the house is somewhat messy. (It is described in more detail in a following section.) The textile-block walls are occasionally bearing (vertical loads), sometimes retaining (horizontal loads), and sometimes only curtain (self-supporting infill panels). The major support for the main roof and south facade is provided by two large poured-in place reinforced concrete frames. Smaller hidden concrete beams provide lateral stability. The remainder of the roof structure is wooden beams and joists. The living room floor is supported by double-cantilevered concrete beams in the corners, block bearing walls, and wood joists. The garage floor is concrete slab, as is the floor of the

loggia and storage room. Most other floors are concrete pavers on a setting bed (below), or concrete pavers on wooden joists (above).

The living room of the Freeman House has been described as one of the greatest of Wright's small spaces: it contains elements of a basilica, "treehouse" vistas of the city, and the "cave"-like hearth so important in Wright's work. The room is the purest example of the textile-block system and its technical, polemical and aesthetic connotations. With its two-story, mitred-glass, corner windows; strong vertical piers; and the dramatic horizontal plane of the roof slicing through the concrete uprights, it also seals Wright's transition from an architect of the Arts and Crafts, to a Modernist innovator of new forms and materials, an abstract painter of space and movement.

Construction of the Freeman House was difficult. The system was essentially untried (the Millard House, built the previous year, did not have steel reinforcing between the concrete tiles), and was further complicated by the fact that three block houses were being constructed roughly simultaneously. As a result, Lloyd Wright's attentions were split. Furthermore, Frank Lloyd Wright had already abandoned Los Angeles and returned to Wisconsin, and was therefore only sporadically available to assist with missing details or resolving problems. The Freeman House, which was to cost $9,100 ended up costing over $23,000--and the Freemans took years to pay off the many liens which accompanied the overruns. The couple later complained that they had to live in a barely completed house for three years, using cardboard boxes for furniture, until they hired family friend Rudolph Schindler. He ended up not only making a variety of furnishings, ranging in scale from table lamps to 'pullman' kitchens, but also added two apartments by modifying parts of the house.

These Schindler interventions are fascinating for five reasons. Firstly, they are the work of a superb architect. Second, the canvas for Schindler's designs was the strong, pre-existing, Wright-designed textile-block structure. Third, we now know that Schindler actually worked with Wright on the Millard House and the Lowe House (model for the Storer House), and therefore had at the least a sensibility, if not some actual responsibility, for the system. Fourth, ultimately, Wright and Schindler had very different design ideologies--and the interventions, while sympathetic, reflect this. Finally, the Freemans were socially, artistically, and politically part of the avant-garde circle which centered around the Schindler house on King's Road.

After Schindler's death in 1953, the Freemans turned to other designers to take on the role of "family architect." First, Taliesin graduate Robert Clarke remodeled the kitchen, one of the downstairs bathrooms and, possibly, the roof. Then John Lautner remodeled the two-story corner windows, replacing the original wood with a similar section in aluminum. Meanwhile, Sam Freeman, who was 'retired' for the last 40 years of his life, continually embarked on a variety of projects around his home, ranging from various attempts to waterproof the roof, to building new terraces on the slopes below the house. After Sam's death, Eric Lloyd Wright, Frank Lloyd Wright's grandson, did some repairs at the house. Finally, in 1982, an elevator was added by James Reneau so that Harriet could make the trip from Living Room to Bedroom while confined to a wheelchair.

Virtually continuously after 1928, when the first apartment was created out of one of the bedrooms, the Freemans were hosts to an assortment of house guests and tenants. Some, such as the actor Albert van Dekker and his wife

and child, or the actress Helen Walker, were invited to stay because their fortunes were low--or various political activities had blacklisted them out of the movie industry. Others, such as band leader Xavier Cugat, were simply tenants involved with the arts or education. At one point there were actually four different 'households,' consisting of seven people, residing in the Freeman House. This kind of flexibility, or ambiguity, of living space was typical of what Schindler provided his clients: a single-family house could, with a few sliding partitions and outside entries, suddenly become a duplex, or even a triplex. This was abetted by the dense development typical of the Hollywood Hills, where terraces and stairs wind down slopes covered with seemingly random patterns of gardens and houses.

The Freeman House has played a significant role in the history of the avant-garde in Los Angeles. For many years, a wide range of artists, architects, actors, scientists and political figures visited the "Salon" at the Freeman House. From photographer Edward Weston to Xavier Cugat, dancers Martha Graham and Bella Lewitsky to scientist Fritz Zwicky, architect Rudolph Schindler to fashion designer Rudi Gernreich, art collector Galka Sheyer to film director Jean Negulesco, the Southern California cultural landscape of the past 50 years was reflected in the life of the Freemans and the Freeman House. The house guests combined with the 'salon' of avant-garde artists and various political friends of Sam Freeman's, to form an exceptionally rich social history for the house. These activities didn't stop until the 1980s. Three examples: In 1952, Rudolph Schindler wrote to Harriet Freeman, after her dance class gave a performance at the Hollywood Bowl, that "it was nice to see our twin enthusiasms of the '20s bear such fruit. Mine the modern frame house; yours, the energy with which to fill it." [1] In later years, the strategies to win the battle to integrate the first public housing projects in Los Angeles were developed in the Freeman House living room. And, later still, the Freeman House became a second home to a Guatamalan refugee family which Harriet, then in her 70s, adopted while she was an English teacher at a local community school.

[1]A letter from Rudolph Schindler to Harriet Freeman in 1952 (see appendix).

The southeast corner of the livingroom, c. 1955.

Part I. HISTORICAL INFORMATION

A. Physical History:

1. Original and subsequent owners:

Samuel and Harriet Freeman, 1924-1985.
University of Southern California, School of Architecture
1985 to present.

2. Date of erection:

1924-25

3. Architect (name if possible):

Frank Lloyd Wright

Project Architect, Frank Lloyd Wright Jr.

4. Alterations and additions:

1928-Enclosure of laundry room and service porch for apartment by RM Schindler. Enlargment of downstairs bedroom to include hall sitting area.
1979-Elevator

5. Photographs (past and present):

Construction photos	1924-25
Present photos	1985-present

B. Historical Events Connected with the Structure (if any):

Please see Monument Application history

C. Sources of Information (bibliography and surveys – governmental, private, H.A.B.S., local, etc.):

Historic Structures Report 1990

D. Drawings (if data known), location, availability, attached, etc.:

1. Original (date):

1924-25- FLW drawings Taliesin

2. Measured (date):

1988-89- As built and altered

Part II. ARCHITECTURAL INFORMATION

A. General Statement:

1. Architectural character:

Please see brief history

2. Condition of fabric:

Fair to poor condition, the University of Southern California is currently engaged in a multi-year 1.6 million dollar restoration of the structure.

B. Description of Exterior:

1. Overall dimensions:

74'x70'x153'x125'

2. Foundations (material):

none

3. Wall construction:

Concrete block, 16 sq. in.

4. Framing:

2x6 joists @ 12" o.c. floors, roof and first floor.

5. Appurtenances (special features):

Rudolph M. Schindler furnishings, 1928-1952, built in.

6. Chimneys:

Concrete Block, reinforced, 16 in. sq.

7. Openings:

a. Doorways and doors:

French Doors and windows where all originally wood. The corner windows of the living room and the two bedrooms below were the first butt-jointed glazings used by FLW. Wood Mullions were replaced with aluminum muntins by John Launtner, to provide more support for the glass

b. Windows:

The above mentioned french doors and casements are also found between blocks with perforated designe allowing light in.

8. Roof:

Flat, built-up roofing.

a. Shape, covering:

b. Cornice, eaves:

Concrete block parapets, wood eaves with decorated wood fascias.

C. Description of Interior:

1. Floor plans: From the entry porch (which connects the living areas with the garage and service porch below) one enters to the south meeting the stairwab to the roof deck and the bedrooms below. A hall leads to the large living area with cantilivered corners commanding distant views of the Los Angeles Basid. The entry court and kitchen abut this hallway. At the rear wall of the living room is the hearth. the lower level hall at the foot of the stairs is flanked by the retaining wall and bathroom. A hearth creates a sitting area at the end of the hall. The sitting area serves as the entry to the bedrooms.

2. Stairways: The concrete block stairway allows access from the lower bedroom level to the main living area to the roof deck.

3. Flooring (material): 16 sq. in. Concrete Block throughout except for Hardwood floors in the living room and third floor penthouse.

4. Walls and ceiling:

16 sq. in. Concrete Block walls with wood panel insets &plaster on the interior of the stairwell. Decorative wood ceiling adorn the main floor; plaster ceilings are found on the lower floor.

D. Environmental (brief description of site and surroundings):

1. General setting and orientation:

Nestled in the Hollywood Hills the house enjoys spectacular views of the Los Angeles Basin and Hollywood. The living room of the house is approximately on center with Highland Ave. below. The surrounding neighborhoods have been home to numerous Hollywood figures and artists.

2. Accessory structures (outbuildings, enclosures, etc.):
None

3. Landscaping:

The perimeter of the property is planted with Eucalyptus and tall shrubs maintaining a private setting above busy Highland Avenue.

Honorable Members:

I hereby certify that I am familiar with the established criteria that govern your evaluation of landmark applications. This is to confirm that FREEMAN HOUSE
(insert name of landmark)

does qualify for architectural significance on the basis of one of the following criteria: (check one or more)

___ 1. The first, last, only or most significant structure of a type in a region (underline one and identify type and region), and

X 2. Architectural prototype of a period, style, architectural movement or method of construction, or

X 3. Outstanding example of a period, style, architectural movement or method of construction, or

X 4. The most notable work, or the best surviving work in a given region, of a pioneer architect, designer or a master builder.

___ 5. Other comments, if any

Respectfully submitted,

Statement on Historical Significance

The Freeman House

Prepared for the California State Office of Historic Preservation

Summary Statement

The Samuel and Harriet Freeman House, designed by Frank Lloyd Wright and built in 1924 in Los Angeles, is both one of the architect's most important works and, along with a select group of works including Irving Gill's Dodge House and Rudolph Schindler's own Double House, marks the advent of Modernism in California. It is Wright's clearest expression from the 1920s of his vision for the middle-class American home. The design of the Freeman House contains both powerful aesthetic statements (the first mitred-glass corner in architecture, for example), and innovative social theories (a build-it-yourself construction system). Its history is equally remarkable and significant. Among the architects who either helped build, furnish, landscape or modify the house are Frank Lloyd Wright, his son Lloyd and grandson Eric, Rudolph Schindler, Richard Neutra, and John Lautner. Located in the heart of Hollywood, the Freeman House was a salon of the arts and politics from the 1920s to the present day. Martha Graham danced there. Xavier Cugat, Galka Sheyer and Edward Weston all lived there. Today, the House is owned by the School of Architecture at the University of Southern California--and is the only Wright-designed home, and one of the few great works of architecture anywhere, which is both open to the public and used on a regular basis by students and others for research and coursework. The ongoing restoration of this building has been supported, both because of the home's importance and because of the level of original technical and historical research involved, by the Getty Trust, the National Endowment for the Arts, the Graham Foundation, the Andy Warhol Foundation and other private and public organizations. State landmark designation of the Freeman House will both recognize its own remarkable accomplishments and history, and materially assist in the challenging restoration effort.

The Aesthetic and Social Essay of the Freeman House

The Freeman House marks the transition for Wright from a 19th to a 20th Century architect. It shows most clearly the influence of European Modernism in its dramatic cantilevered floors and roofs, its corner glass windows, its free-flowing spaces which, to quote Wright, "explode the box." Being constructed out of 12,000 square blocks, the Freeman House turns out to also be a series of perfect cubes and squares in its massing and plan. It shows Japanese, Gothic, Mayan, and Pueblo antecedants in its attempt to develop an appropriate historical antecedant for its style. It also demonstrates the exuberance of movie-set architecture of 1920s Hollywood—but stripped down, transformed by the rigors of modernism so that, unlike Hollyhock House or the Ennis House, it no longer presents a romanticized style ahead of its more serious concerns. The Freeman House responds to the Los Angeles climate and light with thick walls, shaded windows, a pool of water by the front door, and dramatic perforated concrete screens which shape and play with light throughout the house. Indeed, while containing what has been described as "the most beautiful

small room of Wright's career," it is the combination of these formal design moves with social and political issues which makes the house so interesting and important.

The Freeman House is one of three houses built in what Wright later called the "textile-block" system of construction. It is the clearest example of what Wright envisoned for the system: an answer to what he termed the greatest challenge of the American architect: housing the middle class. Chronologically, the first concrete block house was La Miniatura (Pasadena, 1923). However, this beautiful home, with an exciting cross-section of alternating floor levels, is relatively typical masonry construction using mortar. The next house, the Storer House (Hollywood, 1923), was the first textile-block home under construction. Interestingly, it was originally designed in wood frame and stucco for another client, the Lowes family, in Eagle Rock. The result, while again quite striking, was not the tightly interwoven relationship of material, system and design for which organic architecture came to be noted noted. the Freeman House came next—although the Storer, Ennis and Freeman Houses were all under construction essentially at the same time. The Ennis House, of course, is the largest and most well-known of the block houses. It was designed for wealthy clients, who basically fired Wright during construction and finished the project themselves, making extensive modifications to the original design.

It was left to the modest 1,400 square foot Freeman House, therefore, to be both the paradigmatic inexpensive home, and the home which most successfully integrated the construction system into the design. The textile-block design system was intended as a do-it-yourself kit. Owners were to combine the decomposed granite from their site, with cement and a little water. This dry mix was then stamped in cast aluminum molds into the 16" x 16" x 3 1/2" blocks, something like an adobe brick. The blocks had semi-circular channels along their perimeters, in which were laid 1/4" steel rods. Together they formedthe warp and the weft of the "textile" blocks. The blocks were assembled into double-wythe walls without mortar because Wright thought that meant the owners need not hire a mason. Blocks were made on site, and construction on the Freeman House went from March 1924 to March 1925. The budget also went from $9,100 to $24,000. Because of the experimental nature of the system, problems on all three houses multiplied along with the budgets, and a difficult time was had by all. However, Wright learned from these first experiments. He went on to design over 50 other block homes and buildings.

Nonetheless, several other features of the Freeman House's design contributed to its strategic role as a model middle class home. These included 1) the dominance of the garage, facing the street and set in its own cubic structure across the entry from the main house, and 2) a transparent wall between the kitchen and the living room, the first time in Wright's work that this service space was designed in recognition of the fact that the middle class California woman was as likely to be cooking and serving as sitting and eating with her guests, and that people flowed freely between these two spaces.

Another important feature of the Freeman House is its orientation to the city below. Frank Lloyd Wright was very impressed by Los Angeles and by its relation to the automobile, despite his statement that if the map of the United States was tilted, all the loose marbles rolled to California. (He even designed a car in 1924 with a cantilevered roof.) The main axis of the living room of the Freeman House, which connects the hearth, symbol of the home, with a balcony overlooking the city or community, is continued into the landscape by its alignment with Highland Avenue. Thus, the basic choreography of movement through the house ends in the city. Wright was to say that "man is a fluid in metropolitan regions." This movement through the

house and the city is a reflection of that idea. Later, he designed Broadacre City, his vision for American urban design, based on his experiences in LA in the 1920s—especially the way the car for the first time allowed a major city whose primary housing was the single-family residence.

The History

The Freeman House was designed as part of Wright's attempt to launch a professional career in Los Angeles after completion of work in Japan and on the Barnsdall projects on Olive Hill. He selected developed a new style, and placed it in the burgeoning Hollywood Hills, to take advantage of the rapid growth of Los Angeles at this time. However, by the time the Freeman House was actually under construction, it was clear that Angelenos were not going to beat a path to his door--and so he returned to the Midwest. The result was that his son Lloyd, an architect and landscape architect, was both contractor and supervising architect on the project. It was also a contributing factor to the construction difficulties. As a result, when the Freemans had paid off the 16 liens (!) caused by cost overruns, and they needed to furnish their three-year old house, they turned to a family friend, and the architect for four of Harriet's sister's homes, Rudolph Schindler. For the next 25 years, this innovative Austrian architect, himself a Wright apprentice, designed furnishings and modifications for the Freemans. Today, the Freeman House has the largest collection of Schindler furniture (ranging from stools to beds to kitchenettes) extant anywhere. Not only is this assemblage incredibly important from an art-historical perspective, but no other major work of architecture in California exhibits the phenomenon of design by one important architect (Wright), and extensive and coherent furnishings and alterations by another.

These modifications were made both to furnish the residence, as mentioned above, and also to allow the Freemans to receive guests and even tenants. Among people who lived in the house were Xavier Cugat, Edward Weston, Clark Gable's agent, the noted physicist Fritz Zwicky, Galka Sheyer (who brought the works of the Klee, Kandinsky, Feiniger and Jawlensky to the US), the director Jean Negulesco ("How to Marry a Millionaire"), and the actors Albert van Dekker (and family) and Helen Walker. These people were joined at the many salons and other events by Rudi Gernreich, Richard Neutra, Bella Lewitzky (who was married at the house), and countless other luminaries and celebrants of the arts in Los Angeles. Harriet herself taught dance, and when her class performed at the Hollywood Bowl in 1950, received a note from Rudolph Schindler that said: "How nice to see our twin enthusiasms of the 1920s bear such fruit: Mine, the California frame for living, yours, the movement with which to fill it."

County Recorder's Office
County of Los Angeles
5557 Ferguson Drive
Los Angeles, CA 90022

On September 30, 1992, Governor Wilson signed into law AB 3037 authorizing designated historical properties be officially recorded with the County Recorder. After March 15, 1993 a certified resolution acknowledging the designation of individual historic properties by the State Historical Resources Commission, local agency, or a unit thereof, shall be recorded by the County Recorder in order for the designation to be effective.

Section 5029 of the Public Resources Code requires that the State Historical Resources Commission shall, within 90 days after the approval by the Director of Department of Parks and Recreation, submit a certified resolution to the County Recorder for recordation of the historical property. Section 5029 further specifies that "County Recorder shall record a certified resolution of historical resources designation. The County Recorder shall index the recorded resolution of the Commission or local agency, or unit thereof, listing the respective agency as the 'grantor' and the current owner as the 'grantee'."

The enclosed Certified Resolution of Historical Resources Designation is submitted for your action. May we please have proof of this recording.

Please do not hesitate to contact Sandra Elder of my office at the above telephone number should you have any questions.

Sincerely,

Concrete Block Houses of Frank Lloyd Wright
in Los Angeles County - Thematic
Samuel and Harriet Freeman House
Staff Evaluation

The twenties were a disaster for Frank Lloyd Wright. His career was moribund and his personal life wrenching chaos. For a brief period Wright settled in Los Angeles where he designed four highly original concrete block houses that together stand as landmarks in California architecture.

In 1922, Frank Lloyd Wright returned from Japan and the Imperial Hotel for good and settled briefly in Los Angeles, with the idea of opening a practice there with son Lloyd Wright. Wright, Sr. had already worked in Hollywood on various projects for Aline Barnsdall, most notably the Barndsdall (Hollyhock) House, 1916-1920. Wright now turned his attention to affordable housing and modular construction using the cheap building material of concrete. In very rapid succession, Wright designed four residences that were constructed from a textile block system of handmade concrete tiles held in a matrix of steel bars, anchored and protected by a concrete mixture, and stacked without grout.

Stylistic influences for these houses derived from the International Style, Mayan revival, and Southwest Native American architecture. But their overall character had, in the words of Robert C. Twombly, "a peculiar and direct relevance to Wright's private life."

> ...the concrete homes of the 1920s, elevating detachment into seclusion and retreat into escape (including a kind of psychological escape into architectural fantasy land), were carefully thought-out, meticulously executed essays in solitude and isolation. Building with textile blocks, moreover, meant weaving together myriads of lines, designs, and individual pieces - solving a complicated architectural puzzle. The emphasis here was on parts and detail, on process, every bit as much as on total conception; putting and keeping something together was as crucial as what was kept together. Elaborating on the fortresslike, not the environment-embracing, qualities of Taliesin, the concrete block homes were less places to live than impregnable retreats from a hostile world, precisely constructed defense mechanisms suitable for a precarious existence with an erratic partner. The California houses - testaments to Wright's skills in architectural composition - were created when the fabric of his life was most directly threatened, when the dynamics of his interpersonal relationships were of utmost importance.

Concrete Block Houses of Frank Lloyd Wright
Staff Evaluation
Page Two

Wright left California in 1925, but continued to use the textile block system for residences throughout the rest of his career. The four original concrete block houses he designed in the Los Angeles area -

Alice Millard House, "La Miniatura," Pasadena, 1923
Samuel and Harriet Freeman House, Hollywood, 1925
Charles Ennis House, Los Feliz Hills, 1925
John Storer House, Hollywood, 1925

- are unique in his work. Each is a highly artistic and individual expression of a new structural system of reinforced concrete blocks. Each is individually eligible for State Landmark status under the theme of "Concrete Block Houses of Frank Lloyd Wright in Los Angeles County." (They are all already listed in the National Register.)

Staff recommends listing the Freeman House as a California Historical Landmark.

Cynthia Howse

Frank Lloyd Wright in Los Angeles

Frank Lloyd Wright's stay in Los Angeles was a brief one: occasional visits while the Imperial Hotel was under construction, and a short residency at Olive Hill. Indeed, the three buildings built for Aline Barnsdall were done while Wright commuted back and forth between Tokyo, Los Angeles, and Wisconsin—with Rudolph Schindler and Wright's son, Lloyd, carrying much of the responsibility for executing the work. The four block houses were designed and built while Wright was undergoing what would turn into the bleakest period of his life. In a four year span Wright divorced his first wife, married and separated from his second wife, and met and fathered a child with his soon-to-be third wife. In addition, his mother, Anna, and mentor, Louis Sullivan, died. Finally, Wright's attempts to start a practice with his son in Los Angeles were unsuccessful, and his Wisconsin home at Taliesin was repossessed by the bank.

Yet during the period from 1917 to 1925, seven houses were built in Southern California, five buildings constructed in Japan, and at least another 37 projects designed. The astonishing thing is not that these buildings were often accompanied by difficulties but that these works represent a major shift in Wright's architecture and that the incorporation of innovations in form and structure which the textile-block houses represent helped to ensure that his architecture would never again resemble the work of another. Perhaps liberated by the turmoil in his private life, and having already reached an enviable maturity in his professional work, from this time on Wright invented the "styles," and others followed.

An Appropriate Architecture

In his Autobiography, Wright described his dismay at what he found in Southern California. Wright felt that the Mission style, for instance, so popular in Los Angeles after the 1915 Panamanian Exposition in San Diego, was an inappropriate borrowing from Spain that was bad enough in Mexico, and by the time it had been brought by Junipero Serra to California there was nothing the forms had left to say to their new inhabitants or about the place in which it sat. Indeed, the only worthwhile thing which Wright felt man had contributed to the Los Angeles landscape was the eucalyptus tree, which he called, "tall, tattered ladies."

Wright was not the only architect at the time who was fascinated with exotic architecture. In Los Angeles, both the Mayan and Egyptian Theaters were constructed contemporaneously with Wright's work on Olive Hill. And of course, the early movie spectaculars had begun bringing visions of Babylonia, Egypt and the rest of the world to fascinated Americans. But the search for an appropriate formal referent was quickly subsumed into the dialectic of a new construction system: the concrete block, and his vision of the 'California House' as half indoors and half outdoors, a celebration of the desert climate. As a result, Wright's Los Angeles houses become more than indicators of the latest fashion. Through their skillful exploitation of site, materials, and form, these projects become some of Wright's most interesting work.

For example, while looking at the houses in this exhibition, notice the rich variety of roles that openings such as doors, windows and skylights play in the houses. Each has a formal, aesthetically determined position in the facades. Each is designed for its orientation to the views of the city and surrounding landscape. Each responds to the path of the sun through the sky at various seasons, with openings often recessed deep in the wall or shaded beneath an overhang. As can be seen in the plans, openings are often used to indicate a destination for people moving through the dwelling, such as at the end of a hallway or formal axis, as at the Freeman House. Windows in all the houses constantly reaffirm the strong relationship between indoors and out, which is such a critical part of the design of the California House. Their differing sizes and treatments help to indicate those rooms which are public, and those which are private, such as at the Storer House. And of course, they cast light to mark special places, such as at the hearths in Hollyhock House and Residence B.

Frank Lloyd Wright In Los Angeles: An Exhibition

The Textile-Block System

The textile-block system was Frank Lloyd Wright's first design for a new method of constructing a building. It was to be the answer to a set of practical and ideological issues with which the architect was struggling. Wright felt the need for a technology of construction that could utilize cheap, unskilled labor. He sought a building material which could be structure, skin and ornament, all at the same time: organic rather than contrived. Wright looked for a way to integrate his process of *designing* a space (which relied on a regular geometric grid) with a technology dependent on an equally rigorous structural grid for *building* that space. And he was looking for a material which was appropriate for the climate of the Southwest.

In the textile-block system, an entire building is planned and constructed from identical square pieces. The basic components are 16" x 16" concrete tiles, held in a matrix of 1/4" steel bars (the warp and woof of the "textile"). These tiles are actually hollowed out on the back, so that they range in thickness between 3 1/2" at the edges and 1 1/2" in the middle. A semi-circular channel runs the length of each edge.

When several tiles are stacked on edge adjacent to each other, the steel bars are placed in the vertical channels between the blocks. Then, a soupy grout mixture is poured into the channel to anchor and protect the bars. After a horizontal course of tiles are placed, another bar is laid into the continuous channel formed across the top. The same grout protects these bars as well.

In a typical exterior wall, two walls of tiles are placed back to back, with the hollowed-out areas serving as insulating air space. Additional steel wires tie the rows together. With an extra inch of space left between for drainage, the "wall sandwich" is 8" thick, or exactly half of a module.

One component of the textile-block system, is that the masonry units are stacked on top of each other without a mortar setting bed. This feature, while intended to simplify construction, actually became one of its major flaws. Without mortar to level each course, the handmade tiles need to be individually propped into position with wooden shims, clay or some other material in order for the course to maintain a horizontal line. Additionally, the unsealed joints allow moisture to penetrate the system, and attack the steel where grout has either cracked or not completely covered the bars.

To make a block, a concrete mix was prepared which was so dry that "it left no moisture when squeezed in the palm of the hand"— according to the specifications. This mix was then placed into a cast-aluminum mold which consisted of a plain or patterned face plate, a coffered back plate, and a hinged surround which held the two plates together. (The sides of the surround pressed the channels into the block). Then, according to the remembrance of one mason of the time, after the mold was filled, a piece of wood was placed on top and the entire setup hit with a 6-pound sledge hammer. The block was then taken out of the mold by means of a lightweight tin liner (which was placed in the mold with the concrete) and set someplace out of the way where it could be kept wet while it cured for three to four weeks.

The Freeman House, which is the smallest of the textile-block buildings, used over 11,000 blocks in its construction. With only a plain and two patterned blocks, it is also the simplest. The Ennis House, with many times that number of blocks, in 64 possible design permutations, must have provided quite a logistical challenge.

Statement on Historical Significance

The Concrete Block House of Frank Lloyd Wright in Los Angeles County

Prepared for the State Office of Historic Preservation

Frank Lloyd Wright, widely acknowledged as America's most important architect, had a remarkable career which spanned 70+ years, and produced works around the United States, Asia and the Middle East. During the early 1920s, Wright resided briefly in Los Angeles, in a house of his own design on Olive Hill. This little-known period had tremendous significance for the architect. It was during this time of great personal and aesthetic turmoil that Wright made the transition from an architect of the Arts and Crafts to a Modernist. It was here that he first assembled all the ingredients which would later become his "Usonian House:" the protoypical affordable middle-class home. And his presence in Los Angeles also brought the two great foundation figures of California Modern Architecture to the area: Rudolph Schindler and Richard Neutra.

Wright actually designed a great many structures for California during the decade 1915 to 1925. These ranged from fourteen projects for Aline Barnsdall (four were built, including Hollyhock House), La Miniatura and the three textile-block houses (Storer, Freeman and Ennis), and projects for Lake Tahoe, Death Valley and Beverly Hills (the mammoth Doheney Ranch development). While only a portion of these were constructed, and his hoped-for new career in California failed to take off, those buldings which were built were powerful and influential. They dealt with numerous issues both context specific, and universal in scope. And they were part of a West-coast body of work which spanned from 1909 (the Stewart House in Santa Barbara) to 1960 (the Marin County Civic Center). In 1922 to 1924, he designed the four remarkable concrete block buildings which are described below.

Response to Context

Wright was always noted for designing around the natural qualities of a site, its views, topography and available light. In California, he recognized that an outdoor lifestyle made this even more important. Consequently, while providing shaded interiors and overhangs to protect against the bright light and warm days, Wright also choreographs movement within his buildings to always terminate in terrace or garden. In the block buildings, he even imagines them being made of concrete which used sands from their sites, thereby wedding the constructions to their landscapes like granite outcroppings of the sites themselves. Each house also incorporates water, either as pools at the entry (Storer and Freeman) or at the termination of the axis of the house (Ennis), or as a large pond (La Miniatura). The importance of water in the region was not lost on Wright, but he also used it as a way to increase the primal resonance of the architecture, much the way the hearth containing warm fires became the center of the Midwestern home.

The search for an appropriate historical antecedant was also of great interest to Frank Lloyd Wright. He was very conscious of the fact that he was helping to define "American" architecture.

For him, the use of Spanish or even midwestern precedents was anathema to what a new thriving metropolis like Los Angeles should be doing. Instead, he proposed that Californians turn to Mayan or other "amerindian" sources. The block houses, then, in their massive forms and deeply patterned concrete surfaces, were deliberately attempting to invent a more suitable past for modern Los Angeles. In this, Wright shared the concerns of both Irving Gill and Rudolph Schindler, who each selected a different kind of romanticized past to use as design inspiration.

Concrete and Construction

Each of these three architects selected concrete as the material to use for their architecture not just because it accomodated their romatic visions, but because in the tree-less, arid and only partially industrialized Southern California of the 1910s and 1920s, the material seemed the most versatile and practical choice. Wright used concrete in the form of a masonry block. He thought that the least expensive system, and one which allowed the owner to build his own home. In the three textile block houses, he even eliminated the mortar bed between rows of blocks because he thought that would eliminate the need for a mason. Thus, Wright was developing the second of his three major construction systems for residential architecture which were all intended to revolutionize the home building industry, providing low-cost housing for the middle class. (The American Ready-Cut system he co-developed in the 1910s, while the Usonian house came in the late 1930s.)

The textile-block system was to be a Mono-material method of building, in which the outside skin, structure, roofs, floors, and inner surfaces all came from the same source: the 16"x16" concrete block. In fact, the construction of all the four block buildings was much more complicated and difficult. But these first experimental structures were the basis for repeated forays into concrete block construction including the Arizona Biltmore Hotel, Florida Southern College, and numerous residences.

After 1925, when Wright returned to Wisconsin, he saw little work reach fruition until the Depression was beginning to wane in the 1930s. This hiatus allowed him to use the lessons learned from these rich, often contradictory but always powerful California works to develop the principles which governed his "second career." For in 1936, at the age of 69, Wright burst back on the scene with Fallingwater, the Johnson Wax Building, and the first usonian house. Each of these can be directly traced to his efforts from the California period.

DESCRIPTION

6. Briefly describe the present physical appearance of the site or structure and describe any major alterations from its original condition:

This is a series of small one and two story shops constructed to face into a central court area which is entered from Sunset Boulevard. These shop buildings are eclectic in design, ranging from French and Italian to more traditional Spanish. The shops are multi-colored and are intentionally non-uniform in their design. The center of the court yard has a building designed like a ship with a tower rising from it. Atop the tower is a globe, symbolizing the international theme of the center. There have been minor alterations to suit the tastes of subsequent shop owners.

7. Locational sketch map (draw and label site and surrounding streets, roads, and prominent landmarks):

IGNIFICANCE

20. Briefly state historical and/or architectural importance (include dates, events, and persons associated with the site when known):

The Crossroads of the World symbolizes, in its mingling of architectural styles and its "old world" atmosphere, the great social mingling which took place in Los Angeles at the time of its construction and which undoubtedly inspired its design. The centrally-located ship-style building is outstanding as an example of the unusual and eccentric architecture of Hollywood. This style of small "shopping center" situated on a major artery but facing into a quiet patio area was perhaps indicative of the small town image Hollywood was cultivating at the time, and even today remains a quiet haven in the area.

This has been designated historic-cultural monument number 134 by the Los Angeles Cultural Heritage Board.

21. Main theme of the historic resource: (Check only one): a. Architecture ☒ b. Arts & Leisure ☐

Describe the present and original (if known) physical appearance

The original plan for Crossroads of the World was a series of small one and two story shops located on a T-shaped piece of property with 200 feet fronting on Sunset Boulevard, 50 feet on Las Palmas Avenue, and 113 feet on Selma Avenue. Built during the Great Depression, the project was never fully realized. The portions fronting on Selma Avenue and Sunset Boulevard were completed in 1936, along with one side of the planned Early American streetscape entering from Las Palmas Avenue. One building representing the Moorish section was completed soon after the opening of the complex. The proposed theatre, one side of the Early American section, and most of the central section which was to unite the other three frontages were never completed. These undeveloped areas are now used for parking. All of the original buildings remain and have been restored to their original exterior designs. These shop buildings represent a variety of styles ranging from French and Italian designs to the Moderne and the Spanish Colonial Revival. A system of private walkways connects the numerous structures.

On the Sunset Boulevard entrance are two sets of structures perpendicular to the street. Between them is a large Moderne structure. The structures which flank this Moderne ship are designed in European styles. On the east end, the edifices are Spanish in flavor, characterized by asymmetrical massing, tiled roofs, arches, and balconies. On the west side the buildings are French in character. Regency style canopies mark many of the store fronts. Both sets of structures are composed of reinforced concrete.

The large Moderne ship located between the Spanish and French buildings is docking at Sunset Boulevard. This two story Moderne ship features curved corners, ship railing, port-hole windows and smooth flat horizontal surfaces. At the front of the ship is a vertical shaft supporting a turning globe of the world. The words, "Crossroads of the World", are clearly marked on the revolving globe.

At the Las Palmas entrance is a series of small one story buildings that are in the words of the architect, "Cape Cod and Early American shops." These structures are constructed of wood and are laid out on one side of a narrow pedestrian pathway. These American inspired designs have medium to high pitched roofs, shingles and shutters. The architect created large store front windows to accommodate the latest merchandizing techniques. These small buildings join with the large Spanish and French style buildings which are on Sunset Boulevard.

Those structures on Selma Avenue represent the architecture of Northern Europe. Steep pitched roofs, half-timbering, and shingles create a pleasing harmony. Like the Sunset Boulevard buildings, these structures focus around a central walkway/plaza, which has a fountain, a well and trees. One particular building in the corner has a lighthouse erupting from its side. At night a light revolves in the tower. Another building has a round turret entrance which is Russian in flavor.

While the Sunset Boulevard and the Las Palmas Avenue buildings are tied together, the Selma Avenue buildings stand alone. One small Moorish building lies between the Sunset and Selma structures. This edifice has a pointed Arabic arch entryway and a large rounded window-door. Tile compliments the structure.

CONTINUATION SHEET ITEM NUMBER 7 PAGE 2

A system of walkways ties all of the structures together. Landscaping includes large palms and small shrubbery. Fences and gates have been erected at the Sunset and Selma entrances; as the stores are being converted to offices, more privacy is desired. New stone and brick pavement has replaced some of the asphalt, enhancing the character of the buildings. Some new planters have been added, but are in keeping with the overall character of the complex. Likewise, the undeveloped area which is used for parking has been landscaped along its borders to soften the visual transition from the buildings to parking.

Specific dates 1936 **Builder/Architect** Robert V. Derrah

Statement of Significance (in one paragraph)

Although less than 50 years of age, Crossroads of the World is of exceptional architectural importance. Designed by an acknowledged master architect of the 1930's in Southern California, the complex is an important design statement of Hollywood in the Thirties. The architect created an intimately scaled shopping complex using an international theme, a series of buildings representing village streetscapes from around the world, uniting them for pedestrian access by carefully planned walkways and landscape elements. Derrah scaled down his earlier successful Streamlined Moderne imagery used in the Coca-Cola Bottling Plant to create a small Moderne ship as an effective, eye-catching centerpiece supporting the turning globe of the world which marked the entrance to the complex. The varied forms of architecture are skillfully handled to work in harmony, and create an image which strongly reflects the spirit of Hollywood during this period. The architect successfully created "an outstanding landmark and civic attraction, as well as a centralized shopping district comprising a wide variety of high class shops, cafes and professional offices,"[1] which rapidly became a meeting place of the "Who's Who of Hollywood."[2] Upon its opening Crossroads of the World was featured in several architectural journals of the period. The property has been published in a number of authoritative works on Southern California architecture, including Gebhard and Winter's Guide to Architecture in Los Angeles and Southern California, and Gebhard and Von Breton's L. A. in the Thirties. It is also designated as City of Los Angeles Historic-Cultural Monument 134.

The Crossroads of the World, designed by Robert V. Derrah in 1936, is a unique design statement of Hollywood in the 1930's. In this design, Derrah has separated the vehicular and pedestrian, a feature associated with much later pedestrian malls, to create an unusual shopping center. Each building is an individual design statement which is visually attractive. Similarly styled buildings are grouped together providing a harmonious balance. The structures are designed specifically to appeal to the pedestrian as they feature large windows, warm entryways and attractive landscaping.

The main architectural feature of the Crossroads of the World is a Moderne ship with a vertical pier supporting a revolving globe. This provides the focal point for the passing motorist while also appealing to the pedestrian. Other notable architectural features include the lighthouse at the Selma entrance. This tower light revolves at night providing an unusual attraction. The overall attractiveness of the buildings plus the appealing layout and design are a harmonious entity.

Derrah, a noted Los Angeles architect of the 1930's, was a master of the Streamlined Moderne. He also designed the widely-publicized Coca-Cola Bottling Plant in Los Angeles which appears to be a ship, complete with portholes and other nautical features. The Crossroads of the World and the Coca-Cola Plant have both received recognition by the City of Los Angeles by their designation as Historic-Cultural Monuments. Derrah has also been acclaimed for his work on Farmer's Market and the Southern Counties Gas Company Building. His Crossroads of the World remains as one of the unique design features of Hollywood of the Thirties.

CROSS ROADS OF THE WORLD

CROSSROADS OF THE WORLD

Integrity remains high for the complex. Crossroads of the World has been acclaimed as a major work of noted Los Angeles architect, Robert V. Derrah. Although falling 7 years short of the normal 50-year age guideline, the property is of exceptional architectural importance and has been published in a number of authoritative works on Southern California architecture, including Gebhard and Winter's Guide to Architecture in Los Angeles and Southern California and Gebhard and Von Breton's L. A. in the Thirties. The property is significant primarily under criterion C (architecture) but also has association with a major design figure in L. A. under criterion B (persons). Because of the architectural importance of the design, the significance of the architect and the acclaim the work has received in architectural publications, Crossroads of the World appears to meet the criteria for nomination to the National Register at the state level of significance.

Unique Architectural Treatment of Hollywood Shopping Center

All Nations Meet at Cross Roads of World Development of Three-Acre Tract Planned

By Robert V. Derrah
Architect

Hollywood's new shopping center, "The Cross Roads of the World", was opened October 29 on completion of five units of a total of twelve now in course of planning or construction. The site of this project is a "T" shaped piece of ground fronting 200 feet on Sunset Boulevard, 113 feet on Selma Avenue, and fifty feet on Las Palmas Avenue, and lying east of the latter.

The owner of this property, realizing the world wide interest in Hollywood and the tremendous advertising value of the name, has wanted to launch a project that would at the same time be an outstanding landmark and civic attraction as well as a centralized shopping district comprising a wide variety of high class shops, cafes and professional offices, exclusive of drug stores, grocery stores, filling stations and the like.

In order to develop this property to the fullest so as to provide a maximum of store frontage and a minimum of excess depth in the stores, a private street scheme was developed with access at Sunset, Selma, [illegible] Palmas, wide enough to per[illegible]my vist[illegible] and free circulation. To this, the exclusion of automobile traffic and the numerous fine old trees, will lend an Old World atmosphere quite unique in the midst of a busy city.

Although it is not possible to represent all the nationalities of the world in merchandise and merchants, it is the intention to practically cover the civilized world in architecture, and one of the problems in this respect has been to avoid a clash of types and styles and to provide easy transitions from one country to the other.

Starting at Sunset Boulevard, which is in the fire district, it was most feasible to use the masonry types, so that on one side of the street we have the Italian and French, and on the other side the Spanish and Mexican, while in the center is a marine-modern structure surmounted by a sixty-foot tower on which the world, eight feet in diameter and of sixteen gage steel, revolves.

Further up the street to the north will be buildings suggestive of the Moors, the Turks and the Mohammedans, while at the northerly or Selma entrance will be represented the steeper roofed structures of northern Europe. The entrance from Las Palmas Avenue will be through a narrow crooked street [illegible]ape Cod and Early American shops, adjoining which buildings will be two story, wit space above the shops, and some one-half and one-story. As soo get out of the fire district a m turesque design is possible wit roofs, clipped ceilings and so for

Aside from remodeling the Fre the Mexican buildings from two shaped apartment buildings, th interesting problem was to get show windows into the old worl and still be able to recognize th Thick masonry piers and buttre very much taboo by the mode chant, as we all know, but give bay window and he is happy, an tacking on bay windows of shapes and styles wherever t space was in danger, narrow pie avoided and the illusion of maso served without sacrifice of glas

The central building on the Su proach above referred to is som little different in store planning. frame reinforced concrete struct building is twenty feet wide hundred fifty feet long, and con stores, two cross passageways stairways to the roof deck. Th are about thirteen by eighteen fe dimensions and each has plate gl on three sides. They are pract show window and no floor s have all leased very quickly. house on part of the second flo building houses the offices of th and the rear of the flat roof dec a roof garden in connection continental cafe in the store b

Another four months will be for the full completion of all of ings, but already the complete is enjoying an increasing numb itors and shoppers.

Homesteaders had a hard life. The women took in washing and iro
raised and sold fruit and vegetables.

Although the property is owned by the City Recreation and P
Palmer has a lifetime tenure on the residence.

CROSSROADS OF THE WORLD, 6671 Sunset Boulevard, Hollywood. Hist
No. 134 - declared December 4, 1974.

The Crossroads of the World, which opened in 1937, is a com
extending from Sunset Boulevard on the south, to Selma Avenue on
Las Palmas Avenue on the west to the Church of the Good Samarita
was designed by architect Robert V. Derrah.

The complex of small one and two-story buildings is a taste
varied forms of architecture reflecting the magnificent spirit o
30's and 40's when it was a meeting place of the "Who's Who of H

In the courtyard formed by the structures stands a central
of a red, white and blue ship, a building which has become a wel
attraction.

CANOGA MISSION GALLERY, 23130 Sherman Way, Canoga Park (west of
Historic-Cultural Monument No. 135 - declared December 4, 1974

The Canoga Mission Gallery building was designed and buil
star Francis Lederer between 1934 and 1936 for use as his stal
was ranch country. Of early California Mission style archite
in the building was quarried from the hills on the property.
population explosion started and the area ceased to be rural
that the stable had outlived its validity.

In 1967, Mr. and Mrs. Lederer and Mr. and Mrs. Obdulio
stable into the Canoga Mission Gallery as an art and cultur
munity. Described as a "paraphrase" of Spanish-Colonial ar
Mission Gallery building is a unique reminder of an early
unusual in its adaptability to present day needs. Many un
from Mexico are displayed at the gallery. All proceeds fr
to charitable causes. It is open Wednesdays through Sunda

ST. MARY OF THE ANGELS CHURCH, 4510 Finley Avenue, Hollyw
Historic-Cultural Monument No. 136 - declared December 4,

St. Mary of the Angels Church was designed by archi
and erected in 1930. Its distinctive Mediterranean exte
chapel and its distinguished Renaissance entrance have
described as a "little jewel of architecture".

It is interesting to note that the founding pries
Neal Isaac Dodd, was deeply involved in the film indus
members of the Board for the Motion Picture Retirement
portions of over 385 films. This fact explains the e:
only altar dedicated to St. Genesius, the patron of a
New York. The Genesius altar is located at the east
and was used for many years to celebrate masses for

Ms. Carol Shull, Acting Keeper
National Register of Historic Places
National Park Service
440 - G Street, N.W.
Washington, D. C. 20243

Dear Ms. Shull:

We submit the Whitley Heights Historic District for nomination to the National Register of Historic Places. This district is located in Hollywood, Los Angeles County, California. All owners of property within the district were notified in accordance with federal procedures; no letters of objection were received. As this district is potentially threatened by a proposed undertaking utilizing federal funding, we would appreciate your most expeditious review.

Sincerely yours,

R M Ellen

Describe the present and original (if known) physical appearance

The WHITLEY HEIGHTS HISTORIC DISTRICT contains 163 single family residences and three small apartment buildings. One hundred and twenty-six of these structures date from the years 1906-1929. Seventeen structures (most of which contribute to the District) date from 1929-1939. There are twenty-five structures which do not contribute to the District. The large majority of the houses are of Mediterranean architecture. The community was planned and developed by H. J. Whitley, who filed the original tract maps in 1902 and 1903. The District is composed of a single low hill which directly overlooks and is in close proximity to downtown Hollywood on the south, and Cahuenga Pass and Hollywood Bowl to the north. The District has always been associated with the film and theatre industries as the home of many world famous celebrities. H. J. Whitley's concept of it as a Mediterranean hillside village has not been altered over the years. There have been few significant alterations to any of the structures, and with the exception of governmental condemnation on two areas of the District for civic projects, the area is still a model of community planning.

The area in Hollywood north of Franklin Avenue, bounded on the west by Highland Avenue and on the east by Cahuenga Avenue, forming an apex at Cahuenga Pass was developed very slowly during the first two decades of the twentieth century. It's central and very concentrated period of development occurred between 1918 and 1928 with several notable homes being erected during the subsequent decade. Planned and developed as an upper middle-class, single family residential area, it was designed to resemble a Mediterranean hillside village composed of small villas on irregular lots that would insure the uniqueness of each home and view. The architecture is predominately Mediterranean. The restrictions on the architecture of the area, imposed after the 1918 sub-dividing of the tracts, stated that all residences, garages, and outbuildings, "shall be of the general Italian or Spanish type of architecture with plastered exteriors." There was a view guarantee in that no home could be built more than one story high or twenty feet at street level, or downslope. This insured a view for everyone on all levels of the hillsides. Over three-fourths of the houses in the area were constructed to these specifications, and as very few have been demolished or radically altered (except for civic projects, which will be mentioned later) there remains a real architectural homogeny.

The concept of hillside development in the Hollywood area was new in 1918, and was brought to a successful completion by Mr. Whitley and his associates within the next decade. Roads were graded and retaining walls were constructed for many of the steep embankments. These walls function sixty years later as do the flights of pedestrian steps that were built to connect different levels of the hill to the streets below or above. Six flights of these steps are in use today, enabling a pedestrian to traverse the entire hill on four different levels. To protect automobiles from backing off the steep grades, decorative iron posts and heavy oblong link chains were installed on the streets. These are still in use at several intersections. Due to the efforts of the WHITLEY HEIGHTS CIVIC ASSOCIATION, now the oldest continuing Civic Association in Los Angeles, electrical lines and utilities were placed in underground conduits, (still a novel idea in the early twenties), and by 1926 all of the streets had been paved in concrete, which is still in use today. The street lamps currently in use date from the late 1920s.

The streets are narrow and vary generally in width from 20 to 30 feet with many homes being built to the curb line. Those homes that were built without street frontage (i.e. on the

connecting flights of steps) or on steep lots that excluded garages being built, were originally provided for in the tracts by having narrowing lots between intersecting streets designated as row garage lots. These garages are still in use between Grace Avenue and Whitley Terrace. Row garages were also provided at the street level of the steep lots on Milner Road and Las Palmas Avenue.

No two lots are quite alike on Whitley Heights. The terrain constantly changes with curving streets and steep to gentle slopes. Every house was built with a view and many homes have several distinctly different view lines. As foliage has grown up over the years, these views have changed but little, as the houses are so well sited. Many of the homes were designed to be built below the street level, but extending downslope for two or three stories Others connect with the street at the first story, and then are built down for another two stories. The houses built above the curb line are generally two storied although several on the crest of the hill are three storied. The siting of many of the houses on irregularly shaped lots was innovative at the time of construction and remains so today.

The boundaries for the District are determined by the traditional R-1 boundaries that define the area of the WHITLEY HEIGHTS CIVIC ASSOCIATION.. These differ very little from the original Ocean View Tract and Grand View Tract boundaries except in those areas of government condemnation and demolition. The area encompasses only three commercial properties. They are small apartment complexes from the 1920s at 1979-85 Whitley Avenue, 1916-18 North Las Palmas and 6510-16 Cerritos Place. The feeling of a residential village is dispelled as soon as Grace Avenue and Whitley Avenue begin their downslope grades to Franklin Avenue, bounded by apartment buildings and condominiums. Emmett Terrace is a through street and the southern flank of the District. Cerritos Place leads to the easterly cul-de-sac of Holly Hill Terrace. Whitley Avenue, Wedgewood Place and Whitley Terrace form an irregular oblong around the crest of the hill with Bon Air Place and Milner Road being exits to Highland Avenue. The northernmost area in the District are the three homes on Fairfield Avenue, a cul-de-sac, which is connected to Wedgewood Place by a stairway. The areas western boundary of Las Palmas Avenue from the west side of the curb has always been zoned for commercial properties as these lots run through to Highland Avenue. The three exceptions are the homes at 2049-51 and 2055 and 2057 North Las Palmas Avenue at the intersection of Milner Road.

The County of Los Angeles owns all of the land to the northwest of the District, which it leases to the Los Angeles Philharmonic Association for it's Hollywood Bowl parking lots. These lots have been carefully landscaped and maintained and there exists between them and the District a green zone of picnic areas, with large trees and shrubberies planted on the steep slopes that border several of the homes on Milner Road and Watsonia Terrace.

The Hollywood Freeway project brought about the demolition of many Whitley Heights homes in 1948 and 1949. The hill was bi-sected, and an area west of Cahuenga Boulevard, composed of a short portion of Whitley Terrace and Iris Drive was isolated from the western remnant of the hill and disassociated from it from that time. It is extant today, with it's remaining fine homes, a much smaller area than it's sister neighborhood, Whitley Heights. This area is not included in the proposed District. Whitley Avenue now became connected to

CONTINUATION SHEET ITEM NUMBER 7 PAGE 3

the bi-sected Whitley Terrace, and our streets were turned in on themselves to serve only the area residents. There are now no through streets from major avenues below the hill.

In 1960, 1961, and 1962 the proposed Hollywood Museum north of Milner Road and east of Highland Avenue caused more condemnation and demolition to structures that had been a part of Whitley Heights including some that pre-dated it. The Freeway had taken Charlie Chaplin and Rudolph Valentino's homes,[1] among others, and now the Hollywood Museum took Bette Davis's first Hollywood house on Alta Loma Terrace, which was pictured in her autobiography "The Lonely Life".[2]

The Museum was never built. Asphalt parking lots have been laid in this area, but landscaped and maintained as earlier described.

In the early 1970s, the Hollywood Freeway was widened, and four more homes were demolished. Again these lots were never used, and today the land has been landscaped by the state.

Whitley Heights has survived all these events, and still preserves it's architectural look of a Mediterranean village. It still has all the time proven marks of innovative, pioneering community planning, and it still engenders excitement because of its unique history. These three aspects of the area make it significant.

Statement of Significance (in one paragraph)

The WHITLEY HEIGHTS HISTORIC DISTRICT is significant for its Mediterranean architecture and for its association with H. J. Whitley, a major land developer of the period, its hillside community planning which was innovative at the time of its development and remains so today, and for its theatrical and film cultural heritage as a residential area for theatrical celebrities.

The WHITLEY HEIGHTS HISTORIC DISTRICT, which has been an historical point in the trade and traffic route through Cahuenga Pass, first by the Indians and later by the Spanish, was developed by Hobart Johnstone Whitley. By 1918 he owned virtually all of Whitley Heights, with the exception of those lots he had already sold.

The first structure was a mission-style roofed Pavillion built in 1903 on the western crest of the hill at the present site of 6675 Whitley Terrace. This was used for band concerts on Sundays to attract prospective buyers to see the views of the ocean and of the city. From this vantage point Mrs. Whitley gave the Hollywood Ocean View Tracts their names.[1.] This structure existed into the 1920s, and was the site of the first Hollywood Easter Sunrise Service in 1919, the forerunner of the annual Hollywood Bowl Service which began in 1921.

Mr. H. J. Whitley was a planner-developer of a once great, but now largely forgotten, reputation. A developer of cities for the western railroads in the last two decades of the nineteenth century, he created cities such as Guthrie, Chickasha, and Oklahoma City in Oklahoma Territory. In California he developed Corcoran, Van Nuys, Lankershim (now Studio City), Reseda, Sherman (now Sherman Oaks), Owensmouth (now Canoga Park), and many more. Often called "The Father of Hollywood" [2.] he was instrumental in laying the plans for the new city and naming it's streets. His company "The Los Angeles-Pacific Boulevard and Development Company" had the area surveyed and tract maps filed. He planned and built the "Los Angeles-Pacific Railway" [3.] which linked downtown Los Angeles to the new town of Van Nuys, thereby opening up the San Fernando Valley for development. The company of which he was general manager, "Los Angeles Suburban Homes Company" [4.] owned forty thousand acres of San Fernando Valley land, having bought out many large "ranchos".

On November 25, 1902, the "Los Angeles-Pacific Boulevard and Development Company" filed a tract map with the County Recorder's Office for "The Hollywood Ocean View Tract". This covered the south, west, and northern areas of Whitley Heights. On January 8, 1903, the same company filed the "Grand View Tract" which included part of the crest and all of the eastern slopes of the hill.

Sub-division was not to come until the end of World War I, and then Mr. Whitley is quoted in an article in the Los Angeles Times [5.] "Whitley Heights will be my last sub-division. I look upon it as the culmination of a lifetime of development, and frankly, the most beautiful piece of property I ever developed. I have owned and held it for about eighteen years with the idea that it should be my last piece of development work." Mr. Whitley

likened the Hollywood Hills to the Mediterranean hillside villages where he vacationed. He had his principal architect and contractor, A. S. Barnes, study the detailing of the Mediterranean area from Spain to Italy. The homes designed and built by Mr. Barnes include many interior as well as exterior features not seen in Los Angeles before 1920, but much copied afterwards.

The Whitley Heights area was being built just as the fame of Hollywood and it's film industry was being noted throughout the world. Many screen stars, directors, writers, producers, musicians, art and set designers, and cameramen lived on the hill in the 1920s, establishing it as a celebrity neighborhood. Many of these residents owned their homes while others rented or sub-leased. Sight-seeing buses, filled with tourists, drove the narrow streets in the early days, the driver announcing through a megaphone that Rudolph Valentino lived at 6776 Wedgewood Place with his designer wife Natasha Rambova, or that Barbara La Marr lived at 6672 Whitley Terrace in the partically hidden little villa built downslope from the street. Francis X. Bushman and his wife Beverly Bain lived at 2020 Grace Avenue, later the home of Tyrone Power, Blanche Sweet and Burton Holmes, the first great travel-lecturer. Directors Sidney Franklin and Monta Bell were neighbors at 6658 and 6666 Whitley Terrace while Joseph Schildkraut and Chester Morris lived next door to each other at 6660 and 6662 Whitley Terrace. These are but a very few of the famous names connected with the homes of Whitley Heights. In the book "David Selznick's Hollywood" [6] there is a map of Hollywood drawn in 1926 that illustrates the "golden age" of this city. Whitley Heights is drawn very near the center of it, and there are homes indicated on the hill that were notable as gathering places for film people. One of these indicated was the home of Eugene O'Brien, a silent era leading man. In "Pictorial California", October 1929, his home at 6691 Whitley Terrace was featured in a photographic essay.[7] The pictures of fifty-three years ago match almost perfectly with the house as it is today. While, by the nineteen-thirties, the accepted address for stars had become Beverly Hills or neighborhoods westward, Whitley Heights has continued to the present time to be home to many notable film people and to designers, artists, and musicians

Many of the homes were designed by notable architects. Arthur Barnes was the architect-builder who designed more Whitley Height's residences than any other. He worked closely with Mr. Whitley from the beginning and designed and built many homes in the Camrose area as well. This is the hillside area across Highland Avenue from Whitley Heights that faces the western side of the hill. This area was also developed by Mr. Whitley as Ocean View Tract #2, and while today it is an R-2 zone, the two hills are very similiar in appearance, and both retain a village-like community feeling. This is due mainly to the designs and innovations of A. S. Barnes. His studio was called "Ye Planry" and was located at 212 Mercantile Place in Los Angeles. A later studio was located in the Story Building.[8] Early residents tell of his insistence on only premium materials such as the interior paints from Holland that arrived in pottery crocks and were so thick that they had to be applied with wooden spatulas, much to the chagrin of the painters. A list of his specifications for materials and methods to be used in the construction of 6633 Emmett Terrace is available, and is exacting far beyond present day standards. Every house in the area has some wrought iron on it. The Barnes designs for iron as window framing, balconettes, balustrades or lamps are still functional as well as being highly individualistic within

the whole concept of his design. Mr. Barnes was active in the area into the late 1930s.

Mr. Gunn, a contractor, was allowed to try a new material and process on the exterior of several homes. This was a framework of steel mesh sprayed with a very hard, fast-drying cement. The process proved unprofitable to Mr. Gunn, but the houses shelled in "gunnite" are in excellent shape today, the exterior looking like stucco, but being almost maintenance-free. The process is widely used in construction today.

The imminent German designer-architect Paul Lazlo designed the moderne home at 6624 Whitley Terrace. He is famous for his interior designs as well as furniture, stemming from the "Bauhaus School".

Another German emigre Kem Weber, designed three houses in 1925 and 1926. He designed a house for himself and his family at 6707 Milner Road, and the large villa at 6727 Milner Road, and a very excellently sited house at 2062 Watsonia Terrace. The 6727 Milner Road home was published and photographed in "Better Homes" Spring Issue of 1925, 9. and is little changed today. Mr. Weber was noted as a set designer for Paramount Pictures, as well as his furniture designs. He also designed the Los Angeles Mayfair Hotel, and The Walt Disney Studios. A retrospect of his work was organized by David Gebhard and Harriette Von Breton at U. C. Santa Barbara in 1969. A newer house on the hill was designed by George Vernon Russell in 1952 at 6675 Whitley Terrace. This was the original site of the bandstand Pavilion, and later of one of the Whitley Real Estate offices. This Russell house and the house at 2055-57 North Las Palmas Avenue, built in 1929, are mentioned by David Gebhard in "A guide to Architecture in Los Angeles and Southern California". On page 143, he describes the Las Palmas house as "a charming Hansel and Gretel in this storybook area. This area near the corner of Highland and Hollywood Blvd. is one of the few in Los Angeles where you can actually park your car and walk to dozens of things". 10.

Arthur Watson, a builder and developer, and Harry McAfee, the artist-architect who later headed the Departments of Set Design at both MGM and Paramount Studios, designed and built the houses at 6708 and 6753 Milner Road and 2058 Watsonia Terrace. The section of Whitley Heights from the northern portion of Milner Road from 6756 uphill to Whitley Terrace and the whole of Watsonia Terrace were the last parcels of land on the hill to be developed. Arthur Watson purchased this parcel of land from the Whitley Company in the early 1920s and extended the streets and sold the lots. Harry McAfee also built the house at 6740 Milner Road from blue prints which he expanded of a house in Amalfi, Italy. 11.

The Whitley Land Company offered a discount on lots sold if the buyers would build a residence to specifications within a certain time limit. This was such a successful incentive to build that the community was nearly filled in with completed residences in a very few years. The Italian, Spanish restrictions expired in 1928. Until after World War II, there were only a few houses built in the remaining lots, notably a fine example of California Moderne at 2047 Grace Avenue, and in 1936 a Mediterranean house with moderne influence at 2071 Grace Avenue. A house, purportedly from the Schindler Studios, was constructed at 2000 Grace Avenue. After 194[illegible] and particularly after 1950, when the

Hollywood Freeway had bi-sected the hill, the remaining lots began to fill up with modern and ranch style homes. As most of these remaining structures were built downslope, these homes are not intrusive to the Mediterranean feeling of the area. None are more than one story at street level, and all are landscaped with trees and shrubbery. Of a total 166 homes, there are 23 homes built after 1939.

The architecture of Whitley Heights is unusual in its homogeny, and in the relatively few changes which have taken place on the houses in the past sixty years. It is one of Hollywood's oldest, least damaged neighborhoods of real architectural integrity. Its retaining walls, flights of steps, streets and vistas proclaim imaginative builders from another time with durable visions and materials. The continuing interest in its Cultural Heritage and unique celebrity status mark it as a "one-of-a-kind-community".

Gentlepersons:

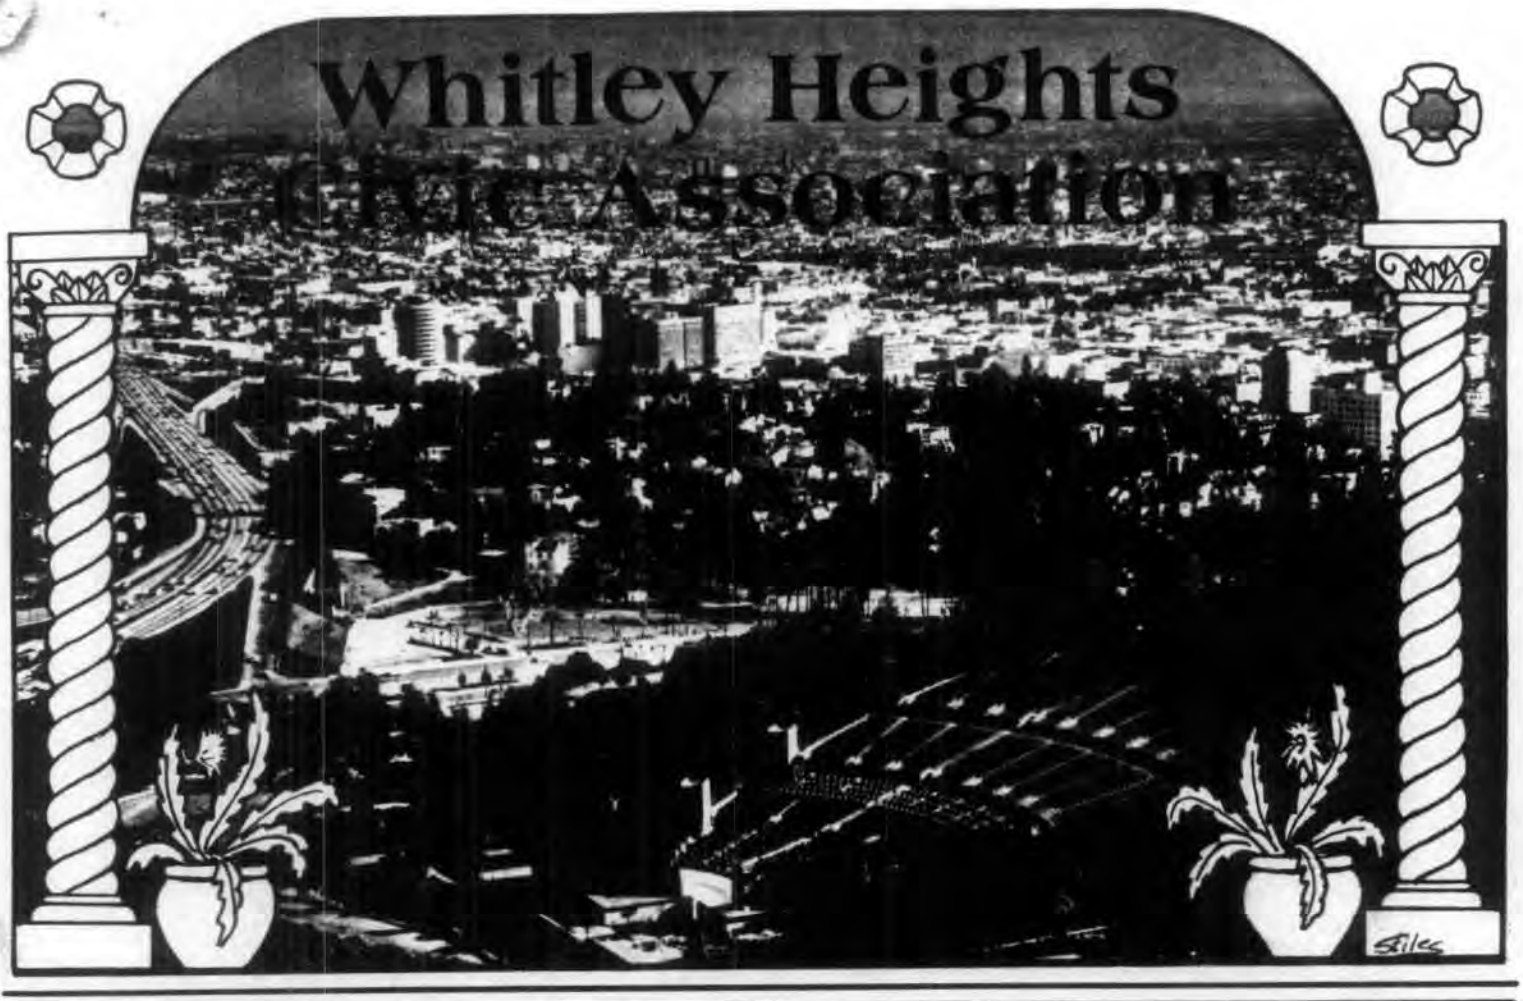

It is my understanding that the area in Hollywood, California commonly referred to as Whitley Heights is being considered by you as an area for historical preservation. As the owner of the single-family dwelling at 6675 Whitley Terrace, located in the area of your consideration, I wish to give my whole-hearted support of this effort.

It may interest you to know that my house was built in 1951-52 and in the year of 1954, was awarded the national prize as best house of the year by the American Institute of Architects. Regularly people knock at my door to ask to see this architectural gem, which was designed by George Vernon Russell, the noted California architect. The house itself deserves recognition and preservation, but the good fortune of having it incorporated into the Whitley Heights area as a historical place can only serve to enhance the historic significance of this remarkable area. Let me urge you to give this your unqualified support.

Yours truly,

DMZ/ch
cc: Brian Moore, President
Whitley Heights Civic Association

Whitley Heights Civic Association

Vol. 7 No.1 Spring 1980

PRESIDENT'S COLUMN

by Richard Stiles

This spring has really charged in like a lion with your Association busier than ever dealing with the many problems facing our hillside community. Our major problem has been the surge in development on and around our hill. Even long time homeowner supporters such as Councilman Joel Wachs is "-suggesting that the city consider relaxing some of its strict zoning and building rules to clear the way for more housing-" L.A. Times April 10, 1980. I don't believe that more density within an established neighborhood is better, but will lead to overcrowding and decay. With our own preservation in mind, your Whitley Heights Civic Association has taken on city agencies and developers - not to stop all development, but to control the quantity and quality of that development. After all, once the developers move on to other projects, we have to live with whatever they leave behind.

The vigilance and support of the residents of Whitley Heights has been phenominal. Many of you have written letters and religiously attended meetings both on the hill and at City Hall. The results of your support will benefit all of us for years to come. Ken Feingold, whose service as legal council has been invaluable on both the 2020 Grace Property and the 2037 N. Las Palmas proposed development, has written an article for this newsletter along with Brian Moore, another devoted member in this fight, that will give you more details and an update.

I know a few people are disappointed that we could not stop all development, but of course that is not realistic. We were able to modify the 2020 Grace proposal by reducing the density by one-third and saved most of the trees. Also, all garages will now be located inside the property instead of on the streets as previously planned. Even a condition was added that all architectural improvements should be consistent with the Mediterranean design of existing hillside homes.

At 2037 Las Palmas we did not oppose the Townhouses that will be built on the property between Highland and N. Las Palmas after the owner met with us and modified his plans to make all vehicular traffic enter and exit on Highland. A fire gate will be the only access from Las Palmas and a very attractive stone and wrought iron wall has been designed for that side of the development. Las Palmas will also be widened along that side of the development which should provide more parking for our residents.

Councilwoman Peggy Stevenson along with her Chief Deputy, Sylvia Yuster and Mark Brown have given us full support in our efforts to control the quantity and quality of development in our area. Mark Brown has been a strong spokesman for our cause at the hearings and Sylvia Yuster keeps us updated on pending development. We really owe them special thanks for the many times they help.

ASSOCIATION LIMITS DEVELOPMENT OF 2020 GRACE

by Brian Moore & Ken Feingold

On February 17th, fifty concerned members of the Whitley Heights Civic Association met at the home of Richard Lewis and Bill Reagan to discuss the filing of a proposed tentative map for 2020 Grace Avenue. At the meeting, it was revealed that nine separate homes with four garages facing Whitley Terrace and an additional garage and entrance on Grace Avenue were proposed by the owner, Ester Kascle. The proposal included no provisions for preserving any of the historic trees which were planted by the first resident of 2020, Francis X. Bushman; and further, no architectural design would be guaranteed for future development.

At the regular Whitley Heights board meeting on February 19th with Ken Feingold of Milner Road in attendance to offer legal counsel, the board mapped out its strategy to preserve the historic site on our hillside, to reduce the number of single-family homes proposed, to save as many trees as possible, and to prevent any ingress or egress to existing streets.

Supported by thirty activated members, the Association appeared on February 20th at City Hall for the public hearing on the proposed development. Robert Primes of Watsonia Terrace contributed valuable slides of existing architecture and terrain; Brian Moore offered a history of the site and its many illustrious residents; and President Dick Stiles, Richard Whitfield, Dennis Duggan, Richard Lewis, Howard Magwood, and Antonia Robertson voiced concern for preservation of trees, comparable lot size and zoning, parking and traffic congestion, water and drainage difficulties, and other problems resulting from the proposed nine-unit development.

The members of the Association unanimously felt that the advisory board was sympathetic to the opposition voiced. The advisory agency requested that the owner meet with the Association to accomodate our concerns.

On March 18, at the next regular board meeting at the home of Howard Magwood, Ester Kascle and Paul Cooke, a civil engineer, were present and proposed a revised plan calling for the development of six lots, entrance to which would be self-contained from the now-existing private driveway with the exception of one lot on Grace Avenue and one lot on Whitley Terrace. Through further negotiations, the Grace entrance was eliminated, and it was agreed to preserve almost all driveway trees and the five large palm trees adjacent to Whitley Terrace. The Board felt that since six new lots proposed were larger than many of the existing surrounding lots, future reduction of lot size was unlikely to be required.

On March 26, twenty-five members re-appeared at City Hall to voice their views. At the meeting, specific trees, including many interior trees at 2020 Grace were designated to be preserved; and architectural condition for requiring Mediterranean motif including red roof tile on new construction was specified; and the entrance on to Whitley Avenue was approved upon the stipulation that there will be sufficient turning area so that cars will not have to back on to Whitley Terrace. Additionally, each of the approved lots will be required to provide a minimum of two covered parking spaces and one additional guest parking space in an area other than a driveway.

While some members of the Association opposed more than 5 lots, their position was fully presented at the March 26 hearing by several members but was overruled by the advisory agency.

In the last two months members of the Whitley Heights Civic Association can take justifiable pride in the activation of so many individuals who have concerned themselves in a direct and meaningful manner to issues raised by the proposed development of 2020 Grace and 2037 N. Las Palmas. By united efforts the concerns of the Association were heard and legal conditions have been imposed on these developments to better protect and preserve our neighborhood.

BIG NIGHT UNDER THE BIG TOP

by Patti Faulkner & Sheila Werner

The night of February ninth, on the Fairfield parking lot, was one of the premiere performances of Circus Vargas. It was a magic night, a super production under the big blue tent and Whitley Heights Civic Association members were invited as special guests.

A truly amazing feat had turned the parking lot into a real live "Circus City", Big Top and all, in just a few hours. Yes, indeed the circus had come to town and settled right in our own back yard. There was no doubt of it, the elephants could be heard, trumpeting their arrival all over the hill! During the weekend many neighbors were seen mingling with the circus people, watching the acts rehearse, the animals doing their tricks, and enjoying the sight of children riding the elephants. The local dogs had a good time too, checking out those strange beasts who had invaded their territory. For those of you who were unable to attend the Saturday night show, you missed a slick, classy sparkling performance, complete with gymnasts, aerialists, clowns and those oh so smart animals! How do they ever train the lions and tigers? (Very carefully, I hope.)

It all started as the Ringmaster made the announcement that they, (the circus) were able to use that location because of the courtesy of the Whitley Heights residents. Then the fanfare sounded and thru the entrance came the magnificent, glittering and sequined parade of elephants and costumed riders, animals and clowns all moving to the lively circus music. Even the performing Samoyed dogs that seemed to be smiling and having as much fun going thru their paces as the audience did watching them. There was the high wire act- so scary; then the aerialists-unbelievable as they sumersaulted thru the air defying gravity; and the beautiful lions and tigers - doing anything their trainer asked them to, with love.

They were well mannered guests during their stay with only a little noise from the animals, which most hill people seemed to enjoy. Also, we had no problems or known incidents from the general public. The Explorer Scouts and traffic officers did a fine job of screening the cars to keep non-residents off our streets. To say the least, it was a festive, fun evening and weekend. As a final thought, I keep remebering the Peggy Lee song "Is That All There Is?" No, I don't think so. There's the happy memory of becoming an awe-struck kid again, if only for a little while, and that was just lovely!

WHITLEY HEIGHTS AS A CULTURAL MONUMENT

by Brian Moore

Your Whitley Heights Civic Association Board of Directors has decided to step up its efforts to have Whitley Heights declared an "Historic Cultural Monument within the City of Los Angeles."

Section three of ordinance 121,971, in part describes such a site as -quote- "historic structures or sites in which the broad cultural political, economic, or social history of the nation, state, or community is reflected or exemplified or which are identified with historic personages or with important events in the main currents of national, state, or local history, or which embody the distinquishing characteristics of an architectural type specimen, inherently valuable for a study of a period style" -unquote.

Certainly we qualify on these points, for we live in an increasingly unique community that has managed, in spite of several dismemberments, to survive much as it was built sixty years ago by an exciting group of people many of whose names have been household words for decades.

The compilation of facts needed for each historic home is vital. We should all help. Anyone with information, preferably photographs or articles about Whitley Heights, please submit them for a copy and prompt return to: Brian Moore, 6711 Whitley Terrace- 874-8763. This project will benifit us all. We need information. Won't you help?

THE HERITAGE CORNER

This is the first in a series of articles that will appear in our newsletters about the events and personalities that have made up Whitley Heights Heritage.

At 6:30 A.M. on Easter Sunday morning, April 20th, 1919, the very first Hollywood Easter Sunrise Service was held - not at Hollywood Bowl - but on Whitley Heights, at the little Pavilion or band-stand which had been built by Mr. H. J. Whitley and his associates in 1903. This small structure was conceived as a shelter and resting place for prospective buyers of the new hillside properties, and as a viewing place for Catalina Island. Located at the present Howard Magwood home, the little band-stand was filled with worshippers that Easter morning, including many who had carried armloads of lilies up the steep hill.

Mrs George Eastman of Hollywood Feed and Fuel, had provided as a performing platform, a flat-bed truck with a piano on it. The choirmaster, Mr. Hugo Kirckhofer, had prepared a group of singers to present the Easter music and the soloist, Mrs Ella Beck, took her place on the truck by the piano and commenced the opening hymn, "Come See the Place Where Jesus Lay." Suddenly disaster seemed imminent! Due to the spring rains, which had stopped only the night before, the muddy hillside slope could not retain the weight of the truck and it began to move downhill in mid solo. Mrs.Beck's composure was deemed admirable as the Reverend J. H. Lush, officiating, and the men in the audience hastily moved against the back of the truck, holding it in place until the hymn was sung. The wheels were then chocked with heavy stones and the service continued without further mis-hap.

REPORT FROM FOOTHILL PATROL

by Larry Saye

It has been a pleasure serving Whitley Heights Association for the past year. We have seen a consistent reduction during the past year of crime statistics over the period prior to the inception of the patrol, and also over current statistics for adjacent neighborhoods. We are continuing to make every effort to constantly improve our company and our service to you.

For the past six or seven months we have maintained the same officer working your area. His name is Dan Stivers, as I believe you are aware. Dan is very conciencious and has made your neighborhood's security his personal concern. He probably is more knowledgeable about your area than most of the neighborhood residents.

There has been a drastic reduction in our statistics regarding the number of doors, windows, and garage doors left open. This reflects an improved attitude and awareness of security among the members of your neighborhood. Further evidence of this is that a much higher percentage of our contacts with suspicious persons and vehicles are now generated through calls from homeowners. The overall number of suspicious incidents has gone down substantially.

I feel very strongly that our own statistics, and police crime statistics, show that the patrol service is accomplishing its goals. It goes without saying that it has not solved 100% of the problem and probably never will, however, the more participation we can get from the homeowners in your neighborhood, the more effective the service will be. The number of patrol subscribers per total number of homes in your neighborhood is fairly low. Those who are not subscribing to the patrol should be made aware that joining would bene not only themselves, but the whole neighborh

In the crimes that have occured, we can almost always identify a weakness in the secu ity of the house that invited the attempted break in. It would be very helpful to all of your residents to call us for a free securi inspection of their homes. It is better to identify security flaws before a crime occur and to correct it, than it is to understand how and why a crime occured.

We look forward to a continued relationship of trust and success. We invite anyone who has any complaint regarding the patrol service to call our office and speak to Larry Saye or Mike Greenwald, and promise to take swift corrective action on any problems brough to our attention. We want all members to trul feel that they are receiving more service than they expect.

← We hope to have more of these interesting articles such as this one researched and written by Brian Moore as you, the residents, come forth with more history of the hill.

POSSIBLE LOSS OF WATER & POWER

by Richard Stiles

On April 18 I joined 36 community leaders on a 3 day inspection tour of the Los Angeles and Owens Valley Water & Power facilities. The tour was conducted by our own Los Angeles Department of Water and Power in an effort to inform the consumers both as to the present water and energy sources as well as the effects that would be brought about by the loss of any of these present facilities.

The Los Angeles Department of Water and Power is the largest municipally-owned utility in the United States. It has the almost overwhelming task of providing not only the present energy and water needs of its citizens and industries, but must plan and prepare for the future needs and all this without any tax support. It must rely upon the sale of water and electricity for its operating funds, and augments this income by the periodic sale of revenue bonds to finance expansion and remodeling of its facilities.

Two measures in the California Legislature could have a critical effect on Los Angeles water and power resources, and on utility costs to customers. AB 2235 would compel the DWP to surrender 85% of its water diversions from streams flowing into Mono lake in the High Sierra. This means not only a loss of water for L.A., but a loss of hydroelectric power generated by the fall of water. To replace this non-poluting source of electricity would take 500,000 barrels of oil a year. To replace the water which flows without pumps down to our city would take another 500,000 barrels of oil to pump replacement water from the Colorado River. Los Angeles' use of Colorado River water will be terminated in 1985, so we can say goodby to that source of water.

In its early planning, our city bought the water rights to the areas in question in order to secure a permanent source of good water for the city. If some environmentalist who have a highly organized campaign are successful, AB 2235 would deprive the city of valid water rights that it has held for over fifty years. Los Angeles would loose an important water and power source and we the consumers would pay the costs for this sacrifice. No one wants to be unsensitive to the environmental considerations of the effects of diversion of water from Mono Lake, but during the present fuel crisis this is no time to close down hydroelectric power plants until we have something else on the line to replace them. We have already spent billions on nuclear plants that are being kept closed, and the same people are trying to close down those that are currently operating.

The magnitude of the problem is far too great to be solved by the 15% conservation suggested by some. Current plans call for a number of coal powered plants and geothermal and solar projects are being tested but it could take a number of years before these are a major power source.

The Department of Water and Power has worked hard to get these sources of water and electricity on the line, but it will take the efforts of we the consumers to counteract the organized efforts of environmentalists and those in other parts of the state just plain anti-Los Angeles. They would prefer we just dry up and blow away. Don't wait until the water is rationed and we have blackouts to write the State Legislature.

A SPECIAL THANKS TO RETIRING BOARD MEMBERS

by Richard Stiles

Things are always changing and that includes your Board of Directors. I know that many of you will be as disappointed as I am that four of your present board members will not be serving on the board after June 30th. Richard Lewis and Tod Jonson will be stepping down because of the extreme time demands of their occupations. they have really served above and beyond the call of duty and are the best example I know of of dedicated service to their community. For years they have inspired us all with their hard work and enthusiasm. I hope that Art Lloyd, another retiring board member, won't mind me calling him a work horse, because in addition to his good council in the meetings, he has thrown his strong arm into setting up the auctions and parties. Howard Magwood, a new board member this year, has brought new ideas and balance to the Board of Directors. For several years now, he and his family have graciously lent us the use of their property for auctions and parties. We will miss this wonderful family who are leaving our hill. One of the board members who is leaving made a very selfless statement, "In order for new ideas and new people to come on the board, someone must leave the board." Our love and thanks to all of you for your service.

UPDATE

FINAL ARTICLES OF INCORPORATION have been filed with the Secretary of State. We wish to acknowledge the work of Attorney Key Feingold who has so ably guided this long sought project thru for us. We are hoping that our non-tax, incorporated status will quickly be granted.

A GENERAL MEMBERSHIP MEETING for all members of the Whitley Heights Civic Association and those wishing to join the Association, will be held in the cul-de-sac of Watsonia Terrace Sunday June 22, at 2:00 P.M. (Same location as last year) This is a very important meeting for all residents to attend since you will be voting on your new Board of Directors. Remember, this is your meeting, discussing problems that effect your property, and your security. Be there so we can have your input.

OUR ANNUAL AUCTION is being planned for July 13th, so start collecting and searching out those auctionable items for this fun and fund-raising event. This year it will be held in a new location, actually the original site of our first auctions and parties, 6740 Whitley Terrace.

EVERYONE SUPPORT OUR PRIVATE SECURITY PATROL
The Foothill Patrol has really been doing a super job of patroling our streets and watching our homes. Everyone who watches the news knows that crime is rampant all around us so let's not loose this deterant or we will all pay the price. We should all share the cost of this protection which is $12 per household per month. Subscribers will find quick response to their calls for emergency help, or just to check out suspicious persons. Those not on our private patrol will have to rely on the police whose facilities have been stretched too thin to be effective. If you have lost the patrol announcement we sent out, then send $75 for 6 months of the security patrol to our Treasurer, Richard Whitfield, 2058 Watsonia Terrace. L.A. 90068. Make checks out to Whitley Heights Civic Assoc.

WHITLEY HEIGHTS CIVIC ASSOCIATION-NOMINATIONS FOR BOARD OF DIRECTORS

JUNE 1980 - 1981

☐ HENRY ANTOSZ	6657 EMMET TERRACE
☐ GINI COLVIG*	6620 WHITLEY TERRACE
☐ PATRICIA FAULKNER*	6674 WHITLEY TERRACE
☐ KEN FEINGOLD	6753 MILNER ROAD
☐ COLENE GILFORD	6717 WHITLEY TERRACE
☐ LARRY HARPER*	6672 WHITLEY TERRACE
☐ MARVIN LEFF*	6615 EMMET TERRACE
☐ MILDRED LORD*	6663 BON AIR PLACE
☐ JEANNE MANFRED*	2071 GRACE AVENUE
☐ STEPHEN MARSHALL	2026 HOLLY HILL TERRACE
☐ BRIAN MOORE*	6711 WHITLEY TERRACE
☐ ROBERT PRIMES	2062 WATSONIA TERRACE
☐ LAURIE SCHWARTZ	6733 WEDGEWOOD PLACE
☐ LOU STALER	2034 LAS PALMAS
☐ RICHARD STILES*	6526 CERRITOS PLACE
☐ JAMES THOMAS	2017 HOLLY HILL TERRACE
☐ HERMAN UNDERWOOD	6763 WHITLEY TERRACE
☐ SHEILA WERNER*	2133 FAIRFIELD AVENUE
☐ RICHARD WHITFIELD*	2058 WATSONIA TERRACE
☐ MEG WILSON*	2026 N. LAS PALMAS

NOTE: PLEASE MARK YOUR BALLOT FOR NO MORE THAN 15 CANDIDATES.

NOMINATING COMMITTEE:

GINI COLVIG JULIA BARRY CHARLOTTE VIEIRA

* INDICATES INCUMBENT MEMBERS OF BOARD OF DIRECTORS.

BRING THIS BALLOT WITH YOU TO THE GENERAL MEMBERSHIP MEETING
JUNE 22, at 2:00 P.M. WATSONIA TERRACE CUL-DE-SAC. 2058 WATSONIA

INTRODUCTION

The following brief history of Whitley Heights was written by Ms. Margel Gluck in the late 1950s.

Ms. Gluck was President of the Whitley Heights Civic Association from 1952 until 1955. A violinist, she resided at 6726 Milner Road, which she had purchased in 1929.

PREFACE

About two years ago it occurred to your committee of the Whitley Heights Association that it might be very interesting to residents on our Hill to know more about the history of this part of Hollywood. This particular community has quite a background, especially in the twenties, when it was the undisputed center for homes of the picture colony of the silent screen. The search for records and data on those early days took much longer than we had anticipated, when a few members of the Committee volunteered to see what they could find out. Written records are few, and recollections of the old residents are often a little vague as to dates, which is not surprising. We have tried to compile as much as possible, depending much on the kindness and interest of neighbors on the Hill. It seems inevitable that some inaccuracies and some conflicting memories may be found in this narrative, and for that we ask your indulgence. If anyone has corrections to make, we will be most appreciative, for when one starts digging into times from 20 to 50 years ago, it is almost impossible to obtain corroborative evidence, or to check on dates etc.

A half century ago Whitley Heights looked like its sister hills to the north, a tangle of sage brush, chapparal, yucca, live oak and the other natural growth of Southern California. In the spring, native California flowers covered the fields, poppies, lupin, mariposa lilies, wallflower and the "sticky monkey flower", all these still to be found on the few empty lots remaining.

Deer roamed the hills as they still do, farther out now beyond the Pass. Rabbits, squirrels and oppossums abounded and stray "possums" still appear from time to time, bundling along the road in search of food. At night, instead of the rush and boom of cars and trucks that now pour through the Freeway cleft - the only sounds were the high shrilling of moon-struck coyotes or the night song of the mocking bird, while the owl complained of such as doth molest his solitary bower.

The owl could see the moon in those quiet nights, for no industrial haze blanketed the hills and fields. Whitley Heights itself afforded an excellent view of the Los Angeles Basin and except during the rains, one could be sure of daily bright blue and golden sunlight - clearly showing Catalina Island, humping out of the ocean to the south.

It is hard to picture that less than 50 years ago the only way through Cahuenga Pass was a rustic wagon trail winding over the wooded irregular ground about thirty feet west of where Highland Ave. runs today. This road paralelled a spring-fed stream whose course could still be seen back of the school at 2140 Highland, as late as 1956. The old creek bed the school now replaced by a parking lot for the Hollywood Bowl.

The first report of any habitation in this vicinity is little more than a rumor, told us by Mr. John Hendricks. It seems that somewhere around 1876 a little adobe shack is supposed to have stood on the banks of the above mentioned stream near Odin, 50 feet east of Highland Ave. Here an old Indian crone, known as the "Witch Woman" lived alone. She had great repute as a fortune teller who could peer into the future. It is said that the more courageous ladies of the day, came on horseback from their haciendas, far or near, to consult this old woman on their affairs of the heart. One can inagine the delicious fears and thrills that must have enlivened such expeditions. If this seeress could have looked ahead to 1956, she would have been more frightened than any of her clients!

In the late eighteen hundreds, A Mr. H. J. Whitley made his leisurely way down the coast from his home in Canada, with plans for settling somewhere in California. He was interested in real estate and saw a great furure for this part of the world. He finally decided on Los Angeles - then little more than a sprawling town. Whitley arrived here in 1893, and after opening a jewelry store in the town, began to look around for likely investments. In 1900 he formed the Los Angeles Pacific Boulevard and Development Co. and bought a tract bounded by what is now Cahuenga and Highland to the North and East - and extending south as far as Yucca. A little later he addedpart of the Rancho La Brea estate - owned by Mrs. Ida Hancock whose property farther south along La Brea, Later became an oil field.

Before many months passed, homes began to appear along Wilcox, Yucca and Hollywood Blvd., then known as Prospect Ave. Only the level ground was favored for building. Whitley Heights was used for a reservoir which was located where the Burton Holmes house is now - at 2020 Grace Ave. The pumping station for this water supple was at the corner of Las Palmas and Franklin Ave, now Las Palmas Playground. The old wall and huge eucalyptus trees are still there. Mr. Whitley called the Heights "Ocean View Tract" as it truly was at that time. He built a little pavilion on the topin 1903 - which is now 6675 Whitley Terrace, built by John Pike in 1952. This Pavilion was used to show the view to prospective buyers and later became a band stand where they had many open air concerts. A casual dirt road called Curlew Drive circled the top of the hill where Whitley Terrace is now. To get to this road, there was an entrance on the East side off Cahuenga which was not too steep for carriages or the early motor cars. A fine orchard of Kadota figs was planted covering ground from the top of the hill down to Wilcox Ave. and including what is now Holly Hill Terrace.

By 1903 most of the flat land of Mr. Whitley's Company had beenbought and much of it built on. No one wanted hilly property at that time and the Whitley Heights section was presented to Mr. Whitley by the Company, as an appreciation for his services and it is to be supposed because he was one of the few who saw a future for hillside homes.

The first house which is still standing, was built on the Highland Ave. side of the Heights by a Mr. Hussey in 1905. He purchased a tract of some acres running from the

dirt road through the Pass, up the hill to where Whitley Ave in now. The South boundary was marked by a row of eucalyptus trees south of 2049 Las Palmas, some of which still stand. The North boundary was just north of Mr. Hussey's house at 2104 Las Palmas.

When Mr. Hussey and his wife and little girl decided to build a small home here, he first had to put in a bridge over the stream so he could drive his wagon in and out. He built a small frame house which was later sold to Mr. Henry Tracy, who added to the original house and still lives there. Mr. Hussey was a miner and prospector and he attached a gold rocker to the lower part of his bridge and panned for gold in the stream. His horse grazed in the surrounding fields. Some one was running cattle on the Cahuenga side of the Hill at this time. At sunset they would wander down to drink at the stream. Re-inforced from time to time, Mr. Hussey's original bridge was still there as late as 1930 (later?) when it served as an entrance to Milner Road and Las Palmas. Originally, of course it was just a private driveway for his home.

In 1911, evidently not having found as much gold as he had hoped, Mr. Hussey sold to Mr. Tracy. The property was still pretty wild and largely in its natural state.

Mr. Henry Tracy has given us some memories of those days. He said that Highland Ave. was unpaved, with dirt sidewalks and a little green "Toonerville Trolley" car ran between West Hollywood and the Pass, via Santa Monica Blvd. every half hour. This car would stop anywhere on request. He recalls seeing flocks of sheep being driven north on Highland and a huge elephant, escorted by a keeper who walked alongside - probably on its way to Universal Studio.

He relates how steep the hill was,(Whitley Ave.) for the early automobile days. It was used as a test hill for cars. The First machine to make the grade to the top was a Locomobile in about 1912. The early Hill days were plagued by grass fires which often swept the area and which Mr. Tracy had to fight to save his home. These continued as late as 1918, when the Hill was subdivided and houses began to spring up on the slopes. The flat boundary sections were built up earlier.

The second house to go up on the Heights was on the East side at the corner of Cahuenga and Whitley Terrace. This was a small five room building with a dome top, built by a Mr. Curry in 1906. In 1908 Mr. J. G. Somers bought about ten acres along the Cahuenga

side of the Hill, including Mr. Curry's house. This comprised all the section which was later Iris Circle and Iris Drive and ran to about the center of where the Freeway cut is now. Mr. Somer enlarged the Curry house, which was well built of poured concrete, adding 10 rooms, in the style of the era, with domes and cupolas. This house is still there, domes and all! All this section was at that time county property.

Mr. Somer's daughter, Mrs. Helen Otis, now lives at 6851 Iris Circle; and from her we learned that while Mr. Curry still owned the house at the corner of Cahuenga and Whitley Terrace, he had a severe illness and employed the services of a male nurse to take care of him. This young man subquently eloped with Mr. Curry's daughter Lillian. Their first child was later known as Lita Gray Chaplin, the mother of Charlie Chaplin's two sons.

In 1912, Mr. Somer's acreage was made City property, with a consequent increase of taxation. At this time he sold most of his holdings to a Mrs. Emma Hambleton, who in turn sold to Mr. Whitley, (from whom Mr. Curry originally bought this property.)

Mr. Whitley had meanwhile built a house at 6650 Whitley Terrace, for his own home. He gave this to Mrs. Hambleton as part payment for the acreage she bought from Mr. Somer. He then built a second house for himself in which he lived for a long time. This was 6682 Whitley Terrace, now owned by Mrs. Amanda Purdy.

Mrs. Otis speaks of the rapid increase in values on this Hill from 1908 on and cites as an example that when her father, Mr. Somers bought his ten acres from Mr. Curry, he paid $13,000; he sold four years later to Mrs. Hambleton (holding out about 1½ acres for hishis own use) and received $20,000 for the balance of the property. Mrs. Hambleton sold this property to Mr. Whitley for $65,000, of which $37,000 was allowed for the house at 6650 Whitley Terr. When Mr. Whitley later subdivided and sold this same property, he is supposed to have made in the neighborhood of $150,000.

The third home built on Whitley Hill may well have been the Burton Holmes house at 2020 Grace Ave. or it may have been the old frame house next to the Tracy's, 2106 Las Palmas. No one seems to recall the exact dates for these two homes. We have heard that a Mrs. Jewel built 2020 Grace Ave. about 1914. We also heard that earlier it was built and planned for a riding club, when Hollywood was still undeveloped.

During the years many distinguished people have lived in this house - Francis X.

Bushman - Blanche Sweet - O.P. Heggie and others.

The chronology of house building is lost after the first three. Bits of the Hill were bought from time to time and a few homes built, but the real development of the district began in 1918, when it was subdivided and planned as residence property by Mr. Whitley and his right hand man, Mr. Royal V. Milner. These men re-purchased most of the acreage they had previously sold - notably to Mr. Somers and Mr. Tracy. They then planned the whole section after the French Riviera, which Mr. Whitley greatly admired. The winding roads and planting of many trees aided this resemblence and building restrictions required Mediterranean acrhitecture and tile roofs to make high class residential property in harmonizing architecture.

By 1920 houses began to appear in increasing numbers on many parts of the Hill. Milner Road began at the foot of the Hill on Las Palmas and ran only to the first corner facing No. 6756 where there is still the circle to allow cars to turn around. Then Mr. Arthur Watson bought much of the acreage north of that point and opened up what is now the rest of Milner. He called it all Watsonia Terrace from the Circle to Whitley Terrace and built many of the homes still standing. Later when the streets were paved, the City re-named this all Milner Road and the present dead-end street originally named Watsonia Court is all that remains of Watsonia Terrace to commemorate Arthur Watson. Mr. Watson built 6717 Milner Road in 1923 and lived there some years. Many were the lively parties given by him in this home, attended by most of the Movie Stars of the Silent Screen.

The very first Easter Sunrise Service was held on the top of our Hill, in 1919 Those who recall it, say it was a memorable and touching occasion. In the dim light of early dawn, streams of worshippers made their way up the muddy roads. They carried arm-loads of white lilies and finally converged at the top by the little pavilion Mr. Whitley had built. By some miracle, a truck was able to make it to the top with a small piano or organ. Mr. H. Kirchofer - a well known choirmaster had trained a group of singers and the soloist, Mrs. Ella Beck sang the opening hymn to the silent crowd, but distaster threatened and suddenly the truck began to slip down the hill in the mud, The Rev.J.H. Lush the officiating clergyman and a number of men from among the onlookers, hastily came to the rescue and moved against the back of the truck, holding it in place until the song

was over. Perhaps this incident was why the next year the service was held on Olive Hill, and after that in the Hollywood Bowl.

By this time the motion picture business had swept Hollywood into the headlines. Patamount, Metro and other studios were on or near Vine street or Sunset, and Whitley Heights became the chosen spot for many homes by the stars of that day. Barbara LaMarr, Jack Gilbert, Pauline Fredricks, Harold Lloyd and countless others. Lew Cody as well as other directors, writers and executives all flocked here and built their homes. It was a very gay and colorful little colony of ready made neighbors as nearly all of these early settlers lived in the Hollywood Hotel, (a familiar landmark until 1956) and life in this family hotel was really like a large and carefree family.

The Craufurd Kents and the Jack Mulhalls were among the first on Milner Road, as their houses 6753 and 6747, were built in 1923, while it was still Watsonia Terrace. As there was no paving at that time, the rainy season posed something of a problem. Mrs. Kent recalls well how they carried rubber boots in their car and parked at the foot of the Hill. Fortified by the boots they would slosh and slide up the muddy street, wondering if it was worth it until sunshine came again and all was forgotten until the next year.

In spite of such primitive conditions, the Whitley Heights group was a very informal and friendly community. Every one knew everyone - there were parties practically every night and it was all a light hearted time. One old timer remarked that all anyone needed in the way of a wardrobe was evening clothes, plus what they wore to the studios.

Mr. Francis X. Bushman told an amusing anecdote to one of our committee members, which shows the carefree spirit of those days. It seems that Rudolf Valentino had an uncontrolable passion for dis-mantling motor cars. His home had a double garage but before long these were filled with cars in various stages of disintegration. When a car resisted all efforts to re-assemble it, Valentino simply bought another. He borrowed one of Bushman's garages for his third car. Mr. Bushman was living in the large house "Top Side" now occupied by the Burton Holmes and he had four garages. Presently two of those were filled with wrecks of cars with assorted nuts and bolts, the victims of Valentino's insatiable mechanical experimention. Here Mr. Bushman drew the line. No more garages

he told the crest-fallen Rudy, and get these cars together or else!

There was great pride in the Hill and its future. This included a hope for paved roads and a high standard district to be maintained. It was with this in mind that the Whitley Heights Civic Association was founded, in 1923. One of the founders was the first President, Mr. Harold Barter, with Mr. Somers as Vice President. These two men and their committee wrote the by-laws of the W,H.C.A. and after consultation decided that the first important thing was to have all utilities put in and placed underground before the roads were paved. This was not so usual at that time and convincing the city that it was essential to any high class community was a three year job involving hundreds of letters and meetings with various departments of the L.A. civic officials. Mr. Barter persisted, he had a fat volume of correspondence of that time. Finally he did succeed in that project - so we have no ugly telephone poles or surface wiring.

We all owe a great debt to Mr. Barter and those early committees, as their untiring efforts set the original tone for our Hill. Mr. Barter held the Presidency until 1930, a record length of time. The list of Presidents since then will be found in later pages.

During the 1930s, things went along in a quiet pattern. With sound pictures and the building of huge new studios farther west, many of the new stars settled in Beverly Hills, Whitley Heights developed a Garden Club and did a lot of planting and beautifying all over the Hill. New homes were built and the Association kept order, arranging for special street cleaning services and other improvements.

In 1940 we were confronted by the possibility of having our Hill cut in two by a Freeway. No one could believe that this would really be done. It seemed such an unnecessary sacrifice of one ofthe few remaining beauty spots in Hollywood. More immediate was the threat of war. When this actually came to pass and it was clear that in the event ofbombing, our section might be cut off from the City services, the Assoc. decided that we must get our own protection. Money was raised for this project by a series of Concerts, given by the Sinsheimer Quartette and assisting artists in various hillside homes. With the money raised in this way, our lical Fire Dept. was on its way! Our first truck was donated by the Golden State Milk Co. which had to be fitted out with hose and pumps and etc. An unused garage was made over to hold the truck and

official calls were taken at 2018 Whitley Ave. where all members of our Fire Dept. met., when an alarm was called. They had uniforms, tin hats and gas masks, and drilled regularly on week-ends with the Los Angeles Fire Dept., who were evidently impressed by the seroius purpose of our group and showed it when they later exchanged our little truck for a more modern truck donated by the Southern Calif. Gas Co. and fitted out by W.H. members. Our group was given a title - L.A. Fire Dept. Co. 27 Area 7 and the personnel consisted of Mr. Craufurd Kent (then President of the W.H.C.A.) Mr. MaDonald, Fire Chief John Anderson Jr., Russel Custer, Wm. Foster, George A. Grist, Norbut Nettleship, Edward Samaha, George Wing, Harold Barter, Peter Milne and others.

The ladies of the Hill contributed their share too, in organizing a Red Cross Unit. We met at 2118 Las Palmas (demolished in 1956) at the home of a Mrs. Auger and under instruction by accredited Red Cross teachers, learned how to prepare every type of bandage or first aid requirement. As the supply grew, portions were placed in various homes on all parts of the Hill, so it would be easily accessible in case of need. After the war, about a truck load was given to the Red Cross as, thank goodness, none of it was needed by us.

During the war, restrictions loosened up everywhere - and on our Hill no less than elsewhere. There was a terrible shortage of housing, toward the last years and we were begged to take in those who looked vainly for any place to live. Many Hill dwellers, now living in homes too large, since their families had grown up and moved away, rented rooms to help out and it made a great change in the character of our community. Once the shortage of living space was past much of the change righted itself, but in the nature of such things it was not immediately back to the old family basis. There were many ill advised efforts to change the zoning on the Hill. All these were steadfastly resisted by the W.H.C.A., and the Zoning Board backed us each time, recognizing that our narrow streets and blind corners made restriction a neccessity.

Our first really serious threat came in 1949. We were told then that our Hill was to be cut in two by a Freeway plan, to connect Hollywood and San Fernando Valley. It seemed to us that any community would be proud of a development like Whitley Heights. A real beauty spot, within ten minutes walk of the main street and yet with a real

country quality. Beautiful planting and great civic pride in this little section made it unique here - or anywhere in its homogenous and artistic planning.

We could not believe that this would be sacrificed, especially with an already established route only a few hundred feet to the north east. However we were told that the plans had been made elsewhere - lines drawn on a map with no regard to the terrain, no recognition of hills or valleys taken into account. It was admitted that shifting the local route to the Cahuenga Blvd. ready-made highway would have cost five million dollars less - but with a shrug we were informed "the plans are made now, they cannot be changed."

It was a heart breaking business and we fought to save our community to the last moment, but to no avail. A three or four hundred foot gash was cut through our lovely Hill, separating about a fourth of the hill from the rest. Forty or fifty beautiful homes were torn down including Valentino's lovely house with its famous mirrored floor. The old Harold Lloyd home was destroyed along with innumerable others. We all recognized that Freeways were needed but this seemed so ruthless and so unnecessary. It could not have happened anywhere else we feel, as most cities would have made every effort to preserve such a beauty spot, especially one with such a history of Hollywood's beginning for after all, Hollywood is noted for just one thing, motion pictures!

Well, it was done at last, the Freeway opened in 1952 and if it had been just for motorists we might have gotten used to it - but on top of all the rest it is now a truck route and all night long heavy trucks roar up and down the grades making night hideous and making sleep impossible for those who live near that dreadful gash that divided ourcommunity.

We have remained vigilant in trying to preserve what is left, planting has been kept up - houses have been painted - many built on the few remaining vacant lots and to anyone who had not known our Hill in the old days, it still appears a lovely place to live. Our Association is as active as ever though we lost another crucial battle in 1956 when it was decided to mangle the West side of the Hill, by tearing out some forty or more homes and destroying trees to put in a parking lot for the Hollywood Bowl. The idea of again sacrificing all this beauty which made the Pass entrance to Hollywood

a joy to see, for the sake of eight Saturday nights in July and August - the only nights crowded enough to require extra parking - shows again the curious disregard of beauty and civic pride which seems to characterize our city planners. Black top versus homes and trees.

We still have a lovely little section remaining - with a real community spirit and a quality of mutual good will and neighborly warmth which has always been a part of this Hill. Long may it survive - we need food for the soul as well as for the table.

A BRIEF HISTORY OF WHITLEY HEIGHTS

by

GRACE MORSE with VESEY O'DAVORAN

The Whitley Heights development began as a dream, a dream in the mind of Mr. H. J. Whitley who came to California in the closing years of the last century, fell in love with the California climate and natural beauty, and resolved to make this his home. He had traveled in Italy and the French Riviera and loved all he saw there, and he realized that the California terrain offered him an opportunity. He especially liked the Italian hill country and he envisioned the rugged hills of Hollywood covered with white stucco houses with red-tiled roofs, surrounded with gardens of luxuriant California growth. He began to subdivide in the early part of the century, had the property studied by a builder-architect named Barnes, then sent Mr. Barnes to Italy and France to acquire ideas, plans, and inspiration in order to adapt what he liked best to the California scene. Mr. Whitley had the proper setting: a kidney-shaped hill, forming a triangle, bounded by Franklin Avenue on the south side and by Highland and Cahuenga laterally, coming to an apex at the foot of Cahuenga Pass. But this all happened in the twenties; the history of the hill goes back much further.

And quite a history it is! Particularly is it true in the twenties when it became the home of many of the picture colony of the silent era. The search for records and data was a long one and credit is due Vesey O'Davoran, who performed the arduous task. Written records are few and recollections of the older residents are often vague. It seems inevitable that there may be inaccuracies and conflicting memories. For such I beg your indulgence.

Fifty years ago Whitley Heights looked like the hills to the north --- a tangled mass of chapparal-yucca, live oak, sage brush, all that makes up what the botanists call the elfin forest. In the spring native wild

2) A BRIEF HISTORY OF WHITLEY HEIGHTS

flowers covered the hills: California poppies, mariposa lilies, lupine, sticky monkey, still found, but not in such abundance, on the few vacant lots remaining. Deer roamed the hills, as they still do farther our beyond the Pass. There were many rabbits, squirrels, opossums, and racoons --- these latter animals may still be seen often at night foraging in the neighborhood. Coveys of quail added interest and color to the area even in the late thirties. Instead of the whirr and rush of cars and trucks pouring through the Pass the only sound was the high shrilling of a moonstruck coyote or the night song of the mocking bird or the hooting of a lonely owl. And in those days the moon was plainly visible for no blanket of industrial smoke hung over the hills and from our vantage point there was a clear view of the Los Angeles basin, a blue strip of ocean, and even Catalina on a fogless day. The road through the Pass was a one-way wagon path about thirty feet west of where Highland runs today. This road went through an avenue of huge sycamore trees with a spring-fed stream flowing down the hill. The stream could still be seen as late as 1956, behind the old Progressive School building, which was removed to make a larger Bowl parking lot.

Mr. John Hendricks tells of the first dwelling in the area, a little adobe shack which was built on the bank of the stream on what later became Odin Street just a bit east of Highland. Here lived an Indian crone, known as the Witch Woman, who had a great reputation as a fortune teller. It is said that the Los Angeles ladies of the day came on horseback from far and near to consult her. In the eighteen-hundreds, Mr. H. J. Whitley came here from Canada with the idea of settling in California. He arrived here in 1893, and began searching for investments. He first opened a jewelry store; then in 1900 he formed the Los Angeles Pacific Boulevard and Development Company. This company bought a tract of land bounded by what is now Highland, Cahuenga, and Yucca. Before long houses were built along Wilcox, Yucca, and Hollywood Boulevard, then known as Prospect Avenue. At first only the level ground was built on; the hill area was thought impossible, and the part now called Whitley Heights was occuppied by a reservoir on the site of the present Burton Holmes place. The pumping station for this reservoir was at the corner of Las Palmas and Franklin, where the Senior Citizens Center, named in honor of Francis X. Bushman, stands today. Whitley called the Heights: Ocean View tract. In 1903 he erected a pavilion just where the Martin House is. Here the prospective buyers were brought to see the view.

3) A BRIEF HISTORY OF WHITLEY HEIGHTS

Later the pavilion was turned into a bandstand where open air concerts were played. A dirt road, named Curlew Drive, circled the top of the hill ---- the present Whitley Terrace. This road was reached from Cahuenga by an approach road not too steep for the carriages and cars of the day. It lead through an orchard of figs which stretched from the hilltop through the present Holly Hill neighborhood and down to Wilcox. By 1903 all the flat land had been built on; the hilltop property was thought undesirable and the Whitley Heights section was presented to Mr. Whitley for his services ---- and probably because he was one of the few who saw a future in hillside land.

The first home to be built on the hillside was erected on the Highland side of the Heights by a Mr. Hussey in 1904. This house was still standing in 1964. Mr. Hussey purchased a piece of land running from the dirt road through the Pass and up the hill to where Whitley Avenue is now. The south boundary was bordered by eucalyptus trees, some of which are still standing on Las Palmas Avenue. Here on Las Palmas was the site of the Hussey home, which was approached by a bridge over the stream. Mr. Hussey was a miner and prospector. He had a gold rocker and panned for gold in the stream. There is no evidence regarding his success. Horses grazed in the surrounding fields and cattle were pastured on the Cahuenga side of the hill. The original wooden bridge lasted until 1930, still serving as the entrance to Las Palmas, Milner Road, and Watsonia. In 1911 the house was bought by Mr. Henry Tracy, who added five or six rooms. This house was razed only recently to make way for the proposed Motion Picture Museum. Mr. Tracy recalled pictures of the early days: Highland was unpaved, sidewalks were dirt, a little green trolley ran between West Hollywood and the Pass by way of Santa Monica Boulevard. He also recalled that the steep grade of Whitley Avenue was used in those days as a testing ground for cars, and the first car to make the grade successfully was a Locomobile. Grass fires, the dread of hill dwellers, continued to plague him until 1918.

The second house to be erected was built at the corner of Whitley Terrace and Cahuenga, a small five-room structure with a dome top,

4) A BRIEF HISTORY OF WHITLEY HEIGHTS

by a Mr. Curry in 1906. In 1908 the house and the adjacent acreage was bought by Mr. J. G. Somers. This acreage comprised the area now known as Iris Drive and Iris Circle. Mr. Somers enlarged the Curry home to ten rooms. The house was built of poured concrete with domes and cupolas. Mr. Somers' daughter, an early Hollywood beauty queen, now Mrs. Helen Otis, recalls that while Mr. Curry lived there he had a critical illness, hired a male nurse to care for him. This young man eloped with Mr. Curry's daughter, Lillian. Their first child became famous as Lita Gray Chaplin.

In 1912 the acreage, now city property, carried such a heavy tax burden that he sold part of his holdings to Mrs. Emma Hambleton, who in turn sold to Mr. Whitley. The latter had already built a residence for himself at 6682 Whitley Terrace, which is now owned by Amanda Purdy, and is still one of the show places of our hill.

Mrs. Otis cites the increase in property values: when her father bought the ten acres from Mr. Curry, he paid $13,000.00 for them. He sold four years later, holding out one-and-a-half acres for himself for $20,000.00. Mrs. Hambleton then sold to Mr. Whitley for $65,000.00 although $37,000.00 was allowed for the house at 6650. When the surrounding property was subdivided and sold, Mr. Whitley is supposed to have cleared $150,000.00.

The Jewel house --- 2020 Grace Avenue --- was probably the next to appear. Its history remains cloudy, although rumor has it that it was once a riding club and later a night club or roadhouse, as they were called in the early days. Since those days the house was occupied by various celebrities: Marshall Neilan, Blanche Sweet, Francis X. Bushman with his six Great Danes, and for many years has been the gracious home of Mr. and Mrs. Burton Holmes.

The real development of the hill began in 1918 when the property was subdivided and offered as an exclusive and superior residence district

5) A BRIEF HISTORY OF WHITLEY HEIGHTS

of Mr. Whitley and his friend, Royal V. Milner. Restrictions as to amount and type were set --- all houses to be $18,000.00 or over, Mediterranean in architecture with Granada tile roofs. These restrictions lasted twenty years, but with the end of the restriction period and the coming of the great depression other types of building: modern, English, even semi-colonial --- have been erected on the few pieces of land that remained unsold. Mr. Whitley had a model house to show the attractiveness of hillside construction built at 6682 Whitley Terrace, and his own house on the upper side was also a model. The house at 6682 was for some time the home of Barbara La Mar, although she was not the first occupant.

The very first Easter Sunrise Service was held on the top of the hill in 1919, a memorable and touching occasion. In the early dawn crowds of worshippers climbed up the steep and muddy roads carrying armloads of lilies to the little pavilion. A truck somehow had brought up an organ; Hugo Kirkhofer had trained a group of singers. Mrs. Ella Beck, the soloist, was singing the opening hymn when the truck with the organ began to slip and roll downhill. The Reverend J. H. Lush, who was officiating, and other strong men halted the downward movement until the hymn was over. The next year the service was held on Olive Hill, and ever since then at the Bowl.

By this time the motion picture business was at its height and stars, who had made the old Hollywood Hotel their headquarters, sought the hills. Perhaps the most famous was Rudolph Valentino. He had a charming house on Wedgewood, beautifully landscaped with rare and fragrant plants. The front facing the Bowl was a large terrace leading to a spectacular living room with a tesselated marble floor and with walls of antique mirror. The stairs to the second floor were of colorful handmade Mexican tile. The furnishings, chosen and arranged by his then wife, Natacha Rambova, were authentically Spanish and the whole effect was magnificent. He could be seen every morning when he used to run around the hill, wearing a white track suit and white turtleneck sweater, accompanied by his two mastiffs. He had a double garage of his own, but he kept two skeletons of cars --- a Hispano-Suiza and an Isotta --- in a garage he rented from Francis X. Bushman.

6) A BRIEF HISTORY OF WHITLEY HEIGHTS

These cars would run, but not on the road. He delighted in working on the motors and spent hours cleaning and testing them. He lived on Wedgewood for over five years. The place was bought by a Mr. Williams who bought up the two neighboring lots and on which he had built an exotic tiled swimming pool and cabanas. A new surrounding wall appeared which formed a background for a gorgeous planting of southern magnolias and hybiscus. The house and pool were razed to make way for the Freeway. It was sad to see the uprooting of the trees and the crushing done by the bull-dozers.

Mr. Flanagan of the vaudeville team Flanagan and Edwards built the house where Peter and Janet Milne now live. There the son, now known as Dennis O'Keefe, grew up. In the present Johanson house on the corner of Bonair and Whitley Terrace the Archard family lived in the thirties. Their son, Army Archard, is well known as a writer for Variety and for his many TV and radio appearances.

In the twenties and thirties Ethel Clayton lived on Fairfield; Lenore Coffee and later Margaret Lindsay owned the house where now dwell the William Kents (Irene Tedrow). Jack Mulhall had a house on Milner as did the Crauford Kents. Adrian once occupied the house on Watsonia now the residence of Jim Mathes. Lew Cody was often seen working in the garden of his house on the corner of Grace and Whitley, now the property of Leo J. Carroll. At 6658 Whitley Terrace, where Paula and Phil Guibord now live, resided the Sidney Franklins; she later became Mrs. Nelson Eddy. Next door in the present Beulah Bondi house were Joseph Schildkraut and his wife, Elise Bartlett. Near them was Chester Morris, and in the corner house, where now Kim Hill lives, was Monta Bell. Anders Randolph, the artist, lived in the former Barbara La Mar house. Mr. Gonzhoff, a voice coach, resided in the Kreke house, since inherited by their daughter, Caroline Anderson. Eugene O'Brien loved the hill so much that he had two homes -- one near Cahuenga on Whitley Terrace; it still can be seen across the freeway; and another, a more beautiful one at 6687 Whitley Terrace, where he lived until his recent death. Wesley Barry too had two homes -- one lower on Whitley Terrace,

7) A BRIEF HISTORY OF WHITLEY HEIGHTS

sacrificed to the freeway, and the other across the street from the O'Brien dwelling where Julia Barry still lives. Robert Vignola's house at the bend of Whitley Terrace was always a show place. Ivy de Verley (Mrs. Vesey O'Davoran), a famous artist from England, resided from the early twenties on Las Palmas. Warren Kerrigan, the star of THE COVERED WAGON, had a low colonial-type house with spreading lawns at the Cahuenga entrance to the hill. Ralph Graves owned a lovely place on Iris Drive. In the twenties and thirties sight-seeing busses made a tour of the hill hoping to catch a glimpse of such home-owners as Eleanor Boardman, Wally Reid, Wanda Howley, Marshall Neilan, Blanche Sweet, Helen Lee Worthing, Bette Davis, Maurice Chevalier, Yvonne Vallee Chevalier, Richard Barthelmess, Sidney Franklin, Lawrence Tibbett, Montague Love, George Arliss, Dorothy Devore, Mary Doran, Dorothy Peterson, Stuart Walker, Gloria Stuart, Anita Louise, Tom Brown and Patricia Ellis.

There was great pride in the hill and its future, but there were drawbacks. Sewers were not provided and everybody had a cess pool which often overran, caved in, or gave other trouble. The streets were unpaved. When one started down Grace Avenue on a rainy day, you would find yourself sliding, even facing back uphill. There were no accidents however; one merely turned the car around and negotiated the grade as one could. The service poles and lines were the most unsightly; if one had a view window, you could count on the fact that a great towering pole with huge cables radiating in every direction like a spiderweb would be right in front of it, and since everybody had bought up here for the view there was a consequent distress. The most far-seeing and energetic residents started a movement to remedy these hazards to gracious living. A meeting was held at the home of Mr. Somers and the Whitley Heights Civic Association was formed. Hal Barter was elected president, Mr. Somers vice-president. The first order of business was to gather a warchest for the necessary expenses. An assessment of $35 per lot was made. Mr. Ted Anderson, Mr. Stanley Mc Michael, Mr. George Green, Mr. Miller, and Mr. Richard Green were appointed as the committee to collect this money and to sound out the attitude of those who had not attended the organization meeting. The committee worked assiduously; if any resident could not pay the assessment, the amount was made up from the annual dues (Three dollars a year was the amount set). Meetings and consultations

8) A BRIEF HISTORY OF WHITLEY HEIGHTS

were held with the city and county authorities, with the Department of Light and Power, and with the Pacific Telephone Company, all of which were fruitful and everybody was far-seeing enough to go along. Soon the bulldozers and other heavy equipment arrived; the excavation for the sewers and underground power lines began. This period was a headache; most of the work of excavating was done during the rainy season and one could scarcely drive through the mud without picking up a spike in a tire. However, it was soon over and the new look began. The streets were now heavily paved, ornamental lighting was put in, and decorative chain and post edging was installed all along the streets. With new building though most of this iron fencing has disappeared; some can still be seen at the corner of Milner and Whitley Terrace and by the Taylor Apartments.

The money left over from the assessment and the early yearly dues was used on a beautification project. Mr. Miller and Ted Anderson haunted the local nurseries and themselves planted white oleanders the whole length of Whitley Avenue and Whitley Terrace. Cocus plumosus was planted where they would be most visible; the vacant lots received a geranium cover, and Beatrice Green herself planted crasula portulaca, that waxy-blossoming succulent which brightens the streetsides in December, from the Kreke house to Janet Milne's. Similar successful projects were started on Iris Drive, Iris Circle, and Lloyd Lane.

Meetings of the association occurred regularly; ideas were suggested to raise money so that there might be a sinking fund. The talented residents of the hill responded generously. Mr. Sinsheimer, who lived then in the former Preston house on Milner and was a famous violinist with a Paris symphony, formed a string quartet and gave two concerts at the home of Mrs. Earle. These were well attended. At one Amelita GalliCurci was guest of honor and Baron de Mayer, who lived on wedgewood then, attended. Another concert, featuring the interest and ability of the Bickfords from Holly Hill Terrace, was presented at the home of Mr. and Mrs. Bloom of Iris Circle. The Bickfords were professional musicians, specializing in mediaeval instruments. Mrs. Bickford gave an introductory talk on the history of the lute and the recorded; then they played solos and duets on these historic instruments. The rooms were crowded for each performance and the funds so raised went into the association sinking fund, which is still in the savings bank.

9) A BRIEF HISTORY OF WHITLEY HEIGHTS

The Garden Club of the hill women was organized about 1930 as an auxiliary to the association. The founder and first president was Mrs. Manning, the wife of a Santa Barbara doctor, who lived in the then Grace Whitley house, now the residence of Philip and Charlotte Burg. The aim of the club was the beautification of the hill. The club met once a month usually with a speaker on some vital topic and a tea. The earliest efforts were spent on cleaning and replanting the vacant lots. In the first year the club entered the Hollywood Garden Club contest which was presented at the Roosevelt Hotel. Beatrice Green was in charge of the Whitley Heights exhibition -- a booth and a table decoration. She won two small silver cups, one of which was given to Mrs. Manning, the other was kept by the club and as far as we know is still in the possession of Hazel Zamora, the president of the club at the time of its dissolution. To raise money for planting and trimming, Mr. and Mrs. Green gave a dinner at the Green home, 6711 Whitley Terrace. Mr. Green donated the meat -- filet mignon; the other items of the menu were grapefruit and avocado salad, fresh peas, au gratin potatoes, hot roles, ice cream and homemade cake, coffee. I do not remember whether the price was two dollars or two and a half. About fifty people responded; they sat in the dining room or at a long table on the terrace. Mrs. Green cleared about seventy dollars, which went into the club coffers. Mrs. Wood, Julia Barry's mother, was president at one time. At Christmas time the club formed the first group of carol singers. Mr. Patty, a voice coach living on Emmet Terrace, trained the singers, consisting of Helen Emden, Jo Hughes, who had a beautiful voice, Beatrice Green, Richard Green, Betsy and Grace Morse, and others whom I no longer recall. On Christmas Eve we circled the hill, and both the Whitley and Iris areas, singing carols and accepting hospitality generously offered. One year we used a small portable organ, played by Grace Morse; the next year the organ was not available and Jo Hughes accompanied with her accordion. Mr. Patty moved away, some of the singers left the hill, and the caroling faded out.

The hill went on merrily with its activities -- fabulous parties at Eugene O'Brien's, at the Burton Holmes's, at Janet Milne's and others until the war. During this dreadful period frivolity was forgotten and people became more civic- and world-minded. The men of the hill established a fire department to care for possible disasters in the neighborhood. Money was raised; a truck was donated by the Golden State Milk Company, which was converted into a fire truck and fitted with pumps and hose. An unused garage at the corner of Lloyd Lane and Whitley Avenue was rebuilt to house the truck and official calls were made to 2018 Whitley Avenue. Fortunately no disasters occurred and no official calls were made. These

10) A BRIEF HISTORY OF WHITLEY HEIGHTS

members of the fire department; D. H. MacDonald, fire chief, John F. Anderson Jr., William Foster, George Grist, Crauford Kent, Edward Samaha, Peter Milne, all wore blue denim coveralls, tin helmets, and gas masks. Full scale drills took place weekly on the hill and once a month at the Hollywood fire station for drill with ladders and runs with professional firemen. The women too were engaged in wartime activity. A Red Cross unit was started at 2118 Las Palmas, the home of Dora Auger, where under instruction of a professional Red Cross worker the women learned to prepare every type of bandage and dressing and first aid requirement. As the supply grew allotments were placed at various parts of the hill to be readily accessible in an emergency. Everyone had blackout curtains and followed every suggestion made by the war office. At the close of the war a truckload of these supplies was given to the Red Cross. And all returned to our customary peace and serenity.

Getting back into its peacetime routine the association went on with its work of beautification and improvement. Mr. Barter was president until 1935. He was followed by Stanley Mc Michael, D. H. MacDonald, George Grist, Andrew White, LeRoy Hebbert, John Hendricks, Margel Gluck, Richard Whitfield for three or more terms, Carl Pierce, Erwin Herr, Jack Fields for three terms, Jerrel Podorson for two, and at present James Mathes, who has served ably and efficiently for two terms.

The first indication of a detriment to the hill was the proposed uprooting of the sheltering trees on Highland and Cahuenga, necessitated by the widening of those avenues to accommodate valley traffic. In a few months our leafy borders were denuded and the hill stood out like an unprotected sentinel, and the tree-covered lanes became bare concrete runways crowded with traffic. We thought that was the end, but soon rumors circulated about a freeway to cut through the hill. We quickly discovered that these were more than rumors. First the houses at the base of the hill near the Cahuenga-Highland spot were bought up by the state and moved to other locations or razed. Then sixty larger and more luxurious residences in the projected path of the freeway suffered the same fate, including the Valentino estate, the domed Ted Anderson home, the Wallace home, which was a small jewel on Lloyd Lane. All this was not done without protext; meetings were held, petitions were signed and sent to the governor, individual letters were sent to Earl Warren, but all in vain. It would seem that pride should have taken in an area of homogeneous construction

11) A BRIEF HISTORY OF WHITLEY HEIGHTS

artistic planting, beautiful planning, and progressive citizens -- unique here or anywhere. We could not believe that all this would be sacrificed, especially when there was an established route only a few hundred feet away. We had no recourse and no redress; we were told that the state highway plans were already set -- lines on a map with no regard for terrain or expense. The commission went on with its devastation; a three-hundred foot gash was cut through the lovely hill, isolating the Iris section and depriving both sides of the hill of three means of access. The bulldozers, scrapers, and every sort of equipment arrived with consequent noise and dust and confusion. The houses of our former friends were destroyed or moved to faraway locations. This went on for two years; the Hollywood Freeway was completed in 1952. Then the stream of valley traffic poured through the cut at all hours. The daytime noise was not too bad, but after eleven at night the constant roar of trailer trucks resounded through the hollow with accompanying trembling of the earth and cracking of plaster in adjoining house walls. We never learned to live with it. However, with the completion of the Golden State Freeway and the rerouting of the trucks, the noise has abated and now one scarcely notices the sound.

But we were left with the scars of construction. The plantings that had made the hill delightful were all gone; there was a bare chain-link fence along the denuded bank of the freeway and raw banks above the retaining walls. A group of disillusioned residents decided to correct this fault. A weekend was declared an improvement period; everybody was invited to volunteer. Richard Whitfield was the inspiration; a few people appeared: Caroline Anderson, Beatrice Green, Vesey O'Davoran, Janet Milne. A setting of alternating rose gleanders and blue plumbago was put along the fence and the bare hillside above the wall on Whitley Terrace was planted to ivy and mycembreanthemum. The work has been well repaid by the growth.

Since 1952 few changes have occurred on the hill. Houses have been sold, new neighbors have moved in, but the character of the hill has remained the same. The chief activity of the association has become the maintenance of our R-1 status. Attempts have been made to divide the houses and to erect high-rise apartments and condominiums, especially on Emmet Terrace. But so far the city planners have agreed with our petitions and

12) A BRIEF HISTORY OF WHITLEY HEIGHTS

after many interviews and meetings our status remains the same. The president and vice-president of the association have given freely of their time and energy as have other members of the executive committee. The efforts of the association have been slanted toward any problem which might be of interest or benefit to the hill: traffic, illegal parking, taxes, etc. The directors meet once a month, the members attend faithfully, heated discussions occur, in fact, anything and everything which might become a matter of trouble to the residents comes up for consideration.

Four years ago Charles Robinson and his wife, Joan, of Whitley Terrace revived the custom of carol singing at Christma s time. A volunteer group consisting of Kim Hill, Beatrice Green, Grace Morse, Frances Bloem, Vera Calistri, Marie Hurley, Michael Kohn, and others gather near 6666 Whitley Terrace on the evening of December 23. The Robinsons entertain the members at a festive dinner first; then we start circling the hill with our carols. The route is up Grace Avenue, around Whitley Terrace and Wedgewood, down Milner, around Watsonia, and back to the Robinson's for dessert. The carolers have been well-received. Many residents have invited us in for a bit of holiday cheer. Amanda Purdy, Mary Jackson, Goni Colvig, the Podorsons, Janet Milne, the Whitfields have all at one year or another called us in to sing and accept hospitality. One year we were helped by a professional accordion player; the last two years he has been unavailable bu t Charlie Robinson with his banjo and his cheery voice has led the group. We hope to continue the tradition.

A new tradition was started in 1965, and it was repeated in 1966 -- the OPEN HOUSE. The first was presented during the Christmas season. Richard Whitfield, James Mathes, and Richard Wookey, all of Watsonia Terrace, opened their houses to the residents for cocktails with the idea of getting the residents together at a social function instead of a purely business meeting, which is more formal. Delicious refreshments were served from tables gay with holiday decoration. About eighty-five people responded and all felt that the event was a success. However, it was thought that the rush of the holiday season prevented many from coming; so the 1966 OPEN HOUSE was held in the spring at the homes of Gini Colvig, Arthur Martin, and Palmer Amundson. This time a Spring motif was used in each house, each of which was beautifully arranged for the occasion. This year the response was not too great and the decision was made to have the 1967 affair at only one house. Mr. Dick Webster of Milner Road has graciously offered his house for this year's gathering. The parties are

13) A BRIEF HISTORY OF WHITLEY HEIGHTS

worth attending; many interesting people live on the hill: attorneys, doctors, businessmen, many prominent actors and actresses, airport officials, entertainers, etc. -- people worth meeting.

Many hill houses have been featured in national magazines. Pictures and a story of the present Podorson home appeared in an architectural magazine as an outstanding example of the adaptation of the Mediterranean style to the California scene. This occurred when the house was occupied by the mother-in-law of Robert Taft. The doorway and garden of 2014 Whitley Avenue was pictured in a recent issue of BETTER HOMES AND GARDENS. The former Monta Bell house, now owned by Kim Hill, was displayed in many motion picture magazines, as also was the James Mathes house when Adrian lived there. The Guibord house at 6658 Whitley Terrace was exhibited often as the true Mediterranean type when it was owned by Mrs. Janet Kitselman. The Guibords have added many refinements, such as a pool, new windows, etc. Also the Lon MacAllister home has been featured. Mrs. Kitselman's collection of Actress Glass was shown for a long period at the Los Angeles County Museum; her work in needlepoint and petit point was exhibited for many months at Bullock's.

In the late thirties the intersection of Milner and Whitley Terrace was used for many outdoor scenes in the movie ONE NIGHT IN LISBON. The artists connected with the film found the tile-roofed houses and the sloping roads delightful. A flock of sheep, a few geese, pigeons, and a donkey or two were added to lend color. Madeleine Carroll and Fred McMurray used the Vignola house as a dressing room and for rest. Mrs. Green has a lot of still that were made at that time.

There is an air about Whitley Heights; one notices it as soon as one crosses Franklin and starts up the hill. It is an air of quiet dignity, well-kept houses, gentle living, pride of ownership, and contentment. Although we are only six blocks from the turmoil of Hollywood Boulevard, we have a rural atmosphere. Occasionally a fishpond will be raided by

14) A BRIEF HISTORY OF WHITLEY HEIGHTS

a racoon or a rubbish can is knocked over by a family of opossums and squirrels bark or chatter in the trees. Birds in their migrations make the hill a station on their journeys in the Fall and Spring; flocks of bush tits and cedar waxwings can be seen feasting on hedges of pyracantha and Java plum. Doves linger all the year and brighten the days with their gentle cooing. Yearly orioles swing their hanging nests from the Holmes palm trees, and mocking birds, bluejays, and tohees live here the year round. The contentment and satisfaction of living on the hill are shown by the fact that many families have lived here for years -- fifty-two, fifty, forty-six, etc. The hill is a good place to live!

Back in 1908 one Louis Grant Somers purchased the north 8 acres of the knoll - now known as Whitley Heights. He built a large home, facing Cahuenga on the corner of Whitley Terrace.

This area was then county acreage. Shortly after acquiring it, the City absorbed it - and taxes flew upward. Being retired and living on an income, he could not afford to hold this amount of land. He sold the major portion to Emma L. Hambleton of Chicago. She had high hopes of developing 'the hill" in a costly fashion, but found advancing years made the project unwise for her to complete.

About this time Mr. Whitley, who owned the larger acreage of the knoll, decided to sub-divide, and call it Whitley Heights. He started building a lovely home for his own use on the front of the hill. This Mrs. Hambleton fell in love with , and made a deal with him on an exchange basis to sell him her property and acquire his home for her use.- This area was sub-divided by Mr. Whitley with 2 right-hand helpers, Mr. Barnes and Mr. Milnor;- the former was an architect who designed all of the first residences built on the hill. -Mr. Milnor I believe named the streets. - The north knoll seemed difficulty named. There are Iris Circle, Iris Drive, and Iris Place - around the knoll. The same being borderd by Whitley Avenue and Whitley Terrace.-

(1)

A word concerning a former resident Louis Grant Somers.
He was a pioneer in Hollywood, having come here from Cleveland in 1906.
It was he who procured our first Library from Andrew Carnagie.-
It was he who planned our old street car tunnels to shorten running time in Los Angeles instead of going through the Plaza.
It was he who worked diligently for the Annexation of Hollywood to Los Angeles in order to secure an adequate water supply, when the Owens River Aqueduct was to be built. This annexation gave Hollywood Police and Fire protection and greatly enlarged school facilities.
He also founded Whitley Heights Civic Association and was President of the Board of Trade- now Chamber Of Commerce.

Hollywood became his 'baby' to nurture and help to grow.- He was young, had time to do things and was very Civic minded.
It does seem as though some street or park or area might bear the name of one whos greatest endeavors were for 'little Hollywood'.-

To facilitate confusion in street names, on the north knoll area, and to perpetuate that name,(though a very short street since the Freeway came through) - it would seem Whitly Terrace might be re-named SOMERS TERRACE - as on that corner Mr. Somers lived until his death in 1926.- This our Association recommends and we hope it may meet with full approval.

(2)

Whitley Heights History:

I don't know the exact year Mr. H. J. Whitley acquired this large knoll in the Hollywood Hills - but I came here in 1906 and it was his then.

It was completely undeveloped and abounded ~~in~~ with gophers and gopher snakes. These gopher snakes look much like a rattles but are harmless. They grow to the lenght of three to five feet. There was a samll stucco summer house on the crest of the knoll overlooking Hollywood, a town then of about 2300 people. I am told Mr. Whitley acquired this large area, clear to Cahuenga from Highland and from Franklin over the crest, from an early day realtor in Hollywood, for materially aiding him in a large real-estate transaction, in lieu of cash.

It remained undeveloped for many years. Then the portion now north of the freeway was bought up by a Mr. William Curry, who's grand-daught became the first wife of Charlie Chaplin (Anita Gray Chaplin) and bore two sons.

These two boys were born in our large old house on the corner of Whitley Terrace and Cahuenga. The house was then but 4 rooms and occuiped by Mr. Currie and family. Later my father, Louis Grant Somers bought this end of the hill and included these four rooms in our exceeding large home. (18 rooms) Our property covered about eight acres. Mr. Whitley's acreage was far larger. ~~and~~

In about 1917 Mr. Whitley decided to sub-divide. He had been a subdivider for years. Our towns of Van Nuys and Reseda are of his design and also, I am told, Oklahoma City.

At this time he employed a Mr. Barnes as architect to erect a few Mediteranean style houses - to be dotted around the hill. All had specification of plaster and tile exteriors. Then his engineer, Mr. R. V. Milner, who laid out our streets, was asked by my mother one day what R.V. meant. He acted sort of sheepish and said "Don't ask me, please," then admittted his mother had named him ROYAL VIRGIN MILNER.

As time went on and houses dotted around the hill were selling very well, one Mr. Rudolph Valentino drove by one day and the area reminded him of his native Italy. He was pretty poor then, only getting his start in movies. He bought the house on some sort of terms and along with it a very old cadillac touring car, open of course on all sides. This had originially been painted gray but now appeared with large and orrrible looking rust spots freckling all over it. The black leather seats were torn and too costly to repair, with curled horse hair sprouting from the ~~xxxxx~~ seats.

About that time he acquired two police dogs. As he was making "Blood and Sand" in the old Lasky Studio on Vine he'd drive home for luch, put both dogs in the back seat, go tearing all over Whitley Heights with the old Cadillas, eating his sandwiches, with both gods leaning forward, tails wagging, for bits of sandwiches Valentino would throw back to them.

Whitley Terrace was then a mud street with mustard greens coming up in the ruts. My father would level these hard ruts after they'd dry out from a rain. One Hay he was mopping his brow and leaning on his hoe-handle for a breather, when an elegant car drove by and some gentlemen remarked to him "That's why we pay such high taxes. It's fellows like you sleeping if off on heo-handles".

Another time a sight-seeing bus called out on a megaphone "This is [illegible] J. Warren Kerrigan", hero of the "Covered Wagon". and then to my father who was

Page II

So he did and didn't tell him Kerrigan lived next door.

My father, Louis Grant Somers, started the Whitley Heights Civic Association and was the president until his death. Then at long last we got some pavement in and then had to tear a trench of it right up again to pu in the under ground wiring. The telephone poles look awful. So my dad, and Mr. Barter called evenings on everyone on the hill and personally raised $85,000.00 for conduits to carry electric and phone wires. I wonder if our present owners would be so civic minded.

Mr. Whitley started two homes on the front of the hill, one for Grace, his daughter and one for himself. The later was traded to Mrs. Emme L. Hambleton of Chicago. Mrs. Hambleton owned a portion of our acreage and found it too much for her to develope into a costly fashioned area, and found advancing years made the project unwise for her to complete. She traded her property to Mr. Whitley for his house. He then subdivided this area also. The lots sold well and the few rem all over the hill, were bought by Berne McKaskill, whos wife was the daught of the man who invented the Alamite Process.

Our early day meetings were at each other's homes and concentrated on keeping ~~gxxgx~~ garage doors closed, bringing in trash cans as soon as emptied, having a yearly clean-up all over the hill and paying our dues. Similar to todays activities.

In 1908 when we built up her there were no sewers, electricty nor phone wires. We had to buy poles for $185.00 each and bring them up Odin Street from Highland Avenue and have both utilities hooked on. We had cess-pools for several years and the sewers were put in about 1925. It cost us $800.00 to hook onto the poles. We cooked by a gasoline stove in our 1st years up here. The San Fernando Valley raised watermelons and cantalopes and they were hauled by the truck load through our old Cahuenga Pass into L.A.

Mr. Pursel's cow grased where the freeway tunnel is between Highland and Cahuenga and Mr. Pursel ran a livery stable on Sunset opposit Cahuenga which wasn't cut through yet.

When the freeway cut us into two parcels, it was tragic. The beautiful Anderson home was one which was taken along with the Valentino home. The Anderson home contained a 1000 pipe organ and a swimming pool, between the bedrooms in the house. The Valentino house had been bought, after his death, by Mr. Williams, who makes eye-lashes for Maybeline. Mr. Williams spent $135,000.00 on the house and it was a dream inside. It was a pitty to destroy.

+ + + + +

From Vesey O Davoran

In 1922, Arthur Watson, A Canadian, came to Los Angeles and settled in Hollywood. He purchased the land from old Milner Road to Whitley Terrace. Milner Road did not run directly through to Highland Avenue then but turned off at Las Palmas and exited into Highland Avenue 50 years or so from the present exit. It extended up the hill to the turn around area. Mr. Watson opened this up with the extension of Milner Road to Whitley Terrace and formed Watsonia Court.

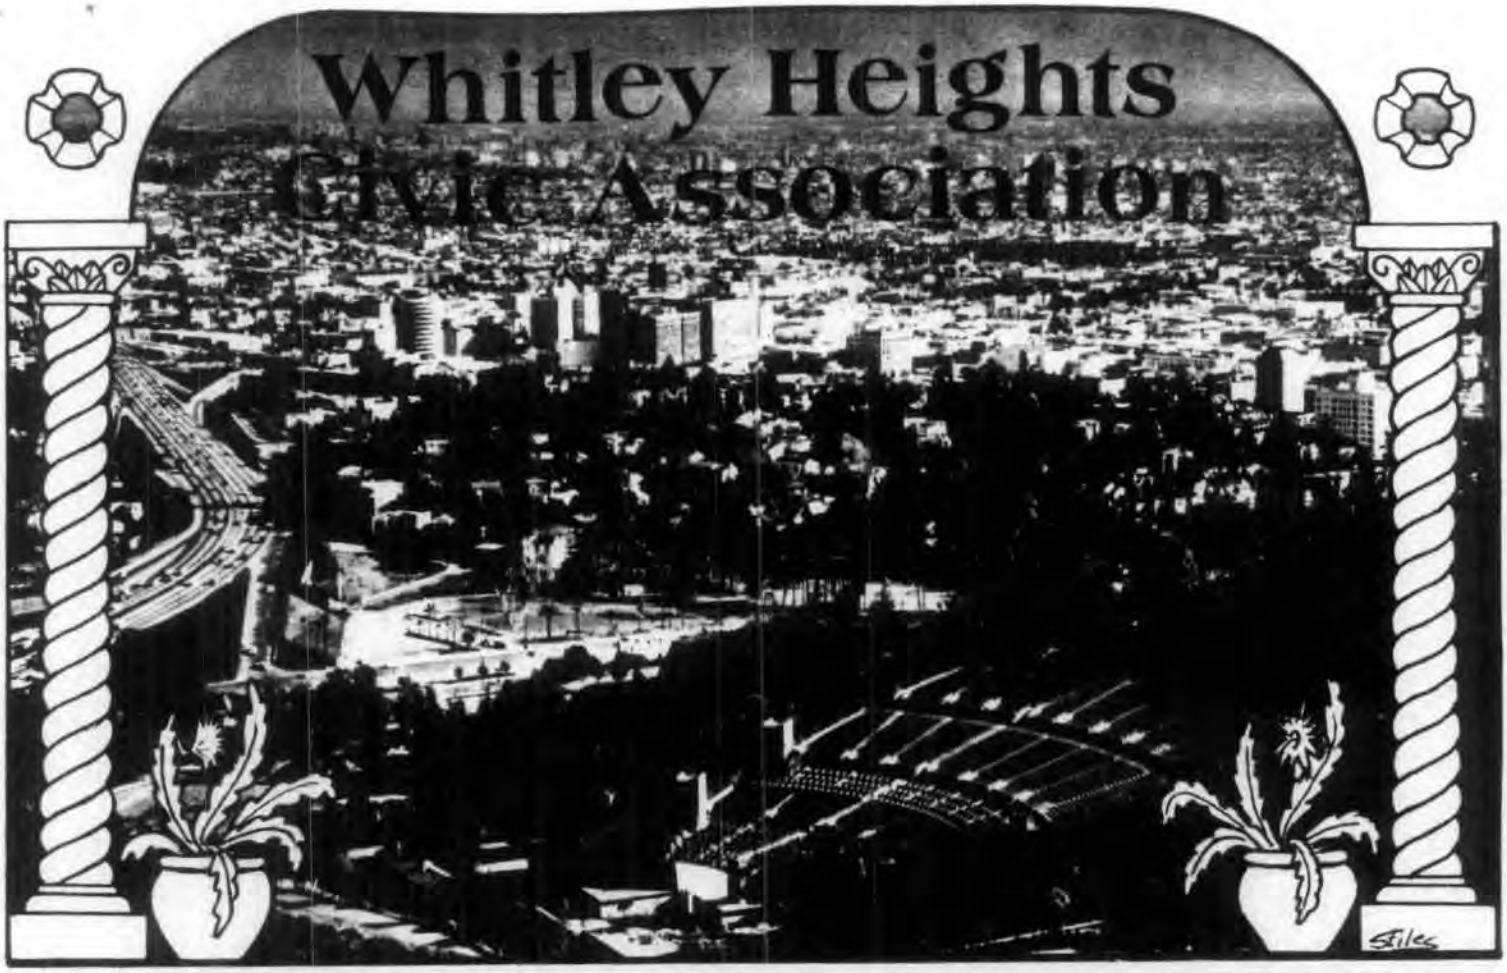

The first three houses he built in 1923 were the corner house, 6757 Milner Road for Bob Machautyre, a casting director, now owned by Mrs. Hilda Walls. Next was built 6753 Milner Road for Constance and Crawford Kent, Crawford being a well known actor in silent films. Next was built 6747 M[illegible] for Jack Mulhall, a silent screen actor who starred in "Siren of the Sea" t[illegible] Universal in 1917 and many others. This is now owned by Mrs. Esther Herr.

On the opposite side of the street he built 6740 Milner Road for Leonore Coffie who was a well known motion picture writer and did works for De Mille and others. The home is now owned by Mr & Mrs William Kent.

Further up the road he built for himself a home at 6717 Milner Road now owned by Bub Brooks and Cruz Martinez. Opposite that he built 6708 Milner Road for someone unknown, later purchased by Mr. Laura Earl and which is still owned by the family, Mr & Mrs Gordon Goodridge. He also built the home at 2058 Watsonia Court which is the home of Mr & Mrs Richard Whitfield.

Milner Road was paved in 1923 so before that, during the heavy rain season, owners of these homes had to usually leave their auto's at the bottom of the hill and trug up the hil throught the mud weighted down with large rubber boots.

** Vesey O Davoran is presently a member of the Whitley Heights Historical Society.

Vol. 8 No. 2 Fall 1981

THE PRESIDENT'S COLUMN

Brian Moore

I believe that this year is a time when members and directors of Whitley Heights will be called upon to be more active in their association than in any other year. Looking back over our sixty year history, we know of the successful efforts in the Twenties to install utilities underground and to pave our streets. The Forties and Fifties saw the unsuccessful struggle to save the Hill from the path of the Hollywood Freeway. In the Sixties the proposed Hollywood Museum again decimated our Hill as did the widening of the freeway. The Seventies witnessed the struggle to maintain our R-1 status against illegal units being built into single family dwellings, an issue which unfortunately must be addressed again this year.

Nineteen Eighty-One sees us within reach of the long sought goal of making Whitley Heights a private community. For years it was thought that this would make residents financially responsible for municipal services, such as street maintenance, garbage collections, sewer repairs, etc. In June of this year, the city attorney's office advised us in a legal brief that this need not be the case. Our streets are not through streets to other communities. They serve only our residents. Therefore, by a vote of the city council, which has the right to close any city street, we could become a private community and retain all city services. However, we would be responsible for maintenance, and perhaps the construction of closures.

The Whitley Heights Board of Directors has been investigating every aspect of these closures, so that we may make recommendations to the membership. It is a time when we must all work together, trying for a real understanding of each other and be patient of change.

The Cultural Heritage program is moving forward and if achieved will greatly enhance the value of our entire area. It will also mean that Whitley Heights will achieve real, and long overdue, community status, both in our city and state.

Your Board of Directors are founding members of the new Hollywood Hills Alliance, an organization of homeowners that has addressed itself to Hollywood's specific problems of crime, zoning, traffic and development.

This is a year when several large development projects, condominium and other commercial units will be proposed for the surrounding areas of the Hill. We must all report any notices of hearings to our Board of Directors who will then monitor, and if necessary, protest the development procedures.

We have begun this year well. The auction was a record-breaker and we have enjoyed a very successful party. Both of these events were planned and carried out by the Board of Directors and volunteer members, who invested a great deal of time and physical effort toward these successes.

Nineteen Eighty-One is a promising year filled with expectations for a better Hollywood and a better Whitley Heights. Let's ALL make it happen!

AUCTION 1981

Gini Colvig

In the nine years we've been having these auctions, this 1981 auction was the most profitable. Along with our live auction and 'treasure tables,' this year we included a silent auction due to the numerous small items donated from Beulah Bondi's estate by Betty Markert. They included delicate linens, lovely placemats, chinese objects, vases, lithographs, many articles of the 'Deco' era, a pair of cloisonne ginger jars and a baccarat crystal perfume bottle and atomizer. Many other small items donated by our members helped make our first silent auction successful.

Weeks prior to the auction these items were catalogued by Pat Freidrich and me. Thanks Pat for operating this for us. We hope we can have another silent auction next year because it was such fun.

Our 'treasure tables' were handled by Charlotte Vieira with lots of help from Carol Gilbert and Gloria Leff. The live auction was kept moving by our auctioneers Vance Colvig, Dennis Freidrich, Mark Schwartz and John Vieira. Again thanks, fellas! We were given many, many articles of interest including a handsome sofa, contemparary rocker, mirrors, paintings, lamps, linens, chairs, silver, cocktail tables, chests, plants, typewriters, baked goods, a stove and a trash compacter. We received an unusually large donation of furniture from Phil and Paula Guibord. Other generous donations came from Bob Bartolo, Richard Webster, Don Bevis, Julia Barry, Garth Wilson, Julius Lambrecht, Morris Fox, St. Steven's Church and the Van Wheldons. Thank you all for your wonderful support. Our off-the-hill Jayne Stein again worked as she's done in the past and our young friend Monica Vieira helped for hours. Patti Faulkner, Sheila Werner and Barbara Lloyd donated their time to give the Board members a hand. Thank you, ladies. Jeanne Manfred, Dick Lewis and Ginni Colvig handled the incoming merchandise. Tod Jonson, Jim Gillie, Ken Feingold and Marvin Leff helped the auctioneers, while Fred Burgess, Jim Mathes and Brian Moore were assisting in many areas. Richard Lewis and Mildred Lord (our Treasurer and Assistant-Treasurer) were aided by our former Treasurer Richard Whitfield cashiering. Thanks to Bob Primes for use of his trusty van to haul so many things with aid from a few of our hard working Board. For clean up of the auction site, many Board members helped including Henning Schellerup with the assistance of Annie Schellerup. And, as if by magic, the area was back in order. We thank Charlie Smith for arranging for tables from St. Stephens' Church and Vance Otis for refreshments. A big thanks to Charlie Manfred, Pat Ruyle and Dick Lewis for providing lunch Saturday and Sunday before the auction for the 'workers.'

Last, but not least, we're grateful to our council representative Peggy Stevenson's office for waiving the up to $200.00 fees charged for the street closure as they've done for auctions and parties for so many years.

SECURITY

Bob Primes

We are currently investigating what might be the ultimate security system for Whitley Heights: electrically operated, radio-controlled iron gates around our periphery. We'll keep you advised of our progress.

Meanwhile, Foothill Patrol reports the majority of calls they have received from us in the past six months have been reports of suspicious characters around the area. Good! Keep reporting them.

We have recently had two car thefts, a residential burglary, and a woman chased into her home at night, so let's continue to be alert and on guard. Be Nosey. Question strangers you see walking or driving our streets. (Please question them safely.) Look after your neighbor's property when they're away. Call the Foothill Patrol (660-3331) immediately if you see anything or anyone the least bit suspicious. If you do not belong to the patrol yet, think of how nice it would feel to know there was someone you could call for help 24 hours a day that would normally be there in less than 10 minutes. If that might be worth $14 a month to you, call Dick Lewis at 851-1662.

In fact, I recently saw an out-of-state van with three young men in it cruising up and down our streets. I stopped them and asked what they were up to. When they told me they were just looking at the houses, I told them to watch out because the residents were a little up tight about robberies and recently a resident fired on a car. You'd be surprised how fast those guys left!

LOS ANGELES BICENTENNIAL PARTY

Gini Colvig

The well over 200 of us who attended this year's "Hill Party" know what a tremendous success it was. The Board would like to particularly thank a number of non-Board members for their very valuable assistance. They include Jayne Stein for her work and the loan of her piano, Scott Nutter and Chuck Hattendorf for the loan of the small arches, lighting the gazebo and designing, cutting and taping table covers among other duties, Patti Faulkner and Sheila Werner for the tie-up of napkins and Sheila for working at the entrance, Larry Hughes for making his truck available for our use, Arcnie Sharp for the Super Lights, Geoffrey Gillie for again giving us hours of help in set-up and clean-up, Harrison Primes (Bob's father) for lighting, Fred Burgess for clean-up, Ektor Carranza for pre-party day help, and Meg Wilson, Gloria Leff and Margo Graham for assorted tasks.

This year our party was at a new site which everyone seemed to enjoy. We owe particular thanks to our generous neighbors who allowed it to be held in front of their homes. They include Julia Barry and Garth Wilson, Candy and Al Barnhart, Ektor Carranza and Tod Jonson, Bill Bast and Paul Huson and Cheryl Pagliaro.

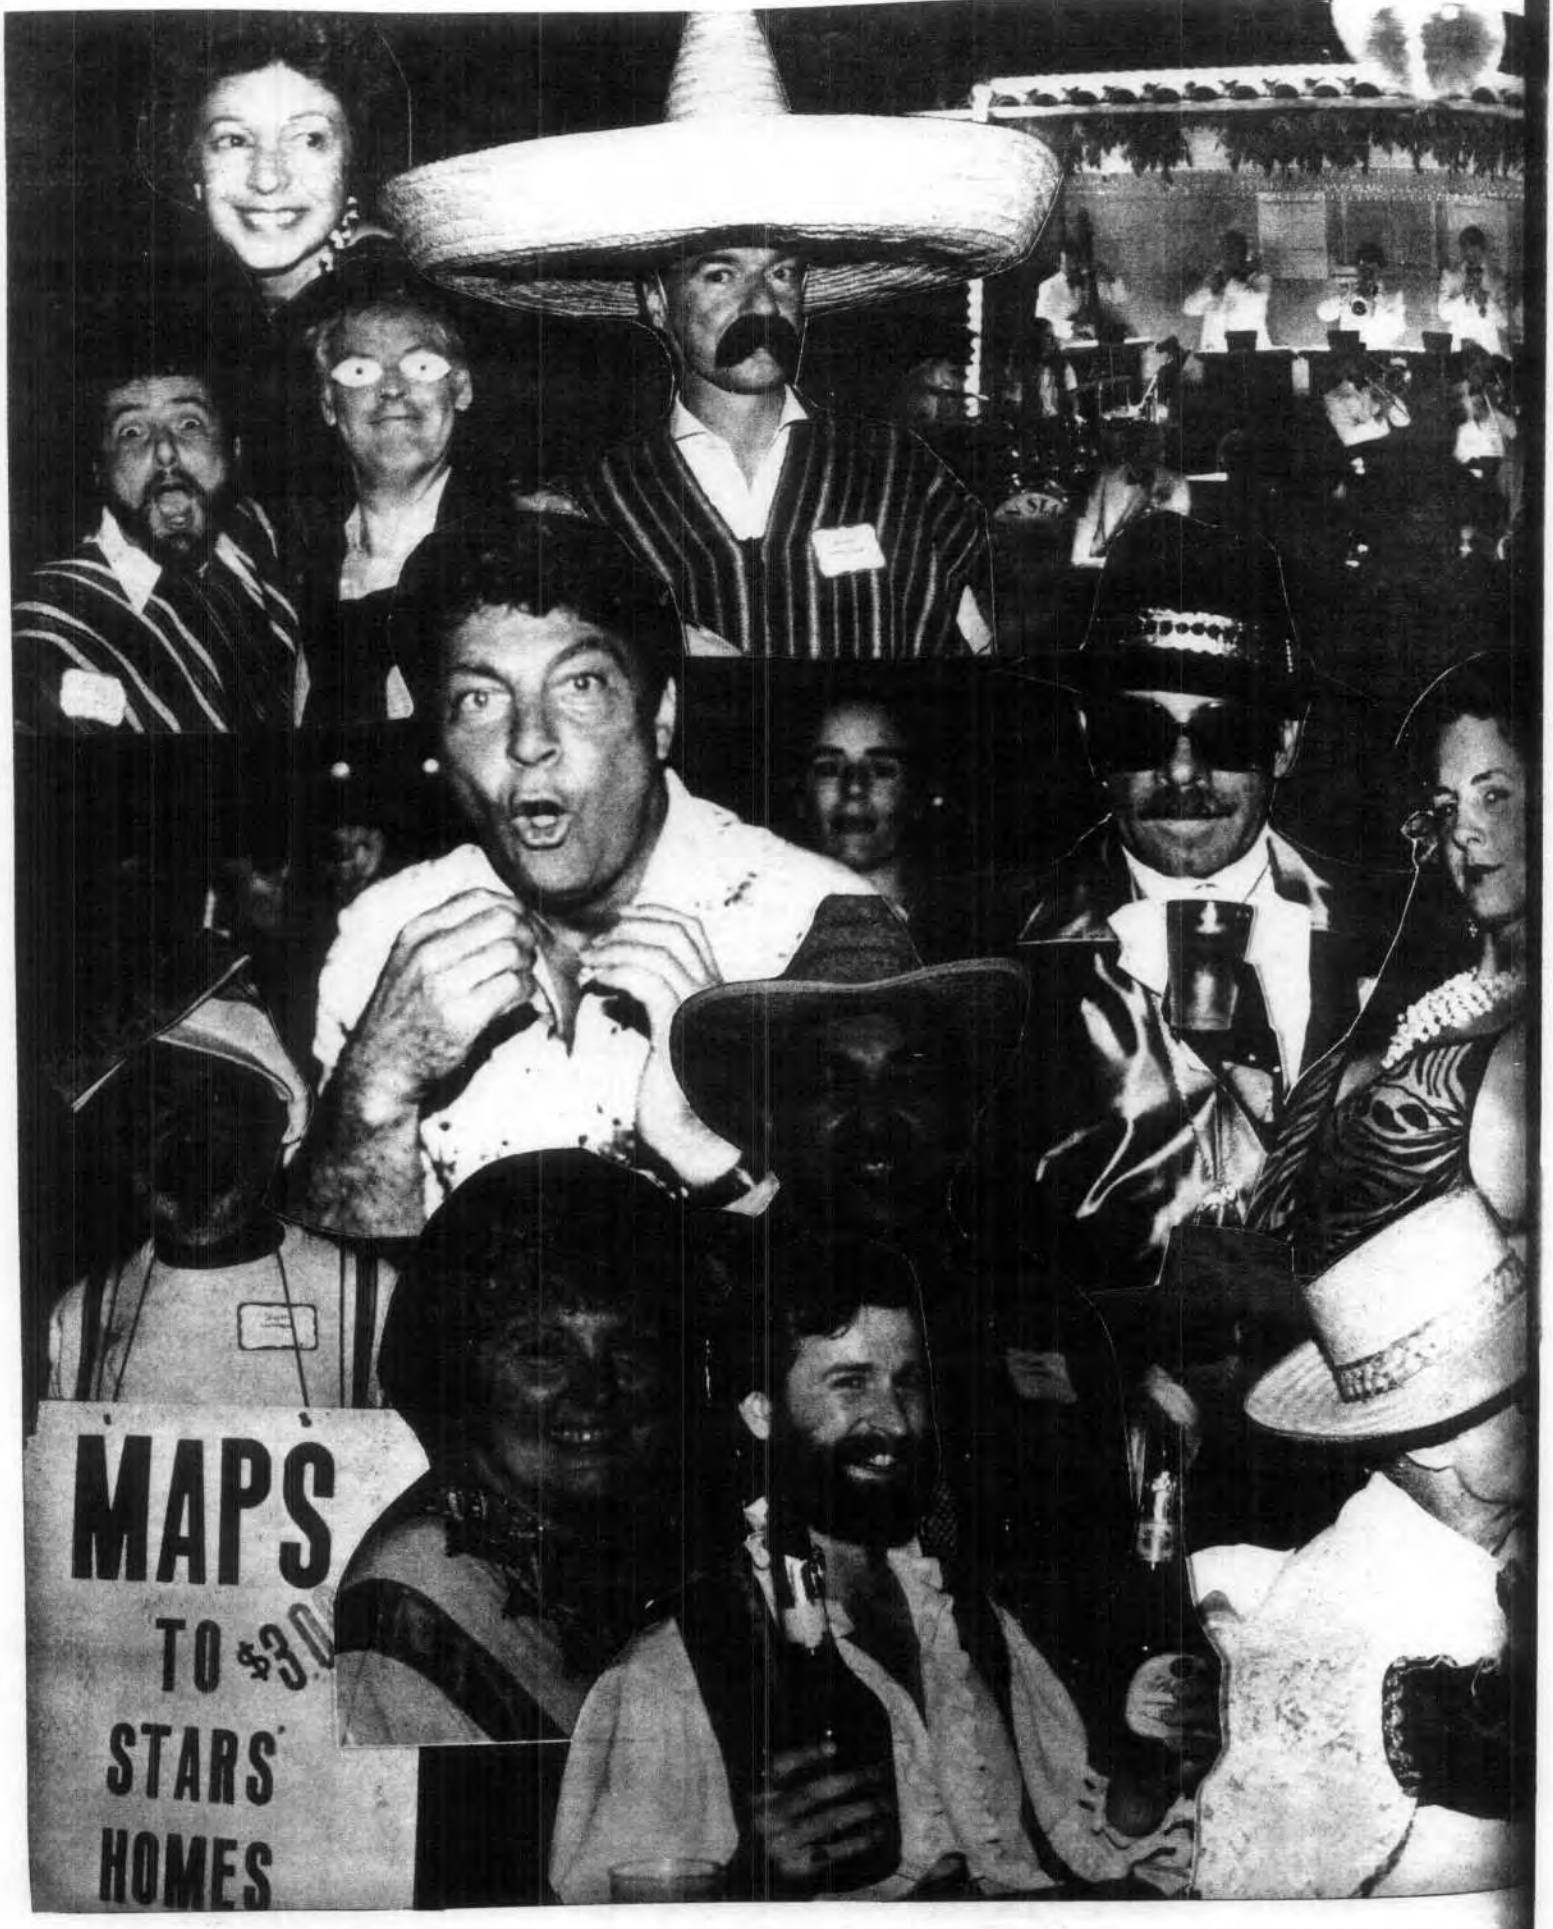

As usual, many people out-did themselves with costumes for the occasion. Some of the exceptional costumes include a trio of medflies (Valerie Silver, Kevin Burns and Burton Ray),someone selling maps to the movie star's homes (Scott Nutter), a couple of colonials (Elizabeth and Richard Barrons),a spanish padre (Richard Rothchild), and many people in western garb. Also notable were Julius Lambrechts and Marvin Leff as early Californians, Gloria Leff, Jayne Stein, Esther Lambrechts, and Candy Barnhart in pretty dresses, Carol Gilbert, Frances Bay and Moira Feingold in prairie dresses and early California garb, and the Lloyds as Spaniards. There were plenty of peons and peasants and even an Arab (a 'new' Californian as Ken Feingold explained his costume)and a 30's-40's movie star (Laurie Schwartz).

All who attended agreed that the music, the food, the bar and most of all, the companionship combined to provide a spectacular evening.

JUST A FRIENDLY REMINDER

Section 9 of the Rules and Regulations for Sanitation for Collecting Household Refuse and Dead Animals of the Board of Public Works prohibits trash containers on the street earlier than 6 PM the evening before trash pick-up and requires them off the street by 8 PM the day of the pick-up. Chronic abuse can result in a citation and fine. Let's all help do our share to keep Whitley Heights beautiful and clean.

STARS'
HOMES

TRAFFIC AND SAFETY COMMITTEE

Marvin Leff

The Traffic and Safety Committee has been working closely with Mr. Conner in the Department of Transportation. Unfortunately the city denied our request for a traffic signal at Franklin and Whitley on the grounds that there is not enough automotive and foot traffic from Whitley Avenue. They did, however satisfy several of our other requests.

First of all, "Tow Away-No Stopping Any Time" restrictions have been authorized for Franklin Avenue a) on the north side extending 50 feet easterly and 86 feet westerly from the curbs of Whitley Avenue and b) on the south side extending 100 feet easterly and 46 feet westerly. These same tow away restrictions have also been authorized for the Grace Avenue area a) on the north side of Franklin Avenue beginning at the east curb of Grace Avenue and extending 80 feet easterly and b) on the east side of Grace Avenue beginning 460 feet south of Whitley Terrace intersection and extending 485 feet south to Franklin Avenue. We're delighted because these actions will provide better visibility at these intersections for both foot and auto traffic.

Also in response to our request, the city adjusted the signal on Milner and Highland that many of us were sitting impatiently at for long periods of time.

Some proposals which will require further action including review and concurrence by residents are: 1) the possibility of one-way streets in certain areas, 2) further restriction in parking on some of the narrower street sections, and 3) change in street name for the short section of Las Palmas from Franklin to Emmet Terrace.

RESIDENTIAL CONSTRUCTION

You may have noticed construction at several locations on the Hill. On one lot on Highland 57 condominium units were approved. Our Board successfully had the density reduced from 65 units with no exit onto Las Palmas. We were also able to insist on provisions for landscaping with trees. On Grace Ave. 32 units are being built which will exit onto Grace. And construction has begun on Highland for another 81 condominium units.

IN MEMORIAL

Regretfully we would like to acknowledge the deaths of three residents of Whitley Heights. Carolyn Anderson of Whitley Terrace was a long term resident of Whitley Heights, an active Board member and one of our few Honorary Board Members. She is survived by several grandchildren. Robert Bolman also recently passed away. He is survived by his wife on Watsonia Terrace. And finally, Frances Bloem who used to reside on Whitley Terrace passed away. A renowned vocal coach, Frances always supported the Hill activities and graciously opened her home to many Hill events.

NEW NEIGHBORS

We'd like to extend a warm welcome to our new neighbors on the Hill. They include:

6612 Emmet Terrace-Jane Gates
6633 Emmet Terrace-Steve Sabin and Harry Starvic
1979 Grace Ave.-Shirley Ellis, Joel Schumacher, Charles and Francis Bay, L. A. Pread, Richard Colbert and B. Spectorsky
6684 Bon Air-Brian and Bobbi Roberts
6740 Milner Rd.-Laird and Raquel Cagan
6757 Milner Rd.-Anthony and Ann St. John
2000 N. Las Palmas-Heike and Thad Merron
2020 Las Palmas-Randy and Jill Scherrer
2064 Watsonia Terrace-Roxalene Taylor
6754 Wedgewood Place-John and Mardy Midders
2037 Holly Hill Terrace-Matti Glatt and Gloria Von Jansky
2031 Holly Hill Terrace-Barton Ray, Kevin Burns and Valerie Silver
2026 Las Palmas-Joan Klein
2040 Las Palmas-Angela Carbone
2050 Las Palmas-Thomas Anable
2057 Las Palmas-Scot Hensel and Pie Lombardi

UPDATES

Due to complaints by residents, your Board has negotiated with Circus Vargas to reduce the number of days the Circus will perform at the Bowl location. In contrast to last year, the Circus will only be performing three days rather than five days. Members of the Board and interested neighbors are meeting with representatives of the Hollywood Bowl and Circus Vargas on Oct. 1 for continued discussion.

The Board has had numerous requests to resume the annual tradition of Christmas Caroling. We'll keep you posted.

Due to lack of funds, the City is now only providing street cleaning once a month citywide rather than weekly. Anything Hill residents can do to maintain the cleanliness of the street in front of their residences' would be greatly appreciated.

NEWSLETTER COMMITTEE

Carol Gilbert

As editor of the Newsletter, I'd like to thank those Board members who have greatly assisted in its production. Special thanks go to Bob Primes and Jim Gillie for taking pictures at the party. Jim also graciously volunteered to layout our picture pages. Ed Balin spent a good deal of time assisting with the layout of the newsletter with the help of Jim Mathes, Tod Jonson and Brian Moore.

BIRTH ANNOUNCEMENTS

Congratulations to Patty and Glen Schellerup on the birth of their son Aaron this summer.

Rumor also has it that the Hill's racoon has been recently sighted in the company of five baby racoons. Mom and babies are all reported doing fine.

THE HERITAGE CORNER

Brian Moore

In her seventeenth year a judge ruled that she was too beautiful to live in a city by herself. At the age of eighteen, she had gained such notoriety in the press that she changed her name in order to work. When she was twenty-two she was writing screenplays for $10,000 each. At age twenty-four she was leading lady to Douglas Fairbanks Sr. in "The Three Musketeers." At twenty-seven she divorced her fifth husband and at twenty-nine was dead of a combination of alcohol, over-work, drugs and strenuous dieting. During these tumultuous years she lived at 6672 Whitley Terrace. Her name was Barbara La Marr.

La Marr was to the twenties what Jean Harlow was to the thirties and Marilyn Monroe to the fifties. She was the reigning beauty of Hollywood during the early twenties, a curvaceous, full bosomed beauty in an era of flat chested, thin figures. As an actress, her talents were well regarded and at the height of her career, she was paid $250,000 a picture.

Born Reatha Watson, La Marr tested for pictures as a teenager but ruined her first chance in films when she slapped the face of a prominent director who tried to kiss her. She left her family and lived alone in Los Angeles, working in a department store. Her father appealed to her to come home and finally a judge insisted that she was too beautiful to live alone in the city. A young reporter, Adele Rogers St. John, the daughter of Los Angeles' most famous criminal lawyer, reported the hearing and became a life-long friend and chronicler of the young star-to-be.

Life moved swiftly for La Marr. She was married and widowed twice in one year, the second husband being a bigamist with a family. She changed her name to escape the notoriety and married again.

La Marr began to write screenplays, which led to a small part in a film with Douglas Fairbanks Sr., who then featured her as Lady De Winter in the Dumas classic, a role that made her a star. Subsequently divorced and remarried, she purchased the house on Whitley Terrace which had been built as a model home by J. J. Whitley in 1920.

La Marr adopted a baby son from a Texas orphanage and maintained a small domestic staff of a nurse, housekeeper and butler-chauffeur. Then came another divorce and another marriage. Jack Dougherty was her last husband. A star of westerns, he soon found that he was tired of basking in his wife's shadow and they divorced.

Barbara La Marr began the rapid finale of her life as illness and fatigue overcame her, though she never slowed a killing pace of making picture after picture, with Perc Westmore, the famous make-up artist to maintain her screen beauty and to keep secret her desperate physical condition. Finally she collapsed on the set of her last picture and was taken away unconscious. Death followed soon afterward, just six months before the death of her friend and neighbor in Whitley Heights, Rudolph Valentino.

La Marr's young son was taken to be raised by actress Zasu Pitts, a close friend of La Marr's. He grew up to work in the film studios and married Joyce Reynolds, a starlet of the forties.

La Marr's house is owned today by Larry Harper. He has restored the house and the grounds, including the pagoda summer house, as close to their former state as possible. Even the secret stairway has been opened. Ah, but that's another story!

CHAMBER GROUP FIGHTS PROSTITUTION

Ken Feingold

In July, the Hollywood Chamber of Commerce formed a Committee on Crime, chaired by Bruce Torrence. The first order of business is to coordinate a united campaign and to act as a spearhead for the community's fight against prostitution.

The first public forum was attended by representatives of approximately 55 homeowner's associations, citizen's coalitions and civic organizations united by their desire to rid our streets of prostitution. Among other objectives, the Committee plans on being a focal point for a united campaign which includes working with the City Attorney, District Attorney, law enforcement agencies and judges to demand stricter enforcement, stiffer sentences and the assignment of additional police officers in Hollywood.

Lastly, the Committee will enlist the support of civic associations like our own in a letter campaign directed against judges and public prosecutors. As a member of the Committee, I will keep our Association informed, and will in the future ask our Association members to write the appropriate public officials requesting assistance with the prostitution problem.

ZONING AND DEVELOPMENT COMMITTEE

Ken Feingold

The Zoning and Development Committee is comprised of four area representatives: Ken Feingold, Carol Gilbert, Marvin Leff and Jeanne Manfred. The purpose of the Committee is to respond quickly to proposed developments to insure that any new development is consistent with the high residential quality existing on our Hill. The Committee is also interested in working for preservation through requested downzoning of adjoining areas adjacent to our Hill.

The Committee's impact on proposed developments is illustrated by a recent hearing. On July 28, 1981, the City Zoning Administrator considered a proposal to permit the establishment of a restaurant at 6700 Franklin Avenue. Committee members, Ken Feingold and member Richard Moreno joined by President, Brian Moore, attended the hearing and raised issue as to the need of the restaurant and its likely impact on Whitley Heights. Along with other community members, Whitley Heights successfully opposed the zone change and the permit was denied.

The Committee hopes to continue to have similar success in promoting appropriate development and discouraging the inappropriate. To this end, we ask that all homeowners be on alert for proposed developments. Because only homeowners within the immediate adjacent area of a proposed development receive formal notice, it is crucial that those neighbors contact either Committee members or their area representative. The Committee will then respond by conferring with Association members and neighbors to determine what course of action to take.

COMMITTEE ON CLOSURE

Jim Mathes

As indicated in the President's column, our Board has created a Committee on Closure to investigate the possibility of closing our streets to public access. A dream of many residents for years, this closure will not be a simple process. It will take a minimum of a year before a fully comprehensive plan can be worked out and perhaps an additional year before the plans could be implemented. It is the Number 1 priority of the Board this year and one that excites us. The Committee consists of: Marvin Leff, Jeanne Manfred, Dick Lewis, Tod Johnson, Bob Primes, Ken Feingold, Jim Mathes, chairman and Brian Moore, ex officio.

Vol. 7 No. 2 Summer 1980

AUCTION 1980
by Gini Colvig

Our 1980 Auction was one of the most successful ones we've had. We owe special thanks to Sheila Werner for her large donation of lovely pieces of furniture and lamps from her mother's estate; Herman Underwood and Bob Marencovich for their gorgeous plants and flower arrangements; Richard Whitfield for his beautiful flowering plants; and from Tod Jonson and Ektor Carranza a brand new sofa; and many items, almost new, from member Dick Lovell and our off-hill friends Denny St. Denis and Bill De Carolis.

Our baked goods made the usual hit with Kathy Elsey baking her delicious breads, Pat Ruyles several apple pies and Pat Friedrich (with help from daughter Jill) treated us to many sweet bread loaves. We had an abundance of small, lovely items of china, silver, and onyx chess set, vases, a silver candelabra, eight sterling liquor goblets from Richard Webster and Don Bevis and many, many more.

Once again kudos to our three Auctioneers- our regulars, Vance Colvig and John Vieira and new this year, Mark Schwartz- Thanks for a super job well done!

Thank you again, Jayne Stein, (another off hill friend) for spending your Saturday and Sunday for us. Sorting and tagging was handled by Patti Faulkner, Jeanne Manfred, Gloria Leff and Laurie Lipton Schwartz. Pick up of items was taken care of by Bob Primes and Richard Whitfield, who is our devoted treasurer was cashier. Mildred Lord helped auctioneers with paperwork. Tod Jonson, Marvin Leff, Ken Feingold and Larry Harper were aides to auctioneers, as was young Monica Vieira, doing much running with purchasers' information.

Because of his accident, Richard Lewis couldn't lift or haul as usual, but was much in evidence helping wherever he was able and checking in guests. Ever-dependable and efficient Charlotte Vieira took charge of the 'treasure' tables. Thanks to Vance Otis for donating the refreshments. Returning items and putting the auction site back in order, our clean up crew did the work quickly: thanks to Ken Feingold, Hank Antosz, the Vieiras, Dick Stiles, Bob Primes and the Matthews lads.

Thank you all for donating and attending. You made this 1980 Auction a huge success!

"CRIME FIGHTER" CLEANS UP IN W.H. SWEEP"

by Patti Faulkner

It is good to know that we Whitley Heights residents have such a wide-awake and alert neighbor at an early hour as Vance Colvig who's quick action made it possible to "catch a thief", or two. Make room in that phone booth, Clark Kent, you have competition! It should also be noted that Vance picked up his own supoena to appear in court to testify. His reward for being a responsible citizen was to spend two days downtown waiting to testify. Because of his outstanding service to the community, the Board of Directors hereby honors Vance Colvig with the first "Whitley WAY (We Appreciate You) Award!" When it's decided what form this prestigious award will take, there will be a celebration with marching bands, fireworks, dancing girls and maybe even a partridge in a pear tree. In the meantime please accept our thanks for a job well done. (See article on "Car Burglars.")

PRESIDENT'S COLUMN

by Richard Stiles

It has been a busy and exciting summer on the hill, and it is gratifying to see so many of our residents getting envolved, and why not? With such functions as the General Membership Meeting, the Auction, and our Beautiful Party, there is ample opportunity for everyone to get together and meet new and old neighbors. We all have a common interest in maintaining the beauty and security of our community, so we encourage everyone who lives in Whitley Heights to join us in both the work and play of the Association. Our success in dealing with developers, governmental agencies, or crime is directly related to how many of you participate and support our efforts.

Certainly we had wonderful support for this years auction and party, with hot auctioneers like Vance Colvig, Mark Schwartz, and John Vieira doing a proffessional job of auctioning the wide array of donated items. Everyone's generosity in both donating and buying helped us raise enough money to put together a beautiful party. As usual, a lot of hard work went into setting up our party so many thanks to our Board of Directors for such excellent work. Several of you have already expressed your appreciation to the Board in person and in writing. Others who are due a great deal of thanks are the non-board members that pitched in such as Vic Conklin who ran the necessary electrical lines with the help of Jim Gillie that brought power to the lanterns and the special lighting of new Board member Bob Primes. Scott Nutter was there lending a hand and a number of exoctic silk kites.

Former Board members Dick Lewis, still recovering from his injuries, and Tod Jonson were their usual hard working selves. We would have missed their help after so many years of relying on it. We also appreciate the enthusiastic efforts of Jayne Stein, Gloria Leff, Pat Friedrick, Theo Primes, Pat Rule, and any others that came out to help us turn the street into an oriental fantasy.

It means a great deal when everyone is exhausted after the party that a few hardy souls such as Dennis Friedrick, Morris Fox, Vance Colvig, Dennis Dugan, Scott Nutter, Jeff Gillie, Mark Schwartz, and a few others stay behind to help us clean up.

A special thanks to our party chairman Gini Colvig who did such a marvelous job and to her neighbors on Whitley Terrace between Grace Avenue and Bon Air for letting us take over their street for the party. The beautiful candles were lent to us by Bob Bartalo and another neighbor on that stretch, Vai House trimmed neighbors overhanging bushes to tidy up the party entrance. Nowhere else in this city do you see these kinds of efforts and I hope that everyone had a wonderful time and that we all got to know our neighbors a little better.

"ORIENTAL NIGHT ON THE HILL"

by Dick Stiles

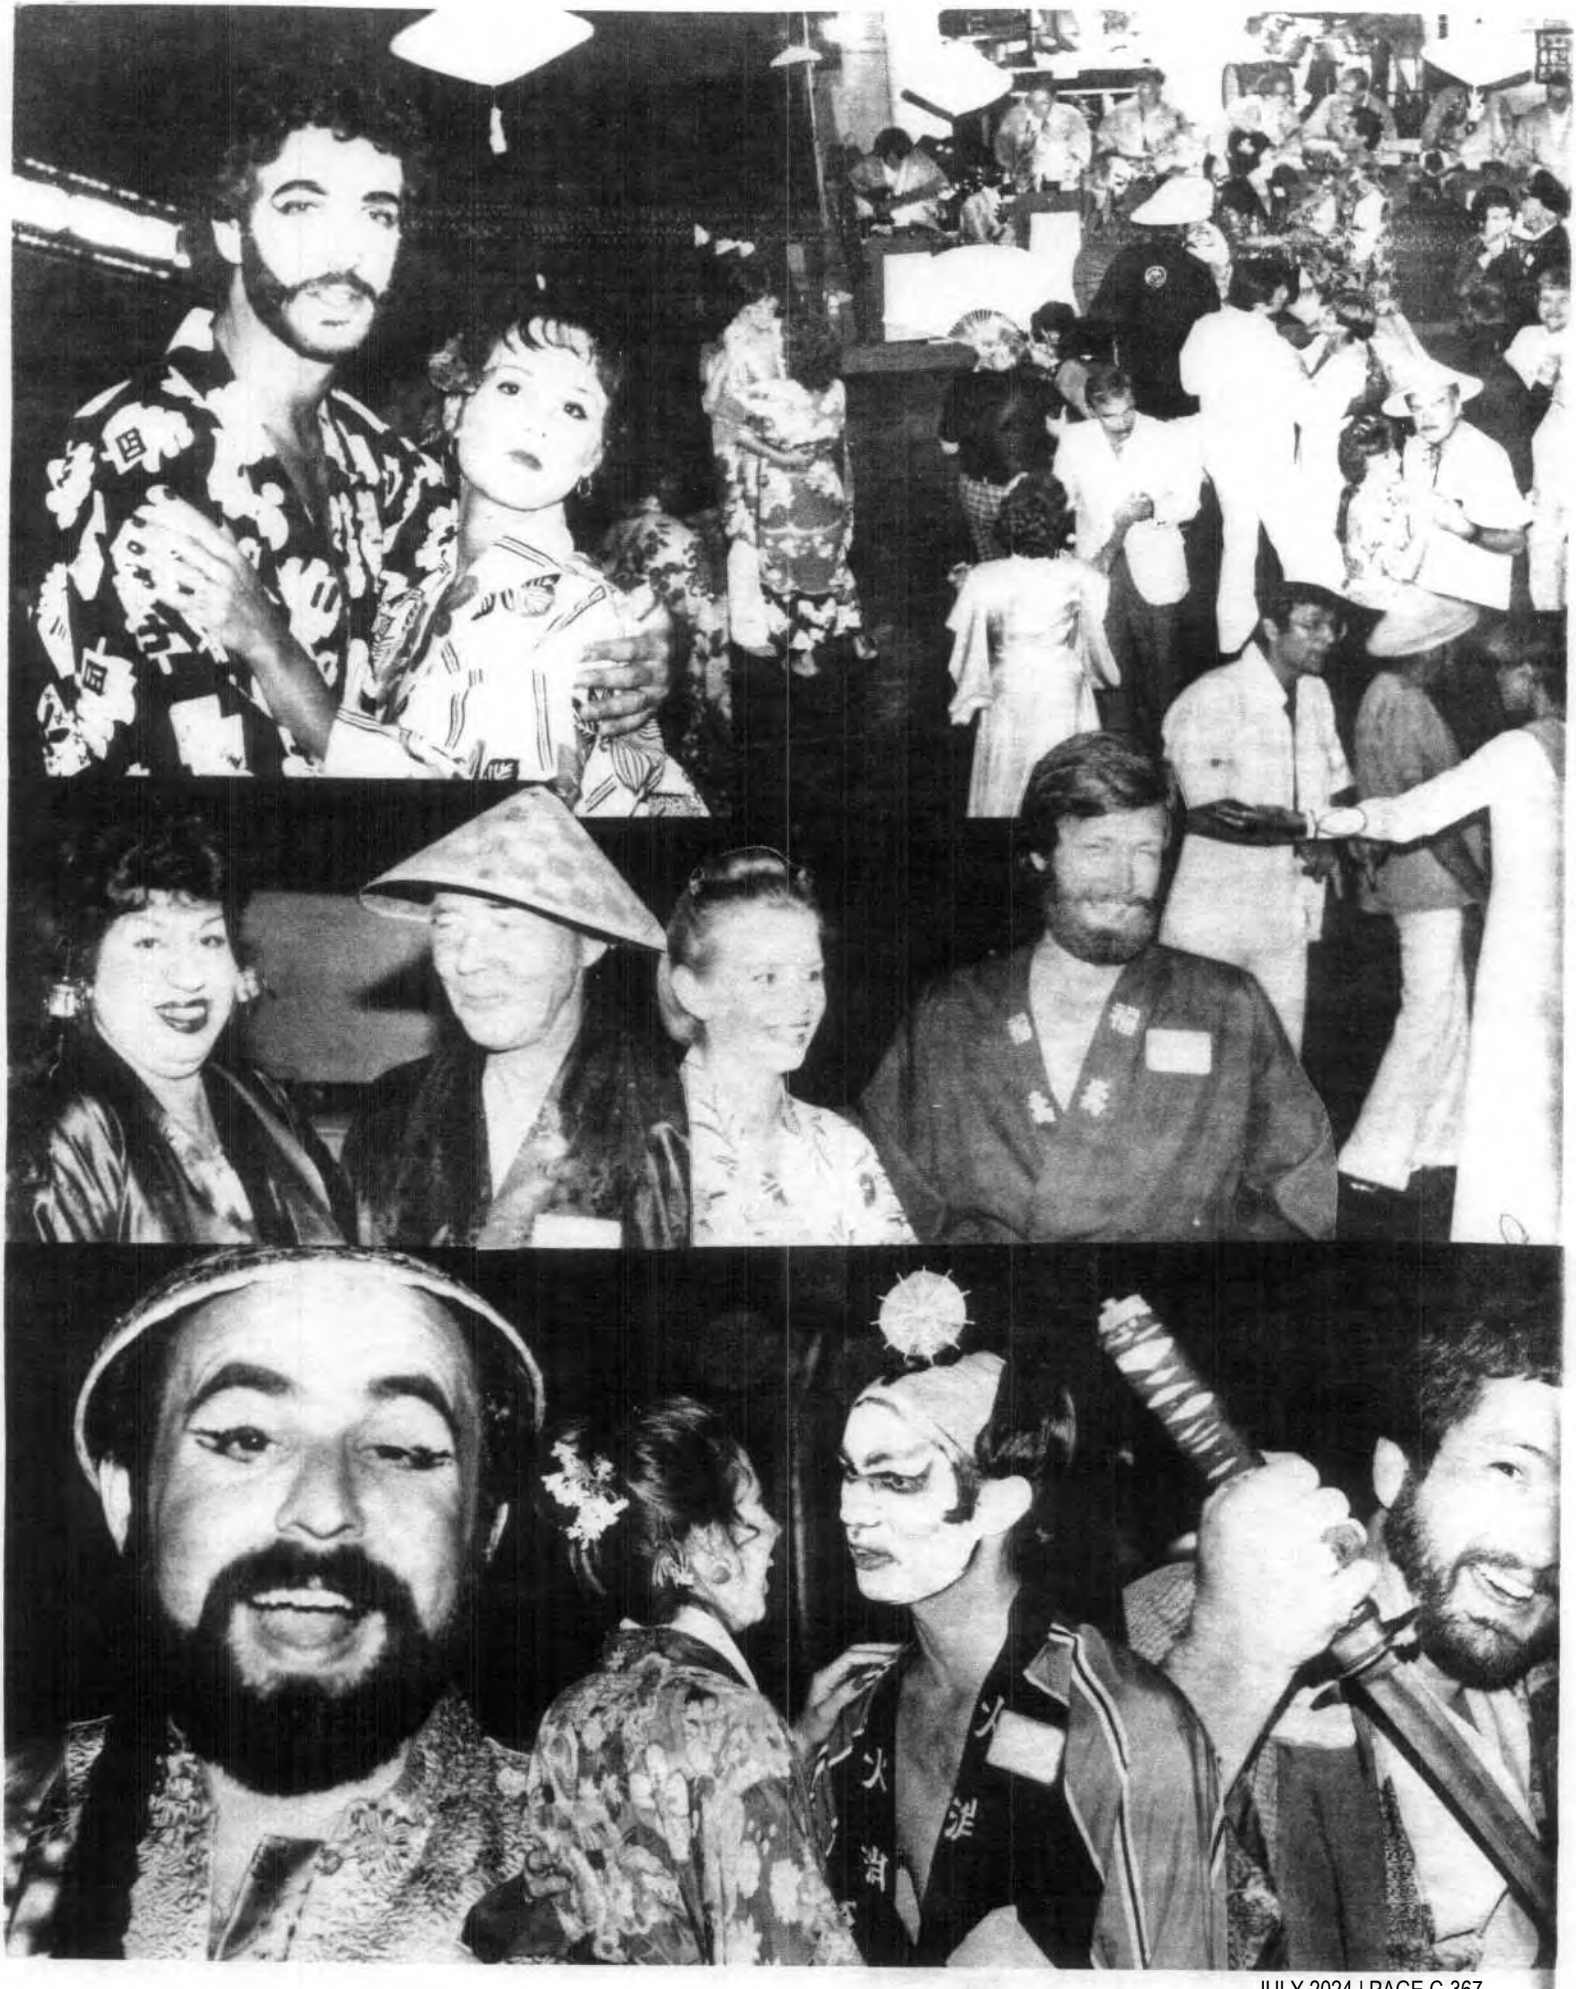

On the evening of Saturday August 30th, East met West on Whitley Terrace as the Board of Directors of the Whitley Heights Civic Association threw it's annual party for Members and guests. The theme, "Tea House of the August Moon," seemed to catch the imagination of everyone because an enthusiastic Board along with many volunteer helpers were out early Saturday morning cutting bamboo, hauling scenery, stringing cables and lights, hanging lanterns and kites, setting tables and chairs, and innumerable other tasks necessary to turn Whitley Terrace between Grace Avenue and Bon Air Place into a glorious oriental setting.

By sunset, the street had become a dream world with a large red Tori gate for an entrance, and giant red silk and white paper lanterns lighting the dance floor and decorated tables with a warm glow. As one passed under the Tori gate there was a hut to the left where a pretty geshia served tea and almond cookies and a fruit buffet to the right. At the opposite end of the party a large moon window and wall enclosed the serving tables where delicious oriental food was served including on-the-spot cooking of tempura. In the middle of the party was the especially installed wooden dance floor and band stand with our perennial favorite music master John Susac and his band.

Party goers showed great enthusiasm for the theme by donning a colorful array of oriental dress and makeup. It took close scrutiny to recognize Jayne Stein under that wig and makeup as she danced with Ector Caranza who was wearing an elegant brocaded coat. Ken Feingold was well disquised under his coolie hat and mustache as he and his wife Moira chatted with handsomely adorned Laurie and Mark Schwartz. Vesey O'Davoran showed us that a wise oriental scholar can also enjoy himself as he took a turn around the dance floor with party chairman Gini Colvig. It was nice to see new member residents Judie and Giles de Turenne, Paul and Karen Van Weelden and Larry Hughes enjoying there first hill party.

Bob Primes made a great Samurai Warrior complete with sword while his wife Theo was a graceful oriental girl. Jeff Wellborn was well disguised under Kabuki makeup and Pat Friedrick even darkened her hair to complete her transition to the world of the East. Scott Nutter, offering another kind of transition, came as a shady opium dealer giving away samples of his wares, (actually a perfume called Opium.) There were many beautiful Japanese girls including Peg Cummings and her guests Joan Bluestone and Sharry Mannings. There was a swirl of beautiful kimonos too and Hapi coats worn by such party revelers as our beloved Beulah Bondi, looking lovely in a pastel kimomo, President Dick Stiles,wearing an outfit he brought from Japan, Treasurer Richard Whitfield appearing comfortable in his kimono while wife Frances wore a Jade green Hapi coat and coolie hat. Nina de Ravenne looked elegant with her captain escort, and Morris Fox was on the dance floor trying to decide whether to disco or do karate in his black belt outfit. There were Mikados and Geshias and a couple of sailors looking for Madame Butterfly. Richard Lewis didn't let lingering injuries keep him from enjoying the party. It was remarkable that almost everyone came in costume, which added so much to the party spirit.

Several special guests of the Association were there to enjoy the evening with us including Peggy Stevenson's Chief Deputy Sylvia Yuster and staff worker Virginia Miranda. President of the Federation of Hillside Associations Charles Melhorne looked dashing in his naval uniform as he and his wife Lotte marveled at the scope of our bash. A bit of history took place as Billy Whitley Widenham, grandson of our hill's namesake, and his wife Loraine returned to the hill to share the party and some precious memories of his childhood on the hill. Vice President and hill Historian Brian Moore was host to the Widenhams

CAR BURGLARS CLEAN UP IN WHITLEY HEIGHTS SWEEP!

by Vance Colvig

Auto burglaries on our Hill have notbeen uncommon, but recently the problem became epidemic when five thieves broke into and burglarized more than a dozen cars parked curbside overnight.

These pre-dawn activities were noted by this early rising resident on Whitley Terrace who alerted the Foothill Patrol and L.A.P.D. by phone. The culprits' efforts were interrupted by the arrival of the Patrol, followed shortly by several black and white units. As these thieves scampered on foot from the scene, two of them were collared—one each by the Patrol and a gentleman from the Hollywood Division.

Much of the loot, including valuable items such as cameras, has not been recovered as it was carried off by the three burglars who escaped. It was a very profitable foray for this trio—and an early return by them, and their like, can be expected.

What can we do to thwart auto burglars? Locking our cars is not the answer. An artful thief who knows his trade can gain entry to your locked car in less than 60 seconds! Leaving absolutely no visible valuables in your car is not the answer. Burglars go for the radio, contents of the glove box and search under the seats for goodies that might be stashed out of sight.

An L.A.P.D. officer noted that most of our homes have garages, and stressed that a car parked overnight in a locked garage is far safer from vandalism than one parked on the street.

The message is obvious: if you have a garage use it for its intended purpose--as a haven for your automobile. Many of the garages in our immediate area are being used for storage of no-longer-used items that can be recycled through the Salvation Army or Goodwill. So clear out your garages (saving the best items for our next auction, of course) and welcome your autos back home!

NEW ARRIVALS

The Association welcomes new arrivals to the Hill: Giles and Judie De Turenne, Paul and Karen Van Weelden, Larry Hughes, Jim and Jamie and son Clark Gillie, and Zachary Oliver Feingold, newly arrived son of Ken and Moira. (Zachary's grandmothers don't reside on our Hill and Zachary invites surrogate grandmothers interested in providing regular day care to contact his parents at 851-8370.)

"ANNUAL GENERAL MEMBERSHIP MEETING"

by Tod Jonson

The annual General Meeting was held outdoors on a lovely sunny Sunday afternoon, June 23, 1980, on the Watsonia Terrace cul de sac. President Stiles opened the meeting at 2:13 with the idea that this was a Town Meeting for the governing of our hill. through this method we join efforts in security, political support, crime prevention, etc. After introductions of the Board's officers and of new residents on the hill, the 1979 minutes were read, and the treasurer's report given. The first new business discussed was the Pilgrimage Cross. It seems that at the time Mrs. Stevens willed her property to the county, it carried the stipulation that the cross be preserved. Lee Boman made a motion for the WHCA to support the saving of the cross as a landmark of interest. A lengthy discussion followed on the appropriate requests to make of the City Council and Board of Supervisors. A motion was made and carried to send a second letter to city officials reminding them of our support in protecting the cross at its present site.

Our second item of business was the Foothill Patrol. Private security patrols are fast becoming an absolute necessity to deter crime in our area. Everyone is urged to join and support this protective measure.

Brian Moore will take over for Tod Jonson as WHCA Historian. A concerted effort is being made to complete the history of our hill. Bob Primes is taking photographic slides of the hill and most of the houses on it.

Sylvia Yuster, from Councilwoman Stevenson's office, spoke about the accessibility of their office when we have problems. It is such a pleasure to see the City this responsive to our needs. Other adjacent home-owner groups are petitioning to be annexed into our district because we get such excellent response for all our important needs from Stevenson's office. Mrs Stevenson appointed our own Dick Lewis to represent the WHCA on a committee developing a plan for Hollywood.

The nominees for the new Board of Directors were introduced and then members were asked to mark their ballots. At the end of the meeting, results of the election were announced and the new Board was welcomed and the old Board of Directors was thanked for its hard work by President Stiles. He also announced that the Whitley Heights Civic Association had completed its efforts to become incorporated as a non-profit organization thanks to the legal help of attorney Ken Feingold.

1980-1981 BOARD OF DIRECTORS	AREA REP.
Mildred Lord	Bon Air Place
Marvin Leff & Hank Antosz	Emmet Terrace
Richard Stiles	Cerritos & Holly Hill
Jeanne Manfred & Larry Harper	Grace Avenue
Robert Primes	Las Palmas Ave
Ken Feingold	Milner Road
Sheilah Werner	Fairfield Ave
Richard Whitfield	Watsonia Terr.
Laurie Schwartz	Wedgewood Pl.
Herman Underwood	Whitley Ave.
Pat Faulkner	Whitley Terr.
Gini Colvig	Whitley Terr.
Brian Moore	Whitley Terr.

THE HERITAGE CORNER
by Brian Moore

At this time in our lives, and in the history of our country, when we are being called upon for small sacrifices and changes in our life styles, I think it interesting to remember how others have met these kind of times. For instance--The Whitley Heights Volunteer Auxiliary Fire Brigade.

After Pearl Harbor, Californians feared bombing or invasion by the Japanese. Cities around the globe had been leveled by night bombings with incendiary and phosphorus bombs. By the summer of 1942 many auxiliary fire companies had been formed for the protection of neighborhoods. By September of that year Whitley Heights had its own all-volunteer company in training.

The Company was a dashing group of Whitley Heights citizens in blue denim coveralls, tin helmets and gas masks. They doubled as "air-raid" or "blackout" wardens, and enforced the ordinance against any lighted window or light of any kind during the frequent alerts of the war years.

Funds for the outfitting of the fire company were raised by a series of concerts given in hillside homes by the "Sinsheimer Quartette", a popular group of classical musicians led by Bernard Sinsheimer of 6727 Milner Road. An unused and partly demolished garage at the corner of Lloyd Lane and Whitley Avenue was donated by its owners as fire company headquarters. It was repaired and outfitted with necessities such as ladders, asbestos gloves, hoses, and buckets.

The first fire engine was an elderly milk truck donated by the Golden State Milk Company which was painted red by the volunteers and fitted with hose and pump.

The volunteers were serious about their time and efforts, and besides their nightly duties as wardens, held full scale drills every weekend and met one evening a week from 7 to 9 p.m. with the Hollywood Fire Department for instruction and drill. They also assisted the fire department in regular runs to local fires. Many of the members volunteered over 1000 hours during the life of the company.

The Los Angeles Fire Department was evidently impressed with these earnest endeavors and conferred official title upon the group. The Whitley Heights Company became L.A.F.D. Co. 27D-Area 7.

The L.A. Fire Department also helped the new company acquire and outfit a more modern fire truck donated by the Southern Counties Gas Company. A system of quick response to calls was developed: all calls went to a central location--a private residence at 2118 Whitley Avenue. The alarm was sounded and every member alerted to a swift rendezvouz at this address. Hand pumps had been distributed to certain houses in key positions in case of a large incendiary attack.

Mrs. Julia Barry remembers many an evening taking hot chocolate to the volunteers at their appointed posts, and remembers too, the diligence of those who served.

A partial list of our hill's volunteers includes Fire Chief John Anderson Jr., D.H. McDonald, Wm. F. Foster, Crawford Kent, George Wing, Peter Milne, Wesley Barry, Russell Custer, George A. Grist, Edward Samaha and Harold Barter.

Nor were the ladies lagging in their efforts. Mrs. Laura Auger organized a Red Cross unit at her home at 2118 Las Palmas where the ladies met weekly to roll bandages and prepare first aid materials. These supplies were placed in various homes on the hill to be easily accessible in case of emergency.

That emergency never materialized--neither for the Red Cross unit nor the Fire Department. However, a feeling of accomplishment and comradship must have been shared by these actively patriotic citizens.

EDITOR'S NOTE: Members with historical articles or photographs of our hill are invited to submit them to our hill historian, Brian Moore, 6711 Whitley Terrace-874-8763. Brian promises to make copies and to return originals to their owners.

VAHDAH OLCOTT BICKFORD REVERE 1885-1980

by George Warren & Richard Stiles

On May 18, 1980, famed guitarist and long time resident of Whitley Heights, Vahdah Olcott Bickford Revere passed away. Her long full life spanned nearly a century and has left a valuable legacy to those of us whose life she touched.

Mrs. Bickford, born Ethel Lucretia Olcott on October 17th, 1885, was the last pupil of the great Alta California guitarist, Manual Ferrer. She was already an established concert guitarist when she married Myron Bickford, a mandolin virtuoso, organist, composer and conductor, in 1915. The marriage plus a subsequent change of given names in which "Ethel" became "Vahdah" and "Myron" became Zarh", was made at least partly on advice from her mentor, world famous astrologer and numerologist Evangeline Adams. The marriage was a union of interlocking talents that propelled the two to the top of their respective fields in New York by 1920. (Vahdah had become the second person in the world to make commercial recordings on classical guitar.)

In 1923, Vahdah and Zarh settled in Los Angeles and immediately proceeded into what became a lifetime of intense activity in the musical community here. This included concerts, heavy teaching schedules, composition, arranging and publishing, and involvement in State and National Conventions. It also included the founding of many prestigious musical organizations, notably the American Guitar Society, of which Vahdah was the Founder and President to the end of her life; and the Burbank Symphony, of which Zarh was the Founder and Conductor Emeritus.

In 1935, they bought their home on Holly Hill Terrace here in Whitley Heights. Vahdah has been a long time supporter and member of the Whitley Heights Civic Association. For several years she was President of the Whitley Heights Garden Club.

Vahdah's last years were devoted to continued teaching, to advisory work with musicologists and historians of the guitar; and to the maintenance of her most treasured life-work, the American Guitar Society, over whose concert meetings she presided with quiet dignity into the sunset of her life. She is survived by her nephew, Norman Olcott Tiffany, her niece, Wilhelmina Olcott, and her second husband, Robert Revere.

Whitley Heights Civic Association

Vol. 6 No. 3 Fall 1979

REFLECTIONS ABOUT THE PARTY

y Patti Faulkner

As I was looking through some past issues of he Newsletter, one word seemed to repeatedly pop ut at me in CAPITAL LETTERS; that one word was EIGHBOR. Stay with me. I'll make my point!

I probably was more pleased than anyone that ur latest party was a smash hit, in spite of the act that I was "Chairman of the Bash" (or as Gini olvig tagged me, "Party Chairgirl!!). Of course he reason for the success was the help and coop- ration of so many paople, Board members and the eneral membership. Thanks to all of you, I only ad a mini-anxiety attack!

My only criticism is the fact that the party ot out of hand as far as the number of people ttending, mostly at the last minute. It has been n observation of many that we have lost the original oncept of the "Hill" party, which is to bring to- ether NEIGHBORS for an evening of fun and visiting ith people we don't see very often. Some years ago, s a new resident, I remember attending my first arty and meeting my NEIGHBORS and having the oppor- unity of sitting down and getting to know them. ecause there were so many people this year, I even issed saying hello to some of them. All I ask of ou is to keep this thought in mind when it's time or next years "Bash".

Thanks to all the workers for their diligent elp. I hope a good time was had by all.

REPORT FROM FOOTHILL PATROL

by Michael Greenwald

To keep residents informed, I have tabulated a short incidence report covering all actions taken by our officers in the Whitley Heights area. These figures have been taken directly from our daily log book; they should give you an accurate account of our activity for the period beginning July 1, 1979 thru October 31, 1979.

Suspicious Vehicles:	36
Suspicious Persons:	41
Open Door/Window:	65
Miscellaneous:	8

I'm sure you realize that, as inflation goes up, crime goes up. We will need even more partic- ipation from members to keep your neighborhood safe and secure. Make an effort to keep all doors (especially garage doors) and windows shut. If you should spot a suspicious vehicle or person, write down any information you possibly can. Make suspicious persons aware of your presence! Let them know they have been spotted!

We would also like to remind all members that they are eligible for a free security consul- tation at any time. We will advise you on ways you can better secure your home and personal belongings Or if you choose, we will discuss the possibilities of an alarm system.

Please feel free to contact us concerning any of your security needs. We can be reached 24 hours per day at 664-1115 or 660-3331.

ANNUAL PARTY GOES HAWAIIAN

by Cholly Whitley Heighter

"A Hawaiian Garden Party" was the theme for the Whitley Heights Civic Association's annual party. As in previous years, the Association's Board of Directors has hosted this dinner and dance social for its hillside members and their guests. This year over three hundred people in a variety of tropical attire attended the open-air street party. The day of the party, board members and volunteers arrive at the party site and spent most of the day changing the street into a tropical paradise with palm fronds and flowers. Rows of tables were covered with tapa cloths and set with exotic tropical flower arrangements. A life size statue of King Kameamea with his splendid red and yellow feathered robe watched over the revelers and was joined by party chairperson Patty Faulkner with husband Bill, son Gary and his date Melodie Swanson, prexy Dick Stiles, vice president Gini Colvig, and board members Larry Harper and Russ Smith as well as others for candid photos. Another popular photo spot was the volcano which gently bubbled and glowed in the cool night while Charlotte and John Vieira admired the parrots riding on the shoulders of two handsome 'Hawaiian' gentlemen. The brightly colored birds seemed to enjoy the soft tropical night until flash bulbs gave the impression that the volcano was about to erupt.

There were more wonderful candid shots such as the one of Frances and Richard Whitfield laughing with Frances' sister Dorothy McCord, and Vance Colvig's comic grin while Candy Barnhart is caught in a state of surprise on seeing a giant pineapple sprouting out of the head of Scott Nutter. I could say that it takes guts to wear nothing but a sarong to our party, but I wouldn't say that to Dennis Fredrich, just that he and his wife Pat never looked lovlier. I understand that the shore patrol is out looking for a couple of Navy uniforms that dissappeared, and not off the rack. Oh well, Morris, we'll never tell.

Rick and Jean Welch and Brian and Meg Wilson, adorned in palm headresses and floral outfits looked like a poster for 'Island Hopping.' Speaking of 'Island Hopping', that might be a good name for the dance step Vance Otis and partner Beverly Gaard were doing to the lively music of John Lusac and his band. The groups ever danceable music kept the dance floor a whirl of bright colors as partners Ann Coe and Bruce Chevillat, Gloria and Marvin Leff, Ektor Carranza and Jayne Stein, Randy and Dawn Sprout, Bill Hale and Kathy Martin, Kathy and Dennis Elsey, Eleanor Lewis with handsome nephew Geoff Czapak visiting from Niagara Falls, Donna Magwood with Joseph von Karnfeld, Carol Gilbert and Dan Shelton, Andy Braznell and Jeanne Shirley, Barbara Bevin and date all followed the rythms from Manhatten to Waikiki.

"Did someone say food?" Who else but Tod Jonson would ask, and party chairman Patti Faulkner was quick to assure him as well as others that there was a Hawaiian feast beautifully prepared by 'Marcus' of Glendale. Soon everyone was filing under a beautiful canopy covered with orchids and vines to be served the delectible sweat and sour pork, oriental rice, Chicken Breasts Cantonese, cole slaw, and a variety of fresh fruit. After a meal like that, how could Candy Barnhart and Barbara and Art Lloyd still manage to look so slim and perky. Champagne was served with the dinner and mixed drinks were available at the bar ably concocted by Tom Shoot and Scott Bauer.

Palmer Amunson put on the old uniform to see if it still fit and speaking of fit, we were glad to see Carolyn Anderson was able to attend the festivities. Unfortunately another longtime hillside resident, Beulah Bondi was convalescing at the Motion Picture Country Home so missed the party. Thank goodness that pioneer spirit of hers has her recovered nicely.

We were pleased that special guest Councilwoman Peggy Stevenson and Steve Catalano from her office, Assemblyman Hershel Rosenthal and his wife Pat, and Captain Jerry Feinberg and his wife Julie could join us for this special fun night. Other welcome party guests were 'off hill' big auction spenders Monique and Gary Wilmes, Mac Meltzer, Dale Miller, Bob Morton, Joe Hornick, Aldor Langernin, Harold and Benita Singh, Gene Davis, Peter Silence, Shirley Binninger and Hugh and Dotty Jeffries. Thanks for your continued participation.

Seen here and there at the party by your roving reporter: Watsonia Terrace as always well represented by the Whitfields, Bob and Theo Primes, (Bob and Vic Conklin did the terrific lighting effects), Jim Mathes, Fred Burgess, Chuck Hattendorf, Scott Nutter in his fantastic pineapple 'head do', and Nina Johns sitting with Vesey O'Davoren, Bob Hendersen, and Bob Ferro. The Bobs were long time Watsonia residents who are again looking for a Whitley Heights home. Also, was great seeing ex-Grace Avenue-ites Rick Wierbitsky and John Sankovich back for the festivities. We miss you guys - when you moving back? Paula and Phil Guibord finally returned from the east and hosted a festive table of friends including Bernie Margaleth and Drew Flora (Bernie back in Hollywood after living several years in Hawaii). Bob Metzer with his always happy house guest-revelers group including Bob's sister Lorraine and Irmalinda Conrad. The cleanup group could never make it with out Bob's bloody Marys on Sunday morning. Joe Bobitz and Max Reno sitting with Lawrence Dworet and Toni Robertson at a table that included Andy Micsky with guest Gloria McDermott and good neighbor Dorothy Brown.

Richard Rothschild in his great Charlie Chan goes to Honolulu get-up. Mildred and Jim Lord chatting with new neighbors Randy and Melanie Bishop. Randy is a startling Baryshnikov look-a-like.

Glad to see so many of our 'old guard' out in force including June Gelfand, Ed Balin, Alvin and Colene Gilford, George Wilhelm, Charlotte and Phil Burg, Ed Smith, John Leggit, John Hemphill, Nina DeRavenne, Julia Barry and Garth Wilson, Trudy and Louis Staler, Art Rochman and Larry Tonnas. Don Bevis and Dick Webster with his charming mother Lillian were sharing a table with old neighbors, Grace, Geoff, and David Purdy and new neighbors Ken and Moira Feingold. Mary and Fauod Samaha seated with Julius and Esther Lambrechts, Cheryl Paghira and Bob Johnson. Another old guard newcomer combo were Howard and Fran Magwood sharing a table with Jane and Bill Badalato while young sons Jeff Magwood and Bill Badalato Jr. spent the evening together. Don't worry fellas, in a few years you can join in the fun. The Lloyds and Barnharts shared their table with Wedgewood neighbors Jim and Marge Hiemstra and Charlie and Peg Smith. Jeanne and Charles Manfred with Jeanne's mother Pat Ruyle and newly-weds Matt and Helen Manfred really made it a family party.

Neighbors on Grace Avenue Bill Bast and Paul Huson shared the Manfred table along with Assemblyman and Mrs. Herschel Rosentnal, Pat and Dennis Freidrich with Pat's big auction spending brother Pete Lambert and wife Lynne, niece Robin Lampert and date Larry Vaughn. As well as the 'old guard' and 'new comers' the 'young set' were well represented by Herman Underwood and Bob Marencovich (they did such an outstandingly beautiful job on all the floral centerpieces and displays), Chris and Jon Jay, Harvey and Lynda Alperin, Edith Scott, Stephen and Florence Marshall, Paul Tiberio, Bill Jones, Pat Fry, Lurena Deutsch, Barry Scott, Jacob Palofax and Steve Ross.

Our own hillside "White Shadow", Dick Lewis seemed to be everywhere and why not. No one knows how to give or enjoy a party more than he does. A number of televison and film personalities were on hand to have a good time including Stuart and Dierdra Damon, Brian Moore, Argentina Brunetti, Sean McClory, and Denis Dugan - arriving late after performing with wife Joyce Van Patten in their new hit show at the Westwood Playhouse. So you see there was enough talent, costumes, scenery, and performances on hand for director Howard Magwood to produce our own "La Dolce Vita" -or did we? 'Aloha 'til next time.'

SECURITY ON THE HILL

by Dick Stiles

We are about to start another six month period of security patrol for our neighborhood. Bill forms were sent out to all homes at the beginning of November and many of you have already responded by sending in you checks. Since our new contract period, December 1st, is rapidly approaching, we urge both present subscribers and those wishing to subscribe to send your checks in right away in order that we can keep these proffessional security officers patrolling our streets and on-call when we need quick help. The holidays have always been a bad period for breakins and there are so few police cars driving through our hills that we need someone keeping a watch on our homes. We do not publicize hours and number of times our private patrol sweeps our area, but they probably drive through more often in 2 days than the LAPD does in a month. The police time is concentrated in the so called high crime area, leaving us exposed and only after a breakout of crime in our neighborhood do they send in more patrols. This is like chasing fires after they break out, the loss and damage has already taken place. We need highly visible patrols that make our hill too risky for would be burglars. Granted our private patrol has not stopped all crime, but there has been a decreased number of incidents in Whitley Heights while non-patrolled areas have had a dramatic rise in crime. Once you join, don't hesitate to make full use of the patrol by calling and reporting any suspicious persons or vehicles. Also let them know when you are away on a trip so they will be extra watchful. It is $75 for six months. That is $12 per month and the more residents that subscribe, the better our neighborhood can protect itself. Make your checks out to "Whitley Heights Civic Association" and send to Richard Whitfield, Treasurer,
2058 Watsonia Terrace, LA, CA. 90068

KEEP CLEAR OF THE FLAMES

by Meg Wilson

Once again, many homes were burned to cinders in the almost predictable summer hillside fires. Bear in mind that the disastrous Bel Air fire occurred in November and that it's not too late to take stock of our own properties and neighboring vacant lots.

Proper brush clearance creates a "fuelbreak" around your home which not only slows, and may even stop the progress of a fire, but which also gives firemen a chance to work around a structure to try to save it. Therefore:

(A) Trees should be cleared of all dead wood and trimmed up at least two feet from the ground.

(B) Native shrubs such as salt bush and coyote bush should not be removed because of their high fire resistance; while other natives that are highly flammable, should be replaced with oleander or other fire retardant varieties.

(C) No vegetation is permitted by the City of Los Angeles within 10 feet of the outlet of any chimney.

(D) Clean up your cultivated plants as well. Get the dead leaves out of the bamboo and the litter out from under the eucalyptus and the trash from your service yard. Clean the pine needles off your roof.

But don't delay! Because of the last two years heavy rains, the amount of brush on the hills is formidable. So start cleaning. NOW! Once you see those flames racing toward you, it's too late!

"SPECIAL DISNEYLAND EVENING FOR CHILDREN"

Many of the children from Whitley Heights had their own special evening Sunday, October 21, when they went to Disneyland as guests of the Board of Directors of the Whitley Heights Civic Association. Charlotte Vieira was in charge of organizing the outing which offered the children free admission and unlimited use of all attractions from 4:00 P.M. to midnight. Everyone seemed to have a good time with the new ride "Thunder Mountain" causing the most excitement. The sixteen children from our hill must have forgot about time, since they didn't want to come home until midnight. The Association is grateful to Charlotte Vieira and the other chaperones Pat Friedrick, Dennis Elsey, and John Anderson for their part in taking the children on this fun evening and seeing that they all got back safely.

"TRASH IS NOT BEAUTIFUL"

by Patti Faulkner

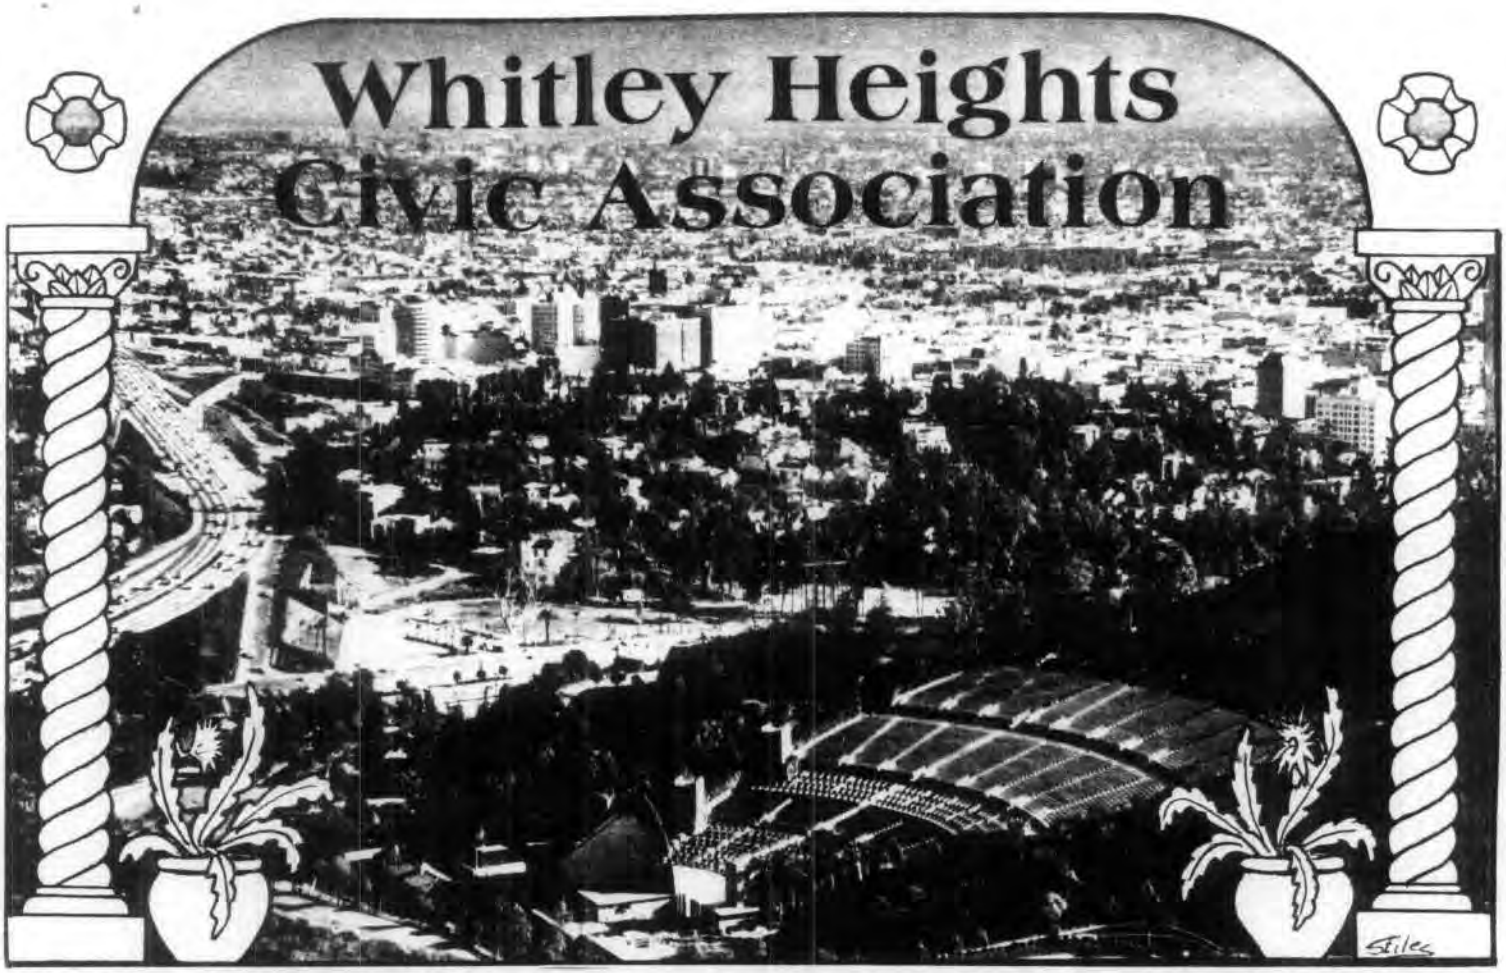

We all have trash,
That fact's for sure
But "left out" cans,
We can't endure.

So please take them in,
When they're cleaned out
And we'll have neat streets,
On the Whitley Heights route.

I submit this to you,
For your edification.
Your neighbors will thank you
For your cooperation!

PLEASE NOTE:

The City is expected to start citing homes for leaving trash or cans in public view past pick-up day!

Vol. 8 No. I Spring 1981

WORKING TO COMBAT CRIME

by Ken Feingold

During the past year, most of us have become inundated with talk of increasing crime. Crime statistics for our Hill gathered by Hank Antosz graphically disclose disturbing evidence of our crime problems:

Between October 7th and November 30, 1980, we suffered through 67 reported incidents of crime, including car thefts and residential burglaries. During this 8 week period, we were victimized by 17 burglaries, averaging 2.1 burglaries per week.

Between December 7, 1980, and February 14, 1981, we fell victim to 139 reported incidents. During this 10 week survey, the Hill suffered 32 residential burglaries, averaging 3.2 per week.

Although none of us, including the police and community leaders, have ready, quick answers, in response to the apparent increase in crime, the Board has begun a number of projects.

Most visibly, seven freshly painted signs have been installed at entrance points on our Hill to alert undesirables that our Hill is privately patrolled.

As a further deterrent, a Committee chaired by Bob Primes is investigating the installation of security gates.

A Security Committee has been formed and has studied numerous alternatives to the current employment of Foothill Patrol. Two competitive security services have been interviewed and have submitted bids. The Committee has begun negotiations with Foothill to increase the hours of coverage and benefits. A full report of the alternatives will be provided at the general membership meeting in June.

A letter to Hughes Market, followed by a delegation and a meeting with Hughes officials, has been undertaken to remove the undesirables who frequent Hughes. Brian Moore continues to chair the delegation and we are hopeful that we will obtain greater cooperation in this effort.

A discount has been obtained for Association members desiring the installation of home security systems. Complete details of the discount from Interline are included in this Newsletter.

A Crime Report form has been prepared and included in this Newsletter so that the Association can be better informed and can lobby for more police protection. Members are encouraged to file the Report with the area representatives so appropriate follow-up can be taken.

Finally, this Newsletter has been devoted to the issues of crime to increase our awareness and to invite suggestions. While we don't like to talk about crime, there is no benefit in being a silent victim. Everyone is encouraged to submit their ideas to protect our neighborhood. The situation will only improve if we work together.

PRESIDENT'S COLUMN

by Richard Stiles

As you will notice, this issue of our newsletter is dovoted primarily to security matters which has been the subject formost on most of our minds for some time. Your Board of Directors has spent a great deal of time and effort searching for ways to meet and defeat the incursion of crime. A special security committee has been searching out and interviewing various companies and individuals in an effort to insure that we have the best protection we can afford for our hillside community. We are ever looking for ways to get greater participation by all residents of Whitley Heights in some form of self protection. Even neighboring associations have been contacted with the idea of sharing expenses of an expanded security patrol in order to obtain more hours of coverage while holding the price line. To discourage would be criminals, we have installed signs announcing that the area has 24 hour armed patrol at each entrance to the hill.

I compliment those residents who have joined and support the private security patrol and urge the rest of you to stop being passive in protecting your life and property. Crime never goes away by ignoring it and any sign of weakness becomes an open door.

In June I will complete my third year as President of Whitley Heights Civic Association. It has been both and honor and challenge to serve the needs of our very special hill community. The wonderful help and participation of residents and Board Members have enabled us to successfully meet some very serious challenges to both the density, beauty, and security of our area. We have also had some memorable social events. It would take the entire newsletter to thank everyone who has given me both their help and friendship during my years on the board, but I am most grateful to all of you. This has been a special time in my life that I will never forget. I offer my support to the new officers that will take over in July, and ask that you all do the same.

The work of the Association is never done since each year brings new problems and challenges to cope with. There are some old problems that need repeated attention. Over the years Whitley Heights has truly been blessed with some wonderful residents that worked to make the hill what it is today - a wonderfully unique, and historical community. We all must do no less in carrying on the tradition of vigilance and service that will preserve the quality and security of "the Crown of Hollywood." Whitley Heights.

"GENERAL MEMBERSHIP MEETING"

All residents of Whitley Heights are urged to attend the annual General Membership Meeting at 2:00 P.M. June 21, 1981. This is your opportunity to elect the Area Representatives that will serve on your Board of Directors this coming year. There are also several urgent items that members must vote on encluding a raise in membership dues, possible changes in the security patrol, Hollywood Bowl problems encluding the Circus, etc. Come and make your ideas known Sunday, 2:00 P.M., June 21, at the residence of Charles and Jeanne Manfred 2071 Grace Avenue.

HUGHES MARKET

Brian Moore

I am told that in the early years of Hollywood, there was a market on the corner of Franklin and Highland Avenues where the produce was sold from large bins and the roof was only partial and of tin. This was replaced by a more permanent building and finally Hughes Market was built. The important thing is, we have always had a neighborhood grocery store that we could depend on and call our own.

We now know that has changed. We have all watched with dismay and alarm, the steady deterioration of Hughes Market and its operation during the last ten years. Not only from our point of view as customers but from our feeling that it has now become a focal point of those elements that spread crime, fear and deterioration through our community.

The Whitley Heights Board of Directors, after much discussion, canvassing of opinion and listening to and witnessing dozens of ugly incidents originating from the Market, has presented Hughes with a list of complaints and recommendations.

It is well known that the Market is one of the Hughes chain's most profitable stores - especially the Liquor Department. We have requested they not stock or sell any wine or liquor under the price of $3 and that they abide by the law in refusing to sell liquor to an intoxicated person. Presently they are selling "splits" of cheap wine for 80¢ and 11/2 liters of Carlo Rossi wine for $2.59. These are the empty bottles we find in our streets, our vacant lots, on our steps and in the Park.

We have requested removal of the bank of telephones by the main entrance, as many of our members have complained of having to run the gauntlet of "street people" who seem to habitually inhabit these places.

We have asked Hughes Market to insure safety for its customers with a 24 hour security guard in the parking lot and another inside the building. We have asked for mature, experienced guards to put an end to the panhandling and other harassments in and out of the store.

The vagrants and their fellow travelers who are sold to by Hughes, tolerated by Hughes and thereby encouraged by Hughes, ultimately become the community's problems, whether we meet them in the Market parking lot or in front of our homes.

On April 28, a delegation met with Hughes officials to discuss the problems. David Cochran of Hughes promised greater cooperation, removal of certain splits of low-grade wines and increased security.

Members with specific complaints are asked to communicate with Mr. Cochran at Hughes Market Headquarters, 227-8211. Let's get back the feeling of a neighborhood store.

CRIME REPORT

Date of Incident: _____

Location: _____

Victim's Name: _____

Address: _____

Phone No.: _____

Circumstances of Incident: _____

_____

_____

_____

_____

_____

_____

Date Reported to Police: _____

Report Number: _____

Name of Investigating Officer: _____

The preparation and mailing of this Report to your Homeowner's Association (c/o your area representative) will assist our joint efforts to deter crime and to monitor law enforcement on our Hill.

The Association will follow up crime reports where appropriate by contacting the police and the prosecuting agencies.

Thanks for helping.

WHITLEY HEIGHTS CIVIC ASSOCIATION

SAFETY & SECURITY

by Marvin Leff

On a positive note, to attempt to expand the external security on our Hill, your Board appointed an ad hoc committee to probe this problem in depth. Representatives from Hollywood Dell and Hollywood Knolls were invited and joined in the sessions to pursue the possibility to enhance the security of households in all these areas.

Interviews were held with four recognized security companies with the following objectives:

1. Maximum number of patrol passes to be guaranteed including night time and week-ends.
2. Response time to emergency or critical situations.
3. Cost per households.

The culmination of these sessions will be a recommendation to the Board of the best security available per dollar cost. A security package will be presented at the next regular Association meeting for your review, consideration and acceptance.

Your involvement in crime prevention is critical - the greater the participation, the more service we can realize. A safe and secure hillside is the objective of all of us! For your own peace of mind, homeowners and tenants, let's unite to combat this fearful threat to our community!

SECURITY TIPS

from Foothill Patrol

1. Keep all doors and windows secured with good locks at all times. Chain locks and spring-latches are not considered good locks.
2. Use exterior lighting during hours of darkness, low wattage household lighting is sufficient.
3. Trim shrubbery for good visibility.
4. Know your neighbors, and keep watch on each other's homes.
5. Make your home appear "lived-in." Put lights and a radio on a timer. Don't let mail and newspapers build up while you are away. Have your landscaping cared for in your absence.
6. Don't ever open your door to anyone without being absolutely certain who it is. Ask for identification. Install a peephole in door.
7. Keep watch for suspicious looking people and report their presence to the patrol.
8. If confronted by a burglar or robber, co-operate in giving up your property. Don't be placed in a deadly situation from which there is no safe reaction.
9. House numbers must be clearly and readily visible from the street for the patrol, police, Fire Department, or paramedics.
10. Secure miscellaneous openings that may give access to your home. i.e.. crawl space openings, basement doors, utility room doors, etc.
11. Consider a security system for your home.
12. Call Foothill for any specific questions you may have on your security.

THE HERITAGE CORNER
"QUALITY OF LIFE - PAST AND PRESENT"

Brian Moore

I was very fortunate when I first came to California twenty years ago and settled on Whitley Terrace. Fortunate to have a dear friend who told me of early Hollywood as she had known it. Many of you knew her too.

Mrs. Beatrice Green and her husband Richard, built their home on Whitley Heights when very few houses had been completed. It was 1921 and Hollywood was experiencing an exhilarating growth and status as "The Entertainment Capital of the World". Where a decade before only orchards and barren fields had been, suddenly there was a vital and yes, a slightly elegant new town. The quality of life in that town and on Whitley Heights, was exhilarating too.

The great stars of the day were residents of the Hill in the twenties. Mrs. Green told of greeting Rudolph Valentino almost every morning as he passed her garden. He wore a white turtle neck and jodhpurs, walked his great danes and stopped to have a neighborly chat.

Barbara LaMarr, Francis X. Bushman, Blanche Ring, Eugene O'Brien and many more were neighbors. And everyone walked - day or night - alone or with friends or family and almost always with a dog. There was no fear then on the streets and women went alone on leisurely evening walks, to which the Hill streets lent themselves so perfectly.

Hollywood Boulevard was the great place to be seen in the evening, strolling with the dog on its leash and walking from the Roosevelt Hotel to Vine Street on one side and then crossing the street for the return trip. Exercise and air; greeting friends and window shopping; seeing and being seen, for celebrities walking their dogs were as attracted to this pleasant, now nearly impossible pastime, as were the less famous citizens of Hollywood. It was a time of stylish, well dressed people, making a conscious effort to be a pleasant part of their community. There was no mugging, no knifing, no shooting, no paranoia or fear of attack.

In those days, Saks Fifth Avenue, I. Magnin and world famous restaurants were landmarks along Hollywood Boulevard. "Levy's" on Vine Street was one of the most renown restaurants on the West Coast and featured a fresh ice sculpture in the window each day. The "Brown Derby" was across the street and to this day has retained some of its elegance and fame as has Musso & Frank's. a first rate Grill. Now they are remnant outposts of a less troubled, friendlier time.

Parades were numerous on the Boulevard and family groups would hike down steep Whitley hill to cheer the bands and marchers, stop by C.C. Brown's for ice cream and climb back home safely.

I like to think of Hollywood then, remembered through the eyes of my friend Beatrice. It was a real community; the residential and commercial sections responsible and respectful to each other. This was a time when anyone, anytime, could walk the length and breadth of Hollywood and arrive home safely, unthreatened. Quality of Life - Past and Present. We in the Present seem to be missing a great deal.

BIRTH ANNOUNCEMENT

Bill and Trudy Hale of Whitley Terrace welcomed a new baby girl named Elizabeth, April 27. We're happy for you, Bill & Trudy.

GATES TO GUARD WHITLEY?

by Richard Stiles

In a continuing effort to find ways to combat crime and secure the Whitley Heights area, one suggestion being pursued is to install manned gates. With gates installed at each of the street entrances to the hill, we could restrict access to the neighborhood to residents and those who have business with area residents. Bob Primes is chairman of a committee searching into all the advantages and disadvantages of this kind of security approach, as well as the cost of installation and personnel. Councilwoman Peggy Stevenson has been contacted and she has enlisted the aid of City Attorney Bert Pines to search out the legal aspects of closing off our streets to public access. Under current law it appears that if residents should agree on closing off their streets, then we would all become responsible for the maintenance of streets, and many other city and county services. Many residents could not or would not pay for this upkeep, so I have asked that the City Attorney look for a plan that would allow the monitoring of vehicles entering and leaving Whitley Heights and still keep us eligible to receive the city and county services that our taxes pay for.

Over the years,a number of Whitley Heights residents have suggested installing gates for protection in lieu of the private security patrol. At first it seemed an unrealistic idea that we could not afford, but as crime increases, gates may one day be a real necessity.

Residents are encouraged to contact Board members with any other security suggestions they have and we will give them serious consideration.

BEULAH BONDI

by Gini Colvig

Our dear Beulah Bondi left us last January. So many of us here on the hill feel the loss of this charming, cheerful, and delightful friend. We all know of her long successful career, nominations, awards, and national recognition. I would like to mention her wonderful friendship, her good neighbor spirit, how compatible she was to be with, her calm and gentle manner, her knowledge of hundreds of topics and her appreciation of art and fine lovely things. She was one of the most constant and ardent supporters of the Whitley Heights Civic Association and its activities. Truly, a remarkable woman.

Several times when we attended a function together, people approached her and told her she was remarkable. Then one day, right after someone had said she was 'remarkable,' she turned to me rather irate and said she wasn't 'remarkable' at all, that she was simply doing what she loved best, practicing her profession, enjoying travel, friends (endless friends). "What's so remarkable about that?" she asked.

Our Beulah - from an era of genteel elegance. When with her, you sort of felt quite elegant, too.

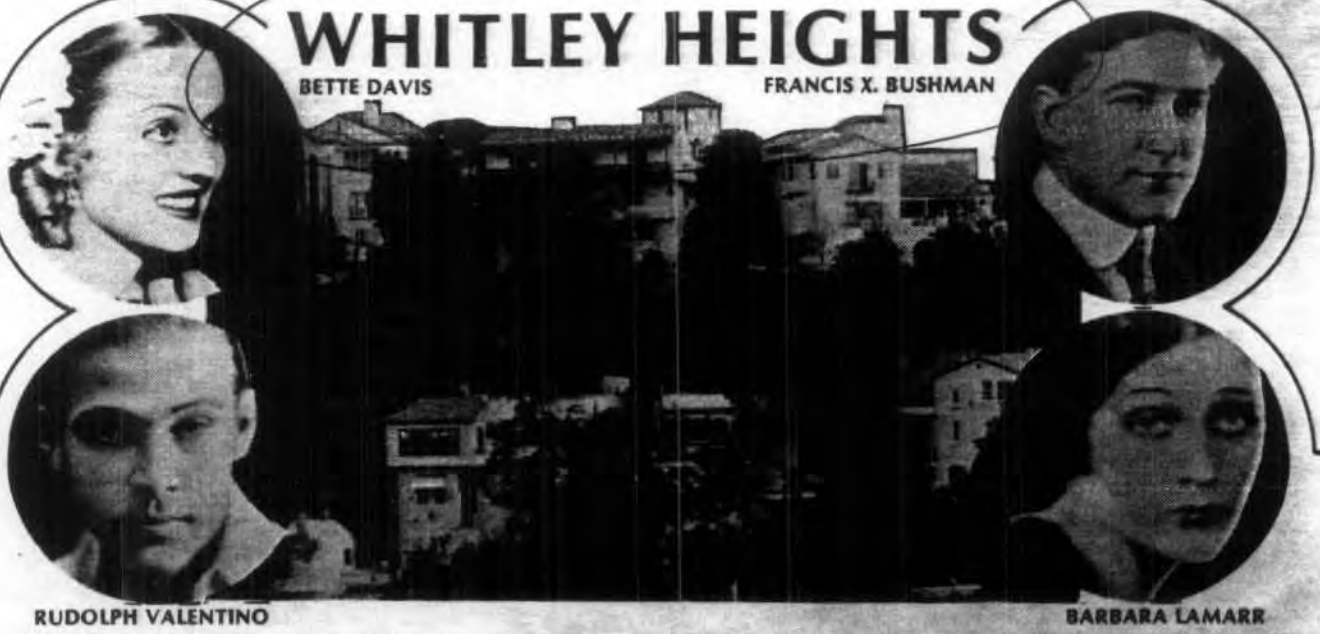

Beulah dear, we shall miss you so very much. Its been a privilege to have shared time with a gifted, lovely lady such as you, and -forgive me- 'remarkable'is the word for you!

SECURITY SYSTEM AT A DISCOUNT

As a special accommodation to our Association, Interline Security Corp. of Granada Hills is offering a 20% discount on all residential alarm systems installed for Association members. As an additional incentive, Interline has agreed to accept 1/3 down upon signing of the Contract, 1/3 at completion, and 1/3 thirty days after completion. Interested members may contact Ron Giganti of Interline at 366-7792. If enough members show interest by contacting their area representatives, we may arrange to have Interline at the June general membership meeting.

537-17

WHITLEY HEIGHTS

THE ROARING TWENTIES have been dubbed the Glamour Decade, a time of elegance and experimentation, opulence and changing social patterns. The arts were paramount, and a new art form, the film industry, had captured the hearts and minds of the American public. Filmdom's " Stars " were idolized; every facet of their lives scrutinzed. They became America's visible royalty.

Where did they go to retreat from the public eye? To the secluded hillside community of Whitley Heights, just minutes away from the bright lights of Hollywood Boulevard but light-years away in ambience. This neighborhood of elegant Mediterranean villas was home to the beautiful Barbara LaMarr, Beaulah Bondi, dashing Francis X. Bushman, Bette Davis, W.C. Fields, Rudolph Valentino and many others. Brainchild of developer H.J. Whitley, the unique siting of each residence provides unparalleled views.

HOLLYWOOD HERITAGE and the WHITLEY HEIGHTS CIVIC ASSOCIATION are pleased to present a TOUR of this special area (Hollywood's first National Register district) SATURDAY and SUNDAY, MAY 7th and 8th. Admission is $12.00 per person, $7.00 for seniors (free to HWH members). Several homes will be open to view, and each participant will recieve a brochure detailing the history of the area. Tours will depart every twenty minutes from the Hollywood Studio Museum (Hollywood Bowl Fairfield parking lot) between 11:00 AM and 3:30 PM. Tour takes approximately two hours. Reservations are requested. Please call 466-6782 or write to:

WHITLEY HEIGHTS HISTORIC DISTRICT

This property has been viewed on site by staff. The National Register application is the result of months of research and community effort working in close cooperation with the Office of Historic Preservation to insure the adequacy of boundaries and the accuracy of historic descriptions. The district is located in the Hollywood Hills and is a distinct, cohesive unit which has a strong sense of time and place. Integrity remains high, although the original development was much more extensive and at one time extended across the area now occupied by the Hollywood Freeway. Unfortunately, the construction of the Hollywood Freeway removed a large portion of the eastern side of the district and has created a very strong boundary on the east side. Likewise, demolition for parking areas associated with the Hollywood Bowl has created a strong northwestern boundary. The boundaries, therefore, on two sides of the triangular shaped area are defined on the basis of existing integrity, while the south boundary is drawn on a combination of integrity and the limits of Whitley's original tract development. Whitley Heights was an early planned development in Los Angeles. From 1918 until the early 1920s, H. J. Whitley developed Whitley Heights as his magnum opus; he had been instrumental in the development of many communities including a number of San Fernando Valley towns at the turn of the century, and planned Whitley Heights as his last and finest development. Whitley's dream envisioned the creation of a Mediterranean hilltop village, a setting into which he wished to retire. To achieve his goal, he sent his architect to study Italian architecture for two years prior to the initiation of the development of Whitley Heights. Whitley offered strong economic incentives to prospective owners if they would complete their buildings in a relatively short period of time and in Mediterranean styling. Strong design control was imposed upon the hill from the very beginning. The result is a remarkably cohesive, charming district which has a strong sense of time and place; in some regards, it is particularly evocative of the spirit of Hollywood of the 1920s as some of the buildings were built by noted set designers of the period not only in the Mediterranean styles but also in some of the various romantic revival styles so characteristic of the era. In addition to having significant architectural and community planning values, the area also is notable for its strong historic associations with the film industry in Hollywood. Whitley Heights immediatley attracted many early celebrities as residents in the community, a tradition which is still maintained today. The list of celebrity occupants of homes in Whitley Heights reads like a Who's Who of Hollywood of the 1920s and 30s. The Whitley Heights Historic District is a strong candidate for listing in the National Register under Criterion A (events associated with planning and development of the Hollywood Hills in the early 1920s), Criterion B (persons - directly associated with H. J. Whitley, a major land developer of the period, and numerous Hollywood celebrities), and C (type/period/district - as an enclave of many notable examples in the Mediterranean and Period Revival styles of the 1920s by locally and nationally known designers; and for retaining a strong sense of time and place with relatively few intrusions as a cohesive architectural unit). The Whitley Heights Historic District is recommended for nomination to the National Register at the statewide level of significance.

GHOST TOWN OF HOLLYWOOD by FRANK SCULLY

(Daily Variety, 11/4/58. Reprinted by permission of the author)
In HELLO, HOLLYWOOD! RIVKIN-KERR. Doubleday & Co. Inc Copyright 1962

Halfway between Vine and Highland on Hollywood Blvd is a street called Whitley Avenue. Four blocks straight up this street, the last block a 27 percent grade, is whitley Heights, onetime hideaway for the crème du fromage of Tinsel Town.

Though within hog-calling distance of the main drag, it is so quiet it might just as well be on top of Old Baldy. Now and then when the siren of an ambulance screams as it rushes to the succor of the latest peasant in pain does a sound of civilization reach Whitley Heights.

Just what lured the earlier picture stars into deserting this heavenly hill for the flatlands of Beverly Hills, where you could feed five poets on what it costs to cut a lawn, is hard to say. Recently Donald O'Connor bought the Pike place on Whitley Heights for $125,000 and moved in with his wife and child, but otherwise the hill is peopled with old-timers and ghosts of long ago.

Twenty years ago, looking for a hilltop which could be in town and yet out of it, I told a realtor, "I want a place which has seen its best days, which may never hear the sound of a carpenter's hammer again, a place which is on the downbeat, where all progress has stopped, a place which except for me will be dead."

He told me he feared it would be impossible to find such a place in California and it broke his heart that every time he beganpitching about what a good buy a certain property was and how it was bound to increase in value I went dead pan. Finally in despair, he cried, "I know the place for you. Whitley Heights!"

He was right. Forest Lawn looked livelier, but certainly not quieter, and if you were alive, no comparison as to views. The lot we picked ran from street to street. To the north was the Hollywood Bowl and to the Sou all of L.A., even beyond the tower of the city hall. To the west you coul see the ocean and, on a particularly clear day, Catalina. This was before the smog, fog, grog and hog-eat-hog reduced L.A. to a city of fallen angel

Jim Tully sold me on his builder. He had built a beautiful copy of George Borrow's famous home for the Termite Inspector of Toluca Lake. He copied a place for us along the lines of Villa Variety, which was our mans for years on the French Riviera. Above he added a sun deck the lengh of the house so whenever I got a yen for a sea voyage I could walk the deck, look toward the Pacific and save myself a thousand bucks.

One day while he was building the place I found Amelia Earnart on the deck with him. Actually what he was doing was using the house as a come-on, for he went off to build a home for her, leaving ours half completed. To his humiliation we moved in before he had affixed a front door, lights or other essentials to modern living.

Nat Ferber, J. P. McEvoy, Tim Tully and others were advising us how to pay for the place and when I said I was paying cash, they looked on me as an enemy of the Republic. "No mortgate?" "No mortgage on Bedside Manor," I said. How this was possible I explained to them. "For twenty years every time a doctor puts a stethoscope on me, he dies. So I have never been able to get any insurance, and pretty lucky for me, too. Because if they had got my money they would have put it into real estate, cleaned up and, what with inflation, have paid me back about half what I paid in premiums, or whatever they call their gimmick. This way I have been able to do it all myself and eliminate the middleman." They looked on me with awe.

Five junior members of the Scully Circus were spawned at Bedside Manor and romped the hill as if it were a private park, for there were preactically no children on Whitley Heights. A few doors up the street lived Eugene O'Brien, then quite dashing, but now a wraith who takes short walks on the arm of a nurse.

At the turn of Grace Avenue, Burton Holmes had taken over the old Francis X. Bushman place, which boasted the first swimming pool ever built in Hollywood. It is still working. Holmes, ever a gracious gentleman, would invite our kids to swim in the pool and at the end of the summer send a note of thanks for letting them do so.

Across the street was a house where Chester Morris lived. It had been built for Grace Whitley, daughter of the tycoon who at one time must have owned most of the hill. To the right lived Beulah Bondi. In fact, she sti lives there. Monta Bell was living a few doors above Miss B ndi's place and next to him was the home of Maurice Cass. Where Grace Avenue and Whitley Avenue and Whitley Terrace joined was the home of Barbara LaMarr, credited with being the most beautiful picture star of her time. She died very young. Her house still has a ghostly quality.

Further around the turn lived Wesley Barry, and still does. His place got caught in the Freeway and he moved it two or three blocks nearer us. Down where his house was originally was Rudolph Valentino's home. That got torn down for the Hollywood Freeway. The state paid $90,000 to wreck it. It was so well built it took a lot of bombing to bring it down.

Most of these were before my time, said he, trying not to be dated. In fact except for the O'Connor manse and the home of Dr. Hans Schiff, who recently hopped to Cannes to help Jack Warner get over the folly of drivin a car and dreaming of what he would do with his Monte Carlo winnings.

there have been no new homes erected on Whitley Heights since we built Bedside Manor.

Our next-door neighbor is the present incumbent of the old Whitley Mansion, an imposing Mediterranean-looking job. He was a gentleman from Yorkshire. Among his other purcheases was a Lincoln that had previously seen service when the underworld and the cops were in open partnership. In fact it was the car in which Pete Delgado scooted to Mexico with $150,000 which has never been traced to this day.

Other cops, believing it may have been buried in the floor boards of my neighbor's car, were perpetually stopping him and tearing the car apart. H was baffled beyond all reason at this invasion of his privacy. When he learned the reason, he got rid of the glamorous crate.

But aside from a few interludes of this nature, Whitley Heights, remains as it was-quiet, cool, aloof, the highest-taxed piece of L.A. dirt, with it future receding further and further into the past.

Any bids? I'm off for Palm Springs.

NEW MOVIE
JANUARY 1934

Hollywood's

The strange story of Whitley Heights, where glamorous ghosts gather, rising high above the common world

Blanche Sweet, still slim and romantic looking, is seldom heard of or seen in pictures.

After many tragic episodes, Helen Lee Worthing is in a sanitarium.

THERE is a hilltop in Hollywood where glamorous ghosts gather . . . some of them the ghosts of people who are still alive.

There is an insidious charm about this spot possessed by no other residential district in the environs of Hollywood or Los Angeles. Stand on a balcony on Whitley Heights some deep blue, velvet night, when the perfume of orange blossoms and roses mingles ever so faintly with the fragrance of burning eucalyptus logs, and Hollywood stretches before you like a handful of jewels waiting to be scooped up, and you will know what I mean.

Bel-Air, Brentwood, Beverly Hills and the Los Feliz estates have dignity, beauty, stability. Malibu offers fun, freedom and relaxation.

But Whitley Heights has the ecstatic quality of impermanence. The houses cling perilously to the hillside. Bedrooms may be downstairs and kitchens upstairs. There is a profusion of flowers and foliage. Red roses hang over small green gates. Hibiscus blossoms line the winding paths. Bright-colored birds dart from tree to tree, and when it rains you can watch the rain drops falling on the roofs below. People on the way up the ladder of fame live here, and people on the way down.

Real estate men will tell you, and tell you truly, that on a clear day you can see a shimmer that is the Pacific, and that on summer nights your ears will be regaled with snatches from the symphonies in Hollywood Bowl.

But the real estate man doesn't know that if you listen ever so carefully you may hear the eerie whine of Valentino's specially-built foreign roadster as it creeps up the steep hill that leads from Hollywood. The roadster lies in a junk heap somewhere, and Valentino, greatest of screen lovers, in a crypt, not even his own, a short distance from the foot of the hill.

And, late at night, the fog creeps in from the sea to clothe the hill in silver and to enfold with loving fingers the graceful wraith of the too-beautiful Barbara La Marr, who traveled so far in the eight miles that stretch from the shabby cabaret on Main Street to the odd little pink house that still clings trustingly to the hillside.

And if your ears are tickled by a vagrant refrain from a song you have almost forgotten . . . "Wally" Reid lived not far away, and impromptu orchestras composed of his friends were his chief delight. And strange unhappy fates overtook others who were beautiful, gay and gifted and who looked triumphantly down on Hollywood from this picturesque hilltop.

Photo by Wide World

Wallace Reid loved the hilltop, too. Memories of gay parties and Wally's Pan-like pranks still abound. . . . Above, one of the last pictures taken of Wally, with Wallace, Jr.

Wanda Hawley lived in the house next to Eugene O'Brien—Wanda, blond and dimpled.

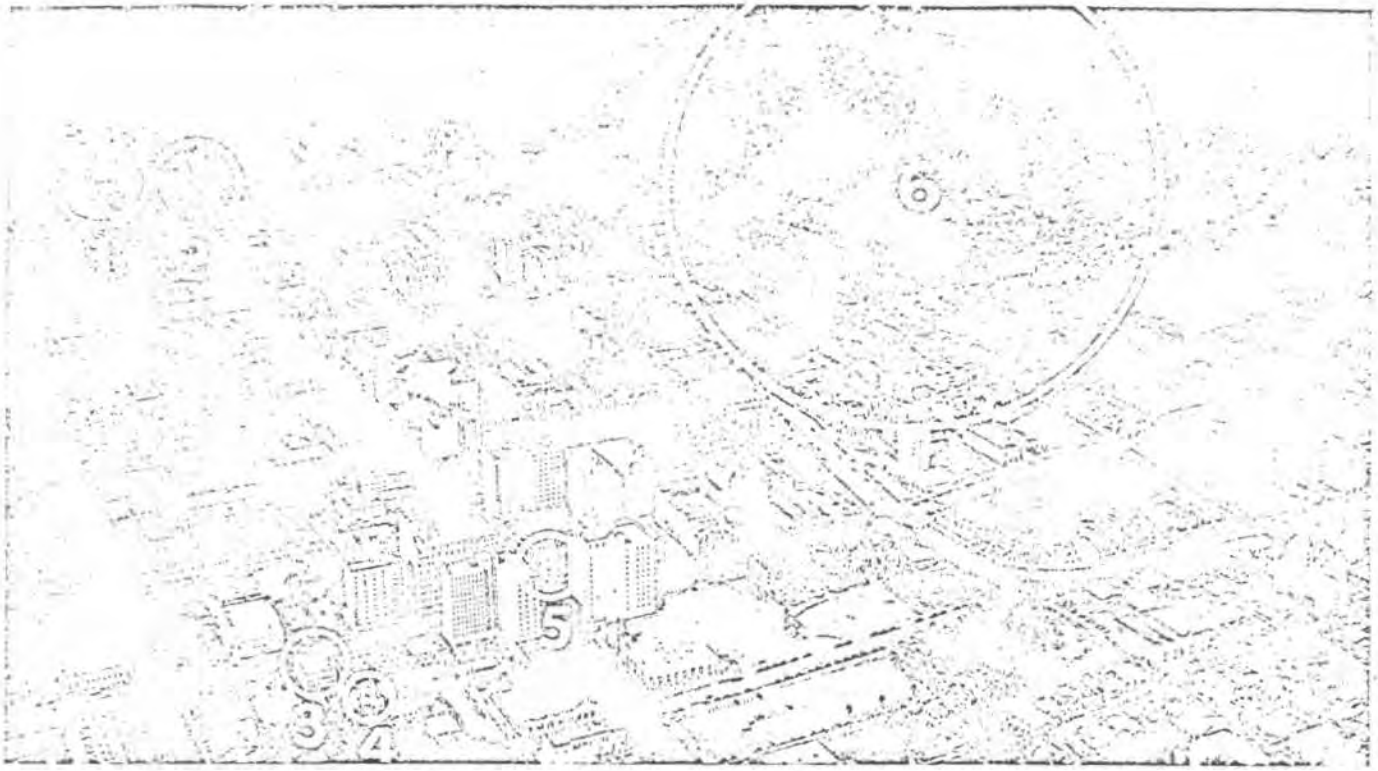

TEN or twelve years ago so many celebrities lived on this one hilltop that a sightseeing bus laden with tourists made the almost precipitous climb every afternoon.

Valentino lived there then in the blue honeymoon house to which he brought the exotic Natacha Rambova. Valentino, who in his brief career, enjoyed an adulation accorded no other actor in the history of the stage or screen.

But the darling of the gods died at the age of thirty-one. Rioting lines, blocks long, waited to view his casket. Wom[illegible]er the

HAUNTED HILL

An airplane photograph of Hollywood. In the circle marked No. 1 is Grauman's Chinese Theater, where Hollywood holds its swankiest openings; 2, the Roosevelt Hotel, center of much movie gayety; 3 and 4, Levy's Cafe and the Brown Derby, respectively, where the stars dine; 5, Sardi's restaurant, a comparatively new social center; and 6, the hilltop known as Whitley Heights.

Falcon Lair, the honeymoon house, where Rudolph Valentino took his exotic bride, Natacha Rambova, and still visited by countless sightseers. . . . At right: Rudy who, in his brief career, enjoyed an adulation accorded no other actor in the history of the stage or screen.

on the screen, girls he didn't know existed, committed suicide.

The blue honeymoon house still stands, and curious fans continue to ring the doorbell and humbly request that they be allowed to go through the house. The present tenants are amazingly gracious about it. Perhaps Rudy, who died at his zenith, will be the screen's only immortal.

And children who are now grown up remember begging their nurses to take them walking by the pink house where Barbara La Marr lived, because Barbara was so beautiful she seemed to them like somebody out of the pages of a fairy tale . . . Barbara, who crowded the adventures, the tears, and the joys of several lifetimes into her pitiful twenty-nine years. She loved the hilltop and the glittering lights below her.

Wally Reid loved the hilltop, too. Memories of gay parties and Wally's Pan-like pranks still abound. Everyone loved Wally, who looked like a young god, and who died waging a glorious but futile battle.

Scoff, if you will, but is it not strange that three individuals, each one glamorous, beloved and gifted, (*Please turn to page* 88)

Eleanor Boardman lived up here when she was considered one of the most brilliant and promising of the younger actresses.

True beauty
LIES WITHIN
THE *Eyes!*

Bring Out the Hidden Loveliness in Your Eyes
with
Maybelline
EYE BEAUTY AIDS

Do you wish for large, expressive, and alluring eyes? Of course you do! What woman doesn't? Then learn how quickly and easily you may have perfectly natural and long appearing, dark lashes by using Maybelline Eyelash Darkener. This will instantly make your eyes appear larger and more expressive, and it is absolutely harmless, non-smarting and tearproof! It can't make the lashes hard or brittle, but on the contrary keeps them soft and silky because of the pure, high-quality oils it contains. Black for Brunettes, Brown for Blondes.

To intensify the color and sparkle of your eyes, blend Maybelline Eye Shadow softly on your eyelids. Pure and creamy, it comes in five exquisite shades to match any eye: Blue, Brown, Blue-Gray, Violet and Green.

Perfect, graceful eyebrows can be formed with the smooth-marking, easy-to-use Maybelline Eyebrow Pencil. Use Black if you are dark, Brown if you are fair.

The natural growth of your lashes is best stimulated by applying Maybelline Eyelash Grower before retiring. Its pure, nourishing ingredients are wonderfully beneficial.

Be sure to ask for Maybelline eye beauty aids. The name Maybelline is your assurance of purity and effectiveness. Special purse sizes on sale at all leading 10c stores.

Hollywood's Haunted Hill

(*Continued from page 53*)

should live within a stone's throw of each other and that each one should be struck down in the full flush of youth and accomplishment?

Two of the screen's first great matinee idols lived on Whitley Heights—J. Warren Kerrigan and Francis X. Bushman.

J. Warren Kerrigan still lives in the rambling white bungalow, half hidden by pepper trees and with scarlet geraniums growing rampant, at the foot of the hill. Almost any day he can be seen strolling about, his hair still thick and curly but almost white, a cap on his head and a pipe in his mouth . . . as on the cover of the very first movie magazine I can remember.

ON the top of the hill is the house where Francis X. Bushman used to live. It is an old-fashioned frame house of definite charm, with a high fence around it and a winding driveway bordered with daisies. Though no other star ever earned as much from the films alone, today Bushman is bankrupt. However, in a newspaper statement he said that he didn't care. That he was happy. That his life had been replete with good things and that he would like to live it over.

When I lived in the middle west, Eugene O'Brien made a tour with a play called "Steve." Movie stars were rare enough, but Eugene O'Brien in the flesh was something beyond all dreams.

Gene has a lovely home on Whitley Heights. He still lives there . . . very quietly. Almost every afternoon he sprinkles his lawn in his bare feet. Gene is still very handsome though he has a bit of a tummy. He speaks without a great deal of enthusiasm of going on a diet and staging a comeback. Over his fireplace is a huge oil painting of Norma Talmadge and when in a mellow mood, Gene grows reminiscent.

Wanda Hawley lived in the house on the other side of Eugene O'Brien. Wanda was blond and dimpled. She appeared in many of DeMille's earlier pictures; she was Valentino's leading lady in "The Young Rajah"; and for a time she was starred in a series of comedies. But Wanda grew fat, so fat that after a while she was seen no more.

AND still the hill continued to take its toll. Ethel Clayton, the girl with the languorous, dreamy eyes and flyaway hair, who appeared in the film versions of a dozen or more of Rupert Hughes' novels, was another who lived on the hill and whose footsteps were dogged by misfortune. After years of devotion, that became almost a Hollywood tradition, to the memory of her first husband, she fell in love with and married Ian Keith. For a while they were ideally happy; then everything was over in a flare of ugly publicity.

Eleanor Boardman lived up here when she was considered one of the most brilliant and promising of the younger actresses, and the hillside smiled on the ardent wooing of King Vidor. They were married and Eleanor deserted the screen for babies and domesticity. Their marriage ended recently with a barrage of not-too-pretty charges and counter-charges, and Eleanor was sued by the private detective she had hired to shadow King. Since the advent of the talkies she made one

she was under contract to Paramount. Though she looked very pretty, her debut was considered woefully inauspicious and Paramount didn't renew her contract.

Another ill-fated pair who challenged the spell of the hilltop were Marshall Neilan and Blanche Sweet. Mickey, in whom there is a real flame of genius, is no longer in Hollywood, and Blanche, still slim and romantic looking, is seldom heard of.

Helen Lee Worthing, one of the most gorgeous to find her way out of the Follies, lived in a big white house, looking directly down the boulevard, with her dusky doctor husband. After many tragic episodes, which included investigations by the Federal authorities, attempts at suicide and soul-searing publicity, Helen is in a sanitarium.

SOME time or other they all lived on Whitley Heights. Maurice Chevalier took a house on the hill when he had been in Hollywood but a few days. Every morning he would set out for the studio accompanied by the tiny girl with the enormous eyes, who was Mme. Chevalier, formerly Yvonne Vallee, Parisian musical comedy star.

Their devotion was apparent to everyone. All day long Yvonne sat on the set, and around the studio they said that Maurice never as much as looked at anyone but Yvonne. But after a little while a hurt and bewildered expression crept into the eyes of the little French girl. She returned to Paris without her Maurice. Maurice followed. There was a quiet divorce. The King of Spain's cousin lives in the house now.

Thomas Meighan, Ralph Graves, Monta Bell, Richard Barthelmess, Joseph Schildkraut, Sidney Franklin, Lawrence Tibbett, Montague Love, George Arliss, Dorothy Devore, Mary Doran, Dorothy Peterson, Gloria Stuart, Greta Meyer, Stuart Walker, Chester Morris, and a host of others have lived or still live on the hilltop.

There may be a curse on the hill, but romance and beauty still linger there. As, for example, the most intense current romance in Hollywood—and the sweetest—concerns Tom Brown and Anita Louise. If you take a short stroll you will see Tommy's shining new roadster parked before Anita's gate.

Perhaps this new generation of screen stars will lift the spell from the hill. Pretty Patricia Ellis, one of the most promising newcomers, lives with her parents, the Alexander Leftwiches, in Francis X. Bushman's former home. There is a small swimming pool and the younger set gathers there for hilarious times. Those on the way up . . . and those on the way down.

YES, unquestionably, the hill exerts a mysterious enchantment. It comes on the breeze in the tinkle of distant laughter, a quick strain of music, a breath of perfume, as the hill lies soft and tranquil beneath the pale September moon. There is a rustle in the trees, then all is silence, but it seems that the hill is smiling pityingly that anyone should sigh for those who lived and loved and laughed on her lovely, treacherous bosom . . . and there is a whisper that the story of the hill-top and who have lived on it has o

DESCRIPTION

6. Briefly describe the present physical appearance of the site or structure and describe any major alterations from its original condition:

The Hollywood Walk of Fame is a charcoal terrazzo sidewalk embedded with coral terrazzo stars oulined in brass. Its placement is on both sides of Hollywood Boulevard from Sycamore to Gower and on both sides of Vine Street from Sunset Boulevard to Yucca. The achievements of over 1,500 entertainers are noted within the Walk of Fame. Each entertainer's accomplishments are indicated with brass plaques which denote motion picture, television, radio or recording achievements. The Walk of Fame, due to its substantial length is indeed a highly visible and greatly recognized landmark.

SIGNIFICANCE

20. Briefly state historical and/or architectural importance (include dates, events, and persons associated with the site when known):

The origin of the Hollywood Walk of Fame was in 1958, when eight stars were dedicated at the corner of Hollywood Boulevard and Highland. Instigated by Harry M. Sugerman, this project was designed to enhance the beauty of Hollywood and give noteriety to its most prominent celebrities. Each year a few additional celebrities receive this honor. This sidewalk is an unusual urban design feature which provides additional recognition for the entertainment industry's stars and also enriches the visible scheme of the community. The Walk of Fame connects most of the downtown commercial core and provides a reminder of the community's significant past.

CONTINUATION SHEET

Page 1 of 1 Resource Name or #: CAPITOL RECORDS

Recorded by: Historic Resources Group Date: 7/14/2000 ☐ Continuation ☒ Update

The Hollywood Walk of Fame is currently listed in the State Historic Resources Inventory with an evaluation of 3S (Appears eligible for listing in the National Register as a separate property) as a result of a 1978 historic resources inventory. The survey form submitted to the SHPO in 1978 gave the resource an evaluation of 3D (Appears eligible for listing as part of a fully documented district). At that time, the SHPO reviewed the survey form and changed the evaluation to 3S.

Historic Resources Group, in telephone consultation with Lucinda Woodward of the SHPO's office, on July 12 and July 14, 2000, has determined that the Hollywood Walk of Fame is eligible for listing in the National Register under Criterion A because of its association with events that have made a significant contribution to the broad patterns of the history of Hollywood. The boundaries of the resource have remained the same since the 1978 survey was conducted. To, date 2061 stars have been dedicated to individuals in the entertainment industry. Based on the 1978 consensus determination through the survey process, given that the resource has been treated as a National Register eligible property in other Section 106 reviews, and given that Historic Resources Group and the SHPO consider the resource to have become even more significant in the intervening years since the survey, the City of Los Angeles asks that the SHPO formally concur with the determination that the Hollywood Walk of Fame is eligible for listing in the National Register for purposes of the section 106 review process for the Capitol Records Parking Project and that its evaluation be changed to 2S2. The portion of the resource potentially effected by the project is on the east side of Vine Street between Hollywood Boulevard and Yucca Street (photo below).

Re: Section 106 Review for
Capitol Records Project
Hollywood, CA

Determination of Eligibility Under the Programmatic Agreement of September 6, 1995 among the City of Los Angeles, SOHP, and the Advisory Council
RESPONSE TIME: 15 DAYS

Dear Ms. Woodward:

The City of Los Angeles Community Development Department and Community Redevelopment Agency will use Federal funds to financially assist with the construction of a parking structure on Vine Street, as well as the rehabilitation and expansion of a building at the corner of Yucca and Vine Streets. The Hollywood Walk of Fame has been identified as being located in the Area of Potential Effect for the project. As our historic preservation consultant, Historic Resources Group, has worked out with you, we are submitting a brief determination of eligibility for the resource at this time and are asking for written concurrence. At a later date we will submit more thorough documentation to update your 1978 survey form. We appreciate your cooperation on this matter.

Attached for your review are a brief update continuation sheet for the resource, including a photo of the resource in the area potentially effected by the undertaking, and a copy of the 1978 survey form which you have on file.

Thank you for your ongoing assistance. Should you have any questions, please feel free to call.

Sincerely,

R. Sakai by AR

Dear Mr. Sakai:

RE: **HOLLYWOOD WALK OF FAME**

Thank you for forwarding a determination of eligibility pursuant to the terms of the City of Los Angeles' programmatic agreement for HUD-assisted undertakings. I have reviewed your submittal and I concur in your determination that the Hollywood Walk of Fame is eligible for inclusion in the National Register of Historic Places under criterion A.

If you have questions, please do not hesitate to contact Lucinda Woodward at (916) 653-9116.

Sincerely,

Daniel Abeyta

DESCRIPTION

6. Briefly describe the present physical appearance of the site or structure and describe any major alterations from its original condition:

This four story Art Deco structure is constructed of reinforced concrete and brick. Typical Art Deco verticality has been achieved by means of pilasters extending from the second story to above the parapet and ending in stepped finials. Between the pilasters, windows are grouped in sets of fours and fives at the third and fourth floors, forming bays. One large tripartite window occupies each bay at the second floor. Narrow pilaster-like elements articulate each bay and the roofline. Above each window is a chevron shaped panel that forms a jagged roofline on the top story. An elaborate screen tops the ground floor windows and is partially covered with aluminum siding. The entrance to the office building, located on Cherokee, is in its original Art Deco style.

SIGNIFICANCE

20. Briefly state historical and/or architectural importance (include dates, events, and persons associated with the site when known):

The "Shane" Building is not only a finely preserved example of Art Deco architecture in general, but is a unique example of an Art Deco sub-style in particular. The detailing and articulation, having some affinity with earlier Neo-Gothic, is unique on the Boulevard, and in this respect makes a particularly significant contribution. Located in the mid-blocks of Hollywood Boulevard, this structure stands out for its unique architecture. Numerous styles surrounding the structure provide unique contrasts.

***P3a. Description:** (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries)
APN 5547012001 is located at 6778 Hollywood Boulevard in a heavily developed urban commercial setting of offices and retail properties. It is an Eclectic Revival-style (Neoclassical and Spanish Colonial Revival) commercial building. It occupies the entire lot and has a north-facing orientation. It is one-story with a rectangular plan. It is a one-part commercial block. The north elevation contains seven bays and the west elevation contains nine bays (one is an entrance). The building features a flat roof with cornice and parapet of hipped roof-shape and that is covered in red clay tile. The windows are symmetrical arranged. The walls are clad in concrete and stucco. Pilasters line the west elevation and a frieze of medallions and shield-like designs is above the pilasters and then crowned by a cornice. Between the cornice and parapet, there is wall signage. The ends of the walls are decorated with cast stone medallions. The primary façade is symmetrical with three central entrances filled with non-historic age doors and transoms. The building appears to have been minimally altered and is in good condition.

B1. Historic Name: Bank of America
B2. Common Name: Ripley's Believe it or Not
B3. Original Use: Commercial (Offices and Retail)
B4. Present Use: Commercial (Museum/Attraction)
***B5. Architectural Style:** Eclectic Revival
***B6. Construction History:** (Construction date, alterations, and date of alterations)
The building was constructed in 1914 and remodeled in 1935 according to the NRHP nomination or 1936 according to the Los Angeles County Assessor. The remodel involved the alteration of the four story apartment building to a one story bank. The Assessor reports alterations/additions that took place in 1993, but the details are currently unknown. Based on observation, the doors have been replaced.
***B7. Moved?** X **No** ____ **Yes** ____ **Unknown** **Date:** ____ **Original Location:** ____
***B8. Related Features:** N/A
B9a. Architect: Morgan, Walls and Clements b. Builder: Unknown
***B10. Significance: Theme** Architecture **Area** Los Angeles, Los Angeles County
Period of Significance 1936 **Property Type** Commercial Building
Applicable Criteria NRHP Criterion C/CRHR Criterion 3 (Architecture) (Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity.)
APN 5547012001 was listed in the NRHP and CRHR as a contributor (#59) to the Hollywood Boulevard Commercial and Entertainment District (NR District 85000704) (along with WSE 37, WSE 38, and WSE 39) in 1985 under Criteria A and C of the NRHP (Commerce and Entertainment/Architecture). As part of the Westside Subway Extension Project, URS investigators relocated this property in the field. The historical significance of APN 554702001 within the APE was determined by applying the procedure and criteria for the *National Register of Historic Places* (NRHP), *California Register of Historical Resources* (CRHR), and the definition of a historical resource used for CEQA.

Based on site investigations and historic research, APN 5547012001 appears to possess the requisite significance to be eligible for listing on the NRHP, CRHR, as well as considered a historical resource for purposes of CEQA under Criterion C of the NRHP and Criterion 3 of the CRHR, as a building that significantly embodies the distinctive characteristics of the Eclectic Revival architectural style, more specifically the Neoclassical and Spanish Colonial Revival styles, as applied to a one-part commercial block. Neoclassical, popular between 1895 and 1950, is characterized by a façade dominated by full-height porch with roof supported by classical columns, columns with Ionic or Corinthian capitals, and a symmetrically balanced façade, and ornamentation featuring classical columns, cornices, and friezes. Spanish Colonial Revival, most popular between 1915 and the commencement of World War II, is characterized by stucco surfaces which predominate over the openings; low-pitched tile roofs, limited number of openings, loosely related to outdoors through use of French doors, terraces, pergolas; use of decorative ironwork for windows, doors, balconies and roof supports; glazed and unglazed tile used for walls and floors, commercial buildings that are generally organized with their facades in deep-set vertical bands (with windows and spandrels recessed); and Plateresque and especially rich Churrigueresque ornament of cast concrete or terracotta.

For a property to qualify for listing in the NRHP and CRHR, besides meeting one of the criteria, it must also retain a significant amount of its historic integrity. APN 5547012001 appears to retain sufficient historic integrity of location, design, setting, materials, workmanship, feeling, and association.

***P3a. Description:** (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries)
APN 5548006017 is located at 6800 Hollywood Boulevard in a heavily developed urban commercial setting. It is a Streamline Moderne-style commercial building with traditional Neoclassical elements (cornice and pilasters). It occupies the east half of the parcel and has east- and north-facing orientations. It is a two-part commercial block of two stories with a single-story addition at the rear (south bay of east elevation), and a rectangular plan. The east elevation is five bays wide and the north elevation is two bays. The bays are divided by fluted pilasters and the parapet is topped by a heavy simple cornice. The building features a flat roof, asymmetrically arranged windows on the east elevation and symmetrically arranged windows on the west elevation, and stucco walls. The first floor windows on the west elevation are horizontal fixed metal-frame windows with security grilles. Some windows have been painted over, such as the two slightly recessed, horizontal bands of windows on the second floor of the west elevation. The building is organized around the rounded northeast corner with recessed entry covered by a terrazzo design. The north elevation has two large storefront entries, which each occupies their entire bay. One has only a security gate and the other has multi-pane sliding glass doors and security gates. The west elevation has three doors. The building appears to be moderately altered and is in good condition.

Describe the present and original (if known) physical appearance

The Hollywood Masonic Temple is a two-story Neo-classical Revival concrete structure located in the midst of commercial development on busy Hollywood Boulevard. The imposing facade with its two-story Ionic columns gives the structure visual impact beyond its size. Alterations to the building have been minimal since its construction in 1921.

The two-story Hollywood Masonic Temple is designed in Neo-classical Revival styling. Primary building materials are brick and concrete, with details of iron and carved wood. The structure fills an 85 x 180-foot lot on the south side of Hollywood Boulevard at the intersection of Orchid Avenue. The principal feature of the main (north) facade is a colonnade formed by six outsized Ionic columns. Set at street level, the columns protect the recessed entry. A series of eight stone steps lead up to heavy wooden double doors, decorated with inserts of glass covered with ornamental iron grillwork. There are two street-level entrances, slightly recessed, at the east and west corners of the building. These entrances are framed by tall pilasters. Iron grillwork in a crosscut pattern covers the second-story windows placed directly above the main entry, creating a continuous second-story transom. The horizontal line of the parapeted roof is in contrast to the verticality of the columns. The parapet is decorated with a design of acanthus leaves. The Masonic motto "Freemasonry builds its temples among the nations and in the hearts of men" is inscribed on the wide cornice. On either side of the inscription is a circular medallion. The architrave and the frieze are of patterned stone and have no embellishment. Molding around the entry doors mirrors the patterns of the stonework on the exterior facade.

A wide, tiled hallway bisects the interior of the first floor, culminating at the rear of the building in the stepped-down entrance to the main auditorium. This area contains a stage and dressing rooms. Further storage is in the basement. Meeting spaces with tiled fireplaces are located on either side of the central hall. A stone stairway with wrought iron railings and freestanding light fixtures leads to the second floor, where two additional auditorium spaces are housed. Both the main auditorium on the first level and the front theater space on the second level have intact stages, framed with a carved and painted border depicting Masonic ritual. Elaborate beamed ceilings and carved wooden balconies remain part of the auditorium's decor. There have been few significant alterations to the interior, which is reminiscent of Spanish Renaissance interior design with its carved wood, fireplaces, and wrought iron fixtures. Several windows on the east and west have been filled in to conform to fire code regulations; however, their position is visible. There have been no major alterations to the primary facade.

Specific dates 1921 **Builder/Architect** John C. Austin

Statement of Significance (in one paragraph)

The Hollywood Masonic Temple is an excellent example of classical architecture on a modest scale which harmonizes with surrounding commercial structures on Hollywood Boulevard, the main social and commercial thoroughfare of Hollywood. Designed by a major Los Angeles architect recognized for his conservative designs, the structure is representative of Neo-classical Revival styling and serves as a physical reminder of a fraternal organization whose members were instrumental in the development of Hollywood.

Lodge Number 355 was formed at the time of the community's inception in 1903. Its meetings were held in a harness shop and then in a second-story space north of Hollywood Boulevard on Highland. Among its members were E. O. Palmer, surgeon and Hollywood historian; George Dunlop, an early mayor; and C. E. Toberman, a prominent real estate developer. In 1921, the lodge commissioned prestigious architect John C. Austin of Austin, Field, and Frey to build the present structure at a cost of $250,000. Austin, known for the quality of his classical designs, and his various associates were responsible for several of Southern California's most ornate and conservative structures, including Los Angeles City Hall (with Albert C. Martin), the Los Angeles Chamber of Commerce Building, Los Angeles High School, Griffith Park Observatory, and the Shrine Auditorium. His Hollywood commissions include the Guaranty Building (1923), which is listed on the National Register. The Masonic Temple became home to two lodges after its completion. In addition to Number 355, whose membership had grown to over 1,300 by 1930, the building was used by Pacific Lodge 233, a West Coast affiliate of a lodge based in New York City. This unusual organization was to have ten members of the theatrical profession for every layman. The membership put on plays, giving many performances for community causes. At one time, their membership was close to 2,000. Lodge activities continued at the site until 1982, when the order sold the building. It continues its position in the community, providing auditorium, rehearsal, and community space. Its intact exterior and interior make it a prime contributor to the Hollywood Boulevard streetscape and a visual reminder of community life during Hollywood's prime period of significance.

The building's significance has been recognized by its inclusion in the Hollywood Historic and Cultural Resources survey in 1978 and the references to it in Gebhard and Winter's Guide to Architecture in Los Angeles and Southern California, Torrance's Hollywood: the First Hundred Years, and architectural publications of the day.

HOLLYWOOD MASONIC TEMPLE
6840 Hollywood Boulevard
Hollywood, CA 90028

HOLLYWOOD MASONIC TEMPLE

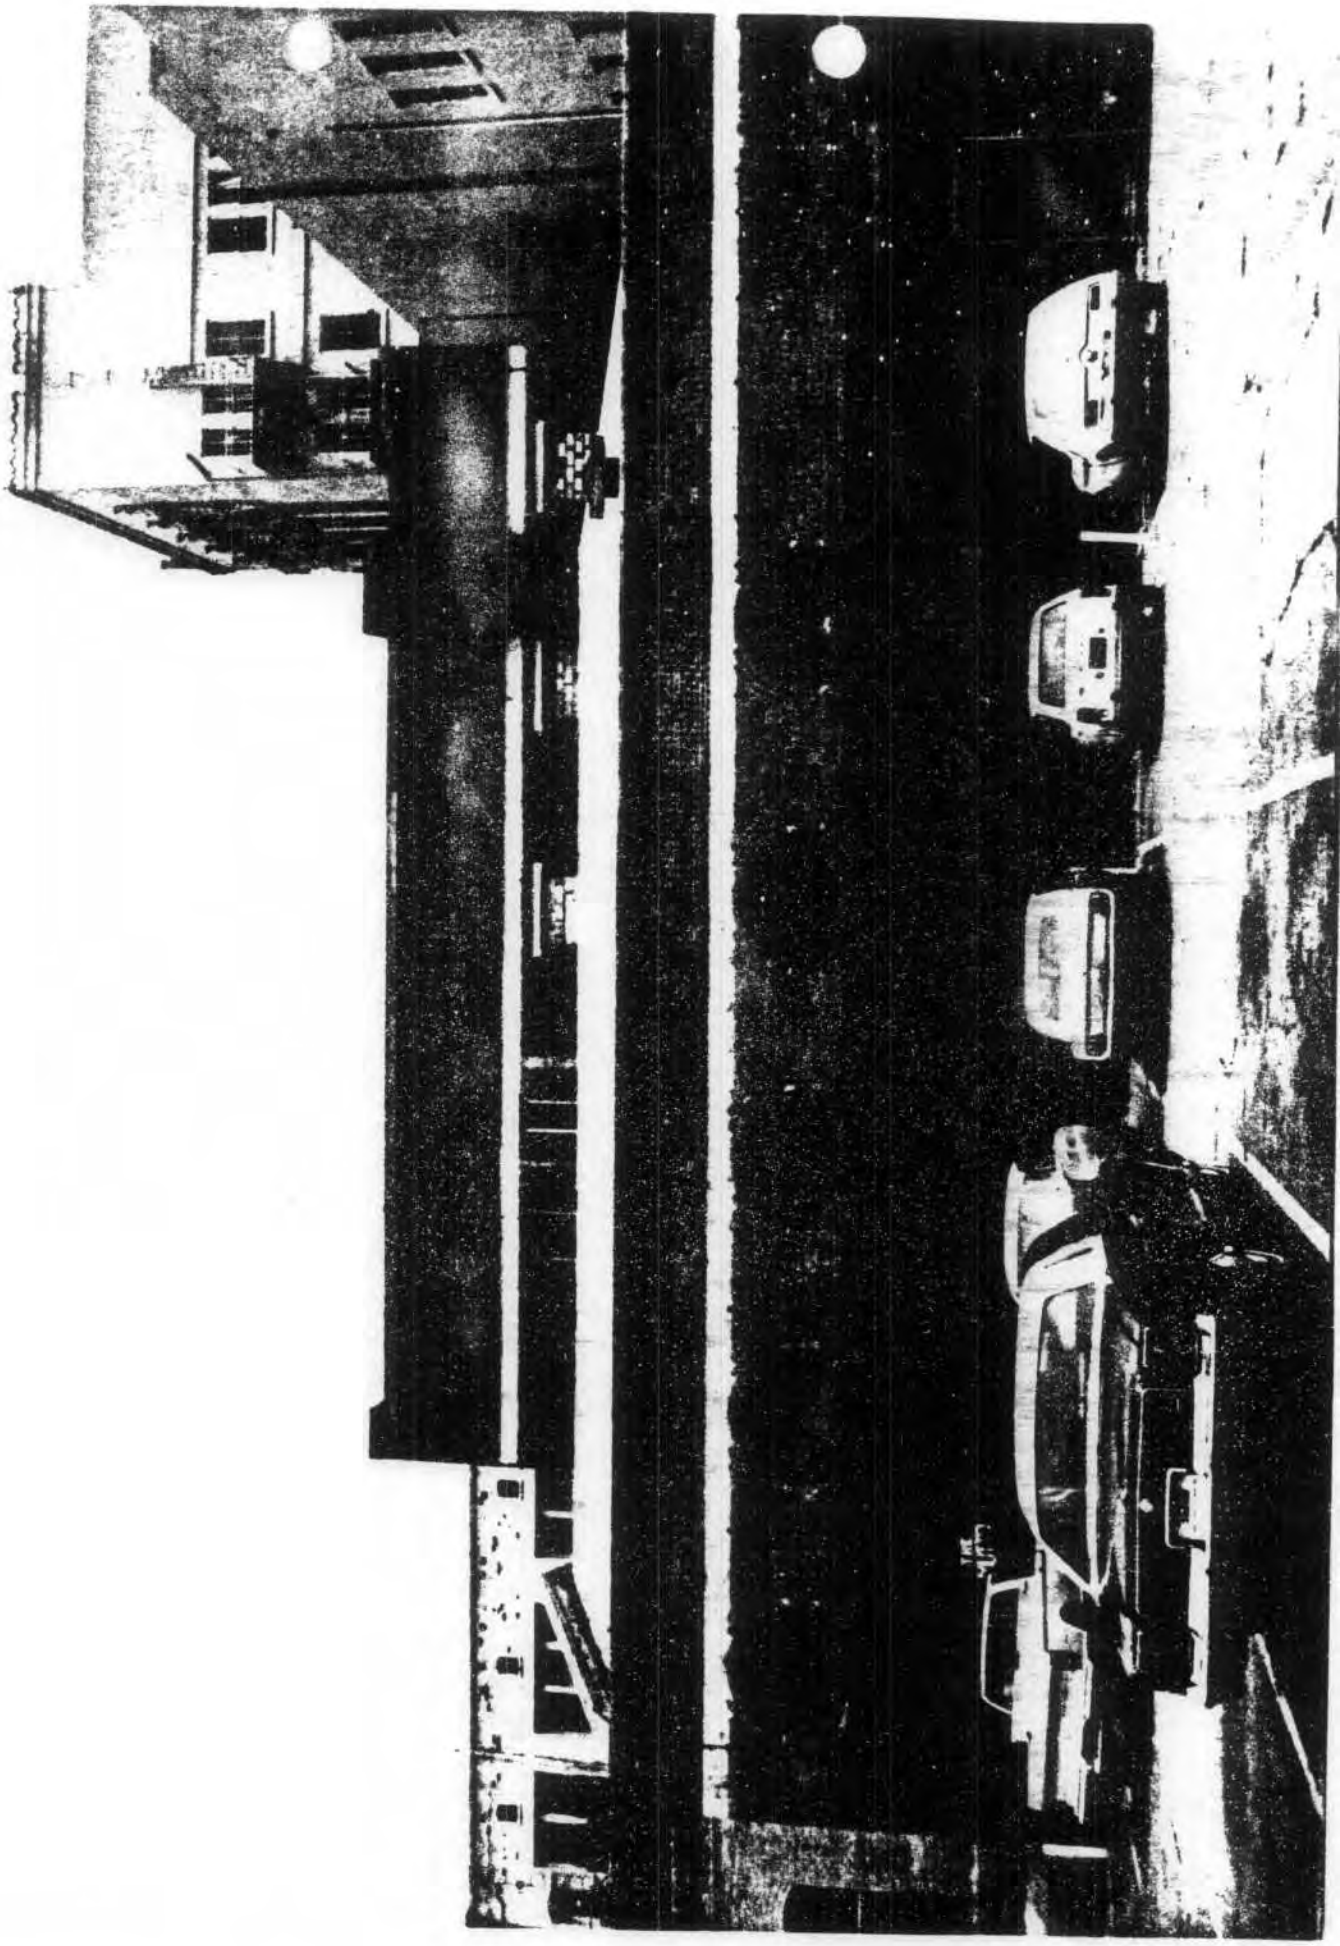

Property has been viewed on site by staff. Integrity remains high; alterations are minimal and confined primarily to the interior. The 1921 building displays the Neo Classical sense of monumentality appropriate to the image of a fraternal organization of the period. The building was designed by John C. Austin, an important Southern California architect, best known for his role in the design of the Los Angeles City Hall. The Hollywood Masonic Temple was the local home for two Masonic lodges which included a large number of members from the theatrical community. The organization was involved in numerous community causes. The building appears to meet the National Register Criterion C (type/period/work of a master), with some secondary significance under A (events) at the local level.

RE: HOLLYWOOD MASONIC TEMPLE
6840 HOLLYWOCD BOULEVARD
HOLLYWOOD, CALIFORNIA

Dear Mr. Gallup:

I am writing on behalf of the owners of the Hollywood Masonic Temple located at 6840 Hollywood Boulevard in Hollywood, California. This building was purchased by 6840 Hollywoood Associates on November 16, 1983. It is our understanding that this building is on the list of those buildings eligible for the National Register of Historic Places.

The attached nomination papers were prepared at the request of the owners of the Hollywood Masonic Temple. We would appreciate anything that you might be able to do in expediting this application and the designation of the Hollywood Masonic Temple as a historic landmark.

Should you have any questions please do not hesitate to contact me at your earliest convenience.

Very truly yours,

Michael J. Kretzmer

Ms. Marion Mitchell-Wilson
Deputy State Historic Preservation Officer
Acting Chief, Office of Historic Preservation
California Historical Resources Commission
Post Office Box 2390
Sacramento, California 95811

Dear Ms. Mitchell-Wilson:

At its meeting of October 2, 1984, the Los Angeles County Historical Landmarks/Records Commission considered the following sites for nomination to the National Register of Historic Places:

1. Hollywood Boulevard Commercial/Community District, Los Angeles: recommended for its unique concentration of business, entertainment, residential, and commercial structures, reflecting the era's significant architectural style of the Hollywood Historic District. The Commission expressed interest in having the original development of the District intact, however, it urged that the application is to be carefully reviewed.

2. Hollywood Masonic Temple, Hollywood: recommended for its fine example of classical architecture. The structure designed in the Greek Revival style is of historical and architectural significance. The role and contribution it displays throughout the years as a physical reminder of a fraternal organization are of importance to the community.

3. The Ronda, West Hollywood: recommended as an outstanding example of Spanish colonial revival architecture. The originality of design is well preserved and is worthy of recognition.

4. Silsby M. Spalding Estate, Beverly Hills: By a consensus, the Commission agreed that although the application is well descriptive, additional information on the original builder (Lombard) and on the historical and architectural significance of the structure is essential.

The above property will be considered by the State Historical Resources Commission for nomination to the National Register of Historic Places. The National Register is the Federal Government's official list of historic properties, worthy of preservation. Listing in the National Register provides recognition and assists in preserving our Nation's heritage. Enclosed is a copy of the criteria under which properties are evaluated.

Listing in the National Register results in the following for historic properties:

—Consideration in planning for Federal, federally licensed, and federally assisted projects. Section 106 of the National Historic Preservation Act of 1966 requires that Federal agencies allow the Advisory Council on Historic Preservation an opportunity to comment on all projects affecting historic properties listed in the National Register. For further information please refer to 36 CFR 800.

—Eligibility for Federal tax provisions. If a property is listed in the National Register certain Federal tax provisions may apply. The Tax Reform Act of 1984, which revised the historic preservation tax incentives authorized by Congress in the Tax Reform Act of 1976, the Revenue Act of 1978, the Tax Treatment Extension Act of 1980, and the Economic Recovery Tax Act of 1981, provides for a 25 percent investment tax credit for rehabilitating historic commercial, industrial and rental residential buildings instead of a 15 or 20 percent credit available for rehabilitation of non-historic buildings more than thirty years old. This can be combined with an 18 year cost recovery period for the adjusted basis of the building. Certified structures with certified rehabilitations receive additional tax savings because owners are allowed to reduce the basis by one half the amount of the credit. The Tax Treatment Extension Act of 1980 provides Federal tax deductions for charitable contributions for conservation purposes of partial interests in historically important land areas or structures. For further information please refer to 36 CFR 67.

—Consideration of historic values in the decision to issue a surface coal mining permit where coal is located, in accord with the Surface Mining and Control Act of 1977. For further information please refer to 30 CFR 700 et seq.

—Qualification for Federal grants for historic preservation when funds are available. Presently funding is unavailable.

Owners of private properties nominated to the National Register have an opportunity to concur in or object to listing in accord with the National Historic Preservation Act and 36 CFR 60. Any owner or partial owner of private property who chooses to object to listing may submit to the State Historic Preservation Officer a notarized statement certifying that the party is the sole or partial owner of the private property and objects to the listing. Each owner or partial owner of private property has one vote regardless of what part of the property that party owns. If a majority of private property owners object a property will not be listed; however, the State Historic Preservation Officer shall submit the nomination to the Keeper of the National Register for a determination of the eligibility of the property for listing in the National Register. If the property is then determined eligible for listing, although not formally listed, Federal agencies will be required to allow the Advisory Council on Historic Preservation an opportunity to comment before the agency may fund, license, or assist a project which will affect the property. If an owner chooses to object to the listing of property, the notarized objection

will be considered by the Commission on November 7, 1984

at 9:00 a.m. in Auditorium, Masonic Temple,
6840 Hollywood Blvd., Hollywood, CA.

If you wish to comment on whether the property should be nominated to the National Register, please send your comments to the above address. Comments must be received before the State Historical Resources Commission considers this application. A copy of the application is on file in our office and will be made available to you upon request. Information about the Federal tax provisions is enclosed.

Sincerely,

Marion Mitchell-Wilson

Ms. Marion Mitchell-Wilson
Deputy State Historic Preservation Officer
Acting Chief, Office of Historic Preservation

The National Register of Historic Places Program is administered in California by the State Office of Historic Preservation. The property indicated above has been submitted for the Register.

☐ The State Historical Resources Commission will consider this property and make a judgment as to whether or not it meets the criteria on November 2, 1984 at 9:00 a.m. in Auditorium, Masonic Temple, 6840 Hollywood Blvd., Hollywood

☐ The State Historical Resources Commission recommended the nomination of the property to the National Register. It will be presented to the State Historic Preservation Officer for formal nomination. The final decision will be made by the Keeper of the National Register, U.S. National Park Service, Washington, D.C. 20240.

☐ The property was placed on the National Register.

☐ The property was determined eligible for placement on the National Register.

Placement on the National Register affords a property the honor of inclusion in the nation's official list of cultural resources worthy of preservation and provides a degree of protection from adverse effects resulting from federally funded or licensed projects. Registration provides a number of incentives for preservation of historic properties, including special building codes to facilitate the restoration of historic structures, and certain tax advantages. There are no restrictions placed upon a private property owner with regard to normal use, maintenance, or sale of a property listed in the National Register; however, proposals to demolish registered properties may require a standard review in compliance with local ordinances or the California Environmental Quality Act.

The above property will be considered by the State Historical Resources Commission for nomination to the National Register of Historic Places. The National Register is the Federal Government's official list of historic properties worthy of preservation. Listing in the National Register provides recognition and assists in preserving the Nation's heritage. Enclosed is a copy of the criteria under which properties are evaluated.

Listing in the National Register results in the following for historic properties:

–Consideration in planning for Federal, federally licensed, and federally assisted projects. Section 106 of the National Historic Preservation Act of 1966 requires that Federal agencies allow the Advisory Council on Historic Preservation an opportunity to comment on all projects affecting historic properties listed in the National Register. For further information please refer to 36 CFR 800.

–Eligibility for Federal tax provisions. If a property is listed in the National Register or is determined eligible for listing, certain tax provisions may apply. The Tax Reform Act of 1984, which revised the historic preservation tax incentives established by Congress in the Tax Reform Act of 1976, the Revenue Act of 1978, the Tax Treatment Extension Act of 1980, and the Economic Recovery Tax Act of 1981, provides for a 25 percent investment tax credit for rehabilitating historic commercial, industrial and rental residential buildings instead of a 15 or 20 percent credit available for rehabilitation of non-historic buildings more than thirty years old. This can be combined with an investment cost recovery based on the adjusted basis of the building. Certified structures with certified rehabilitations receive additional tax savings because owners are allowed to reduce the basis by one half the amount of the credit. The Tax Treatment Extension Act of 1980 provides Federal tax deductions for charitable contributions for conservation purposes of partial interests in historically important land areas or structures. For further information please refer to 36 CFR 67.

–Consideration of historic values in the decision to issue a surface coal mining permit where coal is located, in accord with the Surface Mining and Control Act of 1977. For further information please refer to 30 CFR 700 et seq.

–Qualification for Federal grants for historic preservation when funds are available. Presently, funding is unavailable.

Owners of private properties nominated to the National Register have an opportunity to concur in or object to listing in accord with the National Historic Preservation Act and 36 CFR 60. Any owner or partial owner of private property who chooses to object to listing may submit to the State Historic Preservation Officer a notarized statement certifying that the party is the sole or partial owner of the private property and objects to the listing. ☐ The State Historical Resources Commission recommended the nomination of the property to the National Register. It will be presented to the State Historic Preservation Officer for formal nomination. The final decision will be made by the Keeper of the National Register, U.S. National Park Service, Washington, D.C. 20240.

☒ The property was placed on the National Register on February 28, 1985

☐ The property was determined eligible for placement on the National Register _____

Placement on the National Register affords a property the honor of inclusion in the nation's official list of cultural resources worthy of preservation and provides a degree of protection from adverse effects resulting from federally funded or licensed projects. Registration provides a number of incentives for preservation of historic properties, including special building codes to facilitate the restoration of historic structures, and certain tax advantages. There are no restrictions placed upon a private property owner with regard to normal use, maintenance, or sale of a property listed in the National Register; however, proposals to demolish registered properties may require a standard review in compliance with local ordinances or the California Environmental Quality Act.

Sincerely,

Marion Mitchell-Wilson

5. Present Use: stores and offices Original Use: same
   Other past uses: ____

DESCRIPTION

6. Briefly describe the present physical appearance of the site or structure and describe any major alterations from its original condition:

The Hollywood Professional Building is an excellent example of the Neo-Gothic style popular for commercial buildings of the 20's. While the stores on the street level have been altered, the other seven stories have retained their original ornamentation. To enhance the verticality, windows are grouped in threes with recessed quatrefoil spandrels beneath each one. Above the fifth floor (the original height of the building) and eighth floor are two examples of tracery reminiscent of Gothic churches. The lobby has a high arched ceiling, and continues the Gothic detailing into the interior. A three story Neo-Gothic parking structure is located south of the main building on Orange Drive.

7. Locational sketch map (draw and label site and surrounding streets, roads, and prominent landmarks):

8. Approximate property size:
   Lot size (in feet) Frontage 60
   Depth 114
   or approx. acreage ____.

f. Windmill ☐ g. Watertower/tankhouse ☐ h. Other ☒ parking structure i. None ☐

SIGNIFICANCE

20. Briefly state historical and/or architectural importance (include dates, events, and persons associated with the site when known):

A prime example of the Neo-Gothic commercial style that 20's professional men found so tasteful. Architect Richard D. King is noted for his contributions to school and commercial architecture. Originally King designed a 5 story building for H.P. Rehbein, the ground floor housing Ligget's Drug Store. By 1929 ownership of this building had passed to real estate entrepreneur, C. E. Toberman, who again commissioned King to enlarge the building to its present 8 story height. King's late addition is virtually indistinguishable from the earlier structure.

21. Main theme of the historic resource: (Check only one): a. Architecture ☒ b. Arts & Leisure ☐
c. Economic/Industrial ☐ d. Exploration/Settlement ☐ e. Government ☐ f. Military ☐
g. Religion ☐ h. Social/Education ☐

CONTINUATION SHEET ITEM NUMBER 7 PAGE 6

47 Hollywood Professional (7046 Hollywood Blvd.): 1924; Richard D. King
An excellent example of Neo-Gothic commercial design. The eight story building has altered storefronts, but the upper stories retain their original ornamentation. The massing of the north and west facades is symmetrical and the upper floors exhibit good examples of tracery. Thelobby has a high vaulted ceiling. A companion parking structure of the same design is located south of the building.

50. Arthur Murray (7024 Hollywood Blvd.): 1919; Frank Meline
The builder of the Garden Court Apartments created this two story wood frame stucco Renaissance Revival structure just a few years later. Its main features are six arched windows on the second level and stone detailing. It has a red tiled roof and has become part of the Roosevelt Hotel complex.

51. Hotel Roosevelt (7000 Hollywood Blvd.): 1924; Fisher, Lake & Traver
The site of the first Academy Awards, the twelve story Spanish Colonial Revival hotel occupies a prominent position on the western end of the Boulevard at Orange Drive. An assymmetrical T-shaped plan, the concrete structure has groups of arched windows separated by columnettes, wrought iron balconies, and pierced concrete grills. Some Churrigueresque ornament decorates the facade; the roof is of red tile. Ground floor has been altered.

53. Seven Seas (6904 Hollywood Blvd.): 1920
Three story commercial vernacular building constructed of brick with rusticated masonry banding at corners and carved masonry around the sash windows of the upper stories. Lower floor has been altered. Supportive in size, scale, and design of the surrounding structures.

54. Masonic Temple (6840 Hollywood Blvd.): 1921; John C.Austin
A two story Neo-Classical structure located on the south side of Hollywood Blvd. at Orchid, the Masonic Temple is one of two institutional buildings on the west end of the Boulevard. A colonnade of six columns obscures a recessed entrance to the ornate structure. The building is clad in granite. The parapeted roof is ornamented with acanthus leaves. A Masonic motto is incised in the parapet. The interior meeting spaces are virtually intact. A fine small scale example of its style.

55. El Capitan/Paramount (6834 Hollywood Blvd.): 1925; C. Albert Landsburgh
One of the community's legitimate theaters, this six story reinforced concrete entertainment and commercial complex is one of the most elaborate structures on the Boulevard. It is heavily ornamented with Churrigueresque decoration. Metal columnettes frame display windows. Third through sixth story windows are arranged in vertical bands, with metal spandrels between each section. The bands are recessed between pilasters with ornamented capitals. Betweeen each capital are figures depicting characters in literature and the stage. The theater lobby and marquee were remodelled in the 1940s.

***P3a. Description:** (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries) APN 5547012009 is located at 1666 N. Highland Avenue in a heavily developed urban commercial setting. It is an Art Deco-style commercial building. It occupies the north part of the parcel and has a west-facing orientation. The building is four stories on the north and one story on south, with an overall rectangular plan. The building features a flat roof, metal framed windows, and stucco walls. The four-story façade is symmetrical and consists of three bays divided by fluted pilasters without capitals. Each bay is topped by curved pediment-like parapets with floral ornamentation above and a medallion below. The ground story window bays contain protruding marble surrounded window display cases. The cases are framed by half-circle pediments decorated with the floral motif and swags and a metal lintel. The window sashes are concave on the second and third floors and separated by marble panels. The top set of triple windows is crowned with a pediment of a central floral motif and stars. On either side of the windows there are narrow reeded columns with a spike at the top. The central entry to the four-story portion is framed with marble and topped by a floral and scroll ornament with two stylized metal lanterns on each side. The one-story portion of the building is the same style. The façade is symmetrical and consists of five bays. The windows and display cases are identical to those on the ground story of the four-story portion. The lower third of the wall is clad in marble with a decorative band at top and metal trim. A neon sign has been added in the past ten years to the one-story façade. The building appears to be minimally altered and is in good condition. The south part of the parcel contains surface parking.

Period of Significance 1916/1935 **Property Type** commercial
Applicable Criteria NRHP Criterion A and C/CRHR Criterion 1 and 3 (Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity.)

APN 5547012009 is listed in the NRHP and CRHR as a contributor (#58) to the Hollywood Boulevard Commercial and Entertainment District (NR District 85000704) (along with WSE 36, WSE 38, and WSE 39) in 1985 under Criteria A and C of the NRHP (Commerce and Entertainment/Architecture). It was listed as HCM #593 in 1994 as the Max Factor Make-Up Salon. As part of the Westside Subway Extension Project, URS investigators relocated this property in the field. The historical significance of APN 5547012009 within the APE was determined by applying the procedure and criteria for the *National Register of Historic Places* (NRHP), *California Register of Historical Resources* (CRHR), and the definition of a historical resource used for CEQA.

Based on site investigations and historic research, APN 5547012009 appears to possess the requisite significance to be eligible for listing on the NRHP, CRHR, as well as considered a historical resource for purposes of CEQA under Criterion A and C of the NRHP and Criterion 1 and 3 of the CRHR, as a building that is associated with events that have made a significant contribution to the broad patterns of history and as a building that significantly embodies the distinctive characteristics of the Art Deco architectural style. The building is part of the Hollywood commercial and entertainment district and was the make-up studio of noted Hollywood movie make-up artist Max Factor. The Art Deco style, popular between 1920 and the commencement of World War II, is characterized by smooth surfaced volumes; windows arranged in sunken vertical panels; elimination of any classical or medieval termination at the top of the building; symmetry and balance for each elevation; frequent use of central tower, whose summit recedes in a stepped pattern; flat roof usually headed by parapets; tendency for buildings to be monumental, formal and heavy; and ornamentation of zigzags, chevrons, sun bursts, spirals, stylized plant motifs, and stylized animals.

For a property to qualify for listing in the NRHP and CRHR, besides meeting one of the criteria, it must also retain a significant amount of its historic integrity. APN 5547012009 appears to retain sufficient historic integrity of location, design, setting, materials, workmanship, feeling, and association.

Describe the present and original (if known) physical appearance

Hillside siting and Eastern tradition combine to make this Hollywood apartment an example of the adaptation of Eastern formality to the Southern California of the 1920s. Sited on a narrow hillside lot on the southwest corner of Hillcrest Road and Pinehurst Street, the Villa Bonita is a seven-story classically designed apartment building, constructed of reinforced concrete, which exhibits both medieval and Spanish Renaissance decorative motifs. Roughly rectangular, the structure's main facade is the Hillcrest Road (east) elevation. This facade is irregularly stepped, and set back from the street, as it proceeds north. The southernmost portion is devoted to a canted bay extending from the second through seventh floors, fenestrated by a pair of casement windows flanked by single casements. The northern two-thirds of the building step back from the facade, and carry a pair of casement windows on each floor in the northernmost bay, and a fixed pane window and a tall, one-over-one double-hung sash opening onto a firescape. Alterations are minimal.

The north facade, facing Pinehurst Street, is arranged into bays with an A-B-B-A arrangement. The central bays are made up of pairs of four-light casement windows, each pair separated by a muntin. These bays are flanked by canted bays which reflect the design of the east facade. While the placement of elements and the design give distinct verticality to the structure, the exterior retains the traditional tripartite divisions of Classical Revival styles. The ground level of both the east and north is highly ornamented with pairs of arched, casement windows aligned vertically with the casements above. The center bay of the front facade contains the entry. The central entry is recessed in a stepped, square-columned arch, flanked by heavily decorated Composite order columns, and surmounted by a broken pediment carrying a scalloped parapet and capped with finials. The entrance is slightly elevated, creating a small vestibule; the entry doors are a simple pair of wood-framed glass doors, topped by a wood-framed lunette. As in most structures of this style, most of the ornament is contained on the ground floor and then at the upper levels. The fifth and sixth stories are separated by a corbeled frieze on the east and north facades. Above this frieze, the vertical rhythm is echoed in the alignment of scallop-arched pairs of casement windows, flanked by piers with Corinthian capitals. Medallions are placed at intervals above the windows, and the building service itself is also heavily decorated with a diamond motif. The building is topped with a broken pediment, hiding the flat roof, with urns over each canted bay. The seventh floor consists of a penthouse and roof garden, a uniquely private space with a commanding view of the city and the Hollywood hills. The highly ornamented parapet serves as a garden wall. The south and west facades are treated in a more utilitarian fashion, with each facade carrying rows of casement windows on each level. Alterations are confined to the enclosure of a portion of the roof garden in 1940, an addition to the original penthouse, and security grilles in a style compatible with the building on the ground floor openings.

Specific dates 1929 **Builder/Architect** Frank Webster

Statement of Significance (in one paragraph)

The Villa Bonita is a seven-story Spanish Renaissance Revival style apartment building located in the foothills of Hollywood just a few blocks north of Hollywood Boulevard. Designed by local architect Frank Webster in 1929, the building's owner was Sidney Ullman, Rudolph Valentino's business manager and agent. The quality of detailing throughout the structure is remarkable for a building of its size, making it a prime representative example of multi-unit housing in Hollywood during its prime period of significance.

Nestled in the single-family residential Hollywood Heights area of Hollywood, the intimate Villa Bonita offered quality apartment living for those who preferred the formality of an East Coast plan and yet wanted the quiet of a hillside setting. The Hollywood of the 1920s and '30s was experiencing tremendous growth, as the film industry continued to have a major impact on the area. The small town became "urbanized", building more apartments and multi-family units to house its growing population. This is an atypical pattern for a suburb, and as a result, the Hollywood area today boasts a collection of vintage apartment buildings acknowledged to be among the finest in the city. The Hollywood Historic and Cultural Resources Survey, conducted in 1978 through 1980 and updated in 1984, identified approximately thirty such sites as a thematic grouping of special merit. The structures ring the commercial core, with the finest examples concentrated along the Franklin Corridor and in the Hancock Park/Rossmore area. While not included in the original survey due to its location north of Franklin Avenue, the Villa Bonita displays all the characteristics of size, scale, detailing, and function of those surveyed and is an integral part of this body of housing stock. The smallest of the high-rise apartment buildings constructed above Hollywood Boulevard to serve the needs of part-time residents connected with the entertainment industry, the siting of the building and its styling set it apart from other structures of its type along the Franklin Corridor. Of particular merit is the detailing of the entry and the upper stories, where the architect has embellished window surrounds and bays with exceptionally varied patterns to enhance the verticality of his creation. While its larger neighbors, most in the Spanish Colonial Revival, Chateauesque, or Art Deco styles, functioned as apartment/hotels and provided a variety of services, the Villa Bonita integrated itself into the residential neighborhood as a security apartment building, catering not to stars or directors, but to those behind the camera. Reminiscent of urban East Coast apartments, the arrangement and plan is formal with a small, well-appointed lobby and panelled elevator as its main ground floor accouterments. The views, penthouse, and private roof garden are additional features which enhance the well-appointed, small luxury

The building has a small lobby with marble floor, ornate moldings and brackets, and original chandelier. Metal mailboxes occupy a portion of the north wall. An original panelled elevator and a central stairway provide access to the upper floors. The building is bisected by an east-west hallway. Each of the twenty-four apartments contain living/dining area, kitchens with breakfast nooks, and baths. Interiors are largely intact, featuring casement windows, entry halls, original cabinetry, and hardware.

A low wall surmounted by an ornamental iron fence encloses a small landscaped courtyard at the front of the building. No other features are present within the boundaries.

building of the 1920s. Views were a primary consideration, and roof gardens a popular component of the major buildings. Few examples remain. Along with the neighboring Methodist Church of Gothic design, the Villa Bonita provides a buffer for its hillside neighbors from the busy flatlands of Hollywood. The building was constructed in 1929 by Sidney Ullman, well known in Hollywood as Rudolph Valentino's agent. Like many in the industry, Ullman used his profits to invest in real estate. This tremendous source of capital enabled Hollywood buildings to exercise their creativity without regard to cost, as each builder tried to outdo the others. Local architect Frank Webster designed this building, which was built at a cost of $75,000 in May of 1929. Webster also built several less ornate four- and five-story structures in the flatlands of Hollywood, and designed a number of Spanish Colonial Revival and bungalow residences. The Villa Bonita is the best intact example of his extant work. Webster's extraordinary attention to detail, from the siting of the building to both the interior and exterior detailing, is remarkable. Although still close by to the studios, and the shopping areas of Hollywood Boulevard, the apartment's proximity to homes and churches made it appealing to those wishing for a haven from the hustle and bustle of the Boulevard. Restored by the current owner, the Villa Bonita is in excellent condition, and continues to provide a comfortable retreat for its residents. There is no other comparable resource of its type and style in the area.

STAFF EVALUATION - Villa Bonita

Property has been viewed on site by staff. Integrity remains very high. The interior alterations are confined to the roofgarden and penthouse. An earlier application for tax certification war denied by the Western Regional Office of the National Register (letter attached); this application is an appeal. Additional information has been provided to strengthen the application. (NOTE: The negative comments of the Los Angeles County Historical Landmarks/ Records Commission are based upon an earlier draft which did not include much of the information in the current application). The building is a handsome small-scaled lixury apartment building of Hollywood if the 1920s; it remains remarkably intact. The architect created a strong period statement on Spanish Renaissance styling--the quality of design is high, and, a review of the Hollywood Survey funded by the Office of Historic Preservation confirms the fact that no other examples of its style survive in the Hollywood area. The building has some secondary significance for its association with film industry personnel curing the "Golden Era" of Hollywood. The Villa Bonita is an intimately-scaled, unaltered Spanish Renaissance gem which still conveys a sence of the Hollywood of the 1920s and 1930s. Staff recommends approval at the local level of significance.

*** P3a. Description:** (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries.)
The two-story Italianate style single-family residence is generally rectangular in plan. The roof is side gabled, and modern Spanish tile appears to have replaced the original tile roof. Decorative brackets are located in the eave of the primary facade. A small porch on the west end of the building, with a Spanish tile roof, was enclosed at an unknown date. The exterior walls are clad in smooth textured stucco and appears to be original. The windows are eight-over-one wooden sash. The entrance is raised and accessed via a covered porch, which was constructed in 1949. The porch roof is supported by square supports and are clad in stucco. The supports project above the roofline to create anchor points for cast metal railings. The entrance door is wooden with glazing. Landscape includes a small ficus tree and vines.

*** B10. Significance:** Theme Residential Architecture Area Los Angeles

Period of Significance 1932 Property Type Single family residential Applicable Criteria N/A

(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity.)

The building located at 7045 Lanewood Avenue was construct in 1925. No historically important events are known to have occurred at this site. According to research in the City of Los Angeles Department of Building and Safety's historic building permits, the original owner of the building was Hobart Beck. Research on the Internet does not indicate Hobart Beck was a historically important person. He does not appear to have been significant in the real estate development history of the Hollywood community, neither does he appear to be significant in other historical contexts, and standard bibliographical references (e.g. lapl.org). Therefore the building is not eligible for the National Register of Historic Places or the California Register of Historical Resources under Criteria A and B, or 1 and 2, respectively. The building has been altered with the addition of a front porch, which alters the symmetry of the façade. The building is not a rare example of an Italianate single-family residence in Los Angeles County. Research on the Internet does not indicate Harold Dunn was a master architect, as he is not referenced in standard bibliographical sources about Los Angeles area architecture. Therefore the building is not eligible for the National Register of Historic Places or the California Register of Historical Resources under Criterion C, or 3, respectively.

The two-story, Spanish Colonial Revival style, multiple family residence is generally 'L' shaped in plan. The hipped roof is clad in Spanish tile. The exterior walls are clad in smooth textured stucco. A chimney is centrally located on the primary façade, and has a pyramidal cap. Small porches cantilever from beams mounted on the façade on the second floor. The porch railings are characterized by ornamental metal work. The building is accessed via cast concrete steps. Alterations include the cladding of the cast concrete steps on the second floor with red tile. Holes were punched out of the western wall to accommodate window air conditioning units, and ornamental metal security bars, of incompatible design, and doors were installed at an unknown date. Landscaping includes a brick retaining wall of unknown age and shrubs.

B2. Common Name 7051 Lanewood Avenue
B3. Original Use: Multi-Family Residential B4. Present Use: Multi-Family Residential
*** B5. Architectural Style:** Spanish Colonial Revival
*** B6. Construction History:** (Construction date, alterations, and date of alterations.)
According to an article in the Los Angeles Times, the building was constructed as an 8-unit apartment building for a cost of $20,000.00. According to City of LA permit number 6213, the building was constructed in 1932, was owned by Hobart Beck and was valued at $14,000.00.. A separate permit was pulled on 6/8/1932 for altering the bathrooms

*** B7. Moved?** ☑ No ☐ Yes ☐ Unknown Date _____ Original Location: _____
*** B8. Related Features:**

B9a. Architect: N/A b. Builder: Consolidated Building Corporation
*** B10. Significance:** Theme Residential architecture Area Los Angeles
Period of Significance 1932 Property Type Multi-family Residential Applicable Criteria _____
(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity.)
The building located at 7051-53 Lanewood Avenue was constructed in 1932. No historically important events are known to have occurred at this site. According to City of Los Angeles building permit number 6213, 4/6/1932, the original owner was Hobart Beck. Research on the does not indicate Hobart Beck was a historically important person. He does not appear to have been significant in the real estate development history of the Hollywood community, neither does he appear to be significant in other historical contexts, and standard bibliographical references (e.g. lapl.org). Therefore the building is not eligible for the National Register of Historic Places or the California Register of Historical Resources under Criteria A and B, or 1 and 2, respectively. The building is a common example of Spanish Colonial Revival architecture in Los Angeles County, is not the work of a master architect and does not represent a new or innovative method of construction. Therefore the building is not eligible for the National Register of Historic Places or the California Register of Historical Resources under Criterion C, or 3, respectively.

DESCRIPTION

6. Briefly describe the present physical appearance of the site or structure and describe any major alterations from its original condition:

This section of Lanewood is now eroded by apartments, but several large homes remain intact. The area, built between 1916 and 1932, contains examples of several styles popular in those decades. The residences are Mediterranean, Spanish Colonial Revival, and Colonial Revival. Two large Spanish Colonial Revival Apartment complexes are also present. The homes are similar in massing and scale; landscaping is appropriate. Most of the homes have formal detailing, an indication of their size and structure. Roofs are slightly sloping; many are tiled. Most massing is asymmetrical, exceptions being a Frank Meline Italianate and the New England Colonial. Large setbacks are common.

SIGNIFICANCE

20. Briefly state historical and/or architectural importance (include dates, events, and persons associated with the site when known):

This section of Lanewood was once one of Hollywood's finest residential areas. Developed between 1916 and 1932, it is a prime example in the way scale and massing often produce a unity, even when there are stylistic differences. The houses are large and important. They exude a certain formality, both in plan and design. The landscaping and other such features denote a desire for privacy; residences are placed on large lots far back from the street. A number of architects worked in the area, the earliest being Frank Meline, noted for his designs of quality period styles. His symmetrical Italianate for local developer C.E. Toberman is one of the most striking on the street. The various styles represent a microcasm of important building trends of the time. The section is a picture of middle and upper middle class life in the decades before World War II.

(State Use Only)

19-168063

7014 Lanewood Ave. Doc: 1919, Contractor: George H. Beckman. #022025 19-168052
This is a two story mild mediterranean residence. The simple, boxy structure is topped by a hipped roof. The stuccoed house will soon be razed to make way for condominiums.

7020 Lanewood Ave. Doc: 1923, Architect: Harry R. Pierce. #022026 19-168053
A rich two story Spanish house with a porte cochere. The hipped tile roof adorns the building. A wrought iron balcony embraces three arched windows with twisted columns. The entry way is marked by artificial stone.

7021 Lanewood Ave. Doc: 1922 Architect: A.H. Mc Culloch #022027 19-168054
This is a large New England, colonial house. The ridge of the gambrel roof is parallel to the street. Square columns support a stately porte cochere. The centered portico focuses attention at the doorway. Upper story is clad in shingles, lower clapboard. Attractive well-maintained landscaping complements the house.

7026 Lanewood Ave. Doc: 1916, Architect: Frank Meline Co.
One of the most beautiful Spanish designs in the area, this simple house appears to grow from the ground and curve up to the tiled roof. Symmetrical, the house is "U" shaped, with a tiled portico in the center. Bracketed balconies grace the house. Windows are flanked by smaller sidelights. This graceful mansion was built for prominent local citizen C.E. Toberman. #022028 19-168055

7027 Lanewood Ave. Doc: 1916, Architect: Frank Meline Co.
This is another beautiful Frank Meline creation. This Italianate house has large decorative brackets which are paired. The rectangular structure is topped by a large tiled hipped roof. Ornate french doors open on to small balconies. Arched windows are at the bottom story. A heavy portico serves as an upper story balcony. Arabic arches are part of the portico. #022029 19-168056

7033 Lanewood Ave. Doc: 1920, Contractor A. Thompson.
A simplified house, the two story buildings start Mediterranean and end Colonial Revival. The house, clad in clapboard, has a front porch with upper story balcony which extends the full length of the building. A hipped composition tops the structure. #022030 19-168057

7035 Lanewood Ave. Doc: 1919 Architect: Unknown.
A simplified two story, stuccoed Spanish design, the front porch and upper story balcony have attractive Doric columns. The house is topped by a hip roof. #022031 19-168058

7045 Lanewood Ave. Doc: 1925, Architect: unknown.
The ridge of the tiled roof is parallel to the street. Paired brackets support the roof. A large porch serves as an upper story balcony. Wrought iron railing runs across upper portion of the balcony. Clad in stucco. #022032 19-168059

7051-53 Lanewood Ave. Doc: 1932.
Contractor: Consolidated Building Corporation.
This is a large eight unit Spanish Colonial Revival apartment building. #022033 19-168060
Typical Spanish design elements abound at this site, including: asymmetrical massing, arched openings, tiled roofs, heavy balconies and stucco finishing.

274

19-168063

7057 Lanewood Avenue Doc: 1928. Architect unknown.
A classic two story Mediterranean set far back from the street. The massing is assymmetrical. The entrance is unadorned. Attention is captured by the left wing, which is set back into an abbreviated L-shape. The small arched porch with an iron railing is a distinctive feature, as are arched French doors, bracketted second story overhangs, and a low-pitched tile roof. #022034 19-168061

7063 Lanewood Ave. Doc: 1930. Architect: J.A. Murrey.
A three story late Spanish Colonial Revival apartment of 18 units. the facade is assymmetrical. Access is gained through an arched entrance with an iron gate into a small patio. A balcony on the third story breaks the smoothness of the facade, as does an arched concrete sculptured terra cotta ornament. Other features: arched windows, landscaping and wall designs, tile roof, geometric cut-outs. #022035 19-168062

DESCRIPTION

7a. Architectural style: Moderne

7b. Briefly describe the present *physical description* of the site or structure and describe any major alterations from its original condition: The Hollywood Reporter building on Sunset Blvd. is actually two buildings, a one story front section and a two story rear addition. The front section is a fabulous interpretation of the thirties moderne. Its facade is sheathed in colored marble. One corner of the facade curves. A string course divides the upper and lower story portions, with the lower story being a series of showcase windows . The upper portion has a fluted rounded corner and round light fixtures. The entrance is curved into the building and is also fluted. Marvelous art moderne letters announce the structure. A flat cornice tops the one story facade. The interior is designed in an attractive Regency style. The rear addition is simple concrete with vertically banded windows a la International style.

SIGNIFICANCE

19. Briefly state historical and/or architectural importance (include dates, events, and persons associated with the site.)

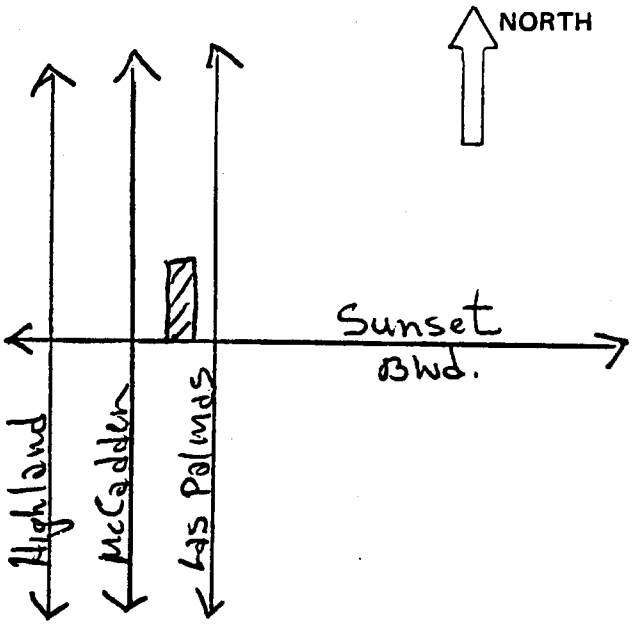

W. R. Wilkerson founded the first motion picture trade paper, the "Hollywood Reporter" in 1930. This newspaper has served the needs of the entertainment industry ever since. In 1936 A. Hanels designed the first phase of the office complex. In 1937 Vernon Russel and J. Johnson designed the exterior facade and the interior office room. The moderne was chosen as the style for the exterior; here a grey marble-like material was utilized to sheath the building in an attractive garb. The interior office-room was designed in an elegant Regency Revival mode. This attractive design remains intact with little or no alterations apparent.

DESCRIPTION

7a. Architectural style:

7b. Briefly describe the present *physical description* of the site or structure and describe any major alterations from its original condition:

At 6641 Sunset Blvd, is the Blessed Sacrament School, constructed of stucco, this two story building combines the classical Beaux-Arts tradition with touches of the Spanish style. The structure is symmetrical and its plan is horizontal. At the center is the entrance which features four smooth columns with Ionic capitals. The name of the school is etched into the entablature. This front entrance culminates in a Spanish-like emblem topped by a cros: The heavy cornice wraps around the multi-planned surface of the facade. Arches are at the entrance at the first floor. The front entrance has been closed and two small ugly one story buildings flank each side of the building obscuring it. Steps lead up to the building from Sunset Blvd.

SIGNIFICANCE

19. Briefly state historical and/or architectural importance (include dates, events, and persons associated with the site.)

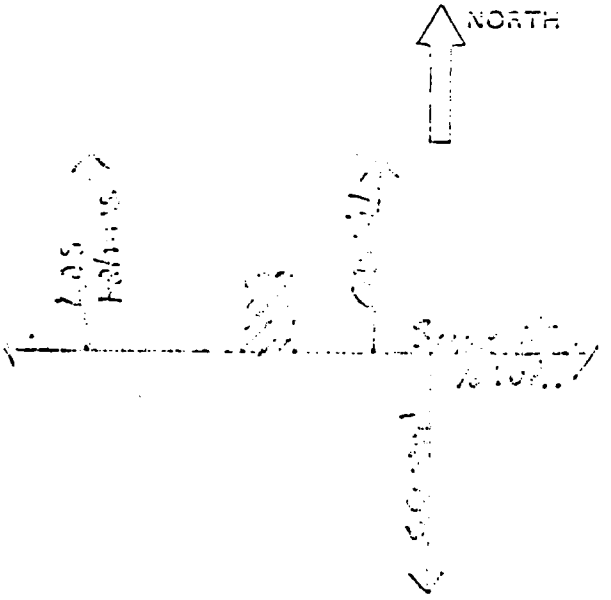

Along with the Garden Court Apartments, this school is one of few Beaux Art structures in Hollywood, situated next to the large Churrigueresque church, it certainly provides a vivid contrast of styles. This building shows the rapid development of Hollywood's Catholic community. Along with the Immaculate Heart School these are two of the oldest Catholic schools in the community. Along with the Immaculate Heart School these are two of the oldest Catholic schools in the community. J. Franklin Power, the architect for the catholic diocese designed the church next store, and the priest's residence.

DESCRIPTION

6. Briefly describe the present physical appearance of the site or structure and describe any major alterations from its original condition:

At 6657 Sunset Blvd. is a large Spanish-Churrigueresque concrete church. A bell tower rises to one side and is topped by open domes and a cross. A large window, flanked by niches with saints faces the boulevard. Below this window is a flat roofed entrance canopy. Columns with modern motifs support the canopy. The church and tower, are decorated with a Churrigueresque ornament that in some places looks very modern. Detail around the entrance and the front wrought iron tend to appear very modern. The entire roof is covered with terra cotta tiles. The interior is a unique combination of twenties and fifties styles in a very ornate fashion.

GNIFICANCE

20. Briefly state historical and/or architectural importance (include dates, events, and persons associated with the site when known):

Originally, Blessed Sacrament Church was located on Hollywood Blvd. The tremendous need for commercial space prompted the church to locate on Sunset Blvd. and construct a new facility. Work began on the new church in 1927, but with the onset of the depression the church found itself with insufficient funds. The shell of the structure was completed but the interior and exterior ornament had to wait until further funding could be found. In 1952, under the direction of architect, Eric Trudeu the church was completed. Blessed Sacrament is an unusual combination of twenties and fifties motifs. As a visual landmark as well as an auditory one, Blessed Sacrament adds character to the surrounding low rise Spanish commercial buildings.

GNIFICANCE

20. Briefly state historical and/or architectural importance (include dates, events, and persons associated with the site when known):

This two story moderne building is a remodeling of an earlier residential building. All of the stylistic features associated with the moderne have been utilized in this remodeled house. This building provides a good contrast to the surrounding Spanish buildings. Its massing and height are sympathetic to the existing structures.

21. Main theme of the historic resource: (Check only one): a. Architecture ☒ b. Arts & Leisure ☐

DESCRIPTION

6. Briefly describe the present physical appearance of the site or structure and describe any major alterations from its original condition:

At 6601-13 Sunset Blvd. is a two story Spanish-Churrigueresque commercial edifice. The building faced with stucco has a two story central portion with one story wings stretching along the frontage of the lot. Tiles decorate the various roofs of the structure. Elaborate Churrigueresque ornaments above the doorway, stretches horizontally across the front facade. Additional ornaments wrap around the roof edge of the second story. The Spanish motif is carried through with arches and small colored tiles in the stairs. Large palms are situated at the front of the building.

IGNIFICANCE

20. Briefly state historical and/or architectural importance (include dates, events, and persons associated with the site when known):

This is one of the remarkable Churrigueresque buildings found on Sunset Blvd. Designed by Milton Sutton, the ornament is rich creating a romantic Spanish feeling. These small buildings are reminders of the early development of Sunset Blvd before it began to go high rise. Situated close to other ornate Spanish buildings, this grouping is one of the best examples of Spanish style commercial architecture in Hollywood.

***P3a. Description:** (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries)
APN 5532006037 is located at 1206 N. Citrus Avenue in an urban residential setting, north of a commercial thoroughfare. It is a Colonial Revival-style residential duplex. It occupies the majority of the lot and has a north-facing orientation. It is two stories with a rectangular plan. The building features a front-gabled roof covered in asphalt shingles. The window bays are arranged symmetrically and contain vinyl frame, horizontal sliding, window sashes. The building is clad in thin wood clapboard, end boards, and a horizontal wood band that divides the second story from the gable. The primary façade is symmetrical with two entries on the ground floor. Each is reached by concrete steps and covered by a porch supported by columns. The porch roof is front gable pediment with a vent and wood siding in the gable. The building appears to be minimally altered and is in good condition. In front of the building (north), the ground is paved and a non-historic age fence surrounds the property.

B9a. Architect: Unknown b. Builder: Unknown

***B10. Significance: Theme** Architecture, Residential **Area** Los Angeles, Los Angeles County
Period of Significance 1923 **Property Type** Multiple Family Property
Applicable Criteria NRHP Criterion C/CRHR Criterion 3 (Architecture) (Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity.)
The historical significance of APN 5532006037 within the APE was determined by applying the procedure and criteria for the *National Register of Historic Places* (NRHP), *California Register of Historical Resources* (CRHR), and the definition of a historical resource used for CEQA.

Based on site investigations, APN 5532006037 appears to possess the requisite significance to be eligible for listing on the NRHP, CRHR, as well as considered a historical resource for purposes of CEQA under Criterion C of the NRHP and Criterion 3 of the CRHR, as a building that significantly embodies the distinctive characteristics of the Colonial Revival architectural style. In its setting and neighborhood, it is the only example of a Colonial Revival duplex and a rare example of multi-family housing from this time period that has a high level of historic integrity. Colonial Revival, most popular between circa 1890 and 1915 (though later examples are not uncommon), is characterized by simple rectangular volumes, covered by gabled or hip roofs; symmetrical, balanced dispensing of windows and doors; surfacing of clapboard or brick (shingles earlier); classical, colonial detailing such as columns, engaged piers, cornices, and entablactures; shuttered windows; and double hung, small paned window sashes.

For a property to qualify for listing in the NRHP and CRHR, besides meeting one of the criteria, it must also retain a significant amount of its historic integrity. APN 5532006037 appears to retain sufficient historic integrity of location, design, setting, materials, workmanship, and feeling. The materials and workmanship have been affected by the replacement of windows, but overall, the materials and workmanship aspects have been retained. The setting has been affected the construction of a parking lot on the parcel to the east, but overall, the setting aspect of integrity has been retained.

***P3a. Description:** (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries)
APN 5548006017 is located at 6808-20 Hollywood Boulevard in a heavily developed urban commercial setting. It is a vernacular style commercial building. It occupies the west half of the parcel and has a north-facing orientation. It is a two-part commercial block of three stories with a three-story addition at the rear (east), and a rectangular plan. The north elevation is three bays wide. The easternmost bay is an addition, which has with two storefronts, three bays on the upper floors of the north elevation and two bays on the south elevation. The building features a flat roof, evenly arranged horizontal sliding windows with small sills on the upper stories, and stuccoed brick walls. The windows of the upper stories of the building's north elevation have been filled in. The north elevation has a wide, decorative chevron pattern belt course between the first and second stories and an entablature of chevrons and sunburst shapes. The west elevation is brick with segmental arched recessed windows of non-original metal sliders on the upper two stories and filled-in openings at the ends and first story. The exterior of the south elevation is painted brick and has a small number of rectangular, recessed windows of non-original metal sliders. The north elevation consists of six storefronts. A single recessed doorway with a wood door is located at the west end of the north elevation. The west elevation has two centrally located side entrances. The south elevation has four rear entrances on the main building and one rear entrance on the addition. The building appears to be moderately altered and is in good condition.

B4. Present Use: Commercial
***B5. Architectural Style:** Vernacular, Commercial
***B6. Construction History:** (Construction date, alterations, and date of alterations)
The building was constructed in 1924 according to the Los Angeles County Assessor or 1922 according to the NRHP nomination. Based on observation, the storefronts and metal-framed window sashes are new construction. There are visible metal ties on the building indicating that it has been seismically retrofitted.

***B7. Moved?** X **No** ____ **Yes** ____ **Unknown** **Date:** _____ **Original Location:** _____
***B8. Related Features:** N/A

B9a. Architect: Unknown b. Builder: Unknown

***B10. Significance: Theme** Commerce and Entertainment **Area** Los Angeles, Los Angeles County
Period of Significance 1922 or 1924 **Property Type** commercial
Applicable Criteria NRHP Criterion A and C/CRHR Criterion 1 (Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity.)
APN 5548006017 (6808-20 Hollywood Boulevard) was listed in the NRHP and CRHR as a contributor (#56) to the Hollywood Boulevard Commercial and Entertainment District (NR District 85000704) (along with WSE 36, WSE 37, and WSE 38) in 1985 under Criteria A and C of the NRHP (Commerce and Entertainment/Architecture). As part of the Westside Subway Extension Project, URS investigators relocated this property in the field. The historical significance of APN 5548006017 within the APE was determined by applying the procedure and criteria for the *National Register of Historic Places* (NRHP), *California Register of Historical Resources* (CRHR), and the definition of a historical resource used for CEQA.

Based on site investigations and historic research, APN 5548006017, as an individual resource, does not appear to possess the requisite significance to be eligible for listing on the NRHP and CRHR or considered a historical resource for purposes of CEQA. However, the property does appear to be eligible under Criterion A of the NRHP and Criterion 1 of the CRHR, as a contributor to the district.

For a property to qualify for listing in the NRHP and CRHR, besides meeting one of the criteria, it must also retain a significant amount of its historic integrity. As a contributor to a commercial district, APN 5548006017 (6808-20 Hollywood Blvd.) appears to retain sufficient historic integrity of location, design, setting, materials, workmanship, feeling, and association.

DESCRIPTION

7a. Architectural style: Multiple

7b. Briefly describe the present *physical description* of the site or structure and describe any major alterations from its original condition:

The 1100 Block of Orange Drive is composed of almost exclusively Colonial Revival bungalows. The street is zoned for industrial development so no apartment buildings have intruded into the neighborhood. The lots close to Santa Monica Blvd. are used for commercial useage. The 1200 block is composed of Mediterranean, Colonial and a few Craftsman houses. There are four large apartment building intrusions. The 1300 BLock is composed of Mediterranean of Colonial, Mediterranean, and Spanish structures. There are three large apartment building intrusions in this block. The 1400 block has been eroded by parking lots. The east side of the street has been completely wiped out. Some attractive landscaping shields the west side from the parking lot. The west side of the street has several Colonial, Craftsman and Mediterranean bungalows. A parking lot has eroded the north end of the street.

Another Colonial Revial bungalow it has clapboard siding, a small portico, porch columns, etc.

1158

~~1157~~ Orange Dr. DOC:1919
This is a one story Mediterranean bungalow. Simple, is has stucco walls and the flat roof is outlined with tiles. This is the only bunglaow in this style on the block.

13

1157

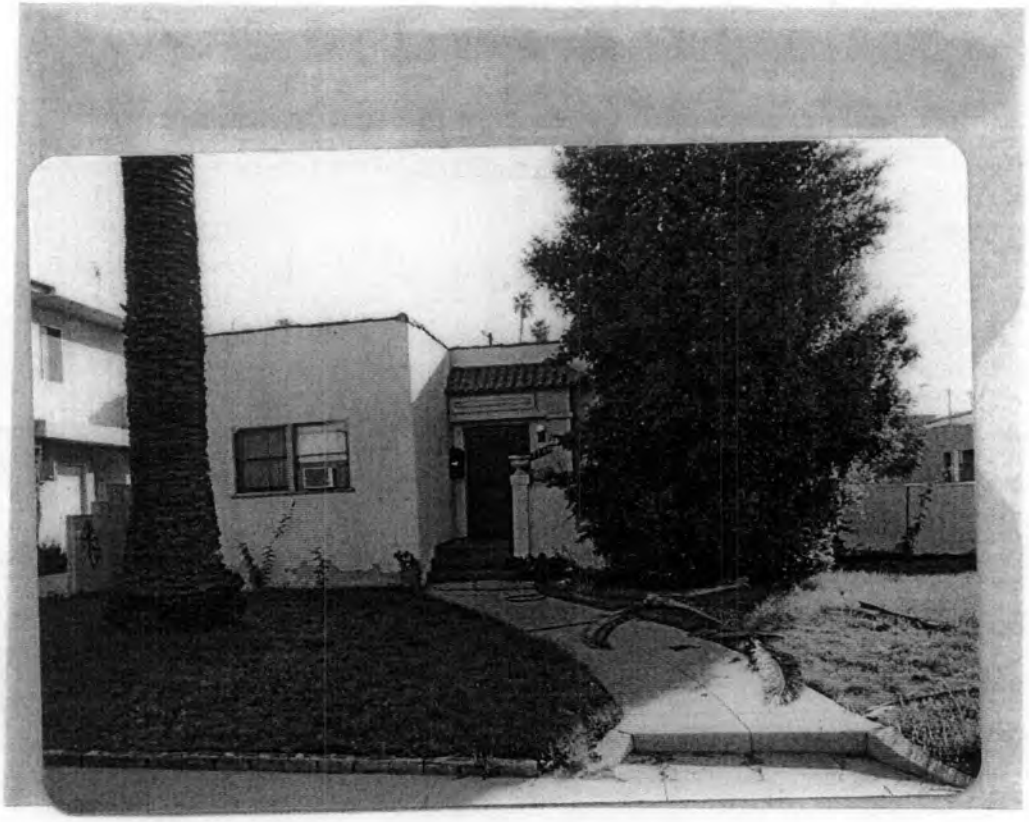

14

~~1158~~ Orange Dr. DOC: 1920
This is another of the simple, one story Colonial Revival bungalows that predominate on this street. This one has an arhced portico roof and has extended rafters on each side of the porch.

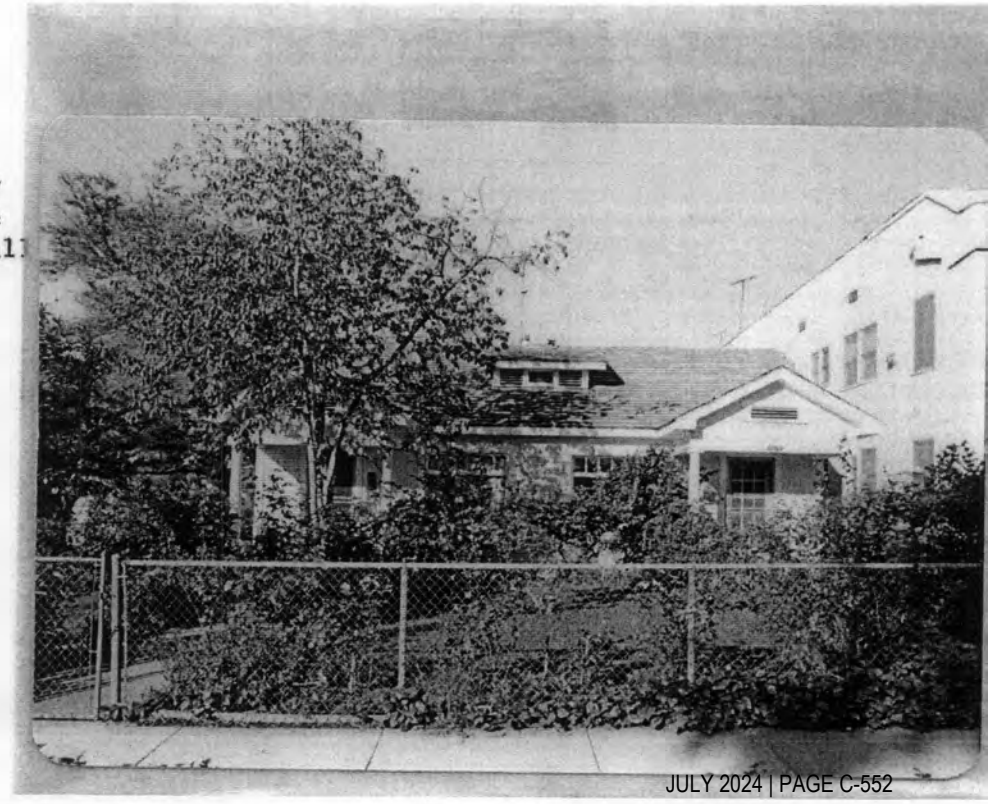

15

1200 Orange Dr. DOC: 1920
This is a one story Mediterranean bungalow. It has a flat roof outlined in tiles. The walls are of stucco. The landscaping is supportive.

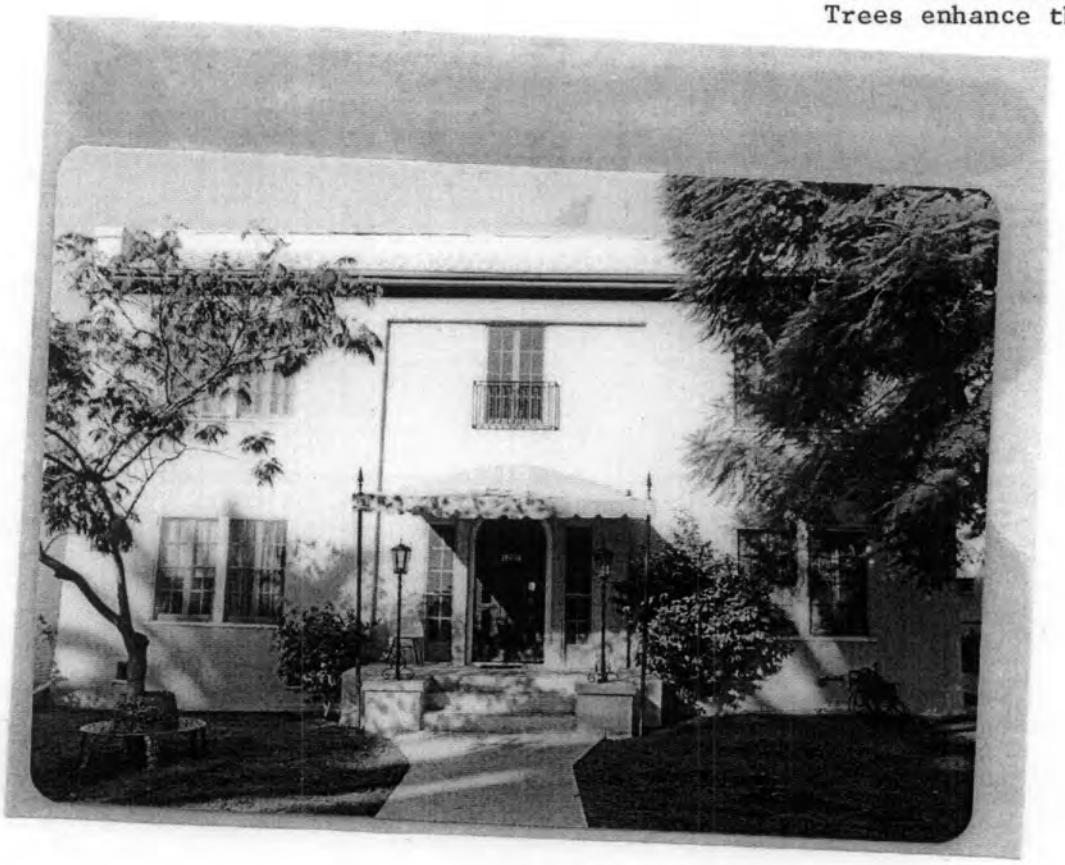

16

1201-03 Orange Dr. DOC: 1922
This is a Colonial Revival one story duplex. Porticos on each side of the front facade provide symmetry. A small dormer is in the middle of the roof facing the street. The building is clad in clapboard.

17

1207 Orange Dr. DOC: 1924
This is a two story Mediterranean apartment building. Clad in stucco, an arched entry marks the front facade. Trees enhance the character.

18

1211 Orange Dr. DOC: 1921
Symmetrical, this simple one story Mediterranean bungalow has a tile covered canopy over the doorway. The walls are of stucco and the flat roof is outlined in tiles.

19

1212 Orange Dr. DOC: 1920
New asbestos siding covers this one story Colonial Revival bungalow. Paired square , thin columns support the portico. The windows and the porch have awnings.

20

1215 Orange Dr. DOC: 1921
Another simple one story Mediterranean bungalow having stucco walls, a small porch, and tiles outlining the flat roof.

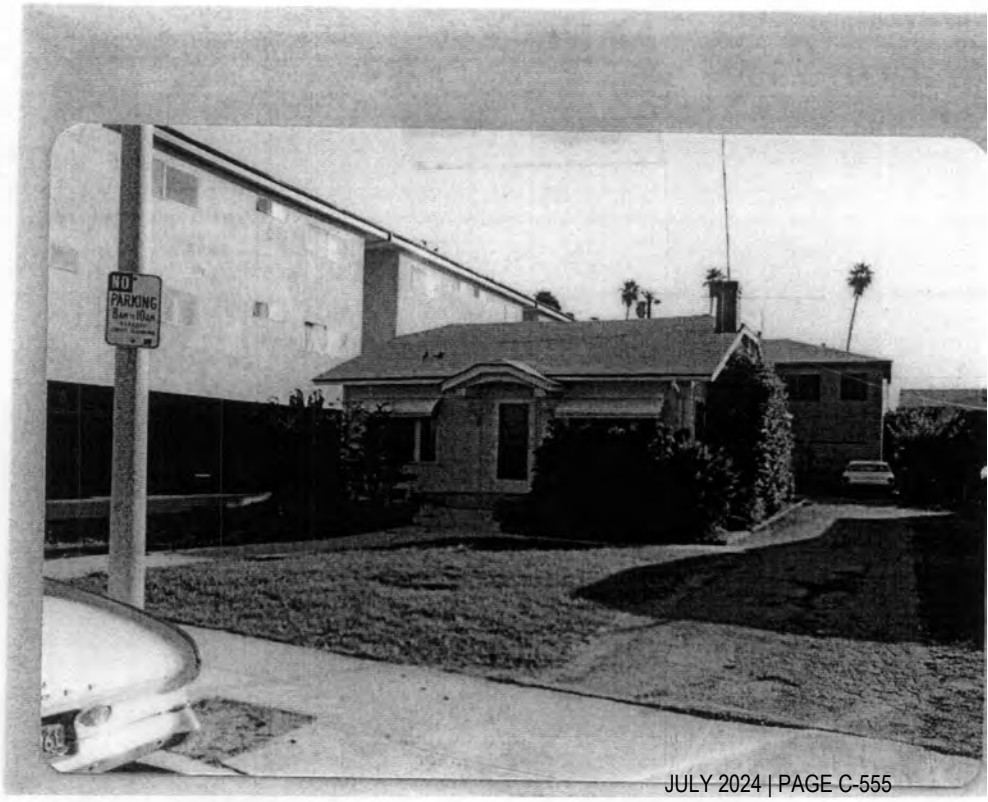

21

1216 Orange Dr. DOC: 1916
Paired porch columns support the portico of this one story clapboard covered bungalow. Several large palms enhance the character.

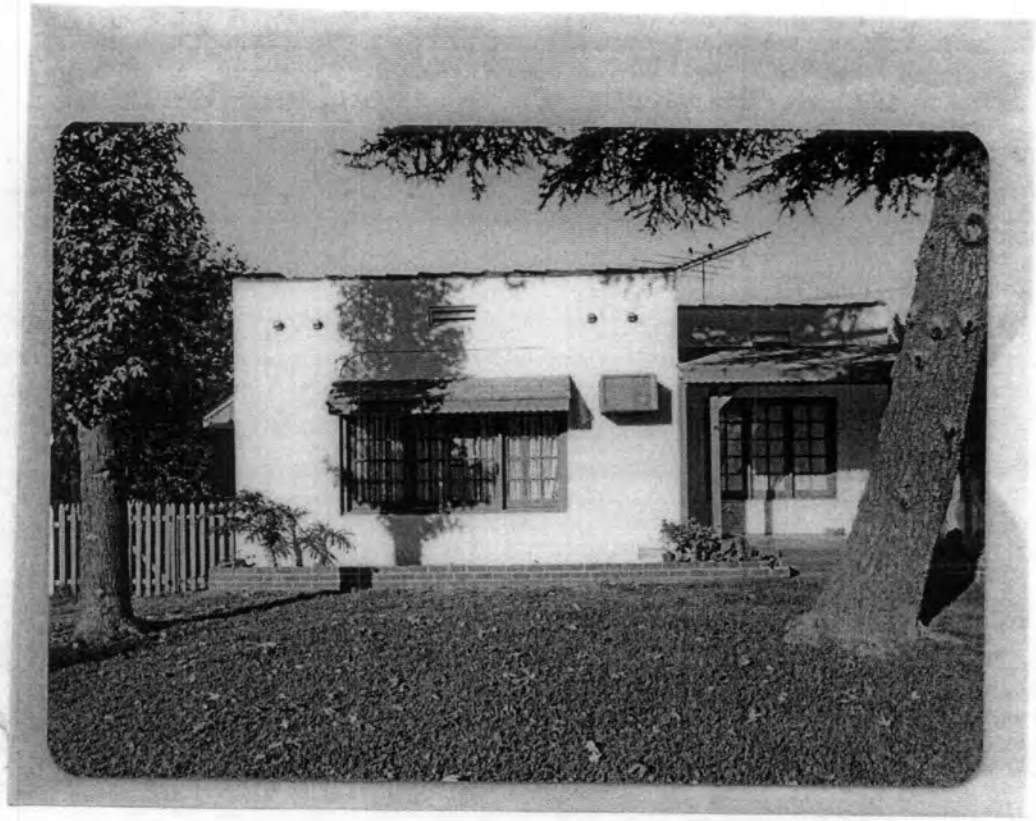

22

1222 Orange Dr. DOC: 1920
This is a one story Colonial Revival bungalow clad in clapboard. A small canopy is above the doorway. A second story has been added to the rear garage.

1231 Orange Dr. DOC: 1922
This is a simple Mediterranean bungalow. A porch is to the side. The roof is outlined in tiles and the walls are of stucco.

23

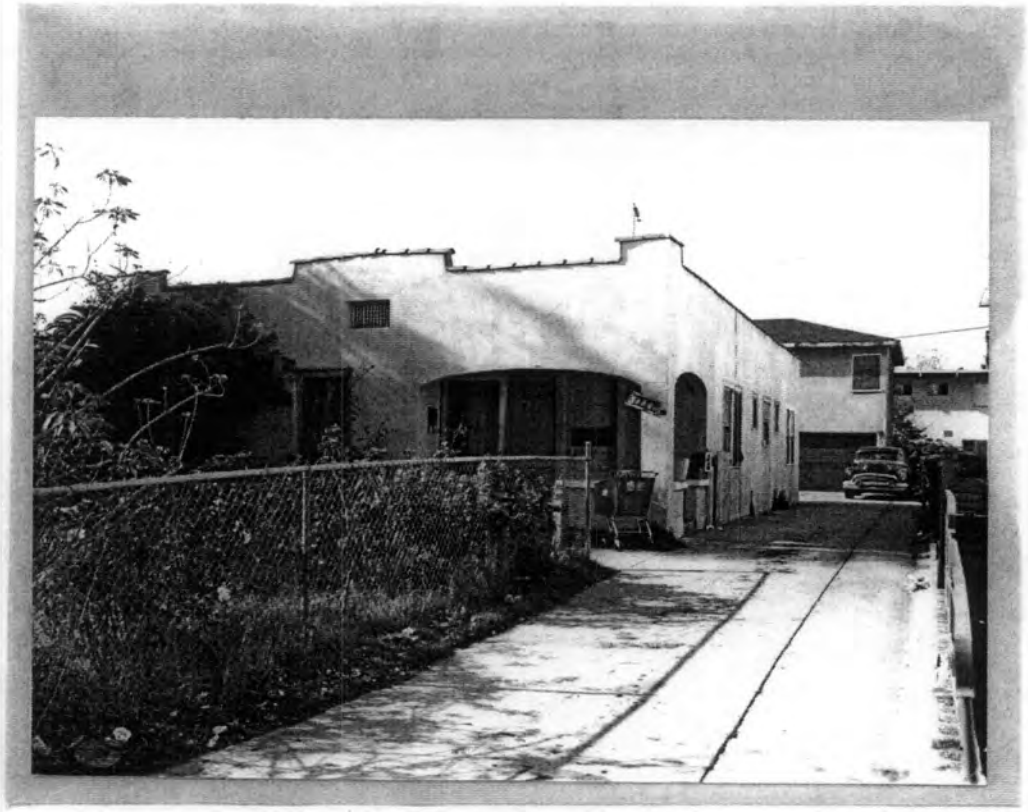

1236 Orange Dr. DOC: 1922
This is a two story Mediterranean Spanish apartment building. Etched concrete surrounds the central doorway. The building is a rectangular box. A pitched tile roof is to the front. The building is clad in stucco. At the rear of the lot is a one story Craftsman bungalow which has been covered with stucco.

24

25

1237 Orange Dr. DOC: 1921
This is a one story Mediterranean bungalow. Stucco walls and an arched entryway enhance the Spanish character. A two story garage is to the rear of the lot. Tiles outline the esxtended parapets of the roof.

26

1244 Orange Dr. DOC: 1910
This is a one story former Craftsman house which has been remodelled into a version of the late Regency Revival. The building is covered with stucco amd there is no large front porch but a small entry with a metal canopy above it. Windows flank each side of the doorway. The extended eaves area all that remains of the former style.

1223 Orange Dr. Doc: 1921
This is a one story Mediterranean bungalow clad in stucco. A small porch is to one side of the front facade. The porch has a tile roof. The building has a flat roof and is edged with tiles.

27

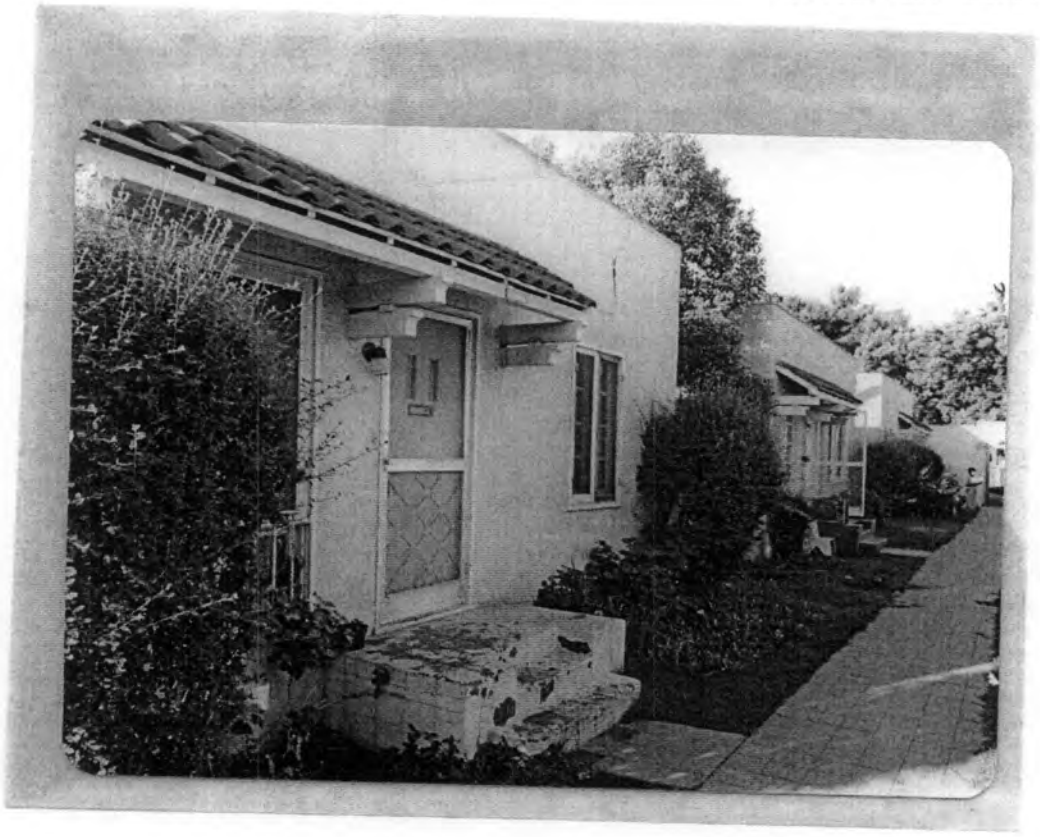

28

1227 Orange Dr. DOC: 1920
A symmetrical one story Mediterranean bungalow, a porch with a tile roof sits in the front. Tile canopies are above the front facade windows.

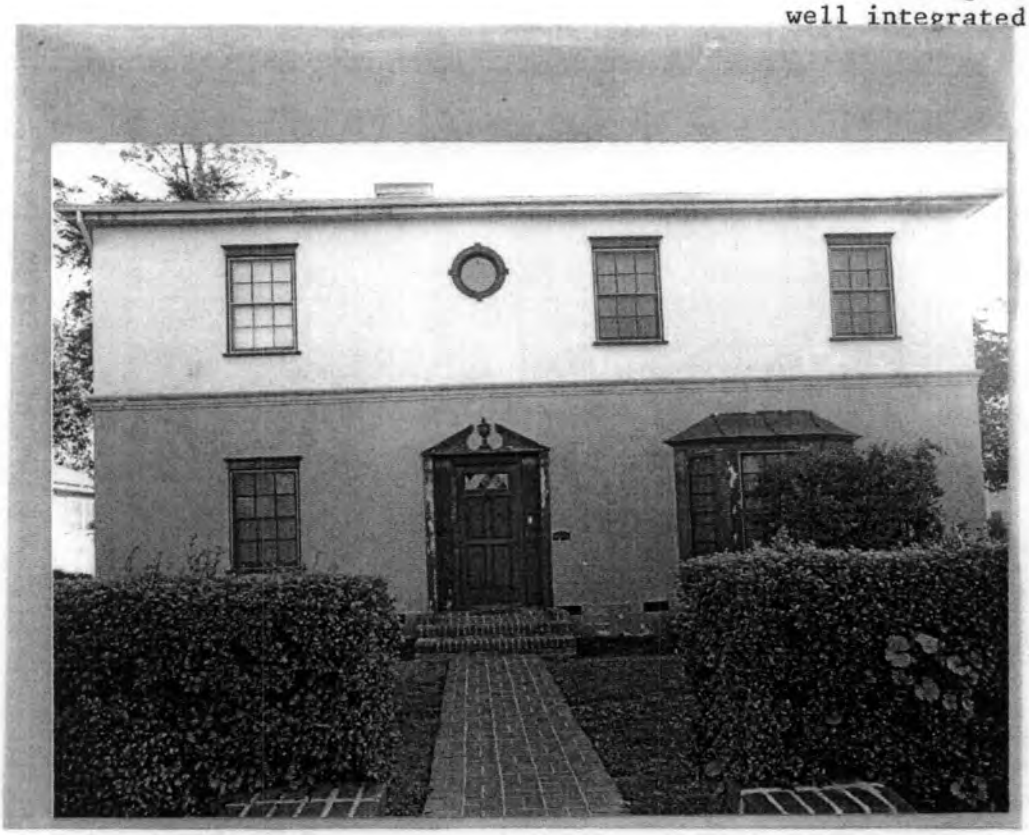

29

1249-51 Orange Dr. DOC: 1921
This is a seven unit Mediterranean bungalow court. Tile canopies are above the doorways. A small walkway lies between the buildings. Stucco covers the walls of the structure.

30

1300 Orange Dr. DOC: 1937, Architect: Robert Conklin
This is a two story Regency-Goergian Revival apartment complex. It has a port hole window, a broken pediment over the doorway, and a bay window. The building is clad in stucco and is well integrated with its landscaping.

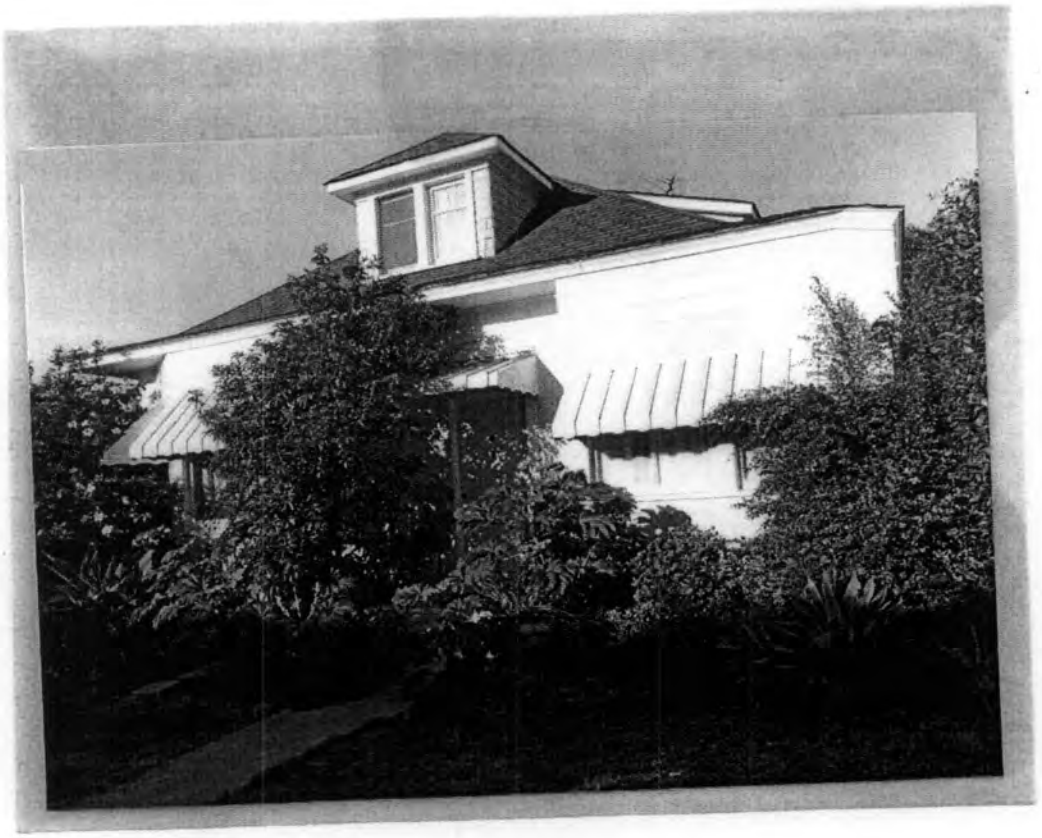

31

1303 Orange Dr. DOC: 1920
Architect: C. S. Albright
This is an attractive , well maintained duplex. The porticos are supported by two sets of paired columns ~~Clad in scapboard, th roof has clipped gables.~~ The house is stuccoed, and without its classical portico would be called "pueblo" in style. The flat roof and pediment are covered in tile

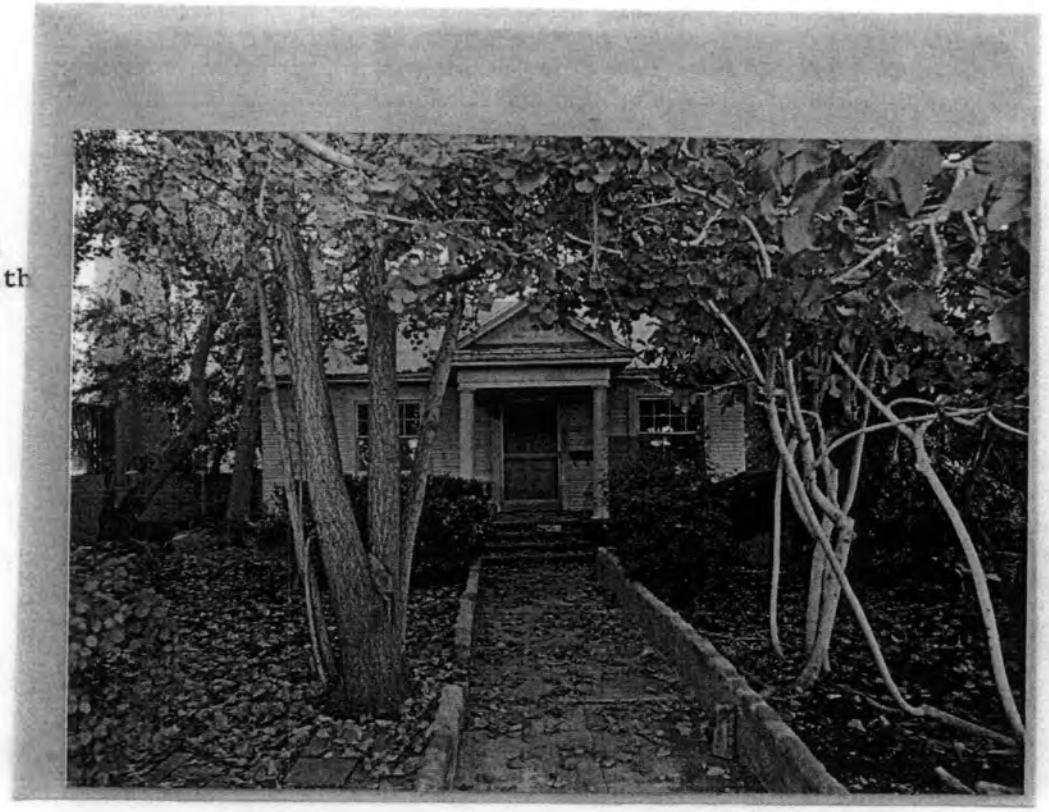

32

1307 Orange Dr. DOC: 1903
This is an early version of the simple classic box. This house has been remodelled beyond recognition. The dormer jutting from the roof is all that remains intact.

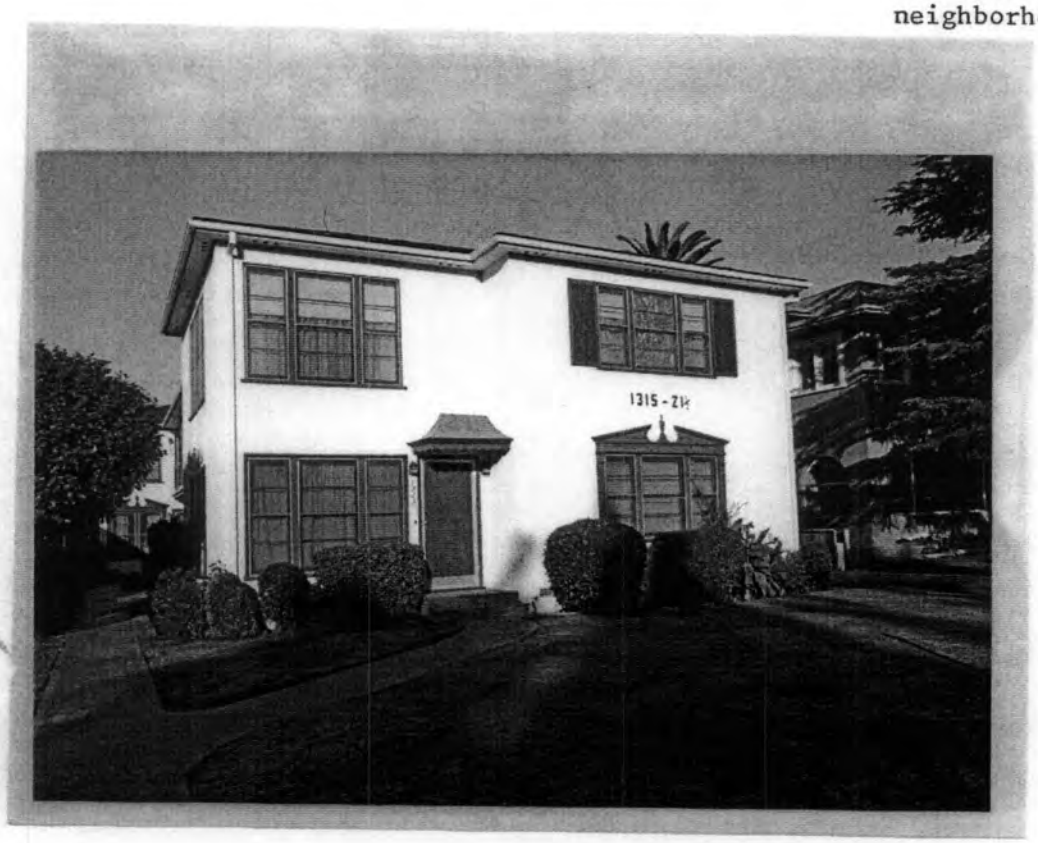

33

1312 Orange Dr. DOC: 1920
Architect: C.S. Albright
This is a simple Colonial Revival bungalow shrouded by foilage. With few alterations, the house has a portico, dendils, columns, and clapboard.

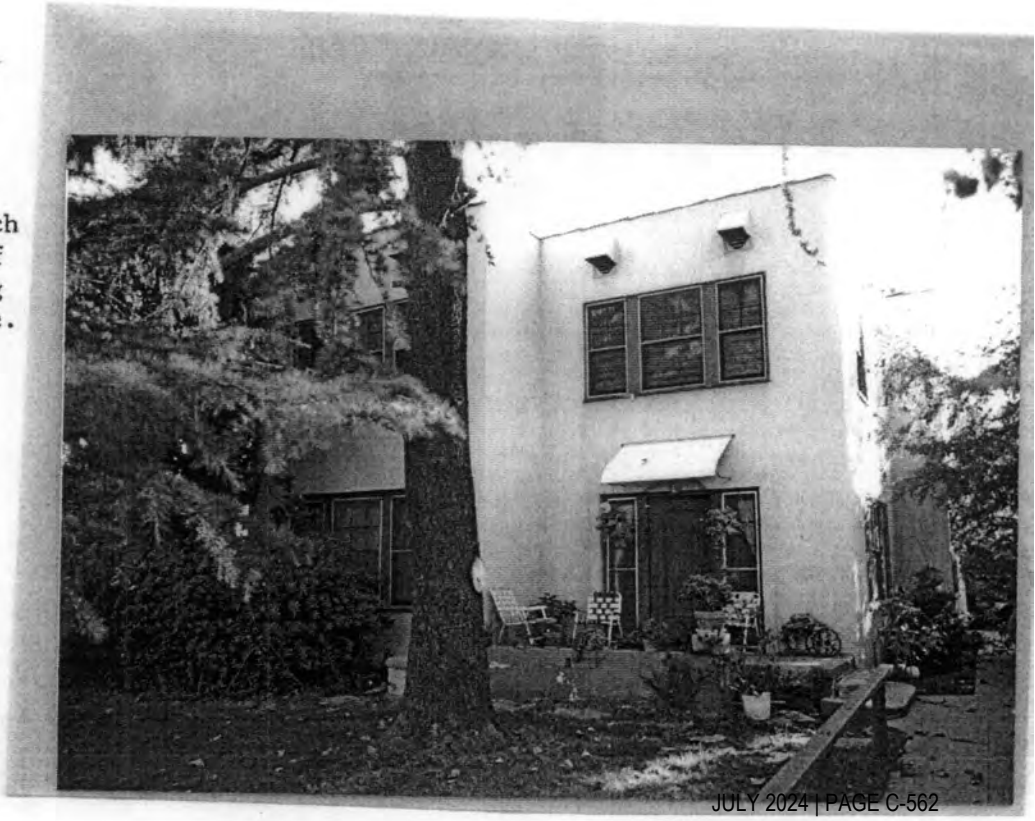

34

1315-21 Orange Dr. DOC:
This is a two story apartment building of the late Regency Revival mode. S
Stuccoed, the building has a small broke
pediment over the lower story window.
A small canopy is over the doorway.
The structure blends well with the
neighborhood.

35

1316-18 Orange Dr. DOC: 1920
Contractor: Reliable Building Co.
This is a two story stucco box which is quite severe in style. The roof is edged in tiles. The landscaping softens the impact of the structure.

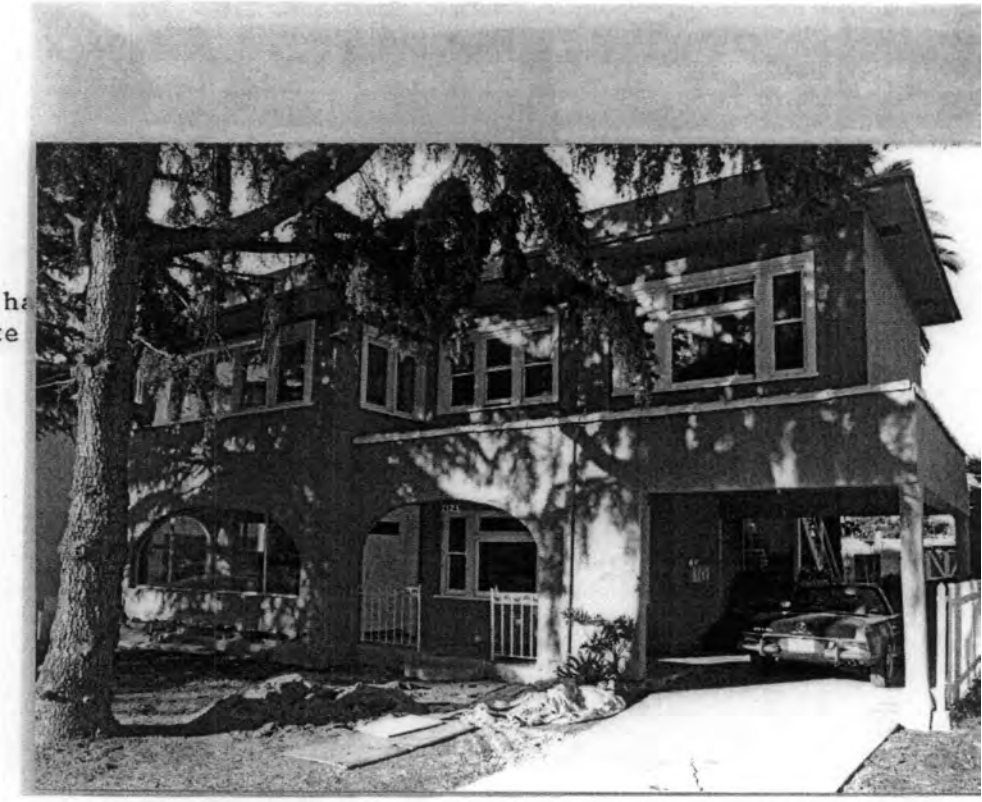

36

1322 Orange Dr. DOC: 1916
Contractor: L. Parmdee
A simple Craftsman bungalow with a low pitched roof, extended eaves, gable venting and a veranda. It has few alterations.

37

1323 Orange Dr. 1916
This is a large two story house that is Mediterranean in style with some influence from the prairie style. It ha arches across the lower facade, a porte cochere and a flat roof.

1327 Orange Dr. DOC: 1927
This is another house which has been influenced in its design by both the prairie and Mediterranean styles. Clad in stucco, and simulated brick, the house has a flat roof. A simple portico with an extended roof sits at the front of the facade.

38

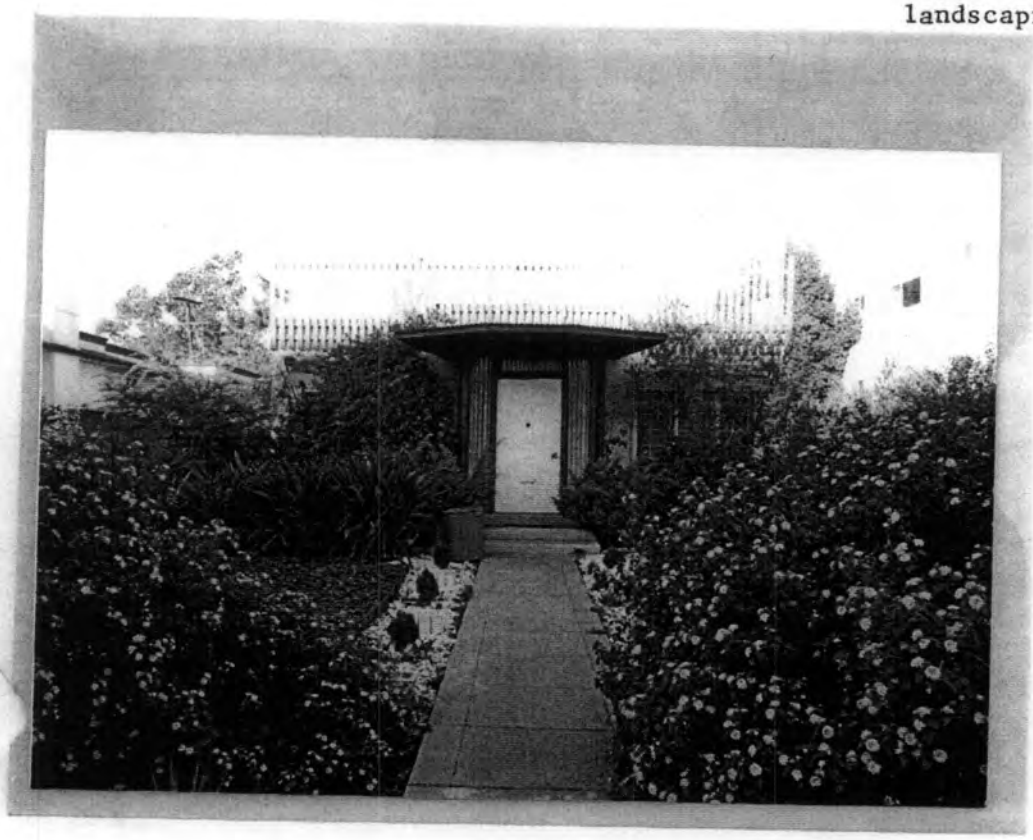

39

1335 Orange Dr. DOC: 1920
Archtiect: Western Contractors
Again, both the prairie and Mediterranean styles have been combined in this stucco house. A skirt wraps around the house below the roofline. A portico is to the front facade.

40

1337 Orange Dr. DOC: 1920 Architect: R. Kitts
A simple stucco house which has been remodelled to give it a new life. A fence runs across the top of the house A portico seems to hang in space. The landscaping is supportive.

41

1342 Orange Dr. DOC: 1913
This was a simple stucco Mediterranean house but it has been remodelled into a sixties version of the Hollywood Regency. Two metal manzard roof are at the front of the house. The facade features squared outlines in stucco. The chimney stnads alone. The landscaping is supportive and careffully maintained. It supports the eccentricity of the design of the house.

42

1352 Orange Dr. DOC: 1927
Architect: R. Conthim
This is a large Spanish Colonial Revival house, unusual for this block. Assymetrical, the house is stuccoed, covered with a tile roof and is carefully landscaped.

43

1356-58 Orange Dr. DOC: 1927
Architect: R. Conthim
This is another Spanish Revival building desing by the same architect as 1352. It is covered with stucco, has a tile roof and is two stories.

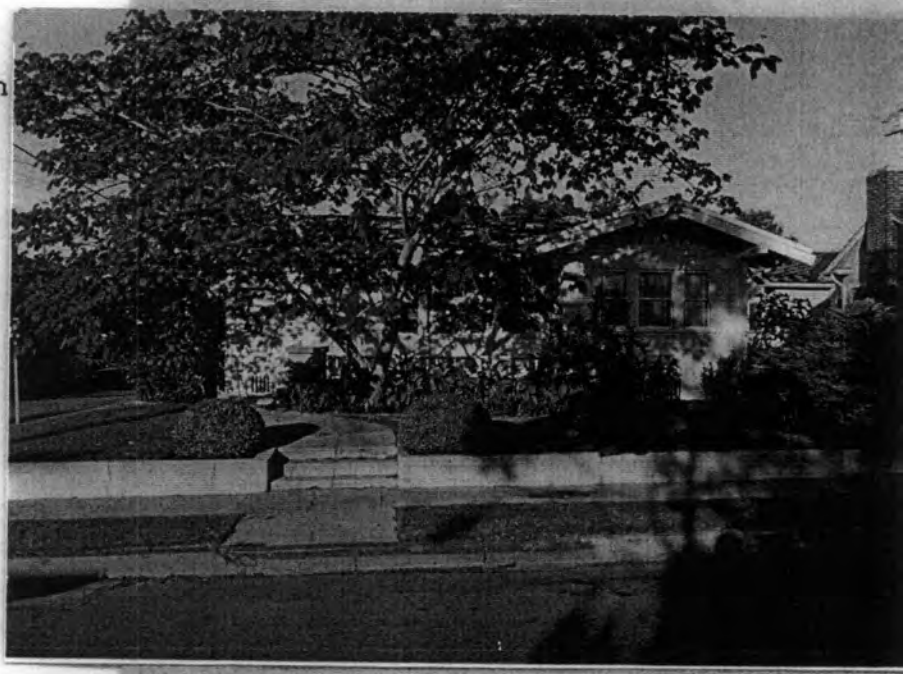

1400 Orange Dr. DOC: 1927
Architect: C. S. Arganbright
This is a two story Spanish Colonial Revival house located at the corner of Orange Dr. and Delongpre Ave. The house is sheathed in stucco has irregular massing and a tile roof. It is the last house on this side of the block.

44

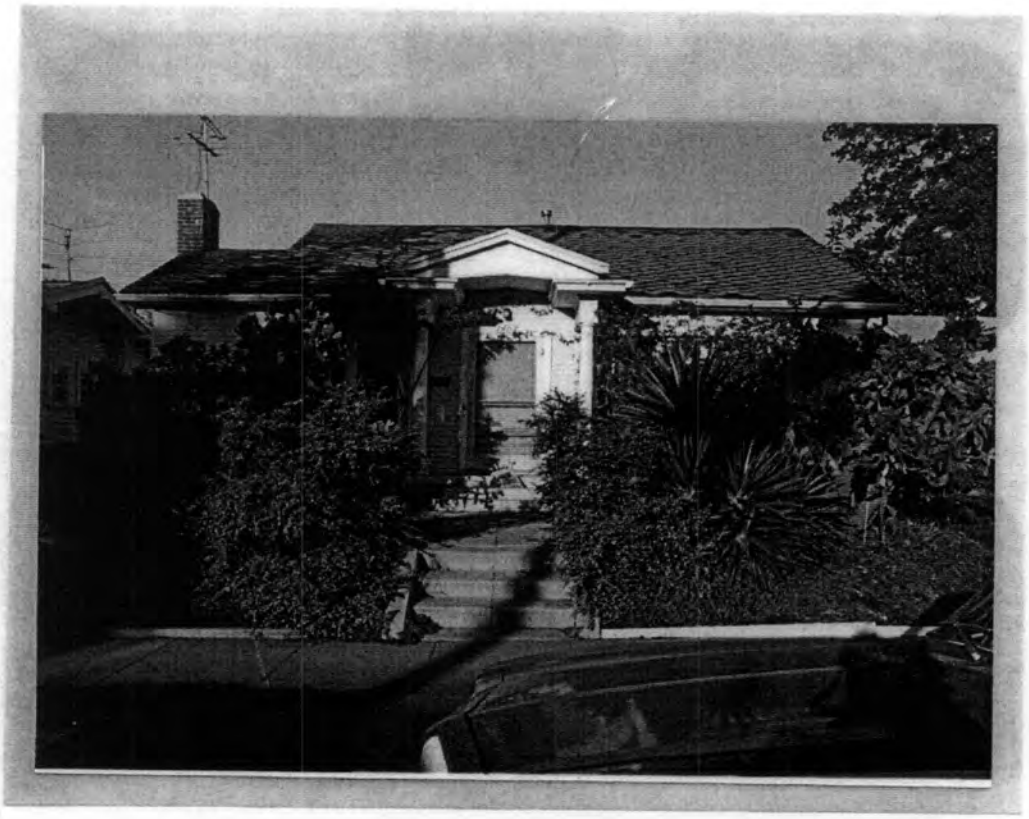

1401 Orange Dr. DOC: 1916
Contractor: C. Lindley
This is a small one story Craftsman bungalow. Clad in clapboard, the house has extended eavesm gable venting, and a large veranda. A large tree dominates the front of the house.

45

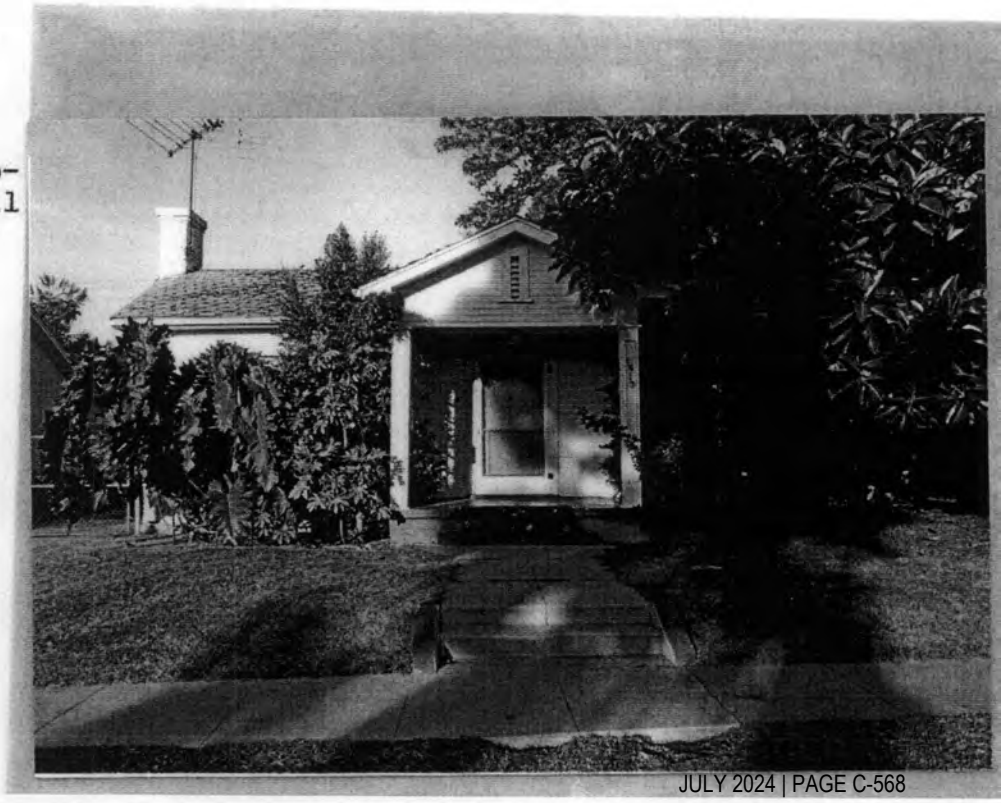

1407 Orange Dr. DOC: 1921
Contractor: Monan and Baer
A simple Colonial Revival
46 bungalow with the detail
concentrated at the front portic
Two columsn support the porch.
The house has heavy landscaping.

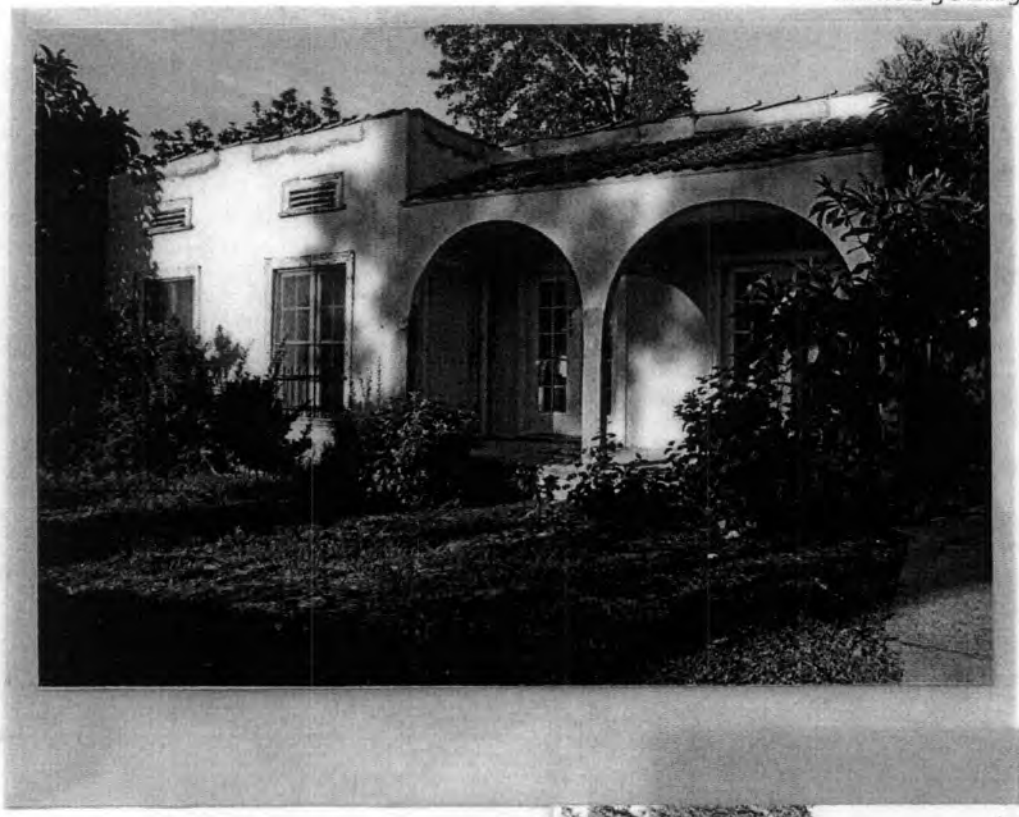

47

1413 Orange Dr. DOC: 1920
Another simplified Colonial
Revival bungalow clad in clap-
board. A simple portico is all
that is there! The house is
well maintained.

48

1419 Orange Dr. DOC: 1920
Contractor: Monan and Baer
This is a simple Mediterranean-Spanish house. Two large arches mark the front porch. The porch roof slants toward the street, and it is covered with tiles. The roof is flat and the walls are of stucco. It is currently undergoing renovation.

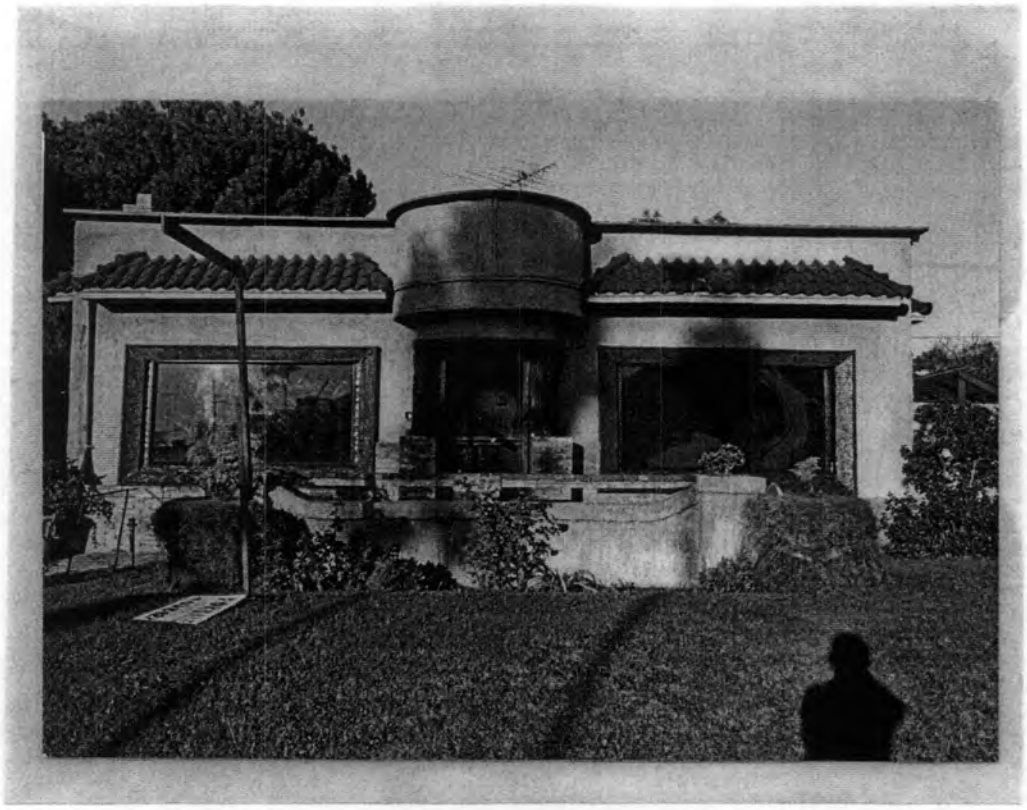

49

1423 Orange Dr. Doc: 1920
Contractor: Monan and Baer
This is a one story house which appears to be a combination of Tudor and Colonial revival styles. The gable facing the street has a roof which rolls toward one side. Wrought iron covers the windows. The house is covered with clapboard siding. An ornate wood fence surrounds the house.

1427 Orange Dr. DOC: 1920
This is a one story Spanish-Mediterranean house that has been heavily remodelled. A rounded portico is above the doorway. Two new windows are to each side of the door. The house has been recently restuccoed Tiles can be seen on the roof.

SIGNIFICANCE

19. Briefly state historical and/or architectural importance (include dates, events, and persons associated with the site.)

The streetlamps of Cole, Cahuenga and Wilcox were added during the late twenties when these streets were widened under the five finger plan for circulation. No other area of Hollywood has this particular lite standard. The ones on Hollywood Blvd. have been replaced and the ones on Sunset Blvd. are being replaced. The Santa Monica standards are slightly different but just as atttractive. They still are predominate on this street. All of these fixtures arerreminders of the early days of Hollywood when pedestrian traffic was more prevalent.

DESCRIPTION

7a. Architectural style: Egyptian Revival

7b. Briefly describe the present *physical description* of the site or structure and describe any major alterations from its original condition:

At 6660 Santa Monica Boulevard is a two-story Egyptian Revival office/store building. The side walls of the structure slant inward. Large, engaged Lotus columns appear on the lower story between the fenestration. Four windows are evenly spaced across the upper story. The facade is etched to appear stone-like. The entrance is centered at the lower story. The doorway and the upper story windows are outlined to look like Egyptian tomb entrances. Two large palms enhance the character of the building.

SIGNIFICANCE

19. Briefly state historical and/or architectural importance (include dates, events, and persons associated with the site.)

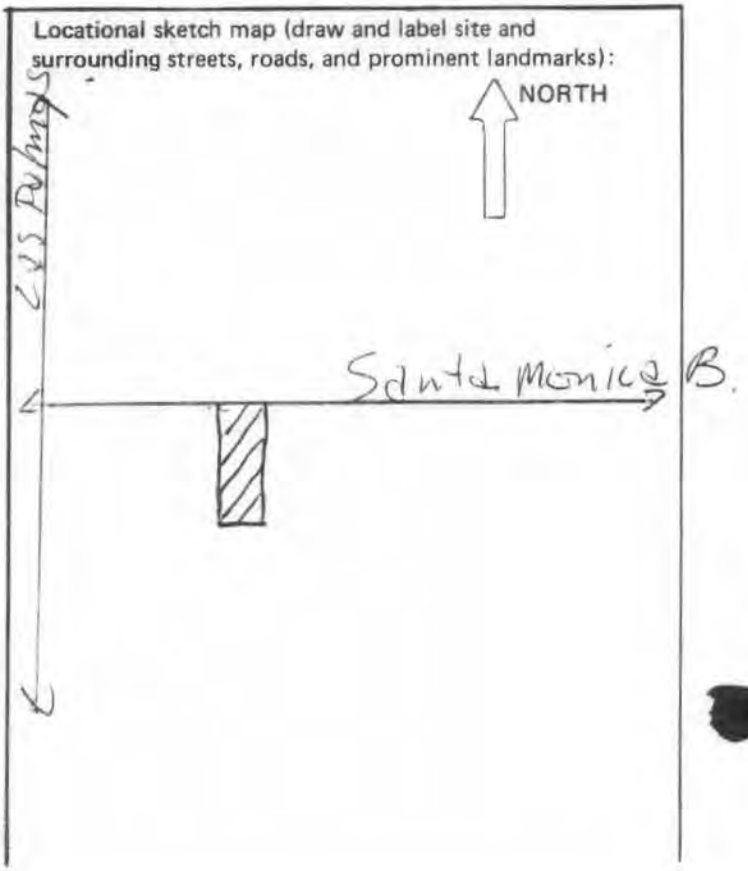

The Egyptian Revival style is a 'rare' style in Los Angeles. Other well known examples of the style include the Egyptian Theatre on Hollywood Blvd. and J. M. Close's Egyptian Revival Apartment buildings scattered throughout Los Angeles. This commercial version of this style is even more rare. Symmetrical, this building is one of the most outstanding and unusual designs on Santa Monica Blvd. The building is part of a block which includes a variety of styles from the twenties and thirties. The entire block contains most of the common vernacular styles which were build during this period. They include Spanish Colonial, Egyptian Revival, Regency, Art Deco, and Moderne.

6. Present Use: Photo Lab & Store Original use: Stores

DESCRIPTION

7a. Architectural style: Spanish Colonial Revival

7b. Briefly describe the present *physical description* of the site or structure and describe any major alterations from its original condition:

At 6700-06 are two reinforced concrete bldgs. 6700 is a simple rectangular box with an arched doorway. 6706 is a two-story office/store bldg. Three arches punctuate the front facade. Two twisting engaged Corinthian columns stand between the windows. Pilasters with Corinthian capitals flank the corners of the front facade. Roof parapets extend above the tile roof. A decorative concrete wall surrounds the lot. Some shrubbery has been planted between the wall and the structure which sits back from the street.

8. Construction date: 1928

18. Related features: Adjacent garage

SIGNIFICANCE

19. Briefly state historical and/or architectural importance (include dates, events, and persons associated with the site.)

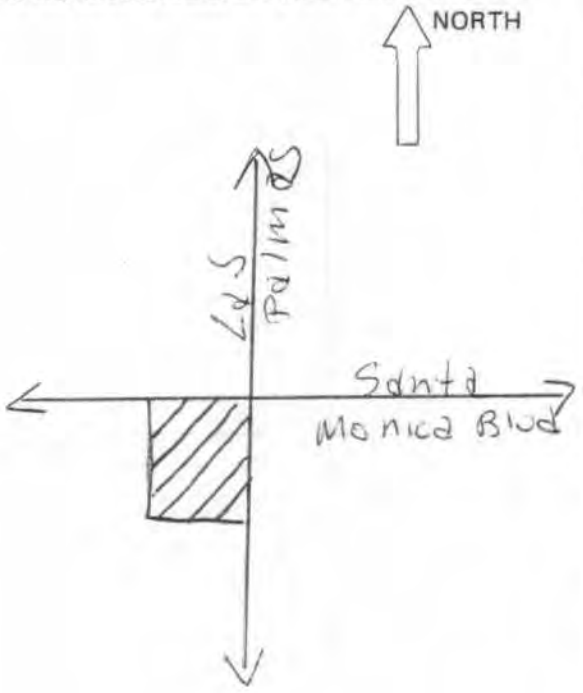

These two bldgs are owned by the Kodax Corporation which is a major industry in Hollywood. Purchased by Kodax in the late thirties from the Brulstown Co. which built the bldgs. Since then Kodax has continued to expand in this neighborhood. The small Spanish bldg has become a symbol of this company in Hollywood.

18. Related features: None

SIGNIFICANCE

19. Briefly state historical and/or architectural importance (include dates, events, and persons associated with the site.)

Carl Jules Weyl was one of Hollywood's prominent local architects. Alone he designed such buildings as the Hollywood Brown Derby and the structure that now houses the Hollywood Wax Museum. With his partner Hank Gogerty, he designed such buildings as the Baine Building on Hollywood Blvd. and the Hollywood Playhouse on Vine St. While the windows have been filled-in , this one story brick building retains its Spanish flavor. For this area. this building is interesting; accenting the corner of Orange Dr. and Santa Monica Blvd.

SIGNIFICANCE

19. Briefly state historical and/or architectural importance (include dates, events, and persons associated with the site.)

Delongpre Park was acquired by the city in January, 1924. The park, named for Paul Delongpre, one of Hollywood 's prominent citizens whose mansion graced the corner of Hollywood Boulevard and Wilcox Avenue, has been the site of the Rudolph Valentino Memorial Fountain since May, 1930.

In 1977 the estate of Joseph Jakowski provided $2,500 for a bust of Valentino which was designed by Richard Ellis and placed in the park in 1979.

One of the first neighborhood parks in Hollywood, the Delongpre Park serves a much broader area than the local neighborhood being one of the few parks outside Griffith Park within the Hollywood area.

Describe the present and original (if known) physical appearance

The Montecito Apartments, 1861 Cherokee Avenue/ 6650 Franklin Avenue, is a ten story and two basement reinforced concrete structure. It is built in an essentially square building plan with two shallow light courts on the east and west facades, and is designed in a manner influenced by the Art Deco/ Zig Zag Moderne style with applied Deco and Mayan decorative detailing. It is built on a corner downslope lot from Franklin south along Cherokee. This lot provides a high degree of visibility for this virtually unaltered structure.

The main or entrance facade is located on Franklin Avenue. It has a double inset bronze doorway with a decorative cast iron, rusticated concrete and marble and black glass surround. A highly decorative cast iron canopy with lamps is located directly above the entrance and is anchored to the facade by bars with turnbuckles. The remainder of the Franklin street level frontage is relatively austere, consisting of rusticated concrete panels set between vertically incised piers and flat metal casement windows. Directly above the street level windows there are decorative cast Deco panels set as partial spandrels. Above these are heavy Mayan pendants cast in concrete and anchored to each pier at the second story level and extending to the third story level. The facade from the third story to the attic level is relatively unadorned with the exception of chevrons in the spandrel areas at each floor level. All windows are flat metal casements in each of the nine window bays which flank a centrally located inset fire stairwell. The attic area consists of cast decorative concrete utilizing a pattern similar to that of the first floor level.

The east elevation continues the decorative detailing of the north from the first story level to the attic area. The downslope lot exposes, however, the wall surface of the basement area which consists of rusticated cast concrete. This side has a centrally located shallow light well flanked by four window bays on each side. Again, the windows are of the flat metal casement type.

The south elevation carries the decorative Mayan detailing of the north and east only to the easternmost window bay. The window articulation and decorative detailing from the first story level to the attic area is, however, similar to that of the north elevation. The two basement levels are fully exposed on this facade and they consist of a flat wall surface articulated by irregularly placed window openings. A sloping driveway runs from Cherokee down to the lower basement level where a large garage doorway provides access to interior parking.

NPS Form 10-900-a

received
date entered

The west elevation is similar in mass to the east elevation, but there are only three window bays located in the principal wall segments as opposed to the four in the eastern elevation. The wall surfaces are flat and are devoid of decorative detailing from the first floor to the attic area where cast decorative panels are utilized in a manner similar to each of the other three elevations. The basement wall surface is exposed and is rusticated only in the area directly below the northernmost wall segment.

The roof area consists of a centrally located machinery penthouse of concrete construction. It is rectangular in shape with four window openings on the east and west elevations and two window bays on the north and south. Elaborate cast Deco panels are carried above the window openings on all elevations and the penthouse is capped by a hipped copper and concrete roof. Large neon "Montecito" signs are located in the roof parapets on the east and south elevations. A similar sign is located on the machinery penthouse directly below the roofline on the northern elevation.

The interior of the structure is relatively unaltered. The principal areas of interest are the lobby, reception room and corridors. Access to the lobby is provided from the Franklin Avenue entrance. It consists of a relatively small area adorned by cast concrete moldings, Deco columns with both flat and fluted surfaces and marble baseboards. The reception room is located to the east of the lobby. It is rectangular in configuration with a splendid Deco fireplace set into the west wall. The windows have decorative surrounds consisting of fluted side moldings with scalloped incised molding above. The corridors are decorated by simple cast plaster moldings at the ceiling level. Numerous light fixtures are located throughout the building. The apartments are also relatively unaltered with the exception of minor modifications to the bathroom and kitchen areas.

The building grounds consist simply of a pool and parking area. The pool, a 1950's addition, is the only major alteration to the building complex. Located in the southwest corner of the lot it is presently unmaintained and is in poor condition.

In summary, the Montecito is an excellent example of the Deco style as utilized in apartment house design in Southern California. Furthermore, its unaltered condition and high visibility serve to make this building a landmark in the Hollywood area.

Statement of Significance (in one paragraph)

The Montecito Apartments is one of the finest examples of Art Deco styling with Mayan detailing in the Hollywood area. It is significant for its architectural quality and integrity, and remains virtually unaltered. The structure is prominently situated on a hillside two blocks north of Hollywood Boulevard, and is highly visible from this well traveled thoroughfare. The Montecito Apartments has long served the Hollywood community as a visually pleasing local landmark, and is compatible in period, style and scale with nearby commercial structures on Hollywood Boulevard. The edifice, with its overscaled signage, is an integral component of the Hollywood skyline.

The Montecito Apartments is the finest extant work designed by the notable Los Angeles architect Marcus P. Miller. The structure was one of only a few apartment buildings in the Los Angeles area which reached the height limit imposed for earthquake safety. The Montecito Apartments has been regarded as one of Hollywood's finest apartment buildings since construction was completed in 1931. It was the illustrated subject of an article in the Arrowhead Magazine in June 1934 which stated that "Towering above the trees at the foothills the Montecito Apartments furnish an example of the fineness of Hollywood's living accommodations."[1] It served the motion picture industry during its peak production years by providing accommodations for the vast influx of workers and artists associated with film making.

The Montecito Apartments was built as a commercial venture by The Cherokee Properties, Ltd. The Los Angeles architect Marcus P. Miller was commissioned to design the structure. Architect Miller is best known for his design of the Darkroom Camera Shop storefront; the unique entrance area is constructed in the shape of a giant camera. The H.M. Baruch Corporation was contracted to erect the edifice at an estimated cost of $275,000. This was a substantial sum for an apartment building in Los Angeles during this period. Herbert M. Baruch was one of Los Angeles' most prominent builders in the late 1920's and early 1930's. A high level of craftsmanship can be seen in his other works determined to be eligible to the National Register, including: the Garfield Building, the William Fox Building, and the Sun Realty Building.

Construction was begun on November 26, 1930 and was completed the following year.[2] Exterior and interior wall construction is reinforced concrete throughout. "Exterior ornament (is) cast integrally with the walls through the use of waste moulds."[3] Interior construction also incorporates tile partitions and plaster walls and ceilings. Cement flooring was incorporated throughout, and in addition, the bathroom floors were covered with decorative tile. Composition roofing was applied to the concrete roof, and the concrete penthouse roof was sheathed in copper. A semi-public swimming pool was constructed in 1956 to the southwest of the main structure. Construction of the pool cost $3,900.

In summary, the Montecito Apartments is architecturally significant as one of the finest examples of the Deco style with Mayan influence detailing in the Hollywood area. Furthermore, it is significant for its architectural quality and integrity, as one of the finest extant works of the architect, Marcus P. Miller. The edifice of the Montecito is an integral component of the Hollywood skyline, and has long served the Hollywood community as a local landmark, contributing to the unique sense of time and place of the surrounding area.

THE MONTECITO APARTMENTS

Integrity appears to be high - both interior and exterior survive virtually unaltered. The Montecito is one of the major Art Deco apartment buildings in Hollywood; its use of Mayan Revival decorative detailing marks a significant phase of the style in Los Angeles. The building has been a prominent visual landmark on the Hollywood skyline for over 50 years. Its significance is primarily architectural (Criterion C), although it has some minor significance for its association with the film industry in the 1930s. The property has been formally determined eligible for National Register listing by the National Park Service under the Tax Certification program. Approval for nomination is recommended at the local level.

DESCRIPTION

7a. Architectural style: Gothic Revival.

7b. Briefly describe the present *physical description* of the site or structure and describe any major alterations from its original condition:

The First Methodist Episcopal Church of Hollywood is prominently situated at the northwest corner of the intersection of Highland and Franklin Avenues. The church and school complex is designed in an excellent interpretation of the English Gothic Revival style built not of stone, but of revealed reinforced concrete. The most striking features include large pointed arched window openings which house enormous stained glass windows and tracery, and a truncated square bell tower with corner turrets. Large piers with Gothic detailing lend structural support and help break up the massive facades of church and school buildings. The church and school buildings are connected along the Franklin Avenue elevation, but are separated by an interior courtyard. The complex has remained in excellent condition, and appears to be unaltered. The excellent site location affords unimpeded views to this splendid architectural endeavor.

SIGNIFICANCE

19. Briefly state historical and/or architectural importance (include dates, events, and persons associated with the site.)

The First Methodist Episcopal Church of Hollywood has long served the community as a striking visual landmark, specifically due to its exceptional architectural interpretation of the English Gothic Revival style and for its prominent site location at one of Los Angeles' busiest intersections, that of Franklin and Highland Avenues. The complex of a school and church is perhaps the best effort of the prominent English born architect Thomas P. Barber. Construction of the 3-story school building was begun in May 1926 for an estimated cost of $61,500, while the subsequent construction of the church and adjoining addition was begun in September 1928 for an estimated cost of $320,000. J.C. Bannister was contracted to erect all portions of the complex. The complex is significant for its architectural quality and integrity, as a prominent local visual landmark, as one of the most striking

19. Significance

examples of ecclesiastical architecture in the Hollywood area, as a local gathering place and educational facility, and as perhaps the greatest endeavor of architect Thomas P. Barber. It is rumored that church services were regularly attended by notable motion picture actresses and actors during Hollywood's golden age, the 1930's, although this has not been verified. Rooms of the school building are now frequently made available for acting classes and casting purposes, maintaining access to the complex for the general public.

The First Methodist Episcopal Church of Hollywood was determined eligible for listing on the National Register of Historic Places as part of the Hollywood Redevelopment Cultural Resources survey conducted for the Community Redevelopment Agency. It was also declared a Los Angeles City Historic-Cultural Monument (#248) by the City of Los Angeles Cultural Heritage Board on December 4, 1981.

The architect, Thomas P. Barber, was born in England in 1862, but moved to America while very young. He opened an architectural office in Colorado following his education, and later was joined in partnership by his younger brother William. The brothers were commissioned to design several notable public buildings including the University Memorial Chapel in Denver about 1910, and planned a number of school buildings in Greeley. Thomas Barber established his architectural practice in Los Angeles in the late 1920's. He designed the First United Methodist Church of Pasadena in 1926, and is also known to have designed a church in Ventura. He also collaborated with architect Paul Kingsbury for the design of a church for Dr. Issac A. McCarty in 1931 and located at 4103 W. Adams Boulevard in Los Angeles. He died soon thereafter, in 1933. The First Methodist Episcopal Church and School at 6807-6817 Franklin Avenue is generally considered his finest and most well recognized work.

DESCRIPTION

7a. Architectural style: Egyptian Revival

7b. Briefly describe the present *physical description* of the site or structure and describe any major alterations from its original condition:

The Hollywood American Legion Headquarters, Post 43 is a monumental example of the Egyptian Revival Style. The design may have been influenced by Bertram Goodhue's popular design of the Central Branch of the Los Angeles Public Library. The two-story, reinforced concrete structure is essentially built in a rectangular building plan. The wall surfaces exhibit a massive appearance by a minimal use of openings; the windows of the central tower and side elevations are narrow vertical slits; the raised central main entrance is placed flush with the wall surface and houses large scale doors. The most visually striking feature of the structure is the square central tower topped by a copper cladded pyramidal roof. The sparse ornamentation includes a series of inscriptions, elegant tile work, a bas relief panel on the tower, and a course of heraldic shield medallions along the top of the first story of the main facade.

SIGNIFICANCE

19. Briefly state historical and/or architectural importance (include dates, events, and persons associated with the site.)

The Hollywood American Legion Headquarters, Post 43 is significant as one of the finest examples of the Egyptian Revival style in Los Angeles. It was designed in 1929 by the notable Los Angeles architectural firm of Weston & Weston, and was built by the Scofield Twaits Co. at an estimated cost of $168,000. The structure is still occupied by its original tenant, the American Legion, and still serves as a private social gathering place. The structure is also significant as a local visual landmark, being located along the heavily used thouroughfare of Highland Avenue.

The architectural firm of Weston & Weston designed several notable commercial structures in Los Angeles including the 1924 Priester Building at 1101 N. Vermont and the recently demolished Security Bank at 7626 Sunset Blvd. The Hollywood American Legion is, however, the firms greatest design achievement.

DESCRIPTION

7a. Architectural style: Spanish Regency

7b. Briefly describe the present *physical description* of the site or structure and describe any major alterations from its original condition:

The El Cadiz apartment is a two to three story Spanish Regency building designed in the late thirties. The building has a reinforced concrete basement parking garage. The front facade is restrained with a series of simple windows, a tile roof, and wrought iron gate. Once past the large gates, one enters a courtyard that is exuberant. The ground is faced with brick. The building jig-jag around to form a variety of small intimate spaces. The court has tiles, potted plants and large wooden doors. A small round tower rises to one end of the building. Large Regency canopy windows with wrought iron are visible throughout the complex.

SIGNIFICANCE

19. Briefly state historical and/or architectural importance (include dates, events, and persons associated with the site.)

Milton J. Black is known for his Moderne and Regency apartment designs. He is not known for his Spanish designs. In this complex Black has created one of the most attractive courtyards in the garden apartment designs. While the Spanish style was not popular during this period, Black does an excellent job of recreating the style.

DESCRIPTION

7a. Architectural style: Spanish Colonial Revival

7b. Briefly describe the present *physical description* of the site or structure and describe any major alterations from its original condition:

This two-story apartment complex is an excellent interpretation of the Spanish Colonial Revival style. A spacious interior courtyard is its most pleasant feature, lending the basically rectangular building plan an assymetrical appearance from the courtyard. The structure features a hipped roof shape covered with red tile and broken up with brick chimneys and some stucco cupolas. The stucco wall surface is broken up by arched and circular window openings, as well as some second story balconies. The casement style windows are accentuated by a horizontal band of glazed decorative tiles along the bottom of the first level. The central main entrance features a delightful pair of art glass panels depicting scenes from "Don Quixote". Interior architectural features include arched window openings with leaded glass. An underground parking garage entrance is located to the south side of the main elevation. Except for a security gate, the structure is unaltered.

SIGNIFICANCE

19. Briefly state historical and/or architectural importance (include dates, events, and persons associated with the site.)

The apartment building located at 1721-1731 North Sycamore Avenue in Hollywood is significant for its architectural quality and integrity, and for its design by prominent Los Angeles architect Milton J. Black. The structure is located immediately adjacent to the Hollywood Boulevard National Register district, and was determined potentially eligible for individual listing on the National Register by an architectural survey conducted for the Los Angeles Community Redevelopment Agency regarding the Hollywood Redevelopment area.

El Cadiz Apartments were built as a commercial venture for Paul Margolis. Margolis commissioned architect Milton J. Black to design the structure. It was erected under the supervision of M. J. Gabrielsen, a licensed engineer, for an estimated cost of

El Cadiz Apartments
1975 North Sycamore Avenue, Los Angeles

19. Statement of Significance

$66,000 from August 3, 1936 until its completion on September 29, 1937.

Architect Milton J. Black designed many fine apartment buildings in the Los Angeles area. The El Cadiz apartment building for Paul Margolis at 1721-1731 North Sycamore is one of his finest designs. Other notable designs include: the apartments for S. F. Slusher at 555 N. Rossmore in 1933, the apartments for Security Finance at 520 N. Rossmore in 1934, the Westwood- Ambassador apartments at 10427 Wilshire in 1936, the apartments for D.H. Cooper at 909-915 S. Serrano in 1936, and the Payne Furnace Company Building at 336 N. Foothill (Beverly Hills) in 1937. His most notable single family dwellings include: the Cernitz House at 601 Amalfi in 1938, the Leiner Residence at 1251-1257 Wilton Place in 1934, and the Streamline Moderne house located at 127 S. Kings Road and built in 1936. The 1930's was his most prolific period, and his designs favored the then popular Spanish Colonial Revival or Streamline Moderne.

Sacramento, CA 94296-0001

RECEIVED
OCT 25 1988
OHP

Attention: Dr. Hans Kreutzberg

Dear Ms. Gualtieri:

For several years your office has been working with the Southern California Rapid Transit District on issues related to the impacts the Metro Rail Project will have on the cultural resources of the Los Angeles Area. The first segment of the Project, Minimum Operable Segment (MOS)-1, is now under construction and is in compliance with the 1983 Memorandum of Agreement for the Project. The District has selected an all-subway Locally Preferred Alternative (LPA) for the next phase of construction.

This letter requests:

A Determination of Eligibility for the National Register of Historic Places of seven historic buildings that fall within the Area of Potential Effect (APE) of the LPA.

SHPO's concurrence with the District's findings on the application of the Criteria of Effect for 12 historic properties, that lie within the APE for the Metro Rail Project.

SHPO's concurrence that the 1983 Memorandum of Agreement for the Metro Rail Project is still in effect and does not need to be amended.

We have prepared a table that shows the historic properties that are affected by the LPA, their eligibility status, and the District's finding as to the effect the project will have on them. See Attachment 1.

Background

In 1986, the SHPO requested additional information on a number of structures. Attachment 2 contains revised DPR 523 forms providing additional information on the use of the Korean Church at 407 South New Hampshire Ave. and an evaluation of other works by the

Southern California Rapid Transit District 425 South Main Street, Los Angeles, California 90013 (213) 972-6000

architects of the Parklane Apartments at 3333 West 4th St. and the Nicholas Priester Building at 1101 North Vermont Ave. The original DPR 523 forms and photographs were submitted to your office and should be on file there.

On July 14, 1988, the District's Board of Directors approved an all-subway LPA (Attachment 3). All structures which are not located within the APE of the LPA are being dropped from consideration for the purpose of this project. The same definition of APE that was used in previous surveys was applied here; one parcel deep around cut-and-cover construction areas, and structures that are directly over the Metro Rail tunnel when the tunnel is less than 200 feet deep. This request does not include any historic properties for which Determinations of Eligibility or Effect were made in the 1983 FEIS.

Request for Determination of Eligibility.

Since the 1986 exchange of letters, a number of realignments of the proposed Metro Rail Project beyond Wilshire/Alvarado Station have been studied. The SCRTD has prepared a Subsequent Environmental Impact Report (February, 1987), a Supplemental Environmental Impact Statement/Subsequent Environmental Impact Report (SEIS/SEIR) (November, 1987), and an Addendum to the Draft SEIS/SEIR in May, 1988. In the course of these studies, and the additional alternatives they discuss, we have identified additional structures that may be eligible for the National Register of Historic Places. Barnsdall Park at 4800 Hollywood Blvd. and the Arts and Crafts Building and Hollyhock House on the park grounds are listed on the National Register. Attachment 4 contains DPR 523 Forms for El Cadiz Apartments, 1725 North Sycamore St.; Harry Gordon Residence, 1825 La Brea Ave.; the Atkinson/Farnum/Swain Residence, 2003 La Brea Terrace; and the Durfee Residence, 2003-1/2 La Brea Terrace.

Request for Determination of Effect.

We have applied the Criteria of Effect to the 12 properties within the APE for the LPA, and have analyzed the effects that the project would have on each resource. In our opinion, there would be "No Effect" on six of the resources and "No Adverse Effect" on the remaining six. The project would not have an adverse effect on any of the resources. Since publishing the 1983 FEIS, we have re-applied the Criteria of Effect to MacArthur Park and determined that the result has changed from "No Effect" to "No Adverse Effect". This determination is based on an engineeering study of construction alternatives made as part of the compliance with Section 4(f) of the Department of Transportation Act, which was incorporated into the May 1988 Addendum to the DSEIS/SEIR. See Attachment 5. UMTA has informed the District that the Department of the Interior has accepted the MacArthur Park Study as adequate for Section 4(f) approval. Attachment 6 contains the analysis and rationale for the findings.

19-173516

Memorandum of Agreement.

If you concur with our finding that the project will have "No Effect" or "No Adverse Effect" on the historic resources that lie within the APE of the LPA, we will prepare the required summary documentation of the findings and submit it to the Advisory Council on Historic Preservation. According to 36 CFR Part 800.5(d), if the ACHP does not object to the findings within 30 days or proposes acceptable changes, the District is not required to take any further steps in the Section 106 process. The Memorandum of Agreement for the project, as set forth in the 1983 FEIS, is still in effect and governs the District's action in the construction of the first segment and the development of subsequent segments of the project.

We look forward to your response on this matter as quickly as possible. We appreciate your assistance on preservation matters related to the Metro Rail Project in the past, and look forward to your continued support on these matters in the future. If you have any questions on the enclosed material, please call Nadeem Tahir of my staff at (213) 972-6439.

Sincerely,

James E. Crawley, P.E.
Director of Engineering
Rail Facilities

Los Angeles, CA 90013

Reply To: UMTA820708A

Dear Mr. Crawley:

Re: Los Angeles Metro Rail- LPA; Determinations of National Register Eligibility and Effect

Thank you for providing me with an opportunity to review and comment on the decision by the SCRTD Board of Directors to construct an all-subway LPA for the next phase of the Metro Rail Project. As a result of the Board's decision, the SCRTD has:

1. delineated an APE for the LPA applying the definition used throughout the consultation process for this undertaking.

2. identified and evaluated properties within the LPA APE for their historic significance under the National Register Criteria.

3. Determined the effects on historic properties of the LPA.

APE

I concur with the LPA APE as defined because it is consistent with the precedent we have been using throughout and because no compelling new circumstances now exist that warrant reconsideration of our approach to delineating APEs for this undertaking.

National Register Eligibility

1. Korean Philadelphia Presbyterian Church

We agree that this property, whose boundaries are the legally recorded lot lines, is eligible for inclusion in the National Register under Criterion C of the National Register Criteria.

2. Parklane Apartments

The additional documentation provided was helpful in determining that this property, whose boundaries are the legally recorded lot lines, is eligible for inclusion in the National Register under Criterion C as a good example of Bryant's work in this eclectic style.

the LPA APE and where necessary, will install underpinning for greater support and stability.

Based on the use by SCRTD of these standards and precautionary measures, I concur in your determination that the following historic properties will not be affected by the LPA: Korean Philadelphia Church; Parklane Apartments; Barnsdall Park and A & C Building; Hollyhock House; Atkinson/Farnum/Swain Residence; Durfee Residence.

Based upon my review of the construction proposals for MacArthur Park, I concur in your determination that the preferred alternative will not adversely affect this historic property. Disruptions and impacts to the Park will be temporary and are reversible. Affected vegetation as well as furniture and fixtures will be restored and the present condition of the lake improved. If carried out as proposed, the preferred alternative will not jeopardize the Park's National Register status. I would suggest, however, that if they do not already exist in sufficient quantity and quality, that HABS-acceptable photos of affected portions of the Park be taken prior to the start of construction.

Assuming that your intended use of a floating slab trackbed and soft fasteners will successfully meet the 35 dB standard, I concur in your determination that the LPA will not adversely affect either the United Church of Religious Science or the El Cadiz Apartments. Since the Harry Gordon residence does not appear to be historic, an effect determination is not necessary.

I also concur in your determination that neither the planned optional station entrance 300 feet south of the Priester Building nor station construction within the Hollywood Boulevard Historic District will adversely affect these historic properties so long as applicable sections (IV A, B) of the project MOA are observed.

Finally, I concur in your finding that owing to the manner in which effects of the LPA on historic properties will be taken into account, there is no need to amend the project MOA.

You must now notify the Advisory Council on Historic Preservation about the foregoing determinations of no adverse affect and supply the Council with appropriate summary documentation in accordance with 36 CFR 800.5(1)(i). Be sure to include a copy of this letter in your submittal to the Council.

If you have any questions concerning this response to your request for comments or require additional assistance with this matter, please call Hans Kreutzberg at (916) 322-9621.

13-173518

3. Nicholas Priester Building

The additional documentation provided was helpful in determining that this property, whose boundaries are the legally recorded lot lines, is eligible for inclusion in the National Register under Criterion C as a good example of Weston and Weston's work.

4. El Cadiz Apartments

This nicely executed Spanish Colonial Revival design by Milton Black has considerable integrity and is eligible for inclusion in the National Register under Criterion C. The legally recorded lot lines are the historic property boundary.

5. Harry Gordon Residence

Not enough of the 1904 property's original integrity survives to qualify this structure for inclusion in the National Register under either Criterion B or C; nor do successive alterations create an entity distinguished enough in its own right to qualify for inclusion in the Register.

6. Atkinson/Farnum/Swain Residence

This property is eligible for inclusion in the National Register under Criterion C as a fine local example of Mediterranean Revival architecture. The property might also qualify under Criterion B if it is the surviving resource most closely associated with William Farnum's importance as a silent motion picture star. Further research would be needed to establish such importance. The legally recorded lot lines are the historic property boundaries.

7. Durfee Residence

This property is eligible for inclusion in the National Register under Criterion C as a rather rare and good example of a Shingle Style inspired residence in the local context. It appears to have good integrity and might also qualify for inclusion in the Register under Criterion B if the association with Farnum described in #6, above, could be established. The property's boundaries are the legally recorded lot lines.

Effects

Section VI of the MOA executed for this undertaking stipulates that "to the extent feasible, the subway and related facilities will be designed so as to not adversely affect historic and cultural properties due to increased noise and vibration. The standard established to achieve this is 35 dB(A). As an added precaution, SCRTD is inspecting the condition of properties within

Sincerely,

Kathryn Gualtieri

SIGNIFICANCE

19. Briefly state historical and/or architectural importance (include dates, events, and persons associated with the site.)

The Riviera Sofa Beds Store is located on a site that is a portion of the Angeles Mesa Addition, annexed to the City in 1922 and is described as a portion of lot 6 in Tract No. 11100.

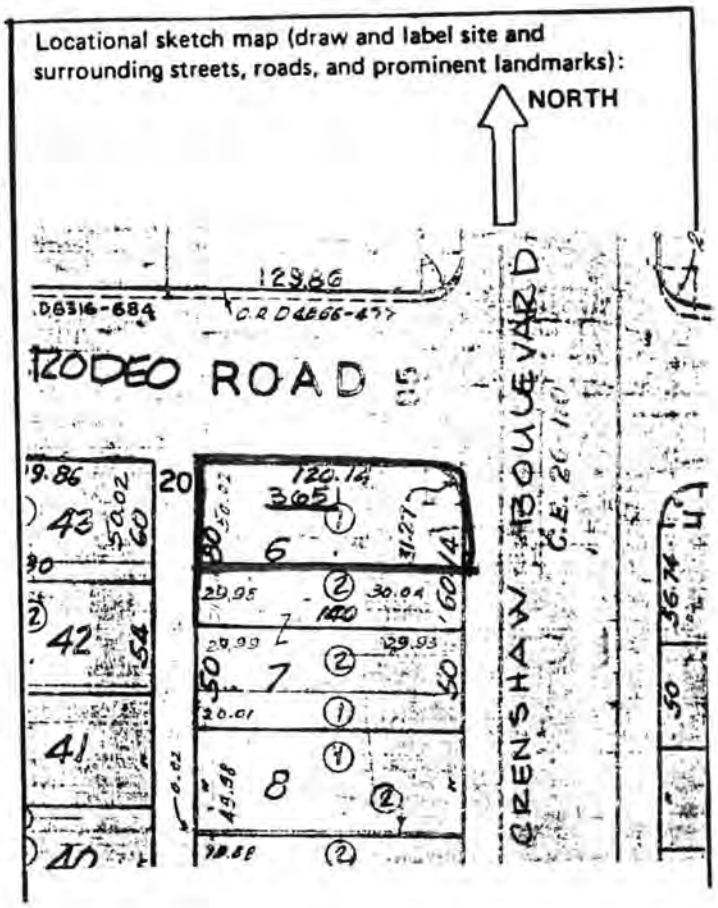

On May 28, 1904, permit #20961 was issued to Henry B. Grandin for the erection of a one-story, 50' x 120', brick and concrete retail store. The estimated valuation of the construction was $35,000.00. The permit lists Stiles O. Clements as the project architect. On July 16, 1940, a second permit was issued for modification of the side elevation from the original design. The building was completed on December 9, 1940. Mr. Grandin was a Pasadena resident, a lumberman, yatchtsman, and an executive on the National Board of the Boy Scouts of America. Stiles Clements, a prominent California architect, designed many of the noteworthy examples of streamline moderne buildings including the Hollywood Turf Club and the Beverly Hills High School.

Continuation Sheet

3651 Crenshaw Boulevard

19. Significance

In 1941, the building was owned by the actor, Richard Powell and it was occupied by the Sontag Drug Store. Later, the store was an Owl Drug Store. Riviera Sofa Beds first occupied the building in 1964.

This building is significant as an intact example of the streamline moderne style of architecture that was very polular in Los Angeles during the fourth and fifth decades of the twentieth century. Also, it is a representative example of the work of a prominent architect and is a moderately visible structure in the Crenshaw survey area.

SIGNIFICANCE

19. Briefly state historical and/or architectural importance (include dates, events, and persons associated with the site.)

This Building is located on a site that is a portion of the Angeles Mesa Addition, annexed to the City in 1922 and is composed of the southern 39' of Lot 12 and the northern 41' of Lot 13 in Tract No. 11100.

On April 25, 1962, permit #8133 was issued to Family Savings and Loan Association for the construction of a 30,000 square foot office building for an estimated cost of $440,000.00. Paul R. Williams and Associates were listed as the project architects.

Family Savings and Loan Association, originally known as the Watts Savings and Loan Association and located at 1644 E. 103rd Street, was founded in 1954 by M. Earl Grant.

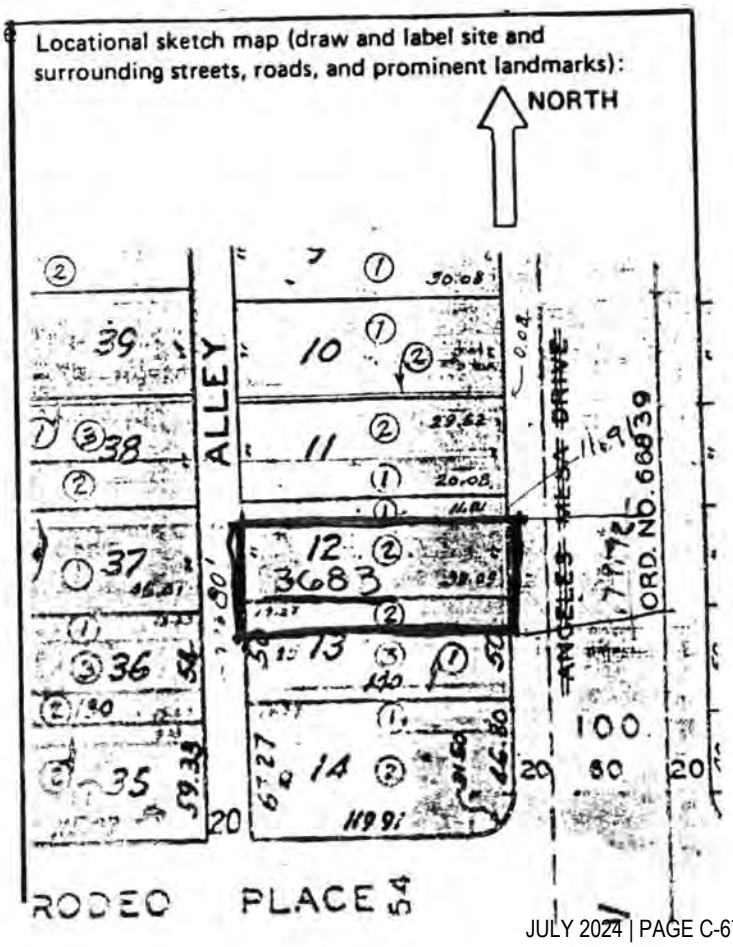

The architect, Paul R. Williams is renown as a designer of private residences.

DESCRIPTION

7a. Architectural style: Zig Zag Moderne

7b. Briefly describe the present *physical description* of the site or structure and describe any major alterations from its original condition:

This structure is a tall, single-story, black-and-gold terra cotta sheathed commercial building. The windows are recessed panels between obelisk columns and extend 75% of the height of the facade. The upper 25% of the building may be a storage area. A large, stepped, column defines each corner of the facade, and 4 smaller ones divide it. The two large columns extend to the flat roof line. There are double glassed, metal framed doors adjacent to the stepped columns at both sides of the facade. Pressed aluminum sheathing in a zig zag pattern forms rectangular panels above the doors. Circular and triangular aluminum cutwork embellishes the tops of the windows and extends between the doors at the base of the building.

Street furniture includes a concrete sidewalk in front of the building with a zig zag design. One classical metal double luminaire lightpost stands in front of the structure, on Wilshire Blvd.

SIGNIFICANCE

19. Briefly state historical and/or architectural importance (include dates, events, and persons associated with the site.)

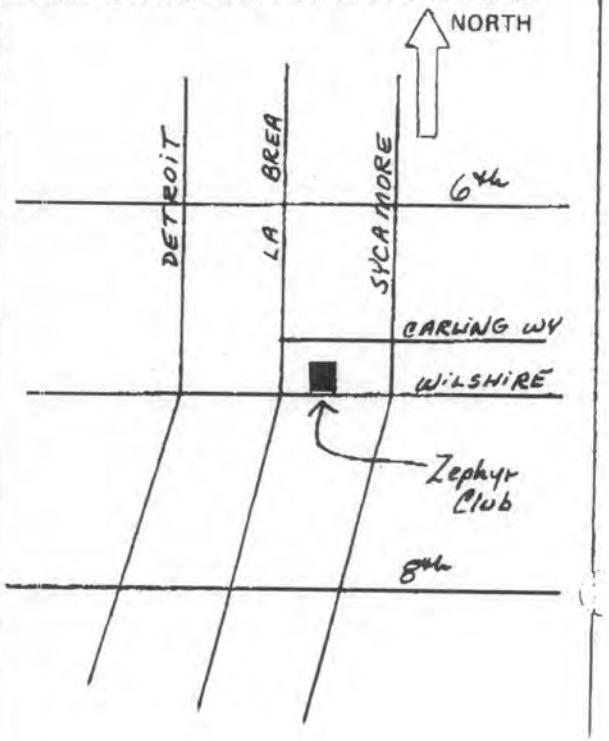

This structure was built as the Security First National Bank of Los Angeles in 1929, after the bank had consolidated with the Farmers and Merchants Bank. The structure was known as the Wilshire and La Brea branch of the bank. A photograph taken in 1929-1930 shows the black-and-gold terra cotta structure on Wilshire before the Mutual of Omaha was built beside it, and it served as a small bank branch in a residential community. A one-story residence stood where Mutual of Omaha now stands. The bank structure was ornate, with a raised letter marquis announcing the bank name on the top front of the building. The sidewalk in front of the structure was a zigzag pattern painted in various colors.

National Register of Historic Places Registration Form

This form is for use in nominating or requesting determinations for individual properties and districts. See instructions in *How to Complete the National Register of Historic Places Registration Form* (National Register Bulletin 16A). Complete each item by marking "x" in the appropriate box or by entering the information requested. If any item does not apply to the property being documented, enter "N/A" for "not applicable." For functions, architectural classification, materials, and areas of significance, enter only categories and subcategories from the instructions. Place additional entries and narrative items on continuation sheets (NPS Form 10-900a). Use a typewriter, word processor, or computer, to complete all items.

1. Name of Property

historic name **Security-First National Bank of Los Angeles**

other names/site number NPS-05000213-0000; NR-15; 024988; 19-170998

Security-First National Bank of Los Angeles
5209 Wilshire Boulevard
Los Angeles, California

Section 7: Description

The Art Deco style building originally known as the Security-First National Bank of Los Angeles at 5209 Wilshire Boulevard is located on the north side of the street near the intersection of La Brea Avenue. A one-story commercial building with mezzanine level, the structure abuts a multistory tower originally known as the E. Clem Wilson Building on the west, with a driveway and fast food restaurant located to the east, and rear (north) facing Carling Way, a named alley, and an adjacent parking lot. The former bank building was designed in the Art Deco style by Morgan, Walls and Clements, and its primary façade showcases black and gold glazed terra cotta, a rare material. While the exterior plate glass and entrances have been replaced, the building exterior retains a high degree of physical integrity. Extant historic fabric was restored when the interior of the building was modified in 2004 to accommodate offices. The original zigzag pattern in the sidewalk concrete on Wilshire remains partially visible and intact.

Primary Elevation

The primary (south) elevation consists of plate glass windows and glazed terra cotta cladding over concrete outer walls. The black and gold color scheme and decorative elements are executed in the Art Deco and Zigzag Moderne style. The five window bays that define the façade are divided by four piers and two larger piers on the ends. Most solid surfaces on the primary elevation consist of vertically ribbed black terra cotta. Non-original clear plate glass windows extend approximately two-thirds of the height of the façade. (Historically, based on photographs, the lower half of these window openings were filled with black glass. The date of the glass modification is unknown.) The upper third solid portion of the façade is intact, except it originally contained the now missing Security-First National Bank of Los Angeles sign in Art Deco style block lettering. Subsequent roof signs advertised the bank while it occupied the building. This sign is visible in historic photographs. The first and sixth outer piers merge with bulkier piers that are multi-tiered and gold at the top and extend up to the flat roofline. The outer portions protrude farther towards the sidewalk to give the building a sense of enclosure. The four center piers emerge from black and gray terrazzo bases and extend approximately three-quarters the height of the façade. Two annulets on each pier are located where the piers meet the building's solid upper portion. A decorative frieze marks the transition between the window openings and the upper wall. The frieze contains a horizontal zigzag pattern formed in the terra cotta cladding. The stylized floral and geometric top element of each pier and the tiered portion of the outer piers are gold.

The primary elevation contains two street entrances into the building. The original glass and metal decorative doors have been removed and replaced with plate glass doors, yet the surrounding doorway features remain. (The date of this modification is unknown.) Pressed aluminum panels with a pressed zigzag pattern are located above each doorway on the exterior and interior of the building. Aluminum cutwork with circular and triangular patterns decorates the base of the building below the plate glass windows. The upper portion of each bay also contains decorative aluminum with Art Deco motifs, such as rosettes at the top and fan-like elements at the bottom of the window openings.

Los Angeles, California

Secondary Elevations

The west elevation is blocked by the E. Clem Wilson Building. The north (rear) elevation contains four window openings at the mezzanine level that were added in 2004, and two emergency exits. The east elevation does not contain any openings in the board-formed concrete. The stepped parapet at both the south and north ends is visible from Sycamore Avenue to the east.

Interior

Ground Level

The interior consists of a central expansive space with an open floor plan and several smaller spaces at the rear of the ground level. These spaces, including the former vaults, are located beneath a mezzanine level. Teller windows, casework, or other furniture related to the original function of the building no longer remain. The floor consists of contemporary polished concrete with zigzag designs. The ceiling contains horizontal bands of skylights parallel to the street façade. Metal framing and smoked glass form an Art Deco style geometric pattern. Each of the five horizontal sections forms a low-pitched peak. The skylight sections span the space between vertically scored flat pilasters in the east and west walls. Scored painted concrete and plaster beams divide each section. Non-original square lighting fixtures are mounted on the beams at intervals, and three pendant light fixtures with zigzag patterns are also contemporary additions. A scored zigzag pattern faux-capital interrupts the three vertical scores in each pilaster. Decorative painted silver metal grille panels with elaborate stylized flora and fauna motifs are located above the capitals and are set between stepped concrete and plaster panels. These grilles are also located in the upper portion of the north and south walls.

A conference room located within former bank vaults is located beneath the mezzanine. The painted plaster surrounds to the vault openings are embellished with a triangular pattern. The bolts are also visible around the vaults. Mechanical and storage spaces occupy the north portion of the ground floor. An opening with an outward vertically stepped decorative soffit leads to a contemporary kitchen in the northwest section. An exit corridor and restroom are located at the northeast section.

The mezzanine has been extended into the open plan of the ground level space to create office spaces with partitions and sliding glass doors at the east and west sides. Each row of offices is interrupted with a staircase that leads to the mezzanine level of these extensions. Non-original vertical metal light fixtures are mounted on each pilaster that divides the office spaces. All railings are painted silver and designed to echo the building's Art Deco zigzag and triangular motifs.

Los Angeles, California

Mezzanine Level

In addition to the non-original two staircases, an original staircase is located at the northwest corner of the main ground floor area to provide access to the open mezzanine. The staircase spills into the ground floor landing. The dark-stained wood stairs form a quarter turn upwards with elegantly curvilinear steps. Walls in the stairwell contain sections with convex ribbing. The stairwell also includes a stepped profile wall stringcourse and painted wood wall-mounted handrails terminating in volutes. The mezzanine apron spans the two beams with scored zigzag pattern capitals.

The mezzanine extensions with the offices at the ground level contain a continuous open work space above. These were created along with the construction of the conference room in the former vault, ground floor offices, and other mezzanine rooms when the building was converted into office space in 2004. The two added staircases lead up to these areas. Pilasters at the ground floor continue to the mezzanine level and terminate in eight-sided balusters. Art Deco style silver railings occupy the openings between each baluster. Non-original concrete and plaster balusters and pilasters contain one center vertical score to emulate other scored elements in the building. Dark wood floors have been installed throughout the mezzanine level.

The east and west mezzanine wall surfaces are comprised of four panel sections with convex ribbing and topped with geometric zigzag grilles. One ribbed panel section without a grille is located north of the pilasters in both walls. The center area of the mezzanine level retains original crown molding. This molding consists of downward facing fan shapes with pointed ends that alternate with foliated volute designs within triangular sections. The north section also contains a band of Art Deco-style notching below.

Rooms at the mezzanine level are a result of contemporary modifications. A storage room and restroom are located in the northeast corner. The walls have been adapted to accommodate the doorway to the storage room and an office which has been added in the northwest corner. Three non-original divided light skylight openings are located in the ceiling to let in natural light and window openings have been added in the north wall to allow the adaptive reuse of the building.

Conclusion

The building remains in its original location at 5209 Wilshire Boulevard, and retains its architectural integrity. Both exterior and interior character-defining features remain. Character-defining features such as the fenestration and spatial characteristics of the open interior plan retain the elements of a local bank branch building. Other remaining features include decorative plaster, metalwork, bank vaults, and the Art Deco ceiling skylights. Rooms have been added in the rear of the ground and mezzanine levels, and the mezzanine extensions were constructed to facilitate the adaptive reuse and financial viability of the building. Black and gold glazed terra cotta cladding, a rare decorative material of Art Deco structures in Los Angeles, remains intact on the building exterior, and is an example of the workmanship of the structure. Wood, concrete, and plaster decorative details remain on the interior. The Art Deco

elements convey the forward-looking optimism of the late 1920s, as well as rejection of historic precedent found in period revival style architecture. Numerous structures along the Miracle Mile were executed in the Art Deco style, as it was considered apropos to the modern character of the street and emerging community.

Section 8: Statement of Significance

Summary

The Security-First National Bank of Los Angeles building, located at 5209 Wilshire Boulevard, is eligible for listing in the National Register of Historic Places under Criterion C at the local level of significance as an outstanding example of the Art Deco style in a small commercial building. Constructed in 1929 at the eastern edge of the Miracle Mile commercial district, the bank was one of the smaller scaled, highly ornamented structures which made the area famous. The area became known for its automobile-centered approach to urban design and architecture, with the resulting Art Deco and Streamline Moderne structures architecturally signifying the upscale pretensions of the Mile. The building retains its glazed terra cotta clad black and gold façade, extremely rare among structures from the period, along with other Art Deco character-defining features. It is also a significant example of the work of the Los Angeles-based firm Morgan, Walls and Clements under the lead of architect and partner Stiles O. Clements.

Style and Design Context

Art Deco began in the 1920s as an alternative to the historical revival styles then prevalent in Los Angeles architecture. Popularized after the Exposition Internationale des Arts Décoratifs et Industriels Modernes that took place in 1925 in Paris, the highly decorative style captured and popularized the spirit of modernity in a way that other styles had failed to do. In Los Angeles, Art Deco was mostly applied to commercial buildings and multi-family structures, with single family residences being the exception. Motifs were derived from technology and avant-guard art movements, such as Cubism and Expressionism which were originally inspired by Pre-Columbian and African art. This inspiration from both technology and so-called "primitive" art provided an escape from conventional historical precedents and revivalism that had previously dominated architecture, particularly in the relatively young city of Los Angeles. Optimism surrounding the machine age imbued the style with a vigorous sense of movement and progress.

State-of-the-art building materials were also heavily favored. As evidenced by many structures along the Miracle Mile, concrete and stucco were preferred, along with glazed terra cotta and terrazzo. Polychromy was another hallmark of Art Deco exteriors and interiors with geometric patterns, also referred to as "Zigzag Moderne." The Pellissier Building at Wilshire and Western by Morgan, Walls and Clements and the Eastern Columbia Building (Claud Beelman, 1929) in Downtown Los Angeles are prime examples of how strong colors with powerful motifs, such as chevrons and sunbursts, were dramatically used.

Combining black and gold to create a dazzling effect was another unique practice of the style. Clements employed this chromatic contrast for the Security-First National of Los Angeles building at 5209 Wilshire Boulevard as he had on the Richfield Oil Building. The Selig Building/Crocker Bank Building at Third Street and Western Avenue, built for a haberdashery in 1931 by architect Arthur E. Harvey, contains a similar black and gold scheme. It has since functioned as a bank branch and nightclub, and currently contains a variety of small businesses. This structure and 5209 Wilshire are the only two identified black and gold glazed terra cotta Art Deco buildings that remain in Los Angeles.

Los Angeles, California

While glazed terra cotta was often used in earlier buildings to imitate marble or stone (even by some Art Deco practitioners, such as with Claud Beelman's more subdued 9th & Broadway Building across the street from his flamboyant, blue-green Eastern Columbia Building), the dramatically polychrome glazed terra cotta buildings from 1928 to 1930 are remarkable and distinctive buildings in all of the limited places where they appear in the cityscape. Downtown, there were three that fit this profile: the Eastern Columbia Building at South Broadway and 9th Street (Claud Beelman, 1929-1930), the Sun Realty/Bankers Building at 629 South Hill Street (Claud Beelman, 1930), and the Richfield Oil Building at 6th and Flower Streets (Morgan, Walls and Clements, 1928). The former two are green or blue-green and the latter, now demolished, was black with gold ornamentation. Three other buildings, both in or near the Wilshire Corridor, carried the drama of downtown Art Deco out of the central core: the Pellissier building at Wilshire Boulevard and Western, the Selig Building/Crocker Bank Building at Third Street and Western, and the Security-First National Bank at 5209 Wilshire Boulevard. Of the two examples, 5209 Wilshire retains significantly more of its exterior and interior historic integrity than the building at Third and Western.

All of the five buildings mentioned above have local or national landmark status, or have been determined eligible for listing in the National Register of Historic Places. The Pellissier building was listed on the National Register of Historic Places in 1979 and is City of Los Angeles Historic-Cultural Monument Number 118. The Eastern Columbia Building is Historical-Cultural Monument Number 294 and is also included in Broadway's National Register Historic Theater District. The structure at 629 South Hill Street has 3S status, meaning that it appears eligible for listing in the National Register as a separate property. The Security-First National Bank of Los Angeles building at 5209 Wilshire currently has 2S2 status and therefore was determined eligible for separate listing by a consensus determination in 1982 and 1983. The black and gold glazed terra cotta Selig/Crocker Bank Building at Western Avenue and Third Street is City of Los Angeles Historic-Cultural Monument Number 298.

As far as has been observed and published, the two smaller buildings and their larger counterpart, the demolished Richfield Oil Building, are the only three black and gold Art Deco buildings that existed in Los Angeles. Office buildings that combined gold with dark shades, including the American Standard (formerly American Radiator) Building in New York City (Raymond Hood and André Fouilhoux, 1923-1924) and the Carbide and Carbon Building in Chicago (Daniel and Hubert Burnham, 1929), were major landmarks in several American cities during the pre-Depression era. The American Standard building is listed on the National Register of Historic Places and the Carbide and Carbon Building was designated a Chicago landmark in 1996. While Los Angeles has lost its equivalent landmark to demolition, the Security-First National Bank branch, designed by the same architects in the same period and honored in 1930 with an award from the local American Institute of Architects chapter, remains.

Following the height of Art Deco, the Streamline Moderne style was an economic and stylistic response to the ravaging effects of the Great Depression. Streamline structures continued to suggest modern values of movement and rejection of historic precedents, but with far less opulence and more restraint than Art Deco of the late 1920s and early 1930s. Streamline Moderne suited the interests of Miracle Mile businesses perfectly through the 1930s, as the massing and fenestration appropriately caught the attention of pedestrians and drivers, and fit the community's forward-thinking ethos. Best of all, Streamline Moderne buildings cost far less than their high style Art Deco precursors. Large-scale buildings, such as supermarkets and drug stores, became popular in this style. The numerous

Ralphs stores designed by Stiles Clements, such as the Westwood Village location, were fine examples, along with the Sontag Drug Store on the Miracle Mile.

Architect Stiles O. Clements in Context

Stiles Oliver Clements (1883-1966) was one of the most prolific and significant architects in Los Angeles. He was responsible for numerous buildings that have since become treasured Los Angeles landmarks, both with the firm Morgan, Walls and Clements, and as an independent practitioner. A native of Maryland, Clements received his undergraduate education at Drexel Institute in Philadelphia, and continued his education at the Massachusetts Institute of Technology and the Ecole des Beaux-Arts in Paris. He worked briefly in New York City, and then began his Los Angeles-based career in 1911 with the firm of Morgan, Walls and Morgan founded in 1888. When Octavius Morgan, Sr. retired in 1920, Clements became partner with Octavius Morgan, Jr. and John A. Walls. The firm changed its name to Morgan, Walls and Clements, even though Morgan ceased to be active with the firm after 1922. In 1937, the firm reflected the sole proprietorship and was renamed Stiles Clements and Associates until Clements retired in 1965.

Clements was known as an architect who was remarkably adept at adapting a range of architectural styles to fit the wishes, needs, and requirements of his wide-ranging clientele. He designed hundreds of buildings across the city, ranging from major theaters and office towers to modest assignments, such as a pedestrian bridge addition to a church. Clements was responsible for approximately eighty markets for the Ralphs and Vons grocery chains, fifty Sears stores, forty Bank of America branch buildings, and dozens of buildings on Wilshire Boulevard alone, including the Security-First building and the Churrigueresque style Ralphs store at 5623 Wilshire (1927, demolished). Morgan, Walls and Clements executed commissions in nearly every architectural style, including Spanish Colonial Revival, Art Deco, Churrigueresque, Mayan Revival, and Streamline Moderne.

Some of the best known buildings designed under Clements's leadership include the Mayan Theater in downtown Los Angeles (1926-27, City of Los Angeles Historic-Cultural Monument No. 460); the El Capitan Theater on Hollywood Boulevard (1926, HCM No. 495); the Chapman Park Market and Studio Building on Sixth Street (1928-29, HCM Nos. 386 and 280); the Assyrian style Samson (renamed Uniroyal) Tire Plant (1929); the Adamson House in Malibu (1929, listed on the National Register in 1977); the U.S. Naval and Marine Corps Armory in Chavez Ravine (1939-40); and the Hollywood Turf Club (1947, also called Hollywood Park). Following the model of Union Square in San Francisco, Clements proposed and designed the underground parking garage at Pershing Square in 1950.

Clements's mastery of massing, materials, and application of decorative ornament fully embodied the whimsy and lavishness of the Art Deco style. As evidenced by the Richfield Oil Building (1928-30), the polychromatic Warner Brothers Western Theater/Pellissier Building (later renamed the Wiltern, 1930-31) and the Security-First National Bank of Los Angeles building at 5209 Wilshire Boulevard, Clements excelled at designing Art Deco style buildings. Clements also used a deft hand in creating impressive and large Streamline Moderne structures, such as Thomas Jefferson High School (1936) in South Los Angeles, and the numerous locations of the Ralphs grocery chains.

According to Clements's daughter, the Richfield Oil Building was the architect's favorite building among his own repertoire. This structure was demolished in 1968, two years after Clements's death. The black and gold color

Los Angeles, California

scheme articulated with glazed terra cotta and other "Zigzag Moderne" design elements from the Richfield Oil Building were incorporated on a much smaller scale at the Security-First National Bank of Los Angeles building on Wilshire Boulevard. The aesthetic program fit in with the emerging unique streetscape along Wilshire in this stretch between La Brea and Fairfax Avenues that became known as the "Miracle Mile" after its surprising success. The firm received an award from the American Institute of Architects for the Security-First National Bank of Los Angeles building on Wilshire Boulevard in 1930. As the Richfield Oil Building no longer remains, the Security-First National Bank of Los Angeles building is the most closely associated structure with Clements that contains the unique elements and deft design skill which characterized his use of black and gold glazed terra cotta. The building is a rare smaller example of Clements's stylistic commercial work.

Conclusion

The Security-First National Bank of Los Angeles is eligible for listing in the National Register of Historic Places under Criterion C as an outstanding example of the Art Deco style and the firm Morgan, Walls and Clements. The architecture and design of the Security-First National Bank of Los Angeles branch located at the eastern end of the Miracle Mile conveyed the excitement and modernity of the era. The highly decorative black and gold glazed terra cotta façade and geometric interior elements articulated the distinctiveness of the Miracle Mile, and the building remains an exceptional example of the Art Deco and Zigzag Moderne style. In addition, it is a significant example of the work of Morgan, Walls and Clements, a noted Los Angeles-based architectural firm, and Stiles O. Clements in particular. Clements designed numerous buildings in a variety of styles throughout Los Angeles, many of which have become associated with the region's architectural heritage and historically significant built environment. The Security-First National Bank of Los Angeles Miracle Mile branch building is also one of the city's few remaining examples of black and gold glazed terra cotta Art Deco style façades.

Section 10: Geographical Data

The property is bounded by Wilshire Boulevard to the south. A parking area bounds the property to the north, and legally the parcel is 100 feet deep from north to south. The building fills the 43.49-foot wide lot from east to west. An adjacent property and a driveway form the west and east boundaries, respectively.

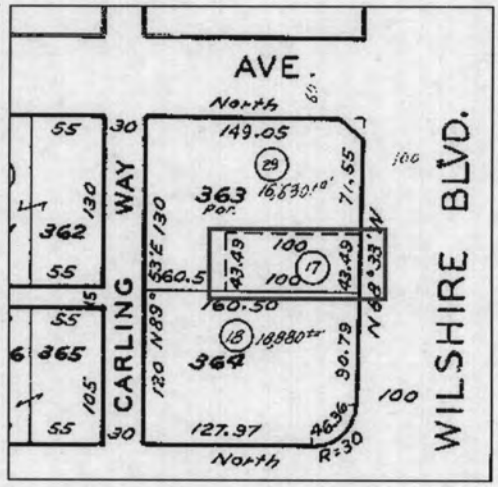

Verbal Boundary Description

As delineated by the attached Assessor's Map of Los Angeles County, California, the boundary of the Security-First National Bank of Los Angeles property located at 5209 Wilshire Boulevard includes the 43.49-foot by 100-foot southwest portion of Lot 363 of Tract 5049, as recorded in Book 54, Page 52 of Maps in the office of the Los Angeles County Recorder. The structure is built to the sidewalk, with frontage on Wilshire Boulevard. The west elevation abuts the multistory E. Clem Wilson Building, and to the east a driveway which also services a fast food restaurant parking lot. Several parking spaces are located behind the rear (north) elevation, which faces the alley known as Carling Way. The lot does not extend to Carling Way.

Verbal Boundary Justification

These are the current and historic boundaries of the property.

5371 Wilshire Boulevard is a two-part commercial block that was constructed in 1928 (per Los Angeles County Office of the Assessor) and occupies the entire parcel (AIN 5508-008-027). The parcel is located in the southwest corner of the block, which is bound by West 6th Street on the north, South Detroit Street on the east, Wilshire Boulevard on the south, and South Cloverdale Avenue on the west. The property is located on Wilshire Boulevard, a heavily developed corridor, which runs west to east in Los Angeles. This portion of Wilshire Boulevard is characterized by a variety of building types ranging from older one and two-part commercial block storefronts (dating 1920s to 1930s) to mid-rise and newer high-rise buildings (dating 1970s to the present). The building is surrounding by sidewalk on the west and south sides and adjacent buildings to the north and east. The property and the surrounding area are characterized by a relatively flat topography and the surrounding roads are set in a rectilinear grid.

The building at 5371 Wilshire Boulevard is a Streamline Moderne-style two-part commercial block with a square plan. The main frame of the building is two parts, with a roof tower extending upward from the southwest corner, and a one-story portion on the northern end containing a parking garage. Offices occupy the second part and various retail shops are situated within the first part. The roof is flat and topped with a large billboard and two additional penthouses/rooftop structures. There are approximately 18 panel antennas mounted on the roof tower and penthouse, obscured behind non-historic FRP screening disguised as rectangular panels. The walls are clad in smooth stucco and thin concrete blocks. The walls of the roof tower feature decorative vertical fluting and contain fixed glass block windows with mullions, with pairs of metal-frame casement windows set into the glass block wall. A wide horizontal band of concrete runs along the parapet of the second story. The second story features fixed aluminum-frame 2-over-1 windows. The ground story has multiple storefront bays with fixed aluminum-frame commercial storefront windows and single aluminum-frame glass commercial doors, some with security bars and all below fabric awnings. The largest storefront, located on the southwest corner, has large aluminum-frame commercial storefront windows with transoms. In addition to the 12 individual retail store entries, there are four other entries to the building: one on the primary (south) façade for access to the second-story offices, and three on the west elevation for access to the second-story offices and parking garage. The main entry on the south elevation is recessed through a hallway beneath a Moderne-style curved concrete awning with horizontal grooves and is filled with double metal-frame glass commercial doors with transom. There are two additional entryways to the second story from the west elevation street level: one a non-historic single metal security door recessed into the wall and the other a non-historic single metal security door recessed through a hallway beneath a doorway with a triangular cap. A third entryway on the west elevation provides access to the parking structure through a rectangular frontispiece flanked by triangular caps and containing a non-historic metal security grate. The north elevation is clad in brick and has seismic retrofit bolts, but is mostly obscured by the neighboring building. The east elevation is completely obscured by the neighboring buildings.

History of the City of Los Angeles

The first European record of the Los Angeles area was a 1542 notation in a ship's log, in which Portuguese navigator Juan Rodriguez Cabrillo described a bay that he called *Bahia de Los Fumos* (Bay of the Smokes), named for the smoke seen rising from Tongva campfires on shore. In 1603, another Spanish explorer, Sebastian Vizcaino, called the inlet San Pedro, in honor of St. Peter. Although the territory had been claimed by Spain since the sixteenth century, it was not actually explored until 1769, when Governor of the Californias, Gaspar de Portola, led a Spanish land party to scout sites for Franciscan missions and civilian settlements. The Franciscan missions were established to bring Christianity to the indigenous population, but, more strategically, to secure the region for Spain through occupation (City of Los Angeles, 2000).

While Cabrillo and Vizcaino had viewed the Los Angeles plain from shipboard, Portola and his men were the first to travel through it. The Portola expedition camped on the bank of the river on August 2, 1769 and named it in honor of Nuestra Senora de los Angeles de Porciuncula, whose feast day they had celebrated the preceding day (Gudde and Bright, 2004). Los Angeles County would eventually become the site of two missions: Mission San Gabriel Archangel, founded in 1771 as the fourth mission, and San Fernando Rey de Espana Mission, founded in 1797 as the seventeenth mission. Spain would eventually have four presidios, 20 missions, and three pueblos throughout California (Caughey and Caughey, 1977).

In 1777, Governor of the Californias Phelipe de Neve traveled through California inspecting the provinces during which time he noticed the advantageous climate, water supply, and local indigenous labor presented by the Los Angeles area. Neve sent a request to Spain to authorize another pueblo on the banks of the Porciuncula River, and on September 4, 1781, El Pueblo de la Reina de los Angeles (the Village of the Queen of the Angels) was founded by a group of 44 settlers (Caughey and Caughey, 1977). By the end of the eighteenth century, the Pueblo of Los Angeles had become the most productive in grain harvests and the livestock herding of any other place in California (City of Los Angeles, 2000).

Following the establishment of the presidio, the mission, and the pueblo, another Spanish institution took hold in California: the rancho. The Governor of the Californias awarded land grants to retired soldiers and loyalists to the Spanish crown (City of Los Angeles, 2000). Under Spain, the Los Angeles area came to have a dozen ranchos. For 40 years, from 1781 to 1821, Los Angeles was a Spanish pueblo. By the close of the Spanish Period, there were 12 more ranchos granted and occupied in Los Angeles County, comprising 15 of the 25 ranchos in the entire province (Caughey and Caughey, 1977).

In 1821, Mexico won its independence from Spain, bringing the Pueblo of Los Angeles and the rest of Spanish California under Mexican governance. The newly-formed Mexican government sponsored the formation of pueblos, awarded large tracts of land to those integral to its independence movement, and secularized the old Spanish missions, opening the former mission lands up to public settlement. Under Spain, the Los Angeles area came to have a dozen ranchos; under Mexico, about two hundred. The Mexican Period was marked by an extensive era of land grants, most of which were in the interior of the state, and by exploration by American fur trappers west of the Sierra Nevada Mountains (Caughey and Caughey, 1977).

During the 1830s and 1840s, disputes between the Mexican nation and the neighboring United States over land rights became increasingly contentious, eventually resulting in the Mexican American War in 1846. During the war, on August 13, 1846, Captain John Fremont entered the Pueblo of Los Angeles and declared it an American territory. The Treaty of Cahuenga ended the conflict in California in 1847. The subsequent Treaty of Guadalupe Hidalgo, signed in 1848, brought an end to the war and transferred the lands of Alta California to the United States (City of Los Angeles, 2000).

Miracle Mile Area

More specifically, the project area is located in an area of Los Angeles called the "Miracle Mile". The following historic context for the Miracle Mile is excerpted from the *Westside Subway Extension Draft Cultural Resources Technical Report* (2010).

The area of Wilshire Boulevard spanning from roughly La Brea to Fairfax Avenues, known as Miracle Mile, is recognized as one of the first outlying commercial corridors developed to challenge the hegemony of downtown Los Angeles and to take advantage of the emerging popularity of automobiles. The development of this commercial corridor was dubbed a "miracle" for several reasons. First, it occurred in spite of restrictive residential zoning that had been established by the original owner, Gaylord Wilshire. Second, it was developed in the absence of a previously established residential or retail community.

At the time that A.W. Ross, a relatively unknown real estate agent, began to assemble property along Wilshire Boulevard, the area was substantially undeveloped. The area was within a 4-mile radius of Los Angeles' wealthiest residential districts of the period: Westlake, Hollywood, and Beverly Hills. It promised to be in the path of western expansion from downtown, and its lack of established infrastructure allowing the developer to be designed and oriented toward the newly popular automobile. Ross gambled that people living within a few miles of his new retail district would "prefer the drive to the Miracle Mile to the journey downtown if the right goods were available," and if parking was easy and accessible. To diffuse traffic and make the whole development look larger, Ross placed each of the major buildings at "least one block from one another rather than clustered around an intersection."

The first major retail establishment developed in the Miracle Mile was Desmond's, a prominent clothing store with three downtown locations. After Desmond's, a number of retailers were lured to the new Miracle Mile. Myer Siegel (women's apparel) and C.H. Baker (shoes) opened stores. Other major retailers included Ralph's Grocery, Coulters, and the May Company. Between these large anchor buildings at each major intersection, low-rise retail structures were designed to front on Wilshire Boulevard.

Built during the late 1920s and 1930s, the majority of buildings in the Miracle Mile exhibit aspects of the Art Deco style—Zig Zag Moderne and Streamline Moderne—popular during the period. Today, this area contains one of the best and most concentrated collections of Art Deco buildings in Los Angeles (Parsons Brinckerhoff, 2010).

Parcel-Specific History

Investigators reviewed historic-period aerial photographs (from NETR Online) and historic Sanborn Fire Insurance Maps. The Sanborn Fire Insurance Map for 1926 [with 1950 updates] shows the building on the parcel, complete with individual storefronts on the south and west portions, a parking garage with gas and oil station on the north portion, and the roof tower on the southwest corner. According to information from the Los Angeles County Office of the Assessor, the building was constructed in 1928 and was most likely added to the Sanborn Fire Insurance Map as a result of the later 1950 map update.

A review of historic-period aerial photographs from NETR Online for 1948, 1952, 1972, 1980, 2003, 2004, and 2005 revealed that as early as 1948, the building is visible on the parcel and the surrounding area is densely developed with commercial properties. Wilshire Boulevard is visible to the immediate south and appears to be an improved four-lane road. The adjacent properties contain commercial buildings and surface parking lots, and residential development is visible further east and south. In aerials from 1952, 1972, 1980, 2003, and 2004, the building continues to be visible on the property and the same commercial buildings and parking lots are visible on the block. Commercial development continues on the adjacent properties and residential development also continues farther east and south.

Architectural History Survey and Evaluation

Upon review of the site survey and historical research, the building does not appear to meet the criteria of eligibility for inclusion on the NRHP either as an individual property or as a contributing resource to a larger resource or historic property. Initial research indicated the building does not appear to be associated with significant events in the United States, California, or Los Angeles County. While the area has been used as a commercial corridor since the 1920s, the building does not appear to have been associated with any particular events in the early development of the area or played an influential role in the commerce of the region (Criterion A).

Research has yielded no information indicating the building is directly associated with the life and career of an individual who made important contributions to the history of the United States, California, or Los Angeles County, such as an important developer or businessperson who was significantly associated with the construction of retail stores, or the general development of the region. The building appears to have been one of many commercial retail buildings constructed during the 1920s and 1930s along the Miracle Mile and was not constructed or used by any particular individual of local or regional significance (Criterion B).

Overall, the building is a relatively mundane example of a Streamline Moderne-style commercial building. The Streamline Moderne style was widely used in commercial architecture throughout the 1920s and 1930s. While the building exhibits characteristics associated with the style (such as the vertical fluting and glass block on the roof tower), alterations (such as the addition of a billboard on the rooftop and FRP screening and panels antennas on the roof tower) have been made outside of the historic period which detract from the historic architectural integrity of the façade. Research did not reveal the name of an architect of the building, so it does not appear to represent the significant work of a master architect (Criterion C).

In rare instances, properties can serve as sources of important information about historic construction materials or technologies under Criterion D. While the materials and workmanship of the building are reflective of a particular period in history, the building is unlikely to provide important information that would have bearing on current data gaps in design research or that would support alternative theories that challenge existing ones (Criterion D).

In order for a property to be eligible, besides meeting one of the NRHP criteria, the property must retain a significant amount of its historic integrity, comprised of seven aspects: location, design, setting, feeling, materials, workmanship, and association. Although the building has retained its integrity of location, design, setting, and workmanship, it does not retain its integrity of feeling, materials, or association. While the building is intact, non-historic age facilities and equipment have been added to the rooftop and other areas of the building in recent decades. In addition, the surrounding area has undergone commercial development and road improvements that have affected the area's historic feeling. Therefore, though the building retains some of its historic integrity, it does not appear to be eligible for listing to the NRHP, since it does not meet any of the NRHP criteria.

***P3a. Description:** (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries)
APN 5089002022 is located at 5370 Wilshire Boulevard in a heavily developed urban commercial setting. It is a Streamline Moderne and Futurist/Googie-style commercial building. It occupies the majority of the lot and has a north-facing orientation. It is two stories with a rectangular plan. The building has a flat roof and three distinct façades. The easternmost façade is Streamline Moderne style and features large metal frame, fixed pane storefront windows on the ground floor and several recessed windows bays on the second story (now covered) that are set in a band of horizontal stripes. The façade is clad with stucco, metal framing accents, and a metal belt course between the ground and second story. The entry is filled with a metal frame, fixed pane glass commercial door with a transom. The center façade is Futurist-Googie style and features a massive faux camera with a round window and a transom of glass blocks on the ground floor. The entry is recessed and contains a metal frame, fixed pane glass commercial door. The walls are clad in stucco (painted in vertical stripes on the upper story), metal panels, and plastic. An awning is mounted above the entry. The western façade is simple Futurist-Googie style and features large metal frame, fixed pane storefront windows on the ground floor and a wide raised band of concrete on the upper story. The entry contains a double metal frame, fixed pane glass commercial door with transom. It is clad in stucco. The building appears to be minimally altered and is in excellent condition.

B9a. Architect: Unknown b. Builder: Unknown
***B10. Significance: Theme** Architecture **Area** Los Angeles, Los Angeles County
Period of Significance 1930s **Property Type** Commercial
Applicable Criteria NRHP Criterion C/CRHR Criterion 3 (Architecture) (Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity.)
The center façade of APN 5089002022 was listed as City of Los Angeles Historic-Cultural Monument #451 (Darkroom) on August 1, 1989. As part of the Westside Subway Extension Project, URS investigators relocated this property in the field. The historical significance of the entire APN 5089002022 within the APE was determined by applying the procedure and criteria for the *National Register of Historic Places* (NRHP), *California Register of Historical Resources* (CRHR), and the definition of a historical resource used for CEQA.

Based on site investigations and historic research, APN 5089002022 appears to possess the requisite significance to be eligible for listing on the NRHP, CRHR, as well as considered a historical resource for purposes of CEQA under Criterion C of the NRHP and Criterion 3 of the CRHR, as a building that significantly embodies the distinctive characteristics of the Streamline Moderne (eastern façade) and Futurist-Googie (central and western façades) architectural styles. Streamline Moderne, popular from 1920 to the commencement of World War II, is characterized by stucco box massing often with rounded corners and even rounded parapets; emphasis on the horizontal through the use of banded surfaces and windows; curved projecting wings; glass brick; round windows (ship portholes); steel (ship) railing; and brightly colored vitrelight. The Futurist-Googie style, popular from circa 1950 to 1965, is characterized by abstract, angular or curved shapes; expressive roof forms (flat, gabled, upswept, butterfly, parabolic, boomerang, or folded); large windows (aluminum framed), prominent signage (neon or lighted); variety of exterior finishes including stucco, concrete block, brick, stone, plastic, and wood siding; bright colors; screen block and shadow block accents; use of the building as a billboard; and asymmetrical façades.

For a property to qualify for listing in the NRHP and CRHR, besides meeting one of the criteria, it must also retain a significant amount of its historic integrity. APN 5089002022 appears to retain sufficient historic integrity of location, design, setting, materials, workmanship, feeling, and association.

DESCRIPTION

7a. Architectural style: 1920s: Spanish Revival- Renaissance Revival
1930s: Streamline Moderne (storefront remodeling)

7b. Briefly describe the present *physical description* of the site or structure and describe any major alterations from its original condition:

This is a tall,one-story commercial building of stucco scored to resemble stonework. It is a corner structure built on a L-shaped plan. Emphasis is on the higher corner section which has a hipped, clay tile roof. The other legs of the buildings have mansard clay tile roofs. The main element of the facade is large, round-headed windows with three elements: the plate glass window, a deep recessed band above and the roundedglass-infilled head with a screen of decorative dowels. Entry doors between the windows have entablature canopies supported on scroll brackets.

Storefronts along Wilshire were remodeled in Streamline Moderne, the most outstanding of which is the Monaco Beauty Salon. Its entire storefront is covered with red glass panels and it is finished at roof edge with a painted metal and neon sign. The other two storefronts have burgundy and black glass panels, geometric-patterned terrazzo floring and original doors with Streamline Moderne hardware.

DESCRIPTION

7a. Architectural style: Park

7b. Briefly describe the present *physical description* of the site or structure and describe any major alterations from its original condition:

Hancock Park, located on four city blocks, lies between Wilshire, 6th, Curson and Ogden Drive in the Wilshire District. Originally part of Rancho La Brea, the park now supports the Los Angeles County Art Museum (built in 1964 by William Pereira and Associates) and the Discovery of La Brea Museum (Page Museum built in 1976 by Thornton and Fagan Associates). Several tar pools are available for viewing within the landscaped park.

At the northeast corner of Curson and Wilshire is located a landscaped triangle with a bust of A.W.Ross set on a black granite pedestal. This bust was constructed in March of 1964.

APPLICATION FOR REGISTRATION OF HISTORICAL POINT OF INTEREST

NAME OF HISTORICAL POINT HANCOCK PARK — LA BREA

LOCATION Between Wilshire Boulevard and West 6th Street and Ogden Drive and Curson Avenue, Los Angeles, California

NAME OF OWNER Los Angeles County

Street

City

HISTORY AND DESCRIPTION

Hancock Park, La Brea, located on Wilshire Blvd, between West 6th Street, Ogden Drive and Curson Avenue, comprises twenty-seven acres of land valued at $500,000 with fossil deposits in la brea far exceeding the land value itself.

The Park was secured by gift from Captain George Allen Hancock in 1913 to the people of Los Angeles County with the proviso that it shall remain a Park in perpetuity. It was given as a memorial in honor of his parents. His father was Major Henry Hancock, a native of New Hampshire, who came to Los Angeles in 1853. He was a lawyer and a surveyor. His mother was the daughter of Colonel Agustin Haraszthy of San Francisco. Mrs. Hancock managed the La Brea Rancho after the death of Major Hancock and as late as 1893 conveyed a twenty acre tract of this land reserving a fifteen year right to hunt over it for game. The game being mostly rabbits, coyotes and quail.

La Brea Rancho was first granted January 6, 1828, by Jose Antonio Carrillo, Alcalde of Pueblo de Los Angeles, to Antonio Jose Rocha. It comprised one square league of land. Early conveyances provided that inhabitants of the Pueblo should have unmolested rights to take brea (asphaltum deposit) as they might need for the roofs of their adobe houses.

On November 16, 1860, the Rocha heirs sold La Brea Rancho to John Hancock by a deed which described the property as being a ranch " some 4 to 8 miles West of the Pueblo de Los Angeles."

Cornelius Cole, then United States Senator from California, received 500 acres of La Brea Rancho land as attorney fees for service rendered the Hancocks and on these acres platted Colegrove, now a part of Hollywood. However, the Hancocks, John and Henry held much of the ranch land in tact and it later became the property of Henry's son, George Allen Hancock.

Immense quantities of oil were produced from this field but as the flow subsided the black sumps gave way to modern houses and La Brea Pits and Oil Fields became Wilshire District, one of the World's

HISTORY AND DESCRIPTION (Continued) HANCOCK PARK

finest residence and business sections. The true value of the land lay, however, in the historic pleistocene fossil deposits that were discovered and made known to the world in 1875 by William Denton. In 1905 an important collection of this fossil material was placed by W. W. Orcutt and Frank M. Anderson, with Dr. John C. Merriam of the University of California for study and preservation. From 1900 to 1913 material was excavated by field parties from the University of California , the Southern California Academy of Science, Occidental College and Los Angeles High School. But in 1913 Captain Hancock granted exclusive right to excavate at La Brea Rancho to Los Angeles County authorities. The excavations are conducted under supervision of the Los Angeles Museum where the collection is preserved as the Hancock Collection and Memorial to Major Henry Hancock and Madam Ida Hancock.

When Captain Hancock conveyed the Park to the County he made two stipulations. One that the land shall be used for park purposes " forever." The other is that no fence more than five feet high shall be erected closer than thirty feet from the street line. The negotiatio negotiations were made by Raymond Stephens, attorney for Hancock and A. J. Hill, former county counsel, who had worked upon the project for some eight years, for the county.

The remains of many animals of paleozoic age have been found imbedded in the heavy tar deposit. The animals include 600 saber-toothed tigers, six imperial elephants, many giant sloths and numerous animals of gigantic proportions as well as birds, reptiles and small creatures all of whom were caught in the brea and were unable to release themselves. Many of the skeletons have been sold to other museums or have been used in museum exchanges.

The house still standing in the Park is the one in which Capt. G. Allen Hancock was born.

Ms. Carol D. Shull
Chief of Registration
National Register of Historic Places
U.S. Department of the Interior
Washington, D.C. 20240

Dear Ms. Shull:

The Urban Mass Transportation Administration is requesting a determination of eligibility for the National Register of Historic Places for the Rancho La Brea Fossil Deposits located principally in Hancock Park, Los Angeles, California.

Because of the significance of the fossil resources at this site and the contribution that the fossil discoveries have made to the science of paleontology, it is our view that Rancho La Brea is eligible for the National Register. The California State Historic Preservation Officer (SHPO) has expressed his opinion that the property is eligible for the National Register. Therefore, we are seeking a "consensus" determination of eligibility for this site. We are enclosing documentation on the site and a copy of the SHPO letter stating his opinion on eligibility.

Sincerely,

Robert W. Stout

Ms. Yvonne G. Stewart
United States Department of the Interior
National Park Service
Washington, D.C. 20240

Dear Ms. Stewart:

Thank you for your determination of National Register eligibility for the La Brea Tar Pits.

We agree with your finding that only the area of the La Brea Tar Pits within Hancock Park is eligible. We also agree with the boundary change which excludes the Art Museum's grounds and building.

As you know, the California State Historic Preservation Officer (SHPO) had expressed the viewpoint that the area at the La Brea Tar Pits needed to be enlarged rather than reduced. As we have not yet heard the SHPO's response to your finding, we are wondering if any further work on our part is required.

Sincerely,

for Nader Tamir
Manager, Environmental Engineering

Mr. Abbe Marner, Environmental Specialist
U.S. Department of Transportation
Urban Mass Transportation Administration
400 7th Street, SW
Washington, DC 20590

Dear Mr. Marner:

Re: Request for Determination of Eligibility, Hancock Park-Rancho La Brea, Los Angeles, Los Angeles County, California

The abovereferenced docuement was received on July 7, 1983.

We agree that this property is eligible for listing in the National Register of Historic Places, and that the documentation submitted is adequate for establishing eligibility. The remarks below are not intended to qualify our concurrence in eligibility but rather to explain our position with respect to this highly significant resource.

First, it is our view that, while subsurface deposits constitute the significant resource at this site, the property is eligible under Criterion A rather than Criterion D. LaBrea is a highly significant landmark in the development of North American paleontology, of international importance in the history of science. Obviously, the appearance of the site has changed from that which prevailed when the first major excavations were conducted there. The site does still retain large fossiliferous deposits and, in its park setting and through the many excellent interpretive facilities, still conveys to the public the nature of its significance in scientific history.

Second, we note that the boundaries for this site are necessarily somewhat undefined. Hancock Park, of course, is the heart of the site, the locus of the major paleontological excavations in the past. Related deposits, however, likely extend beyond park boundaries. We cannot specify the ultimate boundary of the site at this time because excavations have been restricted to the park area and because intensive development in the vicinity of the park precludes a large-scale effort to define site boundaries. Our concurrence in this determination of eligibility is made with the understanding that site boundaries may extend beyond those defined in this eligibility report.

Thank you for requesting our opinion on the eligibility of this site. If you have any questions, feel free to contact Stephen Mikesell of my staff at (916) 322-8599.

Sincerely,

Knox Mellon

Dr. Knox Mellon
State Historic Preservation Officer

REQUEST FOR DETERMINATION OF ELIGIBILITY FOR INCLUSION IN THE NATIONAL REGISTER OF HISTORIC PLACES

Property Name:

Hancock Park - Rancho La Brea Fossil Deposits

Location:

5801 Wilshire Blvd., Los Angeles, California 90036

Classification:

Los Angeles County Park/Paleontological Fossil Deposits

Ownership:

Public, Los Angeles County Museum of Natural History

Agency Requesting Determination:

United States Department of Transportation, Urban Mass Transportation Administration. Contact: Mr. Abbe Marner, United States Department of Transportation, Urban Mass Transportation Administration, UGM-22, Department of Transportation Headquarters Building, 400 Seventh Street SW, Washington, D.C. 20590, Telephone (202) 426-2360.

Representation in Existing Surveys:

California Historic Landmark Number 170

Description:

Hancock Park, located on four city blocks covering 23 acres, lies between Wilshire Boulevard, Sixth Street, Curson Avenue and Ogden Drive in the Wilshire District of the City of Los Angeles. Originally part of Rancho La Brea, a 4,500 acre Rancho granted to Antonio Rocha by Mexico in 1828, the park now supports the Los Angeles County Art Museum, George C. Page Museum, and contains the La Brea Tar Pits, of which 1 "lake", 1 "oil creek," and 6 observation pits are open for public viewing. The Rancho La Brea fossil deposits have provided the most prolific record of Late Pleistocene vertebrate animal life yet discovered anywhere in the world (Stock 1956). Because of the abundance and extraordinarily good preservation of specimens, the vertebrate fauna have been designated the type for the Upper Pleistocene, Rancho La Brea Mammalian Provincial Biostratigraphic Stage in North America (Savage, 1951). This world-famous locality is currently listed on the National Registry of Natural Landmarks, and as State of California Historical Landmark Number 170.

In 1978, the George C. Page Museum in Hancock Park was opened to the public. The museum features displays of Rancho La Brea animals, and its staff of scientists is engaged in research, preparation, and curation of the tremendous volume of specimens that have been amassed over the years.

Presently, the museum is open to the public every day but Monday with three types of tours available. These are a museum tour, a park-tar pits tour, and both park and museum tour. The tours are available for groups from third grade on up by reservation only. About 1,500 scheduled and unscheduled school groups tour the museum each year with 500 to 600 general public tours also occuring annually. In addition, about 200 tours of the park grounds and 100 combined park and museum tours occur annually. Total attendance for the Page Museum has dropped from a peak of 1,060,000 people in Fiscal Year 1978, when there was no fee, to 390,000 people for 1981-82.

Observation Pit attendance has varied from 360,000 people in 1977-78 to 130,000 people in 1981-82. About 50,000 students visit the museum annually.

Significance:

The La Brea Tar Pits have been a focus of human activity for thousands of years. The oldest positive evidence of human presence was the 1914 discovery of artifacts and remains of a 9,000 year old "La Brea Woman." From the artifacts found it appears the tar pits formed some sort of trading area. Asphaltic resources were traded by the Indians to other tribes along the coast and as far away as the San Joaquin Valley. Moreover, the Indians used the asphalt for various household uses such as glue for decorative inlay, waterproofing of baskets, and in the construction of plank canoes. In addition, the Indians frequented the tar pits in search of game trapped in the asphalt and, in fact, may have used the tar pits as a hunting trap by stampeding game into it.

During the Spanish Era, the La Brea Tar Pits asphalt was used as a resource in much the same way as the Indians had used it. However, the Spanish also used the asphalt to waterproof the roofs of houses.

Mining of the asphalt continued until the end of the nineteenth century with the Hancock family becoming associated with the park area in the late 1880's and distributing the asphalt as far north as San Francisco.

The discovery of fossils at the beginning of the twentieth century caused intense international interest. Though bones have been recovered continuously, the early settlers thought the bones to be of cattle and other modern species.

The significance of Hancock Park certainly lies with the Rancho La Brea fossil bed and tar pits and their contribution to the study of paleontology. The discovery of these fossil deposits spurred early

paleontologic investigations focusing upon taxonomic and osteologic studies (Akersten in press). Approximately two million specimens were removed in the 8-year period from 1907-1915, with the major work completed by Los Angeles Museum of Natural History and University of California, Berkeley.

After 1915, no systematic removal activity occurred and, that which did occur, did so on a much lower level of intensity. Time was devoted to the examination and curation of specimens with interest focused on bone studies, species identification and the geologic description of the park. In the 1950's interest turned to the dating of specimens using the radioactive carbon dating technique developed in 1949.

In 1969, the Rancho La Brea Project commenced, combining paleontologic and archaeological techniques to recovering fossil remains. New procedures, tools and research questions and directions have been developed since these studies were undertaken. They include:

- A device for determining depth of a point below an elevation datum,
- Using commercial metal degreasing equipment to clean asphaltic matrix to locate small fossils.
- Using archaeological procedures for determining the position and orientation of paleontological specimens.
- Research on the paleoecology of the Rancho La Brea area.
- Reexamine the origin and formation of the Rancho La Brea deposits including detailed geologic mapping.

In 1977, the construction of the George C. Page Museum revealed an intact deposit containing articulated animals, all in an excellent state of preservation. This fossiliferous asphaltic sand layer was under 4 feet of overburden and 2 feet of asphaltic clay, and was underlain by calcareous blue-green clay. The deposit was 1.5 feet thick, 32 feet long east-to-west, and 8 feet wide, from north to south. This unique find was removed in plaster-jacketed blocks during a salvage operation and these blocks are presently stored until such time as they can be systematically and meticulously examined. Unlike all the Rancho La Brea deposits recorded to date, this one consists of articulated skeletons and probably represents a single entrapment episode. This discovery further adds credence to possible additional important discoveries being made in the area during future excavations. Although no excavation work has occurred since 1977, questions relating to the faunal and floral composition and diversity, the microfossils, paleoecology, and mode of entrapment of the bones and other fossils are continuing subjects of vigorous research at the Page Museum.

Preservation of the fossil remains is excellent and allows for careful and accurate functional morphological studies. These include delicate skeletal and muscular reconstructions, paleopathology, and biochemistry studies (Akersten, personal communication 1983). Significant contributions toward understanding the processes of evolution, particularly in view of the current debate over gradual versus punctuated equilibrium, can be made by researching these deposits. The deposits are accurately dated and comparison of structural shapes within genera would be a fairly simple matter.

In addition to the skeletal fossil remains, a considerable quantity of flora and pollen remains have been recovered which have not as yet been carefully studied. A detailed reconstruction of the environmental and climatic conditions for the Los Angeles region over the past 30,000 years may be possible through careful study of these flora and pollens recovered from the La Brea Tar Pits, and may enhance our knowledge of present day climate.

The sheer numbers and excellent preservation of the recovered fossil specimens have contributed much to the unraveling of the history of the Ice Age and in fact are used as the standard of reference for all fossils found in North America from 9,000 to 40,000 years ago. As a result, the Rancho La Brea Tar Pits gave its name to the Rancho La Brean Land Mammal Age in Paleontology.

While much information has been discovered from the La Brea Tar Pits, there remains more information to be extracted that would be used to decipher the environmental conditions of the earliest immigrants to North America. This alone makes the La Brea Tar Pits a culturally important landmark. Its sheer contribution to the science of paleontology is in itself historicly significant.

Collections from the La Brea Tar Pits are found exhibited around the world, and there is a continuously large prevailing interest focused on La Brea. Many prominent people from Teddy Roosevelt and Thomas Edison to Prince Charles have visited the Tar Pits. The Tar Pits continue to be a major cultural and tourist destination in Los Angeles of visitors from around the world.

If fossil deposits are found

agreement
If find sig Rancho La Brea fossil deposits will take care of them. That's for the ~~Entire~~ Entire Can

- Agree to Bruce Kuel + Charlie McKenney ~~Kuel~~ agreement policy.
- Let know if recommendations.
- Let know on Fridays if no decision reached.

* This man is very angry because he has not had callbacks from ~~Kuel~~ Kuel for months.

** — 2 policy questions
(1) boundary pb.
(2) paleontology problem

policy decision is needed.

If the site is judged eligible under A, the boundaries should be those of the original excavation and study — that is, essentially Hancock Park, Los Angeles County, CA. Eligibility under A would preclude extending the boundaries outside the park. The park also contains the LA County Art Museum (Ca. 6 acres). A 1982 review of the Natural Landmark suggests removal of this acreage from the boundaries. Agree with this removal. Will need new map + UTM coordinates.

Site integrity not addressed specifically. Seems clear much further information exists. Need site map showing excavation locations, other known disturbance, and statements about integrity.

- Find previous work. Site eligible under A with the exclusion of c. 6 acres per recommendation by National Landmarks and as not present

Joyce -

Please make this a 45-day and send appropriate letter.

Comments:

1.) boundaries need archeological review and possible comments noted such as those in SHPO letter

2.) integrity of site is questionable

3.) Page Museum should not be determined eligible, or should it? Need clarification of exactly what is being determined eligible in request and under Criteria A or D?

B. Savage

letter sent 4/7/83 JMS

I know I comment on back

1) Under Criterion A La Brea Fossil Deposits would have a boundary defined by the extent of the area within which the early 20th century excavations took place. Included in this area would be the locus where field analysis took place, the locus where the actual excavations occurred and, the locus of any other associated activity e.g. field laboratory

2) Under Criterion D La Brea Fossil Deposits would have a boundary

March 1, 1982

Memorandum

To: Associate Director, Science and Technology, National Park Service
Attention: Chief, Division of Natural Landmarks

From: Associate Regional Director, Resources Management, Western Region

Subject: FY 1982 Natural Landmarks Section 8 Status Report, California

Enclosed are two copies of the 1982 National Natural Landmarks status report for Rancho La Brea, California. The site is in satisfactory condition and should not be included in the FY 1982 Section 8 Report to Congress as damaged or threatened.

As indicated in the status report, two followup actions are needed: a realignment of the landmark boundary and a revision of the National Natural Landmark Brief. A new boundary that excludes a six-acre area of Hancock Park that contains the Los Angeles County Museum of Art has the full support of Mr. Gregory Byrd, Superintendent of the George C. Page Museum. The new boundary would encompass only those values for which the site was designated as a national natural landmark. A map showing the proposed boundary is enclosed.

Also enclosed is a draft of a new National Natural Landmark Brief. It is written in the new format and describes the resource values, significance and land uses for only that portion of Hancock Park containing the tar pits and associated laboratory and interpretive facilities.

Should you have any questions, contact Gene Wehunt at FTS 556-4968.

(Sgd) John D. Cherry

NATURAL LANDMARK BRIEF

1. Site: Rancho La Brea, Los Angeles County, California

2. Description: Rancho La Brea National Natural Landmark encompasses 7 hectares (18 acres) of Hancock Park on Wilshire Avenue in the Miracle Mile District of the City of Los Angeles. The site contains La Brea asphalt deposits, or "tar pits," in which Pleistocene animals became entrapped in their quest for fresh water. Reconstructed skeletons taken from the pits and displayed in the site's George C. Page Museum include an Imperial mammoth, California saber-tooth tigers, American mastodons, an Antique bison, an American lion, Dire wolves, giant ground sloths, a Short-faced bear, an extinct camel, an extinct western horse, and various extinct birds including a giant condor. The tar pits were discovered in 1769 (the time of the early Spanish explorations) and excavation of the fossils began in 1906. Today, the site contains the museum, an active excavation, numerous pits from which fossils have been taken, and pathways.

3. Owner: County, ~~of Los Angeles~~ administered by the Museum of Natural History.

4. Proposed by:

5. Significance: The La Brea tar pits have yielded the largest and most diverse collection of Pleistocene animal and plant remains in the world. Approximately 500,000 bones have been excavated to form a unique representation of the living things of about 15,000 years ago.

6. Land Use: The site contains active and inactive excavation pits, a museum in which the La Brea discoveries are exhibited, and a laboratory where the excavated fossils are cleaned and identified. All are within Hancock Park, with its pathways, landscaping, and parking lot.

7. Dangers to Integrity: None Known.

8. Onsite Evaluation by:

9. Special Conditions: None Known.

HANCOCK PARK - LA BREA

(Summary by Esther Harlan)

Fossils and bones from the brea beds at Hancock Park, near Los Angeles, now in the museum of History, Science and Art in Exposition Park, in Los Angeles, constitute one of the most complete records in existence of the fauna of prehistoric times - mastodons, elephants, and extinct species of camel, the western horse, ancient ox; birds, including giant vultures and peacocks; tigers, lions, giant sloths and a human skeleton believed to be some 7,000 to 12,000 years old - nearly a million specimens, in all. Some of them have been left just as they were found, embedded in the asphalt.

The theory regarding the formation of these brea pits - an alluvial accumulation of clay, sand and asphalt - is that they resulted from blowouts of gas in oil deposits underlying the rock strata known as the San Fernando Shales. Evaporation resulted in the thickening of the oil, forming pools of tar. Lured by the surface water covering the region during the rains, animals approaching the pits would be mired and unable to extricate themselves and their outcries would attract others which, in turn, would be sucked under.

The earliest records of the brea beds are in the diaries of Father Crespi and Gaspar de Portolá of the 1769

exploring expedition. During early settlement days, those deposits were regarded as common property, and the tar used for roofing and similar purposes. Indians had found it serviceable for mending canoes and for fuel.

In 1828, Rancho La Brea was granted (provisionally) to Antonio José Rocha, a Portuguese blacksmith, use of the asphalt deposits being reserved for the people of Los Angeles. Some seventeen years later, the city transferred its interest in the bitumen pits to Carlos Barie, who agreed to pay the municipality 5 per cent on all sales receipts.

In 1860, Rancho La Brea was deeded to Major Henry Hancock - native of New Hampshire, and officer in the Mexican war, who had settled in California in 1849 - by José Jorge Rocha, a descendant of Antonio Rocha. The greater part of La Brea ranch remained in the Hancock family, but some 500 acres of it later became the property of Senator Cornelius Cole and a considerable section was sold to James Thompson. The brea deposits proved commercially valuable as paving material, selling for $20 a ton in San Francisco. Extending for some 80 acres, the asphalt beds appeared practically bottomless; thousands of tons were removed and the supply still seemed inexhaustible.

During those years of excavation the large quantities of bones exhumed were assumed to be those of cattle and domes-

19-171007

tic animals. William Denton, who examined some specimens in 1875, was the first to realize that they were fossils from a prehistoric period. His report on the subject made little impression at the time. More skeletons were taken out, but it was not until W. W. Orcutt of Los Angeles became interested, in 1905, and with F. M. Anderson made a collection of some of the more important that public attention was attracted. Doctors Ralph Arnold and John C. Merriam of the University of California visited the beds, recording the fossils as belonging to the Pleistocene era. Scientific representatives of other institutions later made independent excavations for some years.

Major Hancock died in 1883, his ranch heavily mortgaged. Some time later oil was discovered on La Brea and it became one of the most valuable oil properties in the State. In 1913 George Allan Hancock, who had inherited the property, gave exclusive excavation rights to Los Angeles County, the fossils to constitute the Hancock collection. In December, 1916, he gave the land containing the fossil pits, to be used as a city park.

HANCOCK PARK, LA BREA

One of the most complete records of a fauna of prehistoric times may be read by the scientists of today in the fossiliferous remains embedded in the brea deposits of Hancock Park.

For more than a hundred thousand years the black, viscous pools of pitch known as La Brea sucked to their death animals which became mired in them. Perhaps in search of creek or spring, creatures went to the pools to drink surface water, oblivious of the danger which lurked there. Slowly, but inevitably, the thick pitch stifled the last futile efforts of hapless victims caught in the pit's unyielding grip. The despairing death cries of doomed creatures, echoing through the bituminous swamps, seldom went unheeded. Prowling, carnivorous beasts of prey pursued their quarry, and in turn were lured into the sinister mass. Even the most gigantic and powerful beasts were unable to escape the mysterious force, once it clutched them. Giant sloths, mastodons, elephants, camels, tigers, lions, wolves, and birds large and small were equally helpless in the brea pits. The tar preserved the skeletons.

The earliest accounts of the brea beds in the vicinity of Los Angeles are found in the diaries of Father Crespi

19-171007

and Caspar de Portola, who were members of an expedition to California headed by Galvez, Visitador-General of New Spain, and Father Junipero Serra in 1769-1770. As they travelled north, to the right along their route they observed extensive beds of bituminous deposits called chapapote, a black wax or glue. While in the vicinity of those fields, they felt a number of earthquake shocks and attributed the cause to the tar which oozed out of the ground from many small springs. The Indians of the vicinity used the bitumen as fuel and in mending their canoes.[1]

In the years following the expeditions of the Spanish explorers, settlers gradually arrived and occupied land grants from the Spanish, and later the Mexican, government. Los Angeles became a populous, thriving pueblo and prosperous ranchos were cultivated in the surrounding countryside. In these early days the brea deposits were considered community property, and any citizen had access to them. The tar was found to be a very durable material for the roofs of the adobe houses which the Spanish people erected. James Ohio Pattie, a trapper, who passed through Los Angeles in 1828, describes the process of roofing them:[2]

2. J. M. Guinn, "History of the Cahuenga Valley and Rancho La Brea," in Historical Society of Southern California, Publications, VIII, 87.

19-171007

> The houses have flat roofs covered with bituminous pitch brought from a place within four miles of the town, where the article boils up from the earth. As the liquid rises, hollow bubbles like a shell of large size are formed. When they burst, the noise is heard distinctly in the town. The large pieces thus separated, are laid on the roof previously covered with earth, through which the pitch cannot penetrate when it is rendered liquid by the sun.

In 1828, Rancho La Brea was granted by Governor Echeandia to Antonio Jose Rocha, a Portuguese, who first came to California in 1815. By the terms of the grant, Rocha was considered a provisional and not an absolute owner of the land, which consisted of one square league or 4,444.4 acres. The first owner of La Brea erected a large adobe house on the property, where he resided with his family for many years. He was a blacksmith by trade and became a well known citizen of Los Angeles. The adobe house was sold to the city and county in the '50s to be used as a courthouse and city hall.[3]

By the provisions of the grant of 1828, the use of the asphalt deposits of La Brea was reserved for the citizens of Los Angeles. As the pueblo assumed the aspect of a small city, occasional trouble arose over the city's rights; and special privileges were granted sometimes to private persons. According to the pueblo records, in 1835 the missions and

---

19-171007

the city council had a verbal skirmish over the brea deposits. A member of the town council, or ayuntamiento, Juan de Dios Bravo, accused the friars of monopolizing the use of the pueblo salt pits and brea beds. He proposed that the missions be taxed for their use of those two resources. A committee appointed to consider the situation reported in favor of taxing the padres two dollars a bushel for all the salt used by them for the Indians. It could not be discovered that the missions used any brea, but it was recommended that, if they did so in the future, the town council tax them in proportion to the quantity used.

In 1845, the city granted its interests in the bitumen deposits to Carlos Baric, who was to pay the city five per cent of the money received from all sales made. The city records also state, however, that Baric could not prohibit his "neighbors" taking any brea from the pits.[4]

In 1860, Rancho La Brea was deeded to Major Henry Hancock by José Jorge Rocha, an heir of Antonio Rocha. Five hundred of those acres went into the possession of Senator Cornelius Cole and another portion became the property of James Thompson, but the greater part of the estate remained in the Hancock family. Major Hancock, a native of New

19-171007

Hampshire, had become interested in California during the Mexican war. During the gold rush of 1849, he established a law office in San Francisco, but in 1852, went to Los Angeles where he made his permanent home. He became one of the city's prominent citizens, serving two terms in the State legislature. He served also, for a time, as a United States government surveyor. Many of the ranches in Los Angeles and San Bernardino counties were surveyed by him. Mr. Hancock invested most of his money in Mexican land grants. Although he owned ranches which in later years were exceedingly valuable, during his lifetime he was always land poor. The present districts of Sherman, Colegrove and Hollywood are located on some of the acres which he formerly owned. La Brea was the largest of the land grants which were in his possession at one time or another, and on it he raised sheep and cattle.[5]

The title to the rancho during these years had remained provisional, as made in the grant of 1828 to Antonio Rocha. In 1866, it was perfected in the United States Supreme Court. Senator Cornelius Cole handled the matter for Major Hancock.[6]

The brea deposits on the rancho were found to have a great commercial value as material for constructing pave-

6. Seaman, A brief history, 255.

19-171007

ments. Mr. Hancock employed about twenty-five Chinese laborers to dig out the best of the tar, which was then boiled for twenty-four hours in huge iron boilers and run into sand molds. After that process, the substance became brittle and was easily broken up. In that form it sold for twenty dollars a ton in San Francisco.

During those excavations, a large number of bones were found in the bituminous deposits, but they were generally supposed to be those of cows, horses and ordinary domestic animals of recent times. The skeletons were so numerous that La Brea was often referred to locally as La Huesamente or bone-yard.

The first recognition that the skeletons were of animal forms belonging to a geological period prior to the present was made by William Denton, in 1875, in a report in which he describes the fossil-like remains:[7]

> The locality is known as Major Hancock's Brea Ranch, and is about eight miles west of Los Angeles, in the valley of Santa Anna. The bed of asphaltum here covers sixty to eighty acres, and at a depth of thirty feet no bottom has been reached. Thousands of tons have been removed for roofing, paving and combustion, but the supply is almost inexhaustible.
>
> Beds of petroleum shale of tertiary age, having in many places a thickness of about

7. Merriam, The fauna, 202-203.

19-171007

two thousand feet, are to be found along the California coast, and at some distance in the interior; they are said by Professor Whitney, to extend from Cape Mendocino to Los Angeles, a distance of about four hundred and fifty miles. They are exposed in cliffs on the coast near Santa Barbara and Carpinteria and other places. This shale, there is good reason to believe, is the deposit from which all the asphaltum of California has been derived.

Although this shale is not exposed in the vicinity of the Brea ranch, it is exposed in various localities at but a short distance, and doubtless underlies the asphaltum deposit, for hundreds of "tar springs" exist in the vicinity, from which the material is still flowing over the surrounding locality, the springs being in some cases elevated, by its deposition around them, several feet above the surrounding level.

Major Hancock presented me with what I found to be a canine tooth of Machairodus, a great saber-toothed feline. It was found at the depth of fifteen feet in the asphaltum. The tooth is nine and a half inches in length, measured along the curve, and the breadth of the crown at the base is an inch and three-quarters, being larger than any tooth of the European Machairodus, whose measurement I have been able to find. The crown of the tooth is broken, and its entire length could not have been less, I think, than eleven inches. The tooth from the Val d'Arno., in Italy, referred to by Falconer in his Paleontological Memoirs, measured eight and one-half inches in length, and the breadth of the crown at the base is one and one-half inches, while the tooth found by McEnery in Kent's Hole, England is six inches in length, and one and one-fifth inches in breadth. The California tooth is closely serrulated on both the concave and convex sides. It seems to have been exposed to the action of the elements for a long time, and contains a number of fractures, some of which have been united by the asphaltum in which it was imbedded.

I obtained a number of teeth of the fossil

19-171007

> horse and bones of the deer, a large bovine animal, the otter, seal, albatross, and other animals. I found near the pit, a part of the right upper jaw of the fossil horse, containing four molar teeth, or three premolars and one true molar. The first premolar is smaller in proportion to the size of the other teeth than those of the recent horse, judging by several with which I have compared it, and smaller than those of the fossil horse of India. It is but one inch in length, and three-quarters of an inch in breadth; but the other three teeth are larger than the average of the recent horse.

After Denton's investigation in 1875, apparently no one became interested in the fossil remains for many years. Denton's discoveries were either overlooked or forgotten. Excavations of asphalt for commercial purposes continued. Many more skeletons were unearthed, but they created no particular interest until geologists and scientists from the University of California began excavations in 1906.

Major Hancock died in 1883, unaware of the great wealth which La Brea ranch contained in oil and the Pleistocene fossil deposits. At his death, the property was heavily mortgaged and it was not until after a number of years that the land became especially valuable. Mrs. Hancock, widowed and with two sons to rear, had a difficult struggle for a few years; but she met the situation admirably. She managed the ranch so successfully that the mortgage was lifted and she attained comfortable circumstances for herself and family. In 1909 she married a Los Angeles attorney, Erskine M. Ross.

19-171007

Rich oil veins were discovered on La Brea and it became one of the most valuable oil properties in California. Major Hancock's son, George Allan Hancock, devoted much of his time to the management of the estate and organized the Rancho La Brea Oil Company. A hundred and eighty wells were drilled. For a time, the daily production attained a volume of two and a half million cubic feet, most of which was used by consumers in Los Angeles. The oil supply decreased after a time and the derricks and sump holes were replaced by the Wilshire residential and business sections.[8]

In 1905, Mr. W. W. Orcutt of Los Angeles became interested in the fossiliferous deposits of La Brea. In December, 1905, he visited the beds with Mr. F. M. Anderson; and they realized that the bones were those of extinct forms, of a prehistoric period. A small collection of the fossils was made, including part of a saber-tooth skull, teeth of the great wolf, and several dermal ossicles of a great ground sloth. Scientists, including Doctor Ralph Arnold and Doctor John C. Merriam of the University of California, interested in the finds, visited the Brea beds and began regular collections for the university. The bones were considered to be the remains of animals of the Pleistocene era. After the revelation of the true nature of the fossil deposits at

---

8. McGroarty, Los Angeles, 81-82.

19-171007

La Brea in 1906, continuous excavations were conducted by various scientists, colleges and other institutions.

The formation in which the fossil remains occur at the brea pits is an alluvial accumulation consisting largely of beds of clay, sand and asphalt. Scientists consider that the crater-like holes in which the fossiliferous remains are entangled are located just above a sharp fold of rock formation called the San Fernando shales. The theory of the manner in which the brea pits were formed is that heavy blowouts of gas occurred from oil deposits underlying the shales. As a result of evaporation, the oil thickened and formed the pools of tar.[9]

After the discovery of the important contents of the fossil beds in 1906, the University of California made the first extensive excavations and collection of fossils. Mrs. Hancock Ross consented to have the fossil remains exhumed for scientific purposes. Other institutions - including Los Angeles High School, the Southern California Academy of Science, and Occidental College - also carried on research activities until 1913. The owner of the pits, George Allan Hancock, then gave the exclusive privilege of excavation to Los Angeles County. The fossils obtained by

---

19-171007

the county were to be preserved in the Museum of History, Science and Art, as the Hancock collection, a memorial to Major Henry Hancock and his wife, Ida Hancock Ross.

The material excavated by Los Angeles County includes specimens of a Norway rat, a Virginia rail, a human skeleton thought to be from the period 5,000-10,000 B. C., skeletons of mastodons, elephants, the great ground sloth, extinct camels, western horse, ancient ox, and many bird fossils including a giant vulture and peacock.[10]

Incredibly large numbers of skeletons of prehistoric animals have been procured through these excavations. The collection made for the Hancock room in the Museum above contains almost a million specimens, and interesting remains are still being retrieved from the fossil beds. A study of the various collections shows that a preponderance of young, very old and diseased animals were caught in the pits, in comparison with average collections of the remains of similar animals which accumulated under different conditions. Observation also reveals that an unusually large number of carnivorous animals and birds were caught in proportion to other animals. Predaceous creatures must have been lured into the pits by the outcries of victims struggling to extricate themselves from the tar.[11]

---

10. Rider, Rider's California, 454.
11. Merriam, The fauna, 210-211.

19-171007

On December 6, 1916, George Allan Hancock gave the land containing the fossil pits at La Brea to Los Angeles for a park. He specified that the place be preserved as a point of pilgrimage for scientists and interested persons. Some of the skeletons imbedded in the asphalt deposits have been left just as they were found, so that visitors may see how the victims perished. In the Museum of History, Science and Art at Exposition Park, specimens obtained from the pits have been mounted. They constitute one of the most famous exhibits of remains of animals of the Pleistocene era which has ever been brought together.

Forty Years Ago Today

From the Evening Express, May 3, 1878.

The Council has instructed the city surveyor to investigate the ventilation of sewers and report a feasible plan at the next meeting of the board.

Maj. Henry Hancock has shipped a schooner load of 300 tons of asphaltum from the Brea rancho to San Francisco. He expects the product will be extensively used for street paving.

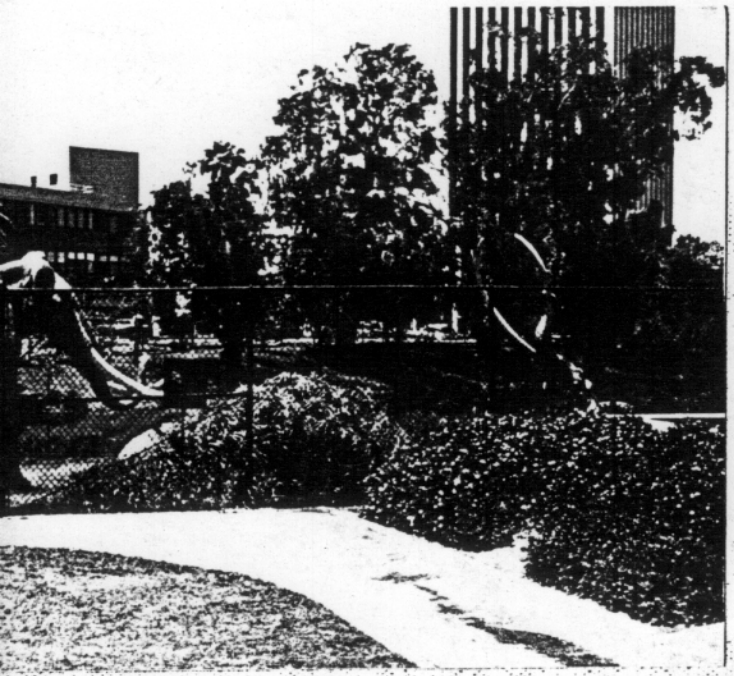

At the meeting of the City Council last night the seats of Valle and Fanger were declared vacant, as both members had been absent without leave from more than four meetings.

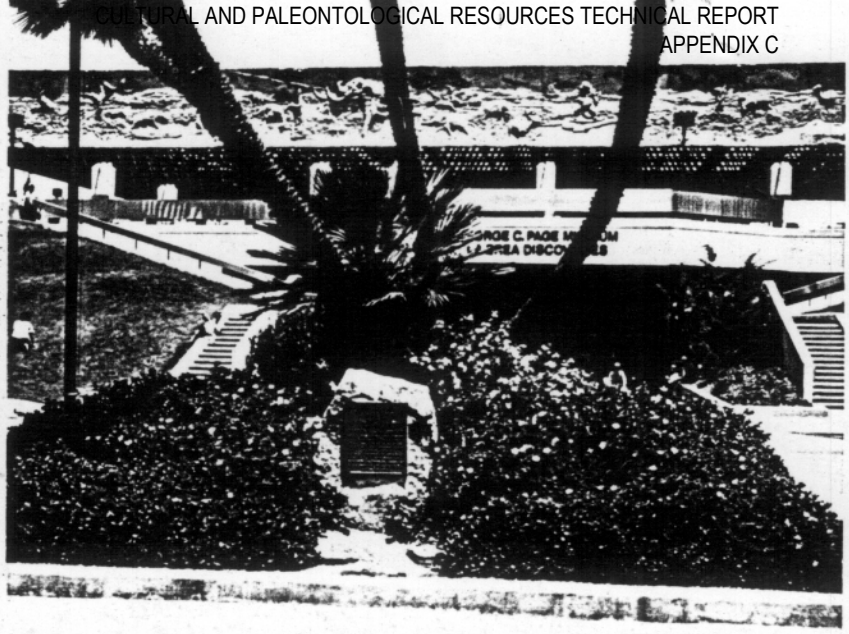

P. L. O'Donnell has bought the abandoned roundhouse building on the old depot site, and will remove it to the site of his foundry, to be used in connection with his present plant.

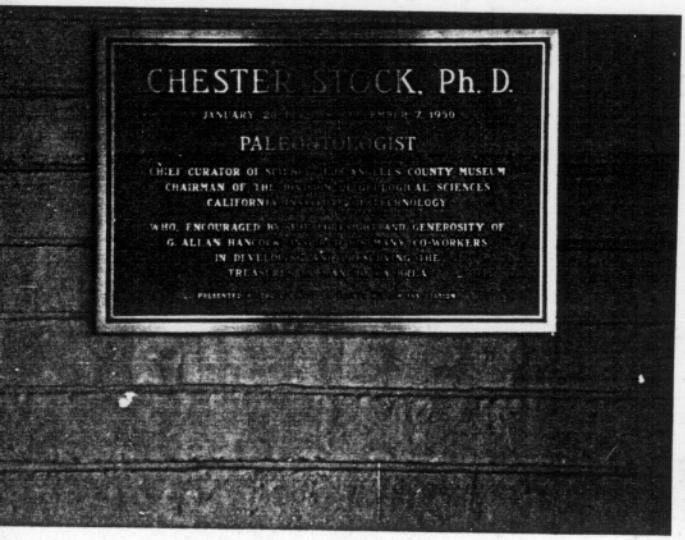

Salsbury's Troubadours, with Nellie McHenry will again appear in Los Angeles shortly.

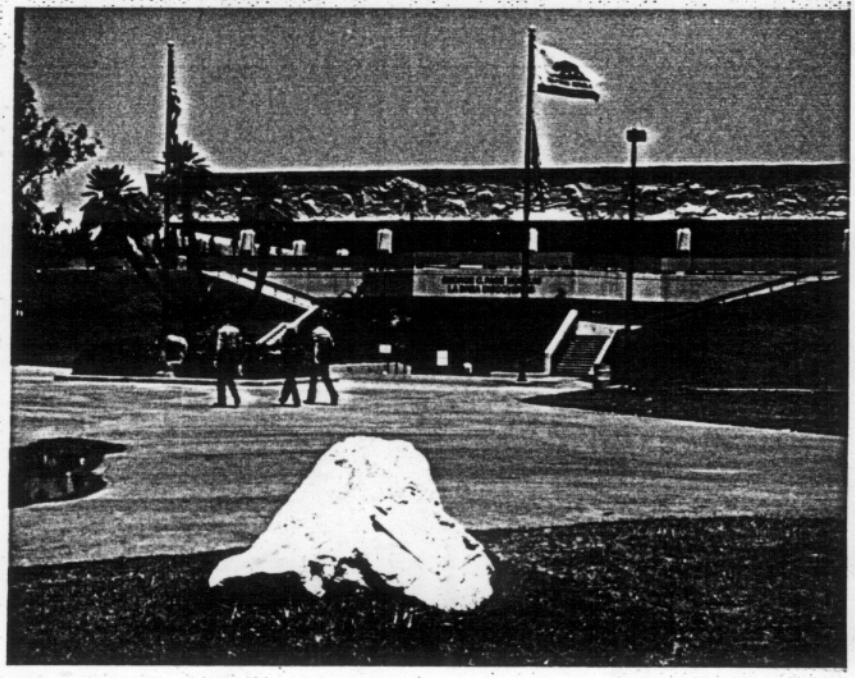

The city's surplus funds are to be farmed out for the coming year to the highest bidder.

DESCRIPTION

6. Briefly describe the present physical appearance of the site or structure and describe any major alterations from its original condition:

The structure is located on a large undeveloped acreage and consists of an acoustical shell, seating for approximately 20,000, and several supportive structures including offices and restroom facilities. The shell is built of welded steel, concrete, fiber board, and wood, and has been altered by the addition of large cardboard tubes, to help disperse sound, and numerous other structural modifications. But, the classical horn-shaped shell design is still clearly evident.

19. Related features: a. Barn ☐ b. Carriage house ☐ c. Outhouse ☐ d. Shed(s) ☐ e. Formal garden(s) ☐
f. Windmill ☐ g. Watertower/tankhouse ☐ h. Other ☒ Restroom, etc. i. None ☐

SIGNIFICANCE

20. Briefly state historical and/or architectural importance (include dates, events, and persons associated with the site when known):

Easter Sunrise services were first held on the site in 1922, and when the Hollywood Bowl Association was established, funds were raised for the construction of improved facilities. The Bowl soon increased in size and underwent a series of rapid changes until, in 1929, when the present acoustical shell was built. The Hollywood Bowl and the horn-shaped shell design by the well-known architect Frank Lloyd Wright, have become a landmark and a gathering place for all of Southern California. A new facility, having better acoustical characteristics, has been designed and plans are underway for the demolition of the present shell.

6. Present Use: Outdoor Theatre Original use: Outdoor Theatre

DESCRIPTION

7a. Architectural style: Outdoor Amphiteatre

7b. Briefly describe the present *physical description* of the site or structure and describe any major alterations from its original condition:

Hollywood Bowl is located on a large undeveloped acreage in Cahuenga Pass and consists of a concrete acoustical shell, seating for approximately 20,000, and several supportive structures including offices, concessions, and restroom facilities. The classical horn-shaped shell design is composed of welded steel, concrete, fiberboard and wood with various structural modifications.

The gate to Hollywood Bowl on Highland Avenue is decorated by three Federal Arts Project statues representing music, drama and dance. The statues were sculptured by George Stanley around 1935.

Hollywood Bowl features over 2,000 trees, hundreds of shrubs, picnic spots and fountains.

SIGNIFICANCE

19. Briefly state historical and/or architectural importance (include dates, events, and persons associated with the site.)

Hollywood Bowl had its beginnings with a search for a natural outdoor amphitheatre in which concerts and plays could be staged "under the stars". H Ellis Reed discovered the potential spot in Cahuenga Pass in the early 1920s. The area, originally known as Daisy Dell, became Hollywood Bowl. Easter sunrise services were first held on the site in 1922, and when the Hollywood Bowl Association was established, funds were raised for the construction of improved facilities. In 1924, it was decided to improve the carrying power of the sound by building a shell, and Lloyd Wright was chosen as the designer. The wood shell was successful both visually and acoustically. In 1928, Wright constructed a shell elliptical in shape. In 1931, the Allied Architects of Los Angeles replaced the wood shell with a concrete one. Because of difficulty in the acoustics, this shell has been continually remodeled.

The Hollywood Bowl with its horn-shaped shell design has become a landmark and a gathering place in southern California.

20. Main theme of the historic resource: (If more than one is checked, number in order of importance.)

February 23, 1983

RECEIVED
SCRTD
FEB 25 1983
OFFICE OF
MGR/CHIEF ENGINEER
METRO RAIL PROJECT

Mr. Richard Gallagher, Manager
Metro Rail Project
Southern California Rapid Transit DIstrict
425 South Main Street
Los Angeles, California 90013

Dear Mr. Gallagher:

Re: Determinations of Eligibility for Properties Within the Area of Potential Environmental Impact (APEI), Metro Rail Project.

A copy of the cultural resources survey, "Historical/Architectural Resources, Parts A and B" was received in this office on January 23, 1983. This document has been reviewed by my staff. On the basis of that document and extensive on-site inspection, we have reached the following conclusions regarding the ...esence of properties listed in or eligible for listing in the National ...gister within the Metro Rail APEI.

First, we have concluded that the survey adequately identifies all potentially eligible properties within the project's APEI. Indeed, we feel that SCRTD has acted responsibly and cooperatively in its dealings with this office and the historic preservation community of Los Angeles during the identification phase of 36 CFR 800 compliance. The creditable cultural resource survey conducted by your office adds greatly to our understanding of historic resources in Los Angeles, especially along the Wilshire corridor. We would appreciate receiving the original survey forms for inclusion in our master inventory of statewide resources.

We have determined that the Metro Rail APEI includes nine properties previously listed in or eligible for listing in the National Register.

Property	Address	Status
Pellissier Building	3870 Wilshire	Listed
Union Station	800 N. Alameda	Listed
Broadway Mart	401 Broadway	Listed in National Register Di
Title Guarantee Bldg.	401 W. 5th Street	Determinied Eligible
Pershing Square Bldg.	448 S. Hill Street	" "
...rker Bros. Bldg.	700 W. 7th Street	" "
...deral Title Bldg.	437 Hill Street	" "
Myrick/Markham Hotel	324-326 Hill Street	" "
Subway Terminal Bldg.	415-425 Hill Street	" "

We note as well that the property, Campo de Cahuenga, at 3919 Lankershim Blvd., has been determined not to be eligible by the Keeper of the National Register. The state of California disagreed with the 1973 ruling and continues to disagree. For 36 CFR 800 compliance, however, the Keeper's judgement prevails.

We have in addition concluded that the following fifteen properties appear to be eligible for National Register listing, but have not yet been determined eligible by the Keeper of the National Register:

1.	Crocker Bank	1926-1930 Wilshire
2.	Post Office Terminal Annex	900 N. Alameda
3.	Wilshire Christian Center	634 S. Normandie
4.	Hollywood Bowl	2301 N. Highland
5.	Toluca Southern Pacific Depot	5401 Lankershim
6.	MacArthur Park	2200 Wilshire
7.	Global Marine Bldg.	807 W. 7th Street
8.	Hotel Clark	400-426 Hill
9.	McKinley Bldg.	3747-3763 Wilshire
10.	Zephyr Club	5209 Wilshire
11.	Clem Wilson Bldg.	5217-5231 Wilshire
12.	May Company	6067 Wilshire
13	Security Pacific Bldg.	6381-6385 Hollywood
14.	Roosevelt Bldg.	648 Flower
15.	Miracle Mile Historic District	5318-5514 and 5519-5353 Wilshire

If you concur in the Eligibility of these properties, please prepare a Formal Request for Determination of Eligibility for each. My staff has supplied your staff with examples of Determinations of Eligibility commonly used in transportation projects. Completed requests should be sent with a copy of this letter to the Urban Mass Transit Administration for submission to the Keeper of the National Register.

The remainder of the properties surveyed in the project APEI not discussed above are, in the view of this office, not Eligible for listing in the National Register of Historic Places.

As it appears we agree on the eligibility of properties within the project's APEI, I recommend that you apply the criteria of Effect and adverse effect (36 CFR 800.3) to the 24 properties listed above. When we have reached agreement as to the effect, you may proceed to the drafting of a Memorandum of Agreement, if necessary, to complete consultation on this undertaking.

Again, we greatly appreciate your cooperation in this large and complex undertaking. If you have any questions, feel free to contact Stephen Mikesell of my staff at (9 758-1813.

Sincerely,

Dr. Knox Mellon

MAY 6 1983

Ms. Carol D. Shull
Chief of Registration
National Park Service, Room 114
U.S. Department of the Interior
Washington, D.C. 20240

Dear Ms. Shull:

The Urban Mass Transportation Administration (UMTA) is requesting a determination of eligibility for inclusion in the National Register of Historic Places for one district and fourteen (14) properties in connection with the Los Angeles Rail Rapid Transit Project. These properties are:

1. Post Office Terminal Annex
2. Hotel Clark
3. Roosevelt Building
4. Global Marine Building
5. Crocker Bank (Wilshire East)
6. MacArthur Park
7. Wilshire Christian Church
8. McKinley Building
9. Zephyr Club (Security First National Bank of Los Angeles)
10. Clem Wilson Building/Mutual of Omaha
11. May Company
12. Security Pacific Bank Building, Hollywood
13. Hollywood Bowl
14. Hendricks Builders Supply Company (Toluca Southern Pacific Railroad Depot)
15. Miracle Mile Historic District

The California State Historic Preservation Officer (SHPO) is of the opinion that these properties are eligible for inclusion in the National Register. We are seeking a "consensus" determination of eligibility. Enclosed are the documentation on these properties and a copy of the SHPO's letter stating his opinion.

Sincerely,

Robert W. Stout

REQUEST FOR DETERMINATION OF ELIGIBILITY FOR INCLUSION IN THE NATIONAL REGISTER OF HISTORIC PLACES

Property Name:

Hollywood Bowl

Location:

2301 North Highland Avenue

Classification:

Park

Ownership:

Public (County of Los Angeles)

Agency Requesting Determination:

United States Department of Transportation, Urban Mass Transit Authority. Contact: Abbe Marner, Office of Program Analysis, Urban Mass Transit Authority, UTA-22 Department of Transportation Headquarters Building, 400 Seventh Street SW, Washington, DC 20590.

Representation in Existing Surveys:

Hatheway, Roger G., Inventory form filled out for Los Angeles Natural History Museum, 1977.

Southern California Rapid Transit District Metro Rail Draft Environmental Impact Statement.

Description:

Hollywood Bowl is a 69.92+ acre park, consisting mostly of the amphitheatre and associated structures. Hollywood Bowl is located on a large undeveloped acreage in Cahuenga Pass, north of Hollywood, and consists of a concrete acoustical shell (stage area), seating for approximately 20,000 and several supportive structures including offices, concessions and restroom facilities. Parking is provided within the park, as well as outside the entrance on Highland Avenue.

The classical horn-shaped shell design of the stage area is composed of welded steel, concrete, fiberboard and wood with various structural modifications.

One of the main architectural features of Hollywood Bowl is the stunning entrance to the park on Highland Avenue. Designed in Streamline Moderne style, the entrance is flanked by curved, stepped concrete walls topped with statues or advertising signs. Three Federal Arts Project statues representing music, drama and dance, sculptured by George Stanley in 1935, decorate the entranceway. The William

Mulholland fountain at the entranceway was built as a tribute to the "Father of the Los Angeles Municipal Water System," in 1937.

Hollywood Bowl features over 2000 trees, hundreds of shrubs, picnic areas and several fountains.

Significance:

Hollywood Bowl had its beginnings with a search for a natural outdoor amphitheatre in which concerts and plays could be staged "under the stars." H. Ellis Reed discovered the potential area in Cahuenga Pass in the early 1920s. The area, originally known as Daisy Dell and used as a small ranch, became Hollywood Bowl. Easter sunrise services were first held on the site in 1922, and when the Hollywood Bowl Association was established, funds were raised for the construction of improved facilities.

In 1924, it was decided to improve the carrying power of the amphitheatre's sound by building a shell, and Lloyd Wright, prominent architect in the western states, was chosen as the designer. The wood shell was successful both visually and acoustically. In 1928, Wright constructed a shell, eliptical in shape. In 1931, the Allied Architects of Los Angeles replaced the wood shell with a concrete one. Because of difficulty in the acoustics, this shell has been continuously remodeled.

During the past 5 decades, Hollywood Bowl has attracted some of the world's greatest conductors and artists. The Hollywood Bowl, with its horn-shaped shell design, has become a landmark and a gathering place in southern California.

Ms. Christina Poon
Sapphos Environmental, Inc.
133 Martin Alley
Pasadena, CA 91105

Dear Ms. Poon:

I am returning your National Register application for the Hollywood Bowl because it does not meet the standards outlined in National Register regulations and Bulletins 15 and 16 and will need to be extensively revised. I am enclosing copies of those bulletins for your guidance. Also, I am concerned that the property may not retain sufficient integrity to qualify for National Register designation. The National Register will not permit a period of significance that extends into the present time. Therefore the Bowl's most recent alterations cannot be considered part of its historic fabric. Generally the period of significance will end at least fifty years in the past.

Before you revise the application you may wish to provide clear current photos showing views of the entire Bowl along with comparable views from at least fifty years in the past. If you have any questions, please call me at (916) 653-8911 or e-mail at mlort@ohp.parks.ca.gov.

DESCRIPTION

7a. Architectural style: Spanish Revival/ Renaissance Revival

7b. Briefly describe the present *physical description* of the site or structure and describe any major alterations from its original condition:

This is a two-story, stucco-covered brick, commercial building. The tall, plain ground floor has decorative metal grilles above each storefront. The second floor facade is divided into bays by attached, flat piers with flat, decorated capitals and small, shallow corbels at each base. Each pier face has a recessed panel decorated with the typical building ornament of urns and stylized plants. The bays are composed of either french doors opening onto decorative, metal balconies or of flat surfaces with small, casement windows screened by twisted metal grilles. The top edge at each bay features a broad, decorative band in line with the pier's capitals. The entire facade is finished with a pronounced cornice molding.

The exterior is unaltered except for minor modifications to the street level store frontage.

18. Related features: Attached brick buildings (2) continue to the intersection of Fairfax and Santa Monica.

SIGNIFICANCE

19. Briefly state historical and/or architectural importance (include dates, events, and persons associated with the site.)

This stucco-covered brick building is one of four commercial structures dating from the 1920s at the intersection of Fairfax and Santa Monica Blvd. Typical of 1920s commercial structures, the ground floor had large plate glass windows facing directly on the street to attract automobile shoppers. The structures at this intersection are unique in that they are all brick structures dating from the 1920s, and pre-date Art Deco in architectural style.

Linda Samels
Community Development Block Grant Division
Community Development Commission
County of Los Angeles
2525 Corporate Place, Suite 200
MONTEREY PARK CA 91754

Dear Ms. Samels:

RE: COMMERCIAL REHABILITATION PROGRAM, CITY OF WEST HOLLYWOOD

Thank you for forwarding the above referenced undertaking to my office for review and comment pursuant to Section 106 of the National Historic Preservation Act and its implementing regulations found at 36 CFR Part 800.

The undertaking involves the rehabilitation of eighteen storefronts in the City of West Hollywood. The individual buildings have not yet been selected. The area of potential effects for this program includes property facing Santa Monica Boulevard between Harper Avenue and La Brea Avenue; property facing La Brea Avenue two blocks north and one block south of Santa Monica Boulevard; and Harper Avenue two blocks north and one block south of Santa Monica Boulevard. I concur with your determination that within this area of potential effects, the following commercial buildings are eligible for inclusion in the National Register of Historic Places:

7900-7906, 7908-7914, 7916-7922, and 7924-7936 Santa Monica Boulevard, which comprise a small commercial district, previously determined eligible for inclusion in the National Register of Historic Places;

7643 Santa Monica Boulevard, Los Angeles County Fire Station No. 8, previously determined eligible for inclusion in the National Register of Historic Places; and

7200 Santa Monica Boulevard/1041 North Formosa Avenue, which is eligible for inclusion in the National Register of Historic Places under criterion A at the local level of significance.

If you have further comments or questions, please do not hesitate to contact Staff Historian Lucinda Woodward at (916) 653-9116.

Sincerely,

Steade Craigo, AIA, Acting

DESCRIPTION

7a. Architectural style: 1920s commercial

7b. Briefly describe the present *physical description* of the site or structure and describe any major alterations from its original condition:

The Campbell Building is a two-story, commercial structure. The building is built of red brick with decoration added by the use of several brick colors and patterns. The facade is divided into four bays by five two-story, attached flat piers. Each red brick pier is set on a black tile base and has a flat capital of a decorative, square terra cotta panel enclosed by bricks. The shaft of the pier is inset with a large, white brick rectangle infilled with buff bricks. A top horizontal band of buff bricks laid in a herringbone-pattern with a central square of white bricks runs between the pier capitals. The ground floor stores have original storefronts set on bases of blue and black tile and have obscure glass transom windows. The second floor has original, wood, double-hung windows in a continuous horizontal band between piers. The spandrels are decorated with buff, header bricks set in a diamond pattern in a field of red brick. The facade has an original metal and neon sign.

The exterior is unaltered except for the addition of signage.

Dear Ms. Samels:

RE: COMMERCIAL REHABILITATION PROGRAM, CITY OF WEST HOLLYWOOD

Thank you for forwarding the above referenced undertaking to my office for review and comment pursuant to Section 106 of the National Historic Preservation Act and its implementing regulations found at 36 CFR Part 800.

The undertaking involves the rehabilitation of eighteen storefronts in the City of West Hollywood. The individual buildings have not yet been selected. The area of potential effects for this program includes property facing Santa Monica Boulevard between Harper Avenue and La Brea Avenue; property facing La Brea Avenue two blocks north and one block south of Santa Monica Boulevard; and Harper Avenue two blocks north and one block south of Santa Monica Boulevard. I concur with your determination that within this area of potential effects, the following commercial buildings are eligible for inclusion in the National Register of Historic Places:

7900-7906, 7908-7914, 7916-7922, and 7924-7936 Santa Monica Boulevard, which comprise a small commercial district, previously determined eligible for inclusion in the National Register of Historic Places;

7643 Santa Monica Boulevard, Los Angeles County Fire Station No. 8, previously determined eligible for inclusion in the National Register of Historic Places; and

7200 Santa Monica Boulevard/1041 North Formosa Avenue, which is eligible for inclusion in the National Register of Historic Places under criterion A at the local level of significance.

If you have further comments or questions, please do not hesitate to contact Staff Historian Lucinda Woodward at (916) 653-9116.

Sincerely,

Steade Craigo, AIA, Acting

DESCRIPTION

7a. Architectural style: 1920s Classical commercial

7b. Briefly describe the present *physical description* of the site or structure and describe any major alterations from its original condition:

This is a two-story corner, brick building constructed on a sloping lot with three stories at the rear and side of the structure. The basic organization of the facades is provided by attached concrete piers and entablature. The classical piers have rounded bases, square capitals and are decorated with a recessed panel. The entablature consists of plain, flat bands. The second floor has round arches infilled with multiple light, casement windows. The three-story facade has a middle row of rectangular casement windows now partially hidden behind a wide stucco band. There is a decorative, three-dimensional clock attached to the corner of the building.

The street level store facades have been altered and a wide band of stucco added above the storefronts.

***P3a. Description:** (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries)
APN 5548014900 is located at 1521 N. Highland Avenue in a high school campus setting and on a heavily developed urban commercial setting. It is a New Formalist-style theater building. It occupies the northeast corner of the parcel and has an east-facing orientation. It ranges from one to three stories and has a roughly rectangular plan. The building features a low-pitch gable roof behind a parapet, a curtain wall separated by concrete stringcourses, and stucco paneling on the north elevation. The primary façade is symmetrical with a row of double doors. The main façade (south elevation) features small square tile (gray with white and black mosaic patterning) and a row of pylons. The entrance is marked by a flat, rectangular canopy. The entrance is reached by a flight of concrete steps with brick podium foundation. The north elevation is a symmetrical arrangement of rectangular blocks and features five glazed windows between simple pilaster-like projections. The stucco panels on the south elevation are covered by a mural of famous alumni. The north elevation is covered by a mural of the school mascot, the Sheik. The building appears to be minimally altered and is in good condition.

***B10. Significance: Theme** Architecture **Area** Los Angeles, Los Angeles County
Period of Significance Circa 1954 **Property Type** Theater
Applicable Criteria NRHP Criterion C/CRHR Criterion 3 (Architecture) (Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity.)
The historical significance of APN 5548014900 within the APE was determined by applying the procedure and criteria for the *National Register of Historic Places* (NRHP), *California Register of Historical Resources* (CRHR), and the definition of a historical resource used for CEQA.

Based on site investigations and historic research, APN 5548014900 appears to possess the requisite significance to be eligible for listing on the NRHP, CRHR, as well as considered a historical resource for purposes of CEQA under Criterion C of the NRHP and Criterion 3 of the CRHR, as a building that significantly embodies the distinctive characteristics of the New Formalism architectural style as applied to a theater or auditorium. The New Formalism style, popular from 1960 to the present, is characterized by single volume massing; buildings separate from nature and usually set on podium; often an exotic Near Eastern/Indian flavor; strict symmetry; flat projecting rooflines; suggestion of classical columns (piers) and entablatures; arches, elliptical and others; smooth wall surfaces, often elegantly sheathed in stone; high-quality materials; delicacy of all details with no heavy, monumental qualities; grilles of polished metal, concrete and stone; formal landscaping including pools, fountains, and frequent use of monumental High Art sculpture.

For a property to qualify for listing in the NRHP and CRHR, besides meeting one of the criteria, it must also retain a significant amount of its historic integrity. APN 5548014900 appears to retain sufficient historic integrity of location, design, setting, materials, workmanship, feeling, and association.

DESCRIPTION

7a. Architectural style: Tudor Revival

7b. Briefly describe the present *physical description* of the site or structure and describe any major alterations from its original condition:

This building is a two-story wood and stucco structure. It is built in an irregular-shaped building plan and is designed in a manner influenced by the Tudor Revival style.

Major architectural features include an offset main entrance, offset half length porch, and a steeply pitched gable roof. Architectural details include flat window and door openings, half-timbering, exposed rafter ends, simple bargeboards, and small pane windows. The structure has been altered by the addition of bars to the windows. Related features include a garage/shed.

The building is in fair condition. The structure is located on a steeply raised hillside lot, and is set well back from the street. Landscape features consist of trees, shrubs, and flowering plants.

8. Construction date: Estimated 1925 Factual ___
9. Architect Unknown
10. Builder Unknown
11. Approx. property size (in feet) Frontage ___ Depth ___ or approx. acreage 0.199
12. Date(s) of enclosed photograph(s) September 1984

13. Condition: Excellent ___ Good ___ Fair X Deteriorated ___ No longer in existence ___

14. Alterations: bars to windows

15. Surroundings: (Check more than one if necessary) Open land ___ Scattered buildings ___ Densely built-up ___

16. Threats to site: None known ___ Private development X Zoning ___ Vandalism ___
Public Works project ___ Other: Redevelopment

17. Is the structure: On its original site? ___ Moved? ___ Unknown? X

18. Related features: shed/garage, garden steps and chain link fence.

SIGNIFICANCE

19. Briefly state historical and/or architectural importance (include dates, events, and persons associated with the site.)

This portion of the west section of the Olympic/Normandie survey area was annexed to the City of Los Angeles on October 27, 1909 as a portion of the Colegrove Addition. 1270 West Boulevard is located on Lot 11 and a portion of Lot 12 of Tract #3788 which was recorded on July 30, 1920 by the Pacific Electric Land Company. At the time the tract was recorded West Boulevard was known as Walbridge Avenue.

The original building permit regarding construction of this structure is unavailable. The Lupams file describes the structure as a single unit residence that was built in 1925 and is 2,238 square feet in size with 2-bedrooms and 2-baths.

This building is a moderate example of a small residence designed in the Tudor Revival style. Its steeply pitched lot is unusual in the Olympic/Normandie Survey area and adds interest to the West Boulevard streetscape.

DESCRIPTION

7a. Architectural style: Zig Zag Moderne

7b. Briefly describe the present *physical description* of the site or structure and describe any major alterations from its original condition: This large off-white molded concrete building is a symmetrically stepped 12 story-plus tower structure. Style includes elements of both zigzag and streamline moderne. At the street level are modified store fronts for the Wilshire-La Brea Rexall Drug, a coffee shop and an income tax office. Architecturally, the lower three floors are rounded at the corners in streamline moderne fashion. All windows are flush with the facade. Windows on the second and third floor extend vertically for the two floor distance and are comprised of peach-colored panels and immovable rectangular panels of glass. The third floor windows are all 6-pane double-casement opening vertically and topped by a plain lintel. The decorative relief above the third floor is an alternating "tassel" (or rocket exhaust) and an irregular horizontal zig zag (lightning bolt) motif.

The facade of the building has been modified at the second and third floor level with vertical lattice work upon which the large circular emblem of Mutual of Omaha is centered.

Entrances along the main floor are either modernized recessed doorways or flush with the street. Windows are metal-framed glass panes. A slight (continued)

17. Is the structure: On its original site? X Moved? ___ Unknown? ___

18. Related features: Security Pacific (black and gold terra cotta) Building.

SIGNIFICANCE

19. Briefly state historical and/or architectural importance (include dates, events, and persons associated with the site.)

The E. Clem Wilson Building was constructed in 1930 for use as retail space and as an office tower. The Owl Drug Company occupied the first floor of the building at the corner of Wilshire and La Brea streets for many years. At the time of its construction, the office building had many interesting features which made it unique in its adaptation to the zig zag Moderne design. The general style of the structure is accentuated with vertical lines. As the structure rises, it sets back at frequent intervals, providing many well-located roof areas to provide outdoor office space for 44 office spaces. Meyer and Holler employed a colored emulsified asphalt mastic for the various roofing areas.

In addition to the outdoor features, the building provided many offices with two sides to the exterior on corners.

Because the building faces two main streets, show window display space for the entire second story street fronts were provided. A two-story glass curtain sweeps around the corner. Parking spaces for automobiles were provided in the rear and in the basement of the building.

Presently, the original building is intact with only a few changes. (continued)

Wilson Building/Mutual of Omaha
Continuation Sheet 1

7b. Description:

overhang above storefronts advertises store names on a plastic linear awning. The western side of the building at ground floor is comprised of large brown granite blocks; the once large store windows have since been filled in.

Square corner posts, at the levels that are stepped, extend beyond the roof-line of that floor and are decorated with geometric relief (circles and angular lines). Zig zag ornamentation is more deeply molded at the higher elevations and also more ornate. Spirals and stylized heads with rocket-like bodies occur at the 9th and the 11th floor levels. The building is topped by a metal structure on stilts; the legs are white, and the base of the domed tower is red. A large simple rectangular "Mutual of Omaha" sign is buttressed against the top floor just below the tower.

Street furniture includes one classical metal double luminaire lightpost on Wilshire Blvd.

19. Significance:

The sweeping glass panels on the first and second floors are now partially covered. Mutual of Omaha has added huge facades with its logo at the entranceway on Wilshire Blvd, as well as at the top tower of the building. The vertical accentuation of the building is broken by the large Mutual of Omaha sign at the top. Small decorative parapets at the stepped intervals, and other small decorations have been removed.

The structure's significance lies in its unique adaptation to Zig Zag Moderne style and its use of numerous glass display windows to attract visitors in their automobiles along Wilshire Boulevard.

MAY 6 1983

Ms. Carol D. Shull
Chief of Registration
National Park Service, Room 114
U.S. Department of the Interior
Washington, D.C. 20240

Dear Ms. Shull:

The Urban Mass Transportation Administration (UMTA) is requesting a determination of eligibility for inclusion in the National Register of Historic Places for one district and fourteen (14) properties in connection with the Los Angeles Rail Rapid Transit Project. These properties are:

1. Post Office Terminal Annex
2. Hotel Clark
3. Roosevelt Building
4. Global Marine Building
5. Crocker Bank (Wilshire East)
6. MacArthur Park
7. Wilshire Christian Church
8. McKinley Building
9. Zephyr Club (Security First National Bank of Los Angeles)
10. Clem Wilson Building/Mutual of Omaha
11. May Company
12. Security Pacific Bank Building, Hollywood
13. Hollywood Bowl
14. Hendricks Builders Supply Company (Toluca Southern Pacific Railroad Depot)
15. Miracle Mile Historic District

The California State Historic Preservation Officer (SHPO) is of the opinion that these properties are eligible for inclusion in the National Register. We are seeking a "consensus" determination of eligibility. Enclosed are the documentation on these properties and a copy of the SHPO's letter stating his opinion.

Sincerely,

Robert W. Stout

RECEIVED
SCRTD
FEB 25 1983
OFFICE OF
MGR/CHIEF ENGINEER
METRO RAIL PROJECT

Mr. Richard Gallagher, Manager
Metro Rail Project
Southern California Rapid Transit District
425 South Main Street
Los Angeles, California 90013

Dear Mr. Gallagher:

Re: Determinations of Eligibility for Properties Within the Area of Potential Environmental Impact (APEI), Metro Rail Project.

A copy of the cultural resources survey, "Historical/Architectural Resources, Parts A and B" was received in this office on January 23, 1983. This document has been reviewed by my staff. On the basis of that document and extensive on-site inspection, we have reached the following conclusions regarding the presence of properties listed in or eligible for listing in the National Register within the Metro Rail APEI.

First, we have concluded that the survey adequately identifies all potentially eligible properties within the project's APEI. Indeed, we feel that SCRTD has acted responsibly and cooperatively in its dealings with this office and the historic preservation community of Los Angeles during the identification phase of 36 CFR 800 compliance. The creditable cultural resource survey conducted by your office adds greatly to our understanding of historic resources in Los Angeles, especially along the Wilshire corridor. We would appreciate receiving the original survey forms for inclusion in our master inventory of statewide resources.

We have determined that the Metro Rail APEI includes nine properties previously listed in or eligible for listing in the National Register.

Property	Address	Status
Pellissier Building	3870 Wilshire	Listed
Union Station	800 N. Alameda	Listed
Broadway Mart	401 Broadway	Listed in National Register Di
Title Guarantee Bldg.	401 W. 5th Street	Determinied Eligible
Pershing Square Bldg.	448 S. Hill Street	" "
Barker Bros. Bldg.	700 W. 7th Street	" "
Federal Title Bldg.	437 Hill Street	" "
Myrick/Markham Hotel	324-326 Hill Street	" "
Subway Terminal Bldg.	415-425 Hill Street	" "

19-173045

...gher
...23/83
...age 2

We note as well that the property, Campo de Cahuenga, at 3919 Lankershim Blvd., has been determined not to be eligible by the Keeper of the National Register. The state of California disagreed with the 1973 ruling and continues to disagree. For 36 CFR 800 compliance, however, the Keeper's judgement prevails.

We have in addition concluded that the following fifteen properties appear to be eligible for National Register listing, but have not yet been determined eligible by the Keeper of the National Register:

1.	Crocker Bank	1926-1930 Wilshire
2.	Post Office Terminal Annex	900 N. Alameda
3.	Wilshire Christian Center	634 S. Normandie
4.	Hollywood Bowl	2301 N. Highland
5.	Toluca Southern Pacific Depot	5401 Lankershim
6.	MacArthur Park	2200 Wilshire
7.	Global Marine Bldg.	807 W. 7th Street
8.	Hotel Clark	400-426 Hill
9.	McKinley Bldg.	3747-3763 Wilshire
10.	Zephyr Club	5209 Wilshire
11.	Clem Wilson Bldg.	5217-5231 Wilshire
12.	May Company	6067 Wilshire
13.	Security Pacific Bldg.	6381-6385 Hollywood
1	Roosevelt Bldg.	648 Flower
15.	Miracle Mile Historic District	5318-5514 and 5519-5353 Wilshire

If you concur in the Eligibility of these properties, please prepare a Formal Request for Determination of Eligibility for each. My staff has supplied your staff with examples of Determinations of Eligibility commonly used in transportation projects. Completed requests should be sent with a copy of this letter to the Urban Mass Transit Administration for submission to the Keeper of the National Register.

The remainder of the properties surveyed in the project APEI not discussed above are, in the view of this office, not Eligible for listing in the National Register of Historic Places.

As it appears we agree on the eligibility of properties within the project's APEI, I recommend that you apply the criteria of Effect and adverse effect (36 CFR 800.3) to the 24 properties listed above. When we have reached agreement as to the effect, you may proceed to the drafting of a Memorandum of Agreement, if necessary, to complete consultation on this undertaking.

Again, we greatly appreciate your cooperation in this large and complex undertaking. If you have any questions, feel free to contact Stephen Mikesell of my staff at (9 758-1813.

Sincerely,

Dr. Knox Mellon

Pedestrian Evaluation

UTM:
Zone 11; 376007 m/e; 3769907 m/N; USGS Hollywood Quad 7.5min, 1:24,000

Description:

Constructed in 1930. Also known as the "Superman" building for its use in the opening credits of the television show. An Art Deco building with Gothic influence, the 12-story building has suffered from the removal of the original architectural details including spires, battlements, and the fenestration of the first two floors.

Under the proposed Westside Subway Extension Project, the Clem Wilson Building will not be physically affected by project activities.

Comparison of a historic photograph of the building (http://digitallibrary.usc.edu/search/controller/view/examiner-m2769.html) that shows its original street-level façade, to the street-level façade of 2011, reveals that the buldings façade has been substantially altered at some point in time.

Because of the size of the building, the change to the first level façade and the other alterations, have not removed the buildings ability to convey its architectural significance as a good example of an Art Deco style building.

Status Code 2S2, 3CD

Determined eligible for listing in the NRHP under DOE 19-83-0010-0000.

DESCRIPTION

7a. Architectural style: Streamline Moderne

7b. Briefly describe the present *physical description* of the site or structure and describe any major alterations from its original condition:

The May Company Building is a five-story steel frame structure with reinforced concrete floors and walls. The exterior walls on Fairfax Ave. and on Wilshire Blvd. are faced with So. Calif. black granite at street level and the second through the fifth stories with Texas shell limestone. At street level, metal-framed glass cubes protrude at intervals for display purposes. There are plantings fronting the granite between the cubes. Between the ground floor and the second floor is curved copper sheathing topped by a curved projecting overhang faced with black granite. Above the overhang on each main street side are four flagpoles at a 45 degree angle.

The most distinctive exterior feature is the rounded corner at Fairfax and Wilshire. The upper four floors are decorated by a huge, semi-circular convex tower covered by gold leaf glass tiles in a stepped pattern. This ornament, known as the "perfume bottle", is flanked by two concave projecting wings faced in black granite, each with the company insignia in vertical bas-relief.

Beneath the tower are large, recessed, brass-framed, double-entry doors. There are smaller entrances at each corner of the facade.

SIGNIFICANCE

19. Briefly state historical and/or architectural importance (include dates, events, and persons associated with the site.)

May Company is an excellent example of Streamline Moderne architecture, one of the last large remaining Moderne department stores still in operation in Los Angeles. At the time May Company was built, it stood out as an "imposing monument" in a district relatively undeveloped. Its gold "perfume bottle" corner decoration was an attraction to motorists in the distance. The structural integrity of the building has changed little since its opening on September 8, 1939.

Currently, May Company is pending nomination to the Los Angeles Cultural Heritage Board Register.

Locational sketch map (draw and label site and surrounding streets, roads, and prominent landmarks):

May Company
Continuation Sheet 1

7b. Description:

The side portion of the building which does not front a main street is faced with limestone panels. It also has horizontal bands of multi-paned windows in protruding, bezel-like frames above the ground floor. Each upper floor has a steel ship railing balcony with access doors on the east side of the structure. The rear portion of the building is unfaced concrete above the ground floor and it, too has bands on the windows.

The rear entrance is the major means of access to the building and fronts on a large parking lot. Its brass-framed, recessed doors are protected by a rectangular, beveled edged overhang. To the east of the entry are large, brass-framed panel windows. To the west, brass-framed glass cubes are separated by black granite facing.

The interior of May Company also follows a Streamline Moderne motif with rounded ceiling decoration and light fixtures.

The May Company building is landscaped with shrub hedges, low trees, and pepper trees. Portable wooden benches with concrete legs are located at the rear of the building. Street lighting on Wilshire Blvd. consists of metal (painted green) posts with double luminaires. Ornate bases have leaf and egg designs. Lighting on Fairfax Ave. consists of simulated granite posts with a single luminaire. These fixtures are "Marbelite", produced by Pacific Union Metal Company.

RECEIVED
SCRTD
FEB 25 1983
OFFICE OF
MGR/CHIEF ENGINEER
METRO RAIL PROJECT

Mr. Richard Gallagher, Manager
Metro Rail Project
Southern California Rapid Transit District
425 South Main Street
Los Angeles, California 90013

Dear Mr. Gallagher:

Re: Determinations of Eligibility for Properties Within the Area of Potential Environmental Impact (APEI), Metro Rail Project.

A copy of the cultural resources survey, "Historical/Architectural Resources, Parts A and B" was received in this office on January 23, 1983. This document has been reviewed by my staff. On the basis of that document and extensive on-site inspection, we have reached the following conclusions regarding the presence of properties listed in or eligible for listing in the National Register within the Metro Rail APEI.

First, we have concluded that the survey adequately identifies all potentially eligible properties within the project's APEI. Indeed, we feel that SCRTD has acted responsibly and cooperatively in its dealings with this office and the historic preservation community of Los Angeles during the identification phase of 36 CFR 800 compliance. The creditable cultural resource survey conducted by your office adds greatly to our understanding of historic resources in Los Angeles, especially along the Wilshire corridor. We would appreciate receiving the original survey forms for inclusion in our master inventory of statewide resources.

We have determined that the Metro Rail APEI includes nine properties previously listed in or eligible for listing in the National Register.

Property	Address	Status
Pellissier Building	3870 Wilshire	Listed
Union Station	800 N. Alameda	Listed
Broadway Mart	401 Broadway	Listed in National Register Di
Title Guarantee Bldg.	401 W. 5th Street	Determinied Eligible
Pershing Square Bldg.	448 S. Hill Street	" "
Barker Bros. Bldg.	700 W. 7th Street	" "
Federal Title Bldg.	437 Hill Street	" "
Myrick/Markham Hotel	324-326 Hill Street	" "
Subway Terminal Bldg.	415-425 Hill Street	" "

We note as well that the property, Campo de Cahuenga, at 3919 Lankershim Blvd., has been determined not to be eligible by the Keeper of the National Register. The state of California disagreed with the 1973 ruling and continues to disagree. For 36 CFR 800 compliance, however, the Keeper's judgement prevails.

We have in addition concluded that the following fifteen properties appear to be eligible for National Register listing, but have not yet been determined eligible by the Keeper of the National Register:

1.	Crocker Bank	1926-1930 Wilshire
2.	Post Office Terminal Annex	900 N. Alameda
3.	Wilshire Christian Center	634 S. Normandie
4.	Hollywood Bowl	2301 N. Highland
5.	Toluca Southern Pacific Depot	5401 Lankershim
6.	MacArthur Park	2200 Wilshire
7.	Global Marine Bldg.	807 W. 7th Street
8.	Hotel Clark	400-426 Hill
9.	McKinley Bldg.	3747-3763 Wilshire
10.	Zephyr Club	5209 Wilshire
11.	Clem Wilson Bldg.	5217-5231 Wilshire
12.	May Company	6067 Wilshire
13.	Security Pacific Bldg.	6381-6385 Hollywood
14.	Roosevelt Bldg.	648 Flower
15.	Miracle Mile Historic District	5318-5514 and 5519-5353 Wilshire

If you concur in the Eligibility of these properties, please prepare a Formal Request for Determination of Eligibility for each. My staff has supplied your staff with examples of Determinations of Eligibility commonly used in transportation projects. Completed requests should be sent with a copy of this letter to the Urban Mass Transit Administration for submission to the Keeper of the National Register.

The remainder of the properties surveyed in the project APEI not discussed above are, in the view of this office, not Eligible for listing in the National Register of Historic Places.

As it appears we agree on the eligibility of properties within the project's APEI, I recommend that you apply the criteria of Effect and adverse effect (36 CFR 800.3) to the 24 properties listed above. When we have reached agreement as to the effect, you may proceed to the drafting of a Memorandum of Agreement, if necessary, to complete consultation on this undertaking.

Again, we greatly appreciate your cooperation in this large and complex undertaking. If you have any questions, feel free to contact Stephen Mikesell of my staff at (9[redacted] 758-1813.

REQUEST FOR DETERMINATION OF ELIGIBILITY FOR INCLUSION IN THE NATIONAL REGISTER OF HISTORIC PLACES

Property Name:

May Company

Location:

6067 Wilshire Boulevard, Los Angeles, Los Angeles County, California 90028

Classification:

Building

Ownership:

Private

Agency Requesting Determination:

United States Department of Transportation, Urban Mass Transit Authority. Contact: Abbe Marner, Office of Program Analysis, Urban Mass Transit Authority, UTA-22 Department of Transportation Headquarters Building, 400 Seventh Street SW, Washington, DC 20590.

Representation in Existing Surveys:

Southern California Rapid Transit District Metro Rail Draft Environmental Impact Statement.

Cultural Heritage Board, City of Los Angeles - pending nomination.

Description:

The May Company building is a 5-story steel frame department store structure with reinforced concrete floors and walls, situated on the northeast corner of Wilshire and Fairfax. The exterior walls at street level are faced with southern California black granite, and the second through fifth stories are faced with rare Texas shell limestone. At street level, brass-framed glass cubes protrude at intervals for display purposes. A curved, projecting overhang of black granite and copper sheathing separates the ground floor from the upper stories of the building.

The most distinctive exterior feature of the Streamline Moderne style May Company building is the rounded corner at Fairfax and Wilshire. The upper four floors are decorated by a huge, semi-circular convex tower sheathed in gold leaf glass tiles. This ornament, known as the "perfume bottle" (Gebhard and Winter 1982), is flanked by two concave projecting wings faced in black granite, each with the company insignia in vertical bas relief.

The side portion of the building which does not front a main street is faced with Texas shell limestone panels. Like the front of the building, the side has horizontal bands of multipaned windows in protruding, bezel-like frames above the ground floor. Each upper floor has a steel ship railing balcony with access doors on the east side of the structure.

The rear entrance to the building is the major means of access, and fronts on a large parking lot. Its brass-framed, recessed doors are protected by a rectangular, bevel-edged overhang. The interior of May Company also follows a Streamline Moderne motif, with rounded ceiling decorations and light fixtures.

Significance:

Built in 1939-1940, and designed by architect Albert C. Martin, Sr., the May Company is significant for its Streamline Moderne style of architecture. It is one of the few remaining excellent examples of Streamline Moderne style in such a large scale along Wilshire Boulevard.

At the time May Company was built, it stood out as an imposing monument in a district relatively undeveloped. Its gold "perfume bottle" corner decoration was an attraction to motorists, just as Wilshire Boulevard promoters had planned.

A prominent architect in the Los Angeles area, Albert C. Martin, Sr. was responsible for several outstanding structures including the Million Dollar Theatre downtown (1918), City Hall (in partnership, 1928), St. Vincent de Paul Roman Catholic Church (1925), and several others.

May Company is a part of the prestigious shopping district known as Miracle Mile. Developed in the 1920s by A.W. Ross, this section of Wilshire Boulevard was unique to Los Angeles in that access to the area was to be primarily by automobile. Towered buildings, large floor-length glass display windows, and off-street parking facilities characterized the Art Deco retail district. The district was enhanced in the late 1930s by prestige department stores such as May Company and Coulter Dry Goods Company. Coulter's, another masterpiece of the Streamline Moderne Style, was demolished in 1980, leaving May Company as the sole large remaining example of the style in the Miracle Mile.

Presently in use as a department store with related office space, the structural integrity of the May Company structure has changed minimally since its opening on September 8, 1939.

APN 5508017007 is located at 6067 Wilshire Boulevard in the Los Angeles County Museum of Art complex, which is in a heavily developed urban commercial setting. It is a Streamline Moderne-style commercial building now occupied by an art museum. It occupies the southwest corner of the lot and has a southwest-facing orientation. It is four stories with a generally square plan. The building features a flat roof. The southwest corner contains a massive gold, round column that rises from the second story to the roof and is backed by a curved black tile surround. The ground level window bays are steel frame fixed pane glass window walls, which are tucked beneath a cantilevered roof that curves around the southeast corner. The window bays on the top story are narrow horizontal bands, slightly protruding from the wall, that are filled with metal frame, fixed, single pane sashes. The walls are coated in stucco. The primary façade is generally symmetrical with a main entry on the northwest corner filled with metal frame, fixed glass pane, standard commercial doors. The building appears to be minimally altered and is in good condition.

***B10. Significance: Theme** Architecture, Commercial **Area** Los Angeles, Los Angeles County
Period of Significance 1939/1940 **Property Type** Commercial
Applicable Criteria NRHP Criterion C/CRHR Criterion 3 (Architecture) (Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity.)
APN 5508017007 was listed as City of Los Angeles Historic-Cultural Monument #566 on September 30, 1992. As part of the Westside Subway Extension Project, URS investigators relocated this property in the field. The historical significance of APN 5508017007 within the APE was determined by applying the procedure and criteria for the *National Register of Historic Places* (NRHP), *California Register of Historical Resources* (CRHR), and the definition of a historical resource used for CEQA.

Based on site investigations and historic research, APN 5508017007 appears to possess the requisite significance to be eligible for listing on the NRHP, CRHR, as well as considered a historical resource for purposes of CEQA under Criterion C of the NRHP and Criterion 3 of the CRHR, as a building that significantly embodies the distinctive characteristics of the Streamline Moderne architectural style. Streamline Moderne, popular from 1920 to the commencement of World War II, is characterized by stucco box massing often with rounded corners and even rounded parapets; emphasis on the horizontal through the use of banded surfaces and windows; curved projecting wings; glass brick; round windows (ship portholes); steel (ship) railing; and brightly colored vitrelight.

For a property to qualify for listing in the NRHP and CRHR, besides meeting one of the criteria, it must also retain a significant amount of its historic integrity. APN 5508017007 appears to retain sufficient historic integrity of location, design, setting, materials, workmanship, and feeling.

Query: Is this house of such historic significance that it should be marked? Aubrey Drury 14 March, 1934

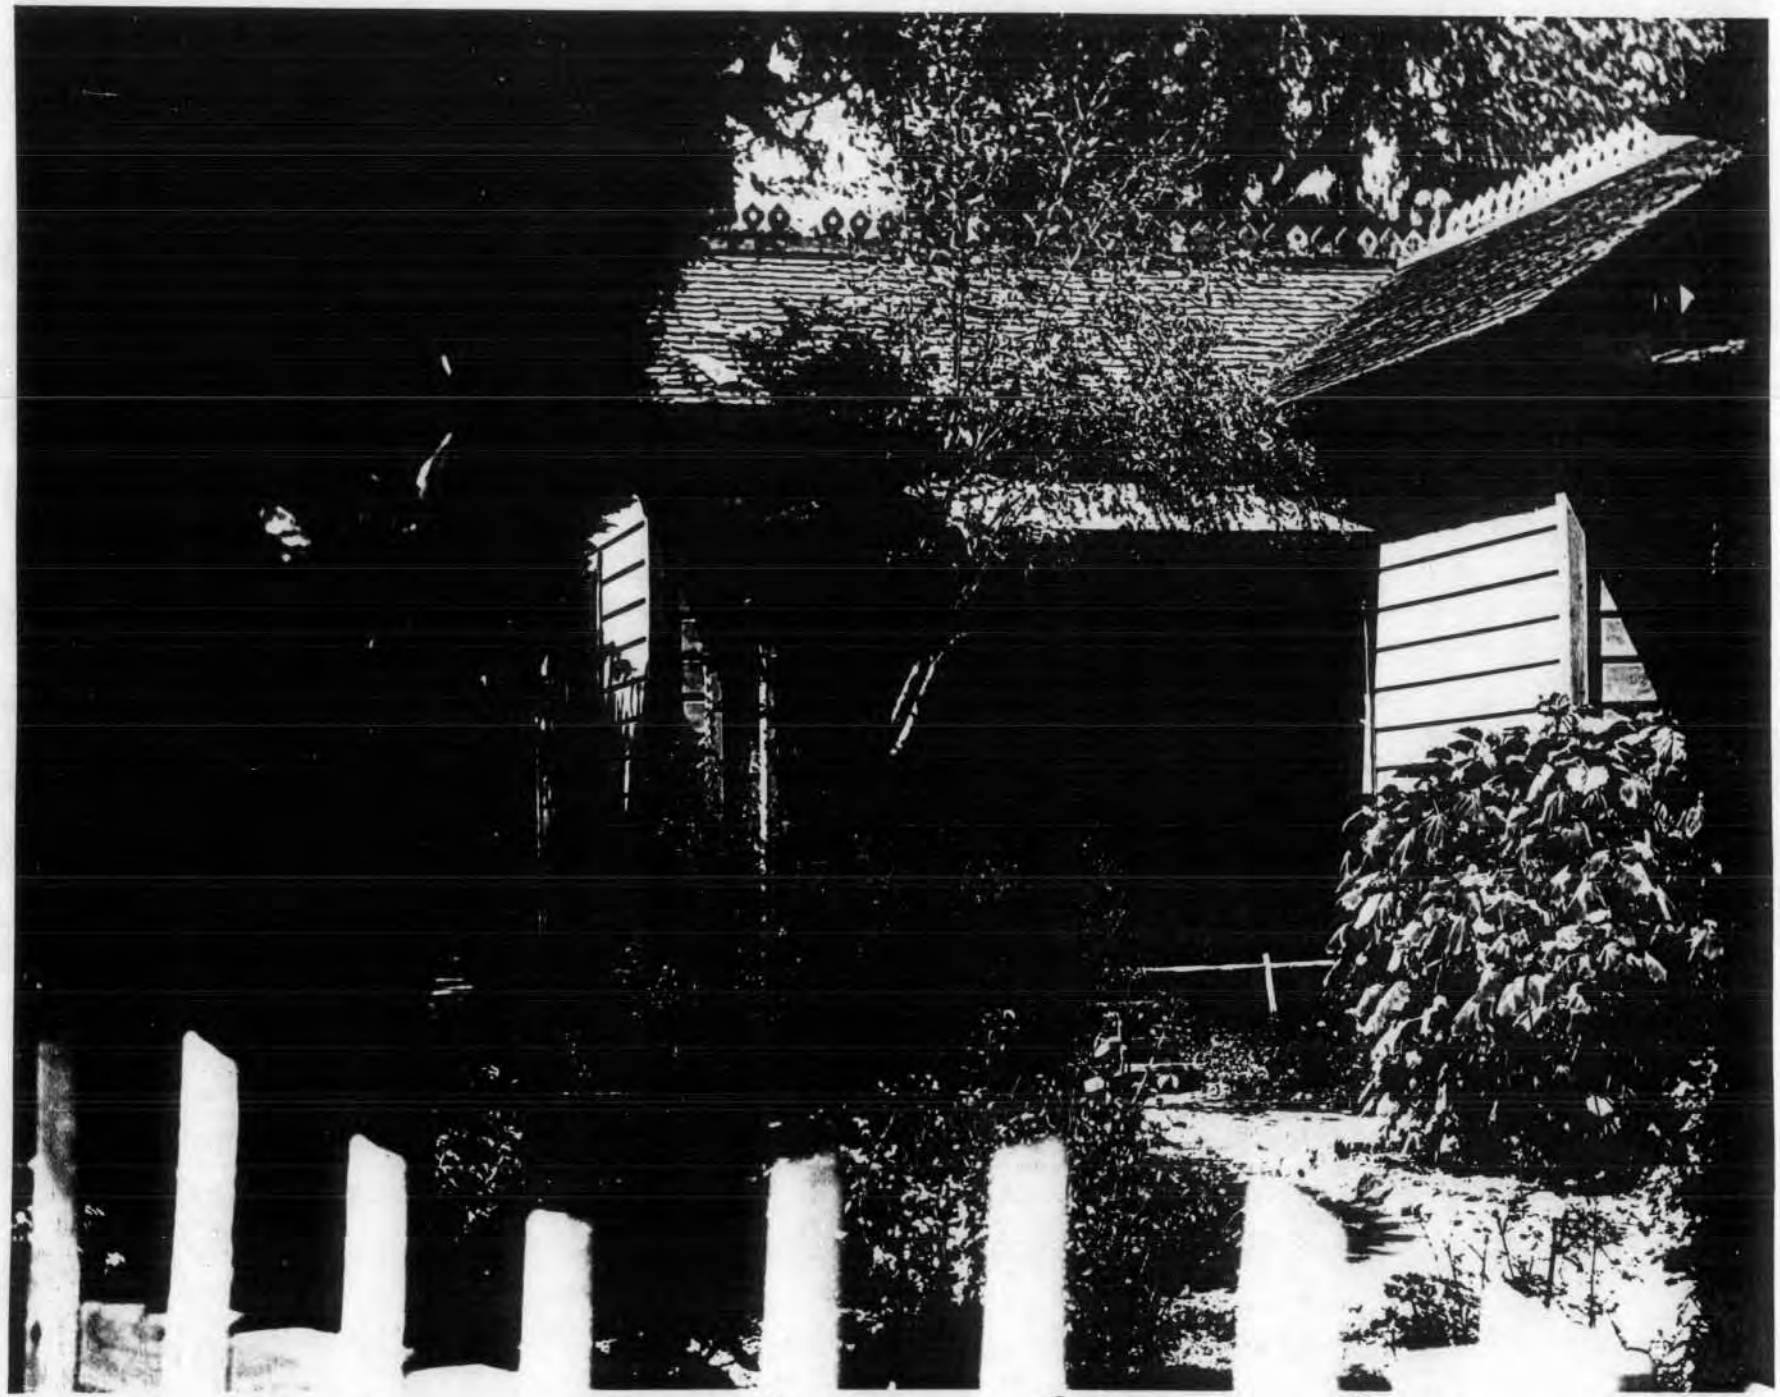

I think it is of historic interest as an example of the "civilized" period of Hollywood prior to the great invasion. H. P. Vaughan 4/6/34

The house, or site of house, of the first in an important modern city, should be marked, I believe. So I have signed — Smith

This is a dangerous precedent. Every city and town in the State has a first house. 6/11/34
Why not a first tree? Ellis Law

LOCATION The Park grounds lie between Santa Monica Blvd. and Mountain street, North Vista and Fuller Streets, West Hollywood, California

NAME OF OWNER Eugene R. Plummer

Street 7377 Santa Monica Blvd.

City West Hollywood, California

HISTORY AND DESCRIPTION

This tract of land was a part of the original " La Brea Grant" of land. It was held by Senora Perez as a squatter intil I873 when the U.S.Government ordered a re-survey of this district to separate the La Brea grant from the Public domain. This survey released the holdings of Senora Perez,and the Plummers acquired title from her in I874, receiving I60 acres, being the S.E.¼ of Sec. 9, Twp. I S, Range I4 W. S.B.M. The present area of the Park is a little over 2½ acres.

Eugene R. Plummer built the house, which contains six roomes, and the large barn, in I874. The magnificent pepper trees were planted between I875 and I88I. The great Elderberry tree was planted in I88I. The house is the oldest house now standing in Hollywood. It is a typical ranch house of the period following the adobe age of this district. The Park has been the scene of many fiesta gatherings, and was the home of the Vaquero Club for years. There is a spacious and most western dance pavilion, a barbecue -pit and deep flowing well. Some of the features have been modernized but the environment is strictly Californian, and wholly individual, being the only one of its kind yet remaining in this district. It should be preserved.

PLUMMER PARK

Plummer Park, a piece of land on Santa Monica Boulevard in West Hollywood, is the site of the oldest house in the city. Giant pepper and elderberry trees make a typically California background for the old-fashioned ranch house. It stands as a reminder of the first California houses with which the Americans replaced the adobes built by the Spanish settlers of Los Angeles. Other houses of that period long since have been destroyed, and have given way to the large business blocks and fine residential districts for which Hollywood is famous. The Plummer house is the only one of its day remaining in a district of modern homes, many of them reproductions of early California and Spanish architecture. In its perfect setting, it is especially interesting as an original old California home, untouched by the trend and whimsy of modern times.

Originally, Plummer Park was a part of "La Brea" land grant. The major part of that grant was included in "Rancho La Trea," which was first granted by Governor Echeandia in 1828 to Antonio Rocha, a Portugese balcksmith. Rocha and his heirs were provisional owners of "La Brea." The land was sold several times until most of it passed into the hands of Major Henry Hancock. The ranch became famous

for its brea and later for the prehistoric fossils found there.[1]

The part of "La Brea" grant which became Plummer Park was held by Senora Perez as a squatter until 1873. In that year the United States government re-surveyed the land to separate the "La Brea" grant from the public domain. As a result of that survey, Senora Perez lost her holdings. The Plummers acquired title to the land from her in 1874. The tract included 160 acres in the southeast quarter of section 9, township I. S., range 14, W. S. B. M.[2]

Eugene B. Plummer built the six-room farmhouse and large barn on the property in 1874. The Plummers made the place their home for many years and became one of the well known old families of Los Angeles. The pepper and elderberry trees were planted soon after the house was built, between 1875 and 1881. As the town of Hollywood grew, the original tract of 160 acres was sold off and dwindled to two and one-half acres.

The old place was used as a small recreational center and became known as Plummer Park. A few changes were made for better convenience, but the essential features of

2. H. R. P. Forbes, Plummer park and oldest house in Hollywood, 1.

the house and grounds have not been altered. A large and very western looking dance pavilion, a barbecue pit and a deep well with excellent water have made the park a popular gathering place. Many fiestas for which California is so well known have been held there. The Vaquero Club also had its headquarters at Plummer Park for a number of years.

In Hollywood, one of the most ultra modern of cities, the Plummer house, standing among the magnificent old pepper and elderberry trees, brings back a refreshing bit of the early American period of California.

SIGNIFICANCE

19. Briefly state historical and/or architectural importance (include dates, events, and persons associated with the site.)

This house is listed as State Historical Landmark #160, known as The Oldest House in Hollywood. When it was moved in 1983 its historical associations were severed. Although the facade and interior were carefully restored, the rear of this building is not. The orientation of this building, at its original location at 7377 Santa Monica Boulevard, West Hollywood was to the south. Its present orientation is to the west. Due to being moved and incomplete architectural restoration this building is not eligible for the National Register of Historic Places.

20. Main theme of the historic resource: (If more than one is checked, number in order of importance.)
Architecture ___ Arts & Leisure ___
Economic/Industrial ___ Exploration/Settlement ___
Government ___ Military ___
Religion ___ Social/Education ___

Now located at 23537 Calabasas Rd., Calabasas

The Leonis Adobe

Standing under the Oaks in Calabasas in the southwest corner of the San Fernando Valley, is the lovely home of one of the most colorful and legendary figures of early Los Angeles. Built in 1844 and restored to its original beauty by the Leonis Adobe Association, it is a superb example of gracious living when the San Fernando Valley was ranching country and Los Angeles still a dusty settlement.

On August 6, 1962, the newly formed Cultural Heritage Board of the Municipal Art Department of the City of Los Angeles officially designated the Leonis Adobe as "Historic Cultural Monument No. 1 ". Thus the Leonis Adobe became the first of a series of historic and cultural Los Angeles landmarks to be officially recognized by the City of Los Angeles. The American Institute of Architects has also filed with the Library of Congress an official "Historic American Building Survey", Report HABS, Cal. 342, recognizing the Leonis Adobe as a significant historical building and describing its architecture and history in detail. As early as May 2, 1953, a commemorative plaque was placed in front of the house by Topanga Parlor, No. 269, Native Daughters of the Golden West.

On May 21, 1966, the Leonis Adobe was formally opened to the public and an official plaque presented by the Cultural Heritage Board unveiled at ceremonies attended by Los Angeles Mayor Samuel W. Yorty, Los Angeles County Supervisor Warren Dorn, and Los Angeles City Councilman Thomas D. Shephard, and other city and county officials.

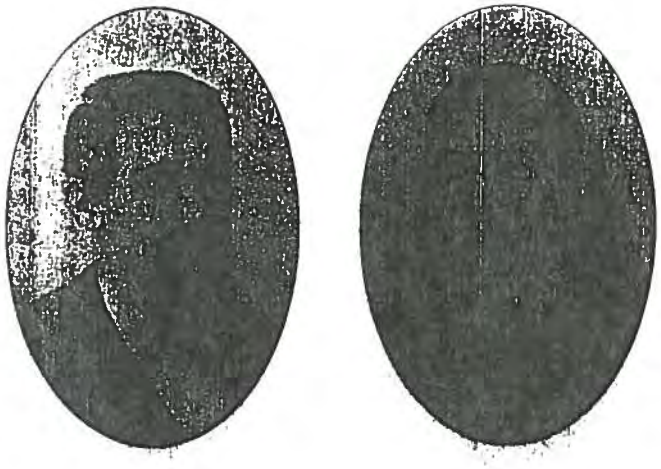

On May 29, 1975, the Leonis Adobe was entered on the National Register of Historical Places.

OPEN TO THE PUBLIC (donation)
1:00 to 4:00 P.M. Wednesday through Sunday
Group tours may be arranged
Phone (818) 712-0734

Calabasas

Calabasas was the site of one of the two hundred or more Indian rancherias (villages) that once dotted the San Fernando Valley. Ventura Boulevard was originally "El Camino Real" that linked the Spanish settlements and missions up and down California and now continues as Calabasas Road. In front of the Adobe hangs one of the now rare mission bells that were placed along "El Camino Real".

Before the Southern Pacific Railroad connected Los Angeles and San Francisco in 1876, Calabasas was a stop on the coastal stage line that was operated by Flint, Bixby and Butterfield. At that time, and until the turn of the century, Calabasas had a reputation as one of the toughest and wildest spots in California. A dance hall and saloon stood on the south side of Calabasas jail which was made of heavy timbers spiked together. Alongside the jail grew the famous Calabasas hangman's tree. The oak that grows beside the former Kramer store was also, according to old timers who used to gather at the store, used for quick frontier justice.

The Discovery of the San Fernando Valley

Over two hundred years ago, on August 5, 1769, a party of Spanish explorers headed by Don Gaspar de Portola stood where the San Diego Freeway now crosses the top of the Santa Monica Mountains and looked down on "a very spacious and pleasant valley". They were the first white men to see the San Fernando Valley. They were also the first to explore California by land. Although the Spanish had discovered and begun mapping the California-Oregon coast in 1542, it was not until two centuries later when other countries, and particularly Russia, whose fur hunters were already in Alaska, threatened to take possession of the area, that Spain moved to colonize California.

The Portola party, coming up from Mexico, had stopped first at San Diego Bay. There they had joined two other Spanish expeditions that had come from Mexico by different routes, and participated in the construction of the presido (fortified stockade) and mission that were the beginning of San Diego, the first Spanish settlement in California. Then, heading north, they had located the site where the San Juan Capistrano Mission would be built in 1776. They had come upon a river they named in honor of "Nuestra Señora La Reina de los Angeles" (Our Lady the Queen of Angels) and had camped where the Pueblo de los Angeles was to be established twelve years later, in 1781. They had discovered the La Brea tar pits, and following an Indian trail up a canyon in the mountains that blocked their northward journey--the same route followed today by the San Diego freeway from West Los Angeles to the San Fernando Valley--they had reached the top of the Santa Monica mountains. The valley that spread before them, they named "Valle de los Encinos", or "Valley of the Oaks". It was not until after the San Fernando Mission was founded in 1797 that the valley became known as the San Fernando Valley.

Descending into the Valley the Portola party camped beside a spring-fed pond that can still be seen as part of the Los Encinos Historical Monument at Ventura and Balboa boulevards. They left the Valley through the Santa Susanna pass and continued north to discover San Francisco Bay whose narrow and often fog-bound Golden Gate had gone unnoticed by the galleons sailing past it for more than two centuries! Returning, the Portola expedition entered the Valley by following approximately the route now followed by the Ventura freeway, and passed near or through the site of Calabasas.

Miguel Leonis "The King of Calabasas"

Miguel Leonis, as both a legendary and historical figure, was one of the most colorful of the early land settlers and pioneers of Los Angeles and San Fernando Valley. A Basque who stood six feet four inches tall, dauntless, physically powerful, and possessed of shrewdness and drive, Leonis for years in the late 1800s controlled and ruled much of the west end of the San Fernando Valley and part of what is now adjoining Ventura county. His home and headquarters was the Leonis Adobe, and he became widely known as "The King of Calabasass".

Leonis was born in 1824 in Cambo in the French Pyrenees, where smuggling across the nearby Spanish border was almost a way of life. Apparently young Leonis took to this local avocation so avidly that before he was twenty or so years old it became advantageous for him to depart for other lands. Probably, too, the lure of riches and adventure, and of owning your own land and sheep in far off frontier California had reached his ears. Thus, sometime in the mid-1800s he arrived in still youthful Los Angeles.

Being referred to as "El Basquo Grande" and by one means or another, and in spite of the fact that he spoke little Spanish or English, Leonis acquired a small empire of land and livestock, until at his death in 1889 his estate was valued at over $300,000!

One event that furthered the fortunes of Leonis was his marriage to an Indian widow, Espiritu Chijulla. Through this marriage Leonis came into possession of the cattle, sheep and horses, and 1100 acres of land belonging to her family. The land was the El Escorpion rancho and was carved out of the San Fernando Mission lands. Today it is the Platt Ranch subdivision, just north of Calabasas.

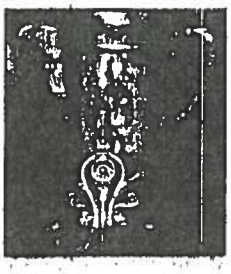

Leonis acquired other considerable holdings of land and livestock through various means, and probably often as the result of shrewd trading. But he also was not above claiming land in the public domain—and he guarded his holdings zealously with an armed retinue of Mexicans and Indians. Any would-be settlers on land he owned were quickly discouraged. If not, they were likely to be hauled into Los Angeles to jail and charged with trespassing or stealing. Leonis then made it a point to freely dispense drink and food to the judge, and jury, if there was one, who tried the offenders! The archives of early Los Angeles courts are filled with trials and lawsuits in which Leonis figured—and the litigation over his estate when he died went on for years and still fills an entire file drawer!

At one time a pitched battle between a group of persistent settlers and the armed mercenaries of Leonis rage for weeks through what is now Hidden Hills. Only when the leader of the settlers was finally killed did they disperse, and Leonis was left in possession of the land.

In 1889, Leonis was killed when his wagon overturned in Cahuenga Pass as he was returning to Calabasas following a celebration in Los Angeles after winning one of his lawsuits. Espiritu lived on at the Adobe until she died in 1906. She is buried at the San Fernando Mission where a monument of unusual distinction marks her grave. Leonis was buried in Calvary Cemetery in Los Angeles. Miguel and Espiritu had only one child, a daughter, Marcellina, who died at 20 from smallpox. But descendants of John Leonis, a younger brother of Miguel, live in the city of Vernon, which John Leonis founded. Among them, the Leonis Malburgs have been generous contributors to the preservation of the Leonis Adobe.

CALABASAS CREEK

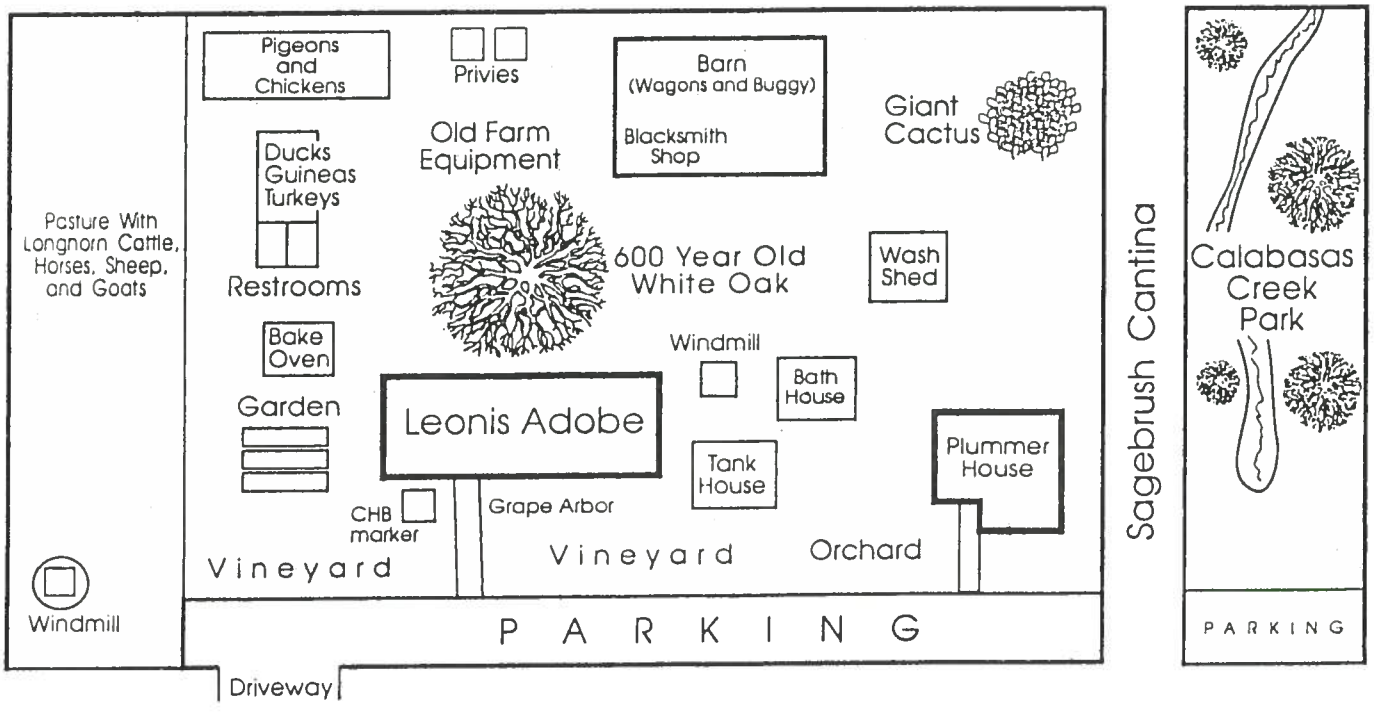

Fed by springs in the mountains south of here, Calabasas Creek runs year-round. In the early days this was of great importance, when rain could not be counted on from April to November. Most of Calabasas Creek has been cemented over, but we have preserved a portion of it in its natural state. To see it, drive east about 100 yards, just about 50 feet east of the Sagebrush Cantina parking lot, and pull off onto the shoulder, on the freeway side (or, you can walk from here!). Follow the path north (toward the freeway) until you can see the creek. You are also welcome to picnic here. About two miles down-stream Calabasas Creek joins Bell Creek and becomes -- the Los Angeles River!

The Leonis Adobe

The Leonis Adobe was built in stages—and exactly who built the original portion and when it was built is still the subject of research. At first, there appears to have been a simple adobe farm house with whitewashed walls. This original portion of the house is believed to date back to 1844, and if this is so it is almost certain that Leonis did not build it. In any event, about 1880 he extensively enlarged and remodelled the house into the gracious Monterey style mansion you see today, and he and Espiritu moved into it made it their home.

A great deal of research, study and skillful work has gone into faithfully restoring the Leonis Adobe to the way it is believed to have appeared after Leonis completed enlarging and remodeling it. But there are one or two exceptions. For instance, the present living room was originally two rooms, a parlor and living room, separated by a wall just to the right of the front door. The wall was removed about 1925 and has not been replaced in order to provide a large room for group meetings.

Leonis, in enlarging and remodeling the house, sheathed the outside front of the house, and panelled the interior living room walls with wood. He walled-in the rear and northeast side porches, both upstairs and downstairs, to add more rooms. He added the Victorian fretwork balcony along the front of the house, and other enhancing details and features. The bright colors that highlight the house were discovered under many layers of paint, and presumably were the ones that Leonis used.

In repainting the house, they were carefully matched.

In the present living room, the family portraits hang on the wall where they used to hang, but the mirror originally hung where the dining room door now is. This door was cut through in the 1920s. Before that, as in many of the early California houses, one walked along the porch to reach the dining room.

Both the kitchen and dining room are board and batten construction added during Leonis' remodelling. The adobe dirt floors were discovered under modern wood flooring that has been removed. The fireplace in the dining room and stove in the kitchen provided the only heat in the house. The stove, while not original to the house, carries a date of 1875.

The stairway to the second floor used to be on the outside of the house before Leonis walled-in the rear porches. Thus, as you go up the stairs, a window in the master bedroom, on your right, opens to what is now a hall. The protruding nails in the upstairs hall rafters were used for hanging grapes to dry them into raisins.

Originally there had been only the traditional outhouses. In the 1920s, the then owner of the house built a frame addition along the north (freeway) side, in which two bathrooms were included. This addition was removed when the house was restored, and a small bedroom converted into a bathroom. Old fashioned fixtures have been installed, such as the copper-lined, walnut panelled bathtub, which dates from 1880.

The furniture in the master bedroom was very similar to what you see there. There were no closets in any of the bedrooms. Clothes were hung on the walls or stored in drawers or gaily decorated chests.

Outside, at the northwest corner of the house, a large Mexican "beehive oven" with a shed over it for protection from the rain, was used to bake bread. The present oven and shed have been reproduced from descriptions furnished by persons who saw the original ones.

The barn was built in 1912 to replace an early barn and blacksmith shop that stood across Calabasas Road, and that burned. A well, windmill and tank house (that was also used for wine-making) stood at the southeast corner of the house. The original well has been located and its decaying redwood lining replaced. A replica of the windmill has been built. The tank house you see was found on an old Van Nuys ranch and the wood tank belonged to the first Calabasas school house.

THE LEONIS ADOBE IS EASY TO REACH.....

The Story of the Plummer House 19-173142

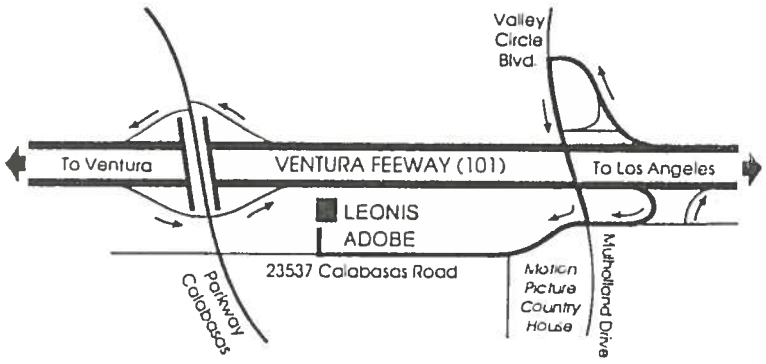

Until it was moved to the Leonis Adobe grounds in 1983, the Plummer House stood in Plummer Park, West Hollywood, where it was known as the "oldest house in Hollywood". In 1957 it was designated as State Historical Landmark No.160.

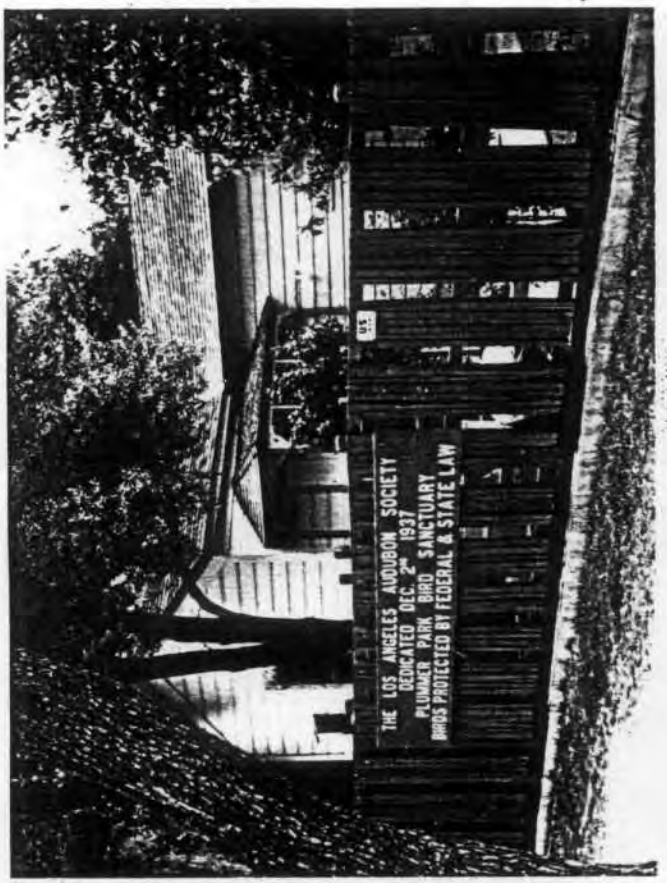

In 1826 Plummer park was a part of the enormous Ranch La Brea, granted by Governor Echandia to Antonio Rocha. The rancho was sold several times until most of it was owned by Major Henry Hancock. The ranch became famous for its tar pits and skeletons of prehistoric animals.

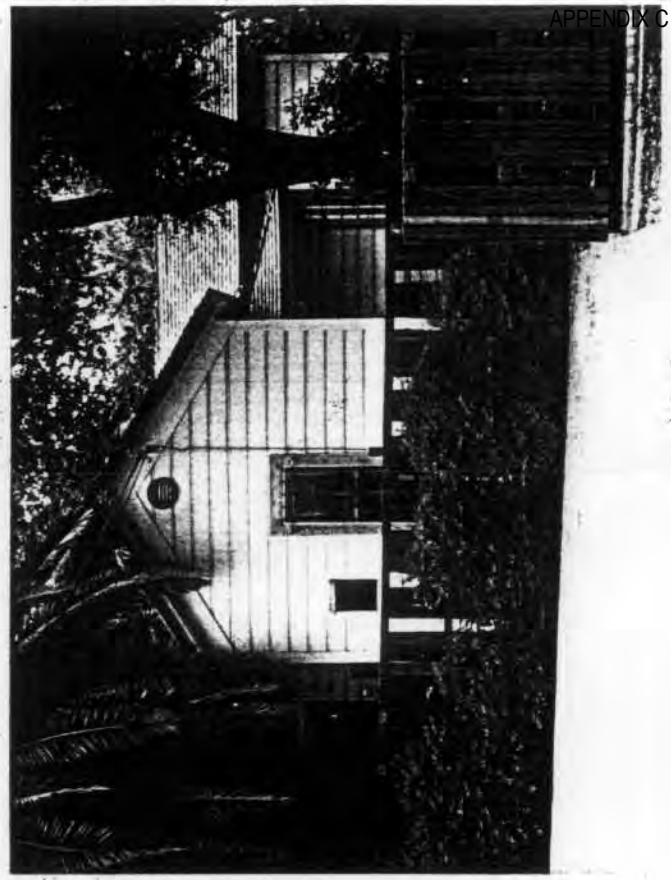

The part which became "Plummer Park" was held by Señora Perez as a squatter until 1873, when the ranch was re-surveyed by the U.S. Government. As a result, Señora Perez lost her holdings. The Plummers acquired title from her in 1874 to 160 acres, and soon after built this house and a large barn. John Plummer was a sailor and sometimes was gone for two to three years at a time, so the family made a living mostly by growing fresh vegetables for the Los Angeles market.

The Plummers and the Leonis's were acquainted, as were most of the landholding families in those days. Eugenio Plummer visited the Leonis family in 1873, as a teen-ager, when the Leonis's were still living on Rancho El Escorpion. He reached under a building for a stray ball and was bitten by a scorpion. Espiritu treated the wound and Eugenio survived. Eugenio tells about Espiritu visiting the Plummers, playing Spanish Whist and telling about the olden days. Juan Menendez, Espiritu's son, wrote in his diary of visits by him and his mother to the Plummers in 1897 and in 1902. As the town of Hollywood grew, the 160 acres dwindled down to 21 1/2 acres and, in 1937 Eugenio Plummer was about to lose even that to foreclosure. Los Angeles County bought the property, named it "Plummer Park", and allowed Eugenio Plummer to live there until his death in 1943. The house was turned over to the Audubon Society and it was used by them until 1980. By then West Hollywood had changed drastically. Even though the Plummer House was in the middle of a county park, vandals set fire to it twice; the second time ruining the Audubon Society's library and exhibits, and almost destroying the house. Despite its historical landmark status, the County allowed the house to stand abandoned for over two years; large parts of the roof missing, windows and doors destroyed, the inside filled with trash. Then they applied for a permit to tear it down.

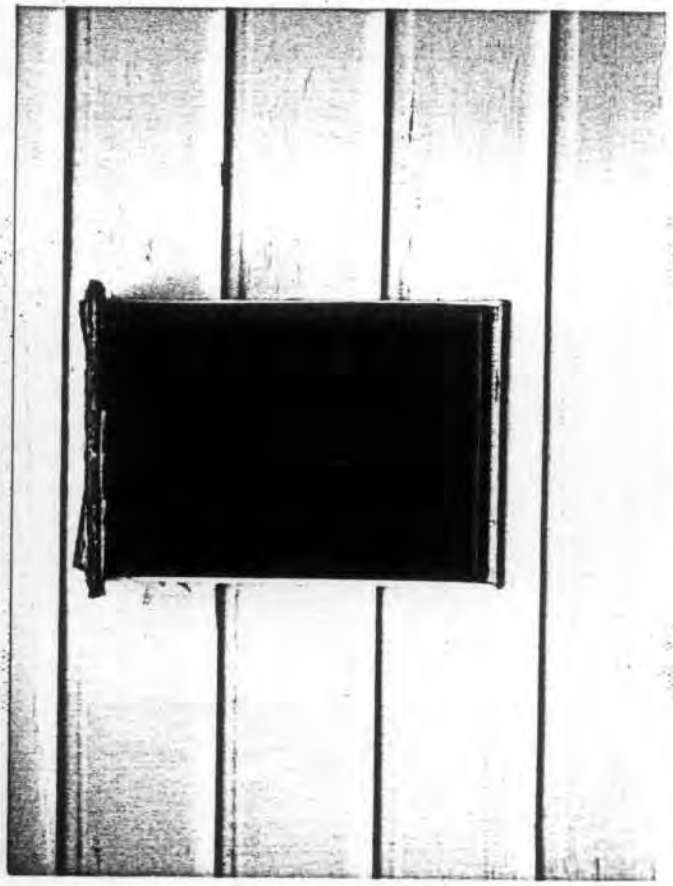

The Leonis Adobe Association learned of this from the Los Angeles Conservancy, and arranged with the County to move the front portion (the rear being too heavily damaged) to the Leonis Adobe grounds. Since 1983 the Association has repaired, restored and refurnished the house into a Visitors Center for the Leonis Adobe. We hope that you enjoy it.

   City Beverly Hills Zip 90211 Ownership is: Public ____ Private X
6. Present Use: Theatre/ Commercial Original use: Theatre/ Commercial

DESCRIPTION

7a. Architectural style: Zigzag Moderne

7b. Briefly describe the present *physical description* of the site or structure and describe any major alterations from its original condition:

The Four Star Theatre Building is a tall, one-story, stucco over concrete, corner structure. The facade features attached piers with flat capitals decorated with stylized plants and zigzags. The capitals project above the roof edge and give the roof line a crenelated effect. Infill between the piers consists of decorative cast metal grilles and a cornice band that continues the decorative theme of the capitals. The building's corner section is raised and has a cornice band of a high-relief zigzag pattern. The theatre's roofline is accented by a vertical pier to which are attached additional stepped forms accented by vertical lines. The vertical pier is symmetrically framed by two bas-relief panels with zigzag top edges representing "Artistry" and "Unity."

Street level store and theatre frontage has been substantially altered.

8. Construction date: Estimated ____ Factual 1932

18. Related features: Numerous Art Deco structures are in this area.

SIGNIFICANCE

19. Briefly state historical and/or architectural importance (include dates, events, and persons associated with the site.)

The Four Star Theatre opened its doors on November 29,1933. The theatre was to be devoted exclusively to "outstanding achievements of the picture industry." Today, the structure still serves as a theatre and commercial space.

Typical of other 1930s structures on Wilshire, large plate glass windows for storefronts cater to automobile shoppers. Architecturally, the structure contributes to Wilshire Blvd. as an Art Deco historical district.

Street furniture includes four brass stars imbedded in the sidewalk in front of the theatre as well as Classical double-luminaire lampposts.

6. Present Use: theater/commercial Original use: Bleachers

DESCRIPTION

7a. Architectural style: Art Deco

7b. Briefly describe the present *physical appearance* of the site or structure and describe any major alterations from its original condition:

This Art Deco building is located on Wilshire Boulevard between Mansfield Drive and Orange Avenue. The design of the building stresses its verticality. There is a stepped roof accentuated by the use of columns of varying sizes. The geometric form is clear. Part of the building is used for retail purposes. There have been alterations for this use, as well as to the theater entrance.

18. Related features: accessory parking on Mansfield

SIGNIFICANCE

19. Briefly state historical and/or architectural importance (include dates, events, and persons associated with the site.)

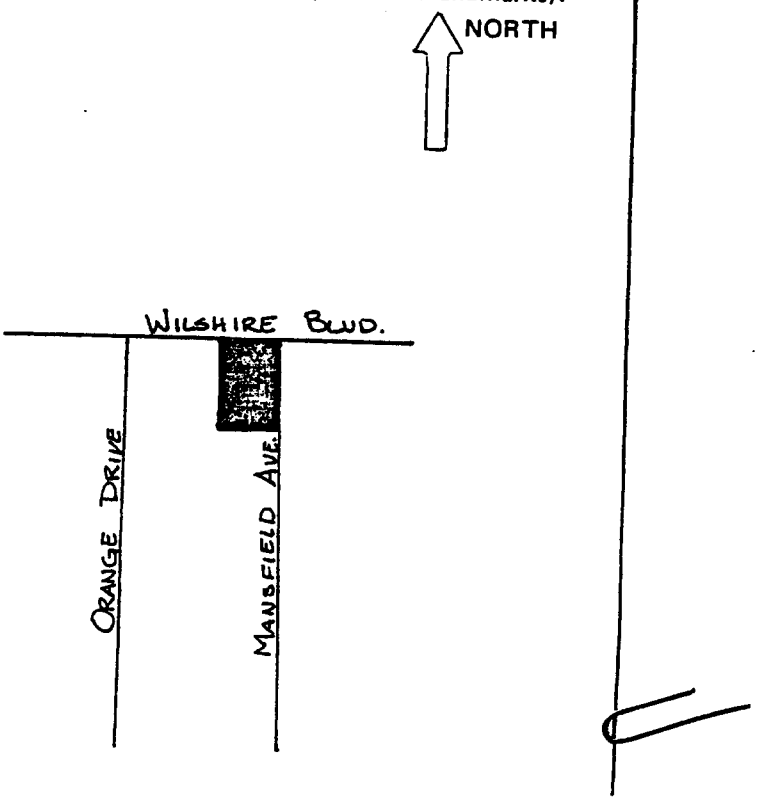

This theater is significant due to its design. The theater was built in 1937 but the original structure was used for bleachers. The theater is also significant for its contribution to the arts. Although there have been alterations to the structure, its Art Deco style is most noteable. It is located just east of the Miracle Mile Historic District which contains the greatest collections of Art Deco buildings in Los Angeles.

DESCRIPTION

7a. Architectural style: California Bungalow

7b. Briefly describe the present *physical description* of the site or structure and describe any major alterations from its original condition:

This group of 14 residential buildings and two garages is located on 1.6 acres of both flat and hillside terrain. A private road leads into the clustered development. The houses are connected by pathways and heavily surrounded by trees and shrubs. The houses are both one and two stories in height including some with basements built into the hillside. The majority of buildings have low pitched gable roofs with offset clipped gables over the porch. Exposed rafters and decorative brackets are found under the broad eaves. The porches contain the main decorative features with square capped columns and brick railings or trim. Most houses have exterior brick chimneys. Siding is clapboard ranging from medium to narrow. Shingles are used in some cases. Windows are typical of the bungalow style with many three part windows (one large fixed window flanked by two smaller windows). The Dutch Colonial Revival influence is seen in the house at 2103 with its gambrel roof. The houses have maintained their integrity over the years with very few changes or additions. Also contributing to the village are the many stone walls, a large painted mural and a small wooden sign tacked to a tree near the entry to the village.

8. Construction date: 1916-1924

Public Works project ___ Other: CDBG funded rehabilitation project

17. Is the structure: On its original site? X Moved? ___ Unknown? ___

18. Related features: many mature trees (see separate list), two garages

SIGNIFICANCE

19. Briefly state historical and/or architectural importance (include dates, events, and persons associated with the site.)

The Highland-Camrose Bungalow Village is historically significant for the role it played in providing housing for members of the burgeoning new Hollywood movie industry. Built between 1916 and 1924, these modest residences provided temporary housing in a convenient location. The Cahuenga Pass trolley ran a line down Highland Ave. with a direct access to the movie studios.

The village was developed by Horace W. Field, who purchased the land in 1914-15 from real estate promoter Charles E. Toberman. The land was part of the Hollywood Ocean View Tract recorded in 1901. Mr. Field lived at the village and leased the residences to movie industry people over the years. The Field family owned the property until it was sold to the present owners in the 1960s. Many artists including actors, writers, musicians and directors have made the village their home and continue to do so today. The secluded and quiet atmosphere next to a large metropolitan area is a rarity today.

Phone: (805) 525-1909

Locational sketch map (draw and label site and surrounding streets, roads, and prominent landmarks):

19. (Continued)

In addition the village is part of a larger area of historically and architecturally significant buildings. North of the village is the Hollywood Bowl, listed on the National Register of Historic Places. To the east is the Hollywood Studio Museum, a California State landmark and Whitley Heights, listed on the National Register of Historic Places, and to the west is the Hightower District.

Architecturally the Highland-Camrose Bungalow Village is significant for it is the only known clustered hillside bungalow development of its type remaining in the Los Angeles area. It differs from the traditional bungalow court that was laid out symmetrically with the bungalows in two rows divided by a walkway down the center.

Also the significance of this cluster of bungalows is seen in the strength of their relationship to their heavily planted hillside location. Their connection to each other through pathways (some now removed) provides both intimacy and a sense of community. Although clustered in a somewhat random arrangement (see map), the houses are very close together, yet the placement of windows gives each unit its own sense of privacy. The effect of the whole is similar to a very small village in a wood like setting.

Many mature trees and shrubs (see list of varieties and age) remain and are important contributors to the overall effect of the bungalow village. A large mural, painted in the 1970s, is located on the upper level wall across from the bungalow at 2109. This is an important contributor, along with the stone walls and walkways.

Building permits indicate that all of the bungalows were built by contractor Lee Campbell except for two. The house at 2105 was built by George L. Field, contractor. The house at 2111 was built by architect/contractor Taylor Brothers of Los Angeles. It is thought that the Taylor Brothers residence (the second house built in the village-2111) influenced the style of the remaining buildings constructed by Lee Campbell, contractor.

The Taylor Brothers, listed in Who's Who in Los Angeles County and in the Biographical Dictionary of American Architects by Henry Withey, are considered prominent Los Angeles architects.

The Highland-Camrose Bungalow Village (except for 6809-11 Camrose Dr.) was declared a Historic-Cultural Monument by the Los Angeles Cultural Heritage Board in 1985. I have included the residence at 6809-11 in the boundaries because it was originally built for Mr. Field by Lee Carpenter before it was sold off. It is now in the process of being purchased by the County of Los Angeles along with the rest of the properties in the district. It is also built in the same style as the other bungalows in the village.

19-173264
027324

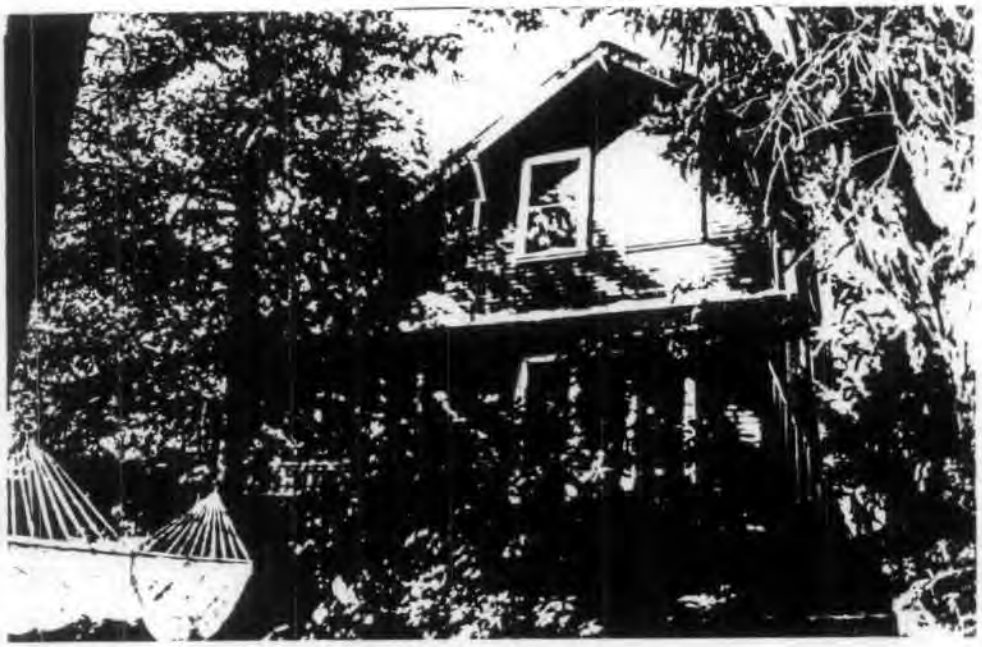

6809-6811 Camrose Dr.. This two story residence was built as a duplex. It is a combination of one and two stories with two entries symmetrically placed. Each attached porch has a clipped gable roof supported by square brick columns and railing. The two story portion has a side facing clipped gable roof with exposed rafters and knee brackets. The one story portion is a front facing clipped gable roof. Siding is of narrow clapboards. An outside wood stairway has been added. The house also has a detached hip roof garage with exposed rafters. The building permit that appears to fit the description of this structure is dated June 25, 1920. It lists a two-story, ten room residence for two families built for H.W. Field by contractor Lee Campbell. The address was given as 2101 Highland Ave. According to the Assessor's Map Book #269, p. 18, 1912-21, H.W. Field then sold this property (Lot 29 on current Assessor's Map) to Elizabeth Comstock. The 1924 Los Angeles City Directory lists Elizabeth Comstock as living at 2219 Sycamore Ave.(the old address for 6809 Camrose Dr.) The property was sold in 1920. #1

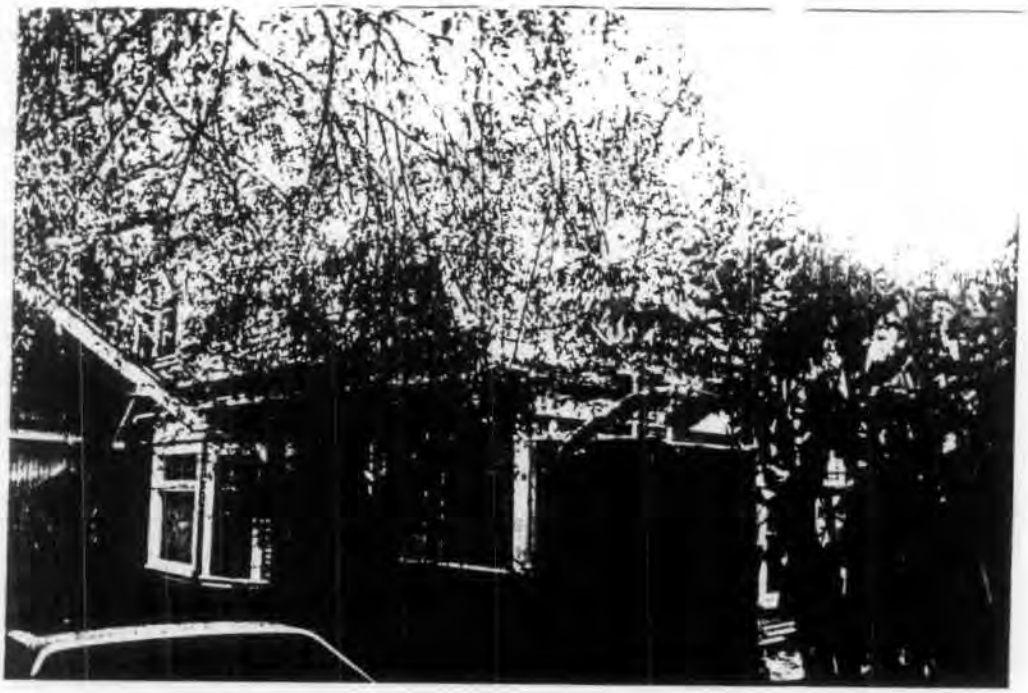

19-173265
027335

6819 Camrose Dr.. This bungalow faces onto Camrose Avenue. It is very similar to five other houses - 2103 1/2, 2105 1/4, 2113, 2115, 2115 1/2, with its side facing gable roof with offset clipped gable, brick chimney, narrow clapboard siding and exposed rafters and knee brackets. A small hip roof supported by square columns (now missing) is located over the entry. The house is presently vacant and the windows and doors are boarded up. I could find no building permit for this house. #2

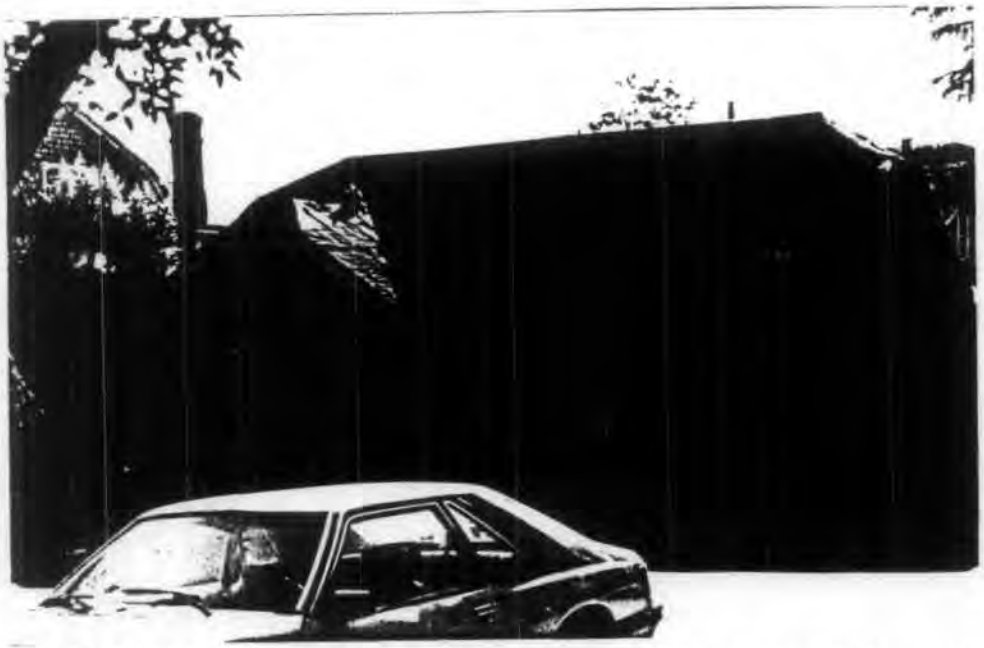

19-173260
027336

2122 Woodland Way This two story hillside residence has a steep stairway leading up from Woodland Way and is located at the top of the hill. It has an unusual steep pitched sloping gable roof on one side. A low hip roof divides the first and second story. The porch is open with a brick wall, concrete cap and decorative carved wood balustrade. The front entry is flanked by sidelights. Knee brackets and exposed rafters are found under the eaves. Siding is of narrow clapboard. A later shed roof porch addition with wood piers is located above the Woodland Way entrance. This house has also been listed as 2109 1/2 N. Highland Ave. Building permits show the house was completed

19-173267
027337

2103 N. Highland Ave. This 1 1/2 story house shows the Dutch Colonial Revival influence with its gambrel roof. A slanted bay window is located at the side of the house. The lower portion of the house had a small hip roof attached dividing it from the second floor portion. A sleeping porch extends out from the rear of the second floor and is supported by square wood columns. The foundation of the large chimney is of cobblestone with the remainder of brick. #4

19-173268
027338

2103 1/2 N. Highland Ave. This single story residence is similar to five others previously mentioned under 6819 Camrose Dr. It has the side facing clipped gable roof with offset front gable over the porch. Under the eaves are exposed rafters and knee brackets. Siding is narrow clapboards. This house has a single garage in the rear built in the same style as the house. The building permit lists a residence and garage completed on October 21, 1919 for H.W. Field by Lee Campbell, contractor. The address given is 2103 but the description of the one story building with garage fits 2103 1/2. This house and the house above at 2103 apparently sold off by H.W. Field in 1921 to Edw. E. Kirtlan. The lot is the present #5 Assessor's map #28. The Assessor's Map Book #297, p. 8 shows an improvement

PH732609
027329

2105 N. Highland Ave. This single story residence has a side facing gable roof with offset front gable over the recessed porch. The porch is supported by square columns. Exposed rafters are found under the eaves. Two square bay windows are attached to the front of the house and supported by diagonal braces. A temporary enclosure has been added to one of the windows. The front porch has a more recent wrought iron railing addition. Siding is medium narrow clapboards. The garage is attached to the rear of the house. A mural of a horse is painted on the sliding garage door. A triangular walled addition has been built around the tree and attached to the garage. The house has a brick chimney. Building permits indicate the house was completed on March 30, 1917. The architect/contractor was George L. Field. #6

Rear of house showing garage, mural and addition.

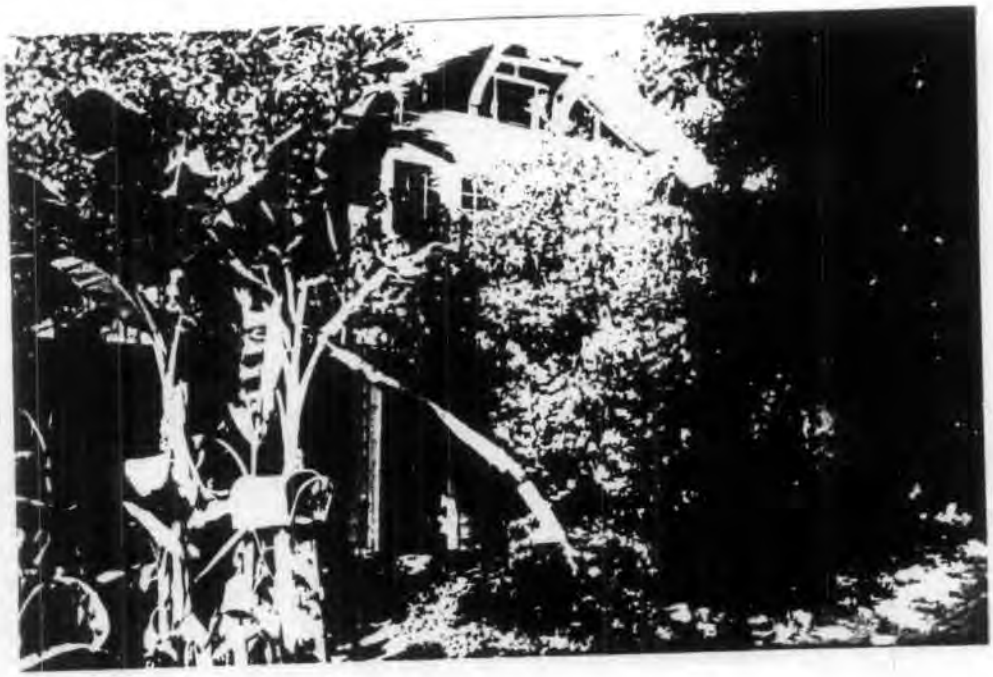

19-173270
027340

2105 1/4 N. Highland Ave. This single story residence, similar to the previously mentioned five bungalows listed under 6819 Camrose, has a side facing gable roof with offset clipped gable over the recessed entry. The porch has square capped columns and a low brick stair railing and porch foundation. The chimney is also of brick. The house is now vacant and the windows and doors boarded up. I could find no building permit for this house. #7

19-173271
027341

2105 1/2 N. Highland Ave. This bungalow has a regular medium pitched gable roof with a shed roof dormer. Exposed beams and rafters are found under the eaves. The attached porch has raised brick steps and railing with tapered capped wood columns. Another porch or what may have been a pergola is located at the side of the house and has a brick foundation and supports with wood railing. The part of the porch that has been removed includes the roof, columns and part of the wood railing. Siding is of medium clapboards. Decorative vertical slats are found under the gable and in the dormer. There is a building permit for 2105-A. It is uncertain if it is for this house or for 2105 1/4. The permit was issued in 1920 to H. W. Field and the contractor was Lee Campbell. #8

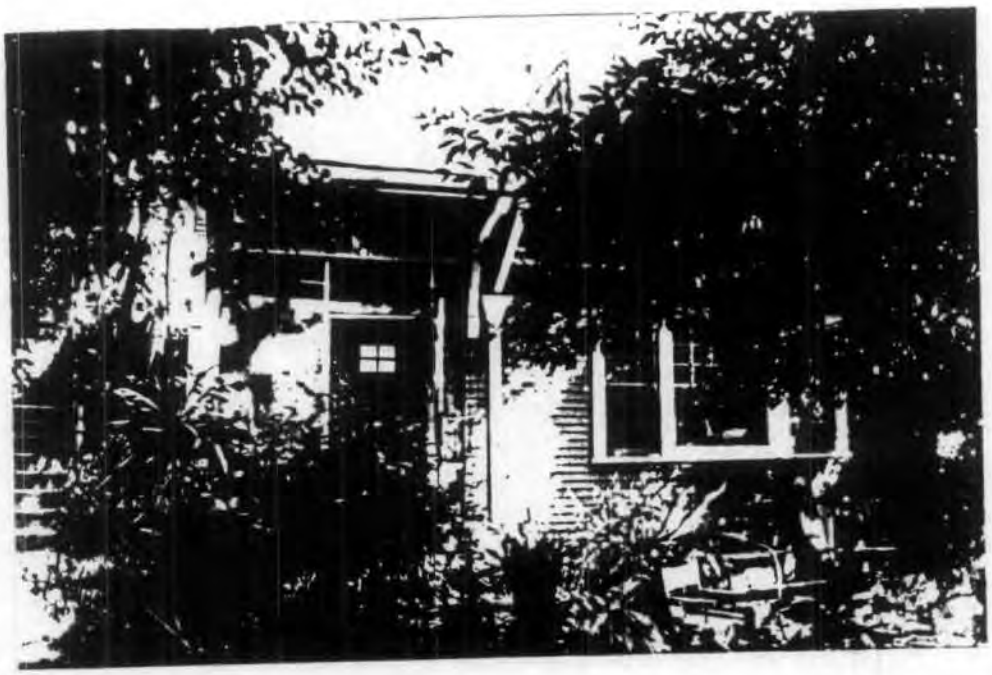

19-173272
027342

2107, 1/2, 1/4 N. Highland Ave. This residence has two stories. The main portion of the house is on the second level and has a brick and stucco stairway leading up to the front porch. The clipped gable roof has exposed beams and decorative brackets. There is a separate entry for the lower level. Siding is of wide clapboards. The house has been altered on the interior from a one family residence to three units. A large bay window is located at the side of the house. Building permits indicate the house was completed on June 6, 1922 by architect/contractor Lee Campbell. #9

19-173273
027343

2109 N. Highland Ave. Built against the hillside, this bungalow has a basement portion. The house has a modified L-shape with an offset clipped gable roof. Under the eaves are knee brackets and rafters. Siding is of medium narrow clapboards. The only porch is a small concrete stoop with wrought iron railing. There is a building permit for 2115 1/2 completed in January of 1924. The Sanborn Map (1954 update) indicates this residence also had this address as well as 2109. However, this house appears to have no chimney and a brick chimney is listed on the permit. #10

LA-173274
027344

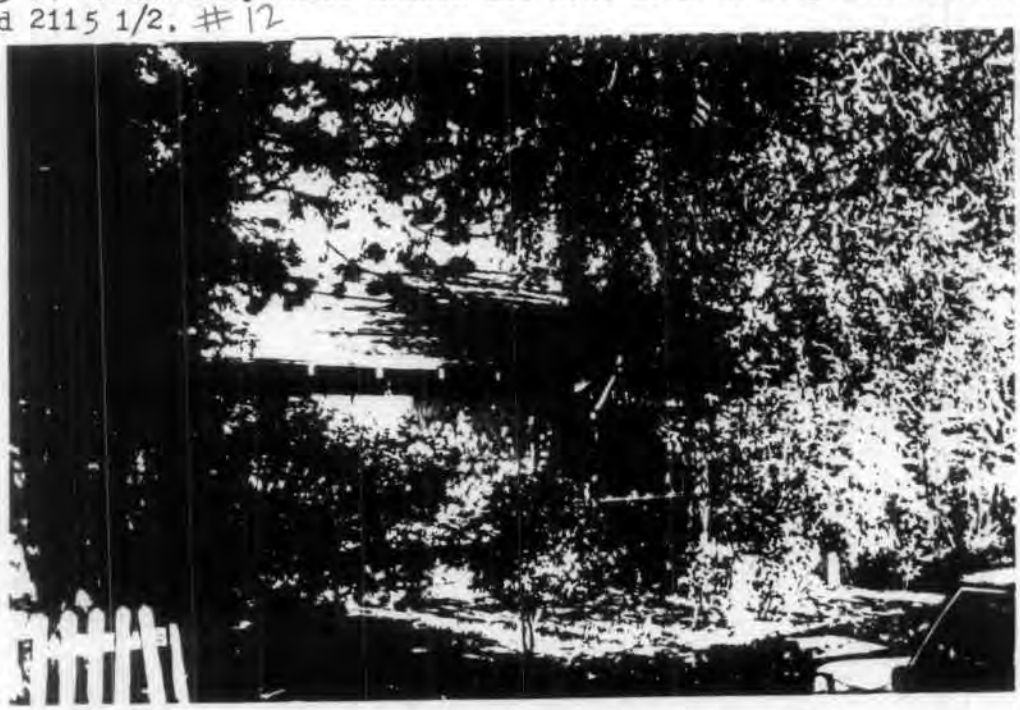

2111, 2111 1/2 N. Highland Ave. This is a combination one and two story residence built against the hillside. The roof is a clipped gable with decorative knee brackets under the eaves. Siding is narrow clapboard and the chimney is of brick. A small hip roof covers the front window. The entry is recessed on one side of the facade. The single story portion across the front has a flat roof with a balcony. Building permits indicate this house was completed on Jan. 22, 1918. The architect was Taylor Brothers of Los Angeles. They were also listed as the contractor. #11

19-173275
#027345

2113 N. Highland Ave. This single story residence, similar to the addresses mentioned under 6819 Camrose, has a side facing gable roof with offset front gable. The porch is recessed to one side with square capped wood columns and brick trim. Knee brackets and exposed rafters are found under the eaves. The porch has french windows and a french door. Siding is of medium narrow clapboards. Building permits show that this house was completed in May of 1919 by contractor Lee Campbell. Two other identical houses were completed at the same time and listed as 2113 A and 2113 B. Presumably these houses are next door to 2113 and now listed as 2115 and 2115 1/2. #12

19-173276
027346

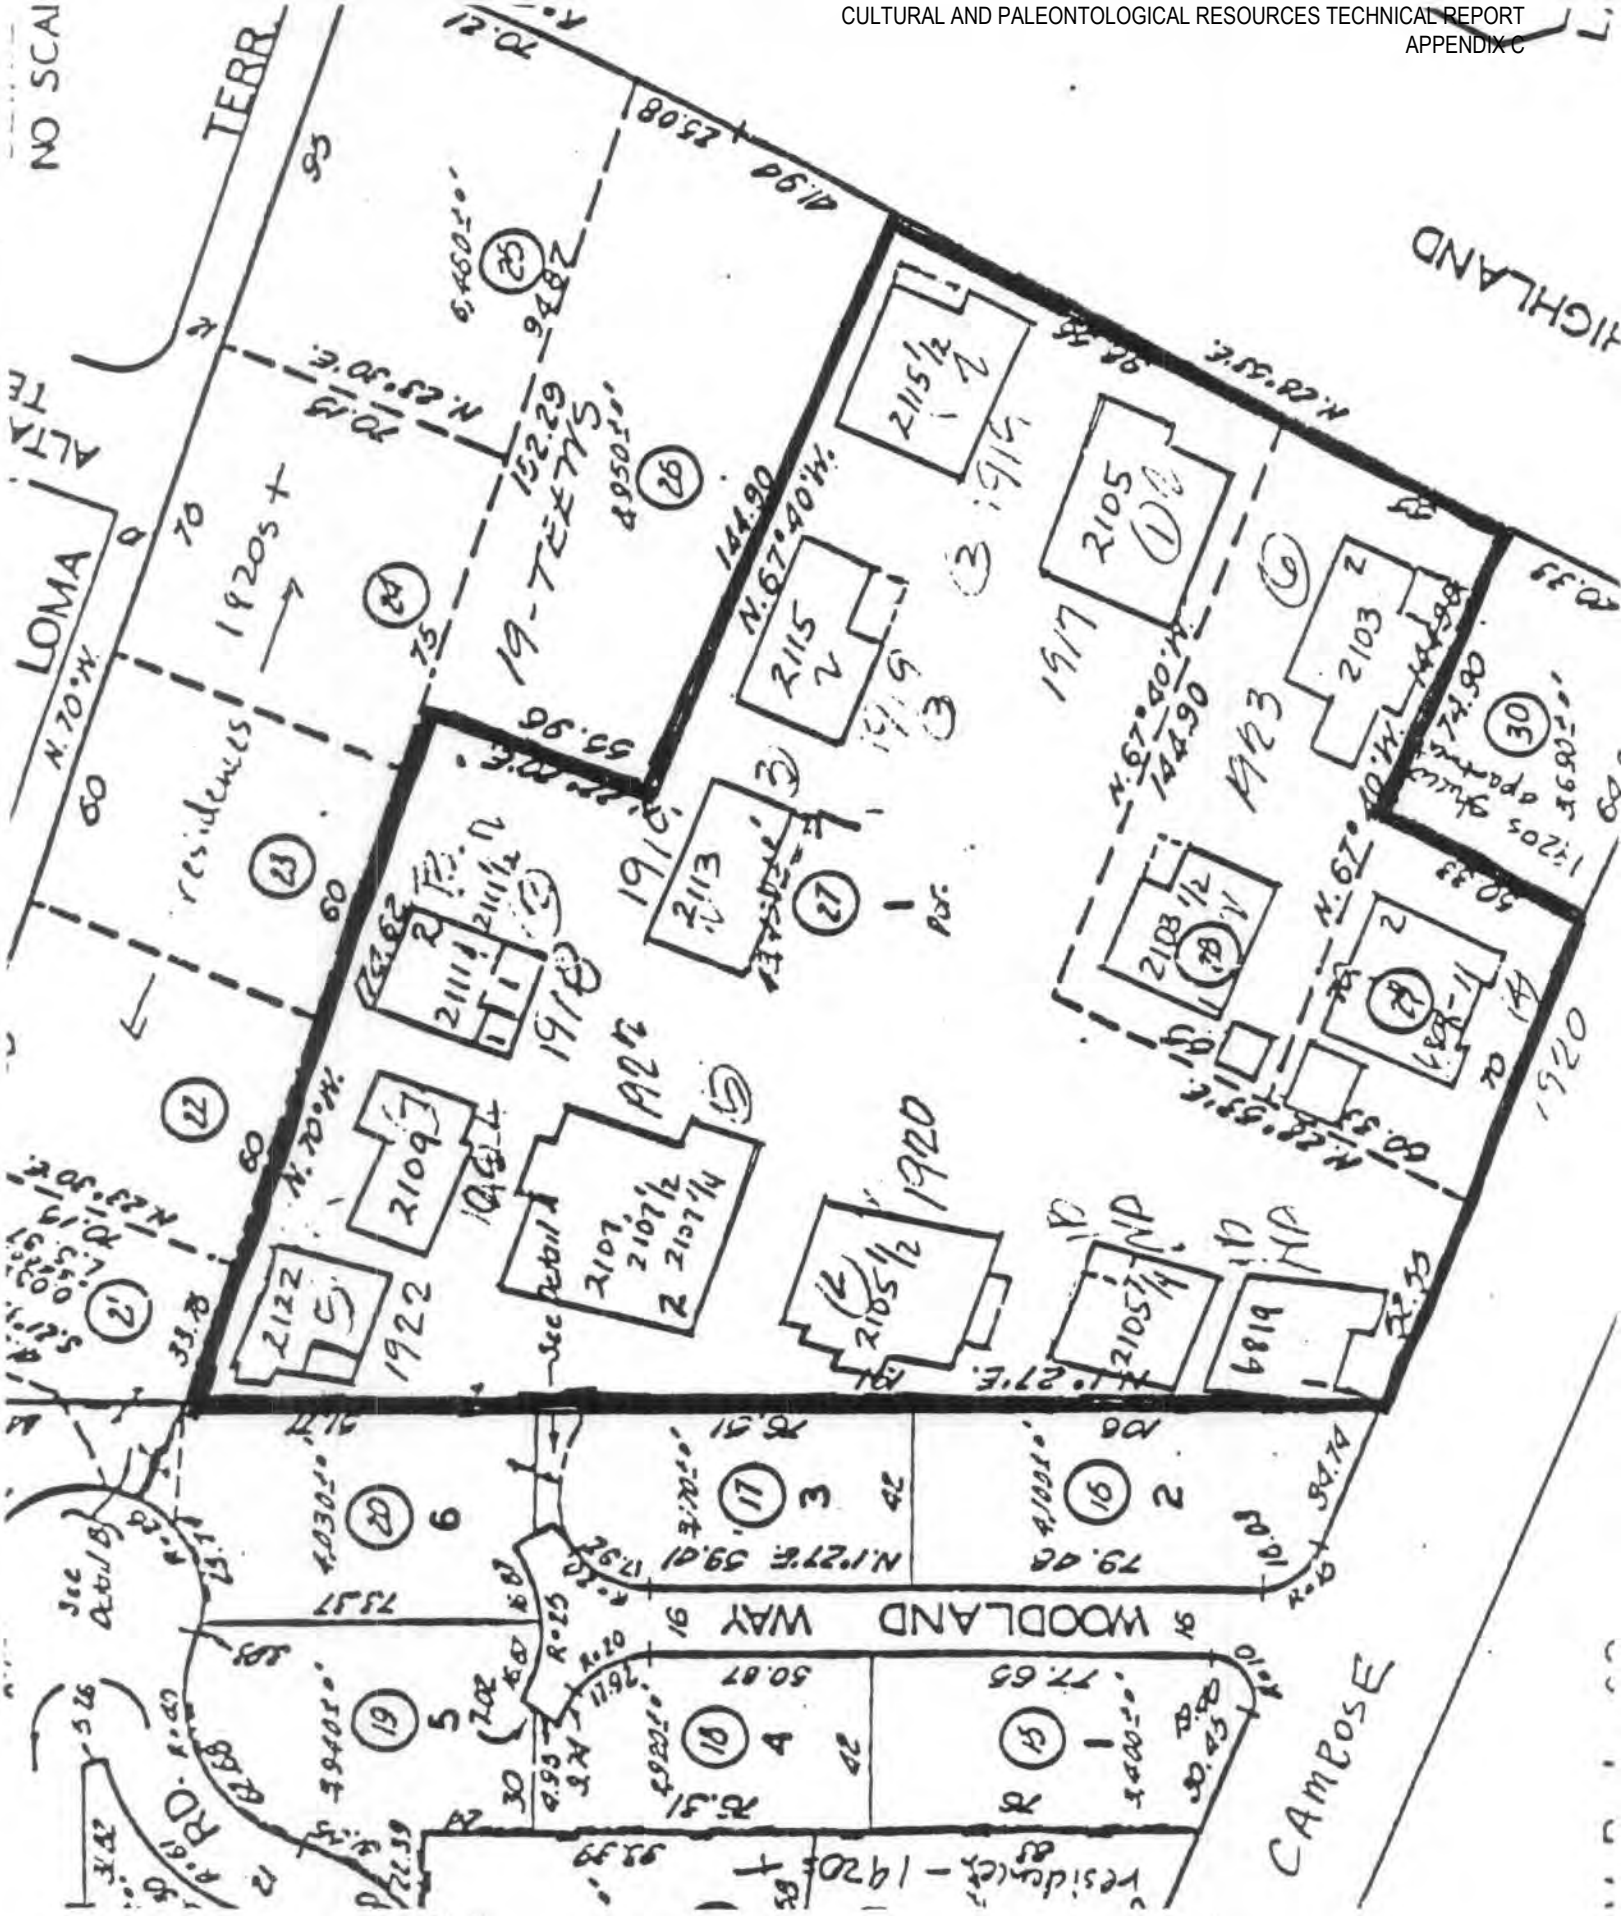

2115 N. Highland Ave. This single story residence is similar to the previously mentioned houses under 6819 Camrose and 2113 Highland. It has the offset clipped gable over the porch. The windows and doors have been boarded up. Exposed rafters and knee brackets are located under the eaves, and siding is of narrow clapboards. The house, according to building permits, appears to have been completed in 1919 by contractor Lee Campbell. #13

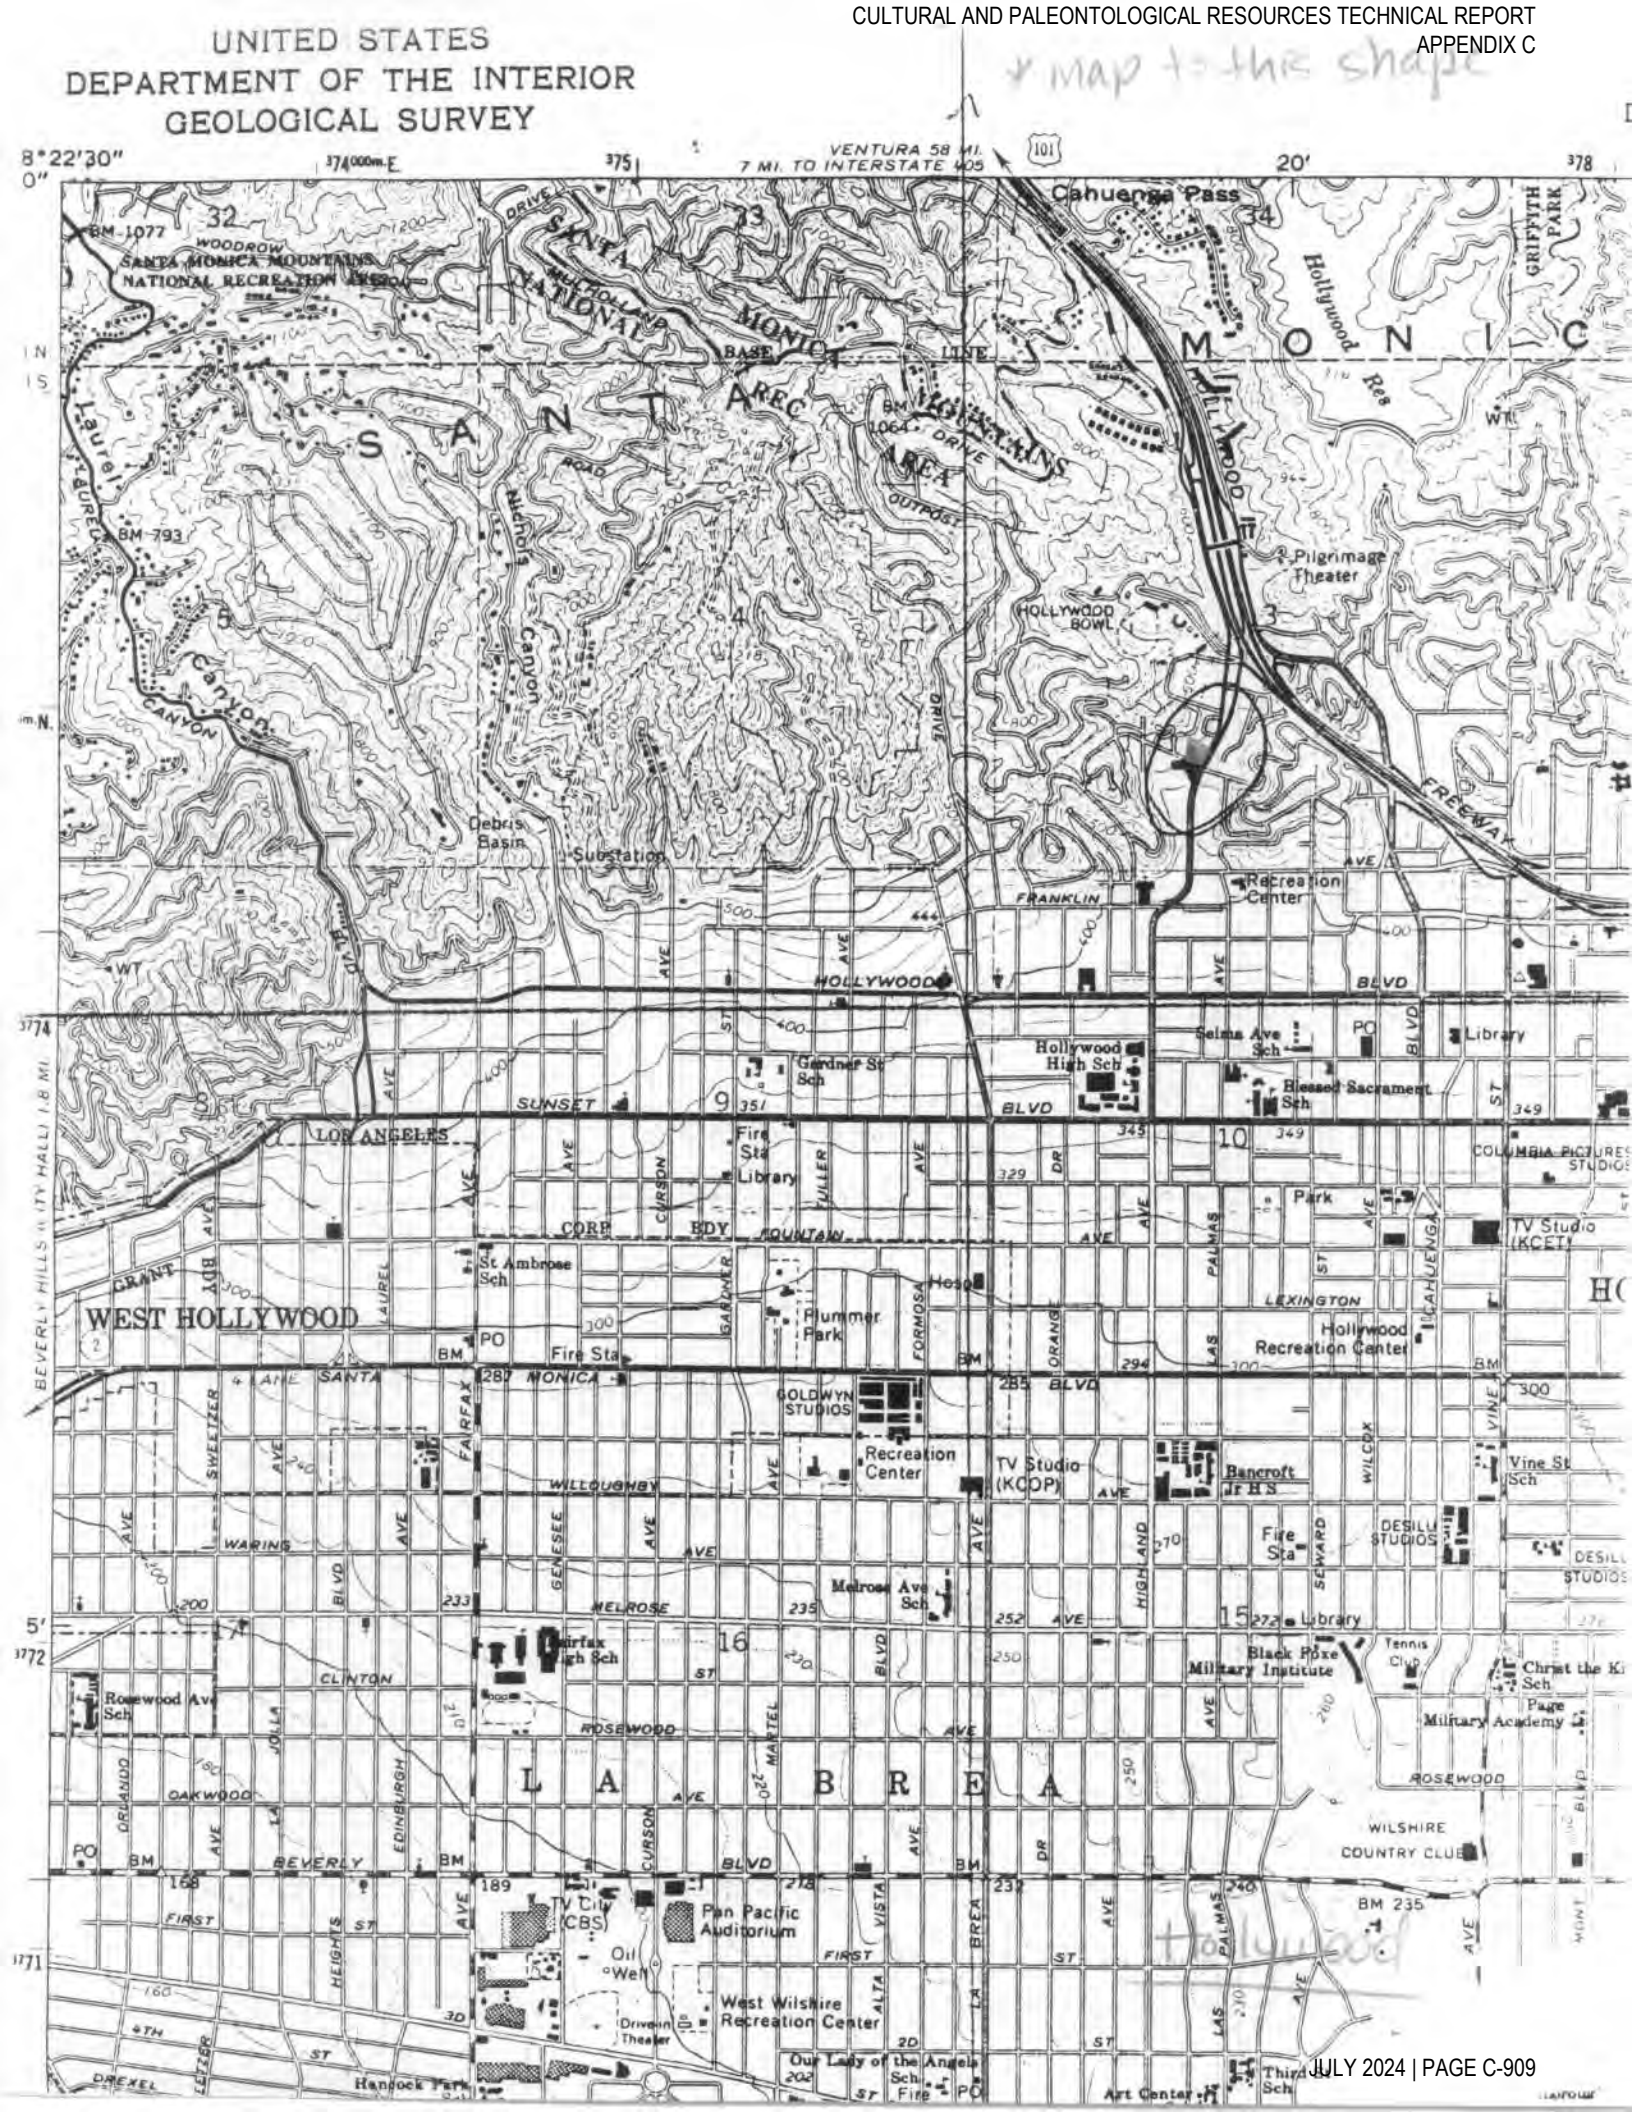

19-173277
027247

2115 1/2 Highland Ave. This house (side view) is similar to the previous residences listed under 6819 Camrose and 2113 N. Highland. It has a clipped gable roof, narrow clapboard siding and brick chimney. According to building permits, it was completed in May of 1919 by contractor Lee Carpenter. This house has suffered fire damage. #14

Highland-Camrose Bungalow Village
Staff Evaluation

The Highland-Camrose Bungalow Village consists of 16 small, wood-frame buildings sited in an irregular pattern on a heavily landscaped hillside lot. Craftsman, Colonial Revival and Dutch Colonial Revival styles are all represented. The district has been visited on two occasions by OHP staff. (Aaron Gallup: 1985; Cynthia Howse and Maryln Lortie: 1988) Integrity is high, although fire has damaged 2115 1/2 Highland Avenue. The fire was confined mostly to the interior and the building still retains most of its original appearance. None of the bungalows has suffered extensive alterations on the exterior.

While no individual bungalow is remarkable in appearance, the overall impact of the collection is very picturesque. This is a complex of modest rental housing, yet so well designed and landscaped that each cottage appears to have its own lush garden setting. A "windshield survey" of Hollywood revealed only a few other examples of this type of complex, and the Highland-Camrose village is the largest, most intact and best landscaped. In 1985 the village was made a Los Angeles Cultural Heritage monument as an outstanding example of hillside bungalow housing -- an uncommon departure from the more standard and uniformly arranged "bungalow court."

The village appears to be eligible under Criterion C. Staff recommends listing at the local level of significance.

Maryln Bourne Lortie
October 25, 1988

Note: The first line of Section 8 should read: "Architecturally, the Highland-Camrose Bungalow Village is significant for it is the best example of clustered hillside bungalow development remaining in Hollywood." The original of the nomination has been corrected.

Subject: Highland-Camrose Bungalow Village

Dear Ms. Gualtieri:

Since the Highland-Camrose Bungalow Village, 2103-2115½ North Highland and 6819 Camrose, is Historic-Cultural Monument 291, I am happy to see that it has been nominated to the National Register of Historic Places. This complex is representative of the Colonial Revival vernacular constructed during the prime period of Hollywood's development.

I look forward to your determination of National Register status, since I feel this designation would help to ensure continued preservation of this property.

Cordially,

The National Register of Historic Places Program is administered in California by the State Office of Historic Preservation. The property indicated above was placed on the National Register March 16, 1989.

Placement on the National Register affords a property the honor of inclusion in the nation's official list of cultural resources worthy of preservation and provides a degree of protection from adverse effects resulting from federally funded or licensed projects. Registration provides a number of incentives for preservation of historic properties, including special building codes to facilitate the restoration of historic structures, and certain tax advantages. There are no restrictions placed upon a private property owner with regard to normal use, maintenance, or sale of a property listed in the National Register; however, proposals to demolish registered properties may require a standard review in compliance with local ordinances or the California Environmental Quality Act.

Sincerely,

Kathryn Gualtieri

Dear Mrs. Gualtieri:

The Los Angeles County Historical Landmarks and Records Commission is requesting a copy of the complete application to the National Register of Historic Places for the Highland-Camrose Bungalow Village. This was considered by the State Historical Resources Commission at its November 4, 1988 meeting. The address is:

Highland-Camrose Bungalow Village
Camrose Drive & Woodland Way
Vicinity of Hollywood Bowl
Los Angeles, California 90068

We understand that it was revised. Please send a copy to the Los Angeles County Historical Landmarks and Records Commission, 500 W. Temple Street, Room 383, Los Angeles, California 90012, Attention: Mary Blair.

If you have any questions or comments, I can be reached at (213) 974-1431.

Very truly yours,

Mary E. Blair

Please see attached list of properties.

We are pleased to inform you that the above property will be considered by the State Historical Resources Commission for nomination to the National Register of Historic Places. The National Register is the Federal Government's official list of historic buildings and other cultural resources worthy of preservation. Listing in the National Register provides recognition and assists in preserving our Nation's heritage. Enclosed is a copy of the criteria under which properties are evaluated.

Listing in the National Register provides the following benefits to historic properties:

—Consideration in the planning for federally assisted projects. Section 106 of the National Historic Preservation Act of 1966 provides that the Advisory Council on Historic Preservation be given an opportunity to comment on projects affecting such properties.

—Eligibility for Federal tax benefits. If a property is individually listed in the National Register, or determined a contributing structure within a National Register district, certain tax provisions may apply. The Tax Treatment Extension Act of 1980 includes provisions regarding charitable contributions for conservation purposes of partial interests in historically important land areas or structures, including archeological sites and private residences. The Tax Reform Act of 1986 contains provisions intended to encourage preservation of depreciable historic structures by allowing favorable Federal tax provisions for rehabilitation. Beginning January 1, 1987, the Tax Reform Act of 1986 replaces the rehabilitation tax incentives available under prior law with a 20% investment tax credit for rehabilitations of certain historic commercial, industrial, and residential rental buildings.

—Consideration of historic values in the decision to issue a surface coal mining permit where coal is located, in accord with the Surface Mining and Control Act of 1977.

—Qualification for Federal grants for historic preservation when funds are available.

Owners of private properties nominated to the National Register of Historic Places must be given an opportunity to concur in or object to listing in accord with the National Historic Preservation Act Amendments of 1980 and Federal regulations 36 CFR Part 60. Any owner or partial owner of private property who chooses to object to listing is required to submit to the State Historic Preservation Officer a notarized statement certifying that the party is the sole or partial owner of the private property, as appropriate, and objects to the listing. For a single privately owned property with one owner, the property will not be listed if the owner objects. In nominations with multiple ownership of a single property, the property will not be listed if a majority of the owners objects. Each owner or partial owner of private property has one vote regardless of what part of the property that party owns. If the property cannot be listed because the owner or a majority of owners objects prior to the submission of a nomination

The Tax Treatment Extension Act of 1980 includes provisions regarding charitable contributions for conservation purposes of partial interests in historically important land areas or structures, including archeological sites and private residences. The Tax Reform Act of 1986 contains provisions intended to encourage preservation of depreciable historic structures by allowing favorable Federal tax provisions for rehabilitation. Beginning January 1, 1987, the Tax Reform Act of 1986 replaces the rehabilitation tax incentives available under prior law with a 20% investment tax credit for rehabilitations of certain historic commercial, industrial, and residential rental buildings.

--Consideration of historic values in the decision to issue a surface coal mining permit where coal is located, in accord with the Surface Mining and Control Act of 1977.

--Qualification for Federal Grants for historic preservation when funds are available.

Owners of private properties nominated to the National Register of Historic Places must be given an opportunity to concur in or object to listing in accord with the National Historic Preservation Act Amendments of 1980 and Federal regulations 36 CFR Part 60. Any owner or partial owner of private property who chooses to object to listing is required to submit to the State Historic Preservation Officer a notarized statement certifying that the party is the sole or partial owner of the private property, as appropriate, and objects to the listing. For a single privately owned property with one owner, the property will not be listed if the owner objects. In nominations with multiple ownership of a single property, the property will not be listed if a majority of the owners objects. In the case of a district nomination, the district will not be listed if a majority of the owners objects to listing. Each owner or partial owner of private property has one vote regardless of how many properties or what part of one property that party owns. If the property or district cannot be listed because the owner or a majority of owners objects prior to submission of a nomination by the State, the State Historic Preservation Officer shall submit the nomination to the Keeper of the National Register for a determination of the eligibility of the property or district for inclusion in the

The above property will be considered by the State Historical Resources Commission for nomination to the National Register of Historic Places. The National Register is the Federal Government's official list of historic buildings and other cultural resources, worthy of preservation. Listing in the National Register provides recognition and assists in preserving our Nation's heritage. Enclosed is a copy of the criteria under which properties are evaluated.

Listing in the National Register provides the following benefits to historic properties:

--Consideration in the planning for federally assisted projects. Section106 of the National Historic Preservation Act of 1966 provides that the Advisory Council on Historic Preservation be given an opportunity to comment on projects affecting such properties.

--Eligibility for Federal tax benefits. If a property is individually listed in the National Register, or determined a contributing structure within a National Register district, certain tax provisions may apply. The Tax Treatment Extension Act of 1980 includes provisions regarding charitable contributions for conservation purposes of partial interests in historically important land areas or structures, including archeological sites and private residences. The Tax Reform Act of 1986 contains provisions intended to encourage preservation of depreciable historic structures by allowing favorable Federal tax provisions for rehabilitation. Beginning January 1, 1987, the Tax Reform Act of 1986 replaces the rehabilitation tax incentives available under prior law with a 20% investment tax credit for rehabilitations of certain historic commercial, industrial, and residential rental buildings.

Describe the present and original (if known) physical appearance

The Highland-Camrose Bungalow Village is comprised of 14 individually placed Craftsman Bungalows. Built in the Dutch Colonial style, they are structurally constucted of full sized redwood. The houses are balloon framed and all exhibit an originality of exterior and interior craftsman detail.

Located at the corners of North Highland Avenue and Camrose Drive in the heart of Hollywood's historical belt, the bungalows are set on 1.6 acres of land on a hillside. Mostly single family dwellings clustered around a common parking area/courtyard, the homes are surrounded by a variety of lush vegetation dating back to the original construction of the property; a very countrified sense of being.

INVENTORY OF BUILDINGS WITHIN THE HIGHLAND-CAMROSE BUNGALOW VILLAGE

Building permits indicate that all the bungalows were built by contractor Lee Cambell except for two. The house at 2105 was built by George L. Field, Contractor. The house at 2111 was built by architect/contractor Taylor Brothers of Los Angeles. It is thought that the Taylor Brothers residence (the 2nd house built in the village-1918) influenced the style of the remaining buildings constructed by Lee Cambell, Contractor.

The Taylor Brothers listed in WHO'S WHO IN LOS ANGELES COUNTY and in the BIOGRAPHICAL DICTIONARY OF AMERICAN ARCHITECTS by Henry Withey, are considered prominant Los Angeles Architects of their time.

THE HOUSES AVERAGE SEVEN ROOMS TOTALING 900-1000 SQ. FEET.

2103 N. Highland - Visible from Highland Ave: 12 rooms - 1326 sq. feet; no building permit found; custom.

Commonly know as the "Red Barn", 2103 is a one and one half story building that shows the most influence of the Dutch Colonial style. The roof has side facing clipped gambrels on the north and south elevations. The east elevation gives the "barn" it's name. The west elevation has a hipped gabel at the 2nd story. The first story has a small hipped roof section that covers a sleeping porch that projects at right angles to the main house. This sleeping porch is supported by square capped wood columns on brick piers. There is a second sleeping porch on the east side of the building. Decorative knee braces and exposed rafters can be seen under the eaves. The north elevation has a slanted bay window. The foundation is faced in river rock. The house is sided in medium, narrow clapboard to the first floors silline with a continuous water table. Above the first floor, the house is sided with large rough-cut shingles to the roof line. The foundation of the large chimney is also made of river rock with the remainder being brick.

Section number 7 Page 1

2103 N. Highland - seven rooms, 1008 sq. feet; completed 10/21/1919; tract; Lee Cambell, Contractor.

Originally addressed as 2103, this building is similar to 2113 and 2115 N. Highland. A side facing clipped gambrel roof with an offset gambrel gabel over the recessed front porch. There are exposed knee braces and rafters under the eaves. The porch is supported by a single wood column on a low brick wall that extends the length of the porch. The siding is narrow clapboard. This is the only house on the property that does not have a fireplace. Interior details include a dining room breakfront and a window seat bookcase built-in that extends the full length of the west wall of the living room. At the side of the house is a detached, single car garage. The Assesser's mapbook #297, P.8, shows an improvement in 1924 indicating the garage was built in 1923. This house and 2103 was apparently sold off by Mr. Fields to Edward E. Kirtlan in 1921. The parcel was repurchased by Mr. Fields at a later date.

2105 N. Highland - seven rooms, 1500 sq. feet; completed 3/30/1917 - building permit; visible from Highland Ave; custom; Architect/contactor George L. Field.

2105 is a single story residence. It has a side facing single gambrel roof with offset front gable over the recessed porch. Two square bay windows are attached to the front of the house and supported by diagonal braces. A temporary enclosure has been added to one of the windows. The front porch has a more recent wrought iron railing addition. Siding is medium narrow clapboard. The only attached garage in the village is at the rear of the house. A mural of several horses within a pasture is painted on the sliding door of the garage. A non-roofed triangular walled addition has been built around the California Oak Tree and attached to the garage. The house has a fireplace with a brick chimney.

2105¼ N. Highland - seven rooms, 1054 sq. feet; no building permit found. Completed 1919-1920; tract; Lee Cambell, Contractor.

2105¼ is a single story building that matches the detailing and plans of 2103½, 2113, 2115 and 2115½. No building permit was found but due to its similarity to the above houses indicates it was also completed in 1919-1920. It has a side facing clipped gambrel roof with a clipped gabel over the recessed porch. Kneebraces and exposed rafters can be seen under the eaves. The porch is supported by a single slayed sqaure, capped column. The low stair railing and poch foundation is of brick. The chimney and

Section number 7 Page 2

fireplace are made of brick. As with the other "tract" houses of this building phase, it includes a diningroom breakfront and bookcases flanking the fireplace.

2105½ N. Highland - Seven rooms, 990 sq. feet; completed 1920; custom; Lee Cambell, contractor.

This single story building has a regular medium pitched gable roof with a shed roof dormer. Exposed 4x4 beams and rafters are found under the eaves. The fascia boards are decoratively cut following the Jappo-Swiss Style. The attached porch has a hipped roof which is supported by tapered wood capped columns on a brick rail. The porch foundation is also brick. The front door is a 15 lit door. Another porch or what might have been a pergola is located at the side of the house leading from the dining room. The dining room has french doors with sidelites. The poch also has a brick foundation and brick piers that support a wood railing. The part of the porch that has been removed includes the roof and wood columns that would have rested on the brick piers. Siding is of medium clapboard. Decorative 2x2 vertical wood slats are found under the gabel on the north elevation and in the dormer. The chimney and fireplace are brick. The exceptionally fine wood mantle is flanked with bookcases with doors of leaded glass. Above both bookcases are small leaded glass windows. The dining room breakfront is also exceptional including leaded glass upper doors in a tulip pattern. The tile work in the kitchen is some of the most decorative in the village.

2107½ N. Highland - Rear of house visible from Woodland Way; 13 rooms, 2376 sq. feet; completed 6/6/1922; Lee Cambell, Architect/contractor.

This residence built at the foot of and into the hillside has two stories. The main portion of the house is on the second level. The clipped gabel roof has exposed 6x6 beams and decorative brackets. There is a brick and stucco stairway leading to the second level. The offset porch extends accross approximately 3/4's of the second level of the west elevation and has an open 8x8 beam structure supported by square wood columns resting on the brick and stucco rail (the open beams have been roofed). The final portion of the elevation is a sleeping porch with french doors leading out to the porch (now closed, the doors are stored in the basement). Siding is wide clapboard. On the north elevation is a large, square bay window. At a fairly early date, the second level was divided into two separate

National Register of Historic Places Continuation Sheet

Section number 7 Page 3

living areas (all the mouldings and castings match). An entry was added at the porch to what would have been a bedroom. All openings between the two halves of the house are still extant and could easily be reopened. A back entry and a stoop were added on the west elevation to what would have been a bedroom or a breakfast room (it enjoins the kitchen). The breakfast room window breakup and type echo the sleeping porch on the oposite corner of the house. At a much later date, the finished basement was made into a living area. It has a separate entry with the original door. There is also an additional, unfinished basement area. The south elevation has a pair of stained glass casement windows in a similar tulip pattern to the breakfront in 2105½. The breakfront in the dining room is especially fine with beveled glass pieces in the doors. The chimney is of common brick. The mantle is of yellow fire brick not found in any of the other houses. The tile work in the kitchen is also the best in all the houses.

2109 N. Highland - Visible from Woodland Way; seven rooms, 780 sq. feet; tract; Lee Cambell, architect/contractor; building permit 6/23/1923.

Originally addressed as 2115½, 2109 is the last residence to be added to the village. One of the smaller houses, the house is built in the style of the earlier "tract" houses. Built against the hillside, the bungalow has a basement portion. The house is built in a modified L shape with an offset clipped gabel roof. It has knee brackets and exposed rafters under the eaves. This building is the only one with corner boards. The only porch is a small concrete stoop with a wrought iron rail added at the same date as 2105. The entry has a sidelight. It has a chimney of brick and a brick mantle. This house has only one bedroom similar to 6819 Camrose Dr. The Sanborn map (1954 update) indicates the change of address. Ajoining the house are very fine retaing walls built of fieldstone and river rock. opposite the house is a fantasy landscape mural painted by Rebecca T. Simco - 11/24/1974 (dated and signed).

2111-211½ N. Highland - ten rooms, 962 sq. feet; completed 1/22/1918; custom; Taylor Brothers, Architect/contractor.

Originally, 2111 was built as a single family residence with an interior staircase. At a later date it was divided into separate residences and the enclosed staircase was removed. A combined one and two story residence built into the hillside. It was an unusual plan for it's time showing the beginning of the development of the "town house" a now common building plan. The roof is a clipped gable with decorative knee braces under the eaves. A small hipped roof covers the front window. The single story living room has a flat roof with a balcony (added at a later date).

Section number 7 Page 4

The entry is recessed on one side of the facade and is screened. The interior of the entry is finished with a narrow verticle tongue and groove siding. The siding is of narrow clapboard. The chimney and fireplace mantle is of brick.

2113 N. Highland - seven rooms, 1085 sq. feet; completed 5/23/1919; building permit; tract; Lee Cambell, contractor.

2113 or as it is addressed in the building permit 2113A, is a single story building. It is one of three similar houses all completed at this date. It has a side facing gambrel roof with an offset front gable. Knee brackets and exposed rafters are found under the eaves. The porch is recessed to one side with square capped wood columns and brick trim. It has french windows and a french door. Siding is of medium narrow clapboards. The chimney and fireplace are of brick. There is a dining room breakfront and built-in bookcases on each side of the fireplace.

2115 N. Highland - seven rooms, 1085 sq. feet; completed 5/23/1919; tract; Lee Cambell, contractor.

2115 was originally addressed 2113A in the building permit. It is very similar to 2113 listed above however the plan has been flopped to allow a more graceful siting of the houses. It has a side facing gambrel roof with an offset gambrel gable over the porch. Exposed knee brackets and rafters can be seen under the eaves. The porch is recessed and is supported by square wood columns with brick piers. It has a triple french window and a 15 lite french door. Currently, the doors and windows have been boarded up. The chimney and fireplace are of brick. The interior includes a dining room breakfront and built-in bookcases flanking the fireplace.

6819 Camrose Dr. - six rooms, 750 sq. feet; no building permit found; tract; Lee Cambell, contractor.

6819 is very similar to 2103½, 2105¼, 2113, 2115 2115½. It is one of the two bungalows with only one bedroom. It also does not have a dining room It has the side facing clipped bambrel roof with an offset clipped gable knee braces and exposed rafter tails under the eaves. The stoop porch has a small hip roof supported by square capped columns (now missing) over the entry. The chimney and fireplace are brick. The mantle is wood. It does not have any built-ins of note.

Continuation sheet Description Item number 7 Page 5

6809-6811 Camrose Dr. - ten rooms, 1080 sq. feet; completed 6/25/1920; Lee Cambell, contractor.

Originally addressed as 2101 N. Highland Ave., this two story residence is a duplex. It is a combination of one and two stories with two entries on the south elevation symmetrically placed. Each attached porch has a clipped gable roof supported by square brick columns and brick railings. The two story portion has a side facing clipped bambrel roof with exposed rafters and knee brackets. The one story portion is a front facing clipped gable roof. Both this roof and the porches have knee brackets and exposed rafters. Siding is of narrow clapboard. An outside wood stairway to the second story has been added. The house also has a detached hip roof garage with exposed rafters. Built by Lee Cambell for Mr. Fields, Mr. Fields sold the property in 1920. According to the Assessor's Map Book #269, P.18, 1912-1921, (lot 29 in the currant assessor's map) the property was sold to Elizabeth Comstock. The 1924 Los Angeles City Directory lists Elizabeth Comstock as living at 2219 Sycamore Ave. (the old address for 6809 Camrose Dr.

2122 Woodland Way - eight rooms, 891 sq. feet; completed 4/11/1922; custom; Lee Cambell, contractor.

Originally addressed as 2109½ N. Highland, this hillside two story bungalow became Mr. Fields final residence in the Village. It has steep stairways leading from both the interior of the village and from Woodland Way. It has an unusual steep pitched sloping gable roof on the south elevation. A low hipped roof separates the first and the second story. The porch is open with low brick piers with a concrete cap and a decoratively carved wood balustrade. The unusual entry includes a four lite door with uneven panels and side-lites. Decorative knee brackets and exposed rafters are found under the eaves. A later shed roof sleeping porch addition with decorative knee braces that match the roof is found on the south elevation. The house includes an interior staircase leading to the second story bedrooms. The chimney and firebox are brick. The fine wood mantle has been stolen by the County workers who boarded the house up. This house is the first to be converted to Philharmonic use. It now houses an architecual firm associated with work at the Hollywood Bowl (hence the discovery of the missing mantles).

Continuation sheet Description Item number 7 Page 7

The Highland-Camrose Bungalow Village was recently acquired by the County of Los Angeles for inclusion into the proposed Highland-Camrose Park. The proposed site restoration and conversion of the buildings from public living quarters to rehearsal and administative space will be used by the Los Angeles Philharmonic and Youth Symposium.

The Highland-Camrose Bungalow Village (except for 6809/6811 Camrose Dr.) was declared and Historical-Cultural Monument No. 291 by the Los Angeles City Council on April 23, 1985. I have included 6809/6811 Camrose Dr. in the boundries because it was originally built for Mr. Field by Lee Cambell before it was sold and divided into a seperate parcel. 6809/6811 Camrose Dr. was also acquired by the County of Los Angeles and is to be included in the park.

Specific dates 1916-1923 **Builder/Architect** LEE CAMBELL/TAYLOR BROTHERS

Statement of Significance (in one paragraph)

The Highland-Camrose Bungalow Village was built (by Horace W. Fields) to help meet the large demands for housing due to the great influx of people into Hollywood because of the rapid growth of the movie industry. They are a unique example of "working class housing" in Hollywood during that period. The Highland-Camrose Bungalow Village is the "only" known example of an "authentic Craftsman Bungalow Hillside Cluster Development" in all of California. Clustered around a common area the bungalows, with their rock walls, are surrounded by trees and lush vegetation. The Highland-Camrose Bungalow Village is located virtually in the "middle" of the melting pot of Hollywood's "historical" and "cultural" past.

The Highland-Camrose Bungalow Village (Los Angeles City Landmark #291) is centrally located to many local and national historic sites. Directly to the north is the "Hollywood Bowl"; to the east is "Whitley Heights" (National Historic District) and the "Hollywood Studio Museum" (California State Landmark); to the south is "Hollywood Blvd" (National Histcric District) and directly to the west the "historically significant Hollywood Heights/Outpost Estates". They include the Methodist Church (a superb example of Gothic Architecture), the American Legion Hall, the Hightower District (an important complex of Moderne Apartments), the Yamishiro Restaurant (an authentic Japanese Manor) and the Freeman House (one of four textile block homes in L.A. designed by FRANK LLOYD WRIGHT. The Village is virtually in the middle of the melting pot of Hollywood's "historical" and "cultural" past.

The oldest existing residences on the North Highland Corridor leading to the Cahuenga Pass, the "architectually indigenous Bungalow Village" is located near the corner of North Highland Ave. and Camrose Dr. in the Hollywood Heights. The Village consists of 13 single family residences, a duplex and two garages built between 1916 and 1923 in the Craftsman and Dutch Colonial Revival Style on a heavily landscaped, irregular, 1.6 acres of land (extensive research has been done to find other extant examples of Bungalow Cluster Housing in California. "The Highland-Camrose Bungalow Village" is the "only" known example of an "authentic Craftsman Bungalow Hillside Cluster Housing Development in California"). The connection of each bungalow to the others through pathways leading to stairways to the upper part of the property provides intimacy and creates a sense of community. The pathways echo a typical land use feature of the neighborhood

which includes several walkstreets such as Broadview Terrace and Alta Loma Terrace. These walkstreets were developed at the same time as the Highland-Camrose Bungalow Village.

The bungalows were built by Horace W. Fields to help meet the large demands for housing due to the great influx of people into Hollywood because of the rapid growth of the movie industry. They are a unique example of "working class housing" in Hollywood during that period. Located on the Cahuenga Pass Trolly Line, residents had direct access to Universal Studios, Burbank and the Hollywood Studios. Long known as the home of the stars, the areas residents included the likes of Rudolph Valentino, Charlie Chaplin, Francis X. Bushman, Betty Davis, Marion Davies, William Randolph Hearst, etc.. The Highland-Camrose Bungalow Village was home to such up and coming stars as Tyrone Power, Linda Rondstat, Jackson Browne and a continual flow of writers, actors, directors, producers, artists and musicians; a long established tradition from 1916 to this very day.

The Craftsman Bungalow homes of the Highland-Camrose Bungalow Village are a part of life that was once "indigenous" to Hollywood. According to Dr. Robert Winter in his book "The California Bungalow": The bungalow was a suburban type, built in outlying areas not strongly affected by urbanization and thus without inflated property values. It was only in "streetcar suburbs" and "auto suburbs" that the bungalow could be built and dreams fulfilled. They were generally inexpensive and built for "working class people." They are the "documents of social history". The careful observer of "California Culture" Mary Austin called them "as indigenous to the soil as if they had grown out of it". The Highland-Camrose Bungalow Village's original boundries, it's unique, original buildings and it's beautifully overgrown vegetation envelop this little known Shangri-La which to this very day is still untouched by progress.

Describe present and historic physical appearance.

This group of 14 residential buildings and two garages is located on 1.6 acres of both flat and hillside terrain. A private road leads into the clustered development. The houses are connected by pathways and heavily surrounded by trees and shrubs. The houses are both one and two stories in height including some with basements built into the hillside. The majority of buildings have low pitched gable roofs with offset clipped gables over the porch. Exposed rafters and decorative brackets are found under the broad eaves. The porches contain the main decorative features with square capped columns and brick railings or trim. Most houses have exterior brick chimneys. Siding is clapboard ranging from medium to narrow. Shingles are used in some cases. Windows are typical of the bungalow style with many three part windows (one large fixed window flanked by two smaller windows). The Dutch Colonial Revival influence is seen in the house at 2103 with its gambrel roof. The houses have maintained their integrity over the years with very few changes or additions. Also contributing to the village are many stone walls.

Contributing Buildings

6809-6811 Camrose Drive. This two-story residence was built as a duplex. It is a combination of one and two stories with two entries symmetrically placed. Each attached porch has a clipped gable roof supported by square brick columns and railing. The two-story portion has a side facing clipped gable roof with exposed rafters and knee brackets. The one-story portion is a front facing clipped gable roof. Siding is of narrow clapboards. An outside wood stairway has been added. The house also has a detached hip roof garage with exposed rafters. The building permit that appears to fit the description of this structure is dated June 25, 1920. It lists a two story, ten room residence for two families built for H. W. Field by contractor Lee Campbell. The address was given as 2101 Highland Avenue. According to the Assessor's Map Book #269, p. 18, 1912-21, H. W. Field then sold this property (Lot 29 on current Assessor's map) to Elizabeth Comstock. The 1924 Los Angeles City Directory lists Elizabeth Comstock as living at 2219 Sycamore Avenue (the old address for 6809 Camrose Drive). The property was sold in 1920.

National Register of Historic Places Continuation Sheet

Section number 7 Page 1

6819 Camrose Drive. This bungalow faces onto Camrose Avenue. It is very similar to five other houses - 2103-1/2, 2105-1/4, 2113, 2115, 2115-1/2 N. Highland Avenue, with its side facing gable roof with offset clipped gable, brick chimney, narrow clapboard siding and exposed rafters and knee brackets. A small hip roof supported by square columns (now missing) is located over the entry. The house is presently vacant and the windows and doors are boarded up. I could find no building permit for this house.

2122 Woodland Way. This two-story hillside residence has a steep stairway leading up from Woodland Way and is located at the top of the hill. It has an unusual steep pitched sloping gable roof on one side. A low hip roof divides the first and second story. The porch is open with a brick wall, concrete cap and decorative carved wood balustrade. The front entry is flanked by sidelights. Knee brackets and exposed rafters are found under the eaves. Siding is of narrow clapboard. A later shed roof porch addition with wood piers is located above the Woodland Way entrance. This house has also been listed as 2109-1/2 N. Highland Avenue. Building permits show the house was completed in April of 1922.

2103 N. Highland Avenue. This 1-1/2 story house shows the Dutch Colonial Revival influence with its gambrel roof. A slanted bay window is located at the side of the house. The lower portion of the house had a small hip roof attached dividing it from the second floor portion. A sleeping porch extends out from the rear of the second floor and is supported by square wood columns. The foundation of the large chimney is of cobblestone with the remainder of brick.

2103-1/2 N. Highland Avenue. This single story residence is similar to five others previously mentioned under 6819 Camrose Drive. It has the side facing clipped gable roof with offset front gable over the porch. Under the eaves are exposed rafters and knee brackets. Siding is narrow clapboards. This house has a single garage in the rear built in the same style as the house. The building permit lists a residence and garage completed on October 21, 1919 for H. W. Field by Lee Campbell, contractor. The address given is 2103 but the description of the one story building with garage fits 2103-1/2. This house and the house above at 2103 apparently sold off by H. W. Field in 1921 to Edw. E. Kirtlan. The lot is the present Assessor's Map #28. The Assessor's Map Book #297, p. 8 shows an improvement in 1924.

2105 N. Highland Ave. This single story residence has a side facing gable roof with offset front gable over the recessed porch. The porch is supported by square columns. Exposed rafters are found under the eaves. Two square bay windows are attached to the front of the house and supported by diagonal braces. A temporary enclosure has been added to one of the windows. The front porch has a more recent wrought iron railing addition. Siding is medium narrow clapboards. The garage is attached to the rear of the house. A mural of a horse is painted on the sliding garage door. A triangular walled addition has been built around the tree and attached to the garage. The house has a brick chimney. Building permits indicate the house was completed on March 30, 1917. The architect/contractor was George L. Field.

2105 1/4 N. Highland Ave. This single story residence, similar to the previously mentioned five bungalows listed under 6819 Camrose, has a side facing gable roof with offset clipped gable over the recessed entry. The porch has square capped columns and a low brick stair railing and porch foundation. The chimney is also of brick. The house is now vacant and the windows and doors boarded up. I could find no building permit for this house.

Section number 7 Page 3

2109 N. Highland Avenue. Built against the hillside, this bungalow has a basement portion. The house has a modified L-shape with an offset clipped gable roof. Under the eaves are knee brackets and rafters. Siding is of medium narrow clapboards. The only porch is a small concrete stoop with wrought iron railing. There is a building permit for 2115-1/2 completed in January of 1924. The Sanborn Map (1954 update) indicates this residence also had this address as well as 2109. However, this house appears to have no chimney and a brick chimney is listed on the permit.

2111, 2111-1/2 N. Highland Avenue. This is a combination one and two-story residence built against the hillside. The roof is a clipped gable with decorative knee brackets under the eaves. Siding is narrow clapboard and the chimney is of brick. A small hip roof covers the front window. The entry is recessed on one side of the facade. The single story portion across the front has a flat roof with a balcony. Building permits indicate this house was completed on January 22, 1918. The architect was Taylor Brothers of Los Angeles. They were also listed as the contractor.

2113 N. Highland Avenue. This single story residence, similar to the addresses mentioned under 6819 Camrose, has a side facing gable roof with offset front gable. The porch is recessed to one side with square capped wood columns and brick trim. Knee brackets and exposed rafters are found under the eaves. The porch has French windows and a French door. Siding is of medium narrow clapboards. Building permits show that this house was completed in May of 1919 by contractor Lee Campbell. Two other identical houses were completed at the same time and listed as 2113A and 2113B. Presumably, these houses are next door to 2113 and now listed as 2115 and 2115-1/2.

2115 N. Highland Avenue. This single story residence is similar to the previously mentioned houses under 6819 Camrose and 2113 Highland. It has the offset clipped gable over the porch. The windows and doors have been boarded up. Exposed rafters and knee brackets are located under the eaves, and siding is of narrow clapboards. The house, according to building permits, appears to have been completed in 1919 by contractor Lee Campbell.

2115-1/2 Highland Avenue. This house is similar to the previous residences listed under 6819 Camrose and 2113 N. Highland. It has a clipped gable roof, narrow clapboard siding and brick chimney. According to building permits, it was completed in May of 1919 by contractor Lee Campbell. This house has suffered fire damage.

State significance of property, and justify criteria, criteria considerations, and areas and periods of significance noted above.

Architecturally, the Highland-Camrose Bungalow Village is significant for it is the only known clustered hillside bungalow development remaining in the Los Angeles area. It differs from the traditional bungalow court that was laid out symmetrically with the bungalows in two rows divided by a walkway down the center. Also, the significance of this cluster of bungalows is seen in the strength of their relationship to their heavily planted hillside location. Their connection to each other through pathways (some now removed) provides both intimacy and a sense of community. Although clustered in a somewhat random arrangement, the houses are very close together, yet the placement of windows gives each unit its own sense of privacy. The effect of the whole is similar to a very small village in a wood-like setting. The Highland-Camrose Bungalow Village also played a role in providing housing for members of the burgeoning new Hollywood movie industry. Built between 1916 and 1924, these modest residences provided temporary housing in a convenient location. The Cahuenga Pass trolley ran a line down Highland Avenue with a direct access to the movie studios.

The village was developed by Horace W. Field, who purchased the land in 1914-1915 from real estate promoter Charles E. Toberman. The land was part of the Hollyood Ocean Views Tract recorded in 1901. Mr. Field lived at the village and leased the residences to movie industry people over the years. The Field family owned the property until the 1960s. Many artists including actors, writers, musicians, and directors have made the village their home. The secluded and quiet atmosphere next to a large metropolitan area is a rarity today.

Many mature trees and shrubs remain and are important contributors to the overall effect of the bungalow village.

Building permits indicate that all of the bungalows were built by contractor Lee Campbell except for two. The house at 2105 was built by George L. Field, contractor. The house at 2111 was built by architect/contractor Taylor Brothers of Los Angeles. It is thought that the Taylor Brothers residence (the second house built in the village -- 2111) influenced the style of the remaining buildings constructed by Lee Campbell, contractor.

The Taylor Brothers, listed in Who's Who in Los Angeles County and in the Biographical Dictionary of American Architects by Henry Withey, are considered prominent Los Angeles architects.

The Highland Camrose Bungalow Village was declared an Historic Cultural Monument by the Los Angeles Cultural Heritage Board in 1985. It was recognized for its exemplification of a building type -- hillside bungalow housing;. The unique aspect of hillside bungalow housing was that it was a seemingly random, "natural" arrangement of rental residences. The hillside village had commons areas, but ones which allowed for a greater intimacy and privacy. The hillside village was thus a departure from "court" housing in which all buildings were arranged regularly around a central landscaped area. According to Christie Johnson McAvoy of Hollywood Heritage, the village's "siting is unique in the Hollywood Hills where single family dwellings were, and are, the norm. Larger than the traditional bungalow court, it successfully bridged the gap between the apartments and courts of the era and single family housing. The placement of residences on the site was more flexible than a court, but the units still had common areas. This plan allowed inobtrusive rental housing in an otherwise owner-occupied neighborhood." (Letter to Los Angeles Cultural Heritage Board, February 15, 1985.

RECEIVED
SCRTD
FEB 25 1983
OFFICE OF
MGR/CHIEF ENGINEER
METRO RAIL PROJECT

Mr. Richard Gallagher, Manager
Metro Rail Project
Southern California Rapid Transit DIstrict
425 South Main Street
Los Angeles, California 90013

Dear Mr. Gallagher:

Re: Determinations of Eligibility for Properties Within the Area of Potential Environmental Impact (APEI), Metro Rail Project.

A copy of the cultural resources survey, "Historical/Architectural Resources, Parts A and B" was received in this office on January 23, 1983. This document has been reviewed by my staff. On the basis of that document and extensive on-site inspection, we have reached the following conclusions regarding the ...resence of properties listed in or eligible for listing in the National ...egister within the Metro Rail APEI.

First, we have concluded that the survey adequately identifies all potentially eligible properties within the project's APEI. Indeed, we feel that SCRTD has acted responsibly and cooperatively in its dealings with this office and the historic preservation community of Los Angeles during the identification phase of 36 CFR 800 compliance. The creditable cultural resource survey conducted by your office adds greatly to our understanding of historic resources in Los Angeles, especially along the Wilshire corridor. We would appreciate receiving the original survey forms for inclusion in our master inventory of statewide resources.

We have determined that the Metro Rail APEI includes nine properties previously listed in or eligible for listing in the National Register.

Property	Address	Status
Pellissier Building	3870 Wilshire	Listed
Union Station	800 N. Alameda	Listed
Broadway Mart	401 Broadway	Listed in National Register Di
Title Guarantee Bldg.	401 W. 5th Street	Determinied Eligible
Pershing Square Bldg.	448 S. Hill Street	" "
Parker Bros. Bldg.	700 W. 7th Street	" "
...deral Title Bldg.	437 Hill Street	" "
Myrick/Markham Hotel	324-326 Hill Street	" "
Subway Terminal Bldg.	415-425 Hill Street	" "

We note as well that the property, Campo de Cahuenga, at 3919 Lankershim Blvd., has been determined not to be eligible by the Keeper of the National Register. The state of California disagreed with the 1973 ruling and continues to disagree. For 36 CFR 800 compliance, however, the Keeper's judgement prevails.

We have in addition concluded that the following fifteen properties appear to be eligible for National Register listing, but have not yet been determined eligible by the Keeper of the National Register:

1.	Crocker Bank	1926-1930 Wilshire
2.	Post Office Terminal Annex	900 N. Alameda
3.	Wilshire Christian Center	634 S. Normandie
4.	Hollywood Bowl	2301 N. Highland
5.	Toluca Southern Pacific Depot	5401 Lankershim
6.	MacArthur Park	2200 Wilshire
7.	Global Marine Bldg.	807 W. 7th Street
8.	Hotel Clark	400-426 Hill
9.	McKinley Bldg.	3747-3763 Wilshire
10.	Zephyr Club	5209 Wilshire
11.	Clem Wilson Bldg.	5217-5231 Wilshire
12.	May Company	6067 Wilshire
13.	Security Pacific Bldg.	6381-6385 Hollywood
1	Roosevelt Bldg.	648 Flower
15.	Miracle Mile Historic District	5318-5514 and 5519-5353 Wilshire

If you concur in the Eligibility of these properties, please prepare a Formal Request for Determination of Eligibility for each. My staff has supplied your staff with examples of Determinations of Eligibility commonly used in transportation projects. Completed requests should be sent with a copy of this letter to the Urban Mass Transit Administration for submission to the Keeper of the National Register.

The remainder of the properties surveyed in the project APEI not discussed above are, in the view of this office, not Eligible for listing in the National Register of Historic Places.

As it appears we agree on the eligibility of properties within the project's APEI, I recommend that you apply the criteria of Effect and adverse effect (36 CFR 800.3) to the 24 properties listed above. When we have reached agreement as to the effect, you may proceed to the drafting of a Memorandum of Agreement, if necessary, to complete consultation on this undertaking.

Again, we greatly appreciate your cooperation in this large and complex undertaking. If you have any questions, feel free to contact Stephen Mikesell of my staff at (9 758-1813.

Sincerely,

/s/ Knox Mellon

MAY 6 1983

Ms. Carol D. Shull
Chief of Registration
National Park Service, Room 114
U.S. Department of the Interior
Washington, D.C. 20240

Dear Ms. Shull:

The Urban Mass Transportation Administration (UMTA) is requesting a determination of eligibility for inclusion in the National Register of Historic Places for one district and fourteen (14) properties in connection with the Los Angeles Rail Rapid Transit Project. These properties are:

1. Post Office Terminal Annex
2. Hotel Clark
3. Roosevelt Building
4. Global Marine Building
5. Crocker Bank (Wilshire East)
6. MacArthur Park
7. Wilshire Christian Church
8. McKinley Building
9. Zephyr Club (Security First National Bank of Los Angeles)
10. Clem Wilson Building/Mutual of Omaha
11. May Company
12. Security Pacific Bank Building, Hollywood
13. Hollywood Bowl
14. Hendricks Builders Supply Company (Toluca Southern Pacific Railroad Depot)
15. Miracle Mile Historic District

The California State Historic Preservation Officer (SHPO) is of the opinion that these properties are eligible for inclusion in the National Register. We are seeking a "consensus" determination of eligibility. Enclosed are the documentation on these properties and a copy of the SHPO's letter stating his opinion.

Sincerely,

Robert W. Stout

Southern California Rapid Transit District Metro Rail Draft Environmental Impact Statement

Description:

Miracle Mile Historic District, comprised of 19 structures of Art Deco style, is a commercial corridor located on both sides of Wilshire Boulevard in an area historically known as the Miracle Mile of Los Angeles.

During the early 1920s, an oil boom and the movie industry increased publicity of southern California's climate, and the automobile started to bring people West in ever increasing numbers. Growth in Los Angeles turned away from downtown and into outlying areas as real estate speculators realized changes created in human mobility by the automobile.

In 1921, developer A.W. Ross purchased 18 acres of land on Wilshire Boulevard midway between downtown Los Angeles and the beach. Ross' tract was located at the

center of a circle 4 miles in diameter that included Hollywood, Beverly Hills, Westlake Park and West Adams. Intending to develop a new commercial center, Ross had strategically purchased land within easy automobile access to the most affluent communities in the Los Angeles area. By the late 1920s, after a bitter zoning feud with downtown interests, the new development, known as the Miracle Mile, became a linear shopping district dominated by Art Deco structures. The buildings were designed to provide easy and convenient access for the automobile shopper.

The automobile affected building design in a number of ways. Large display windows were installed in order to make merchandise visible from the street. So that stores would be visible to auto-shoppers from a distance, tall cylindrical towers were often incorporated into the structure design. Large parking lots behind the stores became another added feature, and the main entrance was moved to the building's rear so that it faced the parking lot.

The depression years of the 1930s were a period of slow growth. Commercial buildings constructed during the period continued to incorporate features adapted to the automobile shopper. Structures built during the latter part of the decade, especially along Wilshire Boulevard, featured Streamline Moderne style architecture popular during the period.

Miracle Mile Historic District is comprised of 19 contributing structures, all of which date from the 1920s through the 1930s, and are representative of the Art Deco style of that period. The following are brief descriptions of each structure in the district:

- Ahn's Music Pianos and Organs

  Hist. Res. DOE-19-83-0015-0001 Prop 024990 NR 202

  5355-5359 Wilshire Boulevard

  Date of Construction: 1920s (estimate) 19-170999

  This Zigzag Moderne structure is a tall, 1-story commercial building. The simple, flat facade is sheathed with alternating, horizontal bands of turquoise and light orange terra cotta. The roof edge is capped with a pressed metal band decorated with zigzag patterns. Above the band are the remnants of an aluminum tubing balustrade. On the left side of the facade is a higher, vertical element covered with rectangular turquoise tiles. The bottom part of the facade is a continuous band of storefronts. There is original terrazzo flooring at two of the store entries.

- Wilshire Center Building (George T. Cline Building) HIST. RES. DOE-19830015-0002 Prop 024991 NR: 202
  5363-5379 Wilshire Boulevard
  Date of Construction: 1928 (factual) 19-171000
  The Wilshire Center Building is a stucco-surfaced commercial structure in Streamline Moderne style. The building height varies from 1 to 3 stories. Ground floor stores feature original glass-paneled storefronts and geometric patterned terrazzo flooring, as well as some original metal and neon signage. Entries to the building are accented in black glass with aluminum tubing, or with black granite. The prominent 3-story corner tower of the building is octagon-shaped with a stepped section at the roof edge. The front tower facade features a large, multi-paned glass window.
- Tru-line Litho (Chandler's Shoe Store) HIST. RES. DOE 19-83-0015-0003 Prop 097589 NR: 202
  5401-5403 Wilshire Boulevard
  Date of Construction: 1938 (factual) 19-175224
  Designed by Marcus P. Miller, the main emphasis of this tall 1-story Streamline Moderne building is on the rounded corner section. The upper section of the facade consists of an interplay of rounded geometric forms with decorative banding and a corner tower. The street level store frontage is intact at the corner section. Gebhard and Winter (1982) states this is "one of the busiest buidings ever done in Streamline Moderne..."
- Commercial Building HIST. RES DOE-19-83-0015-0004 Prop. 097590 NR: 202
  5407-5411 Wilshire Boulevard
  Date of Construction: 1936 (estimated) 19-175225
  The top portion of this 1-story Streamline Moderne building's facade is decorated at the cornice line with a band of bas-relief, flower-motif ornaments. The band is framed at either end by a three-dimensional, stylized bundle of reeds. Of the five storefronts, only one is intact with the original rounded glass entry.
- Roman Foods Mart HIST. RES. DOE-19-83-0015-0005 Prop 097591 NR: 202
  5413 Wilshire Boulevard
  Date of Construction: 1935 (factual) 19-175226
  This Streamline Moderne building's stucco facade is accented by a tower with an attached vertical sign. The upper portion of the facade consists of plain, flat interlocking forms with painted linear accents. The store name in three-dimensional neon-edged metal letters rests on a horizontal banded

overhang. The street level store frontage is original except for some infill panels.

- Brown's Wilshire Bakery — HIST. RES. DOE-19-83-0015-0006 Prop 097591 NR: 2D2
  5423 Wilshire Boulevard
  Date of Construction: 1930s (estimated)
  This is a 1-story Period Revival building with a high-pitched roof above a facade bracketed by pilasters with flat capitals above which are decorative volutes. The upper section of the facade has a broad band with incised hatched patterns and is decorated with a fake dormer window. The street level store frontage has been remodeled.

- Flying Saucer Restaurant — HIST. RES. DOE-19-83-0015-0007 Prop. 097592 NR: 2D2
  5425 Wilshire Boulevard
  Date of Construction: 1930s (estimated) 19-175227
  Although this structure is presently not within the boundaries of the Miracle Mile Historic District, it is considered appropriate as a contributor to the district as it has the same street wall scale as well as the same detail scale as the surrounding structures. The facade has interesting neon signs which will be historically significant in the near future.

- Zachary All — HIST. RES. DOE-19-83-0015-0008 Prop. 097593 NR: 2D2
  5467 Wilshire Boulevard
  Date of Construction: 1930s (estimated) 19-175228
  The top half of this tall, 1-story Streamline Moderne building's facade consists of broad, plain bands stepping back to create a stepped-section. The bands are rounded at the corner. The street level storefront has been remodeled and portions of the facade have been covered with siding.

- Korean Cultural Services Building — HIST. RES. DOE-19-83-0015-0009 Prop. 097594 NR: 2D2
  5505 Wilshire Boulevard
  Date of Construction: 1929 (factual) 19-175229
  This 2-story building's style is a combination of PWA Moderne and Eqyptian Revival. The temple-like facade has full-height round columns with flat, flower-motif capitals and is bracketed by pilasters with the same flat capitals. The flat entablature is decorated with a bas-relief band of eagles above each capital and a flower-motif between. The vertical recessed space between the columns once contained a full-height window system;

now the original windows exist only at the second floor level. A new street level storefront system and tile spandrels have been added.

- Wilshire Beauty Supply
  HIST. RES. DOE-19-83-0015-0010
  5507-5511 Wilshire Boulevard
  Prop 097595 NR: 202
  Date of Construction: 1939 (factual)
  19-175230

  This tall, 1-story Streamline Moderne building's facade is divided horizontally by a rounded-edged overhang. The upper portion of the facade is decorated with two vertically-faceted pilasters and is edged on one side with a curved, horizontally-banded element. The remainder of the plain upper facade has a bas-relief geometric pattern. The street level store frontage has been remodeled.

- El Rey Theatre
  HIST. RES. DOE-19-83-0015-0011
  5515-5519 Wilshire Boulevard
  Prop 097596 NR: 202
  Date of Construction: 1928 (factual)
  19-175231

  This is a 2-story Zigzag Moderne theatre with flanking retail stores at the ground floor level. The main facade emphasis is on the center section which features a neon-signed marquise above which is a vertical neon sign projecting above the roofline. The original sign featuring a king's head etched in neon is flanked by projecting, painted fins. The facade is further decorated with zigzag motif patterns, a bas-relief panel to one side, and sections of glass block. The theatre also has its original bijou and terrazzo flooring from the curb to the building entry.

- Desmond's (Wilshire Tower)
  HIST. RES. DOE-19-83-0015-0012
  5514 Wilshire Boulevard
  Prop 097597 NR: 202
  Date of Construction: 1928-1929 (factual)
  19-175232

  This Zigzag Moderne structure, designed by Gilbert Stanley Underwood, was built in commercial building form popular during the 1920s. The structure is a horizontal 2-story retail block supporting a 9-story central office tower. The retail block's simulated stone facade is divided vertically by stepped pilasters which give the roofline a crenelated edge. The retail element also has rounded corners and the original street-level storefronts. The tower's vertical lines recede in a stepped pattern and are accented by stylized, three-dimensional eagles. The roof of the retail block features an open metal framework billboard supporting attached neon lettering.

- Commercial Building

HIST. RES. DOE-19-83-0015-0013 NR:2D2 Prop. 097597

5466-5470 Wilshire Boulevard

Date of Construction: 1928 (factual)

This is a 2-story Spanish Colonial Revival structure with a 4-story corner tower. The building's lower facade has a plain stucco surface and the upper facade is heavily decorated. The ornamentation includes a highly-decorated bay window, corbels of three-dimensional faces and panels of urns and stylized plants. The street level store frontage has been remodeled.

- Commercial Building

HIST. RES. DOE-19-83-0015-0014 Prop. 097598 NR:2D2 19-175233

5464 Wilshire Boulevard

Date of Construction: 1928 (factual)

This 1-story, Streamline Moderne building has a plain, flat facade framed by two small towers. The towers are highly-articulated with attached, thin vertical fins ending in square forms set at a 45° angle. The ground floor store frontage has been remodeled.

- Ever-Ready Lighting Center

HIST RES DOE-19-83-0015-0015 Prop. 097599 NR:2D2 19-175234

5450 Wilshire Boulevard

Date of Construction: 1937 (factual)

This is a tall, 1-story Streamline Moderne building with a stepped-edged overhang horizontally dividing the facade. The upper section of the facade's only decoration consists of plain, stepped layers at the rounded corner. The street level facade has its original storefront system, but a brick base has been added.

- Dominguez-Wilshire Building

HIST. RES. DOE-19-83-0015-0016 Prop 097600 NR:2D2 19-175235

5410 Wilshire Boulevard

Date of Construction: 1930-1931 (factual)

Designed by Morgan, Walls and Clements, this Zigzag Moderne building was built in commercial building form popular in the 1930s, with a horizontal 2-story retail block supporting a central 10-story office tower. The retail block facade is divided vertically by stepped pilasters which give the roof-line a crenelated edge. Other design features of the retail element include rounded corners and zigzag motif panels above the upper floor windows. The vertically-articulated tower recedes in a stepped pattern and has zig-zag motif ornamentation.

- Commercial Structure
  5366-5374 Wilshire Boulevard
  Date of Construction: 1935 (factual)

  HIST. RES. DOE-1983-0015-0017
  Prop 024992 NR: 2D2
  19-171001

  This Streamline Moderne is a 2-story stucco-over-brick. The ground floor has four stores, one of which is the well-known Dark Room. Its storefront is in the shape of a camera with a body of black and burgundy glass panels and a porthole as the camera lens. The facade also features glass block and neon signage intact behind an added sign. All store entries have geometric-patterned terrazzo flooring. Modification to the other three storefronts have occurred and the second floor is covered by an added metal screen.

- Jack La Lanne's European Health Spa
  5364 Wilshire Boulevard
  Date of Construction: 1930s (estimated)

  HIST.RES DOE-1983-0015-0018
  Prop 097601 NR: 2D2
  19-175236

  The second floor facade portion of this 2-story Streamline Moderne building is still intact while the street level store frontage has been remodeled. The intact portion of the facade has large windows set in a field of horizontal banding. Other design features include a vertical neon sign and accompanying panel of glass block.

- Post Office Building
  5350-5356 Wilshire Boulevard
  Date of Construction: 1938 (Factual)

  HIST. RES. DOE-19-83-0015-0019
  Prop 097602 NR: 2D2
  19-175237

  The form of this 2-story Streamline Moderne building suggests it was once a theatre. The upper portion of the facade is divided by stucco elements simulating a series of wide pilasters. Between these pilasters are located windows and ornamentation of scored vertical and horizontal lines. The street level store frontage has been remodeled.

- Commercial Structure
  5320-5340 Wilshire Boulevard
  Date of Construction: 1930s (estimated)

  HIST. RES. DOE-19-83-0015-0020
  Prop 024993 NR: 2D2
  19-171002

  This 2-story stucco corner building of Spanish Revival style places compositional emphasis on its corner section. The ground floor features a recessed band of storefronts set behind a row of square columns. The second floor facade is edged at the top with a bas-relief band of urns, stylized plants and heads of conquistadors. The corner section projects out

from the rest of the building and has windows with rounded heads decorated with three-dimensional scrolls. Cartouches are placed between the windows. The roof edge has a pronounced cornice molding accented by small brackets with decorative urns.

Significance:

The Miracle Mile Historic District is significant in architecture. The commercial growth of Wilshire Boulevard during Los Angeles and southern California's accelerated growth in the 1920s-1930s as a result of the automobile, is depicted in this 5-block portion of the Miracle Mile.

The Miracle Mile Historic District is one of the best examples of the Art Deco style of architecture, combining both 1920s Zigzag Moderne and 1930s Streamline Moderne.

The 1920s was a decade of great architectural achievement for Los Angeles. The economic movement toward the machine age and the future was depicted in Zigzag Moderne structures through the use of vertical massing, towers, colorful design and the use of terra cotta, the use of metal, and the use of newly-developed neon lighting. The 1920s Art Deco buildings reflected an age of material prosperity and resulted in the acceptance of untraditional forms of architecture. The El Rey Theatre in the Miracle Mile Historic District is an excellent example of 1920s Art Deco with the use of towers, colorful design and neon lighting.

After the Depression of the 1930s, the Streamline Moderne style came into being. Characterized by curved corners and glass, horizontal lines and clean, undecorated surfaces, this style depicted the new ideas of efficiency and the modern age. Usually constructed of concrete or stucco, Streamline Moderne structures were relatively inexpensive to build and numerous commercial buildings used the style. Sweeping glass windows and towers attracted the eyes of motorists in a period when the automobile was imperative to Los Angeles' growth.

The development of Los Angeles as an expanding city is significantly displayed in the Miracle Mile Historic District through the creativity of the 1920s structures, and the expression of the modern movement with the 1930s structures.

Describe the present and original (if known) physical appearance

The Hollywood Boulevard District is a 12 block area of the commercial core along Hollywood's main thoroughfare, which contains excellent examples of the predominent architecture styles of the 1920s and 1930s. The area contains a mix of Classical Revival, Spanish Colonial Revival, and Art Deco structures. Over 100 buildings are included. The development pattern of the 1920s, with high-rise buildings at major intersections, flanked by one and two-story retail structures, remains intact to this day. Integrity is fair; the major landmark buildings still retain their distinctive identities, while many of the smaller buildings have been altered, remodeled, or covered with modern signage. Although the number of contributors is only 56% of the total parcels, the larger scale and placement of the contributing structures create an impression of greater cohesion.

The Hollywood Boulevard commercial and entertainment district contains 102 buildings, the vast majority of which were constructed between 1915 and 1939. A major grouping of Classical Revival financial and professional buildings, several of which reached the legal height limit of 12 stories, anchor the major intersections along the Boulevard. A number of fine examples of Spanish Colonial Revival architecture and the Art Deco style lend character and sophistication to the street. There are a few examples of other period revival styles popular in the first three decades of the 20th century, notably French Chateausque, and a group of theater structures worthy of notice. While the majority of street-level facades have been altered, mainly in the 1950s, the upper stories of the buildings retain a high degree of integrity. Parapet corrections are another significant category of alteration, due to prevailing seismic codes. Many one and two-story commercial vernacular structures are supportive in size, scale, and construction period to the surrounding buildings, but their primary facades have been repeatedly remodeled and they have become visually noncontributing. Metal sheathing masks existing ornament on several candidates for rehabilitation. In addition to architectural details, there are several fine urban design features: colored terrazo entryways, neon signage, and the Hollywood Walk of Fame.

Buildings Contributing to the Significance of the District:

1. Pantages Theater (6233 Hollywood Boulevard): 1930; B. Marcus Priteca
   A two-story concrete structure designed in the Art Deco style, the Pantages retains the stylized detailing in its ersatz stone exterior. Egyptian lotus patterns highlight the second story. First story windows are outlined with metal zigzag frames. Sculptured goddesses highlight the roofline. Interior has been restored to original; office lobby is intact, with elegant bronze sunbursts above the elevator doors.

Buildings Contributing to the Significance of the District: (Continued)

2. Equitable Building (6253 Hollywood Boulevard): 1929; Aleck Curlett
One of three "height limit" buildings at Hollywood and Vine, this 12-story, reinforced concrete, office structure is a Neo-Gothic design stylized in part by means of Art Deco abstraction in its detailing. The U-shaped plan has a two-story section joining the north and south wings on Vine Street. The building has strong vertical emphasis, created by continuous pilasters. Cast concrete ornament and balconies punctuate the structure. Street level has been remodeled in the 1950s.

3. Palace Theater (1735 N. Vine Street): 1926; Gogerty & Weyl
The restored Palace Theater is an excellent example of Spanish Colonial Revival architecture executed by the firm responsible for most structures designed in the style on the Boulevard. Originally a legitimate theater, the building continues to be used for television, video, and musical productions. The most prominent feature of the two-story concrete structure is the central bay window on the second story, which is surrounded by elaborate Churrigueresque decoration. The massing of the facade is symmetrical, with the entry recessed. Alterations include the obscuring of first floor storefonts. The building has a tile roof and enclosed patio above the entrance.

9. Guaranty Building (6331 Hollywood Blvd.): 1923; John C. Austin
One of the imposing height limit financial institutions on the Boulevard, this brick and concrete twelve story Beaux Arts building was designed by the architect of the Los Angeles City Hall. Its conservative veneer is relatively unaltered, and it retains the classical tripartite division with street level and upper stories mirroring each other in detailing. The central bank entrance is slightly recessed between Corinthian columns with an elaborate frieze over the entry. Building materials are terra cotta, granite, and brick.

10. Knickerbocker Hotel (1714 N. Ivar): 1929; John M. Cooper
The Knickerbocker is the residential companion to the Guaranty Bldg., located directly north of it on Ivar Ave. The brick and concrete apartment structure is traditionally designed in a Classical style. The plan is U-shaped with a symmetrical massing on the primary facade. Windows on the upper stories retain their stone molding in the central bay. A stringcourse separates the street level from the upper stories. One of a series of apartment hotels built close to the cental business district for convenience, the building has been rehabilitated for senior citizen housing.

11. Regal Shoes (6349 Hollywood Blvd.): 1939; Walker & Eisen
A two story Streamline Moderne structure with rounded corner and porthole windows. Both south and east elevations have banded windows. Entrance to the second level has sculpted escalator. Some alteration to street level retail. Terrazo entry to storefront retained.

14. Security Trust (6381 Hollywood Blvd.): 1921; Parkinson & Parkinson
A seven story Italian Renaissance Revival structure of reinforced concrete, Security Trust is a major contributor to the financial high-rises on the Boulevard. The street level elevations have a series of vertical plate glass windows recessed between granite pilasters. Cahuenga entrance has an elaborate cornice supported by brackets. Fenestration in the upper stories is regular. Windows on the upper stories are arched in pairs, surrounded by a larger arch adorned with a medallion. A heavy cornice caps the building. Interior has been altered; coffered ceiling and decorative elements in office lobby have been restored.

18. Warner Theater (6423 Hollywood Blvd.): 1927; G. Albert Landsburgh
This elaborate four story structure is a combination office, retail, and entertainment space at the corner of Hollywood Blvd. and Wilcox. Elaborate Spanish Renaissance detailing is evident on both south and west facades. Built of reinforced concrete and embellished with cast concrete ornament, the building retains the original ornate grillwork above the shop fronts at street level. Windows have been replaced, but original fenestration is retained between ornate vertical pilasters. The original marquee has been replaced, but much of the Churriguresque detailing of the theater entrance and office lobby remain. An elaborately ornamented arcade runs along the west facade.

CONTINUATION SHEET ITEM NUMBER 7 PAGE 3

21. Holly Cinema (6523 Hollywood Blvd.): 1920; E.B. Rust
Two story theater and commercial structure on northeast corner of Hollywood Blvd. and Hudson. The building is designed in the French Chateauesque style (a 1930s alteration by noted theater architect S. Charles Lee). The original steep hipped roof is still prominent, although a metal mansard addition over the theater portion ruins the continuity. Building is faced with stucco. Storefronts have been altered.

22. Hillview Apartments (6531 Hollywood Blvd.): 1917; Tifal
A four story Mediterranean style apartment complex, originally U-shaped with a courtyard facing Hollywood Blvd. at Hudson. The courtyard space is now occupied by one story shops. Details include a bracketed cornice, sash windows, and a red tiled roof with some classical ornament.

23. Janes Residence (6541 Hollywood Blvd.): 1903; Dennis & Farwell
Hollywood Boulevard's only remaining residential structure. This building predates existing commercial development. The two story wood frame Queen Anne Victorian is prominently situated at the intersection of Hudson Ave. and Hollywood Blvd. Its major features include a conical bay with turreted roof, a hewn stone porch, bevelled glass windows, and shingled exterior. The interior of the residence remains unaltered, although dilapidated. The exterior is intact.

26. Johnny's Steak House (6553 Hollywood Blvd.): 1930; H.L. Gogerty
A one story Chateauesque commercial structure with the prominent roofline associated with the style. Signage covers a portion of the altered lower story, but the building retains elements of the style, including the steep mansard roof punctuated by four dormers, three of which have curved pediments and one a broken pediment. The first story is clad partially in simulated stone. One of four examples of French Chateauesque architecture in the commercial corridor.

28. Baine Building (6601 Hollywood Blvd.): 1926; Gogerty & Weyl
One of the Builevard's prime examples of the popular Spanish Colonial Revival Style, the two story Baine Building was designed by a firm which specialized in the genre. The corner building is reinforced concrete and stucco, and contains the classic elements of the Spanish Colonial Revival style: red tiled roof, smooth facade, wrought iron grillwork and balconies, Churrigueresque ornament, and a corner tower. The corner entrance is an elaborate scallop. While there has been some alteration at street level, ornamental pilasters and arched windows are still in evidence. First floor retail space retains remnants of painted beamed ceilings.

CONTINUATION SHEET ITEM NUMBER 7 PAGE 4

29. Musso & Frank's (6663 Hollywood Blvd.): 1917; L.A. Smith
Musso and Frank's has continuously functioned as a restaurant on the Boulevard since 1919. The commercial vernacular structure was altered in the 1930s to include a band of glass brick windows atop a flagstone wall. The slightly recessed entrance maintains the 30s character. The interior, particularly the west roon, is intact. A favorite with writers during Hollywood's Golden Era, the restaurant today provides a glimpse of dining on the Boulevard during its prime period of significance. A neon sign is in keeping with the period.

31. 6679 Hollywood Blvd.: 1914; F.L. Paulson
Located at the corner of Hollywood Boulevard and Las Palmas, this two story commercial building is designed in a simplified Beaux Arts style. The brick structure is capped by a heavy classical cornice supported by scroll brackets. Upper story windows are grouped in twos and threes. A stringcourse separates the first and second stories. Street level storefronts have been altered. One of the oldest remaining examples of the commercial vernacular predating 1920.

32. Outpost Building (6701 Hollywood Blvd.): 1920; E. Parcher
This complex combines a variety of stylistic elements popular in 1920s commercial design. The two office buildings (each two stories) were once separated by a court; now they are connected by a second story arcaded passage. Elements of Spanish Colonial Revival (a red tiled roof, bell tower, arched windows and wrought iron balconies) compete with a French Regency swan's neck pediment and stone medallions. Storefonts have been repeatedly altered.

35. Pickwick Books (6743 Hollywood Blvd): 1917/1925/1936; Morgan, Walls & Clements (25)
Pickwick Books has combined two buildings into its present store, providing an eclectic complex which detail three architectural styles associated with Hollywood in its heyday. The McCadden facade has remnants of commercial brick vernacular; the corner is an impressive Art Deco facade with stylized concrete designs; the eastern portion has Churriguerresque detailing hidden under metal panelling on the upper story. First floor entrance has been remodelled.

37. Montmartre (6755 Hollywood Blvd.): 1922; Meyer & Holler
The two story structure has a French design reminiscent of Paris. The upper story once housed one of the most famous nightclubs of the 1920s, the Cafe Montmartre. The lower level was a bank, and is now a bookstore. The street level is a series of arches set in a simulated stone. The building remains largely intact, with a series of arched windows recessed between Ionic pilasters. A wrought iron gate shields marble steps leading to the second floor entry.

38. Wax Museum (6765 Hollywood Blvd.): 1928; C.J. Weyl
A two story Spanish Colonial Revival office and retail structure with fine Churriguerresque detailing on the upper story. Second story windows have been filled, although the original openings are visible. Two arches remain at street level. Metal sheathing masks more ornament on the lower story.

CONTINUATION SHEET ITEM NUMBER 7 PAGE 5

39. Security Pacific (6777 Hollywood Blvd.): 1927; Meyer & Holler
The focal point of Hollywood and Highland, the 12 story reinforced concrete financial institution was designed by the architects of the Chinese Theater. The building is an elaborate stepped tower, combining elements of Gothic Revival and Art Deco. Medieval figures, floral patterns and medallions decorate the facade. Windows have been altered. The building is one of the most significant highrises on the Boulevard in massing and design.

41. Chinese Theater (6925 Hollywood Blvd.): 1927; Meyer & Holler
One of the primary examples of fantasy architecture, this structure is an interpretation of a Chinese temple. Small shops flank the famous forecourt, where footprints of movie stars are imbedded in concrete. A red canopy stretches from the ticket both to a pagoda with two massive red pillars. Shop facades have been modernized.

42. 7001 Hollywood Blvd.: 1929; Meyer & Holler
Meyer & Holler designed this two story Art Deco structure as the home of the local Cadillac dealership. Arched windows span the two stories of the exhibition space. Deco detailing is found at the roofline incised in the concrete facade. The roof is flat; storefronts have been altered. The building remains relatively intact and is a good example of an automobile showroom in an upscale retail setting.

43. Garden Court Apartments (7021 Hollywood Blvd.): 1916; Frank Meline
Badly damaged by attempted demolition, the Garden Court remains an example of a Neo-Baroque apartment hotel of the Twenties. The brick and concrete structure is H-shaped in plan, with symmetrical massing and a generous setback. Classical detailing has been removed and stored.

44. Security Trust (7051 Hollywood Blvd.): 1928; Parkinson & Parkinson
The Los Angeles firm of Parkinson & Parkinson designed this one story Beaux Arts bank building on the corner of Sycamore and Hollywood Blvd. The front facade has three bays and remains basically intact. The central entry is flanked by two colossal Corinthian columns. The classical design makes it supportive of the larger financial institutions along the Boulevard.

45. Stores (7055 Hollywood Blvd.): 1928; Parkinson & Parkinson
Three intact storefronts built by the architects of the adjoining Beaux Arts bank. One story brick building exemplifies small retail establishments along the Boulevard in the 1920s.

46. Congregational Church (7065 Hollywood Blvd.): 1920; H. Glidden
One of two remaining institutional buildings on the Boulevard which exemplify the role of community organizations in the city's development, the church is an L-shaped complex composed of three buildings arranged around a central courtyard. The main chapel is of Mediterranean design with a gable roof covered with red tile. Buildings are linked by covered porticoes. Landscaping and setback provide needed open space on this section of the street.

CONTINUATION SHEET ITEM NUMBER 7 PAGE 6

47. Hollywood Professional (7046 Hollywood Blvd.): 1924; Richard D. King
An excellent example of Neo-Gothic commercial design. The eight story building has altered storefronts, but the upper stories retain their original ornamentation. The massing of the north and west facades is symmetrical and the upper floors exhibit good examples of tracery. Thelobby has a high vaulted ceiling. A companion parking structure of the same design is located south of the building.

50. Arthur Murray (7024 Hollywood Blvd.): 1919; Frank Meline
The builder of the Garden Court Apartments created this two story wood frame stucco Renaissance Revival structure just a few years later. Its main features are six arched windows on the second level and stone detailing. It has a red tiled roof and has become part of the Roosevelt Hotel complex.

51. Hotel Roosevelt (7000 Hollywood Blvd.): 1924; Fisher, Lake & Traver
The site of the first Academy Awards, the twelve story Spanish Colonial Revival hotel occupies a prominent position on the western end of the Boulevard at Orange Drive. An assymmetrical T-shaped plan, the concrete structure has groups of arched windows separated by columnettes, wrought iron balconies, and pierced concrete grills. Some Churrigueresque ornament decorates the facade; the roof is of red tile. Ground floor has been altered.

53. Seven Seas (6904 Hollywood Blvd.): 1920
Three story commercial vernacular building constructed of brick with rusticated masonry banding at corners and carved masonry around the sash windows of the upper stories. Lower floor has been altered. Supportive in size, scale, and design of the surrounding structures.

54. Masonic Temple (6840 Hollywood Blvd.): 1921; John C.Austin
A two story Neo-Classical structure located on the south side of Hollywood Blvd. at Orchid, the Masonic Temple is one of two institutional buildings on the west end of the Boulevard. A colonnade of six columns obscures a recessed entrance to the ornate structure. The building is clad in granite. The parapeted roof is ornamented with acanthus leaves. A Masonic motto is incised in the parapet. The interior meeting spaces are virtually intact. A fine small scale example of its style.

55. El Capitan/Paramount (6834 Hollywood Blvd.): 1925; G. Albert Landsburgh
One of the community's legitimate theaters, this six story reinforced concrete entertainment and commercial complex is one of the most elaborate structures on the Boulevard. It is heavily ornamented with Churrigueresque decoration. Metal columnettes frame display windows. Third through sixth story windows are arranged in vertical bands, with metal spandrels between each section. The bands are recessed between pilasters with ornamented capitals. Betweeen each capital are figures depicting characters in literature and the stage. The theater lobby and marquee were remodelled in the 1940s.

Continuation sheet Item number 7 Page 7

56. 6806 Hollywood Blvd.: 1922
A three-story stucco commercial building faced with some Art Deco ornament which complements the adjacent Lee Drug in style and scale. The second story is intact. Store fronts have been altered.

57. Lee Drug (6800 Hollywood Blvd.): 1935; B.D. Bixby
Occupying the southwest corner of Hollywood and Highland is another building which synthesizes the Art Deco and Streamline Moderne idioms. Like its counterparts at Cahuenga and Ivar, Lee Drugs offers horizontal banding and Deco detailing in concrete. The two story building is relatively unaltered. A pronounced vertical sign projects above the roof.

58. Max Factor Salon (1666 N. Highland Ave.): 1931; S. Charles Lee
The make-up salon is a four story brick and stucco building with a one story wing to the south. Certain stylized aspects of Regency Revival combine with the vertical fluted pilasters of the Deco style to create a "Hollywood" look. Window cases and entrance are clad in marble decorated with medallions and garlands. Some marble has been removed from the street level. Designed by noted theater architect S. Charles Lee, the salon makes a theatrical statement for which Hollywood became noted.

59. Bank of America (6780 Hollywood Blvd.): 1914/1935; Morgan, Walls & Clements (35)
Morgan, Walls & Clements, a major Los Angeles architectural firm, remodeled a four story apartment building to conform with the new needs of the Boulevard as a financial center in 1935. The resulting Beaux Arts one story bank has anchored the corner of Hollywood and Highland, along with its neighbor across the street, Security Pacific. The small structure exhibits a variety of fine Classical detailing, with entrance and windows recessed between Corinthian pilasters. Three elaborate metal panels highlight the entrance. The entablature of both north and west facades has a decorated frieze and a projecting cornice. The flat roof has red tile at the parapet.

61. Hollywood Theater (6766 Hollywood Blvd.): 1913/1933; Claude Balch
The oldest theater in Hollywood, the facade was remodelled in 1933 resulting in some significant neon signage. The one story brick structure has a stucco facade which culminates in a vertical pylon. Some of the original terrazo remains at the entry. The entrance and box office have been remodelled and brought closer to the street.

64. Millers Stationers (6740 Hollywood Blvd.): 1933 remodeling.
At the intersection of McCadden stands an example of small scale Art Deco architecture. This small two story structure has decided verticality. Display windows and entry on the street level have been replaced. This is a simple but effective example of the style in a retail establishment.

Continuation sheet | Item number 7 | Page 8

65. Christie Hotel (6724 Hollywood Blvd.): 1922; A. Kelley
The Christie was the first hotel to be erected in the 20s on Hollywood Boulevard as city boosters realized the city's need to accommodate tourists and the transient movie industry. An eight story Georgian Revival brick structure, the hotel is divided into three towers. Three dormers with rounded pediments project above the roofline. Classical proportion and detailing are evident in the massing and decoration used. The ground floor has been slightly altered, but the building remains an excellent example of its style and retains its original function.

66. Pig N' Whistle (6718 Hollywood Blvd.): 1919/27; Morgan, Walls & Clements.
One story commercial building with three storefronts, the eastern one of which retains the fanciful Churrigueresque detailing and marquee from 1927. The companion soda fountain to the Egyptian Theater, the interior of this store has an intact (although hidden) ceiling. Some wrought iron remains, as well as the stone medallions and ornament on the stucco facade. The other two storefronts have been repeatedly altered and retain no historical integrity.

67. Egyptian Theater (6708 Hollywood Blvd.): 1921; Meyer & Holler
The first of the "fantasy" movie palaces on Hollywood Blvd., the Egyptian retains the forecourt for which it is famous. The marquee was altered in the 1950s. Original Egyptian-style paintings remain on the walls of the forecourt and on the west elevation at McCadden. Original shop fronts now have plate glass windows. Planting retains the desert aura. The building is constructed of reinforced concrete and retains the massing and decorative elements for which it is renowned.

72. Shane Building (6652 Hollywood Blvd.): 1930; Norton & Wallis
An elaborate four story reinforced concrete structure designed in the Art Deco style, the Shane Building is an interesting contrast to its Spanish style neighbor across the street at Cherokee. The office lobby has been refurbished in keeping with the period, and has some elaborate etched glass above the entry and highly stylized gates at the entrance to the slightly recessed lobby. Art Deco verticality is achieved by means of pilasters extending from the second story to above the parapet. A chevron shaped panel articulates the windows of the top story. Storefronts have been altered.

73. Cherokee Building (6630 Hollywood Blvd.): 1927; N. Alpaugh
This two story commercial structure is built in an L-shaped configuration at the southeast corner of Cherokee and Hollywood Blvd. The north facade has been stripped of its original Churriguerresque ornamentation; the west facade is intact. The concrete building has wrought iron ornament and arches common to the Spanish Colonial Revival, as well as an elaborate stringcourse and ornamental medallions. The complex is the first shopping establishment with a primary entrance facing a parking lot, predating Bullock's Wilshire. A courtyard, entered through Moorish arches, has a brick patio with a tiled fountain as its focal point. A tiled roof remains on both wings.

74. The Orient (6626 Hollywood Blvd.): 1927/37
The sleek sophistication of these two store fronts are examples of the smaller retail establishements of Hollywood Boulevard in the 1930s. Its detailing include the use of colored marble and aluminum banding, giving the pedestrian storefronts and display windows a modern yet faintly Art Deco look. The displays "float" on aluminum planes. Low ceilinged entries open onto high ceilinged interiors. A good example of exterior signage in this one story concrete structure.

78. S.H. Kress (6606 Hollywood Blvd.): 1935; E.F. Sibbert
A prime example of the Art Deco style executed in reinforced concrete, this three story building features stepped vertical massing resulting in a central tower ornamented with stylized carved stonework. Windows on the upper levels have been altered, as has the street level storefront. The stepped tower is a focal point on the Boulevard, and its colorful exterior calls attention to the theatricality of its design.

79. J.J. Newberry (6600 Hollywood Blvd.): 1928; J.J. Newberry
The J.J. Newberry store is a two story reinforced concrete structure with an elaborate Art Deco facade of blue-green, gold and brown glazed tile. The second story is divided into three bays separated by vertical piers clad in blue-green tile projecting above the roof. Windows are of industrial metal sash. Chevron designs are prominent. The building interior remains largely intact. This structure and its companion at 6606 present one of the most colorful concentrations of Art Deco architecture on the Boulevard.

80. Hollywood Toys (6554 Hollywood Blvd.): 1927; Gogerty & Weyl
This two story Spanish Colonial Revival building has Churrigueresque ornament and Moorish arched windows on its second story. The roof is of red tile. Windows on the second story are arranged with ornamented columnettes between them. Street level storefronts have been altered. The most prominent feature of the structure is the second story east window with wrought iron.

81. Consumer Drug (6542 Hollywood Blvd.): 1919/38; H. Rice
Like many buildings in the commercial corridor, this 1919 brick building received a facelift in the late 1930s, this one in the Moderne style. The two story structure retains some of the simplified detailing associated with the style; a vertical band between the first and second stories serves as a modified stringcourse. Upper story windows are symmetrically arranged and unadorned. This simple design is in contrast to its richly ornamented neighbors to the west, but compatible in size and scale.

82. Attie Building (6436 Hollywood Blvd.): 1931
The most prominent features of this modest Art Deco two story building are its elaborage carved panels of the second story. The second story is composed of a series of piers which project above the roofline. Three sash windows are recessed between each pier. The panels are stylized flora and fauna. Decorative tiles set off the roofline and the first story. Storefronts have been altered. The building's corner location lends prominence to the 2nd story work on both north and west facades.

86. Creque Building (6400 Hollywood Blvd.): 1913/31; B.B. Homer
The only brick clad Art Deco structure on the Boulevard, this 1913 structure received its facelift in 1931 to conform to the street's new prominence as a shopping district. The colorful green and gold tile patterns highlight the patterned brick. A series of brick piers with slightly recessed sash windows in symmetrical placement heightens the vertical effect. Originally the piers soared above the roofline. Although storefronts have been altered, the colorful glazed tile entrance and lobby remain largely intact.

87. Julian Medical Building (6380 Hollywood Blvd.): 1934; Morgan, Walls & Clements
Built by the family of Hollywood's original developer, this building combines elements of Streamline Moderne and Art Deco into an imposing corner structure. Its distinctive features include a rounded Moderne corner out of which rises an imposing vertical tower with pylons separating the windows of the upper story. The shop front at 6382 is intact, with blue mirrored glass. A dramatic combination of styles created this landmark corner which has remained in commercial use since its inception as a professional and retail space. The two story edifice is constructed of reinforced concrete.

90. Palmer Building (6362 Hollywood Blvd.): 1921; E. Flaherty
One of a pair of commercial office structures which predate the Classical Revival highrises, this fourstory reinforced concrete building has been stripped of its Classical detailing on the Hollywood Blvd. facade. The Cosmo St. facade is intact, however, with bays defined by pilasters with molded capitals. Upper floors exhibit Renaissance Revival detailing (full entablature with architrave and friezes, dentils, spandrels, and shields). Originally a newspaper office, the ground floor has been repeatedly remodelled.

92. Leed's (6352 Hollywood Blvd.): 1935; S. Charles Lee
Designed by a renowned theater architect, Leed's is a one story reinforced concrete commercial structure in a subdued International Style. There is extensive use of glass. The front corner entrance is cantilevered beyond the display windows. White tiles have replaced the original storefront surface. An integral vertical sign is balanced at the northeast corner by intersecting parapets. The only example of International Style in the district, with the exception of the Dyas Bldg. addition.

95. Hallmark (6324 Hollywood Blvd.) 1922/31; Morgan, Walls & Clement
A remodelled 1922 structure in the French Chateauesque tradition, this two story store and loft has Regency details on its prominent second story. A steep hipped roof is central, as are thin windows in the pedimented bay. Ground floor has been altered. A good example of a sophisticated commercial retail style favored in the 1930s, executed by a prominent Los Angeles firm noted for its period architecture.

97. Dyas Bldg. (6300 Hollywod Blvd.): 1927; F. Dorn/1938; Parkinson & Parkinson
The Dyas Bldg. is a nine story Classical Revival department store at the intersection of Hollywood and Vine. Constructed of reinforced concrete with brick upper stories, the majority of detailing is found in the upper stories and the street level. A classical entablature surmounts pilasters with Corinthian capitals, creating a colonnade effect. The colonnade is repeated in the upper stories. The building is capped with a heavy cornice. The six story International Style addition to the west exhibits banded windows and the simple exterior associated with the style. Some showcase windows have been altered.

98. Plaza Hotel (1633 N. Vine St.); 1924; Walker & Eisen
A companion to the Renaissance Revival highrises at Hollywood and Vine, this ten story concrete hotel is designed in the same traditional style. The second floor carries remnants of Corinthian pilasters above a remodelled street level. A floral frieze separates the second and third floors. Floors three through eight are unadorned, with the exception of quoins at the corner. Windows on the upper levels are encased in two story arches. The hotel was popular with vaudevillians and retains the character of an Eastern hostelry.

99. Hollywood Brown Derby (1628 N. Vine St.): 1928; C.J. Weyl
Hollywood's foremost practitioner of the Spanish Colonial Revival style designed the town's most famous eatery with extraordinary attention to detail. The asymmetrical complex has Churrigueresque detailing under the eaves. The arched entrance to the courtyard remains, arched entrance to the restaurant has been squared. The southern portion of the facade is largely intact. A gabled roof over the restaurant entrance has been removed. A small balcony protrudes from the second story. Windows and wrought iron decoration remain intact. The roof is of red tile.

100. Stores (1632 N. Vine St.): 1928; C.J. Weyl
A compatible structure with the Brown Derby to the south, this one story Spanish Colonial Revival retail building has a false gable parallel to the street as its focal point. The upper portion of the facade has some Churriguerresque ornament along the edge of the gable. Signage obscures some of the detail on the north portion. Storefronts have been altered.

101. Taft Building (1680 N. Vine St.): 1923; Walker & Eisen
An L-shaped 12 story Neo-Renaissance office building of reinforced concrete clad in brick, ornamented with concrete and terra cotta. Concrete with cast classical ornament clads the lower two and upper two floors. The 11th and 12th floor windows are recessed between colossal Corinthian columns. Fenestration of floors 3 - 12 is regular and unadorned. The entablature has a decorated frieze and is topped by a heavy bracketed cornice. Ground floor has been altered. The third of the conservative Classical Revival towers at Hollywood and Vine.

102. Gilberts Books (6264 Hollywood Blvd.): 1932; H.J. Knauer
The third of three French Chateauesque commercial structures on the Boulevard, this two story building exemplifies one of the more colorful architectural styles popular in the 1930s. The most prominent feature of the building is its steep pitched roof. Massing is assymetrical with a wide west bay and a pyramidal tower on the east. Narrow pedimented dormers rise to a broken swan's neck pediment with an urn. The sides of the tower are decorated with quoins. Storefronts have been altered.

Buildings which do not contribute to the character of the district.

4. Old Post Office (1717 N. Vine St.): 1925; Morgan Walls & Clements
A two story brick and concrete structure clad in metal sheathing. Originally the Hollywood Post Office, the building had an elaborate Churriguerresque facade similar to its next door neighbor, the Palace. Ornament may still exist under sheathing. A prime candidate for restoration.

5. Laemmle Building (6301 Hollywood Blvd.): 1932; R. Neutra
One story stucco with a red tile roof. Heavily remodelled, the restaurant has a corner entrance and retains no integrity. Building developed by Carl Laemmle; site of Melody Lane Cafe.

6. Sardi's (6313 Hollywood Blvd.): 1923
One and one half story concrete and stucco structure clad with green tile mosaic facing. Some remnants of famous Sardi's nightclub remain, including roof sign.

7. Vine Street Theater (6321 Hollywod Blvd.): 1923
One story theater building with 50s facade and triangular marquee.

8. Stores (6325 Hollywood Blvd.): 1919
One story, modern stucco facade. Strip commercial.

12. Stores (6363 Hollywood Blvd.): 1924
Two story reinforced concrete with cantilevered awning over entrance. Moderinized fa of second floor is recessed in a frame and set in a block pattern.

13. Stores (6377 Hollywood Blvd.): 1924
One story unadorned commercial structure. Prominent awning; flat roof. Stripped facade; recessed storefronts.

15. Stores (6401 Hollywood Blvd.): 1913
One story brick structure with remodelled stucco and brick facade. Prominent signage. Second story simulated block.

16. Stores (6411 Hollywood Blvd.): 1919
Heavily altered two story brick commercial with unadorned stucco facade. Flat roof; remodelled windows on second floor.

17. Stores (6413 Hollywood Blvd.): 1921
Two story brick commercial vernacular with modern stucco facade. Narrow vertical wind Flat roof.

19. Stores (6501 Hollywood Blvd.): 1917
One story brick and concrete structure, with modern metal mansard overhang and roof si Recessed corner storefront.

CONTINUATION SHEET ITEM NUMBER 7 PAGE 14

20. Gitelson Building (6505 Hollywood Blvd.): 1919
A utilitarian two story commercial office and retail structure conforming in size and scale to the surrounding building. Originally brick, the building was remodelled in the 20s to a very stylish Spanish Colonial Revival design. All ornament has since been removed.

24. Stores (6547 Hollywood Blvd.)
One story stucco. Visually non-contributing. Heavily remodeled older building.

25. Stores (6549 Hollywood Blvd.): 1925
Heavily altered three story brick with stucco facade. Banded windows; flat roof.

27. Stores (6565 Hollywood Blvd.)
One story concrete block construction. Stone facing. 1970 remodel.

30. Vogue Theater (6629 Hollywood Blvd.): 1935
Heavily altered theater in one story commercial structure. Lacks visual integrity, but is representative of the concentration of entertainment facilities in the district.

33. Artisan Patio (6727 Hollywood Blvd.)
Courtyard shops in a one story stucco building. U-shaped plan. Fountain in rear. Arched entry. Tiled exterior. Flat roof. Modern complex.

34. Stores (6739 Hollywood Blvd.)
One story commercial utilitarian with metal sheathing. Tiled storefronts with plate glass display windows. Modern appearance.

36. Hollywood Center (6751 Hollywood Blvd.): 1920
Seven story office building heavily altered in mid 1950s. Stories added. Vertical screens of aqua hue protrude from the upper floors while a street level canopy creates a curvalinear effect at the corner entrance. Originally a department store. Flat roof. Faced with block panels.

40. Chinese Annex (6901 Hollywood Blvd.): 1980
Ersatz Chinese addition to existing theater complex. Colorful exterior. One story rectangular auditorium structure.

43. See entry at end of this section.

48 Stores (7038 Hollywood Blvd.): 1925
Two story brick commercial vernacular. Stylized classical cornice remains. Street level heavily altered. Contributing in size, scale, and development period.

49. Parking Structure (7036 Hollywood Blvd.): 1955
4 level parking structure.

52. Max Factor Building (6922 Hollywood Blvd.): 1960
Twelve story office tower with black glass exterior. Aggregrate concrete wall surrounds lower floor to create plaza separate from street.

60. Stores (6768 Hollywood Blvd.): 1914/21
Two story brick building; heavily altered. Present facade is 1950s alteration.

62. Stores (6758 Hollywood Blvd.): 1914/32
Two story concrete and brick office and retail structure. Light scroll designs barely visible above second story windows. Heavily altered first level. Stucco facade.

63. Stores (6752 Hollywood Blvd.): 1979
Spanish courtyard shopping complex. 2 story. Arched entry with tile leads to U-shaped complex. Unobtrusive in design.

68. Stores (6700 Hollywood Blvd.): 1930
Remnants of tan/black glass from 40s alteration remains. Corner one story structure with flat roof. Brick construction stucco facade

69. Stores (6670 Hollywood Blvd.): 1930
One story utilitarian commercial. Heavily altered.

70. Stores (6662 Hollywood Blvd.): 1926
Simplified Art Deco styling with wave motif above showcase windows. One story brick with stucco facade. Modern remodeling.

71. Stores (6658 Hollywood Blvd.): 1920
One story brick structure with plain stucco facade. Some Moderne detailing above showcase windows in storefronts. Terrazo entry. Modern remodeling.

75. Alexanders (6624 Hollywood Blvd.): 1917
Late moderne remodel of earlier commercial utilitarian structure. Stepped false front Some compatibility in design and massing with S.H. Kress.

76. Stores (6616 Hollywood Blvd.): 1930 with modern alterations.
One story brick commercial; 4 storefronts. Slight sawtooth patterning at roof line.

77. Stores (6614 Hollywood Blvd.): 1930
Two story brick utilitarian structure. Flat roof. Stucco facade. Modern remodeling.

83. Stores (6430 Hollywood Blvd.): 1931.
One story 50 x 130' utilitarian commercial. Unadorned stucco facade. Flat roof. One recessed storefront. Modern remodeling.

84. Stores (6418 Hollywood Blvd.): 1913; C.S. Albright
2 story brick commercial structure, 59 x 75'. Heavily altered stucco and simulated block facade. Recessed storefronts. Scale compatible with existing development.

CONTINUATION SHEET ITEM NUMBER 7 PAGE 16

85. Woolworth (6410 Hollywood Blvd.): 1927 with major 1940's remodeling. Two story 65 x 100' commercial utilitarian structure. Simulated block facing; banded aluminum windows. Prominent signage rests on first floor banding.

88. Stores (6374 Hollywood Blvd.): 1936; J.A. Murray
Two story commercial vernacular; flat roof; four vertical panels above remodelled storefronts.

89. Palmer Building II (6368 Hollywood Blvd.): 1921
A four story brick and stucco commercial structure which was one of a pair of office buildings to precede the Classical highrises. The primary facade has been stripped of ornament and refaced. Fenestration has been changed. A fifth floor penthouse exhibits remnants of the building's former Classical facade.

91. Stores (6356 Hollywood Blvd.): 1921; Walker & Eisen
2 story stores and loft. Heavily remodelled. Hinged 2nd story windows; oversized signage. Brick construction with stucco facade.

93. Stores (6338 Hollywood Blvd.)
Two story brick and stucco, heavily altered. Classical motifs remain on Ivar facade. Site of I.Magnin department store in 1920s and 30s.

94. Stores (6334 Hollywood Blvd.)
One story stucco facade with marble facing.

96. Stores (6320 Hollywood Blvd.)
Moderne two story with vertical banding above first floor. Stucco exterior. Contributing in scale. Altered in 1950s.

43. Garden Court Apartments (7021 Hollywood Blvd.): 1916; Frank Meline

The building was badly damaged by attempted demolition; further demolition occurred during the nomination process forcing reevaluation of its remaining integrity and contributing status. The Garden Court was an excellent example of a Neo-Baroque apartment hotel of Hollywood's early years. The brick and concrete structure is H-shaped in plan, with symmetrical massing and a generous setback. Classical detailing has been removed and stored. The building had been determined eligible for listing in the National Register, with formal nomination precluded by owner objection.

Statement of Significance (in one paragraph)

Hollywood Boulevard, the main street of the film capital of the world, has been famous since the 1920s. The Golden Era of Hollywood is clearly depicted in this area of the commercial corridor with its eclectic and flamboyant architectural mix. The district is a thematic one, representing the retail, financial, and entertainment functions of the street and the relationship of the various structures to the movie industry, a 20th century phenonmenon which helped to shape the culture of the nation as a whole.

The proposed Hollywood Boulevard Historic District is a thematic one, centering on the significant commercial "main street" of the Hollywood community during the 1920s and 1930s, the period when the community achieved worldwide attention as the motion picture capital of the world. Between 1915 and 1935, Hollywood Boulevard was transformed from a residential street of stately homes to a bustling commercial center. The concentration of the buildings on Hollywood Boulevard is a microcosm of the era's significant architectural styles, and the streetscape and massing of buildings, with few intrusions, are reminiscent of development patterns of the period. The blocks of Hollywood Boulevard from Argyle to El Cerrito are an intact grouping of business, entertainment, and commercial structures of the Hollywood downtown area. In many cases, architectural style is appropriate to original use and imagery, with classic Beaux Arts Revival styles symbolizing financial and professional solidity, exotic modernism in new building types, flamboyant designs related to the movie industry in fantasy and Art Deco examples, and period revival Chateauesque and Spanish Colonial Revival used in retail. This collection of buildings gives a compact and cohesive impression, a pedestrian-oriented shopping street with few intrusions, one of very few remaining in Los Angeles. The unparalleled growth of the movie industry during this period provided an infusion of capital that allowed industry chiefs and city boosters to create a special urban environment. A microcosm of significant architectural styles between 1920 and 1930, some of the individual buildings offer stylistic examples of great quality; works of most of Los Angeles' premier architects are represented. The concentration of colorful Art Deco structures, such as the Newberry Building, and fantasy entertainment environment offer a grouping which may be unique in the nation, structures which are increasingly rare examples of their styles in the city. This was a period of unparalleled growth and prosperity in the community and the quality of the existing building stock is evidence of the careful attention to quality and detail exhibited by the developers. Several real estate interests were instrumental in this staggering change, and their activities are revealed in the development patterns evident along the commercial corridor.

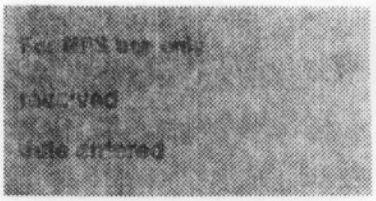

There were three major commercial centers along the Boulevard. The oldest, at the intersection of Cahuenga and Hollywood, was part of the original Hollywood ranch purchased by the Wilcox/Beveridge family. Another center at the western end of the street, at Highland, was established by the Whitley and Toberman interests.

The Hollywood and Vine intersection was developed by the Taft and Palmer families and their allied syndicates. These three centers merged as Hollywood Boulevard prospered, with blocks of low rise commercial structures linking major centers. Thus, architecturally signficant structures tend to anchor corners at or near the three primary areas of commercial development. The result was a pedestrian-oriented streetscape with a regular progression of architectural monuments interspersed with smaller scaled commercial buildings. The first commercial structures were one and two-story brick buildings, often embellished with classical ornament. Most of these remain, although many have been repeatedly altered.

A significant grouping on the Boulevard is the buildings erected to house financial and mercantile institutions. Most of these are designed in the Classical Revival styles popular with banking and financial interests in the 1920s, and several reached the 12-story height limit allowed in Los Angeles in that era. Intended to signify dignity and permanence by their architecture, the Revival office towers were visual landmarks of the community. Among them are the Equitable Building, Taft Building, B. H. Dyas Company, Guaranty Building, Security Trust and Savings, Security Pacific at Highland, Bank of America at Highland, and the Hollywood Professional Building. Most of these edifices housed the financial institutions created to meet the needs of the film industry on the West Coast. Not only were there payrolls to meet, but also production funds were wired from executive offices in the East.

Hollywood real estate syndicates were often the beneficiaries of studio profits. The designers of these buildings constitute an honor roll of Los Angeles architectural firms in practice at this time: Walker and Eisen (Taft Building), John C. Austin (Guaranty Building), Parkinson and Parkinson (Security Trust), Curlett and Beelman (Equitable Building), and Morgan, Walls, and Clements (Bank of America Building). Hollywood Boulevard has an important grouping of ornate Spanish Colonial Revival buildings. Prominent examples within the district include the Palace Theater, the Brown Derby, Hollywood Toys, the Baine Building, the Cherokee facade of the Cherokee Building, and the Hollywood Wax Museum. Most of these are products of the prolific firm of Gogerty and Weyl. This firm's designs created a feeling of sophisticated, yet relaxed, upscale shopping and entertainment district. The style is used most successfully in the district in low-rise office and retail establishments. Many had courtyards or open space. Churrigueresque detailing lent a formality to most of the structures. Unlike the conservative financial and professional buildings, the Spanish Colonial Revival structures were primarily used for services and recreational facilities.

The third commercial style which Hollywood embraced was the exotic and stylish Art Deco. The corridor has several significant examples of various types of Art Deco architecture, including the Pantages Theater (B. Marcus Priteca), the Hollywood Building (the only brick example of this style, by B. B. Homer), the Attie Building,

J. P. Newberry, S. H. Kress (Frederick's, by Edward Sibbert), Pickwick Books, the Shane Building (S. Norton, F. Wallis), and Max Factor (S. Charles Lee), as well as many smaller scale supportive examples. The style lent itself to many interpretations, and the variety of uses for Art Deco building included luxury retail, legitimate theater, and smaller service-oriented businesses. Art Deco became associated in Hollywood with worldliness and sophistication, and many older utilitarian buildings received extensive alteration to conform to the new look. The style's use of color and innovative building materials created the bold statement Hollywood boosters were looking for to promote the Boulevard as the "Style Center of the West". Businesses associated with the movie industry relished its theatricality. Within the Hollywood Boulevard district are a concentration of entertainment oriented structures which are important as a grouping functionally as well as architecturally. Employing a variety of styles, the theaters of Hollywood, both legitimate and cinematic, enabled the street to double as an entertainment center for the surrounding communities. The programmatic architecture of the Chinese and the Egyptian, as well as the ornate Warner Theater, Pantages, Palace, Hollywood, El Capitan, Iris, and others, created an aura of fantasy for the population of the area -- and satisfied the tourists in search of "Hollywood" as well. The major practitioners of these fanciful styles were Meyer and Holler (Chinese, Egyptian), G. Albert Landsburgh (Warner), Gogerty and Weyl (Palace), and B. Marcus Priteca (Pantages). Legitimate houses as well as those for motion pictures were elaborate. Premieres were commonplace, as the dream merchants previewed the latest releases in elegantly appointed auditoriums. This was the retail outlet of the city's major industry, and careful attention was paid to the comfort and convenience of the patron.

Also included in the district are several elegant apartments and hotels built for the convenience of a highly transient film industry population, and later to accommodate a growing tourist trade as well. The Plaza (Walker and Eisen), the Knickerbocker, Christie (A. R. Kelly), Roosevelt (Fisher, Lake, and Traver), Hillview Apartments (Tifal Brothers), and the Garden Court Apartments (Frank Meline) provided amenities close to the commercial corridor for their guests. Each had its distinct clientele: vaudevillians at the Plaza, extras at Hillview (Jesse Lasky built it at a time when it was difficult for actors to find lodging in the local rooming houses) and silent screen stars at the Garden Court. The Roosevelt Hotel, site of the first Academy Awards ceremony, was built by a syndicate of prominent entertainers and local businessmen, among them Mary Pickford, Douglas Fairbanks, Joseph Schenk, and C. E. Toberman. The district also contains the only remaining residence on Hollywood Boulevard, the 1903 Queen Anne Victorian known as the Janes residence. In the 1920s, this residence doubled as a community institution, as the three Misses Janes taught school to the children of Chaplin, De Mille, Fairbanks, Beery, and others. Organizational meetings for various churches, the Hollywood Bowl, and service groups were held in the home. Two institutional buildings from that era remain on the Boulevard: The Congregational Church and the Masonic Temple.

While much of Los Angeles and the rest of the nation saw dark times, Hollywood was pushed by the thrust of the burgeoning motion picture industry to develop as a major commercial center for Los Angeles. The blocks of Hollywood Boulevard from Argyle to El Cerrito house a largely intact business, entertainment, and commercial center from the primary period of Hollywood's significance, the 1920s and 1930s. The district has three distinct architectural styles, each designed with the function and desired image of the building in mind, as well as the storefront and urban design features which are representative of a pedestrian-oriented street.

CONTINUATION SHEET ITEM NUMBER 10 PAGE 1

Verbal boundary description:

The Hollywood Boulevard Commercial and Entertainment District commences at the northwest corner of Hollywood Blvd. and Argyle Ave. and proceeds west to the northwest corner of Hollywood Blvd. and Cherokee following the street; thence to the northeast corner of Hollywood Blvd. and Highland Ave., each parcel with Boulevard frontage; thence along the street to the northwest corner of Orchid Ave. and Hollywood; thence one parcel deep to western boundary of 7065 Hollywood Blvd; then east from the southeast corner of Sycamore Ave. and Hollywood Blvd. one parcel deep to southwest corner of Hudson Ave.; then east following the street to southeast corner at Wilcox and Hollywood Blvd.; then east one parcel deep to two parcels east of Vine Street. Also included is the parcel directly south of the southeast corner of Hollywood and Highland on the east side of Highland; one parcel north of northeast corner of N. Ivar and Hollywood on the east side of Ivar; and three parcels north of northwest corner of Hollywood and Vine on the west side of Vine St; one parcel south of southwest corner of Hollywood and Vine on the west side of Vine; and three parcels south of the southeast corner of Hollywood and Vine on the east side of Vine St. Boundaries are based upon the remaining integrity of the Hollywood Boulevard Commercial and Entertainment area.

19-174178

CALIFORNIA SHPO
STAFF EVALUATION

H(YWOOD BOULEVARD COMMERCIAL ANI
ENTERTAINMENT DISTRICT

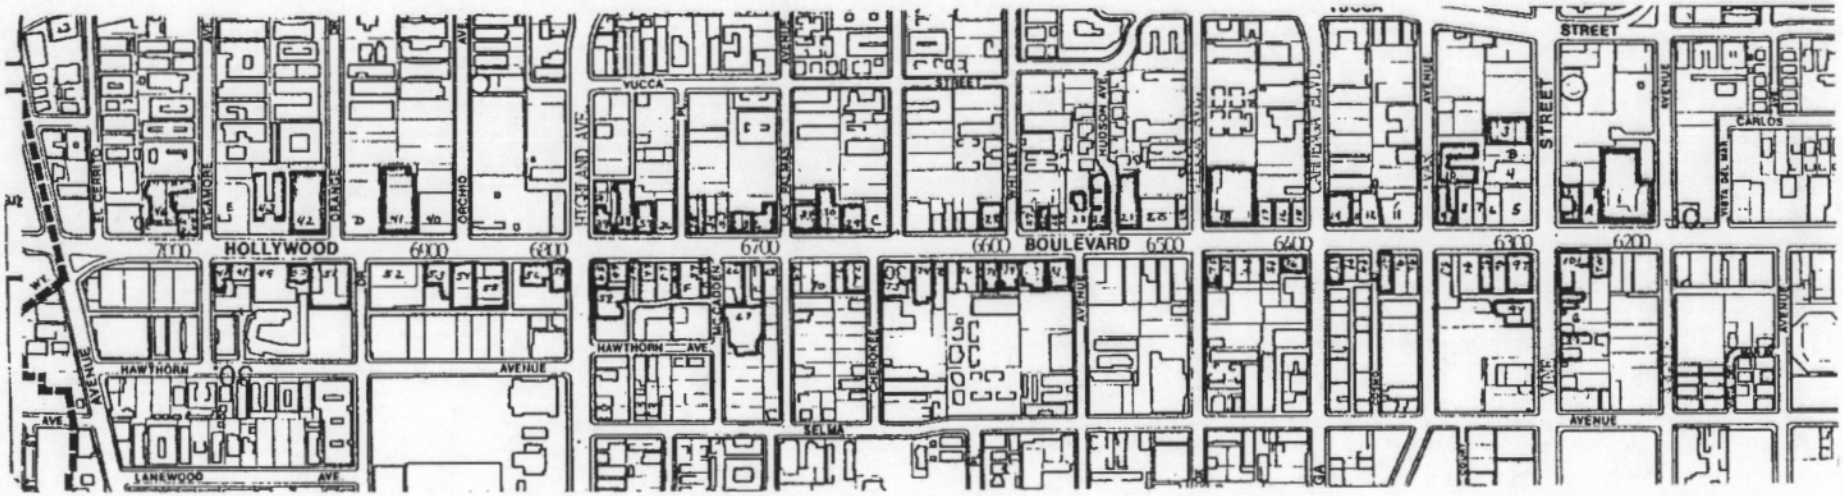

District has been field-checked on site by staff; boundaries appear to be adequately defined, and encompass the 12 blocks which form the heart of Hollywood, including the majority of its most famous landmarks.

The proposed district is the commercial and entertainment center which developed during the rise of the motion picture industry in the 1920s and 30s, The "Golden Age" of Hollywood. Many of the properties are Nationally or internationally known - Grauman's Chinese and Egyptian Theatres, the Pantages, the Knickerbocker and Roosevelt Hotels, Max Factor, the Brown Derby, and the famed intersections of Hollywood and Vine all lie within the district boundaries. Integrity is fair, the major landmark buildings still retain their distinctive identities, while many of the smaller buildings have been altered, remodeled or covered with modern signage. The number of contributors (56%) is low, although the scale and placement of the contributing structures creates an impression of greater cohesion. The district contains numerous outstanding examples of architectural styling of the 1920s and 30s, including several buildings long recognized as major monuments of Art Deco and Moderne (Criterion C - type/period). Works of numerous important Southern California architects are also represented (Criterion C - work of a master). Many buildings have a direct association with the film industry (Criterion A - events) and the rise of Hollywood as the nation's film capital (Criterion A - Events); others are financial, retail, and service establishments that formed the commercial heart of the community (Criterion A - events). The Hollywood Roosevelt Hotel was the site of the first Academy Awards Ceremony (Criterion A - events).

Hollywood Boulevard symbolizes "Hollywood ", a 20th century phenomenon which shaped the culture of the nation as a whole. The proposed district appears to meet the National Register criteria at the National level of significance.

• Hollywood Boulevard Commercial/Community District

•

We are pleased to inform you that the property you own is located in the above district as shown on the enclosed map. The district will be considered by the State Historical Resources Commission for nomination to the National Register of Historic Places. The National Register is the Federal Government's official list of historic properties worthy of preservation. Listing in the National Register provides recognition and assists in preserving our Nation's heritage. Enclosed is a copy of the criteria under which properties are evaluated.

Listing of historic properties in the National Register results in the following:

—Consideration in planning for Federal, federally licensed, and federally assisted projects. Section 106 of the National Historic Preservation Act of 1966 requires that Federal agencies allow the Advisory Council on Historic Preservation an opportunity to comment on all projects affecting historic properties listed in the National Register. For further information please refer to 36 CFR 800.

—Eligibility for Federal tax provisions. If a property is listed in the National Register or is located within a registered historic district and certified by the Secretary of the Interior as contributing to the historic significance of that district, certain Federal tax provisions may apply. The Tax Reform Act of 1976 provides tax incentives for preservation. The Revenue Act of 1978, the Tax Treatment Extension Act of 1980, and the Economic Recovery Tax Act of 1981 provide for a 25 percent investment tax credit for rehabilitating historically significant industrial and certain residential buildings instead of a 15 or 20 percent credit available for rehabilitation of non-historic buildings more than thirty years old. The law requires that the taxpayer use a 19-year cost recovery period for the rehabilitation of the building. Certified structures with certified rehabilitations receive additional tax leverage because owners are allowed to reduce the basis by one half the amount of the credit. The Tax Treatment Extension Act of 1980 provides Federal tax deductions for charitable contributions for conservation purposes of partial interests in historically important land areas or structures. For further information please refer to 36 CFR 67.

—Consideration of historic values in the decision to issue a surface coal mining permit where coal is located, in accordance with the Surface Mining and Control Act of 1977. For further information please refer to 30 CFR 700 et seq.

—Qualification for Federal grants for historic preservation when funds are available. Presently funding is unavailable.

Owners of private properties nominated to the National Register have an opportunity to concur in or object to listing in accordance with the National Historic Preservation Act and 36 CFR 60. Any owner or partial owner of private property who chooses to object to listing may submit to the State Historic Preservation Officer a notarized statement certifying that the party is the sole or partial owner of the private property and objects to the listing. Each owner or partial owner of private property has one vote regardless of what part of the property that party owns. If a majority of private property owners object a property will not be listed; however, the State Historic Preservation Officer shall submit the nomination to the Keeper of the National Register for a determination of the eligibility of the property for listing in the National Register. If the property is then determined eligible for listing, although not formally listed, the only result is that Federal agencies will be required to allow the Advisory Council on Historic Preservation an opportunity to comment before the agency may fund, license, or assist a project which will affect the property. If you choose to object to the listing of your property, the notarized objection must be submitted to the State Historic Preservation Officer, Office of Historic Preservation, Post

District

We are pleased to inform you that the property you own is located in the above district as shown on the enclosed map. The district will be considered by the State Historical Resources Commission for nomination to the National Register of Historic Places. The National Register is the Federal Government's official list of historic properties worthy of preservation. Listing in the National Register provides recognition and assists in preserving our historic heritage. Enclosed is a copy of the criteria under which properties are evaluated.

Listing of historic properties in the National Register results in the following:

--Consideration in planning for Federal, federally licensed, and federally assisted projects. Section 106 of the National Historic Preservation Act of 1966 requires that Federal agencies allow the Advisory Council on Historic Preservation an opportunity to comment on all projects affecting historic properties listed in the National Register. For further information please refer to 36 CFR 800.

--Eligibility for Federal tax provisions. If a property is listed in the National Register or determined eligible for listing, certain Federal tax provisions may apply. The Tax Reform Act of 1986 preserves the historic preservation tax incentives established by Congress in the Tax Reform Act of 1976, the Revenue Act of 1978, the Tax Treatment Extension Act of 1980, and the Economic Recovery Tax Act of 1981, provides for a 25 percent investment tax credit for rehabilitating historic commercial, industrial and rental residential buildings instead of a 15 or 20 percent credit available for rehabilitation of non-historic buildings more than thirty years old. This can be combined with an 18-year cost recovery period for the adjusted basis of the building. Certified structures with certified rehabilitations receive additional tax savings because owners are allowed to reduce the basis by one half the amount of the credit. The Tax Treatment Extension Act of 1980 provides Federal tax deductions for charitable contributions for conservation purposes of partial interests in historically important land areas or structures. For further information please refer to 36 CFR 67.

--Consideration of historic values in the decision to issue a surface coal mining permit where coal is located, in accord with the Surface Mining and Control Act of 1977. For further information please refer to 30 CFR 700 et seq.

--Qualification for Federal grants for historic preservation when funds are available. Presently funding is unavailable.

Owners of private properties nominated to the National Register have an opportunity to concur in or object to listing in accord with the National Historic Preservation Act and 36 CFR 60. Any owner or partial owner of private property who chooses to object to listing may submit to the State Historic Preservation Officer a notarized statement certifying that the party is the sole or partial owner of the private property and objects to the listing. Each owner or partial owner of private property has one vote regardless of what part of the property that party owns. If a majority of private property owners object a property will not be listed, however, the State Historic Preservation Officer shall submit the nomination to the Keeper of the National Register for a determination of the eligibility of the property for listing in the National Register. If the property is then determined eligible for listing, although not formally listed, the only result is that Federal agencies will be required to allow the Advisory Council on Historic Preservation an opportunity to comment before the agency may fund, license, or assist a project which will affect the property. Commercial/Community
District

We are pleased to inform you that the property you own is located in the above district as shown on the enclosed map. The district will be considered by the State Historical Resources Commission for nomination to the National Register of Historic Places. The National Register is the Federal Government's official list of historic properties worthy of preservation. Listing in the National Register provides recognition and assists in preserving our Nation's heritage. Enclosed is a copy of the criteria under which properties are evaluated.

Listing of historic properties in the National Register results in the following:

—Consideration in planning for Federal, federally licensed, and federally assisted projects. Section 106 of the National Historic Preservation Act of 1966 requires that Federal agencies allow the Advisory Council on Historic Preservation an opportunity to comment on all projects affecting historic properties listed in the National Register. For further information please refer to 36 CFR 800.

—Eligibility for Federal tax provisions. If a property is listed in the National Register certain Federal tax provisions may apply. The Tax Reform Act of 1986, which repealed the historic preservation tax incentives authorized by Congress in the Tax Reform Act of 1976, the Revenue Act of 1978, the Tax Treatment Extension Act of 1980, and the Economic Recovery Tax Act of 1981, provides for a 15 percent investment tax credit for rehabilitating historic commercial, industrial and rental residential buildings instead of a 15 or 25 percent credit available for rehabilitation of non-historic building more than thirty years old. This can be combined with an 18-year cost recovery period for the adjusted basis of the building. Certified structures with certified rehabilitations receive additional tax savings because owners are allowed to reduce the basis by one half the amount of the credit. The Tax Treatment Extension Act of 1980 provides Federal tax deductions for charitable contributions for conservation purposes of partial interests in historically important land areas or structures. For further information please refer to 36 CFR 67.

—Consideration of historic values in the decision to issue a surface coal mining permit where coal is located, in accord with the Surface Mining and Control Act of 1977. For further information please refer to 30 CFR 700 et seq.

—Qualification for Federal grants for historic preservation when funds are available. Presently funding is unavailable.

Owners of private properties nominated to the National Register have an opportunity to concur in or object to listing in accordance with the National Historic Preservation Act and 36 CFR 60. Any owner or partial owner of private property who chooses to object to listing may submit to the State Historic Preservation Officer a notarized statement certifying that the party is the sole or partial owner of the private property and objects to the listing. Each owner or partial owner of private property has one vote regardless of what part of the property that party owns. If a majority of private property owners object a property will not be listed, however, the State Historic Preservation Officer shall submit the nomination to the Keeper of the National Register for a determination of the eligibility of the property for listing in the National Register. If the property is then determined eligible for listing, although not formally listed, the only result is that Federal agencies will be required to allow the Advisory Council on Historic Preservation an opportunity to comment before the agency may fund, license, or assist a project which will affect the property. If you choose to object to the listing of your property, the notarized objection must be submitted to the State Historic Preservation Officer, Office of Historic Preservation, Post

The National Register is the Federal Government's official list of historic properties worthy of preservation. Listing in the National Register provides recognition and aids in preserving our Nation's heritage. Enclosed is a copy of the criteria under which properties are evaluated.

Listing of historic properties in the National Register results in the following:

—Consideration in planning for Federal, federally licensed, and federally assisted projects. Section 106 of the National Historic Preservation Act of 1966 requires that Federal agencies afford the Advisory Council on Historic Preservation an opportunity to comment on all projects affecting historic properties listed in the National Register. For further information please refer to 36 CFR 800.

—Eligibility for Federal tax provisions. If a property is listed in the Nation's Register certain Federal tax provisions may apply. The Tax Reform Act of 1976 expanded the tax incentives for historic preservation established by the Congress in the Tax Reform Act of 1976, the Revenue Act of 1978, the Tax Treatment Extension Act of 1980, and the Economic Recovery Tax Act of 1981, provides for a 10 percent investment tax credit for certified historic commercial, industrial and rental residential buildings instead of a 15 or 25 percent credit available for rehabilitation of non-historic buildings more than thirty years old. This can be combined with an 18-year cost recovery period for the adjusted basis of the building. Certified structures with certified retained grants receive additional tax savings because owners are allowed to reduce the basis by one half the amount of the credit. The Tax Treatment Extension Act of 1980 provides Federal tax deductions for charitable contributions for conservation purposes of partial interests in historically important land areas or structures. For further information please refer to 36 CFR 67.

—Consideration of historic values in the decision to issue a surface coal mining permit where coal is located, in accord with the Surface Mining and Control Act of 1977. For further information please refer to 30 CFR 700 et seq.

—Qualification for Federal grants for historic preservation when funds are available. Presently funding is unavailable.

Listing of historic properties in the National Register results in the following:

—Consideration in planning for Federal, federally licensed, and federally assisted projects. Section 106 of the National Historic Preservation Act of 1966 requires that Federal agencies allow the Advisory Council on Historic Preservation an opportunity to comment on all projects affecting historic properties listed in the National Register. For further information please refer to 36 CFR 800.

—Eligibility for Federal tax provisions. If a property is listed in the National Register certain Federal tax provisions may apply. The Tax Reform Act of 1984, which revised the historic preservation tax incentives authorized by Congress in the Tax Reform Act of 1976, the Revenue Act of 1978, the Tax Treatment Extension Act of 1980, and the Economic Recovery Tax Act of 1981, provides for a 25 percent investment tax credit for rehabilitating historic commercial, industrial and rental residential buildings instead of a 15 or 20 percent credit available for rehabilitation of non-historic buildings more than thirty years old. This can be combined with an 19-year cost recovery period for the adjusted basis of the building. Certified structures with certified rehabilitations receive additional tax savings because owners are allowed to reduce the basis by one half the amount of the credit. The Tax Treatment Extension Act of 1980 provides Federal tax deductions for charitable contributions for conservation purposes of partial interests in historically important land areas or structures. For further information please refer to 36 CFR 67.

—Consideration of historic values in the decision to issue a surface coal mining permit where coal is located, in accord with the Surface Mining and Control Act of 1977. For further information please refer to 30 CFR 700 et seq.

—Qualification for Federal grants for historic preservation when funds are available. Presently funding is unavailable.

Owners of private properties nominated to the National Register have an opportunity to concur in or object to listing in accord with the National Historic Preservation Act and 36 CFR 60. Any owner or partial owner of private property who chooses to object to listing may submit to the State Historic Preservation Officer a notarized statement certifying that the party is the sole or partial owner of the private property and objects to the listing. Each owner or partial owner of private property has one vote regardless of what part of the property that party owns. If a majority of private property owners object a property will not be listed; however, the State Historic Preservation Officer shall submit the nomination to the Keeper of the National Register for a determination of the eligibility of the property for listing in the National Register. If the property is then determined eligible for listing, although not formally listed, the only result is that Federal agencies will be required to allow the Advisory Council on Historic Preservation an opportunity to comment before the agency may fund, license, or assist a project which will affect the property. If you choose to object to the listing of your property, the notarized objection must be submitted to the State Historic Preservation Officer, Office of Historic Preservation, Post

For further information please refer to 36 CFR 800.

—Eligibility for Federal tax provisions. If a property is listed in the National Register certain Federal tax provisions may apply. The Tax Reform Act of 1984, which revised the historic preservation tax incentives established by Congress in the Tax Reform Act of 1976, the Revenue Act of 1978, the Tax Treatment Extension Act of 1980, and the Economic Recovery Tax Act of 1981, provides for a 25 percent investment tax credit for rehabilitating historic commercial, industrial and rental residential buildings instead of a 15 or 20 percent credit available for rehabilitation of non historic buildings more than thirty years old. This can be combined with an 18-year cost recovery period for the adjusted basis of the building. Certified structures with certified rehabilitations receive additional tax savings because owners are allowed to reduce the basis by one half the amount of the credit. The Tax Treatment Extension Act of 1980 provides Federal tax deductions for charitable contributions for conservation purposes of partial interests in historically important land areas or structures. For further information please refer to 36 CFR 67.

—Consideration of historic values in the decision to issue a surface coal mining permit where coal is located, in accord with the Surface Mining and Control Act of 1977. For further information please refer to 30 CFR 700 et seq.

—Qualification for Federal grants for historic preservation when funds are available. Presently funding is unavailable.

Owners of private properties nominated to the National Register have an opportunity to concur in or object to listing in accord with the National Historic Preservation Act and 36 CFR 60. Any owner or partial owner of private property who chooses to object to listing may submit to the State Historic Preservation Officer a notarized statement certifying that the party is the sole or partial owner of the private property and objects to the listing. Each owner or partial owner of private property has one vote regardless of what part of the property that party owns. If a majority of private property owners object a property will not be listed; however, the State Historic Preservation Officer shall submit the nomination to the Keeper of the National Register for a determination of the eligibility of the property for listing in the National Register. If the property is then determined eligible for listing, although not formally listed, the only result is that Federal agencies will be required to allow the Advisory Council on Historic Preservation an opportunity to comment before the agency may fund, license, or assist a project which will affect the property. If you choose to object to the listing of your property, the notarized objection must be submitted to the State Historic Preservation Officer, Office of Historic Preservation, Post

We are pleased to inform you that the property you own is located in the above district as shown on the enclosed map. The district will be considered by the State Historical Resources Commission for nomination to the National Register of Historic Places. The National Register is the Federal Government's official list of historic properties worthy of preservation. Listing in the National Register provides recognition and assists in preserving our Nation's heritage. Enclosed is a copy of the criteria under which properties are evaluated.

Listing of historic properties in the National Register results in the following:

—Consideration in planning for Federal, federally licensed, and federally assisted projects. Section 106 of the National Historic Preservation Act of 1966 requires that Federal agencies allow the Advisory Council on Historic Preservation an opportunity to comment on all projects affecting historic properties listed in the National Register. For further information please refer to 36 CFR 800.

—Eligibility for Federal tax provisions. If a property is listed in the National Register certain Federal tax provisions may apply. The Tax Reform Act of 1984, which revised the historic preservation tax incentives established by Congress in the Tax Reform Act of 1976, the Revenue Act of 1978, the Tax Treatment Extension Act of 1980, and the Economic Recovery Tax Act of 1981, provides for a 25 percent investment tax credit for rehabilitating historic commercial, industrial and rental residential buildings instead of a 15 or 10 percent credit available for rehabilitation of non-historic buildings more than thirty years old. This can be combined with an 18-year cost recovery period for the adjusted basis of the building. Certified structures with certified rehabilitations receive additional tax savings because owners are allowed to reduce the basis by one half the amount of the credit. The Tax Treatment Extension Act of 1980 provides Federal tax deductions for charitable contributions for conservation purposes of partial interests in historically important land areas or structures. For further information please refer to 36 CFR 67.

—Consideration of historic values in the decision to issue a surface coal mining permit where coal is located, in accord with the Surface Mining and Control Act of 1977. For further information please refer to 30 CFR 700 et seq.

—Qualification for Federal grants for historic preservation when funds are available. Presently funding is unavailable.

Owners of private properties nominated to the National Register have an opportunity to concur in or object to listing in accord with the National Historic Preservation Act and 36 CFR 60. For further information please refer to 36 CFR 800.

--Eligibility for Federal tax provisions. If a property is listed in the National Register certain Federal tax provisions may apply. The Tax Reform Act of 1976, which revised the tax law provisions for historic properties enacted by Congress in the Tax Reform Act of 1976, the Revenue Act of 1978, the Tax Treatment Extension Act of 1980, and the Economic Recovery Tax Act of 1981, provides for a 25 percent investment tax credit for rehabilitating historic commercial, industrial and rental residential buildings instead of a 15 or 20 percent credit available for rehabilitation of non-historic buildings more than thirty years old. The law also continued with an 18-year cost recovery period for the adjusted basis of the building. Certified structures with revenue producing situations receive additional tax savings because owners are allowed to reduce the basis by one half the amount of the credit. The Tax Treatment Extension Act of 1980 provides Federal tax deductions for charitable contributions for conservation purposes of partial interests in historically important land areas or structures. For further information please refer to 36 CFR 67.

--Consideration of historic values in the decision to issue a surface coal mining permit where coal is located, in accord with the Surface Mining and Control Act of 1977. For further information please refer to 30 CFR 700 et seq.

--Qualification for Federal grants for historic preservation when funds are available. Presently funding is unavailable.

Owners of private properties nominated to the National Register have an opportunity to concur in or object to listing in accord with the National Historic Preservation Act and 36 CFR 60. Any owner or partial owner of private property who chooses to object to listing may submit to the State Historic Preservation Officer a notarized statement certifying that the party is the sole or partial owner of the private property and objects to the listing. Each owner or partial owner of private property has one vote regardless of what part of the property that party owns. If a majority of private property owners object a property will not be listed; however, the State Historic Preservation Officer shall submit the nomination to the Keeper of the National Register for a determination of the eligibility of the property for listing in the National Register. If the property is then determined eligible for listing, although not formally listed, the only result is that Federal agencies will be required to allow the Advisory Council on Historic Preservation an opportunity to comment before the agency may fund, license, or assist a project which will affect the property. If you choose to object to the listing of your property, the notarized objection must be submitted to the State Historic Preservation Officer, Office of Historic Preservation, Post

1873 Midvale Avenue
Los Angeles, CA 90025

Hollywood Boulevard
Commercial/Community
District

We are pleased to inform you that the property you own is located in the above district as shown on the enclosed map. The district will be considered by the State Historical Resources Commission for nomination to the National Register of Historic Places. The National Register is the Federal Government's official list of historic properties worthy of preservation. Listing in the National Register provides recognition and assists in preserving our Nation's heritage. Enclosed is a copy of the criteria under which properties are evaluated.

Listing of historic properties in the National Register results in the following:

—Consideration in planning for Federal, federally licensed, and federally assisted projects. Section 106 of the National Historic Preservation Act of 1966 requires that Federal agencies allow the Advisory Council on Historic Preservation an opportunity to comment on all projects affecting historic properties listed in the National Register. For further information please refer to 36 CFR 800.

—Eligibility for Federal tax provisions. If a property is listed in the National Register certain Federal tax provisions may apply. The Tax Reform Act of 1984, which retained the historic preservation tax incentives established by Congress in the Tax Reform Act of 1976, the Revenue Act of 1978, the Tax Treatment Extension Act of 1980, and the Economic Recovery Tax Act of 1981, provides for a 25 percent investment tax credit for rehabilitation of certain commercial, industrial and rental residential buildings instead of a 15 or 20 percent credit available for rehabilitation of non-historic buildings more than thirty years old. This can be combined with an 18-year cost recovery period for the adjusted basis of the building. Certified structures with certified rehabilitations receive additional tax savings because owners are allowed to reduce the basis by one half the amount of the credit. The Tax Treatment Extension Act of 1980 provides Federal tax deductions for charitable contributions for conservation purposes of partial interests in historically important land areas or structures. For further information please refer to 36 CFR 67.

—Consideration of historic values in the decision to issue a surface coal mining permit where coal is located, in accordance with the Surface Mining and Control Act of 1977. For further information please refer to 30 CFR 700 et seq.

—Qualification for Federal grants for historic preservation when funds are available. Presently, funding is unavailable.

Owners of private properties nominated to the National Register have an opportunity to concur in or object to listing in accordance with the National Historic Preservation Act and 36 CFR 60. Any owner or partial owner of private property who chooses to object to listing may submit to the State Historic Preservation Officer a notarized statement certifying that the party is the sole or partial owner of the private property and objects to the listing. For further information please refer to 36 CFR 800.

--Eligibility for Federal tax provisions. If a property is listed in the National Register, certain Federal tax provisions may apply. The Tax Reform Act of 1986, which retained the key rehabilitation tax incentives established by Congress in the Tax Reduction Act of 1975, the Revenue Act of 1978, the Tax Treatment Extension Act of 1980, and the Economic Recovery Tax Act of 1981, provides for a 20 percent investment tax credit for rehabilitation of certified historic and certain nonresidential buildings, and a 10 percent credit available for rehabilitation of nonresidential buildings built prior to 1936 but not certified as historic. These tax credits may be taken for the depreciable basis of the building. Certified structures with certified rehabilitations receive additional tax advantages because owners are allowed to write off the basis by one half the amount of the credit. The Tax Treatment Extension Act of 1980 provides Federal tax deductions for charitable contributions for conservation purposes of partial interests in historically important land areas or structures. For further information please refer to 36 CFR 67.

--Consideration of historic values in the decision to issue a surface coal mining permit where coal is located, in accordance with the Surface Mining and Control Act of 1977. For further information please refer to 30 CFR 700 et seq.

--Qualification for Federal grants for historic preservation when funds are available. Presently funding is unavailable.

Owners of private properties nominated to the National Register have an opportunity to concur in or object to listing in accord with the National Historic Preservation Act and 36 CFR 60. Any owner or partial owner of private property who chooses to object to listing may submit to the State Historic Preservation Officer a notarized statement certifying that the party is the sole or partial owner of the private property and objects to the listing. Each owner or partial owner of private property has one vote regardless of what part of the property that party owns. If a majority of private property owners object a property will not be listed; however, the State Historic Preservation Officer shall submit the nomination to the Keeper of the National Register for a determination of the eligibility of the property for listing to the National Register. If the property is then determined eligible for listing, although not formally listed, the only result is that Federal agencies will be required to allow the Advisory Council on Historic Preservation an opportunity to comment before the agency may fund, license, or assist a project which will affect the property. If you choose to object to the listing of your property, the notarized objection must be submitted to the State Historic Preservation Officer, Office of Historic Preservation, Post

Pantages Theater Corporation
120 N. Robertson Boulevard
Los Angeles, CA 90048

Hollywood Boulevard
Commercial/Community
District

We are pleased to inform you that the property you own is located in the above district as shown on the enclosed map. The district will be considered by the State Historical Resources Commission for nomination to the National Register of Historic Places. The National Register is the Federal Government's official list of districts, properties worthy of preservation. Listing in the National Register provides recognition and assists in preserving our Nation's heritage. Enclosed is a copy of the criteria under which properties are evaluated.

Listing of historic properties in the National Register results in the following:

—Consideration in planning for Federal, Federally licensed, and Federally assisted projects. Section 106 of the National Historic Preservation Act of 1966 requires that Federal agencies allow the Advisory Council on Historic Preservation an opportunity to comment on all projects affecting historic properties listed in the National Register. For further information please refer to 36 CFR 800.

—Eligibility for Federal tax provisions. If a property is listed in the National Register or is determined eligible for listing, certain tax provisions may apply. The Tax Reform Act of 1976 which replaced the historic preservation provisions enacted by Congress in the Tax Reform Act of 1976, the Revenue Act of 1978, the Tax Treatment Extension Act of 1980, the Economic Recovery Tax Act of 1981, provides for a 15% investment tax credit for rehabilitation income producing commercial, industrial and rental residential buildings and a 15 or 20 percent credit available for a certified rehabilitation of historic commercial building, more than forty years old. The 15% credit is claimed under a 15-year tax recovery period for the adjusted basis of the building. Certified structures which retained substantial portions of existing walls and internal structural framework of their existing or previous predecessor buildings are allowed to reduce the basis by one half the amount of the credit. The Tax Treatment Extension Act of 1980 provides Federal tax deductions for charitable contributions for conservation purposes of partial interests in historically important land areas or structures. For further information please refer to 36 CFR 67.

—Consideration of historic values in the decision to issue a surface coal mining permit where coal is mined, in accord with the Surface Mining and Control Act of 1977. For further information please refer to 30 CFR 700 et seq.

—Qualification for Federal grants for historic preservation when funds are available. Presently funding is unavailable.

Owners of private properties nominated to the National Register have an opportunity to concur in or object to listing in accord with the National Historic Preservation Act and 36 CFR 60. We are pleased to inform you that the property you own is located in the above district as shown on the enclosed map. The district will be considered by the State Historical Resources Commission for nomination to the National Register of Historic Places. The National Register is the Federal Government's official list of historic properties worthy of preservation. Listing in the National Register provides recognition and assists in preserving our Nation's heritage. Enclosed is a copy of the criteria under which properties are evaluated.

Listing of historic properties in the National Register results in the following:

--Consideration in planning for Federal, federally licensed, and federally assisted projects. Section 106 of the National Historic Preservation Act of 1966 requires that Federal agencies allow the Advisory Council on Historic Preservation an opportunity to comment on all projects affecting historic properties listed in the National Register. For further information please refer to 36 CFR 800.

--Eligibility for Preservation provisions. If a property is listed in the National Register certain Federal tax provisions may apply. The Tax Reform Act of 1976 altered the historic preservation tax incentives established by the Internal Revenue Code of 1954. The Tax Reform Act of 1976, the Revenue Act of 1978, the Tax Treatment Extension Act of 1980, and the Economic Recovery Tax Act of 1981, provides for a 25 percent investment tax credit for rehabilitation of certified historic, commercial, industrial and certain residential buildings instead of a 15 or 20 percent credit available for rehabilitation of non-historic buildings more than thirty years old. This can be combined with an accelerated cost recovery period for the adjusted basis of the building. Certified structures with qualified rehabilitations receive additional tax savings because owners are allowed to reduce the basis by one half the amount of the credit. The Tax Treatment Extension Act of 1980 provides Federal tax deductions for charitable contributions for conservation purposes of partial interests in historically important land areas or structures. For further information please refer to 36 CFR 67.

--Consideration of historic values in the decision to issue a surface coal mining permit where coal is located, in accordance with the Surface Mining and Control Act of 1977. For further information please refer to 30 CFR 700 et seq.

--Qualification for Federal grants for historic preservation when funds are available. Presently funding is unavailable.

For further information please refer to 36 CFR 800.

—Eligibility for Federal tax provisions. If property is listed in the National Register certain Federal tax provisions may apply. The Tax Reform Act of 1984, which ignored historic preservation tax incentives, was passed by Congress in the Tax Reform Act of 1976, the Revenue Act of 1978, the Tax Treatment Extension Act of 1980, and the Economic Recovery Tax Act of 1981, provides for a 25 percent investment tax credit for rehabilitating historic commercial, industrial and rental residential buildings instead of a 15 or 20 percent credit available for rehabilitation of non-historic buildings more than thirty years old. The Code also encourages donations of historic buildings by allowing deductions for the fair market value of such donations. For the donor's benefit of the building. Certified structures with certified rehabilitations receive certain tax benefits. Owners are allowed to reduce the basis by one half the amount of the credit. The Tax Treatment Extension Act of 1980 provides Federal tax deductions for charitable contributions for conservation purposes of partial interests in historically important land areas or structures. For further information please refer to 26 CFR 67.

—Consideration of historic values in the decision to issue a surface coal mining permit where coal is located, in accordance with the Surface Mining and Control Act of 1977. For further information please refer to 30 CFR 700 et seq.

—Qualification for Federal grants for historic preservation when funds are available. Presently funding is unavailable.

September 12, 1984

Jack Arian and Associates
415 State Street
Santa Barbara, CA 93101

Hollywood Boulevard
Commercial/Community
District

We are pleased to inform you that the property you own is located in the above district as shown on the enclosed map. The district will be considered by the State Historical Resources Commission for nomination to the National Register of Historic Places. The National Register is the Federal Government's official list of historic properties worthy of preservation. Listing in the National Register provides recognition and assists in preserving our Nation's heritage. Enclosed is a copy of the criteria under which properties are evaluated.

Listing of historic properties in the National Register results in the following:

—Consideration in planning for Federal, federally assisted, and federally licensed projects (Section 106 of the National Historic Preservation Act of 1966 requires that Federal agencies allow the Advisory Council on Historic Preservation an opportunity to comment on all projects affecting historic properties listed in the National Register. For further information see 36 CFR 800).

—Eligibility for Federal tax provisions. If a property is listed in the National Register or certified for participation in a State or local historic district, certain Federal tax provisions may apply. The Tax Reform Act of 1976 provides tax incentives for preservation. The Tax Treatment Extension Act of 1980 and the Economic Recovery Tax Act of 1981 provide for a 25 percent investment tax credit for certified historic commercial properties and provide certain limitations on deductions for depreciation and interest expenses. Owners of income-producing properties listed in the National Register may be eligible for the investment tax credit and accelerated depreciation. The Tax Reform Act of 1984 reduced the tax credit to 20 percent and limited the deductions for rehabilitation expenses. The Internal Revenue Service, National Park Service, and State Historic Preservation Officer must certify that a building is historic and that the rehabilitation is consistent with its historic character. Owners of certified historic structures who donate preservation easements may receive additional tax savings, and the owners are allowed to reduce the State tax by one half the amount of the credit. The Tax Treatment Extension Act of 1980 provides for certain tax incentives for charitable contributions for conservation purposes of partial interests in historically important land areas or structures. For further information please refer to 36 CFR 67.

—Consideration of historic values in the decision to issue a surface coal mining permit where coal is located, in accordance with the Surface Mining and Control Act of 1977. For further information please refer to, 30 CFR 700 et seq.

—Qualification for grant-in-aid funds for historic preservation when funds are available. Presently funding is unavailable.

Owners of private properties nominated to the National Register have an opportunity to concur in or object to listing in accordance with the National Historic Preservation Act and 36 CFR 60. Any owner or partial owner of private property who chooses to object to listing may submit to the State Historic Preservation Officer a notarized statement certifying that the party is the sole or partial owner of the private property and objects to the listing. Each owner or partial owner of private property has one vote regardless of what part of the property that party owns. If a majority of private property owners object, a property will not be listed, however, the State Historic Preservation Officer shall submit the nomination to the Keeper of the National Register for a determination of the eligibility of the property for listing in the National Register. If the property is then determined eligible for listing, although not formally listed, the only result is that Federal agencies will be required to allow the Advisory Council on Historic Preservation an opportunity to comment before the agency may fund, license, or assist a project which will affect the property. If you choose to object to the listing of your property, the notarized objection must be submitted to the State Historic Preservation Officer, Office of Historic Preservation, Post

c/o Alfred J. Homan
608 S. Hill Street, Room 804
Los Angeles, CA 90014

6 Hollywood Boulevard
Commercial/Community
District

We are pleased to inform you that the property you own is located at the above district as shown on the enclosed map. The district will be considered by the State Historical Resources Commission for nomination to the National Register of Historic Places. The National Register is the Federal Government's official list of historic properties worthy of preservation. Listing in the National Register provides recognition and makes it possible for owners to be considered for preservation assistance. Enclosed is a copy of the criteria under which properties are evaluated.

Listing of historic properties in the National Register places no restrictions on the property owner.

- Consideration in planning for Federal, State or local projects. Federally assisted projects affecting properties listed in the National Register must be reviewed to comply with the National Historic Preservation Act of 1966 as amended and the National Environmental Policy Act of 1969. The Act requires Federal agencies to afford the Advisory Council on Historic Preservation an opportunity to comment on all projects affecting historic properties listed in the National Register. For more information please refer to 36 CFR 800.

- Eligibility for Federal tax provisions. A property listed in the National Register or located within a registered historic district may be certified for Federal tax purposes if it is determined by the Secretary of the Interior to be of historic significance to the district. The Tax Reform Act of 1976 has altered the definition of certified historic structure and the rehabilitation tax credits available for certified historic structures. The Tax Reform Act of 1976 provides tax incentives for the preservation of historic properties. Owners of depreciable properties certified as contributing to the significance of a historic district can benefit from tax provisions if they rehabilitate their property according to the Secretary of the Interior's Standards for Rehabilitation. Certain amortization provisions are also available. Owners of income-producing properties may choose between certain accelerated depreciation and straight-line depreciation. Owners of certified historic structures are allowed to reduce the basis by only 50% of the amount of any credit. The Act also provides tax incentives for the donation of partial interests in historic properties and for certain transfers of property. Finally, estate tax provisions encourage donations for charitable purposes by allowing a deduction for the conservation purposes of partial interests in property, such as facade easements and development rights to historic districts, and open space easements. For further information please refer to 36 CFR 67.

- Consideration of historic values in the decision to issue a surface coal mining permit where coal is located, in accordance with the Surface Mining and Control Act of 1977. For further information please refer to 30 CFR 700 et seq.

- Qualification for Federal grants for historic preservation when funds are available. Presently funding is unavailable.

Owners of private properties nominated to the National Register have an opportunity to concur in or object to listing in accordance with the National Historic Preservation Act and 36 CFR 60. Any owner or partial owner of private property who chooses to object to listing must submit to the State Historic Preservation Officer a notarized statement certifying that the party is the sole or partial owner of the private property and objects to the listing. Each owner or partial owner of private property has one vote regardless of what part of the property that party owns. If a majority of private property owners object a property will not be listed, however, the State Historic Preservation Officer shall submit the nomination to the Keeper of the National Register for a determination of the eligibility of the property for listing in the National Register. If the property is then determined eligible for listing, although not formally listed, the only effect is that Federal agencies will be required to allow the Advisory Council on Historic Preservation an opportunity to comment before the agency may fund, license, or assist a project which will affect the property. If you choose to object to the listing of your property, the notarized objection must be submitted to the State Historic Preservation Officer, Office of Historic Preservation, Post

8017 El Paseo Grande
La Jolla, Ca. 92037

• Hollywood Boulevard
Commercial/Community
District

We are pleased to inform you that the property you own is located in the above district as shown on the enclosed map. The district will be considered by the State Historical Resources Commission for nomination to the National Register of Historic Places. The National Register is the Federal Government's official list of districts, properties, sites, and structures worthy of preservation. Listing in the National Register provides recognition and assists in preserving our historical resources. Enclosed is a copy of the criteria under which properties are evaluated.

Listing of historic properties in the National Register results in the following:

- Consideration in planning for Federal, federally licensed, and federally assisted projects under Section 106 of the National Historic Preservation Act of 1966 requires that Federal agencies allow the Advisory Council on Historic Preservation an opportunity to comment on all projects affecting historic properties listed in, or eligible for listing in, the National Register. For further information please refer to 36 CFR 800.

- Eligibility for Federal tax provisions for the preservation of historic properties contained in the Tax Reform Act of 1976, the Revenue Act of 1978, and the Tax Treatment Extension Act of 1980. The Tax Reform Act of 1976 provides for the amortization of certain rehabilitation costs over a 60-month period for certified historic structures. The Revenue Act of 1978 provides for the investment tax credit for certified historic structures. The Tax Treatment Extension Act of 1980 provides for a 15-percent credit and a 25-year straight-line recovery period for depreciation purposes for certified historic structures. For further information please refer to 36 CFR 67.

- Consideration in the development of local plans for the construction of highways, urban development, and other federally assisted projects. Federal funds may be available to help finance the acquisition and rehabilitation of certified historic structures. Owners of certified historic structures will be allowed to reduce the basis by one half the amount of the credit. The Tax Treatment Extension Act of 1980 provides Federal tax deductions for charitable contributions for conservation purposes of certain easements for historically important land areas or structures. For further information please refer to 36 CFR 67.

- Consideration of historic values in the decision to issue a surface coal mining permit where coal deposits are located, in accordance with the Surface Mining Control Act of 1977. For further information please refer to 30 CFR 700 et seq.

- The opportunity for Federal grants for historic preservation when funds are available. Presently funding is unavailable.

Owners of private properties nominated to the National Register have an opportunity to concur in or object to listing in accordance with the National Historic Preservation Act and 36 CFR 60. Any owner or partial owner of private property who chooses to object to listing may submit to the State Historic Preservation Officer a notarized statement certifying that the party is the sole or partial owner of the private property and objects to the listing. Each owner or partial owner of private property has one vote regardless of what part of the property that party owns. If a majority of private property owners object a property will not be listed, however, the State Historic Preservation Officer shall submit the nomination to the Keeper of the National Register for a determination of the eligibility of the property for listing in the National Register. If the property is then determined eligible for listing, although not formally listed, the only result is that Federal agencies will be required to allow the Advisory Council on Historic Preservation an opportunity to comment before the agency may fund, license, or assist a project which will affect the property. If you choose to object to the listing of your property, the notarized objection must be submitted to the State Historic Preservation Officer, Office of Historic Preservation, Post

September 22, 1984

Ariar, Inc.
P. O. Box 10783
Beverly Hills, CA 90213

6 Hollywood Boulevard
Commercial/Community
District

We are pleased to inform you that the property you own is located in the above district as shown on the enclosed map. This district will be considered by the State Historical Resources Commission for nomination to the National Register of Historic Places. The National Register is the Federal Government's official list of historic properties worthy of preservation. Listing in the National Register provides recognition and assists in preserving our nation's heritage. Enclosed is a copy of the criteria under which properties are evaluated.

Listing of historic properties in the National Register results in the following:

—Consideration in planning for Federal, federally licensed and federally assisted projects. Section 106 of the National Historic Preservation Act of 1966 requires that Federal agencies afford the Advisory Council on Historic Preservation an opportunity to comment on all projects affecting historic properties listed in the National Register. For further information please refer to 36 CFR 800.

—Eligibility for Federal tax provisions. If certified rehabilitation of certified historic structures is planned, the following tax provisions may apply. The Tax Reform Act of 1984 changed the historic preservation tax incentives established by the Tax Reform Act of 1976 and the Economic Recovery Tax Act of 1981. For more information please refer to the Internal Revenue Service publication, Tax Incentives for Preserving Historic Properties (available from the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402). The Tax Reform Act of 1984 preserves the 25% investment tax credit for certified rehabilitation of certified historic commercial, industrial and rental residential buildings. The Act modifies the 15-year straight-line cost recovery method for depreciating buildings placed in service after 1980 by requiring a straight-line recovery period over 19 years for most buildings other than certified historic structures. For certified historic structures, the straight-line recovery period remains 15 years. The Act requires a taxpayer to reduce the basis of the building for depreciation purposes by the full amount of the tax credit claimed. Certified structures with adjusted bases allocable to nonexempt use may be allowed to reduce the basis by one half the amount of the credit. The Tax Reform Act of 1984 also preserves Federal tax deductions for charitable contributions or sales of property for conservation purposes of partial interests in real property, such as facades, and remainder interests in historically important land areas or structures. For further information please refer to 36 CFR 67.

—Consideration of historic values in the decision to issue a surface coal mining permit where coal is present, in accordance with the Surface Mining and Control Act of 1977. For further information please refer to 30 CFR 700 et seq.

—Qualification for Federal grants for historic preservation when funds are available. Presently funding is unavailable.

Owners of private property nominated to the National Register have an opportunity to concur in or object to listing in accordance with the National Historic Preservation Act and 36 CFR 60. Any owner or partial owner of private property who chooses to object to listing may submit to the State Historic Preservation Officer a notarized statement certifying that the party is the sole or partial owner of the private property and objects to the listing. Each owner or partial owner of private property has one vote regardless of what part of the property that party owns. If a majority of private property owners object, a property will not be listed, however, the State Historic Preservation Officer shall forward the nomination to the Keeper of the National Register for a determination of the eligibility of the property for listing in the National Register. If the property is then determined eligible for listing, although not formally listed, the only result is that Federal agencies will be required to allow the Advisory Council on Historic Preservation an opportunity to comment before the agency may fund, license, or assist a project which will affect the property. If you choose to object to the listing of your property, the notarized objection must be submitted to the State Historic Preservation Officer, Office of Historic Preservation, Post

The National Register of Historic Places Program is administered in California by the State Office of Historic Preservation. The property indicated above has been submitted for the Register.

☒ The State Historical Resources Commission will consider this property and render a determination as to whether or not it meets the criteria on September 7, 1984 at 2:30 p.m. in the Auditorium, Museum of Natural History, 900 Exposition Blvd., Los Angeles, CA

☐ The State Historical Resources Commission accommodated the nomination of this property to the National Register. It will be processed by the State Historic Preservation Officer in accordance with federal regulations. A decision will be made by the Keeper of the National Register, The National Park Service, Washington, D.C. 20240.

☐ The property was placed on the National Register.

☐ The property was determined eligible for placement on the National Register.

Pursuant to the procedures for the National Register, owners of private property nominated to the National Register of Historic Places have an opportunity to concur or object to the nomination. Unless the property owner objects, properties determined eligible for the National Register will be listed in the Register. Owners of private property will be notified by mail of the pending listing and have an opportunity to comment on the significance of the property. Owners of properties listed in the National Register will be notified by mail. Federal agencies will consider the effects of any undertaking on properties determined eligible for the National Register. Owners of private property will also be notified by mail of any federal undertaking which may affect the property and will have an opportunity to comment on the effect of the undertaking. Owners of properties listed in the National Register may be eligible for certain federal tax benefits. Owners of properties listed in the National Register, or determined eligible for listing, may be eligible for federal grant-in-aid assistance for historic preservation projects. Owners of properties listed in the National Register may be subject to federal regulations requiring a federal review of any project which may affect the property. Owners of properties listed in the National Register may be eligible for certain tax benefits. Owners of properties listed in the National Register may be subject to federal regulations requiring a federal review of any project which may affect the property. Owners of properties listed in the National Register may be subject to federal regulations requiring a federal review of any project which may affect the property. Owners of properties listed in the National Register may be eligible for certain tax benefits

The National Register of Historic Places Program is administered in California by the State Office of Historic Preservation. The property indicated above has been submitted for the Register.

☐ The State Historical Resources Commission will consider this property and make a judgment as to whether or not it meets the criteria on _____ at _____ in _____

☐ The State Historical Resources Commission recommended the nomination of the property to the National Register. It will be presented to the State Historic Preservation Officer for formal nomination. The final decision will be made by the Keeper of the National Register, U.S. National Park Service, Washington, D.C. 20240.

☒ The property was placed on the National Register April 4 1985

☐ The property was determined eligible for placement on the National Register _____

Placement on the National Register affords a property the honor of inclusion in the nation's official list of cultural resources worthy of preservation and provides a degree of protection from adverse effects resulting from federally funded or licensed projects. Registration provides a number of incentives for preservation of historic properties, including special building codes to facilitate the restoration of historic structures, and certain tax advantages. There are no restrictions placed upon a private property owner with regard to normal use, maintenance, or sale of a property listed in the National Register; however, proposals to demolish registered properties may require a standard review in compliance with local ordinances or the California Environmental Quality Act.

Sincerely,

Kathryn Gualtieri

☐ The State Historical Resources Commission recommended the nomination of the property to the National Register. It will be presented to the State Historic Preservation Officer for formal nomination. The final decision will be made by the Keeper of the National Register, U.S. National Park Service, Washington, D.C. 20240.

☒ The property was placed on the National Register April 4, 1985

☐ The property was determined eligible for placement on the National Register _____

Placement on the National Register affords a property the honor of inclusion in the nation's official list of cultural resources worthy of preservation and provides a degree of protection from adverse effects resulting from federally funded or licensed projects. Registration provides a number of incentives for preservation of historic properties, including special building codes to facilitate the restoration of historic structures, and certain tax advantages. There are no restrictions placed upon a private property owner with regard to normal use, maintenance, or sale of a property listed in the National Register; however, proposals to demolish registered properties may require a standard review in compliance with local ordinances or the California Environmental Quality Act.

The National Register of Historic Places Program is administered in California by the State Office of Historic Preservation. The property indicated above has been submitted for the Register.

☐ The State Historical Resources Commission will consider this property and make a judgment as to whether or not it meets the criteria on _____ at _____ in _____

☐ The State Historical Resources Commission recommended the nomination of the property to the National Register. It will be presented to the State Historic Preservation Officer for formal nomination. The final decision will be made by the Keeper of the National Register, U.S. National Park Service, Washington, D.C. 20240.

☒ The property was placed on the National Register April 4, 1985

☐ The property was determined eligible for placement on the National Register _____

Placement on the National Register affords a property the honor of inclusion in the nation's official list of cultural resources worthy of preservation and provides a degree of protection from adverse effects resulting from federally funded or licensed projects. Registration provides a number of incentives for preservation of historic properties, including special building codes to facilitate the restoration of historic structures, and certain tax advantages. There are no restrictions placed upon a private property owner with regard to normal use, maintenance, or sale of a property listed in the National Register; however, proposals to demolish registered properties may require a standard review in compliance with local ordinances or the California Environmental Quality Act.

Sincerely,

Kathryn Gualtieri

☒ The property was placed on the National Register April 4, 1985

☐ The property was determined eligible for placement on the National Register _____

Placement on the National Register affords a property the honor of inclusion in the nation's official list of cultural resources worthy of preservation and provides a degree of protection from adverse effects resulting from federally funded or licensed projects. Registration provides a number of incentives for preservation of historic properties, including special building codes to facilitate the restoration of historic structures, and certain tax advantages. There are no restrictions placed upon a private property owner with regard to normal use, maintenance, or sale of a property listed in the National Register; however, proposals to demolish registered properties may require a standard review in compliance with local ordinances or the California Environmental Quality Act.

Sincerely,

Kathryn Gualtieri

The National Register of Historic Places Program is administered in California by the State Office of Historic Preservation. The property indicated above has been submitted for the Register.

☐ The State Historical Resources Commission will consider this property and make a judgment as to whether or not it meets the criteria on _____ at _____ in _____

☐ The State Historical Resources Commission recommended the nomination of the property to the National Register. It will be presented to the State Historic Preservation Officer for formal nomination. The final decision will be made by the Keeper of the National Register, U.S. National Park Service, Washington, D.C. 20240.

☒ The property was placed on the National Register April 4, 1985

☐ The property was determined eligible for placement on the National Register _____

Placement on the National Register affords a property the honor of inclusion in the nation's official list of cultural resources worthy of preservation and provides a degree of protection from adverse effects resulting from federally funded or licensed projects. Registration provides a number of incentives for preservation of historic properties, including special building codes to facilitate the restoration of historic structures, and certain tax advantages. There are no restrictions placed upon a private property owner with regard to normal use, maintenance, or sale of a property listed in the National Register; however, proposals to demolish registered properties may require a standard review in compliance with local ordinances or the California Environmental Quality Act.

Sincerely,

Kathryn Gualtieri

DISTRICT RECORD

Primary # 19-174178 UPDATE
HRI # _____
Trinomial _____

Page 1 **of** 3 ***NRHP Status Code** _____

***Resource Name or # (Assigned by recorder)** NR 85000704/Hollywood Boulevard Commercial and Entertainment District

D1. Historic Name: N/A D2. Common Name: Hollywood Boulevard Commercial and Entertainment District

***D3. Detailed Description** (Discuss overall coherence of the district, its setting, visual characteristics, and minor features. List all elements of district.):

The district was listed in the NRHP in 1985 (NR 85000704) under Criteria A (events) and C (architecture) for its association with the "Golden Age" of Hollywood and for its distinctive architecture. It was recorded in August 1984 by Christy Johnson McAvoy. As part of the Westside Subway Extension Project, URS investigators relocated the portions of the district within the APE.

The following buildings are previously identified contributors to the district within the APE. A contributing property is a building, structure, object, or site within the boundaries of the district that adds to the historic associations or historic architectural qualities for which the historic district is significant. Non-contributing properties, those that do not contribute to the significance of the district, are not included in this study.

Resource Identifier	Description
WSE 36	Eclectic Revival-style (Neoclassical and Spanish Colonial Revival) commercial building constructed in 1914 and remodeled by Morgan, Walls and Clements in 1935/1936
WSE 37	Art Deco-style commercial building constructed in 1916 according to the Los Angeles County Assessor and modernized and redesigned by S. Charles Lee in 1931/1935
WSE 38	Streamline Moderne-style commercial building with traditional Neoclassical elements (cornice and pilasters) designed by B.D. Bixby and constructed in 1935/1937
WSE 39	Vernacular style commercial building constructed in 1922/1924

The district's most prevalent property type is the commercial building, which is built in a Revival architectural style. The district is located in a heavily developed urban commercial setting along Hollywood Boulevard.

***D4. Boundary Description** (Describe limits of district and attach map showing boundary and district elements.):
Hollywood Boulevard Commercial and Entertainment District is a thematic historic district, which is comprised of properties related in time and historical significance through an established theme, in this case the "Golden Age" of Hollywood. The NRHP district nomination describes the boundaries of the district as 6200-7000 Hollywood Blvd., N. Vine St., N. Highland Ave. and N. Ivar St., in Los Angeles, California. During the current study, however, only the portion of the district within the APE was investigated. The district's geographical definable area, as defined in the NRHP district nomination is delineated on a locational map included as part of this district record.

***D5. Boundary Justification:**
The identification of the contributing resources to this district was undertaken as part of the identification and evaluation process for this Section 106 undertaking. Per federal guidance, complex resources (such as historic districts) rarely need to be recorded beyond the area reasonably subject to effect, nor does the project area need to be extended to include complex resources where potential effects on the whole would clearly be negligible. If a project has the potential to affect only a portion of a complex resource, the resources as a whole may be briefly examined and the portion subject to potential effects then may be evaluated in the context of the larger property. The evaluation would determine whether the portion in the project area would be a contributor or non-contributor to a larger significant property as a whole, should that larger property ever be determined eligible for inclusion to the NRHP, CRHR, or considered a historical resource for purposes of CEQA. Therefore, this Project identified and recorded the portion of the district within the APE.

State of California The Resources Agency
DEPARTMENT OF PARKS AND RECREATION
DISTRICT RECORD

Primary # _____
HRI # _____
Trinomial _____

Page 2 **of** 3 ***Resource Name or # (Assigned by recorder)** NR 85000704/Hollywood Boulevard Commercial and Entertainment District

D6. Significance:
Theme Entertainment, Commerce, Architecture
Area Los Angeles, Los Angeles County
Period of Significance 1900-1924, 1925-1949 **Applicable Criteria** NRHP Criteria A and C/CRHR Criteria 1 and 3 (Events and Architecture) (Discuss district's importance in terms of its historical context as defined by theme, period of significance, and geographic scope. Also address the integrity of the district as a whole.)

Hollywood Boulevard Commercial and Entertainment District is listed in under Criteria A and C of the NRHP and Criteria 1 and 3 of the CRHR because of its association with the "Golden Age" of Hollywood and its collection of buildings embodying the distinctive characteristics of the Revival architectural styles. The architectural styles represented include Art Deco, Late Victorian styles, and late nineteenth and twentieth century revivals.

The following significance evaluation is summarized from the NRHP nomination form:

The district is the commercial and entertainment center that developed during the rise of the motion picture industry in the 1920s and 1930s, the "Golden Age" of Hollywood. Many of the properties are nationally or internationally known. The district contains numerous outstanding examples of architectural styling of the 1920s and 30s, including several buildings long recognized as major monuments of Art Deco and Moderne. Works of numerous important Southern California architects are also represented. Many buildings have a direct association with the film industry (Criterion A – events) and the rise of Hollywood as the nation's film capitol (Criterion A- events); others are financial, retail, and service establishments that formed the commercial heart of the community (Criterion A – events). Hollywood Boulevard symbolizes "Hollywood," a twentieth century phenomenon which shaped the culture of the nation as a whole. The district meets the NRHP criteria at the National level of significance.

For a district to qualify for listing in the NRHP and CRHR, besides meeting one of the criteria, it must also retain a significant amount of its historic integrity. The contributors identified in this study appear to retain sufficient historic integrity of location, design, setting, materials, workmanship, feeling, and association.

CONTINUATION SHEET ITEM NUMBER 7 PAGE 14

20. Gitelson Building (6505 Hollywood Blvd.): 1919
A utilitarian two story commercial office and retail structure conforming in size and scale to the surrounding building. Originally brick, the building was remodelled in the 20s to a very stylish Spanish Colonial Revival design. All ornament has since been removed.

24. Stores (6547 Hollywood Blvd.)
One story stucco. Visually non-contributing. Heavily remodeled older building.

25. Stores (6549 Hollywood Blvd.): 1925
Heavily altered three story brick with stucco facade. Banded windows; flat roof.

27. Stores (6565 Hollywood Blvd.)
One story concrete block construction. Stone facing. 1970 remodel.

30. Vogue Theater (6629 Hollywood Blvd.): 1935
Heavily altered theater in one story commercial structure. Lacks visual integrity, but is representative of the concentration of entertainment facilities in the district.

33. Artisan Patio (6727 Hollywood Blvd.)
Courtyard shops in a one story stucco building. U-shaped plan. Fountain in rear. Arched entry. Tiled exterior. Flat roof. Modern complex.

34. Stores (6739 Hollywood Blvd.)
One story commercial utilitarian with metal sheathing. Tiled storefronts with plate glass display windows. Modern appearance.

36. Hollywood Center (6751 Hollywood Blvd.): 1920
Seven story office building heavily altered in mid 1950s. Stories added. Vertical screens of aqua hue protrude from the upper floors while a street level canopy creates a curvalinear effect at the corner entrance. Originally a department store. Flat roof. Faced with block panels.

40. Chinese Annex (6901 Hollywood Blvd.): 1980
Ersatz Chinese addition to existing theater complex. Colorful exterior. One story rectangular auditorium structure.

43. See entry at end of this section.

48 Stores (7038 Hollywood Blvd.): 1925
Two story brick commercial vernacular. Stylized classical cornice remains. Street level heavily altered. Contributing in size, scale, and development period.

49. Parking Structure (7036 Hollywood Blvd.): 1955
4 level parking structure.

52. Max Factor Building (6922 Hollywood Blvd.): 1960
Twelve story office tower with black glass exterior. Aggregrate concrete wall surrounds lower floor to create plaza separate from street.

***P3a. Description:** (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries)
APN 5089003008 is located at 5410 Wilshire Boulevard in a heavily developed urban commercial setting. It is an Art Deco-style commercial building. It occupies the entire lot and has a north-facing orientation. It is approximately eleven stories with a rectangular plan. The massing is irregular, with a two story base that fills the entire lot and a central, stepped, rectangular tower of approximately nine stories that sits atop the base. The building features a flat roof. The window bays on the base are metal frame fixed pane storefront windows. The window bays on the tower are rectangular, narrow and filled with casement windows with transoms. Some of the windows and transoms have a decorate iron grille. The walls are clad in stucco and feature fluting, chevrons, florals, and zig-zag ornamentation. The primary façade is symmetrical with numerous entries associated with the respective storefronts. The entries are filled with metal frame fixed pane commercial doors. The building appears to be minimally altered and is in good condition.

Period of Significance 1931 **Property Type** Commercial Building
Applicable Criteria NRHP Criterion C/CRHR Criterion 3 (Architecture) (Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity.)
The historical significance of APN 5089003008 within the APE was determined by applying the procedure and criteria for the *National Register of Historic Places* (NRHP), *California Register of Historical Resources* (CRHR), and the definition of a historical resource used for CEQA.

Based on site investigations and historic research, APN 5089003008 appears to possess the requisite significance to be eligible for listing on the NRHP, CRHR, as well as considered a historical resource for purposes of CEQA under Criterion C of the NRHP and Criterion 3 of the CRHR, as a building that significantly embodies the distinctive characteristics of the Art Deco architectural style. The Art Deco style, popular between 1920 and the commencement of World War II, is characterized by smooth surfaced volumes; windows arranged in sunken vertical panels; elimination of any classical or medieval termination at the top of the building; symmetry and balance for each elevation; frequent use of central tower, whose summit recedes in a stepped pattern; flat roof usually headed by parapets; tendency for buildings to be monumental, formal and heavy; and ornamentation of zigzags, chevrons, sun bursts, spirals, stylized plant motifs, and stylized animals.

For a property to qualify for listing in the NRHP and CRHR, besides meeting one of the criteria, it must also retain a significant amount of its historic integrity. APN 5089003008 appears to retain sufficient historic integrity of location, design, setting, materials, workmanship, and feeling.

*P3a. Description: (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries)
APN 5089003008 is located at 5410 Wilshire Boulevard in a heavily developed urban commercial setting. It is an Art Deco-style commercial building. It occupies the entire lot and has a north-facing orientation. It is approximately eleven stories with a rectangular plan. The massing is irregular, with a two story base that fills the entire lot and a central, stepped, rectangular tower of approximately nine stories that sits atop the base. The building features a flat roof. The window bays on the base are metal frame fixed pane storefront windows. The window bays on the tower are rectangular, narrow and filled with casement windows with transoms. Some of the windows and transoms have a decorate iron grille. The walls are clad in stucco and feature fluting, chevrons, florals, and zig-zag ornamentation. The primary façade is symmetrical with numerous entries associated with the respective storefronts. The entries are filled with metal frame fixed pane commercial doors. The building appears to be minimally altered and is in good condition.

APN 5089002002 is located at 5354 Wilshire Boulevard (smaller lot) and APN 5089002003 is located at 5352 Wilshire Boulevard in a heavily developed urban commercial setting. It is an Art Deco-style commercial building with an addition. It occupies the entire lot and has a north-facing orientation. The main building is a three-story building with a rectangular plan. The main building features a flat roof with parapet, topped with a vertical narrow, tall signage board located on the north end. There are four symmetrically arranged window bays on the third story of the primary (north) elevation that have been covered (material beneath is unknown, though they appear to contain square awning window sashes each with four horizontal panes). The windows on the east and south elevations are similar, with those on the second floor of the east elevation recessed within a decorative horizontal band that separates the second story from the third story. The wall cladding is primarily stucco with geometric designs and a vertical emphasis, and tile and glass block on the primary façade's east end of the ground floor. The primary façade of the main building is generally symmetrical with a two entries, the eastern featuring a steel frame commercial double door and the western entry featuring a steel frame commercial door that is recessed and framed by engage fluted pilasters. The one-story addition to the west has a flat roof and stucco cladding. The entry is through a steel frame commercial door. A band of wide stuccoed paneling is mounted between the ground and upper floors on the primary façade. The building and its addition appear to be minimally altered and are in good condition.

The Main Building of this elementary school campus was designed in 1937 by architect Austin Whittlesey. This one- and two-story Moderne style building is constructed of board-formed concrete. Generally rectangular in plan it has irregular massing, combining horizontal and vertical blocks. The main block of the building has two-stories and features a fluted cornice and tall evenly spaced windows with multiple lights. The entrance is recessed into the north of this main block and features a heavy "L" shaped enframement.

Re: City of Los Angeles-Demolition List Dated 8/2/94
FEMA 1008-DR-CA, P.A. 037-91080
FEMA Memorandum Dated August 3, 1994

Dear Mr. Amaglio:

We have reviewed the above-referenced memorandum and performed preliminary field surveys. The results of our findings are summarized in the attached three lists as follows:

1. List of 15 buildings surveyed with determinations of eligibility for listing or listing in the National Register of Historic Places noted. Buildings are determined eligible for listing in the National Register pursuant to 36 CFR Section 60.4. Demolition of the buildings noted as eligible for or listed in the National Register is an adverse effect pursuant to 36 CFR Section 800.9.

2. Summary list of buildings eligible for or listed in the National Register complied from the 8/2/94 demolition list.

3. Summary list of buildings eligible for or listed in the National Register complied from all City of Los Angeles demolition lists received to date.

Should you have any questions, please contact me.

Sincerely,

Cherilyn Widell, SHPO

Christy Johnson McAvoy

Describe the present and original (if known) physical appearance

The Patio del Moro is a courtyard complex with seven maisonette apartments. Architecturally, the two-story U-parti court is of the Spanish Revival style, with extensive Moorish detailing. The building was designed and built by Arthur and Nina Wilcox Zwebell in 1925, and is located on the north side of Fountain Avenue between Harper and Havenhurst streets, in the city of West Hollywood, California. Alterations are minor.

Structurally, the building is wood, brick, and stucco. The multi-leveled roof is both hipped and shed, and is covered in the original terra cotta tiles. The building occupies a subdivided lot measuring 50 feet wide and 158 feet deep; the building is 42 feet tall. The south façade fronts Fountain Avenue with public pedestrian access through the tunneled entrance to the courtyard. Addresses for the apartments within the complex are 8225 through 8235 (odd numbers) Fountain Avenue.

The Patio's Moorish architecture is manifest in a number of features. They include a copper-domed Tunisian tower, a horseshoe-arched entrance and tunnel, tiled fountains in the public and private patios, horseshoe and pointed-arch doorways, and horseshoe and pointed-arch fireplaces. All totaled, there are eight fireplaces feeding six chimneys, six wrought-iron exterior balconies, three interior balconies, three two-story living rooms with cathedral ceilings, three private patios, four fountains, and one reflecting pool. Many windows are covered with ornamental ironwork, while wall surfaces are frequently decorated with custom-made Moorish tile.

The seven maisonette apartments, with their addresses and significant details, are:

Villa del Rey Moro (8225 Fountain Avenue, Office) -- This is a three-bedroom apartment, on two levels, situated at the southern end of the building, above the entrance tunnel and four garages. Significant interior features include the two-story living room with pointed-arch fireplace with tree-of-life and peacock plaster relief, clerestory windows, oak and tile floors, three wrought-iron balconies with French doors, one interior horseshoe-arch balcony, two horseshoe-arch interior doorways, extensive tiling and niches, and an entryway light fixture made from a Tunisian filigree censer.

La Casita (8227 Fountain Avenue) -- This is a one-bedroom apartment, situated directly above Casita para una Estrellita. Significant features include exposed-beam ceiling in the bedroom, oak floors, one beehive fireplace, one horseshoe-arch interior doorway, and tiling.

Casita para una Estrellita (8229 Fountain Avenue) -- This is a one-bedroom apartment, situated below La Casita. Significant features include a brick fireplace, oak floors, raised bedroom, and wrought-iron grating over living-room window.

Casa del Sol (8231 Fountain Avenue) -- This is a two-bedroom apartment with a third-story study on the roof. Significant interior features include one horseshoe-arch tiled fireplace, one horseshoe-arch interior doorway, oak and tile floors, one wrought-iron balcony with French doors, one stone balcony with French doors, extensive tiling and niches, concealed doorway leading to the apartment next door (8233 Fountain Avenue), third-story rooftop study and adjoining rooftop terrace.

Patio del Fuente (8233 Fountain Avenue) -- This is a two-bedroom two-story apartment, which in many ways is a mirror image of the first two floors of Casa del Sol. Significant interior features include one horseshoe-arch tiled fireplace, one horseshoe-arch interior doorway, oak and tile floors, one wrought-iron balcony with French doors, secret access through a bedroom closet to Casa del Sol, and a private patio with wall-mounted fountain.

Casa del Orienta (8235 Fountain Avenue) -- This is a three-bedroom, two-story apartment. Significant interior features include a pointed-arch fireplace with tree-of-life and peacock plaster relief, cathedral ceiling in the living room, one horseshoe-arch doorway, one horseshoe-arch interior balcony above the living room, oak and tile floors, a private patio with wall-mounted fountain, access to Casa del Alegria from patio, and concealed entry to Tunisian turret on the roof.

Continuation sheet Item number 7. Description Page Two

Casa del Alegria (8237 Fountain Avenue) -- This is a two-bedroom, two-story apartment. Significant interior features include a tiled brick fireplace, one horseshoe-arch doorway, one horseshoe-arch interior balcony, cathedral ceilings with painted details, oak and tile floors, extensive niches and tile wall insets, concealed access to Casa del Orienta, secret underground passageway leading to the service entrance, and a private patio running the width of the property with wall-mounted fountain, ramada, and arbor.

Additionally, there is a small one-room ground-level concierge apartment at the end of the entrance passageway.

The central courtyard patio contains a two-story open Spanish baroque fireplace, a wall-mounted tile and bas-relief fountain with tiled holding tank and reflecting pool, extensive arabesque tiled steps, wrought-iron railings, two tiled benches, custom light fixtures, and intricate bricked flooring.

Structurally, very little of the Patio del Moro has been altered since its construction. In the late sixties, two of the three clerestory windows* in the mezzanine-level bedroom were removed and replaced with aluminum-frame windows, while the third was covered with masonry; the original windows are, however, extant. In the Casa del Sol, the room on the third floor was originally a ramada, with half walls and an open-beam roof. In the mid-seventies, windows, upper half-wall panels, and a sliding door were added, making the room into a fully enclosed study that lets onto the private rooftop terrace. At that time, the front door of Casa del Sol was also replaced. Over the years, minor modifications have also been made in each apartment's kitchen, e.g., removing the original built-in ice boxes and retiling countertops. Otherwise, little refurbishing or alteration has been done on the structure since its construction.

Specific dates 1925 **Builder/Architect** Arthur and Nina Zwebell

Statement of Significance (in one paragraph)

Designed and built by Arthur and Nina Zwebell in 1925, the Patio del Moro is a hallmark of Spanish Revival architecture, one of the most important styles in Southern California, which reached its apogee during the 1920s. Moreover, many of the Patio's Moorish elements are unique among other famous courtyard complexes in Los Angeles, while its configuration also shows ingenious architectural virtuosity.

In Richard Requa's foreword to Architectural Details: Spain and the Mediterranean, he prescribes the characteristics of architecture of western Mediterranean countries:

> The walls of the buildings were built of rough masonry finished on the exterior with stucco, whitewashed or tined a light pastel... The roofs were either constructed flat or low-pitched, covered with red, burned clay tiles. Ornament was used with great restraint and discrimination... Exterior interest, attractiveness and charm was obtained rather by wrought iron, wood or stuccoed window grilles, shutters, balconies or other similar practical features. The focal point of the exterior design was usually the main entrances, the doors of which were sometimes elaborately paneled and ornamented with wrought iron hardware, studs and bolt heads of beautiful pattern.[1]

All of the features Requa prescribes are incorporated into the Patio del Moro. From the rose-washed façade to the bolt-studded 15-foot wooden doors on the horseshoe-arch entrance, the Patio beautifully manifests the hallmarks of Andalusian architecture as it was adapted in Los Angeles during the Spanish Revival period.

In Los Angeles, "the dominant multifamily dwelling type is the low-rise, high-density courtyard building."[2] Moreover, "the mission saga became the operative legend of the southland's urbanization, and the Spanish Revival was established as the most preferred building style."[3] Thus, the structure most representative of southern California architecture is the Spanish Revival courtyard.

Among the architects who created this style, Arthur and Nina Wilcox Zwebell are of primary importance. Prominent professors of architecture are of the opinion that "without doubt, Arthur and Nina Zwebell were the originators of the highly refined deluxe court in Los Angeles. However brief an interlude theirs was in the building history of the region, their contribution is extraordinary, with their concern for traditional urban form, their adaptation and development of the southern California court-type housing, their use of landscape as a discrete formal language, and the richness of the individual units in each court. (They) gave Los Angeles a unique building heritage in a burst of activity that lasted less than a decade (1922-1928). Their fame will, without doubt, rest on eight or so buildings of a character peculiar to Los Angeles..."[4]

The Zwebells' first exceptional courtyard housing experiment was the Villa Primavera, also referred to as the Mexican Village. Situated on the northeast corner of Fountain Avenue and Harper Street in West Hollywood, the Villa Primavera's "Spanish-style wood-and-stucco structure completely surrounds a courtyard that is animated by a tiled fountain, outside fireplace, and lush foliage."[5] After its completion in 1924, the Zwebells resided there while undertaking their next courtyard-housing experiment on the subdivided plot directly to the east -- the Patio del Moro or Moorish Patio.

With the completion of the Patio del Moro in 1925, the Zwebells designed and built their next court, the Andalusia, a short distance up the block on Havenhurst Street. And following its completion, the Zwebells designed and constructed a double-parti court on

the opposite side of Havenhurst Street, the Ronda, which is listed on the National Register of Historic Places. Over the decades these four Zwebell courts have been residences for many members of the motion picture industry, including James Dean, Katherine Hepburn (Villa Primavera); Paulette Godard, Charlie Chaplain (Patio del Moro); Claire Bloom, Cesar Romero, and Jay Ward (Andalusia); and Clark Gable (The Ronda).

Although many excellent examples of Spanish Revival courtyard complexes exist in Los Angeles, the Patio del Moro is of particular significance because of pervasive use of asymmetry in its Moorish design elements. None of the other Zwebell courts include the Patio's Moorish features, e.g., the Tunisian tower dome or the horseshoe arches; nor, for that matter, do any of the famous courts designed by the Davis brothers or Charles Gault, other great expositors of the Spanish Revival style.

This point is stressed in Courtyard Housing in Los Angeles: "While most of the Zwebells' buildings are modeled after pure Andalusian prototypes, the Patio del Moro displays a clear influence of Arab form sources: pointed and horseshoe arches, surface arabesque patterns, latticed openings, and countless other details."[6] The text goes on to attribute the existence of these design elements to the Zwebells' client and the Patio's original owner, "a physician who had traveled widely in North Africa and Spain and had strong preferences for Moorish motifs."[7]

The Patio has additional architectural importance because "the dwelling demonstrates Arthur Zwebell's virtuosity in manipulating standardized elements so that individual identity results."[8] This is specifically evident in the design of the maisonettes Casa del Sol and Patio del Fuente, which are essentially mirror images, yet which are "perceived as quite different from one another because of their unexpected placement in the building's configuration."[9] The Patio accomplishes an ingenious puzzle-like assemblage of private units, which, though closely placed, retain their individuality.

Thus the Patio del Moro attains its architectural significance for two reasons. First, it is a hallmark of the southern California Spanish Revival period, and second, it is a supurb example of Arthur and Nina Zwebell's dexterity in adapting and manipulating Moorish design elements to a courtyard complex.

STAFF EVALUATION - Patio del Moro

Integrity appears very high--alterations are minimal. The 1925 Patio del Moro is a complex of seven apartments with a private interior courtyard. The architectural styling fits into the Spanish Colonial Revival of the 1920's, but is unusual for its more direct reliance upon Islamic design sources. The high quality of design and composition have been cited in several scholarly publications in Southern California architecture. The architects were a noted husband and wife team who designed other courtyard housing in the vicinity; all have been recognized in the architectural literature of Southern California and one, the Ronda, was recently listed in the National Register of Historic Places. The property appears to be a strong candidate for National Register nomination under criterion C (type/period/work of a master); approval is recommended at the local level of significance.

6. Present Use: Courtyard complex w/apts. Original use: same

DESCRIPTION

7a. Architectural style: Spanish revival style w/extensive moorish detailing.

7b. Briefly describe the present *physical description* of the site or structure and describe any major alterations from its original condition:

The Patio del Moro is a courtyard complex of seven maisonette apartments. Architecturally, the two-story u-parti court is of the Spanish Revival style with extensive Moorish detailing. The building is located on the north side of Fountain Avenue between Harper & Havenhurst streets in the City of West Hollywood, CA.

Structurally, the building is wood, brick and stucco. The multi-leveled roof is both hipped and shed, and is covered in the original terra cotta tiles. The building occupies a subdivided lot measuring 50 feet wide and 158 feet deep; the building is 42 feet tall. The south facade fronts Fountain Avenue with public pedestrian access through the tunneled entrance to the courtyard. Addresses for the apartments within the complex are 8225 through 8235 (odd numbers) Fountain Avenue.

12. Date(s) of enclosed photograph(s) ___

7b. (Continued)

The Patio's Moorish architecture is manifest in a number of features. They include a copper-domed Tunisian tower, a horseshoe-arched entrance and tunnel, tiled fountains in the public and private patios, horseshoe and pointed-arch doorways, and horseshoe and pointed-arch fireplaces. All totaled, there are eight fireplaces feeding six chimneys, six wrought-iron exterior balconies, three interior balconies, three two-story living rooms with cathedral ceilings, three private patios, four fountains, and one reflecting pool. Many windows are covered with ornamental ironwork, while wall surfaces are frequently decorated with custom-made Moorish tile.

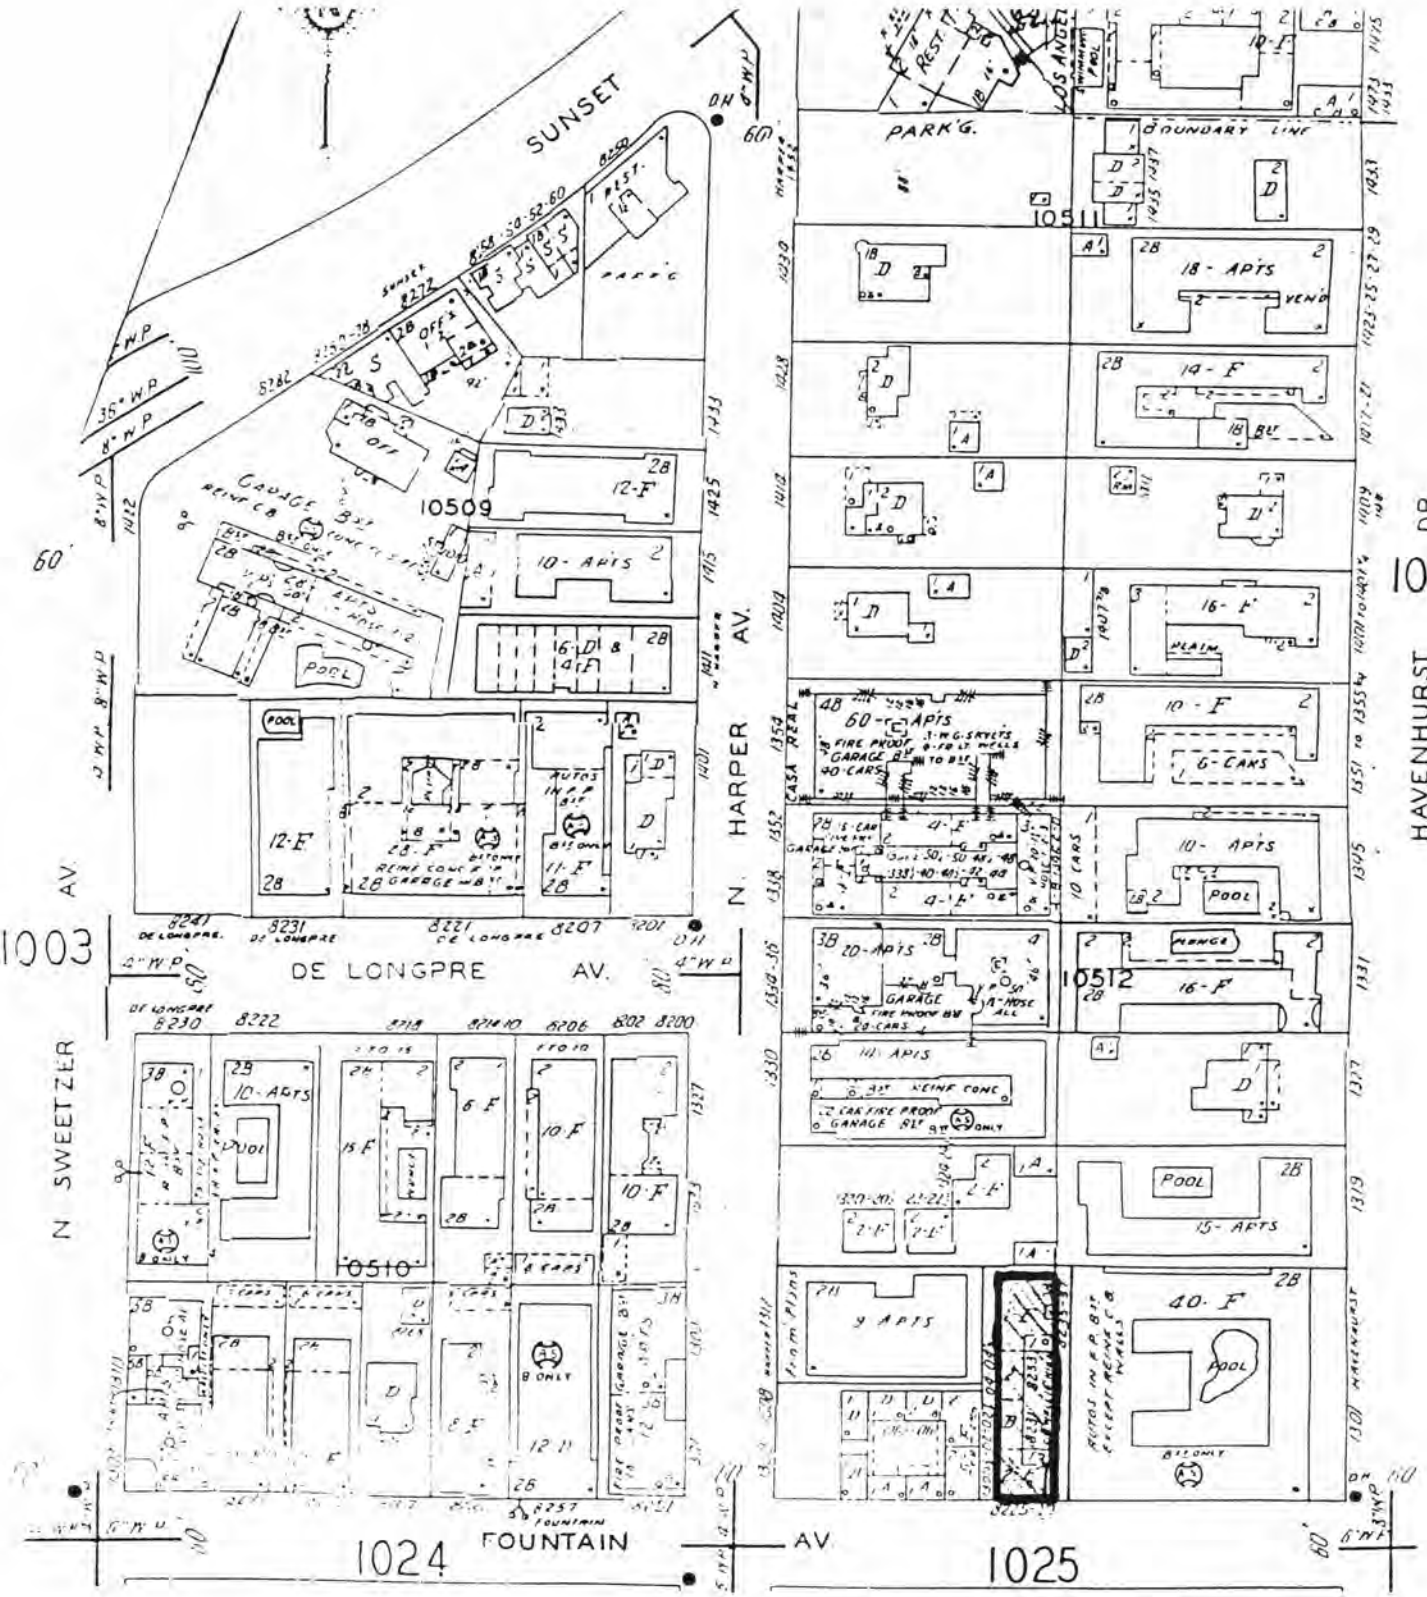

19. (Continued)

Designed and built by Arthur and Nina Zwebell in 1925, the Patio del Moro is a hallmark of Spanish Revival architecture, the indigenous architectural style of Southern California, which reached its apogee during the 1920s. Moreover, many of the Patio's Moorish elements are unique among other famous courtyard complexes in Los Angeles, while its configuration also shows ingenious architectural virtuosity.

Over the decades four Zwebell courts have been residences for many members of the motion picture industry, including James Dean, Katherine Hepburn (Villa Primavera); Paulette Godard, Charlie Chaplain (Patio del Moro) Claire Bloom, Cesar Romero, and Jay Ward (Andalusia); and Clark Gable (The Ronda).

Thus the Patio del Moro attains its architectural significance as an example of the period and an example of Zwebells' works. The building is listed on the National Register of Historic Places.

*P3a. Description: The Blue Building, constructed in 1976, is a large 750,000 square foot design showroom sheathed in blue glass. The steel structure is 6 stories tall. The Green Building, constructed in 1985, sits on a blue base that extends from the original building. The Green Building is 8 stories tall, with 475,000 square feet of design showroom space and offices. It is a steel structure sheathed in opaque and clear green glass. The building is set back from the corner, with a plaza along the west side of the structure. Basically rectangular in shape, the Blue Building has a flat roof with an arched gallery running the length of the structure. A large semi-circular circulation tower projects from the south facade of the building. The west facade of the Blue Building is a flat facade that articulates the geometrical shape of the structure. The Green Building is attached at the northeast corner of the Blue Building, resting on a two-story base clad in blue glass. The Green Building is octagonal in plan along the lower levels, and square in plan along the upper levels. An octagonal pyramid tops the structure.

B9b. **Builder:** Henry C. Beck Company

*B10. **Significance: Theme** Architecture **Area** Los Angeles
Period of Significance 1976-1998 **Property Type** Commercial **Applicable Criteria** n/a

The Pacific Design Center was designed by Cesar Pelli at the start of his professional design career. Cesar Pelli was born in Argentina in 1926. He attended the University of Tucuman in Argentina, earning a Diploma in Architecture, and the University of Illinois, earning a Master in Architecture. His early professional years were spent in the office of Eero Saarinen, working on the TWA Terminal Building at JFK Airport, the Morse and Stiles Colleges at Yale University, and other projects.

***P3a. Description:** (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries)
APN 4337017041 is located at 8687 Melrose Ave. in a commercial setting. It is a slick-skin, postmodern-style commercial building. It occupies the northwest section of the parcel and has a south-facing orientation. It is six stories with a rectangular plan. The building features a flat roof with centered, linear skylight; blue-glaze glass, slick-skin curtain wall with black mullions; and on the south elevation, a clear-glass cylindrical tower. Near the roof line, the wall juts out and is lined by a band of clear glaze windows. The primary façade is asymmetrical with two-story entry on the north elevation. The building appears to be unaltered and is in excellent condition. The south lawn is landscaped and graded in low, rolling hills.

Applicable Criteria NRHP Criterion C/CRHR Criterion 3 (Architecture) (Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity.)
The Blue Building (and the adjacent Green Buildings) in APN 4337017041 was listed as West Hollywood Designated Cultural Resource (Resolution 03-2983) in 2003 based on its architectural value. It was first recorded in 1987 in a historic survey. As part of the Westside Subway Extension Project, URS investigators relocated this property in the field. The historical significance of APN 4337017041 within the APE was determined by applying the procedure and criteria for the *National Register of Historic Places* (NRHP), *California Register of Historical Resources* (CRHR), and the definition of a historical resource used for CEQA. Criteria Consideration G of the NRHP generally excludes properties that achieved significance within the past fifty years unless they are of exceptional importance. Since the building is less than 50 years of age, it must also meet this criteria consideration in order to be eligible.

Based on site investigations and historic research, APN 4337017041 appears to possess the requisite significance to be eligible for listing on the NRHP, CRHR, as well as considered a historical resource for purposes of CEQA under Criterion C of the NRHP and Criterion 3 of the CRHR, as a building that significantly embodies the distinctive characteristics of the Postmodern architectural style. It is a rare Postmodern large-scale commercial building in West Hollywood. Post Modern style of architecture is characterized by its emphasis on pictoral qualities rather than structural values, with casual free-style arrangements of simplified and oversized (larger scale and proportion) examples of classical elements such as archways and loggia, pediments and moldings, and chimneys and rooflines.

For a property to qualify for listing in the NRHP and CRHR, besides meeting one of the criteria, it must also retain a significant amount of its historic integrity. APN 4337017041 appears to retain sufficient historic integrity of location, design, setting, materials, workmanship, feeling, and association.

2525 Corporate Place, Suite 200
MONTEREY PARK CA 91754

Dear Ms. Samels:

RE: COMMERCIAL REHABILITATION PROGRAM, CITY OF WEST HOLLYWOOD

Thank you for forwarding the above referenced undertaking to my office for review and comment pursuant to Section 106 of the National Historic Preservation Act and its implementing regulations found at 36 CFR Part 800.

The undertaking involves the rehabilitation of eighteen storefronts in the City of West Hollywood. The individual buildings have not yet been selected. The area of potential effects for this program includes property facing Santa Monica Boulevard between Harper Avenue and La Brea Avenue; property facing La Brea Avenue two blocks north and one block south of Santa Monica Boulevard; and Harper Avenue two blocks north and one block south of Santa Monica Boulevard. I concur with your determination that within this area of potential effects, the following commercial buildings are eligible for inclusion in the National Register of Historic Places:

7900-7906, 7908-7914, 7916-7922, and 7924-7936 Santa Monica Boulevard, which comprise a small commercial district, previously determined eligible for inclusion in the National Register of Historic Places;

7643 Santa Monica Boulevard, Los Angeles County Fire Station No. 8, previously determined eligible for inclusion in the National Register of Historic Places; and

7200 Santa Monica Boulevard/1041 North Formosa Avenue, which is eligible for inclusion in the National Register of Historic Places under criterion A at the local level of significance.

If you have further comments or questions, please do not hesitate to contact Staff Historian Lucinda Woodward at (916) 653-9116.

19-176758

Sincerely,

Steade Craigo, AIA, Acting

***P3a. Description:** (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries)
APN 5531018001 is located at 1041 North Formosa Avenue in a heavily developed urban commercial setting. APN 5531018001 is a large movie studio lot that occupies the block on Santa Monica Boulevard between North Poinsettia Place and North Formosa Avenue. The movie studio lot includes seven sound stages, post-production facilities, and office buildings, including group of rectangular buildings arranged in an L-shape at the corner of Santa Monica Boulevard and North Formosa Avenue. These buildings feature Colonial Revival and Italianate detailing, asphalt shingle-clad hipped roofs with wide eave overhangs, and stuccoed exterior walls. One of the buildings along Santa Monica Boulevard, near the intersection of North Formosa Avenue has a square cupola with wide overhanging eaves supported by brackets. Windows on these buildings are generally single or multi-light double-hung sash or multi-light casements. The primary façades of the buildings face the interior of the studio lot and are not visible from the street. The buildings appear to be minimally altered with air conditioning units installed in the walls and windows. The buildings appear to be in fair condition.

Applicable Criteria NRHP Criterion A/CRHR Criterion 1 (Events) (Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity.)
APN 5531018001 is considered a City of West Hollywood Cultural Resource under a development agreement. As part of the Westside Subway Extension Project, URS investigators relocated this property in the field. The historical significance of APN 5531018001 within the APE was determined by applying the procedure and criteria for the *National Register of Historic Places* (NRHP), *California Register of Historical Resources* (CRHR), and the definition of a historical resource used for CEQA.

Based on site investigations and historic research, APN 5531018001 appears to possess the requisite significance to be eligible for listing on the NRHP, CRHR, as well as considered a historical resource for purposes of CEQA under Criterion A of the NRHP and Criterion 1 of the CRHR, for its association with significant events in Hollywood's movie history such as serving as the Pickford-Fairbanks Studios, the home of Mary Pickford and Douglas Fairbanks, in 1922, and Samuel Goldwyn Studios. It was the location where such classic Fairbanks films as *Robin Hood*, *The Thief of Bagdad* and *The Taming of the Shrew* were made. The studio was taken over by Samuel Goldwyn and dubbed Samuel Goldwyn Studios in 1938, where *Wuthering Heights*, *The Westerner, Guys and Dolls* and Best Picture Oscar winner *The Best Years of Our Lives* were filmed. In 1980, Warner Bros. purchased the lot as an auxiliary site to its main lot in Burbank and re-named it Warner Hollywood Studios.

For a property to qualify for listing in the NRHP and CRHR, besides meeting one of the criteria, it must also retain a significant amount of its historic integrity. APN 5531018001 appears to retain sufficient historic integrity of location, setting, and association.

Sunset Plaza Commercial Grouping

This two block commercial grouping was designed as a unit and is basically symmetrical in plan along Sunset Boulevard as the major axis and Sunset Plaza Drive as a minor spur. Ten buildings are included within the boundaries of the district of which all but one (8616-28) are a part of its historic character. All are slate-roofed, one or two story in height, and either Classical Revival or Georgian Revival. The French Regency theme was introduced by the smallest building (8600). Most individual buildings present symmetrical facades to the street with a dominant central unit and smaller flanking elements. All are sheathed with stucco and incorporate a common vocabulary of details, among which are projecting bay windows, denticulated entablatures, shuttered double hung sash, keystoned arches, pilasters and quoining. The landscaping is very important to the grouping as it serves to delineate the transition between the stores and pedestrian walkways; emphasizes the shapes and scale

SIGNIFICANCE

19. Briefly state historical and/or architectural importance (include dates, events, and persons associated with the site.)

In 1924, Francis S. Montgomery Sr. began building a series of one story commercial buildings along a relatively unimproved stretch of road called Sunset Boulevard that skirted the foothills of the Santa Monica mountains. The westward expansion of Hollywood was still many blocks to the east and Sherman; to the southwest, was beginning another building boom. Elmer Mauzy built the commercial and residential "English Village" that year also on Sunset but nearer the development of Sherman. Montgomery's venture, occupied a "no man's land" reached primarily by automobile.

Francis S. Montgomery Sr. was son-in-law to Victor Ponet, Belgian Consul and president of the German-American Bank in Los Angeles. Ponet purchased 350 acres of land in this area from a Mr. Carlin in 1892, and built a large house above Sunset Boulevard. For over 60 years, the family enjoyed the Los Angeles basin from Los Angeles City Hall to the Santa Monica Bay.

(continued from 19.)

The 1923 real estate boom in West Hollywood had the effect of raising taxes along Sunset Boulevard from 500% to 1000%. At the time, Sunset Boulevard supported only poinsettia nurseries, small roadside cafes, a few shops, homes and the precursor to modern billboards - real estate signs. The four early commercial buildings of Sunset Plaza established early and air of sophistication to the retail center. The Colonial Revival buildings (now demolished) housed a silversmith and offices of famed Hollywood photographer George Howell. Taking advantage of the nighttime views of Los Angeles were the nightclubs Russian Eagle and La Boheme. In 1927, a "Trotskyite anarchist" blew up the building housing The Russian Eagle - it was never rebuilt.

Montgomery, manager of family holdings, retained an engineer, R.E.C. Ballinger, to work to break bottlenecks of local opposition, zoning and storm drain improvements that were needed to develop "an attractive entertainment, shopping and business center that would allure (sic) people of large social worth and financial means." The family's 1450 feet of boulevard frontage on the route between Hollywood and Beverly Hills was the ideal location for such a development. Armed with architectural drawings by Charles Selkirk of proposed commercial developments, Montgomery and Ballinger successfully lobbied a change in the commercial zoning restriction from 60% to 100% of floor space. Construction of the eleven buildings in the complex lasted from 1934 to 1936. The high styled Colonial, Georgian and Classical Revival architecture provided the perfect setting for what became a business district devoted to "sale of luxury items in small volume and personal service to social culture". The development's prestige also appealed to agents of Hollywood professionals such as Clark Gable.

Reinforcing the area's status were the high class nightclubs which began a 25 year reign when Billy Wilkerson of the Hollywood Reporter reopened the La Boheme as the Trocadero Cafe in 1934. Actor-turned-interior decorator Bill Haines opened his studio on Sunset Plaza in 1935. The Mocambo, a nightclub with interiors by Haines opened in 1939 in Sunset Plaza.

The Sunset Plaza district is a cohesively designed commercial area that demonstrates an early and continued dependence upon the automobile. Extensive rear parking not only supplied the parking demand but secured the views to the basin below which made the site initially so attractive to restaurants and nightclubs.

DESCRIPTION

7a. Architectural style:

7b. Briefly describe the present *physical description* of the site or structure and describe any major alterations from its original condition:

District Description

The Old Sherman grouping consists of twenty-one thematically related cottages and bungalows. Twelve structures on the 800 block of N. San Vicente Blvd. and two on the 8900 block of W. Cynthia St. form the largest congregation. The remaining houses are scattered -- with one on the the 900 block of N. Hancock Ave., two on the 800 block of N. Larrabee St. and three on the 900 block of N. Palm Ave. The grouping, which is composed of plains cottages, hipped bungalows, and Californian bungalows, illustrate the transition in vernacular Southern Californian Architecture at the turn of the century. The styles of the grouping can be separated into three main types according to their dominant design feature, the shape of the roof. There are two houses that are fine examples of the plains cottage. This style was popular at the very end of the nineteenth century and assumes its usual ell shape from a cross gabled roof. The

SIGNIFICANCE

19. Briefly state historical and/or architectural importance (include dates, events, and persons associated with the site.)

In order to understand the significance of the Sherman Grouping, one must first understand the close relationship between Sherman, the regional railway, and the development of the Southern California area.

M.H. Sherman and E.P. Clark developed Los Angeles' electric street railway system called the Los Angeles Consolidated Electric Railway in 1892. They continued their development of the railway system by building the first intraurban line in Southern California between Los Angeles and Pasadena. At about the same time they became interested in developing lines to the coast so they purchased the old Los Angeles Pacific system. To facilitate the development of these line, in 1896 they bought 5.56 acres of land adjoining its Santa Monica line to build a railway facility. Located at Santa Monica and San Vicente, the facility was named Sherman, after the head of the company. The original streets included Clark (San Vicente), Sherman (Santa Monica),

(continued from 7b.)

gables are often covered with decorative shingles that contrast with the clapboard siding. The gabled cottage was the precursor of another small house, the bungalow, which became popular in the next century. Approximately half of the houses in the grouping are examples of hipped bungalows with extending boxed eaves. This unpretentious design is often enhanced with recessed porches, centered dormers, and projecting bays. The remaining houses in the grouping may be described as California bungalows. The roofs are generally hipped, but often have projecting gables or gabelets to the front and exposed rafters. The charm of all of these houses results from the freedom the builder manipulated with the basic design to distinguish one house from another. The houses are ornamented to varying degrees with queen-anne headers and transomes, multi-paneled doors, flaired eaves, carved rafters, and stick work. The Old Sherman district shows how the vernacular tradition exhibits a high degree of eclecticism yet continuity.

For the most part, the houses are intact and in fair condition. Some alterations have been made, but generally do not detract from the streetscape. The deterioration that has taken place is due to the fact that a few of the buildings are vacant and many are not owner occupied. Clearly, the greatest threat to the district is real estate speculation that proposes its demolition and replacement with higher density units.

Descriptions of the individual homes contributing to the quality of the grouping follow on continuation sheets.

Continuation Sheet

City of West Hollywood Historic Resources Survey
Old Sherman District

(continued from 19.)

Cynthia, Palm, and Larrabee. Eventually, Sherman was used to refer to the entire area now known as West Hollywood.

The Los Angeles system along with the Pasadena Line, were bought by Samuel Huntington and others to form the nucleus of the Pacific Electric (PE) Company. The PE became world renowned not only because it was the largest urban railway system, but also because of its integral role in the phenomenal development of Southern California. The fact that Sherman was the service facility for this huge system shows the important role it played in the city as well as region. In 1910, the facility consisted of four brick buildings including a car barn, mill and car building shops, substation and boiler room, and an office building. In addition there was a wood frame car barn, brass foundry, pattern shop and nine other buildings.

As the system grew, so did the town of Sherman. Many of the people who lived there were crafts people who worked in the yards, metal shops, and car barns. Their homes were typical of vernacular architecture during this period and consisted of plain cottages, hipped bungalows and California bungalows. The bungalow became closely associated with California life style because it provided people with low cost housing, modern amenities, modest square footage, and a basic design that could be personalized.

Often the merchants of the town would build several slightly different houses using the same basic pattern and then rent them to the railway employees. For example, in 1899, L.J. Quint, the town's first postmaster, built a very unusual cottage at 873 San Vicente using a very typical format. He eventually rented it to a track foreman. The Cottle Brothers and the Whites were also relatively wealthy citizens who did the same thing. By the turn of the century, Sherman became recognized as an ideal residential area. In 1910, it consisted of a fairly large housing stock as well as two restaurants, three grocery stores, two barber shops, two pool halls, a bank, cobbler, ice cream parlor, Chinese laundry, church, hotel, drugstore, and post office. Clearly, the Sherman Grouping is historically significant not only because the homes are the remnants of the original residential development of the community, but also because they are the remnants of a town that played a very important role in the development of the region.

Continuation Sheet

City of West Hollywood Historic Resources Survey
Old Sherman District

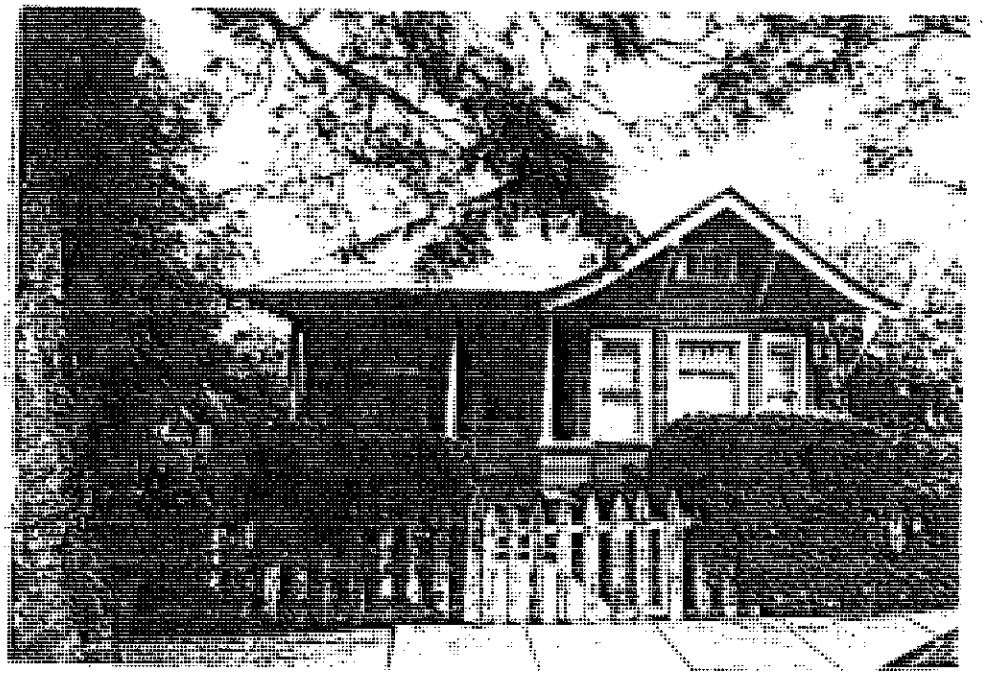

8914 Cynthia Street

Facing north on a lot below street level, this house is completely surrounded by a colorful stone and wood latticed fence as well as a tall hedge. The house is a one-story square bungalow covered with wood shingles. The hipped roof has a contiguous gable in the northwest corner. On the westside, there is a small single sashed pivoting window with Queen Anne style panes.

The house appears to have the same characteristics as others in the district and seems to be in good condition.

Continuation Sheet

City of West Hollywood Historic Resources Survey
Old Sherman District

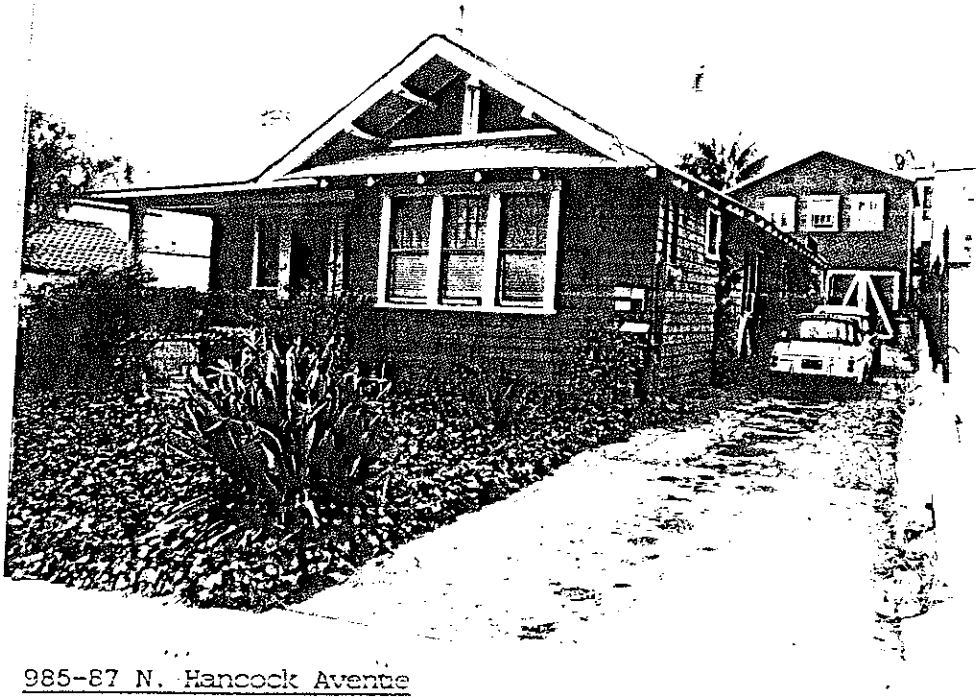

8924 W. Cynthia Street

Facing north, this is a very nicely detailed square bungalow covered with narrow clapboard. The hipped roof has extending eaves with decoratively carved exposed rafters. The gable on the street facade has triangular brackets and a wood latticed vent. The recessed porch in the northeast corner is supported by three Tuscan columns. The east and northwest facades have gently projecting bays with single sashed windows in the middle ornamented with Queen Anne transoms and double sashed windows on the sides. The window under the porch is identical to the windows in the middle of the bays. There is also a small Queen Anne single sashed pivoting window on the west side. Plain wood trim and continuous sill, there are two multi-paneled doors opening to each other at a 90-degree angle on the porch. The house sits off the street on a raised basement and is surrounded by a picketed fence covered with ivy.

The house is in good condition and clearly maintains the integrity of the style.

Continuation Sheet

City of West Hollywood Historic Resources Survey
Old Sherman District / Craftsman District

985-87 N. Hancock Avenue

This late example of a turn-of-the-century type cottage incorporates a Craftsman flavor into its design. On a raised foundation, the house is placed to the southwest side of the east facing lot. A drive runs along the northern edge to a related, detached 2-story garage/apartment structure. The main house is capped by a large, medium hip roof with a gable projecting from over the north half of the front facade. Decorative Swiss chalet type ventwork decorates the street facade gable. Both gables have "point-finished" purlins. The roof is asphalt shingle, has projecting eaves and exposed rafters with ends cut perpendicular to the ground. The main house is covered in wood shingle and has a stone chimney on the south side. A landscaped front setback is divided by a walk which runs to an open, recessed porch. The cement balcony rail on the porch is solid and capped, broken by a similarly treated stairway. The doorway, leading in from the porch, is a double, plain wood with a pair of rail height, 6 by 6 fixed pane sidelights. Other windows are double hung, casement and window traim is a plain, wide wood with decorative lug sills throughout.

The detached structure at the rear of the lot (987 Hancock) has a single, medium gable roof with 2 vents in the gable. Stucco covers the exterior walls, the first level has a double stick style, automobile door. An open stick style stair leads to the apartment above, where the projecting eaves cover a small porch with stick balcony rail and square posts. One-by-one casement windows used throughout, are trimmed in plain wood clapboarding as in the main house.

The buildings are intact and in good condition.

Continuation Sheet City of West Hollywood Historic Resources Survey
Old Sherman District

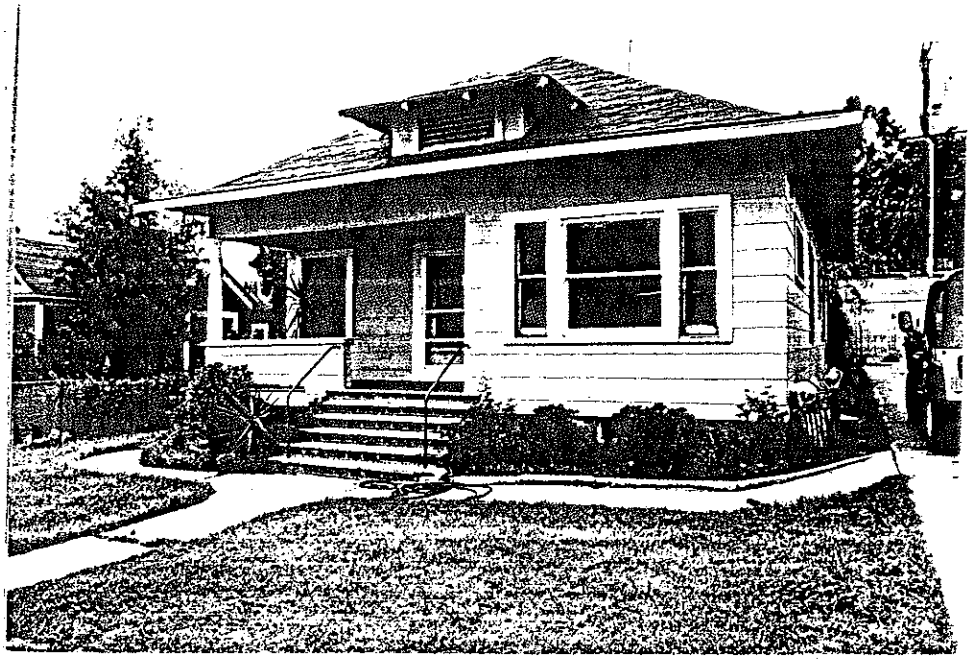

825 N. Larrabee (facing east)

This one-story ell-shaped prairie cottage has a cross gabled roof with extending boxed eaves. The gable on the street facade is decorated with scalloped wood shingles that contrast with its narrow clapboard cladding. The endboards and plain wood trim around the doors and windows enhance the detailing. The shed-roofed porch in the southeast corner has been enclosed. The house, in addition to the lot, are in poor condition as it has been vacant for some time.

Continuation Sheet

City of West Hollywood Historic Resources Survey
Old Sherman District

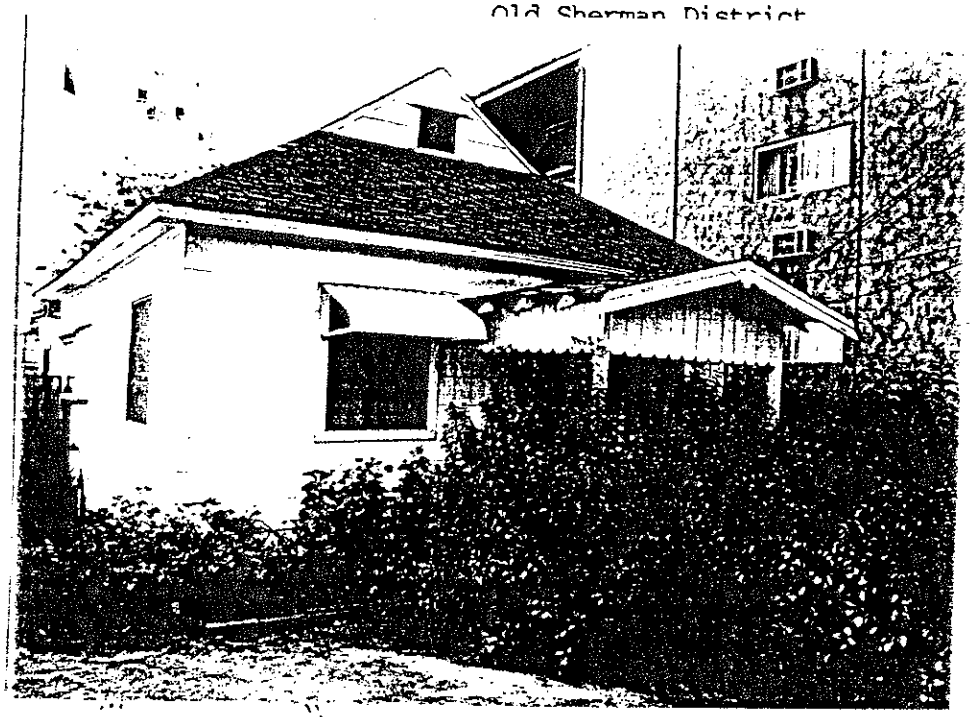

829 N. Larrabee (facing east)

This unassuming one-story hipped bungalow is accentuated by its flaired extending eaves and exposed rafters. Typical of the style, there are centered dormers on the south and east sides and the recessed porch in the southeast corner is supported by a tuscan column. The character unusual to the style is the shingled cladding. The doors and windows have a plain wood trim.

The house is in fair condition and intact.

Continuation Sheet City of West Hollywood Historic Resources Survey
Old Sherman District

858 Larrabee

This one story bungalow facing west at 858 Larrabee is square in shape with a small addition to the rear. A hipped roof with honeycombed asphalt shingles caps the main unit, while a shed roof caps the addition. The main roof has extending boxed eaves and a gablet extending from the tip. The entire structure is shingled. The style of the open porch suggest that it was added later because its roof is very similar to those found on Craftsman bungalows. Its front facing gable has a very low pitch, a thick barge board, and extending eaves with exposed rafters.

The hedge that leads up to the porch is rather overgrown, but the house is intact and in good condition.

Continuation Sheet

City of West Hollywood Historic Resources Survey
Old Sherman District

927 North Palm Avenue

A one-story square bungalow with narrow clapboard siding. The distinguishing characteristic of this house is the hipped roof which gently flairs out into extended boxed eaves. In the center of the west face of the roof is an identically-shaped wood shingled gabled dormer. The southeast corner of the house has a recessed porch with solid rails which is supported by 2 uniquely designed square columns with stickwork. The northeast corner of the facade has a projecting bay with a large single sashed window in the middle and two smaller double sashed windows on the sides. The main door off the porch faces south, not the street. It is multi-paneled and appears new. A pair of double sashed windows under the porch have plain wood trim as do the other windows and doors. The house is also trimmed by a continuous sill. The house sits off the street and has a large beautiful flowering tree but the yard has no grass.

The house is intact and in fair condition.

Continuation Sheet

City of West Hollywood Historic Resources Survey
Old Sherman District

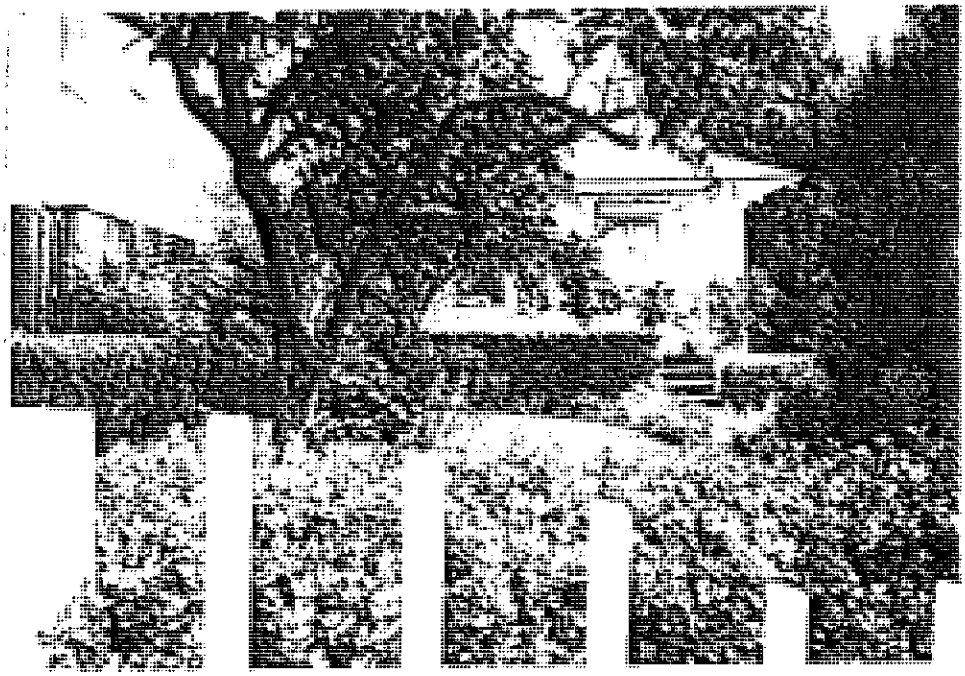

931 N. Palm Avenue

A one-story square bungalow sits on raised basement with narrow clapboard siding and end boards. The hipped roof has extending boxed eaves as well as a centered hipped dormer with wood shingles. The recessed porch in the northeast facade is supported by two tuscan columns. Under the porch, there are paired double sashed windows. An aluminum screen door has been attached to the main doorway. The windows and door have a plain wood trim. A tall wood planked fence, hedge and trees impairs the view of the house.

It appears intact and in fair condition.

Continuation Sheet

City of West Hollywood Historic Resources Survey
Old Sherman District

950 N. Palm Avenue

A one-story square bungalow with clapboard siding and end boards, the house sits on a brick foundation and has a hipped roof with extending eaves and exposed rafters. The main doorway is off center and is covered by a hood. It is supported by plain square wood columns. A pair of double sashed windows sit off from the doorway and are trimmed by plain wood as is the door. The house sit up and off the street with the support of a cement block wall facing the street. The yard is nicely landscaped with trees and is encompassed by a wood picket fence and hedge.

Due to the wall and landscaping, the house is difficult to see but appears in good condition and intact.

Continuation Sheet

City of West Hollywood Historic Resources Survey
Old Sherman District

837 N. San Vicente Boulevard

This one-story bungalow is nicely detailed and well preserved. It has the classic features of the style with its hipped roof, centered hipped dormer, narrow clapboard, end boards, extending boxed eaves and plain trim. The structure is sitting on a raised basement and has a recessed porch in the northeast corner which is supported by two tuscan columns and solid railing. The classic elements of the street facade are enhanced by a small diamond shaped window under the porch, a large triparte cottage window with a diamond patterned header, and a triple paneled door. The yard is nicely landscaped but hidden behind a tall, well-trimmed hedge. Behind 837 stands a semi detached two-story garage/apartment.

The structure has a front gabled roof, extending eaves, exposed rafters, triangular braces and two vertically opening garage doors.

Continuation Sheet

City of West Hollywood Historic Resources Survey
Old Sherman District

838 N. San Vicente (facing west)

This one-story rectangular bungalow is hidden from the streetscape by a wood fence and vegetation. Its hipped roof, extending boxed eaves, narrow clapboard siding, and end boards show that it is very similar to the other houses in the district. Alterations, however, have compromised the integrity of the style. The original entrance has a transome, but the wood paneled door has been replaced by a sliding glass one. Also, the front window adjacent to the door has been boarded-up. While a new window has been cut into the southeast corner. The house is in fair condition and could be restored.

Continuation Sheet

City of West Hollywood Historic Resources Survey
Old Sherman District

840 N. San Vicente (facing west)

This one-story square bungalow has typical features of the style with its hipped roof, extending boxed eaves, narrow clapboard, endboards and plain wood trim. It is distinguished by a contiguous gable in the northwest corner that is adorned with wood shingles and a latticed vent. It also has a charming triparte cottage window with a decorative header in the center. The main doorway is centered and slightly recessed. The house is partially hidden from the streetscap by its deep position on the lot and a wood fence.

It appears to be in fair condition.

Continuation Sheet City of West Hollywood Historic Resources Survey

843-45 N. San Vicente Boulevard (facing east)

This one-story cottage has a cross gabled roof with a catslide projecting to the rear. It appears that there have been additions to the rear, but they do not detract from the integrity since the entire structure is sheathed with the narrow clapboard, all the corners have end boards, all the eaves are extended and boxed, and all the doors and windows have plain trim.

The face of both gables flair and are enhanced by scalloped shingles. It appears as though there was once an extending porch with a shed roof, but it is now enclosed. The house and the yard are well kept but hidden behind a tall trimmed hedge. Directly behind 843 is a two-story garage/apartment. The structure has a front gabled roof, extending eaves, exposed rafters, and triangular braces.

Old Sherman District

847 N. San Vincente Boulevard (facing east)

Continuation Sheet

City of West Hollywood Historic Resources Survey
Old Sherman District

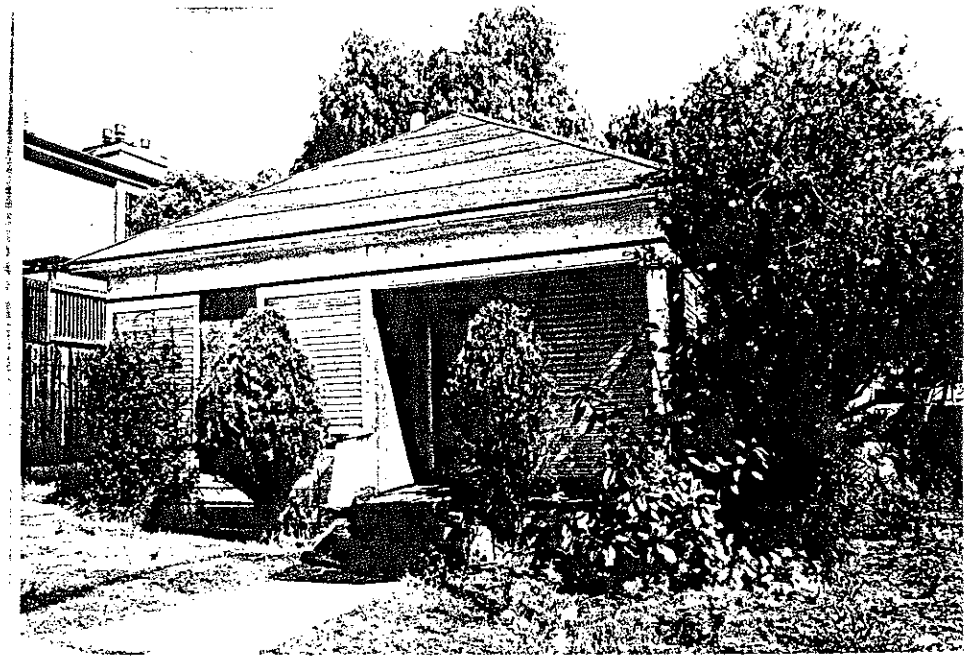

849 N. San Vicente Boulevard (facing east)

This one-story hipped bungalow is sheathed in narrow clapboard. It is made unique from the other houses in the district by a gablet in the northeast corner and a shallow recessed porch covering two-thirds of the street facade. The porch railing was replaced by two-by-four's extending from the roof and the front yard is separated from the sidewalk by a brick wall. There has been a minor addition to the southwestern corner with a shed roof. The changes, for the most part, do not detract from the integrity of the design.

The house is intact and in fair condition.

Continuation Sheet

City of West Hollywood Historic Resources Survey
Old Sherman District

850 N. San Vicente Boulevard (facing west)

This one-story square hipped bungalow combines the classic features of the style with modest detailing. It has extending boxed eaves, narro clapboard, end boards and plain wood trim. It is distinguished by a recessed porch supported by a single tuscan column and open stick railing. A nice detail is the upper and lower continuous sills. Attached to the rear is an enclosed porch with a shed roof.

Unfortunately, the house has deteriorated since it has been vacant for some time.

Continuation Sheet

City of West Hollywood Historic Resources Survey
Old Sherman District

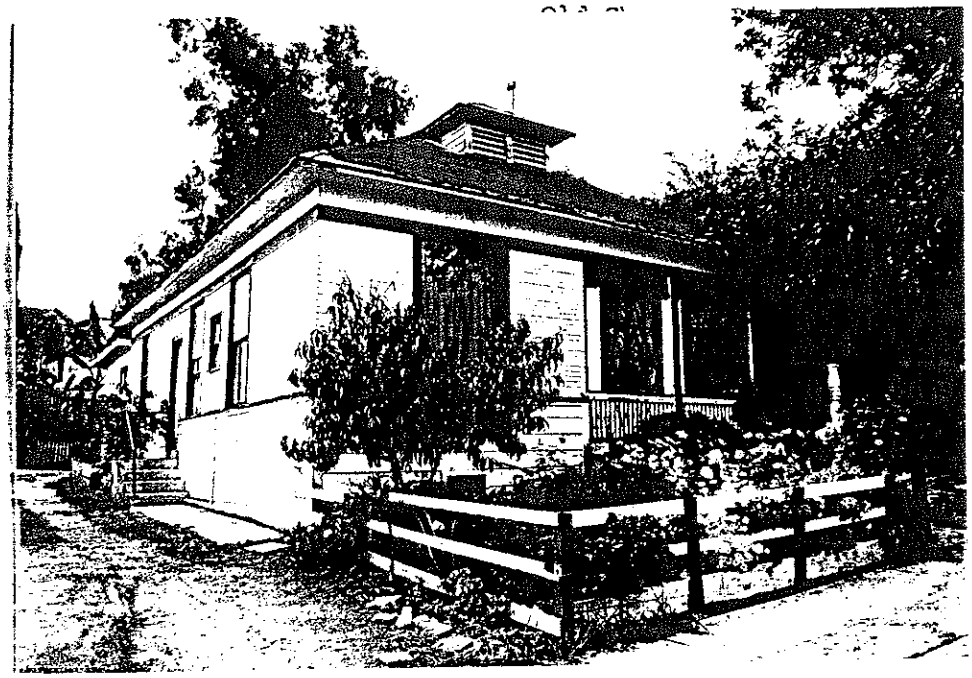

853 N. San Vicente Boulevard (facing east)

The charming details on this one-story shingled bungalow are difficult to see because of the ivy trellis. The hipped roof has a low pitched contiguous gable that extends over two-thirds of the street facade. In the southeast corner there is a small recessed porch supported by a single column and solid railing. The door, facing south, has multiple panels and molding around the light. There is a bay in the northeast part of the facade with two rows of diamond panes in the header. A carport sits adjacent to the house.

The house is intact and in fair condition.

Continuation Sheet City of West Hollywood Historic Resources Survey

863 N. San Vicente Boulevard (facing east)

This one-story rectangular bungalor has a hipped roof with extending boxed eaves and an unusual hipped dormer projecting from the peak of the roof. The structure sits on a raised basement and is cladded with a combination of narrow clapboard and wide shiplap board. The windows have a plain wood trim and the upper and lower continuous sills separate the boards. The integrity of the structure has been partially diminished by an addition to the rear with a shed roof, a poorly enclosed recessed porch in the northeast corner, and a strangely landscaped yard.

Nevertheless, the house is intact and in fair condition.

Continuation Sheet

City of West Hollywood Historic Resources Survey
Old Sherman District

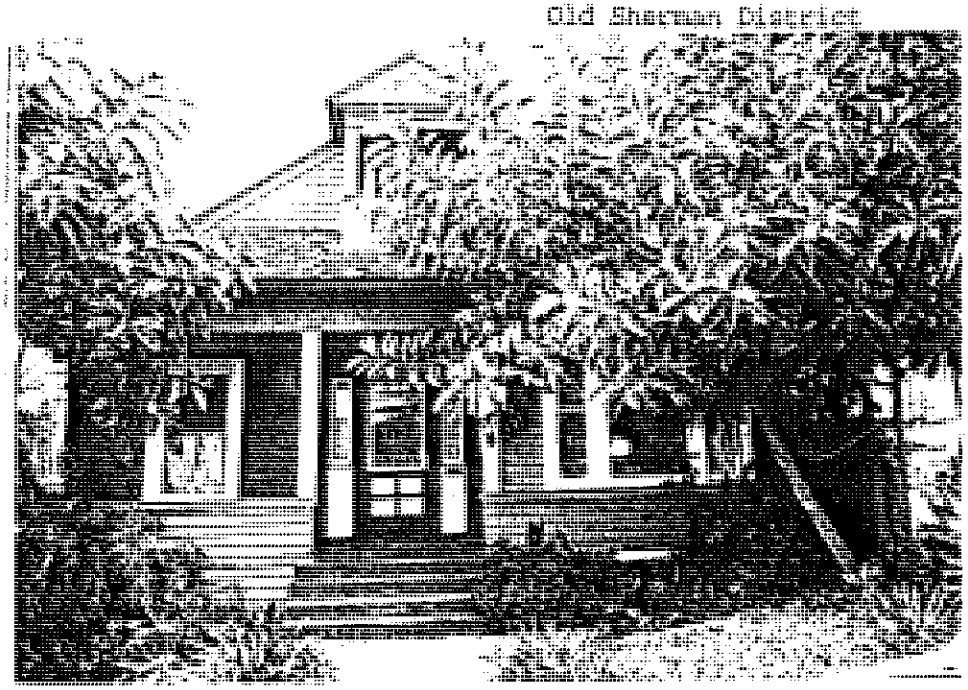

864 N. San Vicente (facing west)

This modestly designed but well preserved one-story bungalow has a hipped roof with extending boxed eaves and a small addition to the northeast corner with a shed rood. The entire structure sits on a brick foundation and narrow clapboard siding, end boards, and plain wood trim around the doors and windows. Its prominent feature is a recessed porch in the north-west corner which has open stick railing and plain supports. The doorway under the porch is facing north, not the street. The windows on the street facade have stick shutters which compliment the porch railing. The house is in good condition and has a well manicured lawn.

Continuation Sheet City of West Hollywood Historic Resources Survey

Old Sherman District

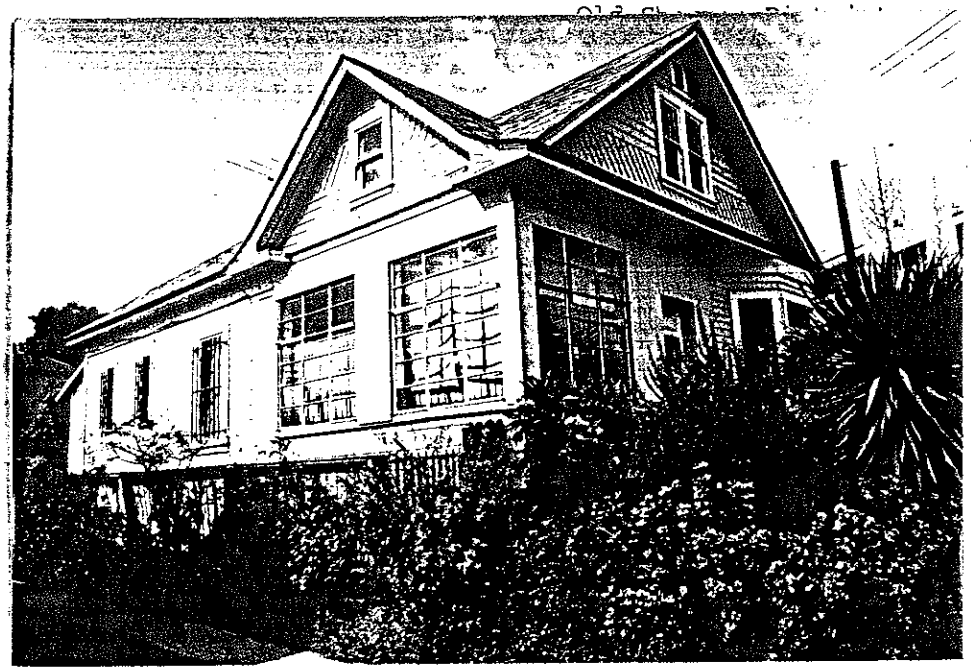

873 N. San Vicente Boulevard (facing east)

This one-story square hipped bungalow has some of the most interesting detailing found in the grouping. Like the others on the street, it has extending boxed eaves, a recessed porch plus upper and lower continuous sills which separate the clap board from the ship lap board. The outstanding feature of this house is the small gabled balcony that projects from the peak of the roof. It is heavily ornamented with paneled columns, and stick work railing. The continuation of the hipped roof has two eyebrow vents. The other outstanding feature of the house is the doorway. The door is multi-paneled with four in the lower portion and a fixed light in the upper portion with art glass trim and an eyebrow transom. The sidelights have kick panels. There is also a diamond shaped window under the porch which is supported by a paneled column.

The house is intact and in fair condition.

Continuation Sheet

City of West Hollywood Historic Resources Survey

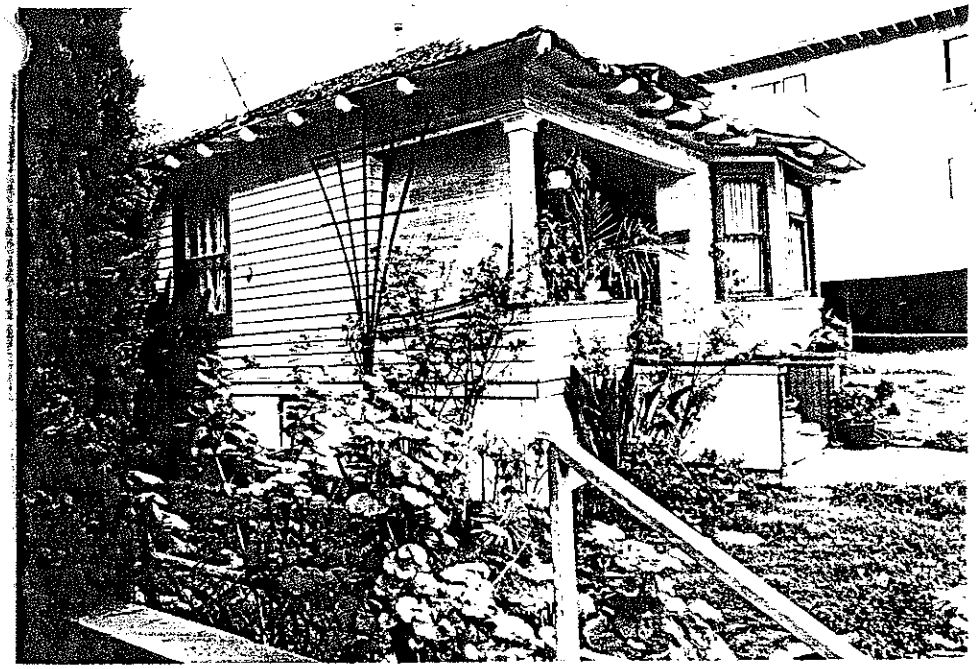

889 N. San Vicente (facing east on corner lot of Cynthia)

The highly detailed and interestingly shaped roof which tops this one-story bungalow is its most notable feature. It is hipped to the rear, gabled to the front, and has secondary gables to the sides. The gables in the southeast and northeast corners of the structure have decorative wood shingles, wood ornaments where the extending boxed eaves gently flair, and small centered 1/1 sashed windows. The northeast gable covers a slight extension from the mainly rectangular structure. The main gable facing east caps the street facade and has highly decorative shingles and window. The street facade is also adorned by a projecting bay with a sunrise motifed header in the center window. The doors and windows have plain wood trim like the other houses in the district, but it is the only one sheathed in shiplap boards.

The extension on the rear facade has a shed roof and appears to be an original part of the structure. The new addition to the northwest corner, the enclosure of the recessed porch in the southeast corner, and the bricked paths and fence have partially diminished the integrity of the architecture. It is in good condition however, and intact.

Continuation Sheet

City of West Hollywood Historic Resources Survey
Old Sherman District

935 N. San Vicente (facing east)

This one-story rectangular bungalow has very nice details and landscaping that enhance its modest design. The hipped roof has extending eaves and exposed carved rafters. The roof is distinguished by a shed dormer with the same detailing. The house is cladded with wide clapboard and the doors and windows have a plain wood trim. A recessed porch with solid railing in the southeast corner is supported by a square tuscan column. In the corner of the porch there are two doors that open onto each other. The northeast corner of the street facade hhas a projecting bay. The center window of the bay has a queen anne header.

The house is intact and in good condition.

Continuation Sheet City of West Hollywood Historic Resources Survey
Old Sherman District

883 N. San Vicente (facing east)

The side-gabled roof with a catslide to the rear and a secondary gable projecting from the southeast corner give this one-story cottage an ell shape. The extending boxed eaves, clapboard, endboards and plain trim around the doors and windows are common to the district. This is the only house, however, with an extending porch. The shed roof capping the porch is supported by plain posts and solid railing. There are two doors that sit opening on each other in the southeast corner.

The house is intact, but vacant and consequently in poor condition.

DESCRIPTION

7a. Architectural style: Italian Renaissance Revival

7b. Briefly describe the present *physical description* of the site or structure and describe any major alterations from its original condition:

8477-81 W. DeLongpre Avenue/1326-32 N. Olive Drive

A three story rectangular Italian Renaissance building faces east from its western lot on DeLongpre. Placed well back from the street and nestled into the hillside, the house is set at ground level. A second, two story house (1326-32 N. Olive) stands directly to the west, almost hidden from view by the larger house. The three story house is capped by a low hipped red and green tile roof. The roof has widely extending eaves with boxed rafters, wood panelled soffit and heavy brackets. A dentillated frieze panel further decorates the cornice line. The first floor is brick -- as a rustication -- with wide wood clapboarding covering the second and third floors. A wide molded string course in a scallop design separates the first and second levels. A second molded string course doubles as a continuous sill for the third floor. Windows are tall on the first floor and shorter on the upper floors. Centered on the first floor is an extended one story portico

SIGNIFICANCE

19. Briefly state historical and/or architectural importance (include dates, events, and persons associated with the site.)

These large houses in the Italian Renaissance Revival style were built in 1936 by Queen Walker Boardman, who owned several parcels in the immediate area. The two multi-family dwellings, in the relatively rare Italianate Revival style were sold almost immediately and then repurchased by Boardman in 1941. The particular adaptation of the style makes it unique in the district. Its size reflects the stabilizing trend in the popularity of the district as luxury apartment housing.

supported by wooden Tuscan columns. A wrought iron balcony circles the entablature of the portico. A pair of French doors with classical pediment hood and molded label opens to the balcony. The door is wood panelled with a leaded glass light. Rail height sidelights and squared plasters flank the door. The reveal around the door is paneled. Other entrances on the first floor are classically pedimented wood panel doors with molded trim, paneled reveals and leaded glass transoms. Automobile entrances open on the first floor at the northern and southern ends of the east facade. The garage doors are also wood paneled.

The two story house at the rear of the property is wood clapboarded with a red tile roof. The house is covered by a side gabled roof with a front gabled projection on the center of the east facade. Classical pilasters divide windows and decorate corners.

Both structures appear intact with minor replacement and are in good condition.

DESCRIPTION

7a. Architectural style: Industrial

7b. Briefly describe the present *physical description* of the site or structure and describe any major alterations from its original condition:

652 N. La Peer Avenue

A three-and-one-half industrial building runs west to east through the block to Robertson from its N. La Peer address. Set half a level above the ground on a cement foundation, the steel truss and beam building has a third story monitor running the length of the building. The building is divided into narrow bays and is 10 bays wide and 60 bays long, and is covered by industrial sash windows and decoratively pressed sheet metal panels. The roof is a very low front gable and the monitor, similarly gabled, projects from the center of the roof. The eaves are slightly projecting and a riveted metal band circles the building at the cornice line. Two thirds the length from its west (La Peer) facade, a spur of the same 3-1/2 story design projects from the north facade. The spur is 12 bays wide by 7 bays long. Windows are awning-style industrial sash and a variety of doorways, all industrial and of metal and wood, fill the ground level bays. Attached, exterior stairways lead to

SIGNIFICANCE

19. Briefly state historical and/or architectural importance (include dates, events, and persons associated with the site.)

In 1929, the Mitchell Camera Company began construction of a large sheet metal sided factory building at 652 N. La Peer. In 1919, George Mitchell, a cameraman with D.W. Griffith and engineer of no formal training, together with Hiram "Hy" Roger, a lumberman from Wisconsin who financed the venture, founded the National Motion Picture Camera Repair Company. The company occupied a small rented building in the film studio area at Santa Monica and Beechwood in Hollywood. Between 1920 and 1925, the company name was changed to Mitchell Camera. Increasingly prosperous, the company moved in the late 1920's to the buildings on the block between La Peer and Robertson. The company developed a reputation for consistency and technological excellence; some of the first silent film cameras are still in operation today. With the advent of sound, the company developed a camera that was both quiet and dependable. In 1939, a drafting room was added as a spur to the huge main building. Prior and during World War II, Mitchell Cameras filmed 85 percent of the films shown in theaters throughout the world. The company's 1942 technical achievements

upper story doors on the east and north facades. Circular vents punctuate the monitors and various utility lines are exposed on several facades.

Another building in the complex is at 665 N. Robertson, a two story stucco structure. The building has a flat roof and no coping. The Robertson facade is comprised of a two story recessed porch containing a single side stairway to the second floor. The flat arched opening has decorative brackets at the corners, and slightly rendered pilasters. The stairway is red clay tile with a wrought iron railing and leads to a single door with large diamond shaped colored glass light. This structure has deeply recessed windows of industrial sash.

The building is intact with a possible re-stuccoing and is in good condition.

(continued from 19.)

main building. Prior and during World War II, Mitchell Cameras filmed 85 percent of the films shown in theaters throughout the world. The company's 1942 technical achievements with the chronograph "GC" camera led to development of specialized "government cameras" used in World War II including an aerial tracking camera, a triangulation camera and a split magazine camera. The first daylight bombing raid over Germany was filmed with a Mitchell camera. At its peak of production, the Mitchell Camera Company employed over 200 people. In 1946, seeking more factory space, the company moved to Glendale, California, where it is today.

Since that time the factory building has been reused as a private nightclub "The Factory" and later a discotheque "Studio One".

DESCRIPTION

7a. Architectural style: Craftsman

7b. Briefly describe the present *physical description* of the site or structure and describe any major alterations from its original condition:

Craftsman Grouping District Description

Clustered on the crest of a knoll along Hancock and Palm Avenues stands a grouping of eight Craftsman style bungalows, two multi-family Craftsman houses, and four Craftsman cottages. The structures all share several characteristics which bind them together in a district: gabled roofs, extended front porches and rear detached automobile garages. The particular articulation of these features, however, is the source of each structure's individual character and what gives the district its depth of detail.

SIGNIFICANCE

19. Briefly state historical and/or architectural importance (include dates, events, and persons associated with the site.)

The gable roofed Craftsman bungalow replaced the hip roofed Victorian cottages as the housing type of preference in Sherman in the early 1910's. Already in use extensively in the Hollywood western expansion by 1910, the Craftsman style here was adopted later, and to smaller structures than prevailed in the developments far to the east. Situated at the top of Hancock Street, above the noise and smoke of the railyards, a grouping of homes gradually formed between 1911 and 1931. Similarly fashioned in the Craftsman style, the bungalows vary quite substantially in roof configuration, porch design and fenestration pattern. Craftsman application to multiple family housing is seen in the Palm Avenue structures and the tiny cottages clustered behind them. The bungalows all show detached automobile garages at the rear of the properties, reflecting a change in the transportation patterns even then.

Craftsman District

(continued from 19.)

In the early 1910's, the town of Sherman had grown to a population of 900. The western residential expansion of Hollywood was still about half a mile away to the east, and Sherman maintained an individual identity. Sherman's commercial core, clustered opposite the railyards consisted of numerous businesses, pool halls, ice cream parlor, post office and the First National Bank of Sherman at the northeast corner of Larrabee and Sherman (Santa Monica Boulevard). A "Mexican Village", many long rows of very small attached units, sat to the southwest of the railyards, which then contained numerous large brick and wood-frame structures. It was a busy and thriving enterprise.

Mary E. Hancock and Anna A. Barnett both owned portions of the old Rancho La Brea at this time. In the period of 1914 to 1925, they sold lots along upper Hancock Street to individuals who built Sherman's earliest Craftsman style bungalows. The Craftsman bungalow was ideally suited to the Sherman lifestyle. H.C. Hartley wrote in 1912 of the splendors of residential life in Sherman saying, "the man who takes pleasure in 'a little land well tilled' will find here his greatest opportunity." The frost free belt which runs through this upper portion of Sherman encouraged the tilling of household gardens in the truest Craftsman tradition. All the houses are located on the north edge of their property line, exposing wide plots of soil to the southern sun.

The homes in the district follow Craftsman imperatives of simplified and exposed structure - evidenced in gable roofs with overhanging eaves and exposed rafters, paired porch supports and exposed purlins. The Craftsman ideal of connection to the outdoors is seen in the large windows, rows of windows and porches covering at least half the street frontage.

Simulating carved stone blocks, Art Stone is seen on several porches and stairays implying that the house itself sprang from the earth. The presence of automobile garages hints at the status of these middle class residences, in 1012 all Sherman roads were oiled, several paved and, though only 20 minutes from downtown by rail, was a "veritable paradise for the owner of a motor car". Hartley recognized that Sherman's situational advantages: above the frost belt, on a gently sloped foothill and between the communities of Beverly Hills and Hollywood, would soon result in a new demand for Sherman property. The "brain and brawn of ours healthy American citizenship, the businessman, lawyer, doctor and every honest workman" built bungalows like these throughout Sherman. These bungalows represent the last of a building type constructed before the building boom of 1923 in a town becoming more commonly referred to as West Hollywood.

The community dubbed "Queen of the Foothills" was billed as enjoying all the advantages of a great city of half a million people and at the same time having the quiet and restful and healthful homelife of the country. The Craftsman bungalow was ideally suited to this quality; the urbanity of several of the district bungalows combined with the openness of plan and structure. Sherman was not a city of wealthy people, but that "of the everyday honest workman". The Craftsman Grouping demonstrates the fusion of the ideals of connection to nature (porches, large windows, large rear setbacks for garden space) and modernity (automobile driveways and garage structures). It is in these unique bungalows that Sherman's individual character can still be seen.

959 N. Hancock Street 19-176851, 027533

A single story, low gable roof Craftsman house, 959 Hancock stands at the edge of the Craftsman Grouping. The simplest design in the Craftsman Grouping, it is placed to the north side of an east facing lot with a driveway running along the southern edge to a detached garage at the southwest corner. The house is built on a slightly raised, exposed cement foundation and a landscaped front setback separates the house from the street. The roof is a single, low-pitch gable of asphalt shingle with projecting eaves, exposed rafters and plain endboards. Near the peak of each gable, metal vents cover small, square openings. The exterior is covered in wide wood clapboarding with endboards on most corners. A straight, solid and capped rail cement stairway leads from the front walk to an open recessed cement porch at the center of the house. The porch extends to the northern corner of the front facade and has a decorative square post at the head of the stairs with a square balcony railing in a decorative pattern and a single square post at the northern corner. There is no endboard on the clapboarding on the porch. Fenestrations are a combination of double sash, 6 over 1 windows with shutters; single-paned pair casement windows; double sash 1 over 1; and for the porch/living room window, a large, fixed pane 8 over 1 window. Window trim is plain, wide wood with wood lug sills throughout. The door, similarly trimmed, is a six panel, wood and opens from the porch at the center of the house. Several vents at ground level are covered by metal grating or wooden lathwork. The detached garage has a medium pitch gable roof with clapboard siding, large, single automobile door on the eastern facade, 2 doorways on the northern and small windows on the southern facades. The roof is asphalt shingle with projecting eaves, exposed rafters but no edgeboards as on the main house.

The buildings are intact and in very good condition.

991 Hancock Street 19-176858, 027634

Set on a raised foundation at the northern edge of its east facing lot, this is a clapboarded Craftsman bungalow with a stone porch. A drive on the southern edge leads to a 2-story, detached Spanish Colonial Revival structure at the rear of the lot. Intersecting gables cover the one-story house, and 2 gables on the southern facade. The roof is asphalt shingle with projecting eaves and exposed rafters with decorative endcuts. Wide endboards on the gables are supported by heavy, square post brackets, cut to a point. Lathwork forms bents at the peak in each gable. An art stone stairway of heavy blocks with a capped rail leads from the center walk in the landscaped front setback to the slightly recessed and projecting porch. The porch's "stone" railing continues to the ground level to form the foundation for the porch section. Decorative capstones and square posts in pairs and 3's (at corners) - matching gable brackets - are used. The house is covered, except for the porch section in wide wood clapboarding. Windows include double hung sash 1 over 1, large fixed single, fixed single with casement sidelights, and a single, stained and leaded glass panel. The doorway is wood panel with a decorative, quadrilateral-design light of beveled glass, and has a pair of single pane, rail height sidelights. The rear detached building is a 2-story, L-shaped structure with 2 stick style automobile doors on one leg of the L and an apartment on the other leg. A second apartment is on the second level. A recessed, straight stairway leads from under an arched opening on the east facade to the second level. Single pane casement windows are used on both apartments throughout.

The property appears intact and is in good condition.

995 N. Hancock Street 19-176859, 027535

A one-story Craftsman bungalow sits on its east facing lot behind a small landscaped setback at 995 Hancock Street. An automobile driveway runs along the southern edge of the property to a small detached structure at the rear of the lot. Set almost half a level above ground, the wide clapboard sided house is covered by a single large side gabled roof of asphalt shingle. An intersecting gable projects from the street facade covering an extended porch. A shallow gable projects from the northern facade. Diamond pointed beams with triangular braces support the gables. In the peak of each gable are latticed covered vents. The eaves are projecting with boxed rafters and plain fascia boards. A single, straight cement stair with cement-capped Art Stone railing leads from the walk to the porch, centered on the front of the house. The porch rail, also of Art Stone, continues to ground level. Two stone lions decorate the stairway rail. The porch gable is supported by two large square columns of Art Stone, continuing, without a break at porch level, to the ground. The door is plain wood with a six pane beveled glass light in the upper center. Windows include a large single pane with casement sidelights between the porch and living room, Chicago-type fixed pane windows, beaded glass and vented glass openings. Windows have small, molded lug sills and plain wood trim. Two large rubber trees flank the entrance stair.

The house appears to be intact and is in very good condition.

1003 N. Hancock 19-176860, 027536

A Craftsman bungalow sits behind a landscaped setback on its east facing lot at 1003 N. Hancock. The house is covered by a front gabled, asphalt shingle roof, a smaller, contiguous gable projects over an extended porch on the north half of the facade. Eaves are projecting and rafters are exposed. Covered in wide wood clapboarding, the house is slightly raised on a cement foundation. Gables use plain end boards, plain purlins and triangular braces. Vertical latticework occupies the peak in the gable. A single cement stair with solid, battered rail and cement cap leads to the porch from the front walk. The porch railing is clapboarded with tapered piers and boxed and battered columns supporting the porch gable. Fenestrations include large single fixed pane with transoms in diamond pattern and single fixed panes with casement sidelights. Windows have molded sills and plain wooden lintels. The door, centered on the building, is plain wood. The trim surrounding the doorway is plain wood cut in a "battered" fashion to match the battered porch piers. A driveway on the south side of the property extends to a similarly styled garage at the rear of the property.

The house is intact and in good condition.

1010-1012 N. Hancock 19-176861, 027537

A one-story Craftsman bungalow sits behind a landscaped setback on its west facing lot at 1010-1012 N. Hancock. A front gabled asphalt shingle roof covers the clapboarded structure with a small gable covering an extended porch placed in the center of the building and another projecting from the north facade over a short projection. Additional contiguous gables project from the south facade and flank each side of the porch gable. A battered chimney on the south facade features an arched niche. Raised slightly above the street, a straight cement stairway with solid and capped cement rail leads to the porch. Square cement piers and boxed wooden column, support the porch gable and decorative purlins punctuate the gable endboard. The porch is stucco and brick rail and circles the southwest corner. Gables feature diamond pointed beams, very widely projecting eaves with exposed rafters cut perpendicular to the ground and endboards, similarly cut on larger gables. The doorway is centered on the house and is wood panel with a large single pane glass light in the upper center. The door is trimmed in plain wide wood trim. Casement windows in groups of four, double sash with decorated upper sash are typical of the fenestrations. The front facade features a row of four narrow casement windows with three narrow upper panes in each. Plain lintels and wood trim are used throughout. A driveway on the southern edge of the property runs to a detached two-story structure at the rear of the lot.

The buildings are intact and in good condition.

Obscured by heavy landscaping, this Craftsman Bungalow is largely hidden from view. A front gabled roof covers the structure on an east facing lot. Two small, contiguous gables project from beneath. Intersecting gables can be seen on the southern facade. The house is set on a slightly raised cement foundation and is covered in wide wood clapboarding. Vertical latticework fills the peak in each gable. The roof is asphalt shingle with projecting eaves and exposed rafters. Double sash windows are used throughout with 4 vertical panes over 1 pane and are arranged in groups of 2 and 3. Plain wood trim forms lintels and lug sills. A driveway runs along the southern property edge. Two short, straight stairways run from the driveway to hidden entrances.

The house appears to be in very good condition.

1013 N. Hancock 19-176863, 027539

Set on a slightly raised foundation on an east facing lot, this is a one-story Craftsman bungalow. A landscaped setback separates the house from the street and a driveway runs along the southern property edge to a 2-story apartment/garage detached structure at the rear of the lot. A single front gabled asphalt shingle roof with many oddly intersecting gables covers the clapboarded house. An interior chimney pierces the roof on the south side. The roof has projecting eaves with exposed rafters and plain fascia board. Gables have purlins with triangular supports and vertical latticework venting in the peaks. An extended porch covers the southern three quarters of the front facade and is capped by a south facing intersecting gable. A small straight cement stairway connects the front walk to the porch. Square cement piers support boxed wooden porch columns with battered sides. The porch is stucco with a plain wooden railing. The doorway is plain wood and features a molding that is tapered to resemble the battered side columns on the porch. Large, single fixed pane windows, double sash and glass louvres comprise the fenestration types. Some windows have false wooden shutters and are trimmed in plain wood.

The building seems intact and in very condition.

Located at the northern edge of the Craftsman district, this is a one-story bungalow in the Craftsman style. Set on the north side of its east facing lot with a driveway running along the southern edge to a detached, 2-story apartment/garage structure at the rear of the property. The wide clapboarded house is capped by a large side gabled roof of asphalt shingle with an intersecting gable facing the street and covering an extended porch. An exterior chimney is on the south facade. On the north facade, a projecting gable covers a short extension. Eaves are extended with exposed rafters and triangular braces supporting exposed decorated roof purlins. Vertical lattice venting occupies gable peaks. Square brick piers support boxed wood columns on the porch which has a boxed wood railing. A short cement stair leads to the porch. The doorway, plain wood with a six pane beveled glass light, is centered on the house and has the "battered side" trim characteristic of several district houses. Fenestrations include a large single fixed pane with transom and louvered glass windows.

976 N. Palm Avenue 19-176865, 027541

A 2-story, rectangular Craftsman styled building stands on a west facing lot at 976 N. Palm Avenue. A single, front gabled roof covers the narrow clapboarded structure. A small gable projects from the southern two-thirds of the facade over a small extended porch on the first level, set, as the rest of the building, on a raised cement foundation. A short cement stairway leads from the landscaped setback to the cement Art Stone porch. Plain square boxed posts support the porch gable. Decorative purlins are supported by triangular braces and vertical latticework fills the peak in each gable. Doorways are arranged at the center of the building - single 12-glass panel door with flanking 8-panel sidelights and a single plain wood with 6-panel glass light. Fenestrations include a double hung with narrow, fixed upper sash, double sash with and without sidelights, a beveled glass light, casement with fixed sidelights and 6 over 1 fixed pane windows. Windows feature molded labels and lug sills. A 1-story bay extends from the north facade and is covered by a low hipped roof, and a 2-story shed roofed extension protrudes from the eastern facade.

A small detached 1-story automobile garage is sited to the east of the main building. Also, at the rear of the lot, stands a 2-story detached clapboarded apartment/garage with gable roof and boxed cornice. Two large Art Stone columns flank the common driveway which runs between the two main buildings from the street.

The buildings appear intact and are in fair condition.

A 2-story Craftsman style multiple family structure stands at the northern edge of the district on Palm Avenue. Set behind a landscaped setback on a west facing lot, it is a rectangular narrow clapboarded building covered by a single front gabled roof and set on an exposed cement foundation. A smaller front gable covers an extended porch on the first floor center of the building. The main gable features a king post and side braces supporting the purlins. The roof is asphalt shingle, has widely projecting eaves and exposed, decoratively carved rafters. The main gable has decorated triangular braces and vertical latticework fills the gable peaks. Supporting the porch gable are wooden Tuscan columns supported by Art Stone block piers. The building features endboards on all corners. Four doorways, arranged in a row at the center of the building, lead off the porch. Windows are double hung sash with a large single pane below and fixed narrow transoms, small single casement windows have decorative lintels and lug sills. Doors are wood panel with a large plain glass light in the upper center. Behind the main 2-story structure are 3 vernacularly styled Craftsman cottages covered by single, side gable roofs, wood clapboarding and set above the ground on cement foundations. Small, intersecting gables cover extended porches. Wooden stairs with stick style railing connect to the porches. Small, detached automobile garages are associated with each building. Windows are double sash, and single fixed pane with transoms.

The buildings are intact and in fair to good condition.

DESCRIPTION

7a. Architectural style: Classical and Spanish Colonial Revival

7b. Briefly describe the present *physical description* of the site or structure and describe any major alterations from its original condition:

7900-7936 W. Santa Monica Boulevard

The south side of the 7900 block of Santa Monica contains four buildings which form an intact streetscape illustrative of vernacular commercial architecture in the 1920s and 1930s. Variations on two styles are represented, Classical Revival influenced and Spanish Colonial Revival. Exterior materials vary between brick and stucco and roofs between flat and hip or gable, according to the dictates of style. Two story adjoining facades with no setbacks line the Santa Monica frontage. Most of the buildings contain multiple storefronts, with retail uses at ground level and office or residential functions above.

Although some alterations, mostly to storefronts and signage, have occurred, the block is notable for its relative integrity and good condition.

SIGNIFICANCE

19. Briefly state historical and/or architectural importance (include dates, events, and persons associated with the site.)

The late 1920's saw not only the rapid development of high density housing in West Hollywood, but of fine commercial structures as well. This intact commercial block represents a preference of the period's commercial architecture for the conservative stylings of the Classical and Spanish Colonial Revivals. The Town of Sherman changed its name to West Hollywood in 1925. Only with construction of stores and offices on the eastern end of Santa Monica Boulevard did Sherman expand beyond its old borders and into its new role as West Hollywood.

7900-7906 W. Santa Monica Boulevard

esigned in a modified Classical Revival idiom, this two story plus mezzanine commercial building is defined by monumental terra cotta piers supporting a continuous cornice and small parapet. The north elevation consists of three equal bays and the east elevation of eight bays of two sizes. Varicolor brick sheathes the building. Half-round windows with fixed side lights and operable central casements occupy most of the upper story bays. The smaller bays on the east contain flat-headed casements. Reglazed display windows and entries fill the street level of each bay. Much of the transom/mezzanine level has been obscured by a band of shop signage. A distinguishing feature of this local landmark building is a clock which projects from the corner of the building at the mezzanine level.

11-7
1979

7908-7914 W. Santa Monica Boulevard

Brick and glazed brick decoration, which suggest Classical Revival building elements, distinguish this two story commercial structure. The facade is divided vertically into four bays stores by two story pilasters. These pilasters are topped by square tile decorations. Horizontally, panels of diagonally gridded brick separate the first and second stories. A band of four double-hung windows fill the upper story of each bay. Mostly intact storefronts, with recessed entries, display windows over black tile bases, and transoms beneath signage occupy the lower level. The frieze is articulated by a band of brick in herringbone pattern studded with diamonds of glazed brick. An above average example of its type, this building appears substantially unaltered.

NR 5D
1925

7916-7922 W. Santa Monica Boulevard

This two story Spanish Colonial Revival commercial building is characterized by ornate carved decoration in the Churrigueresque style. The stuccoed facade is irregularly organized, with casements on the upper story and three storefronts and an entry on the lower. Horizontal bands of decoration frame the second floor, while pilasters with a wheat-like motif flank the casements. Balconets detail the openings. Signage in the transom zone has altered the storefronts. The entry, located at the east end of the facade, is adorned with a wrought iron grille in the transom and a decorated lintel.

(Santa Monica Grouping - continued)

53-4
NR SD
1925

7924-7936 W. Santa Monica Boulevard

Located at the southeast corner of Santa Monica and Hayworth, this is a two story commercial building in the Spanish style. It is sided with stucco and capped by a tiled hip and gable roof. A great deal of the ground floor facade of the building seems to have been modified as it has been converted from a multi-tenanted to a single-user space, and many of the shop storefronts have been plastered over. The second story gives a hint to the articulation the ground floor might have had. A rhythm of deep windows interspersed with projected tall bay windows interrupting a rather ornate cornice must have had some counterpart below. Also, the main entry located on the north elevation with its enriched entablature is an indication of the original decorative scheme.

Community Development Commission
County of Los Angeles
2525 Corporate Place, Suite 200
MONTEREY PARK CA 91754

Dear Ms. Samels:

RE: COMMERCIAL REHABILITATION PROGRAM, CITY OF WEST HOLLYWOOD

Thank you for forwarding the above referenced undertaking to my office for review and comment pursuant to Section 106 of the National Historic Preservation Act and its implementing regulations found at 36 CFR Part 800.

The undertaking involves the rehabilitation of eighteen storefronts in the City of West Hollywood. The individual buildings have not yet been selected. The area of potential effects for this program includes property facing Santa Monica Boulevard between Harper Avenue and La Brea Avenue; property facing La Brea Avenue two blocks north and one block south of Santa Monica Boulevard; and Harper Avenue two blocks north and one block south of Santa Monica Boulevard. I concur with your determination that within this area of potential effects, the following commercial buildings are eligible for inclusion in the National Register of Historic Places:

7900-7906, 7908-7914, 7916-7922, and 7924-7936 Santa Monica Boulevard, which comprise a small commercial district, previously determined eligible for inclusion in the National Register of Historic Places;

7643 Santa Monica Boulevard, Los Angeles County Fire Station No. 8, previously determined eligible for inclusion in the National Register of Historic Places; and

7200 Santa Monica Boulevard/1041 North Formosa Avenue, which is eligible for inclusion in the National Register of Historic Places under criterion A at the local level of significance.

If you have further comments or questions, please do not hesitate to contact Staff Historian Lucinda Woodward at (916) 653-9116.

Sincerely,

Steade Craigo, AIA, Acting
State Historic Preservation Officer

DESCRIPTION

7a. Architectural style: French Revival

7b. Briefly describe the present *physical description* of the site or structure and describe any major alterations from its original condition:

8782-8788 Sunset Boulevard - "Old World Restaurant"

Occupying a corner lot at Sunset and Holloway is a two story commercial structure in a French Revival style. The square wood and stucco building is capped by a steep hipped slate roof with wide overhanging eaves. A rectangular stucco chimney pierces the roof and two large dormers break the cornice line. The formers are filled with a bay of diamond leaded windows. An awning covers the first floor which contains a row of multi-pane casement windows and doorway opening to a narrow raised terrace. At the western end, a large round glass storefront bay projects, covered by a conical roof and divided by large classical columns.

The building is intact and in good condition.

SIGNIFICANCE

19. Briefly state historical and/or architectural importance (include dates, events, and persons associated with the site.)

Also probably built by the California Investment Company, this structure shared many stylistic features with its neighbor at 8776-80. Exaggerated Period Revival styles were used to capture the attention of passing motorists. Louis L. Dorr designed the French Revival structure with overblown dormers to house a flower shop. The Classical Revival circular storefront housed leasing and construction offices for the California Investment Company. The exuberance of the cluster demonstrates the vitality of early strip development.

7b. Briefly describe the present *physical description* of the site or structure and describe any major alterations from its original condition:

8776-80 Sunset Boulevard

At 8776-80 stands a two story commercial structure in the French Revival style. The stucco and wood building is capped by a steep hipped slate roof. Three through-the-cornice dormers asymmetrically divide the roof. The dormers contain paired multi-pane casement windows. A rectangular stucco chimney pierces the roof. From the first floor project two window bays resting on a base of brick. Steep sway hip hoods cover the bays and a doorway. Short brick steps lead from the street to the doors.

The building is intact and in good condition.

SIGNIFICANCE

19. Briefly state historical and/or architectural importance (include dates, events, and persons associated with the site.)

The California Investment Company developed several commercial structures on the newly-paved and widened Sunset Strip. This structure, built for Jordan Warren of Hollywood, was to house ground floor retail and upper floor office space, a popular format on the Sunset Strip to this day. Zoning variances secured in 1934 opened the way for buildings totally devoted to commercial usage to be constructed. Many chose the French and other Period Revival styles, as did this one. Storefronts like this were also easily adapted to the popular Hollywood Regency style which in the early 1940's added sway hipped roofed bays and hoods.

DESCRIPTION
7a. Architectural style: Period Revival, Art Deco, Streamline Moderne
7b. Briefly describe the present *physical description* of the site or structure and describe any major alterations from its original condition:

SUNSET STRIP DISTRICT

Extending from the eastern border of Beverly Hills to the western edge of the Sunset Plaza District (40) the Sunset Strip District is a grouping of commercial structures built in a variety of styles during the 1930's. The District reflects an early automobile orientation in the provision of extensive rear parking and in the architecture which quickly became more sophisticated in its ability to attract the attention of motorists. Period Revival Moderne and Moderne styles together form a district of startling variety but surprising cohesiveness and continuity. Nearly all structures are two stories in height or have a third story nearly hidden behind setbacks, or disguised with a Mansard roof. The scale, therefore, preserves the views and vistas to the basin that made the early strip so

SIGNIFICANCE

19. Briefly state historical and/or architectural importance (include dates, events, and persons associated with the site.)

One of the earliest Los Angeles region's commercial strips dependent on the automobile, the development of the Sunset Strip peaked in the late 1930's with commercial development firmly reaching the eastern border of Beverly Hills in 1938. The district first developed briefly as a sparse residential encroachment on poinsettia farms. Quickly, following a zoning variance sought by landowners, The Strip began in converted residences following a 60% commercial maximum. In 1934, a variance led to the eventual rapid mixed commercial and office development which had rich architectural expression. The Period Revival begun with the 1924 English Village, utilized French, Colonial, Classical, Tudor, Monterey, Spanish Mission Revival, culminating in the Classical and Georgian Revival Elegance of the Sunset Plaza. Art Deco, the "cubist" commercial of R.M. Schindler and finally the elegant Streamline Moderne of Paul Williams (inspiration to later Regency architects such as John Woolf) all found their place on the popular real estate. Breathtaking nighttime views and proximity to both Hollywood and Beverly Hills contributed to the nighttime dining,

popular. The "Strip" is arranged in a series of terraces with the highest at the western end. The buildings lining the four lane, two-way street of Sunset Boulevard relate sensitively to their hillside sites. The boulevard is almost entirely straight except for the eastern end which proceeds from the Sunset Plaza district in a dip to the south with a grouping of French Revival buildings. Two blocks to the south, the Schindler commercial buildings of the Lingerbrink Grouping (50) stand just off the wide intersection at Holloway and Palm. Turning again to the west, the District includes the next 8 blocks of Period Revival, Art Deco and finally, the Streamline Moderne grouping at the western end. The District relates to the motorist with a series of highly styled buildings of district imagery and to the pedestrian with streetscapes of surprising detail and attention to human scale.

(continued from 19.)

nightclub and entertainment businesses which became world famous in the 1930's and 40's. The popularity of the area with theatrical agents, production companies and related entertainment industry and office uses was instrumental in early office development and continues to this day.

Dependence upon the automobile necessitated the early provision of automobile parking. Usually placed at the rear of the property or along one side, and often with a cut and fill of the hillside sites, the automobile parking helped preserve the views of the basin below. It is no accident that the television series "77 Sunset Strip" began each program with a parking attendant in a porte cochere. The tradition continues.

The dependence upon the automobile introduced another level of perception to the advertising market place. Billboards, large pole signs and exaggerated architecture began the evolution of "building-as-sign" for motor speeds. Streamline Moderne's sleek surfaces and sweeping curves were the perfect complement to Detroit's aerodynamics. Exaggerated scale culminated in the Googie Coffee Shop style of Ben Frank's.

Where the Strip paralleled the Fountain Corridor apartment district, there developed a social environment devoted to glamourizing Hollywood - and it worked. Many entertainment and artistic figures of the 1930's and 40's lived, played and even died in this "community".

SIGNIFICANCE

19. Briefly state historical and/or architectural importance (include dates, events, and persons associated with the site.)

This building was constructed about 1928 and the owner in 1931 was August Christensen. No information was found on the original use of the building.

The building has lost its architectural integrity with the facade change and therefore is not eligible for listing in the National Register.

CDBG Division
1436 Goodrich
Commerce, CA 90022

Dear Ms. Keosababisan:

RE: County of Los Angeles, CDBG-Funded Rehabilitation Projects

On January 19, 1988 we received determinations of eligibility for five properties located throughout Los Angeles County from Judy Triem. We concur with her determination that none of the properties, listed below, meet the National Register eligibility criteria.

HUD880119C - 1259 E. 88th Street, Los Angeles
HUD880119D - 4116-18 Live Oak Street, Cudahy
HUD880119E - 7723 Otis Avenue, Cudahy
HUD880119F - 15559 California Avenue, Paramount
HUD880119G - 7155 Santa Monica Blvd., West Hollywood

Should you have questions or comments concerning the above referenced projects, please do not hesitate to contact staff historian Lucinda Woodward at (916) 322-9622.

Sincerely,

Kathryn Gualtieri
State Historic Preservation Officer

This building does not appear eligible for listing on the CRHR. The building has lost a significant degree of historic integrity due to ad-hoc modifications and additions undertaken throughout the years. The building located at 7155 Santa Monica Boulevard was constructed ca. 1928. This building functioned as a bank beginning at an unknown date, up until 1976, at which time it was converted for use as a sound studio. The property has undergone several alterations over the years including: the addition of 650 square feet (1959), new entrance doors and the installation of a suspended ceiling (1965), and the addition of offices on the east side of the building (1991) (Los Angeles County Building Permits). (See Continuation Sheet)

P3a (Description) continued:

The northern façade displays rectangular sliding windows on the second elevation. One-over-one sash windows and glass block accents are featured on the bottom elevation. An inset entry, supported by round metal posts, is also located on this façade. Brick seating and a double-wide entry are located within the covered entryway. This building sits upon a concrete slab foundation, and totals approximately 3,500 square feet.

B10 (Significance) continued:

Research did not reveal this property to have significant associations with important themes in local or state history (CRHR Criterion 1). Likewise, the building does not appear to be significantly associated with persons considered important in local history (CRHR Criterion 2). The building does not embody distinguishing architectural characteristics, nor does it appear to be the work of a master (CRHR Criterion 3). This building, in its current condition and configuration, is the result of numerous alterations undertaken by various individuals over time, and does not retain integrity to its original construction date. This type of building is well represented throughout the Los Angeles area, and does not appear likely to yield important primary information on historic construction techniques or technologies (CRHR Criterion 4). This building does not appear to meet the eligibility criteria for CRHR listing.

Narrative Description

The North Harper Avenue Historic District is comprised of eight contributing apartment buildings, one contributing automotive garage with attached dwelling unit, and two non-contributing apartment buildings. The contributing buildings were constructed during the period 1923 to 1931 and represent variations in 20th century period revival style architecture--specifically Mediterranean Revival and Chateauesque. They range in height from one to four stories and are composed as large, simplified geometric forms which virtually fill their entire lots. The district is located in an urban residential neighborhood. It is bounded on the south by Fountain Avenue, and extends northward on North Harper Avenue to a point approximately midway between Fountain Avenue and Sunset Boulevard. The apartment buildings with exposed elevations on the heavily trafficked Fountain Avenue are built on or close to the property line, while those located on the quieter, well-treed North Harper Avenue are set back from the street by approximately ten feet. The automotive garage is set back from Fountain Avenue by approximately eighty feet. Landscape features play an important role in the cohesive appearance of the North Harper Avenue Historic District. This is evident in the use of landscape elements that are visible from the street, e.g., street trees, foundation plantings. Historic landscape is also an extremely important component in the design of the enclosed and partially enclosed outdoor spaces of the individual buildings. The district's two non-contributing apartment buildings are located roughly in the center of the district on adjacent lots, on the east side of North Harper Avenue. One (1320-24 N. Harper) was originally a grouping of three two-story Spanish Colonial Revival style flats buildings, which served as a contributor to the locally designated district (1991). It was replaced in 1992 with a Spanish Colonial Revival Style apartment building. This new building is similar in massing to the contributors and respects the prevailing front-yard set back. The second non-contributor (1312 N. Harper) was built in 1956, and replaced a single-family dwelling. It is heavily landscaped and barely visible from the street. The non-contributors do not detract from the historical character of the district. The area surrounding the district is densely developed, primarily with post-World War II era apartment buildings. During the period of significance, however, the area was characterized by single-family dwellings. Although there were a few 1920s era apartment buildings scattered throughout the neighborhood (some of which are extant) the concentration of apartments along North Harper and Fountain Avenues was, and is, the only grouping of its kind in West Hollywood. Despite new development, the district has remained intact, and the individual buildings retain a high level of integrity of design.

8225-8237 Fountain Avenue (Patio del Moro, Building A) HistLES NPS-96000694-0001
19-176743 Prop. 02-7419 NR:LB

The Patio del Moro, built in 1925, is a two-story courtyard complex of seven maisonette apartments. Located on the north side of Fountain Avenue, the U-plan building occupies most of the lot. The U-configuration opens toward the east, providing space for a deep and narrow courtyard. A private rear patio is located at the northern end of the lot. The wood stud frame building is composed of simple geometric volumes. A parking garage is incorporated at the ground level of the

county and state

street facade. Architecturally, the building is of the Spanish Colonial Revival style with extensive Moorish detailing. The building's Islamic character is manifested in a number of features. These include the horseshoe-arched entrance and tunnel leading to the courtyard, a copper-domed Tunisian tower, tiled fountains in the public and private patios, and horseshoe and pointed-arch doorways and windows within each unit. Despite the distinctive character of these elements, the overriding architectural character of the building is the Spanish Colonial Revival of the twenties. Simple, geometric volumes are sheathed with stucco that has been stained with colored washes. Gabled and shed roofs are covered with terra cotta tile. Ornamental ironwork and glazed tile are extensively used throughout the building.

The courtyard patio is comprised of a two-story Spanish baroque open fireplace and a blind arch framing a built-in bench on the west wall. On the east side of the patio is a wall-mounted tile and bas-relief fountain which flows into a tiled reflecting pool.

Very little of the exterior of the Patio del Moro has been altered since it was constructed. In the late 1960s, two of the three clerestory windows at the mezzanine-level of the street facade were replaced with aluminum frame windows; a third window was enclosed. A pinnacle, which was originally placed on the entrance parapet, has fallen from the building and has not been replaced. The building is in good condition and retains integrity of design.

The Patio Del Moro is individually listed on the National Register (1986).

8250-62 Fountain Avenue (Les Maisonettes, Building B) HISTPRES NPS-96000694-0002 Prop 103103 NR:ID

Built in 1927, this three-story-and basement, sixteen-unit apartment is located at the southwest corner of Fountain and North Harper Avenues. The rectangular-plan building occupies most of the westward sloping lot. Its wood stud frame structure rests on a concrete perimeter foundation. The walls are sheathed in stucco; its sharply pitched flat-topped hipped roof is covered with slate tiles.

Architecturally, the building is Chateauesque in style. This imagery is conveyed through the use of several Medieval-derived elements: a small corner tower, or tourelle, located at the northeast corner of the building; gabled dormers that pierce the roofline; and masonry chimneys. Each of four entrances is accessible from brick steps. A segmental arched hood shelters a single doorway surrounded by a compound basket handle arch. Vertical rows of paired casement windows with transom lights flank the entries. Elaborate, low relief panels are located in the gable ends of the dormer windows and the spandrel panels. Additionally, quoins and rope molding surround window and door frames. Gothic arched leaded lights punctuate the tourelle and some wall panels. Along the North Harper Avenue elevation of the building, a section of the first story projects slightly to the east, providing space for a second story balcony.

county and state

Unlike the other contributors to the district, no parking is provided within the building. This is due to the construction of a detached automotive garage located at 8264 Fountain Avenue.

The building maintains a good level of integrity of design. Exterior alterations include the addition of four metal canopies which project over the entries (1944), the enclosure of rear exterior double staircases (1953), the removal of pinnacles which were originally located over the dormer windows and tourelle roof (1962), and the addition of rear third-story balconies which are supported by tall steel poles (1965). The building is in very good condition.

Prop 103105 HIST. RES. NPS-96000694-0003

8264 Fountain Avenue (Automotive Garage for Les Maisonettes, Building I) NR: ID

This one-story concrete block garage was constructed in 1927 as parking for Les Maisonettes. It is located on a separate lot (one lot to the south and one to the west). Access to the garage is on axis with a driveway located adjacent to the western property line of Les Maisonettes. It is a rectangular plan building with a low-pitched, flat-topped hip roof. A one-story dwelling unit is constructed on top of the northwest corner of the garage roof. It is a gable-roofed, stucco-over wood-stud frame building. Stylistically it is characterized as Spanish Colonial Revival with some Craftsman details. Access to the dwelling is via a staircase set behind the north wall of the garage. At the northeast corner of the roof of the garage, a wood-fence encloses what appears to be a roof garden.

The garage building maintains a good level of integrity of design. Entrance to the garage is through a recent roll-up metal door. Portions of the garage's western and southern walls have been incorporated into individual landscape schemes by neighboring property owners. A garage is attached to the western half of the north facade of the concrete block garage. This garage is on a separate legal lot, under separate ownership (8266 Fountain Avenue). It has no historical association with the district, and is not located within the district boundaries.

HIST. RES NPS-96000614-0004 Prop. 027428 NR: ID

1300-08 N. Harper Avenue (Mexican Village, Building C) 19-176752

Constructed in 1923, the Mexican Village was the first of the North Harper Avenue apartments. This one- and two-story nine-unit courtyard apartment is located at the northeast corner of North Harper and Fountain Avenues. The virtually square plan of the building is organized around a central courtyard. The major entrance to the concrete-block building is deeply set-back from North Harper Avenue. A secondary entrance and incorporated parking bays are accessible from Fountain Avenue. The building is predominately one story; a second story with a cantilevered balcony forms the eastern end of the building. Access to the second story is from the patio.

The Spanish Colonial Revival imagery of the building is conveyed through the use of stucco-sheathed walls, sheltered by tiled shed roofs. The major entrance is defined by an arched opening that is secured by an iron gate. Two square chimneys,

county and state

placed symmetrically to the right and left of the arch entranceway, punctuate the roof. Red quarry tile paving is used throughout the entryway and courtyard area. A small covered patio projects from the entrance facade.

The first story apartments open onto a central courtyard which is circled with a heavy wood post and beam corridor (covered walkway). The door to each unit is distinct, each characterized by a different carved or inset pattern. Casement windows illuminate the interiors; many of these are covered by decorative wooden grilles. The courtyard is densely landscaped; the landscape effectively screens the units from each other. In the center of the patio is a large stone fountain. An outdoor fireplace with a decorative relief panel is located on the north wall of the courtyard.

The concrete and brick veneer retaining wall running along the western property line, the tile lining the entrance walkway, and the flower bed planter at the western perimeter of the building are of recent construction. The building is in very good condition and retains integrity of design.

HistiReg. NPS-96000694-0005
Prop 027428 NR: ID

1301-09 N. Harper Avenue (Romanesque Villa, Building D) 19-176793

This three-story-above-basement, twelve-unit apartment building, constructed in 1928, stands at the northwest corner of Fountain and North Harper Avenues and is Spanish Colonial Revival in style. Rectangular in shape, it is terminated by a low-pitched roof covered with terra cotta tile. The building's massing is comprised of a central, recessed three-story-and-attic section that is flanked by three-story wings to both the north and south. The northeastern corner is marked by a large square tower with an octagonal turret. The turret is topped by a terra cotta tile roof and Spanish galleon weather vane.

The building rests on a partial subterranean parking garage, sunken into the gradually sloping site. A flat arch, framed by brackets on the south side elevation, forms the entrance to the garage. The ground floor of the south elevation and the south end of the east elevation are distinguished by deeply incised concrete work. Openings that provide light for the garage are covered by decorative grillework. At the first floor, circular and flat-headed casement windows illuminate the building's interiors. Corner quoins and pierced stucco grilles articulate the facades. The cornice is visually strengthened by a deep corbelling. The main entrances are accessible from a small raised platform located within the recessed bay at the center of the east elevation. The platform is defined by a stone balustrade and a pair of piers flanking a wide cement stairway. The arched entries and pairs of arched casement windows are set in aediculae of Churrigueresque ornament on the first and second stories. Wrought iron and semi-circular stucco balconies punctuate the second and third floors. An arcaded loggia articulates the attic level of the central portion of the building.

No exterior alterations are apparent. The building is in good condition and retains integrity of design.

1312 N. Harper Avenue (Building J) Prop 103107 Hist. Res. NPS-96000694-0006 NR: 6X3

This two-story apartment building, roughly rectangular in plan, was constructed in 1956, replacing a single-family dwelling. It is heavily surrounded by landscaping and is barely visible from the street. It is a non-contributor to the North Harper Avenue Historic District.

1320-24 N. Harper Avenue (Building K) Prop. 027522 Hist. Res. NPS-96000694-0007 19-176846 NR: 6X3

This Spanish Colonial Revival style courtyard apartment building was constructed in 1992, replacing a grouping of three two-story Spanish Colonial Revival style flats buildings. This new building is similar in massing to the contributors and respects the prevailing front-yard set back. It is a non-contributor to the North Harper Avenue Historic District.

1330 N. Harper Avenue (El Pasadero, Building E) Prop. 027525 Hist. Res. NPS-96000694-0008 19-176849 NR: 1D

Built in 1931, this fourteen-unit, two-story-and-basement Spanish Colonial Revival courtyard apartment building is located on the east side of North Harper Avenue. The U-plan building is composed around a deep and narrow central space which is open toward the street. The wood stud frame building rests on a reinforced concrete, partially subterranean garage. The street facade is dominated by a symmetrically placed pair of towers. The southern tower is square in plan; the northern tower is octagonal in plan. Street access to the building is via a double staircase. A pointed-arch ceremonial gateway, located between the towers, formally defines the entrance to the courtyard. Beyond this point, a staircase leads to a covered bridge that provides access to the second story units located at the front or western end of the building; another staircase, at the rear of the courtyard provides access to the remaining upper units.

The Spanish Colonial Revival imagery of the building is conveyed through the use of white stuccoed walls, covered with low-pitched pyramidal hipped and gabled roofs covered with terra cotta tile. Rounded and pointed arches articulate various openings throughout the building, including the garage entrance. Cornice detailing includes arched corbelling, decorated friezes, and wrought iron brackets. An elaborate wrought iron balcony wraps around the northwestern corner of the octagonal tower. A simple wood balcony, located at the southwest corner of the square tower, articulates the tower's second story open loggia.

From the courtyard, the entrances to the individual units are defined by shallow shed roof overhangs. The doors have distinctive carved panels, often with a single window in the upper section. Interior illumination is provided by French doors with decorative wrought iron balconies, multi-pane casement windows, fixed pane arched clerestory windows, large fixed pane double arched windows, and a large

Palladian window on the north side of the courtyard. A historic painted metal sign with "El Pasadero" is located to the north of the driveway.

A large Palladian window on the north wall of the courtyard does not appear to be original. The building is in very good condition and retains integrity of design.

1334-36 N. Harper Avenue (Casa Granada, Building F) HIST.RES. NPS-96000694-0009 Prop. 027430 NR:1D
19-176754

This three-story-and-basement and four-story, apartment building is located on the east side of North Harper Avenue. Built in 1929, it is a brick masonry structure that rests on a partially subterranean reinforced concrete garage. The apartment units are organized in a two-part U-configuration: the three-story front (western) section of the building is L-shaped; a four-story L-shaped rear wing of the building completes the U-plan. The composition is open to the south, providing space for a balustraded terrace.

Architecturally, the building utilizes the Spanish Colonial Revival style. A baroque staircase leads from the street to the terrace. The walls are sheathed in stucco and the hipped roof is covered with terra cotta tile. A quality of verticality is conveyed through the emphasis of decorative elements along the upper stories and above the roofline of the building. These features include a square bay at the southwest corner of the street elevation, surmounted by a domed octagonal cupola; and a square tower with an octagonal roof, topped by a Spanish galleon weather vane, projecting above the southwest corner of the rear wing of the building. A circular tower provides the visual "joint" linking the front and rear sections of the building. In addition, vertical rows of casement windows culminate in decorative aediculae and projecting semi-circular balconies. Other features include a rectangular stucco chimney that pierces the roof on the street side, Moorish horseshoe-arched entrances to the units, and quoin patterns at the corners and window surrounds. A flat arch and bracketed corner entranceway leads to the automobile garage in the rusticated first section.

The terrace comprises the principal outdoor space for the building. A shallow, rectangular concrete pond is located near the northwest corner of the terrace. Potted plants are placed around the pond and along the edges of the terrace. No exterior alterations are apparent. With the exception of some visible earthquake damage, the building appears to be in good condition and retains integrity of design.

1338-52 N. Harper Avenue (Villa Sevilla, Building G) HIST.RES. NPS-96000694-0010 Prop 027431 NR:1D
19-176755

Constructed in 1931, this two-story-and-basement and three-story courtyard apartment stands on the east side of North Harper Avenue. It is a wood-stud frame building that rests on a reinforced concrete, partially subterranean garage. The white stuccoed building is capped by a low-pitched hipped and shed roof covered with terra cotta tile. The Monterey Revival imagery of the building is conveyed through

county and state

the use of a second story cantilevered balcony that projects across the principal facade. The balcony is covered by a shed roof with wood posts.

An asymmetrically composed flight of stairs leads from the street to an arched opening. A barrel vaulted passageway, nestled beneath the cantilevered balcony, provides access to the courtyard. Decorative tile paving ornaments this passageway. On three sides of the courtyard, the building rises two stories; at the rear of the courtyard is a three story wing. The third floor is marked by a continuous recessed balcony with shed roof supported by wrought iron railings. Entrances off the courtyard are articulated by projecting balconies, and gable and shed roofed extensions.

The courtyard is paved with tile. At the rear of the courtyard is an octagonal catch basin with a fountain with glazed tile along its rim. Palm trees, and lush planting frame the open space of the courtyard, and the street elevation of the apartment building. In 1967 there was extensive damage to four apartment units which were located on the south side of the courtyard. The only apparent exterior alteration resulting from the repairs to these units is a simplification to the original design of their balcony supports. Another exterior alteration to the building was the replacement of the fountain in 1994-95 with a structure of more recent date. The building is in good condition and retains integrity of design.

1354 N. Harper Avenue (Casa Real, Building H) HISTRES. NRS-96000694-0011 Prop. 103108 NR: 10

The Casa Real was constructed in 1931, and stands on the east side of North Harper Avenue. It is the first building in the district when approached from the north. The four-story-and-basement brick building, with a reinforced concrete partially subterranean garage, is rectangular in plan, and occupies most of the lot. Deep light wells are inserted on the south and north elevations.

The building is Mediterranean Revival in style. A flat roof, with gabled parapet covered with red-clay tiles, terminates the building. A double row of denticulated molding forms the cornice. Flat pilasters with Zigzag Moderne stepped brackets located at the fourth story, define the edges of the building. The pilasters extend above the roof line to form the gabled ends of the side parapets. A rounded strip of molding and a band of blue and speckled decorative tiles distinguish the top story from the lower floors. Four rows of slightly-recessed, paired casement windows, and a row of double casement windows bordered by single windows of the same size compose the facade. Half-circle-transom windows cap the lower story fenestration and subtle quoining surrounds them. Decorative iron balustrades partially cover these windows.

A floor-length double casement window with a small iron balconette projects over the building entrance on the top story. The deeply-recessed arched entrance hides a large wooden door surrounded with an arch of beveled glass panels. Two decorative iron lamp posts are located at the base of the entrance stairway. Two large blue urns sit on the stairway rail further marking the entrance. A subtle-

Statement of Significance

The North Harper Avenue Historic District is eligible for listing on the National Register of Historic Places under Criterion C, as a unique concentration of buildings that are significant to the evolution of apartment building design in West Hollywood during the 1920s and early 1930s. The nine contributing buildings, constructed between the years 1923 and 1931, are representative of 20th century period revival style architecture--eight are variants of the Mediterranean Revival, and one is Chateauesque. Collectively, the buildings convey a unique sense of time and place, and express the range of apartment building design that came to be characteristic of West Hollywood.

The significance of the district has been officially recognized by the City of West Hollywood with its designation, in 1991, as the Harper Avenue District. The district's boundaries are identical to the proposed National Register district, except that it includes an apartment building at 1320 North Harper (which has subsequently been replaced), and excludes the garage at 8264 Fountain Avenue. In addition to this local designation, the Patio del Moro (8225-37 Fountain Avenue, Arthur and Nina Zwebell) is listed individually on the National Register of Historic Places (1986).

Few publications have appeared on the history and development of apartment buildings in West Hollywood and more generally Los Angeles. Courtyard Housing in Los Angeles, by Stefanos Polyzoides, et. al., the definitive study of courtyard apartment buildings, is one of the few publications on the subject. Polyzoides discusses four of the apartment buildings located in the district. Among these, Mexican Village (now known as the Villa Primavera, 1300-1308 North Harper Avenue, Arthur and Nina Zwebell) and Patio del Moro are seminal works in the development of the courtyard apartment building.(1) The authors consider Villa Sevilla (1338-1352 North Harper Avenue, Edith M. Northman) and El Pasadero (1330 North Harper Avenue, Arthur W. Hawes) as among the "most important courtyards in Los Angeles."(2) In the most recent edition of their guide to Los Angeles architecture, Los Angeles, An Architectural Guide (1994), David Gebhard and Robert Winter group the Patio del Moro, the Villa Sevilla and the Romanesque Villa (1301-1309 North Harper Avenue, Leland A. Bryant) with several other buildings located in the area under the heading of "Garden Apartments." The authors note that these buildings "are generally at their best in the Spanish Colonial Revival mode and are generally charming if not great architecture."(3) Another source, Charles Lockwood's The Guide to Hollywood and Beverly Hills, includes the Mexican Village and Patio del Moro in the "Fountain Avenue Tour."(4)

In order to establish a more complete context within which to evaluate the architecture of the district, an intensive review of primary and secondary materials was conducted. Historic photographs, maps and written documentation were reviewed in the archives devoted to the architecture and history of the Los Angeles area. Articles on apartment buildings and their architects/builders were examined in local newspapers, regional and national professional architectural periodicals, and popular journals.

The results of this research revealed that several factors contributed to the formation of the 1920s-early 1930s apartment buildings found in West Hollywood: a sizable community of individuals chose to reside in apartments rather than in single family dwellings; the available building technology allowed for variation in the height and form of apartment buildings; and that there was a consensus among developers and residents that the imagery of the leading period revival modes, especially those derived from the Mediterranean world, created a quality of domesticity that was appropriate to the apartment building.

In the period of the 1920s-early 1930s, the apartment building enjoyed an unprecedented local and national popularity. Across the country, the number of families housed in apartments almost doubled from 1921 to 1927.(5) In the Los Angeles area there was a demand for high quality apartments. This was particularly true for West Hollywood which was becoming an increasingly attractive area, due in large part to its location between the flourishing communities of Hollywood and Beverly Hills, and the rapid growth of the motion picture industry. Indeed, many of the apartment buildings constructed during this era catered to the needs of movie people.

West Hollywood, then an unincorporated section of Los Angeles County, was like other predominantly residential sections of the Los Angeles region, an area that was dominated by single family dwellings. This meant that new apartment building construction frequently replaced existing dwellings.(6) It also suggested that if the area was to perpetuate the qualities that made it attractive to new settlers and tourists (always an important factor in the local economy) it was important that the apartment building should retain what one apartment manager referred to as a "real homelike atmosphere...Give the people that feeling of home comfort in an apartment and they come to regard it as their own home."(7)

During the 1920s, West Hollywood developed a reputation for its luxury housing, as apartment buildings became a dominant direction in residential construction. Apartment construction was more prevalent in the foothill area of West Hollywood, with individual buildings scattered around the blocks adjacent to the North Harper Avenue Historic District. However, the district remains unique as a grouping of apartment buildings which, in a highly concentrated geographic area, displays the range in apartment building design characterizing the era.

Until the beginning of the twenties, most Los Angeles area apartments were constructed downtown and in nearby historic neighborhoods. The dominant apartment building type was a two- to three-story building, often with commercial units on the ground floor. These buildings were of wood frame or brick masonry construction. Their box-like forms, often with a central set-back, were lightly cloaked in the imagery of the Mediterranean Revival. This vocabulary was expressed through the use of stucco-clad walls, plaster ornament over doors and windows, and a roofline that was created by a shaped parapet or projecting elements at the cornice.(8) Typically, the architectural ornament was confined to the entrance facade, with the remaining exterior walls treated as flat-roofed surfaces relieved by an unadorned fenestration pattern. This apartment building type is represented in the district by Casa Real

(1354 North Harper Avenue, Clinton B. Kolyer), albeit, in a somewhat taller and more massive form than was characteristic of its predecessors.

An alternative type of low-scale multiple-unit dwelling was the bungalow court. It was a logical outgrowth of the Craftsman bungalow which had been constructed in southern California since the first decade of the twentieth century.(9) Typically, the bungalow court consisted of small residential units framing a central courtyard or landscaped area. The earliest bungalows utilized the architectural vocabulary of the Arts and Crafts Movement. However, the contemporaneous interest in the Mission Revival soon stimulated the design of bungalow courts that was associated with the Mediterranean tradition.(10)

Occasionally, taller apartment buildings were constructed in the Los Angeles area in the years prior to the twenties. These buildings, ranging in height from six to eight stories, were characterized in the architectural press as "modern apartment houses [built] on lines similar to the big structures of New York City."(11) These buildings were realized through the use of a fireproof reinforced concrete structure, which housed an elevator and other modern mechanical devices. Contemporary publications portrayed the luxurious existence provided by modern apartment buildings.(12) The buildings usually incorporated well-appointed communal spaces, a roof garden, and provision for domestic services. Infrequently, an automotive garage was attached to the building. By the '20s, the incorporation of the garage within the building envelope was a standard, though not universally applied, feature of the apartment building.(13) This is evidenced in the district's contributing buildings, which all have incorporated parking with the exception of the Les Maisonettes (8250-8262 Fountain Avenue). A detached garage serves this apartment building.(14)

By the early twenties, designers of Los Angeles area apartment buildings began to conceptualize the buildings as three-dimensional objects. The mass of the building was broken-up into simple geometric forms, which were set-back from the street, or arranged around a core open area, usually a patio or terrace. The sculptural quality of the buildings was further enhanced by the use of corner towers, roof configurations, projecting balconies, baroque staircases, and highly decorative surface ornament. These architectural elements were standard features of the two most popular vocabularies for apartment building design in West Hollywood--the Spanish Colonial Revival and Chateauesque.

Within the district, notable examples of this apartment building type are represented by the works of the prominent Los Angeles architect Leland A. Bryant. These works include the Spanish Colonial Revival style Romanesque Villa and Casa Granada (1334-36 North Harper Avenue), and the Chateauesque style Les Maisonettes. Bryant is a figure credited with some of the finest apartment buildings constructed in West Hollywood and the Los Angeles area during the 1920s and early 30s. A number of his best known works in West Hollywood (located outside the district) are Chateauesque apartment buildings; these include the Beau Sejour (c. 1920s), virtually a pendant piece to Les Maisonettes; La Fontaine (1928); and the Granville, formerly the Voltaire 1929). He was also the architect of the Sunset Tower, a prominent Zigzag Moderne apartment building (1929-1931). Other examples of large,

highly sculptural apartment buildings in West Hollywood are Arnold Weitzman's Chateauesque style Chateau Marmont (1928), and S. Charles Lee's Spanish Colonial Revival style El Mirador (c. 1920s).

So important was the Mediterranean Revival (including the Spanish Colonial Revival) to the regional imagery of West Hollywood and the Los Angeles area, that its architectural vocabulary was applied to several other apartment building types. Among these was the treatment of the building as a large single family dwelling. Two buildings within the district are products of this view--Mexican Village and Villa Sevilla. Buildings of this type, characterized by their horizontal orientation and low-scale, were constructed throughout West Hollywood, Santa Monica, and other westside Los Angeles neighborhoods.(15) The quality of domesticity was clearly conveyed through the house-like quality of these buildings. The application of architectural concepts associated with the single family dwelling was not surprising since the evolution of the Spanish Colonial Revival, and later the Monterey Revival was based primarily on the development of the house. The shear volume of articles and books appearing during the 1910s and 1920s on the Spanish house in America document the growing sophistication of interpretation of the mode.(16) This literature would have been an available source material for the designers of buildings within the district.

The dominant apartment building type in the district is the courtyard apartment. The courtyard apartment building was derived from several sources. It was a logical outgrowth of the local bungalow court, integrating the discrete units into a single building. Polyzoides traces the European and Middle Eastern sources of the courtyard apartment house. Among the models he cites, which are applicable to the district's buildings, are the "urban patio house" and the "urban callejon."(17) The former has been a basic element of urban structure since western European antiquity. On the Iberian peninsula it can be traced through six centuries of Roman domination. The callejon is a dead-end urban street that is typical of Arab cities in southern Spain. Though it is composed of different buildings, the scale of the street, framed by the openings of the attached buildings creates a dynamic, unified space. A third ingredient in the development of 1920s and early '30s courtyard apartment houses was the contemporary interest in vernacular adobes of California, many of which were arranged around a central courtyard or patio. These buildings were the subject of numerous publications, including Donald R. Hannaford and Revel Edwards' Spanish Colonial or Adobe Architecture of California, 1800-1850 (1931).(18)

Two of the courtyard apartment buildings within the district, Mexican Village and the Patio del Moro, are works by Arthur and Nina Zwebell. Polyzoides, et.al., credit the Zwebells with originating

> the highly refined deluxe court in Los Angeles...Their unique combination of business and design skills generated a set of exemplary buildings that served as a standard for most examples of courtyard housing that followed. From our perspective today, their work is valid as more than just a model for future housing experiments; it is also, in absolute terms, architecture of the highest quality - some of the finest ever created in Los Angeles.(19)

Arthur Zwebell was the principal designer of the buildings, and Nina Zwebell functioned as interior designer, the latter being an important role in a period when furnished apartments were the norm. Polyzoides, et.al. believe that the Mexican Village was the "first known exceptional courtyard housing experiment."(20) According to a 1934 interview with Nina Zwebell, the building was conceived as "a faithful reproduction, down to the last most minute detail" of the well-known Estudillo Adobe, known as Ramona's Marriage Place (1829) which is located in San Diego.(21) The sources of inspiration for the Patio del Moro were considerably more distant - Spain and north Africa, at the behest of their client, a physician who was a frequent traveler to those locations.(22)

The Zwebells designed several other fine courtyard buildings in West Hollywood including The Andalusia (1926) and The Ronda (1927). These slightly later buildings followed the design parameters established by the apartment buildings located within the North Harper Avenue Historic District. Other courtyard apartment buildings similar in type to the Mexican Village and the Patio del Moro include several works by the firm of F. Pierpont and Walter S. Davis, e.g., Villa d'Este (1928) in West Hollywood. Like the Zwebells, this firm also played a significant early role in the development of the courtyard apartment building.

Villa Sevilla and El Pasadero are two other courtyard apartment buildings in the district. The Villa Sevilla follows the model of the "urban patio house" while the El Pasadero is an example of the "urban callejon."

Landscape features play an important role in the cohesive appearance of the North Harper Avenue Historic District. This is evident in the use of landscape elements that are visible from the street, e.g., street trees, foundation plantings. Historic landscape is also an extremely important component in the design of the enclosed and partially enclosed outdoor spaces of the individual buildings. The Mexican Village and Patio del Moro incorporate lush plantings and water elements in the design of their central patios. Each space is relatively small, and accessible from the surrounding units. Contemporary writers analyzing patios that successfully function as outdoor rooms, cite these features.(23) In the context of larger outdoor spaces of other apartment buildings (i.e., Casa Granada, Villa Sevilla), the landscape and water features are located in confined areas, toward the rear of the spaces, in order to create the appropriate quality of intimacy.

While a number of examples of 1920s and early 1930s apartment buildings are extant in West Hollywood, the North Harper Avenue Historic District is a unique grouping of apartment buildings from that historic period. It is a concentration of buildings that are significant to the evolution of apartment building design in West Hollywood. As a group the buildings convey a sense of time and place when the apartment building represented a dominant trend in residential architecture.

14. Los Angeles County Assessor's records indicate a direct relationship between the Les Maisonettes apartments and their garage. Both were constructed in 1927, and the two lots were under the same ownership at the time (Los Angeles County Assessor's Book 311; 6, 19-20, 1920-1939). That same year a Los Angeles Times advertisement for the Les Maisonettes lists "a large fireproof garage, providing each tenant with space for two cars," as one of the features of the new building. The development history of the Les Maisonettes garage was clarified with the help of Marc Yeber, Manager of Les Maisonettes, and the research assistance of Tim Foy, Associate Planner for the City of West Hollywood.

Verbal Boundary Description

Lots 16 through 22, Block E; North 50 feet of Lot 1 and Parcel No. 31 partial Lots 24 and 25, Block G; and Lot 7, Tract No. 2266, of the Crescent Heights Tract, City of West Hollywood, as per County of Los Angeles Assessor's Parcel Maps (1993).

Boundary Justification

The boundary includes a concentration of eight contributing apartment buildings and one contributing automotive garage with attached dwelling unit, constructed from 1923 to 1931. The apartment buildings located directly outside the designated boundaries are of later construction dates, primarily post 1950.

Subject: North Harper Avenue Historic District
West Hollywood, Los Angeles County, California
Nomination to the National Register of Historic Places

Dear Ms. Shull:

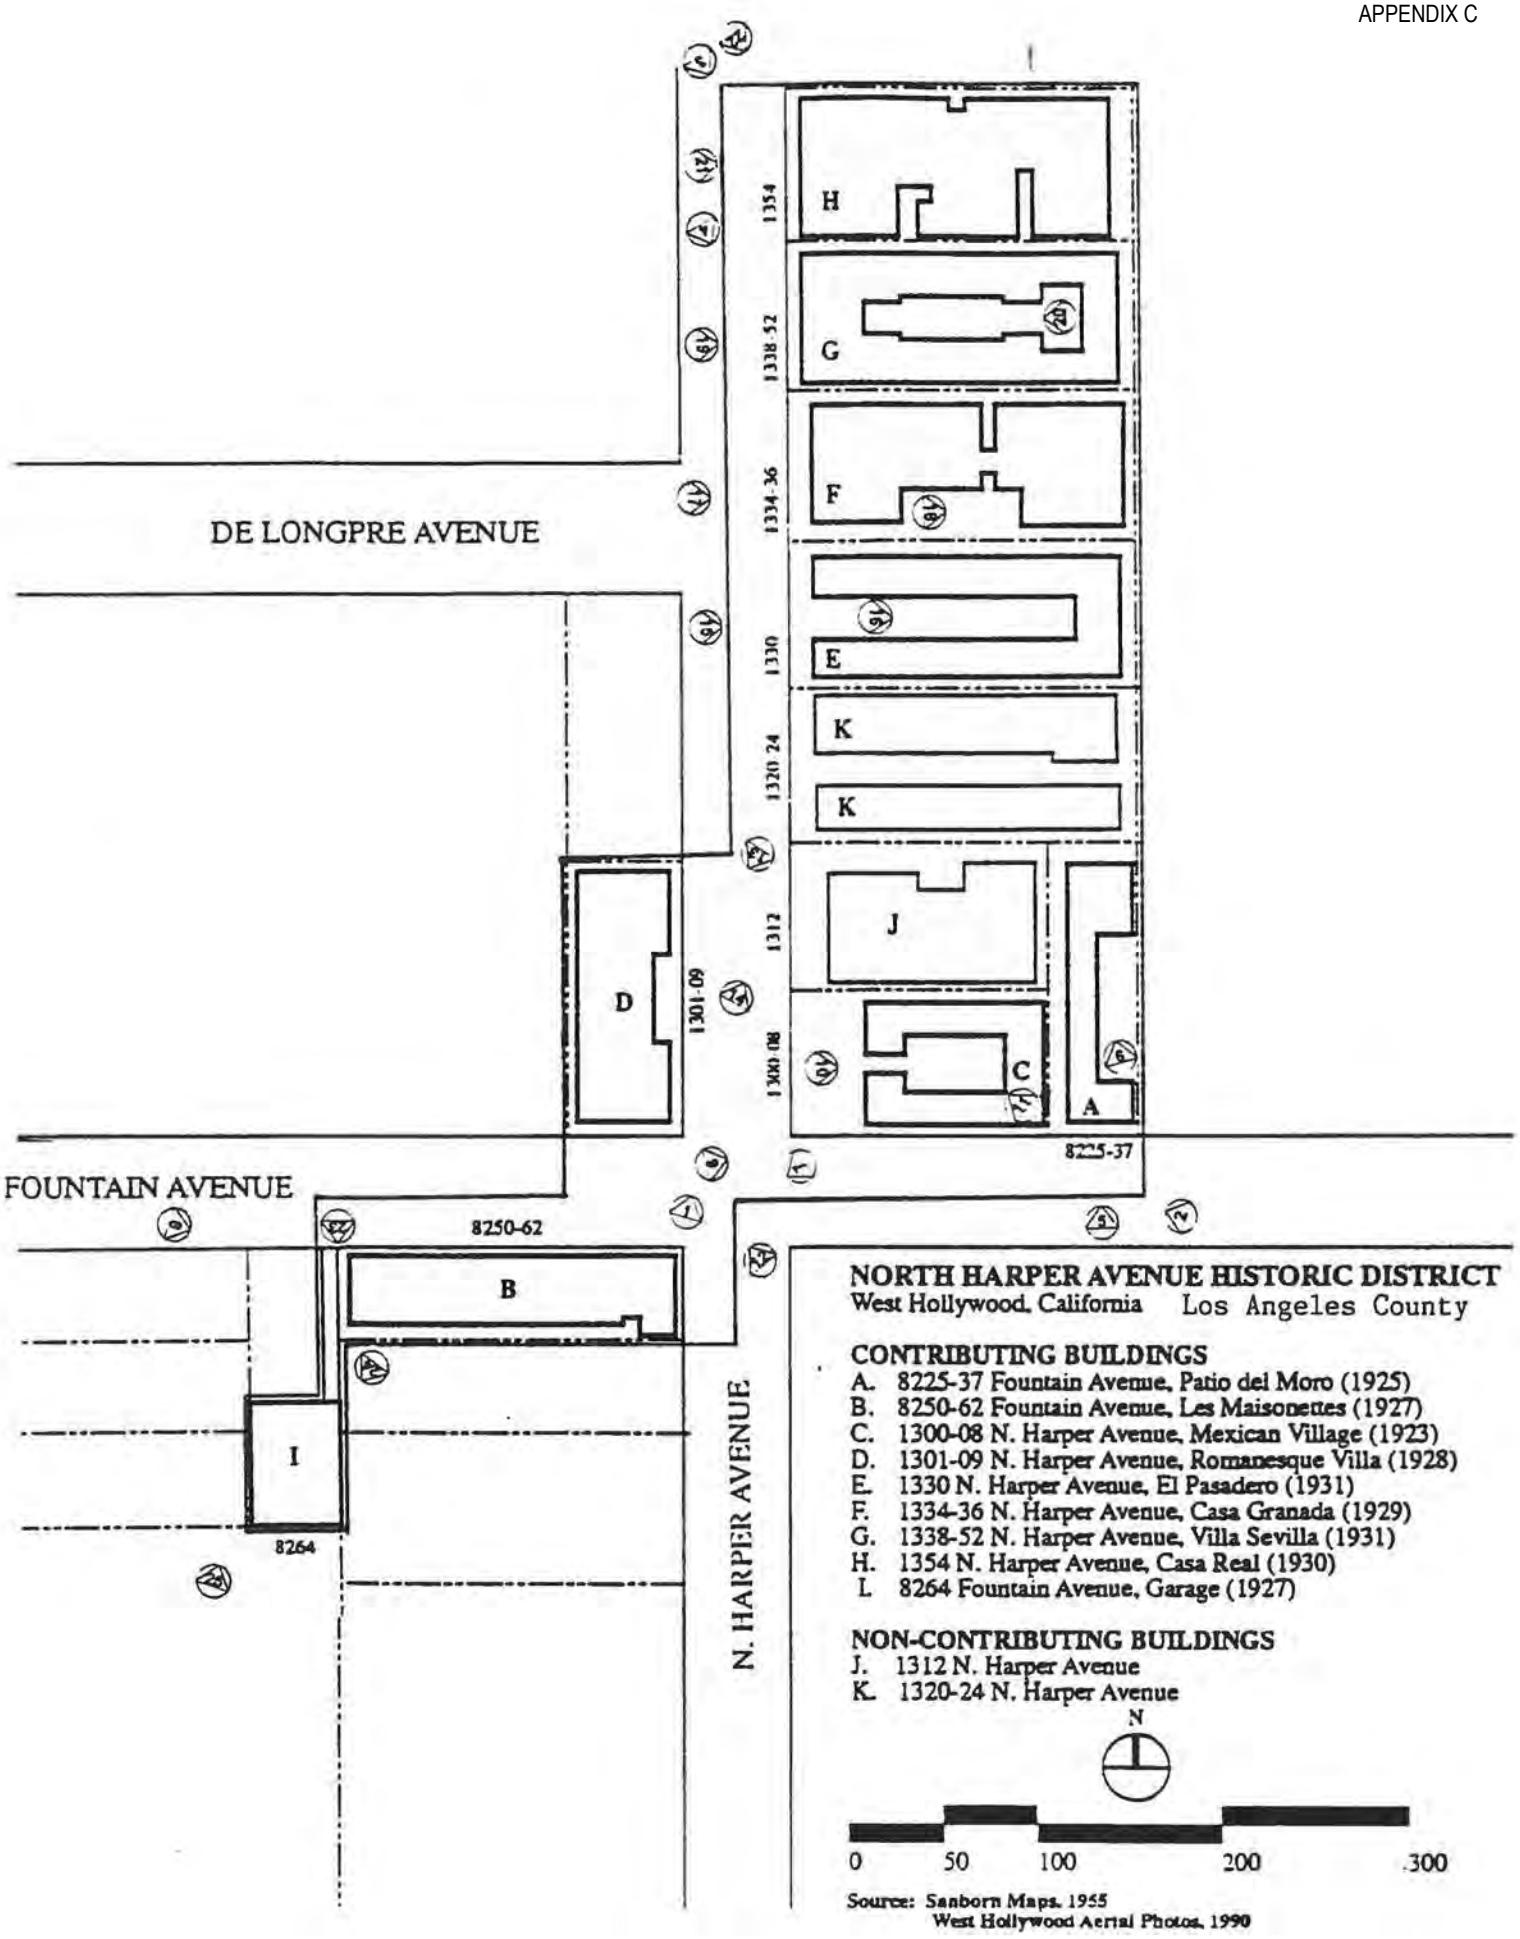

Enclosed please find the above stated property for nomination to the National Register of Historic Places. This Property is located in West Hollywood, Los Angeles County, California.

If you have any questions regarding this nomination, please contact Cynthia Howse, of my staff, at (916) 653-9054.

Sincerely,

for Cherilyn E. Widell
State Historic Preservation Officer

RESOLUTION NO. CHAB 96-23

A RESOLUTION OF THE CULTURAL HERITAGE ADVISORY BOARD OF THE CITY OF WEST HOLLYWOOD IN SUPPORT OF THE NOMINATION OF THE NORTH HARPER AVENUE HISTORIC DISTRICT TO THE NATIONAL REGISTER OF HISTORIC PLACES

WHEREAS, the North Harper Avenue Historic District is a designated Cultural Resource of the City of West Hollywood; and

WHEREAS, the North Harper Avenue Historic District is composed of buildings built within a few years in the late 1920's and early 1930's, which are excellent examples of the various Revival styles popular at that time, and have a high level of integrity as regards their architectural features and detailing and are well and faithfully preserved; and

WHEREAS, the North Harper Avenue District includes buildings whose courtyard designs are some of the earliest and most successful attempts to integrate the desire for private space with a dense urban environment, the benefits of which are enjoyed by the buildings' residents today; and

WHEREAS, the North Harper Avenue District includes buildings which are the work of notable architects, including Leland Bryant and Arthur and Nina Zwebell.

NOW, THEREFORE, BE IT RESOLVED that the Cultural Heritage Advisory Board of the City of West Hollywood finds that the North Harper Avenue Historic District meets Criterion C for placement on the National Register of Historic and urges the State Historical Resources Commission to nominate the District to the National Register of Historic Places.

PASSED, APPROVED AND ADOPTED THIS 8th day of April, 1996.

RESOLUTION NO. 96-1524

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF WEST HOLLYWOOD IN SUPPORT OF THE NOMINATION OF THE NORTH HARPER AVENUE HISTORIC DISTRICT TO THE NATIONAL REGISTER OF HISTORIC PLACES

WHEREAS, the North Harper Avenue Historic District is a designated Cultural Resource of the City of West Hollywood; and

WHEREAS, the North Harper Avenue Historic District is composed of buildings built within a few years in the late 1920's and early 1930's, which are excellent examples of the various Revival styles popular at that time, and have a high level of integrity as regards their architectural features and detailing and are well and faithfully preserved; and

WHEREAS, the North Harper Avenue District includes buildings whose courtyard designs are some of the earliest and most successful attempts to integrate the desire for private space with a dense urban environment, the benefits of which are enjoyed by the buildings' residents today; and

WHEREAS, the North Harper Avenue District includes buildings which are the work of notable architects, including Leland Bryant and Arthur and Nina Zwebell; and

WHEREAS, the North Harper Avenue Historic District has historically been home to many major figures of the movie and entertainment industries and thus is emblematic of an important period in the history of the West Hollywood and of Southern California; and

WHEREAS, the City of West Hollywood, in celebrating its past, endeavors to assist property owners and residents in preserving important buildings and to educate all residents on the architectural and historic treasures within the city;

NOW, THEREFORE, BE IT RESOLVED that the City Council of the City of West Hollywood does hereby voice its support for the nomination of the North Harper Avenue Historic District to the National Register of Historic Places and urges the State Historical Resources Commission to nominate the District to the National Register of Historic Places.

PASSED, APPROVED AND ADOPTED THIS 16th day of January, 1996.

*P3a. Description: (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries)
This reinforced concrete building has a rectangular mass and can best be characterized as Modern Contemporary. The flat roof, asymmetrical facade, and contrasting wall materials of cut stone, stucco, and brick are all characteristic elements of this style. There is projecting stucco banding on the north and south facades creating a wide overhang above the entries. The main doors are glass with metal frame, but there are also two metal security doors and a rolling metal bay door on the south facade. Primary entry may have at one time been on the north facade, but these doors are covered with vertical metal bars. The current entry is via modern electronic sliding doors on the south facade. All fenestration is located on the south facade, and consists of a series of storefront windows on the first floor and several awning windows on the second floor. There are six large display cases on the north facade advertising merchandise, and a tower structure on the northeast corner of the roof. There are twelve inlaid tiles on the northwest corner of the building that were originally part of a clock. Additions to the building include several modern signs and handicap access ramps on the south facade. Although the building is in good condition, it does not appear eligible for listing in the National Register under any criteria.

NARRATIVE DESCRIPTION

SUMMARY

McCarty Memorial Christian Church (Disciples of Christ) is a tall one-story basilica plan church of concrete construction. The interior consists of a narthex, large auditorium divided by a nave, vaulted side aisles and a shallow front balcony. Art glass windows line the side aisles on the nave and clerestory levels. At the rear of the auditorium, the pulpit is centered on an elevated platform that rises to accommodate a choir space, organ loft and the Baptistery. A small chapel is situated at the northeastern corner of the building below the organ space. The structure was built with a full basement to support social and education activities. Located at 4101 Adams Boulevard at 11th Avenue the church is among the group of graceful and imposing houses of worship that were built along Adams Boulevard between Figueroa and Crenshaw Boulevards in the decade of the 1920s. The church was conceived and financed by Dr. and Mrs. Isaac McCarty who commissioned architects Thomas P. Barber and Paul Kingsbury to design the structure in the English Gothic Revival style. McCarty Memorial has retained substantial integrity with minimal alteration to historic features. The adjacent Youth/Center Education Building was built at a later date on another lot, and is not included in this application.

SETTING AND CONTEXT

McCarty Memorial Church is situated on a rectangular lot, 73' by 178'; the church building itself measures 65' by 142'. Located at the northwestern corner of Adams Boulevard and 11th Avenue, the structure comprises Lot 4 of the West Adams Terrace Tract. The main entrance is on Adams Boulevard with side entrances on 11th Avenue. To the west of the church is the Education/Youth Center Building. Built in 1949, it was placed 35 feet back on its lot and, as a result, its front elevation is not on a plane with that of the church. An alley runs behind the church; a small church parking lot is situated on the north side of the alley

The West Adams District developed around the turn of the 20th century, catering to upper middle class professionals who wanted a "suburban" home atmosphere with landscaping on ample lots. By 1910 elaborate 3 and 4-story homes built by prominent architects graced the neighborhood that was considered the city's finest residential community. Churches were placed among the mansions along Adams Boulevard that became the "street of churches." Five churches which are historic-cultural monuments of the City of Los Angeles are situated on Adams Boulevard: St. John's Episcopal, St.

19-187043

United States Department of the Interior
National Park Service

National Register of Historic Places Continuation Sheet

Vincent de Paul Catholic church, Second Church of Christ Scientist. First African Methodist Episcopal Zion Cathedral and the Church of the Advent. By the 1960s, the West Adams had been impacted by a series of events: the Depression that caused many residents to lose their homes; the housing shortage after World War II that resulted in the conversion of many large homes to multi-family housing and the building of the Santa Monica Freeway split the neighborhood in half.

After restrictive racial covenants were declared unconstitutional, West Adams became an integrated community with equal access to housing, business and churches. Adams Boulevard remains as a boulevard of churches. At the present time 17 churches are placed along the Boulevard between Arlington Avenue and Crenshaw Boulevard.

BUILDING DESCRIPTION

Exterior Massing and Decoration

McCarty Memorial Christian Church is an example of English Gothic Revival architectural style. Architects Thomas P. Barber and Paul Kingsbury, wrote a single page sketch of the church, reporting that founder-builder Dr. Isaac McCarty arrived at their office with a series of church sketches that he had drawn on study tours throughout Europe and England. The principal influence, they stated, was Exeter Cathedral in England, an example of the English Gothic which had over time derived influences from the Norman Gothic through the Early English, Decorated and Perpendicular forms of the Gothic style. Thus McCarty Memorial offers decorative elements from all three periods of English Gothic cathedral building.

In plan, McCarty Memorial is a front gable, nave and side aisles church with a tall clerestory, high side tower, a side porch at the base of the tower, and a second porch which offers entrance into a small chapel to the east of the chancel. The structure has exterior walls, floors and structural supports of reinforced concrete; roof trusses are steel. Exterior cladding is smooth finish concrete; the roof is slate. The cornerstone, situated at the southeast corner of the structure facing Adams Boulevard, reads, "Christ, The True Cornerstone. Dedicated May 22, 1932."

Tower

McCarty's landmark tower, 130 feet tall, features one of the structure's singular character-defining features, non-structural segmented vertical buttresses exhibiting pointed triangular arches, elements characteristic of buttresses in the Decorated Gothic style.

19-187043

These buttresses run up the corners of the two-stage tower, which carries one of the four narrow rectangular windows of the front facade, presumably lighting the tower stairs. The elaborate open belfry of the first stage is ornamented with Perpendicular tracery and short pinnacles with crockets. The second stage is a smaller octagonal lantern with open Decorated style tracery, a culminating row of trefoil molding and delicate pinnacles marking each section of the octagon. The placement of the tower in the architectural composition is somewhat unusual. American Gothic Revival towers are generally frontal or central. The side tower, a variant of the tradition bell-cote tower, is more frequently associated with rural churches. The placement of the tower is well integrated in the composition, its vertical thrust and effective counterpoint to the heavier vertical mass of the side elevation, emphasizing and symbolizing the spiritual role of the structure.

Front Elevation

McCarty Memorial's front elevation is asymmetrical; a series of stepped blocks provides the transition to the tower on the right. Similar blocks signal the wing containing the interior side aisle on the left side of the facade; it has been left undecorated. An elaborate English Perpendicular window of art glass set in an elaborated trefoil arch decorated with Gothic tracery pierces the front gable which carries a small cross at its peak. A stylized censer hangs at the center of the gable, which is squared off just above the window. A pair of similar censers is placed on either side of the window at the level of the arch peak. Just below these elements, the architects paired flanking engaged forms similar to the tower buttresses. A short stringcourse below these forms serve to divide them from the paired narrow rectangular windows that light the vestibule interior. Yet another similar pair of lights below them at ground level illuminate the basement.

The church is entered by ascending a flight of concrete steps. The legend "McCarty Memorial Christian Church" is inscribed in block letters on the tympanum of the double wood doors. Above them, a compound Tudor arch is ornamented at its lowest level with a single row of rinceau ornament. At the top of the arch ecclesiastical symbols are set in a series of rectangles separated by pillar forms. The larger central rectangle containing a cross is sheltered by a small concrete pent.

East Elevation

Along 11th Avenue, McCarty Memorial presents the east side of the tower with an entrance into the church vestibule at its base. Wood double doors are set into a compound arch; an art glass tympanum above the doors carries Perpendicular tracery. Continuing north, the facade presents a six-bay, two-level windowed expanse below the

broad side gable of the slate roof. The top level of pointed-arch Gothic windows represents the clerestory art glass windows; the lower row comprises the lights of the aisle windows. Windows on both levels are ornamented by Perpendicular tracery.

At the northeastern corner of the building is a chapel with a sloping, slate-roofed pent, its facade divided into two bays, the first with double doors similar to those at the southeastern corner, and the final corner bay with paired pointed-arch windows below a superimposed cross. Above the pent small Gothic style windows set into half-round arches light the chapel. All the bays along the east elevation are separated by the structure's characteristic triangular-capped buttresses which are elongated across the slate roof above the lower lights; they then continue, dropping down to separate the window bays on the lower level.

West Elevation

The west elevation is separated from the Education Building by a narrow cement walkway. It is similar in design and ornament to the east elevation, with the exception of the corners. The northwest corner offers an entrance into a small waiting room at the foot of the baptistery stairs. At the southwest corner, doors offer a similar entrance to those on the opposite side of the vestibule. Pointed-arch windows are paired above the vestibule entrance.

Rear Elevation

The rear elevation presents a plain gable with no applied ornament. A single narrow rectangular window is visible near the northwest corner of the lower level. At the clerestory level, the exterior wall is pierced by the Garden of Gethsemane rose window placed above the baptistery on the interior.

Interior Features

The interior of McCarty Memorial reads as a Cathedral plan, nave and side-aisles church with a characteristic long and narrow narthex affording entrance to the auditorium through three sets of double doors. Both narthex and nave have the original multi-hued clay floor tile. Seventy feet high to the apex of the ceiling, the sanctuary, together with the choir and gallery, seat about 1000 people. The gallery, which features wood carving across its front face, is approached by stairs from the narthex. On the wall above the last pew appears the Perpendicular art glass window above the main entrance door.

19-187043

Nave and side aisles lead to a transept crossing in front of the chancel area. Doors on the east lead to a small chapel; doors on the west lead into a robing room and by means of stairs give access to baptistery facilities. Immediately behind the crossing is a raised dais reached by flanking stairs. The pulpit is centered at the immediate front. Carved wood screens separate the dais and choir space from the baptistery. Above it on the rear wall of the nave is centered a large rose window depicting Christ in the garden of Gethsemane. Grilled openings from the choir space lead into the organ loft, which is situated above the chapel.

Curved struts that meet at the center to form an arch support the high-pitched, open-frame staff ceiling. These in turn are carried down on wall brackets that culminate above the capitals of slender, metal double-round columns. These elements are placed between the clerestory art glass windows of the nave. Each of the windows is divided by Perpendicular tracery. Vaulted side aisles separate the arcades from the nave. A similar set of art glass windows is placed on the outer walls of the side aisles. Czechoslovakian crystal chandeliers, are suspended from the ceiling in the gallery and the auditorium.

An additional interior feature is the full basement which contains an assembly room with a stage. Adjoining the room is a complete kitchen for food service.

Alterations

No structural alterations to the building are apparent. The roof trusses above the gallery have suffered earthquake damage that is being repaired. A permit search yielded a single alteration permit which was taken out for "parapet correction," which seems to have been the removal of damaged railings on the octagonal lantern of the tower.

Integrity

McCarty Memorial possesses most of the specific aspects of integrity required by National Register standards. The building is on its original location; it has kept the combination of elements of space, building form, and plan that constitute integrity of design. The character-defining Gothic ornament and landmark tower remain intact. Some integrity of materials has been lost over time through repairs. However, the property has kept interior and exterior fabric dating from its period of construction. Although the original founders, Isaac and Ona Bell McCarty have been deceased for many years and no other persons associated with their family have been active in the church, the church has kept its association with the founders by retaining their name.

Narrative Statement of Significance

Summary

McCarty Memorial Christian Church is eligible for listing in the National Register of Historic Places under Criterion C, Design/Construction as a building which embodies the distinctive characteristics of a type and period of construction, that is the work of master builders and possess high artistic values. The building offers an index to varying styles and periods of Gothic ornamentation, particularly the English Perpendicular, since its founder/builder collected examples of the style found in original buildings in England and Europe for reproduction in the church. The structure's tower is significant as a landmark in the West Adams district and is, in its own right, a very well designed and crafted element. McCarty Memorial also exhibits other significant features such as the Perpendicular window of the front elevation, twenty-four stained glass windows with their elaborated Gothic tracery, and dramatic arcaded ambulatories.

In the context of church building in Los Angeles between the years 1919 and 1935, Mc Carty Memorial is one of a group of significant houses of worship placed along Adams Boulevard. It is also important in terms of its founding and major financing by two private persons who asked for no donations either from prospective congregants or the parent denomination, but undertook the work as a civic and religious duty.

HISTORIC OVERVIEW

Founders

Dr. Isaac A. McCarty was born in Illinois. He attended college and medical school in St. Louis, Missouri. About 1911 he came to Los Angeles with his wife Ona Bell McCarty. He practiced medicine and surgery for seventeen years in Riverside County and is credited with an important role in the building of the Riverside Hospital. He came to Los Angeles in 1927 to continue his practice which was highly successful. The couple, who were childless, decided to build a new church and deliver it to the congregation debt free. After the church was completed, the new congregation was assembled from two existing congregations, South Park Christian Church, struggling to maintain a diminishing congregation, and West Adams Christian Church, which had been meeting in a store front. They united to become McCarty Memorial. It is interesting to note that the McCartys themselves did not attend the new church, choosing instead to remain at Magnolia Christian Church near their home on 1264 West Adams Boulevard. Dr. McCarty died a year after the church was completed; his wife died two years later.

Architects

Thomas P. Barber and Paul Kingsbury entered into partnership in 1930. Barber, born in 1862 was nearing the end of a productive career. Born in Colorado, he practiced in Denver and Boulder, coming to Los Angeles in the late 1920s when he began his collaboration with Paul Kingsbury. Barber's specialty was church architecture and public works projects. He died the year after McCarty Memorial was finished.

Kingsbury graduated from the University of Pennsylvania in 1916, then served overseas in World War I. An article in *Southwest Builder and Contractor* in 1944 detailed his biography, stating that Kingsbury's service overseas had given him an opportunity to study "rare architectural treasures."

> While there he made a particular study of Gothic architecture in its most authentic settings and devoted special attention to the methods and tools of the medieval artisan whose work has lasted so many centuries.

Kingsbury also participated in a famous demonstration project for the construction of the Swedenborg Center in Pennsylvania. Its style was Gothic and workmen followed methods of construction that used the techniques and tools of the medieval builders.

The partners' church commission included Methodist churches in Hollywood and Pasadena, both designed in the English Gothic style, in addition to churches in Santa Barbara, Ventura, and Pacific Palisades, as well as McCarty Memorial. After World War II, Kingsbury carried out commissions for many institutional buildings, particularly schools.

Architectural Style

Architectural style in Los Angeles in the years between 1919 and 1935 was very much the province of Period Revival builders. Eclectic styles suited the city's experimental and freewheeling spirit. Ecclesiastical builders turned to historic styles to convey the solemnity, spirituality, and religious symbolism congregations and their ministers felt appropriate for new houses of worship in American cities only a generation removed from the brawling frontier.

Gothic Revival church builders went back to the Middle Ages, to a style characterized by the pointed arch, elaborate structural systems, rib vaults and buttresses. While the

19-187043

United States Department of the Interior
National Park Service

National Register of Historic Places Continuation Sheet

money, skill and patience required to master these forms were lacking, revival architects understood the Gothic as a profoundly organic expression, projecting the strength and vitality of the natural world. American builders looked particularly to the English Gothic, whose rectilinear plans, narrow transept and square end were manageable on smaller American lots. To extend space, they used auxiliary chapels. In place of vaulting, they crafted open wood ceilings in hammer beam and truss rafter designs, exhibiting skillful craftsmanship and emphasizing inspirational height. Gothic Revival ecclesiastical builders were also attracted by the English Gothic tendency to decoration, and they drew elements from all three periods of the High Gothic: Early English, Decorated and Perpendicular. Pointed arches, lancet windows, tracery both rich and austere, running arcades and art glass lights found their way into American houses of worship.

Significance

McCarty Memorial is significant under Criterion C as the work of architects Barber and Kingsbury, master builders in the Gothic Revival style in Los Angeles. Kingsbury, a lifelong student and practitioner of Gothic Revival church building, left a legacy of Gothic revival houses of worship in the city.

McCarty Memorial is also significant under Criterion C, Design/Construction as a structure that embodies the distinctive characteristics of a type, period, or method of construction. Architects Barber and Kingsbury utilized the elements of historic Gothic building: tracery, the open beam ceiling, a large frontal art glass window in the Perpendicular style, the triangular Norman buttress, nave and side aisle plan. All these were skillfully adapted in the Period Revival fashion to meet the ecclesiastic purpose of the Disciples of Christ liturgy that did not allow for a traditional chancel and altar as would be found in a Church of England or American Episcopal house of worship.

McCarty Memorial is also significant for its tower. One hundred-thirty feet tall, it is a neighborhood landmark. Intricately wrought and decorated, it is the church's most prominent feature, and demonstrates the architects' skill in the massing and scale of their architectural composition. Its placement as part of the church plan links the building to a specifically American Gothic element, the side tower, a character-defining feature of the rural American Gothic Revival. Working together, Isaac McCarty and his architects, Barber and Kingsbury, created an impressive and monumental example of American Gothic Revival building, realizing the McCarty family's lifelong ambition to donate a church to their community.

19-187043

United States Department of the Interior
National Park Service

National Register of Historic Places Continuation Sheet

The church was included in a Los Angeles Bureau of Engineering survey of West Adams Boulevard in 1983. It was also listed in a Los Angeles Department of Planning survey in 1990, done in conjunction with the South Central District Plan. McCarty Memorial was given a 3 designation: individually eligible for the National Register at the local level of significance. Although not illustrated, it was also included in Gebhard and Winter, *Architecture in Los Angeles: A Compleat Guide* in 1984, noting it as: "An excellent example of one of L.A.'s reinforced concrete churches of the late 1920s."

Verbal Boundary Description

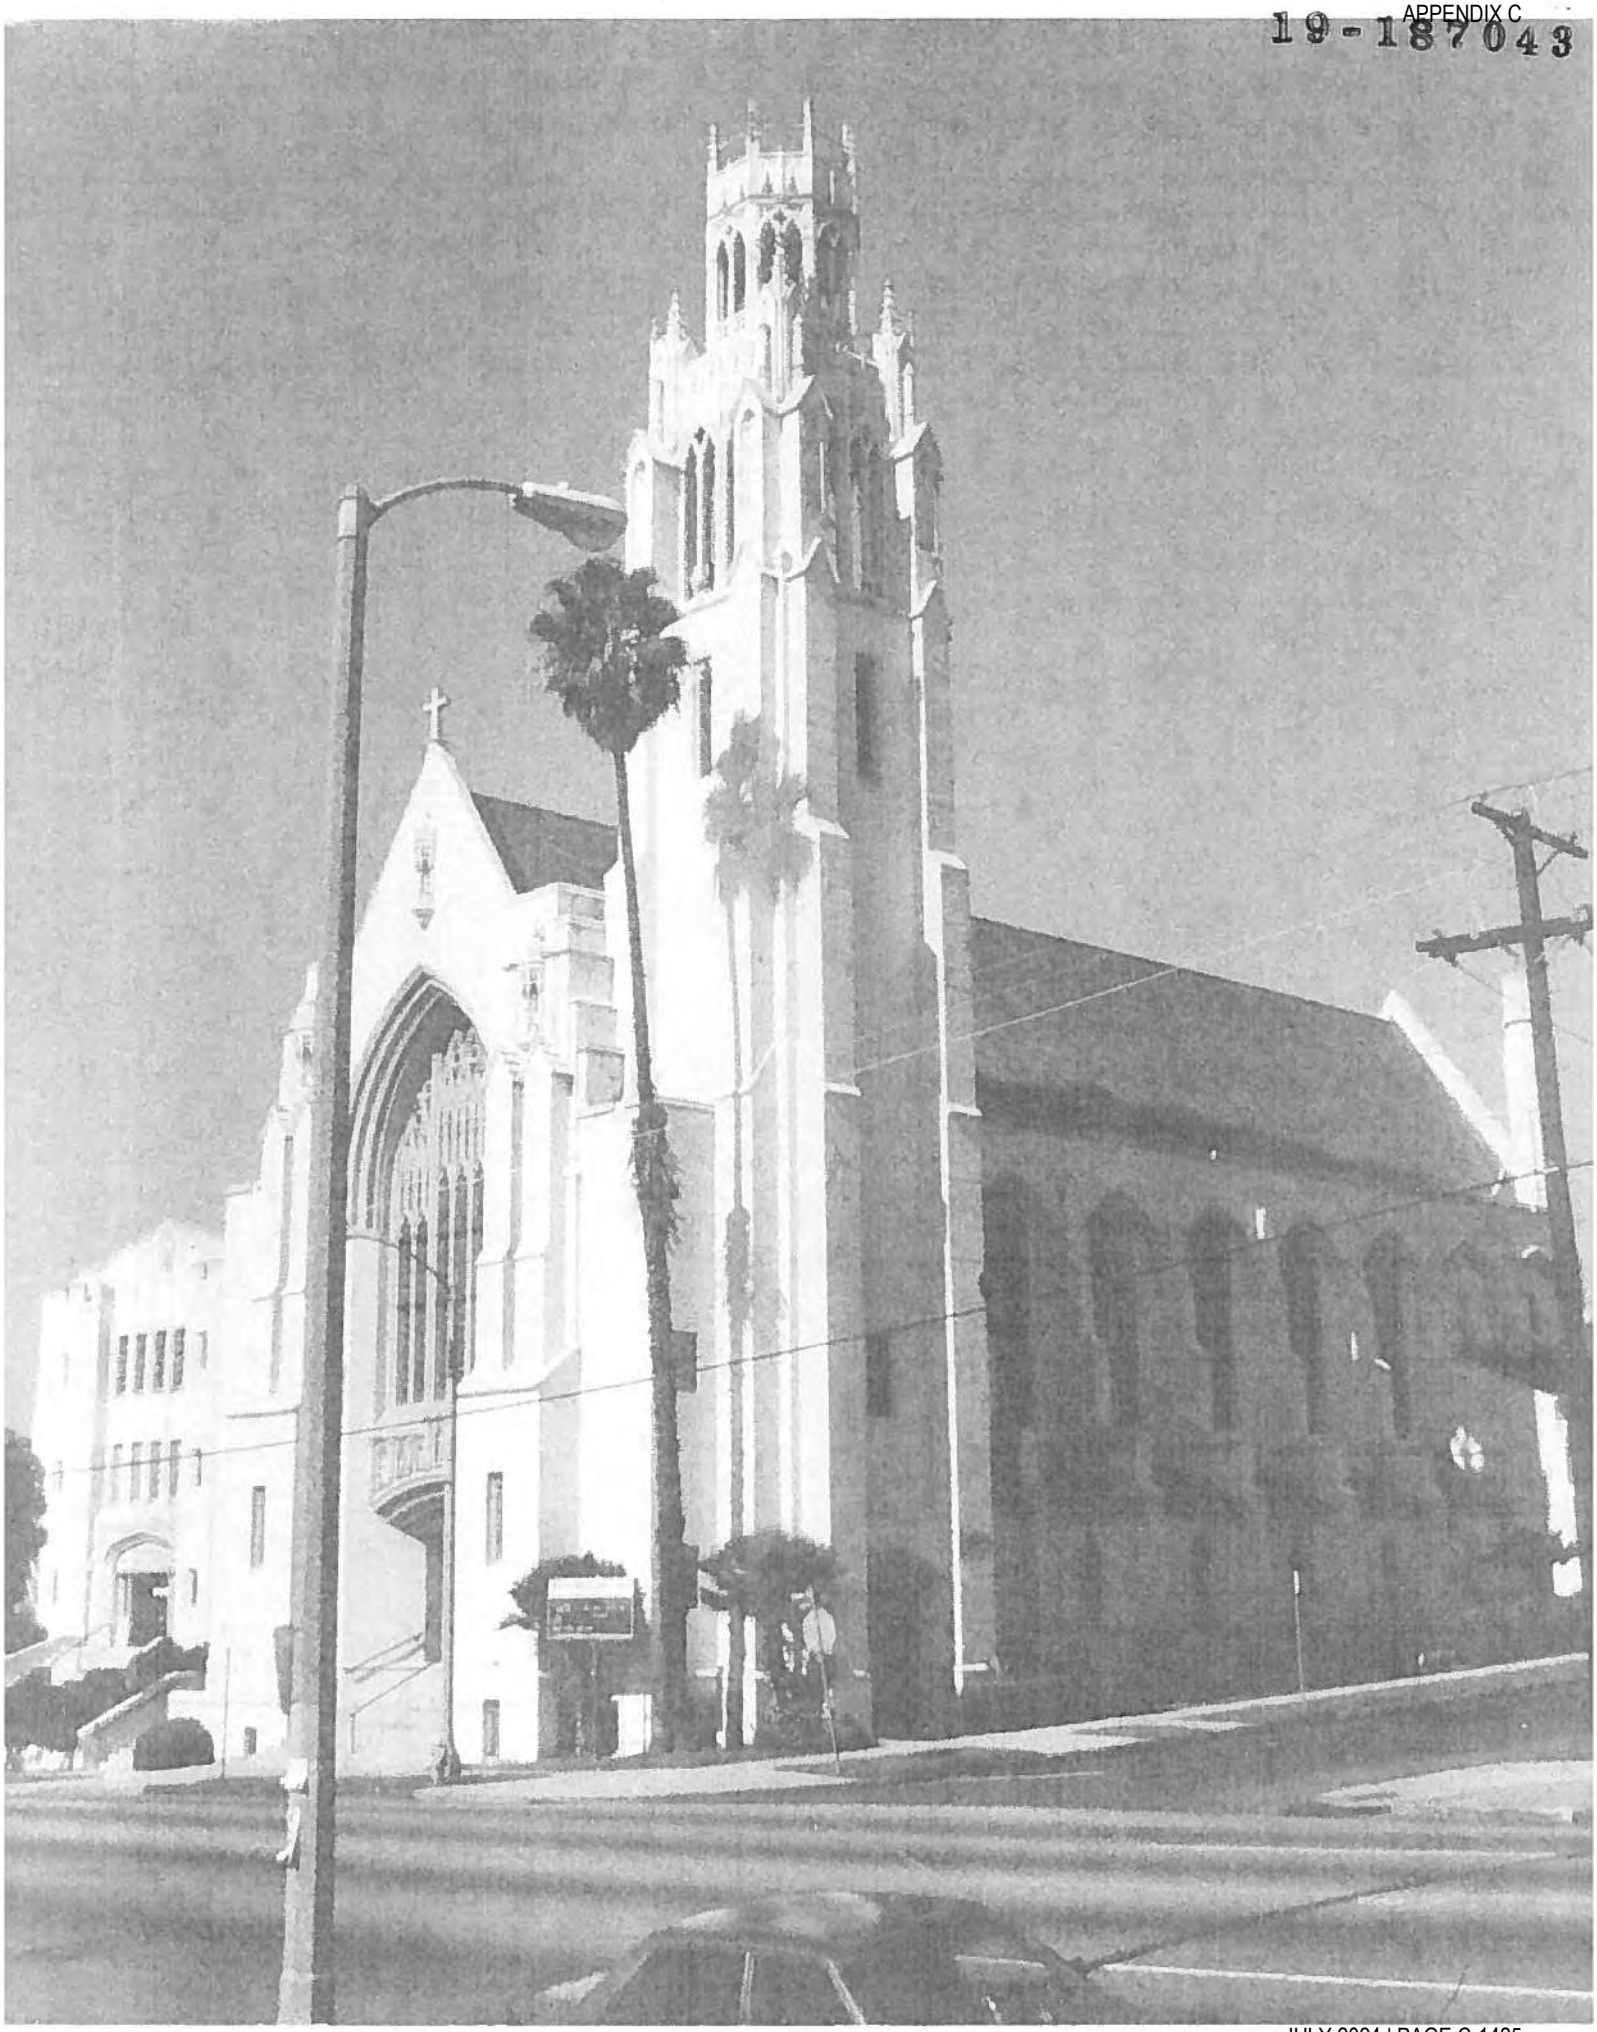

The boundaries of the property are those of the parcel on which it is located: Block 6, Lot 3 of the West Adams Terrace Tract, as recorded in Book 7, Page 142 of maps in the office of the County Recorder of Los Angeles County.

Boundary Justification

The building is located on a rectangular lot following the boundaries of Lot 4: the lot line of the Adams Boulevard frontage on the south; the lot line of the Edgehill Street frontage on the east; the north line of the lot boundary on the alley; the lot line of the adjoining property on the west. This is the lot historically associated with the building.

*P3a. Description: (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries) This is a simple one-story brick and stucco building that has been completely remodeled. According to building permit records, in 1950 an existing residence and garage were converted into office buildings. A 1950 Sanborn Fire Insurance map depicts two buildings on the property. In 1985, a portion of one of the buildings was demolished. Some time later the two were joined. The existing building is a simple Modern wood frame building with a rectangular mass. It has walls clad in stucco and brick veneer and a rolled composition clap roof. The primary entrance is on the north elevation through a modern wood door. A band of aluminum frame fixed windows hang low along the primary facade. There is no fenestration on the east, west, and south elevations. A large bay door is located at the rear of the building, on the southern facade. The building is in fair condition, but it is completely lacking in integrity.

Period of Significance 1950s **Property Type** Commercial Building **Applicable Criteria** N/A
(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity.)

In 1950, this Modern building was converted from a residence and garage into two office buildings. These two buildings were joined and altered later to form the existing building. Although the building is in good condition, it does not appear to be eligible for the California Register. The building is not associated with the development of West Hollywood, nor does it hold a place of significance in the history of West Hollywood (Criterion 1). The building is not associated with any person important in history (Criterion 2), and the building is unlikely to yield information important in history (Criterion 4). Last, while the building is in good condition, it is completely lacking in integrity, as there is no visible remnant of the original structures. The current alterations to the existing building were completed in 1950, in the Modern Style, and while the style was distinctive, it was a relatively popular architectural style during the 1950s. The building is not an outstanding example of Modern architecture (Criterion 3).

***P3a. Description:** (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries) This resource is a two-story brick building in the vernacular Beaux Arts style. The building has a rectangular mass and flat roof. The north and east facades are clad in red brick with white glazed bricks forming decorative belt courses between stories and borders around the windows and doors. There are also decorative glazed tiles with floral motifs at the corners of the borders. Centered above the second story on the north facade is a plaque with the word <VANETTA>. The windows and entries on the ground story are modern metal frame; they are not original. Fenestration on the second story consists of 1/1 light frame sash, double-hung windows. The building does not appear to be eligible for listing in the National Register. While it is in good condition, it is lacking in integrity, as the original retail shop doors and windows have been replaced. Although it is associated with the development of Los Angeles, it does not hold a place of significance within our nation's history (Criterion A). The building is not associated with any person important in history (Criterion B). The design of the structure is not an outstanding example of its type, method, or style of construction (Criterion C), nor does it have the potential to convey information important in history (Criterion D).

The subject property is a two-story, asymmetrical, rectangular shaped, Beaux Arts style, mixed commercial and residential building located on a main commercial artery in the city of West Hollywood. The building has a concrete foundation, brick exterior and a flat roof with a penthouse. One of the dominant design elements is the white trim that surrounds all the window and door openings. In addition, the white detailing is used to create rectangular designs on the facades and narrow belt courses. The ground floor has retail units with fixed pane windows and single metal and glass doors. The upper floor has rectangular shaped, metal framed, slider style or double hung sash style windows. The building appears to be in good condition.

(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity.)

The city of West Hollywood was incorporated in 1984. The area was part of the Spanish and Mexican land grant system as part of the Rancho La Brea. The area now known as the "Sunset Strip" was originally the main highway from El Pueblo de Los Angeles to the Pacific Ocean and the ranch lands along the way. The Rancho La Brea passed through a variety of hands during the 19th century, eventually coming under the ownership of Henry Hancock. The town of Sherman, later West Hollywood, was formed by Moses Sherman and his partners in the Los Angeles interurban rail system and served as one of the major stops on the line and housed all the "car barns," shops and related facilities. Many electric railway workers made their homes in the area. The area remained an unincorporated section of Los Angeles County, allowing gambling to prosper, along with easy access to liquor during Prohibition. The fledgling movie industry also found the area usable and soon apartment buildings, stores and other related commercial activities, including many night clubs developed along the main commercial arteries. The subject property was built in 1924 as a combined residential and commercial space. No original building permits were located for the property and the city of West Hollywood Building Department did not have any permits on file for the property prior to 1982. In 1982, permits were filed to remove portions of the marble façade and change out the retail units windows. A variety of interior alterations were undertaken in 1985. Fire repairs were made in 1986 for a cost of $10,000.. Non-historic doors and windows replaced many of the original elements and the building has undergone a variety of tenant improvements over the decades. The building appears to be in good condition.,

Integrity Statement

In regard to the seven aspects of integrity – location, design, setting, materials, workmanship, feeling and association – the c. 1924 Beaux Arts style commercial/residential building on this property has retained its original location. The building has not been moved. The setting, feeling, and association have not remained intact as the urban area surrounding the structure has changed. The design, materials and workmanship have been altered by door and window changes. The integrity level is fair and the condition of the building is good.

National Register of Historic Places Eligibility Evaluation

The property was assessed under National Register of Historic Places **Criterion A** for its potential significance as part of any historic trends or events that may have made a significant contribution to the broad patterns of our history. The building was constructed as part of the overall continuing commercial and residential development of the West Hollywood area which began in the 1880s and continues to the present time. There is no significant trend or event associated with the property. **Therefore, the property does not appear to meet the criteria for significance under Criterion A: Event.**

The property was assessed under National Register of Historic Places **Criterion B** for its potential significance and association with a person of importance in national history. There is no evidence to suggest that any of the persons associated with the construction or development of the building were considered important in the history of the property or nation. None of the persons associated with the property appear to be historically significant at the level necessary to meet the criteria for National Register of Historic Places. **Therefore, the property does not appear to meet the criteria for significance under Criterion B: Person.**

The property was assessed under National Register of Historic Places **Criterion C** for its potential significance as a property which embodies the distinctive characteristics of a type, period, method of construction or style of Beaux Arts architecture, represents the work of a master architect, builder or craftsman, possesses high artistic values, or represents a significant or distinguishable entity whose components lack individual distinction. The building has been altered by door and window changes and removal of original elements on the storefront facades. The building's style does not rise to a level of significance to qualify for the National Register of Historic Places. The building is not a good example of the work of a master architect or craftsman as the no persons associated with the design or construction were identified. Therefore, the building cannot be considered to represent the work of a master architect, builder or craftsman. **Therefore, the property does not appear to meet the criteria for significance under Criterion C: Architecture as a good example of Beaux Arts style architecture.**

The property was assessed under National Register of Historic Places **Criterion D** for its potential significance and its ability to convey information. The property does not yield, or may not be likely to yield, information important in prehistory or history. In order for buildings, structures, or objects to be significant under Criterion D, they need to "be, or must have been, the principal source of information." This is not the case with this property. **Therefore, the property does not appear to meet the criteria for significance under Criterion D: Information Potential.**

In summary, the property does not appear to qualify for the National Register of Historic Places under any of the above criteria. Therefore, the building is not considered to be an historic resource for the purposes of the NHPA. The property was not accessed for eligibility under the California Register or local West Hollywood Register eligibility.

***P3a. Description:**

This bridge is a two-span, concrete slab structure with spans of 54 feet and 69 feet. The bridge has long approach ramps of approximately 100 feet on the south end and more than 200 feet on the north end. The two-lane roadway is 30 feet wide, and there is a sidewalk on the west side. The total width of the bridge is approximately 39 feet. The concrete slab spans curve downward at the supports. The center pier, in the raised median between eastbound and westbound Venice Blvd., is a wall pier with sloping ends and a faceted shape. The two slab spans are continuous over the center pier, with an incised, horizontal shadow

*B8. Related Features: The bridge is part of West Blvd.

B9a. Designer: City of Los Angeles, Merrill Butler
b. Builder: Unknown
*B10. Significance: Theme: Monumental Bridges of Los Angeles; Art Deco Area: City of Los Angeles
Period of Significance: 1933 Property Type: Bridge Applicable Criteria: C

This bridge is not associated with important persons or events in the history of Los Angeles that would qualify it for National Register listing under Criteria A or B. However, the bridge does meet National Register Criterion C, for its engineering significance and its design qualities. The 69-foot slab span is one of the longest spans of this type among pre-1960 bridges in California, and was probably the longest concrete slab span in the state when built. The slab design was probably chosen over the T-beam in order to minimize the structure depth, and thereby minimize the height and length of the required approach ramps.

The bridge is significant for its Art Deco design and ornamental embellishment, as shown in the center pier, abutment piers, streetlights, and stairway. (The stairway and its associated streetlight are more Spanish than Art Deco in style, but exhibit an unusual level of embellishment.) The bridge is one of the best examples in Los Angeles (and therefore in California) of the style as applied to a transportation structure, and is

*P3a. Description (continued from page 1):

line and a row of large dentils. The concrete railing has a series of small, arched windows. The four corner piers, two at each abutment, have vertical, inset panels with a faceted design, topped by square panels with stylized flower motifs. Each pier is topped by an ornamental streetlight, and additional streetlights of the same design top every third pilaster of the approach ramps. There is a stairway on the east side of the bridge, leading down in two flights from the north approach ramp to Venice Blvd. The stair has an ornamental metal railing, and the top landing is supported by three brackets of monumental scale. Above the middle landing is an ornamental metal light attached to the side wall of the approach ramp.

*B10. Significance (continued from page 2):

comparable to other Art Deco bridges in the city that have been found for National Register listing, such as the Elberon Avenue and Gaffey Street Bridges (53C0399 and 53-0397Y) and the Riverside Drive Bridge (53C1298), as well as the portals of the Sepulveda Tunnel (53C0164) and the Arroyo Seco Parkway tunnels (53-0199R to 53-0202R).

From 1906 to the early 1940s, the Bureau of Engineering of the City of Los Angeles designed numerous bridges which were not only functional additions to the city's automobile transportation network, but also opportunities for civic beautification. These monumental, ornate bridges reflect the city's response to the City Beautiful Movement, a nationwide movement involved with urban beautification and the creation of grand civic centers and public buildings. The monumental bridges of Los Angeles are discussed in more detail in *City of Los Angeles Monumental Bridges, 1900-1950*, a report prepared for Caltrans by JRP Historical Consulting in May of 2004. This report surveyed 45 bridges, and found that 29 of these appear to be eligible for National Register listing under Criterion C, for their design qualities. The majority of these bridges cross the Los Angeles River, and have Beaux Arts Classical details, consistent with much of the City Beautiful architecture of the period. A few of the later examples of highly ornamented bridges, from the late 1920s and 1930s, exhibit Art Deco detailing that was popular at that time. The West Blvd. Bridge, 53C1380, was identified in the JRP report as one of the city's most distinctive examples of a bridge designed in this style.

Most of the city's ornate, monumental bridges were determined eligible for National Register listing as a result of the original statewide bridge survey, carried out in the mid-1980s. The West Blvd. Bridge was included in that survey, but was considered ineligible for National Register listing. This 1933 bridge had just passed the 50-year threshold for National Register listing at that time, and relatively few bridges from the late 1920s and early 1930s, other than concrete arches and metal trusses, were identified as significant in the original survey. In addition, Art Deco design features apparently were not considered as significant then as they are today.

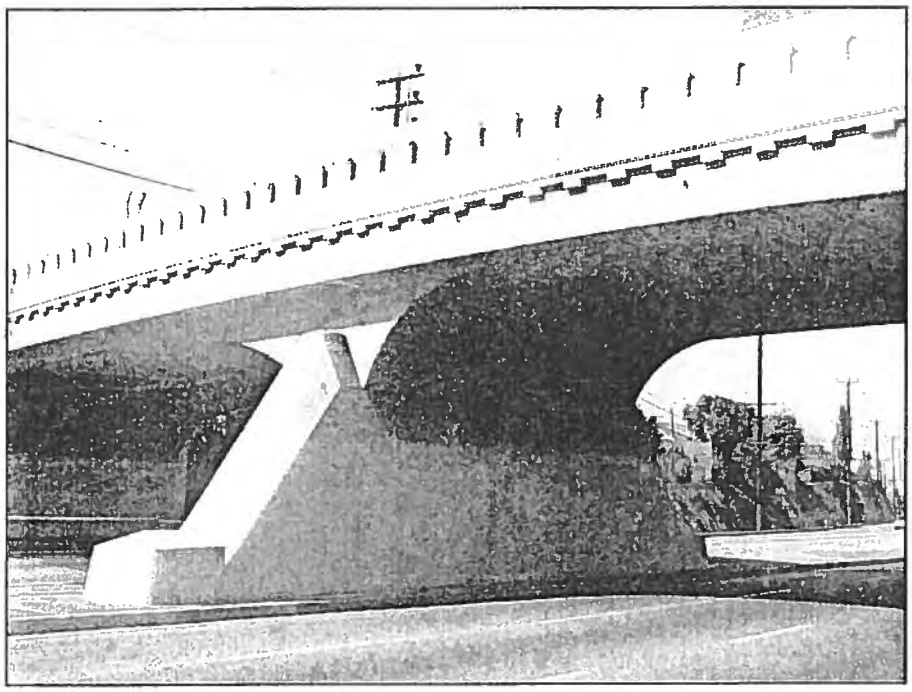

In addition to being eligible for National Register listing under Criterion C, this bridge is considered an historical resource for the purpose of compliance with the California Environmental Quality Act (CEQA).

***P3a. Description** (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries):

The resource is a five-story, symmetrical, rectangular shaped, Art Moderne style, industrial building. The building has a one-story addition on the north facade. The building has a concrete foundation, concrete and stucco walls and a flat roof. The first floor is divided from the other floors by a belt course. The building's design includes extensive vertical and horizontal detailing with raised vertical pilasters between sets of windows that extend to the roof line. The pilasters end in simple jagged detailing at the roofline. Raised medallion motifs are placed between the pilasters just under the roof edge. Metal fire escapes are present on the south and east facades. Windows are placed in evenly spaced, horizontal rows across the sides of the building which provide a contrast to the vertical detailing. The windows are metal framed, multilight, casement style windows. Doors are minimized due to the technical and security aspects of the building and include simple, single doors. The south elevation includes metal fire escapes. The SBC logo appears on the north and west facades. The rear of the property includes a large parking lot. The building appears to be in good condition

The founder of telephone service in the United States was noted inventor Alexander Graham Bell. The Pacific Bell Company began as the Bell Patent Association in 1875 and underwent several transformations in the New England area and by 1877, the company was known as the Bell Telephone Company. Change continued and the company's name and operating procedures changed from the National Bell Telephone Company (1879) to American Bell Telephone Company (1880), then Western Electric Company (1882), next the American Telephone and Telegraph Company (1885-1925); and Bell Telephone Laboratories in 1925. From the 1920s to the mid-1980s, over 22 Bell telephone companies operated under various names. In 1984, the company underwent divestiture and became several different companies, known as "Baby Bells" who provided local service to the different regions of the country. In 1887, the company had two employees and no assets or revenues. In 1900, the company employed 33,000 employees and had over 800,000 telephones in service with assets of 122 millions. By 1940, company employees numbered 324,000, assets were at $4.1 billion and revenues topped $1.2 billion. At the time of divestiture, there were 150 million telephones in service in the U.S., assets stood at $150 million, over 1 million employees managed over $70 billion in assets. The company has grown with the emerging technological changes, regulatory developments and controls, and the expansion of the country's population. The company has undergone extensive changes to meet the needs of the nation in wartime, depression, and all the myriad changes of the last 130 years. The Pacific Bell facility on South La Brea was constructed on property owned originally by Edward G. Trinkeller who constructed a public parking garage on the site in the 1930s. The garage was removed and the present facility was constructed ca. 1939. The records for the facility were unavailable due to the nature of the public utility regulations. Building permits for the property were available only for previous activity on the parcels. The Los Angeles County Assessor's office did not have records available.

Integrity Statement

In regard to the seven aspects of integrity of location, design, setting, materials, workmanship, feel and association, the ca. 1939 building on this property has retained its original location. It has not been moved. The building's setting, feel and association have basically remained intact. In addition, its design, materials, and workmanship have remained intact. A smaller one-story building as added to the structure but it has not affected the overall integrity of the property. The integrity level of the property is good and the condition of the building is good.

National Register of Historic Places Eligibility Evaluation

The property was assessed under National Register Criterion A for its potential significance as part of a historic trend that may have made a significant contribution to the broad patterns of our history. The building was constructed as part of the overall expansion of Los Angeles and Southern California telephone service during the post-World War I years. There is no significant historic trend or event that is associated with this property. **Therefore, the property does not appear to qualify for the National Register of Historic Places (NHRP) under Criterion A.**

The property was considered under Criterion B for its association with the lives of persons significant in our past. There is no evidence to suggest that any of the persons associated with the construction or development of the building were considered important in the history of this property. None of the persons associated with this building appear to have made any significant contributions to the development of the area and do not appear to be historically significant in any way. **Therefore, the property does not appear to qualify for the National Register of Historic Places (NHRP) under Criterion B.**

The property was evaluated for Criterion C for embodying the distinctive characteristics of a type, period, or method of Art Moderne construction, or representing the work of a master, or possessing high artistic values, or representing a significant and distinguishable entity whose components lack individual distinction. The building was constructed to provide telephone service as part of the overall development of commercial and residential growth in Southern California in the post-World War I period. The building was designed in a basically Art Moderne style but incorporates other stylistic elements. The building has undergone few alterations and repairs on the exterior, however, the interior of the structure has been heavily modified to deal with technological changes. The building does not represent a significant and distinguishable entity whose components may lack individual distinction. The building serves as an example of the Art Moderne style created across southern California during this period but it includes common elements of this style. The building's design does not rise to a level of significance and it does not serve as a significant example of the style to qualify for National Register status. The building lacks significant artistic values and does not represent the work of a master architect or craftsman. Neither the architect or contractor was identified. None of these unidentified men are considered to be master architects or craftsman. The building retains its basic integrity due. **Therefore, the property does not appear to qualify for the National Register of Historic Places (NHRP) under Criterion C.**

The property was considered for Criterion D for the potential to yield, or may be likely to yield, information important to prehistory or history. In order for buildings, structures and objects to be eligible under this criterion, they would need to "be, or must have been, the principal source of information." This is not the case with this property. **Therefore, the property does not appear to qualify for the National Register of Historic Places (NHRP) under Criterion D.**

In summary, the property does not appear to qualify for the NHRP under these criteria. Therefore, the building is not a historic resource for the purposes of NHPA. The property was not assessed for California Register or local designation eligibility.

DESCRIPTION

7a. Architectural style: Eclectic

7b. Briefly describe the present *physical description* of the site or structure and describe any major alterations from its original condition:

The structure located at 1851 North Highland Avenue is situated on a steep hillside. The one-story residence is built of wood frame and stucco construction. It is built in an essentially rectangular plan with an assymetrical pictched roof. The main entrance of the structure is located within a recessed porch at the northeast corner. The most distinctive feature of the structure, with the exception of the roof shape, is a chimney incorporated within the construction of the south wall and appearing flush with the wall surface. The chimney heightens the assymetrical characteristic of the roof. The windows are of the casement type, set flush with the wall surface with minimal use of trim. The hillside site is heavily landscaped with shrubs, flowering plants, and trees, including a large eucalyptus in front of the main elevation.

18. Related features: None.

SIGNIFICANCE

19. Briefly state historical and/or architectural importance (include dates, events, and persons associated with the site.)

The structure located at 1851 North Highland Avenue was originally built as a residence beginning in November 1921. The original owner was Mrs. Frances Lyon who resided at 1905 Highland Avenue. A review of Los Angeles City Directories was unable to determine if Mrs. Lyons moved her residence up the hill to this location following construction. Mrs. Lyon commissioned the notable architectural firm of Pierpont & Walter S. Davis to design and build the structure for an estimated cost of $4,050. Los Angeles County Assessor's records indicate that the residence was obtained by Mary Gross in 1926. City Directories again could not verify residence here of Mary Gross, but it may be noted that the Frederick A. Gross family owned property adjacent to this site and resided at nearby 1912 Hillcrest Road. Incidentally, the current owner of the residence is William Gross.

CONTINUATION SHEET

19. Significance

The structure is significant for its unusual eclectic architectural designed by a notable architectural firm Davis & Davis, and for its use of the splendid hillside location in close proximity to residential structures designed by Frank Lloyd Wright at 1962 Glencoe and Rudolph M. Schindler at 1911 North Highland Avenue. Another Davis & Davis residence is located on the adjacent lot at 1913 North Highland Avenue. The structure has been well maintained, and has undergone no apparent alterations.

The architectural firm of Pierpont & Walter S. Davis designed numerous structures throughout Los Angeles during the 1920's and 1930's. Their most significant designs include St. John's Episcopal Church, an elaborate Italian Romanesque design built in 1923 at 615 West Adams Boulevard; the 1926 Roman Gardens apartment building at 2000 N. Highland Avenue; the 1928 Villa d'Este Garden Apartments at 1355 Laurel Avenue; the 1929 El Greco Apartment Building at 1028 Tiverton; and the Echo Park Branch of the Los Angeles City Library, built in 1926-28 at 520 Glendale Boulevard. They designed several other notable major buildings including the Sun Drug Company Building at 557-559 South Broadway in 1920; a 1923 school building at Effie and Padach; and the 1930 Kappa Alpha Theta Sorority House at 736 Hilgard Avenue in Westwood. Their residential designs include the Eltinge House, built in 1921 at 2327 Fargo Street, the nearby De Keyser residence at 1913 North Highland, and the Chotner House, built in 1921 at 1215 Gramercy Place. The structure at 1851 North Highland represents an early period in the firm's history, when the majority of their commissions were residential. The design is superior to the nearby De Keyser residence, even though they were built about the same time. Although both structures utilize different building materials, they each are incorporated well into the hillside site and contribute to the unique architectural variety of the immediate neighborhood.

DESCRIPTION

7a. Architectural style: Eclectic

7b. Briefly describe the present *physical description* of the site or structure and describe any major alterations from its original condition:

The residential structure located at 1913 North Highland Avenue is situated atop a steep hillside. The one-story structure is built in essentially a rectangular plan with a slight wing extension at the southwest corner, and has overall measurements of 26 by 38 feet. The wood frame wall construction is covered with clapboard siding finished with vertical cornerboards. The gable roof has a slight pitch, and extends past the walls with eaves supported by exposed rafter ends. Some attic ventilation holes are drilled at the gable peaks. The entrance area includes an arched porch opening covered by a matching gable roof. Windows appear to be original and are the double hung sash type. The structure is set in a densely landscaped area, complete with mature trees and flowering plants. The structure has remianed in good condition and appears to be unaltered.

SIGNIFICANCE

19. Briefly state historical and/or architectural importance (include dates, events, and persons associated with the site.)

The structure located at 1913 North Highland Avenue was originally built as a residence for Pierre De Keyser. De Keyser commissioned the notable Los Angeles architectural firm of Pierpont & Walter S. Davis to design and build the structure. Construction was begun in March 1922 for an estimated cost of $3,500. The site location is extremely significant as it lies on a hillside directly adjacent to residences designed by Frank Lloyd Wright at 1962 Glencoe and Rudolph Schindler at 1911 North Highland. Each of these structures are related because of their juxtaposition on the same hillside, and although each is constructed of an entirely different wall surface material they all are subtly incorporated into the terrain. Therefore, although the design of this structure is probably not unique enough to satisfy National Register eligibility requirements, the fact that it was designed

19. Significance

by the notable firm of Davis & Davis, and it's immediate proximity to structures designed by two of America's most influential architects, the structure is inextricably linked to the architectural development of this hillside and should be considered for eligibility because of this relationship.

The original residents of the structure were the De Keyser family. Pierre was listed as a clerk in the 1926 Los Angeles City Directory, Peter as an artist, and John also as a clerk. By 1928, John was a department manager at M. Preeman, and Peter was a salesman for A.E. Little Company.

The architectural firm of Pierpont & Walter S. Davis designed numerous structures throughout Los Angeles during the 1920's and 1930's. Their most significant designs include St. John's Episcopal Church, an elaborate Italian Romanesque design built in 1923 at 615 West Adams Boulevard; the 1926 Roman Gardens apartment building at 2000 N. This building is composed of five contiguous brick and stucco buildings constructed during the years 1926, 1927, 1951, 1952, and 1958. The principal building (Building 1) features a flat roof and a brick and stucco exterior. Double-wide entry doors are located on the southern and western facades. A large square galvanized metal element is attached to the western elevation. Building 2 is brick, with a single-story extension located on the western façade. Aluminum-sliding windows on the eastern façade are framed between the brick cornice above, and small decorative metal squares below. (See Continuation Sheet).

The building located at 7141 Santa Monica Boulevard currently functions as a metal plating facility (Faith Plating). The main part of the building was originally constructed in 1926-27. The building was later added to several times. An addition, completed by contractor Jerome White in 1952, added a 2,400 square feet open shed, and converted an existing space to function as a warehouse. Building 2 (1117 Detroit) once functioned as apartments, however were later converted to industrial use. (See Continuation Sheet).

P3a (Description) continued:

A portion of the east façade has been in-filled with concrete block. Both single and double-wide entryways are located on the front (south) façade. A gable-roofed metal covering with square metal posts is attached to the northwest façade. Building 3 is a large, rectangular, stucco-covered building with a flat roof and no eave overhang. Regularly-spaced aluminum sliding windows are present on the eastern façade. A single entry door and double-wide opening with a corrugated metal covered sliding door is also located on this façade. Building 3 encompasses two other buildings (what would be buildings 4 and 5). These are wood and brick buildings under the shared roof of building 3.

B10 (Significance) continued:

In 1958, a 15,800 square feet addition was completed for manufacturing and storage space. Architect Frank O. Gehry designed a two-story addition to the building in 1963. This space added 3,600 square feet and function as offices. Other miscellaneous alterations were undertaken on the building in the 1980s, such as fire damage repair, new and reconfigured doors, and the addition of a small storage room (Los Angeles County Building Permits).

Research did not reveal this property to have significant associations with important themes in local or state history (CRHR Criterion 1). Likewise, the building does not appear to be significantly associated with persons considered important in history (CRHR Criterion 2). The addition designed by noted architect Frank O. Gehry occurred in the 1960s, to an existing structure. This addition was later modified during alterations completed in the 1980s. The later modification, combined with the addition being less than 50 years old (age criteria for historic buildings), renders significance under Criterion 2 unjustifiable. The building does not embody distinguishing architectural characteristics, nor does it appear to be the work of a master (CRHR Criterion 3). This building, in its current condition and configuration, is the result of numerous alterations undertaken by various individuals over time, and does not retain integrity to its original construction date. This type of building is well represented throughout the Los Angeles area, and does not appear likely to yield important primary information on historic construction techniques or technologies (CRHR Criterion 4). This building does not appear eligible for CRHR listing.

B10 (Significance) continued:

Research did not indicate that this building had an important association to significant historic trends or events in local or state history (Criterion 1). This building is not known to be associated with a significant individual in history (Criterion 2). Although this apartment building has retained its general configuration with only a few modifications, it does not represent a rare building type or use of materials, nor does it embody distinguishing architectural characteristics of a particular style (Criterion 3). The building can be described as vernacular, with a nod towards the Moderne; exhibited by its horizontal banding and southern façade's flat roof. Other apartment buildings in the Los Angeles area provide better examples of architecturally distinctive styles, such as the Mauretania, a ten-unit Art Deco apartment building located at 520 N. Rossmore Avenue, and the Moderne-styled apartment building at 10427 Wilshire Boulevard. While some buildings and structures can sometimes yield important information on historic construction techniques and technologies, this type of mid-twentieth century vernacular building is well represented in both written and visual materials. This building does not appear likely to yield important primary information (Criterion 4). This apartment building does not appear eligible for CRHR listing.

Assessor's Parcel No. 5547-020-020, Lots 14 and 15, Block !, Davidson Tract

***P3a. Description** (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries):
The building is a five-story with basement, basically rectangular shaped, symmetrical, Spanish Eclectic style, apartment building. The building has a concrete foundation, stucco exterior with a flat roof. Elaborately detailed corner sections project above the roofline. A center section has similar detailing and a flat roof projects outward from the front façade. Metal fire escapes ascend up the front façade at this center section. The building has a belt course between the first and second floors which adds detail to a basically plain exterior. A row of sculptured lion heads runs along the area directly below the belt course. The building has a recessed centered entrance. The entrance doors are a pair of non-original wood doors with oval glass inserts. The windows are placed in even rows across the facades and were originally double hung wood framed windows. Many of the windows have been replaced with metal framed, multilite windows and metal security screens. The building has a side alley with parking on the south façade of the structure. The building is in fair condition.

*B8. Related Features: Parking area
B9a. Architect: Richard D. King b. Builder: Unknown
*B10. Significance: Theme: Spanish Eclectic Architecture Area: Los Angeles Period of Significance 1926-Present Property Type Residential Applicable Criteria C (Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity.)

The city of Los Angeles was sited on land that had originally been settled by the Spanish in the 1700s. The Spanish created large ranchos on the land in southern California and by the 1820s, the land passed into the hands of the newly formed country of Mexico. By 1850, the area had been acquired by the United States and thousands of newcomers came to California to cerate ranches, farms, orchards and new cities. The present-day city of Los Angeles was a significant part of that trend. After World War I, the Los Angeles area underwent significant growth in the 1920s as the Hollywood movie industry began to attract newcomers to the business and associated commercial activities. The population swelled and building of new apartments for these people became highly profitable. The apartment building under evaluation was part of this larger trend. The building was constructed in 1926, according to Building Permit #LA27544, at a cost of $150,000.00. The building was designed by architect Richard King. The building contains 48 apartment units and 133 rooms. The building was altered in the 1950s and the 1980s with door and window changes and electrical, roofing and plumbing changes to the structure. The building is in fair condition.

(continued from page 2)

Integrity Statement

In regard to the seven aspects of integrity – location, design, setting, materials, workmanship, feeling and association – the ca. 1926 building on this property has retained its original location. The building has not been moved. The setting, feeling and association have not remained intact as the urban area surrounding the structure has changed considerably over time. New buildings with new uses, additional streets, changes in density, and increased commercial activity from 1926 to the present have altered the original neighborhood setting, feeling and association. The design, materials and workmanship of the structure have not remained intact. Alterations to the structure have eliminated elements of the original integrity. The integrity level is fair and the condition of the building is poor.

National Register of Historic Places Eligibility Evaluation

The property was assessed under National Register of Historic Places Criterion A for its potential significance as part of any historic trends or events that may have made a significant contribution to the broad patterns of our history. The building was constructed as part of the overall continuing residential and commercial development of the Los Angeles area which began in the 1880s and continues to the present time. There is no significant trend or event associated with the property. **Therefore, the property does not appear to meet the criteria for significance under Criterion A: Event.**

The property was assessed under National Register of Historic Places Criterion B for its potential significance and association with a person of importance in national history. There is no evidence to suggest that any of the persons associated with the construction or development of the building were considered important in the history of the property or nation. None of the persons associated with the property appear to be historically significant at the level necessary to meet the criteria for the National Register of Historic Places. **Therefore, the property does not appear to meet the criteria for significance under Criterion B: Person.**

The property was assessed under National Register of Historic Places Criterion C for its potential significance as a property which embodies the distinctive characteristics of a type, period, method of construction or style of Spanish Eclectic architecture, represents the work of a master architect, builder or craftsman, possesses high artistic values, or represents a significant or distinguishable entity whose components lack individual distinction. No unusual elements or features are present that would differentiate the building from others of the same style. The building is not significant as an example of the Spanish Eclectic style of architecture as it contains only minimal details of this style. The building has undergone alterations which have compromised its original integrity. The alterations include: door and window changes, roof and plumbing alterations, indoor alterations, and an addition to the rear of the building. The building's style does not rise to a level of significance to quality for the National Register. The building is not an example of the work of a master architect, builder or craftsman. **Therefore, the property does not appear to meet the criteria for significance under Criterion C: Architecture.**

The property was assessed under National Register of Historic Places Criterion D for its potential significance and its ability to convey information. The property yields, or may be likely to yield, information important in prehistory or history. In order for buildings, structures, or objects to be significant under Criterion D, they need to "be, or must have been, the principal source of information." This is not the case with this property. **Therefore, the property does not appear to meet the criteria for significance under Criterion D: Information Potential.**

In summary, the property does not appear to qualify for the National Register of Historic Places under any of the above criteria. Therefore, the building is not considered an historic resource for the purposes of the NHPA. Ths property was not assessed for eligibility for the California Register or local register eligibility.

This historic building was visited January 25, 2011 in support of a proposed collocation undertaking by Clearwire (LOS4750A). During the course of background research in support of the proposed undertaking new photographs of the building were taken and are included here for ongoing preservation purposes. The building presently hosts numerous telecommunications collocations a the rooftop behind FRP antenna screening.

The original DPR Form was submitted in 2008 by Wayne Bonner and Kathleen Drawford as part of their study. No changes to the condition and description were evident.

*P3a. Description (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries):

The resource is a four-story with basement, asymmetrical, rectangular shaped, Modern style, apartment building. The building has a concrete foundation, stucco exterior and flat roof. A penthouse structure is present on the roof of the building. The penthouse has a flat roof with a lower level wrap around flat roof. The lower level roof extends from the south façade around the side of the structure to the west façade. The dominant feature of the facades are large metal framed, fixed pane windows which provide extensive light into the interior. The windows include slider style sections. The windows vary in size and shape but are primarily large rectangular shaped windows. Air conditioning units are present within many of the window sections. Balconies with wood railings are present as an additional design element on the main façade. Metal framed sliding glass doors provide access to the balconies. Two wide entrances on each end of the structure lead into the underground parking garage/basement area. The building is in good condition and no major alterations to the structure were noted.

Integrity Statement

In regard to the seven aspects of integrity – location, design, setting, materials, workmanship, feeling and association – the ca. 1957 building on this property has retained its original location. The building has not been moved. The setting, feeling and association have basically remained intact as the urban area surrounding the structure has not changed substantially. No major changes from 1957 to the present have altered the original neighborhood setting, feeling and association. The design, materials and workmanship of the structure has remained intact. The integrity level is good and the condition of the building is good.

National Register of Historic Places Eligibility Evaluation

The property was assessed under National Register of Historic Places Criterion A for its potential significance as part of any historic trends or events that may have made a significant contribution to the broad patterns of our history. The building was constructed as part of the overall continuing residential development of the Los Angeles area which began in the 1880s and continues to the present time. There is no significant trend or event associated with the property. **Therefore, the property does not appear to meet the criteria for significance under Criterion A: Event.**

The property was assessed under National Register of Historic Places Criterion B for its potential significance and association with a person of importance in national history. There is no evidence to suggest that any of the persons associated with the construction or development of the building were considered important in the history of the property or nation. None of the persons associated with the property appear to be historically significant at the level necessary to meet the criteria for the National Register of Historic Places. **Therefore, the property does not appear to meet the criteria for significance under Criterion B: Person.**

The property was assessed under National Register of Historic Places Criterion C for its potential significance as a property which embodies the distinctive characteristics of a type, period, method of construction or style of Modern architecture, represents the work of a master architect, builder or craftsman, possesses high artistic values, or represents a significant or distinguishable entity whose components lack individual distinction. No unusual elements or features are present that would differentiate the building from others of the same style. The building is not significant as example of the Modern style of architecture as it contains only basic details of this style. The building's style does not rise to a level of significance to quality for the National Register of Historic Places. The building is not an example of the work of a master architect, builder or craftsman. No architect or contractor were identified for the building and therefore, the building cannot be considered to be an example of the work of a master architect, builder or craftsman. **Therefore, the property does not appear to meet the criteria for significance under Criterion C: Architecture.**

The property was assessed under National Register of Historic Places Criterion D for its potential significance and its ability to convey information. The property yields, or may be likely to yield, information important in prehistory or history. In order for buildings, structures, or objects to be significant under Criterion D, they need to "be, or must have been, the principal source of information." This is not the case with this property. **Therefore, the property does not appear to meet the criteria for significance under Criterion D: Information Potential.**

In summary, the property does not appear to qualify for the National Register of Historic Places under any of the above criteria. Therefore, the building is not considered to be an historic resource for the purposes of the NHPA. The property was not assessed for eligibility for the California Register or local San Diego register eligibility.

The resource is a three-story, rectangular shaped, asymmetrical, Modern style, commercial building located on a corer lot on a major thoroughfare. The building has a concrete foundation, stucco and brick exterior and a flat roof. The first floor contains metal framed glass door entrances on the south façade and large sections of metal framed plate glass windows on the east façade. Canvas awnings are present over the window areas. A metal staircase is present on the south façade and is recessed into the building. Metal grilles are present on the west end of the south façade and across the first floor of the west façade. This area is open behind the grille area. The south façade is a blank wall with brick and stucco detailing on the second and third floors. The east and west façades contain rows of metal framed fixed pane and slider style windows on the second and third floors. The second and third floors have vertical and horizontal raised sections to form a subtle detailing around the window sections. The area behind the building contains a small parking lot. The building is in good condition and no major alterations were noted.

City of Los Angeles building permit records indicate that the original structure on the property was a single family residence. The site originally contained a one-story commercial structure built in 1934 by owner Sam Rosen. The building was demolished in 1963 to permit construction of the current structure. No original building permits were located for the current structure. The building is used for commercial operations and currently houses Cabinet City. No major alterations were noted and no permits were filed for any major alterations.

Integrity Statement

In regard to the seven aspects of integrity – location, design, setting, materials, workmanship, feeling and association – the ca. 1963 building on this property has retained its original location. The building has not been moved. The setting, feeling and association have basically remained intact as the urban area surrounding the structure has not changed substantially. No major changes from 1963 to the present have altered the original neighborhood setting, feeling and association. The design, materials and workmanship of the structure have remained intact. The integrity level is good and the condition of the building is good.

National Register of Historic Places Eligibility Evaluation

The property was assessed under National Register of Historic Places Criterion A for its potential significance as part of any historic trends or events that may have made a significant contribution to the broad patterns of our history. The building was constructed as part of the overall continuing commercial development of the Los Angeles area which began in the 1880s and continues to the present time. There is no significant trend or event associated with the property. **Therefore, the property does not appear to meet the criteria for significance under Criterion A: Event.**

The property was assessed under National Register of Historic Places Criterion B for its potential significance and association with a person of importance in national history. There is no evidence to suggest that any of the persons associated with the construction or development of the building were considered important in the history of the property or nation. None of the persons associated with the property appear to be historically significant at the level necessary to meet the criteria for the National Register of Historic Places. **Therefore, the property does not appear to meet the criteria for significance under Criterion B: Person.**

The property was assessed under National Register of Historic Places Criterion C for its potential significance as a property which embodies the distinctive characteristics of a type, period, method of construction or style of Modern architecture, represents the work of a master architect, builder or craftsman, possesses high artistic values, or represents a significant or distinguishable entity whose components lack individual distinction. No unusual elements or features are present that would differentiate the building from others of the same style. The building is not significant as an example of the Modern style of architecture as they contain only basic details of this style. The building's style does not rise to a level of significance to quality for the National Register of Historic Places. The building is not an example of the work of a master architect, builder or craftsman as none of these individuals were identified in the research phase. **Therefore, the property does not appear to meet the criteria for significance under Criterion C: Architecture.**

The property was assessed under National Register of Historic Places Criterion D for its potential significance and its ability to convey information. The property yields, or may be likely to yield, information important in prehistory or history. In order for buildings, structures, or objects to be significant under Criterion D, they need to "be, or must have been, the principal source of information." This is not the case with this property. **Therefore, the property does not appear to meet the criteria for significance under Criterion D: Information Potential.**

In summary, the property does not appear to qualify for the National Register of Historic Places under any of the above criteria. Therefore, the building is not considered to be an historic resource for the purposes of the NHPA. The property was not assessed for eligibility for the California Register or local San Diego register eligibility.

U.S. 101 freeway between Post Mile 8.05 and Post Mile 9.22.

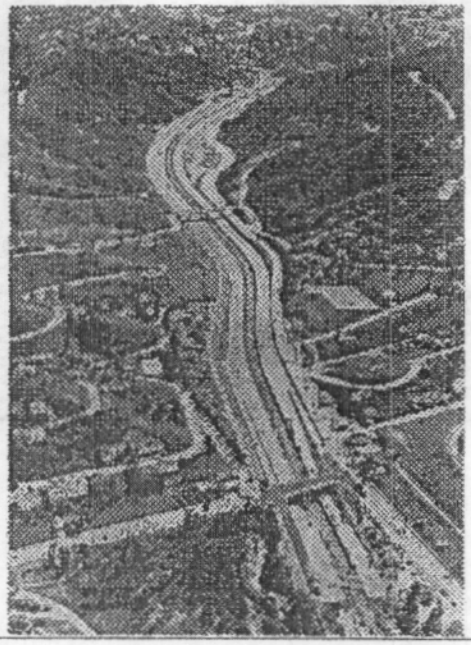

*P3a. Description: (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries.)

The Cahuenga Pass Transportation Corridor is a 2.08-meter (1.3-mile) section of the Hollywood Freeway (U.S. 101) within the city of Los Angeles. The corridor is a 10-lane, paved freeway, with access roads (Cahuenga Boulevard East and Cahuenga Boulevard West) on either side of it. It is the principal route in the Los Angeles Basin through the Cahuenga Pass between Hollywood and the San Fernando Valley. The physical constraints created by the steep hillsides along the Cahuenga Pass have limited changes which can be made to the area. The corridor's major elements include the Barham Boulevard, Mulholland, and Pilgrimage Overcrossings. The three bridges were erected using various related, reinforced concrete construction methods, yet the bridges are unique from one another in the execution of their railings, streetlights, and other ornamental features. The architectural style of the bridges, like many federally funded structures of the 1930s, is referred to as P.W.A. Moderne. The P.W.A. Moderne elements of the designs include the streamlined forms and the stylized details. Beyond the removal of the freeway's multi-modal feature, the Pacific Electric Railway (P.E.) tracks, the corridor has undergone few significant alterations over the past 56 years and remains in good condition.

Page 2 of 4 *NRHP Status Code 3S

*Resource Name or #: Cahuenga Pass Transportation Corridor

D1. Historic Name: Cahuenga Freeway

D2. Common Name: Hollywood Freeway (U.S. 101)

*D3. Detailed Description: (Discuss overall coherence of the district, its setting, visual characteristics, and minor features. List all elements of district.):

Set between the hills bounding the Cahuenga Pass, the contributing elements of the corridor visually identify this stretch as having greater historical significance than other segments of U.S. 101, as the freeway continues north. The district's contributing features include the Barham Boulevard Overcrossing (including the original ramps), Mulholland Overcrossing, Pilgrimage Overcrossing, original guard rails, and the original landscaping areas. Its non-contributing elements are the Cahuenga Boulevard Undercrossing, subsequent landscaping, subsequent exit ramp, k-rail barriers, freeway paving materials, and the freeeway lane configuration. Two pedestrian undercrossings (PUC), the Oakcrest Drive PUC and the Woodrow Wilson PUC, are no longer extant, and neither contribute nor detract from the CPTC.

*D4. Boundary Description: (Describe limits of district and attach map showing boundary and district elements.):

The district extends along the Hollywood Freeway, from the retaining walls immediately north of the Barham Boulevard Overcrossing (Post Mile 9.22) to the landscaping features immediately south of Pilgrimage Overcrossing (Post Mile 8.05) and includes the Mulholland CONTINUED See page 3

*D5. Boundary Justification:

The boundaries include all structures built as part of the P.W.A Cahuenga Pass Freeway project. The boundary extends to outside rights-of-way of Cahuenga Boulevard West and Cahuenga Boulevard East to include the landscaping features and other original structures as previously noted.

*D6. Significance: Theme Freeway Planning Area Los Angeles
Period of Significance 1924-1941 Applicable Criteria A, C (Discuss district's importance in terms of its historical context as defined by theme, period of significance, and geographic scope. Also address the integrity of the district as a whole.)

The Cahuenga Pass Transportation Corridor appears eligible for inclusion in the National Register of Historic Places, at the local level of significance, under Criterion A for its association with the early planning of the Los Angeles freeway system, and individual elements under Criterion C for their reinforced concrete construction with P.W.A. Moderne details. For Criterion A, the course of events leading to the planning and construction of the original Los Angeles freeway system includes the establishment of Los Angeles area transportation lines and patterns; the development of major residential, industrial, and commercial areas; several traffic studies and freeway plans; and finally Public Works Administration (P.W.A.) financing. The significance of the Cahuenga Pass with respect to established transportation patterns and the growth of development was clearly recognized at the opening of the first section of the freeway on June 16th, 1940, when Governor Culbert L. Olson declared, "This is a much-needed and an important improvement and it will serve a larger portion of our population than any other single highway project" (L.A. TIMES 6/16/1940). Similarly, CALIFORNIA HIGHWAYS AND PUBLIC WORKS called the project, "...the first unit of one of the most beneficial highway projects ever undertaken in the Los Angeles metropolitan area." Thus, the Cahuenga Pass Transportation Corridor is significant to the early development of the Los Angeles freeway system, not only because it was one of the first freeways constructed, but because its critical role serving the transportation needs of Los Angeles was clearly anticipated and realized. D4. BOUNDARY DESCRIPTION continued from DISTRICT RECORD
Overcrossing. The district includes related freeway structures and landscaping elements within the rights-of-way of Cahuenga Boulevard West and Cahuenga Boulevard East. The district also includes the original freeway structures (guard rails) that are located along Mulholland, Woodrow Wilson, and Oakridge Drive on the west side of the freeway and Lakeridge Place on the east side of the freeway.

D6. SIGNIFICANCE continued from DISTRICT RECORD
While the six-mile long Arroyo Seco Parkway was the first freeway in the western United States, it had some outmoded characteristics of a parkway, including a limited number of lanes. As David Gebhard and Harriette Von Breton discuss in LOS ANGELES IN THE THIRTIES: 1931-1941, the design of the Cahuenga Pass freeway looked much further ahead in terms of modern freeway design elements. They argue that the Arroyo Seco Parkway was considered "...part freeway and part traditional parkway" while the Cahuenga Pass freeway was called an "ultramodern" project (Montgomery 1941, 24). Describing the differences between the Arroyo Seco Parkway and the now Hollywood Freeway, Gebhard and Von Breton characterize the Arroyo Seco:

"The scale and detailing of its bridges, its landscaping, and its location in the existing system of parks in the Arroyo suggested slower movement--having more to do with the conservative and traditional world of the '20s--than the freeways...Entirely different in feeling and scale were the two units of the Cahuenga Freeway, the first of which opened in 1940, the second in 1942. Here at last was the broad, many-laned transportation corridor...Eight traffic lanes, with the [P.E.] track in the center, openly conveyed its singular purpose as a rapid transportation corridor...Angelenos could at last experience a sample of the new world to come." (22-23)

Additionally, elements of the district appear to be eligible under Criterion C for the 1940s reinforced concrete bridges' design qualities, in the P.W.A. Moderne style. The bridges are representative of a period of freeway construction during which reinforced concrete was the standard material, allowing for distinctive ornamentation to be designed for each bridge. The "plastic" nature of reinforced concrete allows it to be cast into any form (Mock 1949). Stephen Mikesell notes that "...the vast majority of reinforced concrete bridge members were cast-in-place in forms built specifically for that structure" (1986, 367). This is evident in the case of the Cahuenga Pass overcrossings, where elements like the piers, railings, and streetlight standards are unique to each bridge.

The Barham Boulevard, Mulholland, and Pilgrimage Overcrossings of the Cahuenga Pass Transportation Corridor were designed by the same Los Angeles city design team that was responsible for many of the distinctive Los Angeles River bridges. Headed by Merrill Butler, City Engineer of Bridges and Structures from 1923 until 1960, this team's characteristic design style can also been seen in the Avenue 26, Avenue 43, and Avenue 60 Overcrossings over the Pasadena Freeway (Mikesell 1986, 383) and the West 1st Street Bridge over Glendale Boulevard. Butler is a "significant designer" among bridge designers, as stated in the Caltrans evaluation forms for the Pasadena Freeway Overcrossings. Los Angeles freeway and freeway bridge building projects soon became the responsibility of the State of California Division of Highways. Thus, this freeway corridor and the contributing structures are among the last individually designed by the city of Los Angeles engineers.

While the locational integrity remains, the original setting of the district's formerly progressive multi-modal transportation characteristics is no longer apparent. The Cahuenga Pass Transportation Corridor is a small segment of 2.08 kilometers (1.3 miles) within the hundreds of kilometers that comprise the Los Angeles freeway system. Because this stretch is fully integrated with later sections of U.S. 101, the distinctive early association as "one of the nation's outstanding examples of modern road construction" (L.A. TIMES 6/16/1940) is no longer obvious. The setting of the district's immediate physical environment of the Cahuenga Pass, however, is preserved to a high degree, due to the steep hillsides along most of the district.

Page 4 of 4 *Recorded by M.FitzGerald, F. Smith *Date 02/27/1997 ☒ Continuation ☐ Update
*Resource Name or #: Cahuenga Pass Transportation Corridor

The Cahuenga Pass Transportation Corridor maintains its original function as the principal vehicular passageway between the hills north of Hollywood and the San Fernando Valley. In addition, the contributing bridges serve their original purposes and the integrity of design of the Cahuenga Pass freeway exists to a high degree. However, the original multi-modal design of the freeway has been destroyed by the elimination of the P.E. Railway tracks when its passenger service through the pass ended on December 28, 1952 (Crump 1978, 111), and the tracks were removed in the late 1950s. The original reinforced concrete stairways which provided access from the Barham bridge to the P.E. tracks were removed in 1958 (Caltrans 1958). The elimination of the mass transit line allowed the freeway to expand to the current configuration of 10 lanes from its original design of eight lanes.

Furthermore, the original P.W.A. Moderne design theme among the bridges and accessory structures in the district has been retained and is prominent, particularly when compared against other segments of the Hollywood Freeway. The 1940 workmanship of the bridges exhibits the reinforced concrete material that would soon be outdated, in favor of prestressed concrete slab bridges with little custom design. The reinforced concrete material allowed the expression of ornamental elements of the balustrades, railings, and streetlight standards which are unique to each bridge. The district's integrity of bridge materials has been preserved. With only minor patching or repair work on the bridges and the loss of some streetlights, the physical elements of the bridges contribute to the district's high degree of material integrity and level of workanship. These design elements, materials, and workmanship contribute heavily to the district's integrity of feeling of a time period before the standard pre-cast, prestressed freeway bridges became common. Because the vast majority of Los Angeles freeways and freeway bridges were built after 1950 when few architectural styles or details beyond simple, clean lines were expressed, the existence of P.W.A. Moderne details within the freeway corridor significantly assists the observer in placing the district within its period of significance between 1940 and 1941.

The resource is a two-story, asymmetrical, rectangular shaped, Modern with Spanish Eclectic style, commercial building located on a main commercial corridor. The building has a concrete foundation, stucco exterior and flat roof with a sloping front portion covered with Spanish tile. The dominant feature of the front façade are two large arches with metal framed, non-historic, fixed pane windows and doors with transoms. The entrance detailing is repeated on a smaller scale on the four second floor windows. An additional single door arched entrance is located on the west end of the north façade. The east side of the building contains casement windows in various shapes and sizes with metal or wood frames, and two balcony areas for the second floor lofts. The rear of the building contains two metal foldup garage doors and several wood framed, casement style windows. A small restaurant building was attached to the structure on the east façade c. 1974 but ith as no viable connection with the subject building. The property has no landscaping and has been extensively altered with non-historic doors and windows, and interior changes. The building is in fair condition.

*B5. Architectural Style: Modern with Spanish Eclectic elements
*B6. Construction History: (Construction date, alternations, and date of alterations) The building was constructed in c. 1925. Alterations include door and window changes, entrance changes, roof changes and interior alterations.
*B7. Moved? ☒No ☐Yes ☐Unknown Date: _____ Original Location:
*B8. Related Features: Parking lot
B9a. Architect: Unknown b. Builder: Unknown
*B10. Significance: Modern Architecture Area: Los Angeles/West Hollywood
Period of Significance 1925-Present Property Type Commercial Applicable Criteria C
(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity.)

The building was constructed on Santa Monica Boulevard in 1925 as part of the ongoing commercial development of the West Hollywood area. No original records were located for the structure in any City of West Hollywood or County of Los Angeles files. The first records available for the structure date to 1983. At this time, the property was owned by Robert Martinez who operated a bicycle store from the property. Permits are on file to indicate that Martinez enlarged many of the windows on the building. In 1991, Martinez hired the Kings Construction Company to do a complete seismic retrofitting of the building. In 2001, the property was occupied by the Los Angeles Cannabis Resource Center. The Center replaced the rear garage doors. In 2003, the property was owned by the Justin Klentner Investment Company which completely remodeled the property from a commercial building to a life/work property. Lofts were created on the second floor and door and window changes took place. All the interior spaces were remodeled (Permit #B03-2994, October 22, 2003). Cost of the remodeling was estimated at $100,000. The property changed hands and was owned by Lofts, L.P. in 2007. At this point, no commercial operations are present as the first floor retail spaces are not rented. The living spaces on the second floor are occupied. A small restaurant and parking lot are present on the east side of the structure. According to building permit records, the restaurant was built in 1974, however, the structure appears to be older than 1974. It has not apparent connection to the main building and has no historic or architectural significance.

(continued from page 2)

Integrity Statement

In regard to the seven aspects of integrity – location, design, setting, materials, workmanship, feeling and association – the c. 1925 building on this property has retained its original location. The building has not been moved. The setting, feeling and association have not remained intact as the urban area surrounding the structure has changed substantially. Major changes from 1925 to the present have altered the original neighborhood setting, feeling and association. The design, materials and workmanship of the structure have not remained intact. Numerous changes have altered the interior spaces and the exterior of the building. The integrity level is poor and the condition of the building is fair.

National Register of Historic Places Eligibility Evaluation

The property was assessed under National Register of Historic Places Criterion A for its potential significance as part of any historic trends or events that may have made a significant contribution to the broad patterns of our history. The building was constructed as part of the overall continuing commercial development of the Los Angeles/West Hollywood area which began in the 1880s and continues to the present time. There is no significant trend or event associated with the property. **Therefore, the property does not appear to meet the criteria for significance under Criterion A: Event.**

The property was assessed under National Register of Historic Places Criterion B for its potential significance and association with a person of importance in national history. There is no evidence to suggest that any of the persons associated with the construction or development of the building were considered important in the history of the property or nation. None of the persons associated with the property appear to be historically significant at the level necessary to meet the criteria for the National Register of Historic Places. **Therefore, the property does not appear to meet the criteria for significance under Criterion B: Person.**

The property was assessed under National Register of Historic Places Criterion C for its potential significance as a property which embodies the distinctive characteristics of a type, period, method of construction or style of Modern with Spanish Eclectic elements architecture, represents the work of a master architect, builder or craftsman, possesses high artistic values, or represents a significant or distinguishable entity whose components lack individual distinction. No unusual elements or features are present that would differentiate the building from others of the same style. The building's style does not rise to a level of significance to quality for the National Register of Historic Places. The building on the site has undergone alterations which have severely compromised the integrity of the building. The building is not an example of the work of a master architect, builder or craftsman. None of the individuals or firms associated with the design or construction of the building are considered to be master craftsmen, therefore, the building cannot be considered to represent the work of a master architect, builder or craftsman. **Therefore, the property does not appear to meet the criteria for significance under Criterion C: Architecture.**

The property was assessed under National Register of Historic Places Criterion D for its potential significance and its ability to convey information. The property does not yield, or may not be likely to yield, information important in prehistory or history. In order for buildings, structures, or objects to be significant under Criterion D, they need to "be, or must have been, the principal source of information." This is not the case with this property. **Therefore, the property does not appear to meet the criteria for significance under Criterion D: Information Potential.**

In summary, the property does not appear to qualify for the National Register of Historic Places under any of the above criteria. Therefore, the building is not considered to be an historic resource for the purposes of the NHPA. The property was not assessed for eligibility for the California Register or local Los Angeles register eligibility.

***P3a. Description** (Describe resource and its major elements, include design, materials, condition, alterations, size, setting and boundaries.)
The resource is a seven and nine-story hotel complex. The building is asymmetrical, irregular shaped, Modern style, hotel building. The building has a concrete foundation, stucco exterior and flat roof. The front section of the building has a curved shape and the rear portion extends at a right angle from the front structure. The front entrance to the structure has a non-historic portico style roof which is supported by a wall of glass and concrete. The entrance consists of non-historic metal and glass sliding doors. The windows are metal framed, metal slider style windows placed in even rows across the facades. The rear section, the proposed cell tower location, is a nine-story addition constructed in 1970. A one-story restaurant and banquet hall were added on the south façade in 1970. The property also contains a pool and lounge area on the south portion of the property. A small parking lot is present in front of the building and parking structure is present on the north side. The property is in good condition but has been altered extensively since it's original 1964 construction.

The complex was constructed in c. 1964. Alterations and tenant improvements to the complex have taken place from 1964-Present.
***B7. Moved?** X **No** Yes Unknown Date: _____ Original Location _____
***B8. Related Features**: Small parking area
B9a. Architect: David Jacobson **b. Builder:** Good-Era Realty Company
***B10. Significance:** Modern Architecture **Area**: Los Angeles/LAX Airport **Period of Significance**: 1963- Present **Property Type:** Commercial **Applicable Criteria**: C
(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity.)

Building permits were filed in 1963 to permit the construction of a 7-story, 33,000 square foot hotel for the Holiday Inn corporation (Permit #43116, July 10, 1963). The owner, Good-Era Realty and Construction Company was responsible for the actual construction of the $3.5 million hotel. The architect was David Jacobson and the engineer for the project was listed as the Panhurst and Culp Company. The hotel was constructed to provide additional hotel space in the immediate vicinity of the LAX Airport. The hotel has undergone numerous improvements, alterations, and upgrades to keep pace with the hotel industry. The property changed hands and was purchased by the Airway Lodge of California company in 1970 and the company instituted major alterations to the structure. The 9-story rear section of the building, the site of the proposed cell tower location, was added at this time (Permit #15705, September 10, 1970). A restaurant and lounge facilities were added and the project was designed by architect Vincent A. DeGotis. The new addition was constructed at a cost of $3 million. A parking structure was also added at this time (Permit #16167, September 9, 1970). The architect for the parking structure was Kaitayama and Mook and Nerenbaum and Associates. The property is currently owned by the Sheraton Corporation and has continued to operate as a hotel. Entrance, window and door changes, interior changes, additions of banquet halls, pool facilities, cocktail lounge, restaurants, and various tenant improvements have altered the original design concepts of the building and have severely compromised the building's integrity.

(Continued from page 2)

Integrity Statement

In regard to the seven aspects of integrity – location, design, setting, materials, workmanship, feeling and association – the c. 1964 Modern style building on this property has retained its original location. The building has not been moved. The setting, feeling, and association have not remained intact as the urban area surrounding the structure has changed substantially and the complex itself has had major alterations and additions. Major changes from 1964 to the present have altered the original neighborhood setting, feeling and association. The design, materials and workmanship of the structure have not remained intact. The building has had numerous interior and exterior alterations to accommodate various tenant uses. The integrity level is fair and the condition of the building is good.

National Register of Historic Places Eligibility Evaluation

The property was assessed under National Register of Historic Places **Criterion A** for its potential significance as part of any historic trends or events that may have made a significant contribution to the broad patterns of our history. The building was constructed as part of the overall continuing commercial development of the Los Angeles area which began in the 1880s and continues to the present time. There is no significant trend or event associated with the property. **Therefore, the property does not appear to meet the criteria for significance under Criterion A: Event.**

The property was assessed under National Register of Historic Places **Criterion B** for its potential significance and association with a person of importance in national history. There is no evidence to suggest that any of the persons associated with the construction or development of the building were considered important in the history of the property or nation. None of the persons associated with the property appear to be historically significant at the level necessary to meet the criteria for National Register of Historic Places. **Therefore, the property does not appear to meet the criteria for significance under Criterion B: Person.**

The property was assessed under National Register of Historic Places **Criterion C** for its potential significance as a property which embodies the distinctive characteristics of a type, period, method of construction or style of Modern architecture, represents the work of a master architect, builder or craftsman, possesses high artistic values, or represents a significant or distinguishable entity whose components lack individual distinction. The building is a fair example of the main characteristics of the Modern style, however, extensive alterations have compromised the original integrity and reduced it's significance. The building's style does not rise to a level of significance to qualify for the National Register of Historic Places. The building is not a good example of the work of a master architect, builder or craftsman. The architect and contractor are not considered to be masters in their fields. The building has been altered with additions, interior changes, and creation of new elements. Therefore, the building cannot be considered to represent the work of a master architect, builder or craftsman and it has not retained its original integrity. **Therefore, the property does not appear to meet the criteria for significance under Criterion C: Architecture as a good example of Modern style architecture.**

The property was assessed under National Register of Historic Places **Criterion D** for its potential significance and its ability to convey information. The property does not yield, or may not be likely to yield, information important in prehistory or history. In order for buildings, structures, or objects to be significant under Criterion D, they need to "be, or must have been, the principal source of information." This is not the case with this property. **Therefore, the property does not appear to meet the criteria for significance under Criterion D: Information Potential.**

In summary, the property does not appear to qualify for the National Register of Historic Places under any of the above criteria. Therefore, the building is not considered to be an historic resource for the purposes of the NHPA. The property was not accessed for eligibility under the California Register or local Register eligibility.

In a letter to SHPO dated March 20, 2000, the Federal Highway Administration (FHWA) stated the following: "We have determined that the Southern Pacific Railroad/Pacific Electric Railway alignment and associated rail features are eligible for listing on the National Register of Historic Places under Criterion A as representing 'a pattern of events or a historic trend that made a significant contribution to the development of a community, a State, or the nation.'" The resource was described in more detail in the Historic Property Survey Report prepared in December 1999, for the Exposition Boulevard Right-of-Way Regional Bikeway Project, which stated that "this portion of the railroad is significant under Criterion A for being associated with two significant events, the founding of Santa Monica (and its founder, John P. Jones) and as an integral part of the Pacific Electric system." The period of significance was defined as follows: "between 1875 and 1900 for the development of Santa Monica and 1911-1930 when Santa Monica and adjacent cities developed and grew into self-sustaining communities." P3a. Description (Continued)

The limits of the eligible resource presented in the HPSR were from Vermont Avenue, on the east, to the bridge over Ballona Creek, on the west. The eastern limits are appropriate, as significant gaps in the existing tracks are evident from Vermont Avenue to points east in the MTA right-of-way. The western limits were not evaluated for the NOS-ECIS project.

Attached to this updated Primary Record, is a letter dated April 9, 2001, to the State Water Resources Control Board (SWRCB) from Myra L. Frank & Associates, Inc., representing the City of Los Angeles. The letter is included for the record because it indicates the locations where, during construction of NOS-ECIS, railroad tracks, ties, hardware, and significant ancillary equipment would be preserved in place or would be removed, stored, and replaced to replicate the existing condition.

It should also be noted for the record here, that these railroad features are typically removed and replaced or re-installed every twenty to thirty years, depending on the frequency of railroad traffic and the weathering of the railroad ties. Their removal and replacement or reinstallation is entirely consistent with common railroad carrier maintenance practices. Therefore, there is no evidence to suggest, and little likelihood, that any of the existing tracks, ties, hardware, and equipment were installed in their current location during the period of significance, which ended in 1930, as described in the MTA Regional Bikeway Historic Property Report, and that the integrity of the resource would not be diminished by this process.

Subject: North Outfall Sewer-East Central Interceptor Sewer Project (NOS-ECIS)
Section 106 of the National Historic Preservation Act
Protection of Railroad-Related Items in the Exposition Blvd. MTA Right-of-Way

Dear Ms. Hirn:

As you know, Myra L. Frank & Associates, Inc. is under contract with the City of Los Angeles to provide architectural historical services for the North Outfall Sewer-East Central Interceptor Sewer Project (NOS-ECIS) project, including consultation under Section 106 of the National Historic Preservation Act. On behalf of the City of Los Angeles, and in accordance with the Memorandum of Agreement for NOS-ECIS, we are requesting that you submit this information to the California State Historic Preservation Officer at your earliest convenience.

The vast majority of the NOS-ECIS project avoids disturbance of the Exposition Boulevard MTA right-of-way. At several locations, however, railroad related features may have to be temporarily disturbed during construction, either for construction vehicular access or utility relocation. The Exposition Bouevard MTA right-of way, between Vermont Avenue and the Ballona Creek, was determined eligible for the National Register by the Federal Highway Administration (FHWA) in a letter to SHPO dated March 20, 2000, for the Exposition Boulevard Right-of-Way Regional Bikeway undertaking (Bikeway).

The resource was identified as the Southern Pacific Railroad/Pacific Electric Railway and was found to meet National Register criterion (a). The period of significance of the resource, as stated in the Historic Property Survey Report for the Bikeway, dated December 1999, "is between 1875 and 1900 for the development of Santa Monica and 1911-1930 when Santa Monica and adjacent cities developed and grew into self-sustaining communities."

Finding of No Adverse Effect: Because railroad ties are typically replaced every 20 to 30 years, and because railroad tracks are typically moved from high to low railroad traffic segments to extend their life cycle, there is no evidence to suggest, and little likelihood, that any of the existing

811 West 7th. Street, Suite 800, Los Angeles, CA. 90017

tracks, ties, hardware, and equipment were installed in their current location during the period of significance (ending in 1930) for the Southern Pacific Railroad/Pacific Electric Railway along Exposition Boulevard. For example, the crossing signal bridge near the tracks at La Cienega Boulevard and Jefferson Boulevard site identified above, has a patent date of 1987 on it, suggesting that it was installed within the last 15 years. Regardless of the age for the most recent installation of the tracks and ties, they contribute to the overall visual setting, feeling, and association of the historic property. Therefore, the City of Los Angeles is making every reasonable effort to protect these railroad tracks, ties, hardware, and equipment, and return them to their existing location and visual appearance at the sites named above where they cannot be avoided. Because these tracks, ties, hardware, and equipment, are historically moveable and reusable or replaceable objects, and no demonstrable visual change would occur as a result of NOS-ECIS, no adverse effect on historic properties would occur.

It is the intent of the City of Los Angeles to protect historic railroad tracks, ties, miscellaneous railroad equipment and related hardware within the Exposition Boulevard MTA right-of-way. Options include protection of the resources in place when feasible, the preferred option. A second option is the removal, storage, and replacement of significant resources to replicate the existing conditions, particularly the linear continuity of the railroad tracks. It is not the intent to introduce any new visual effects.

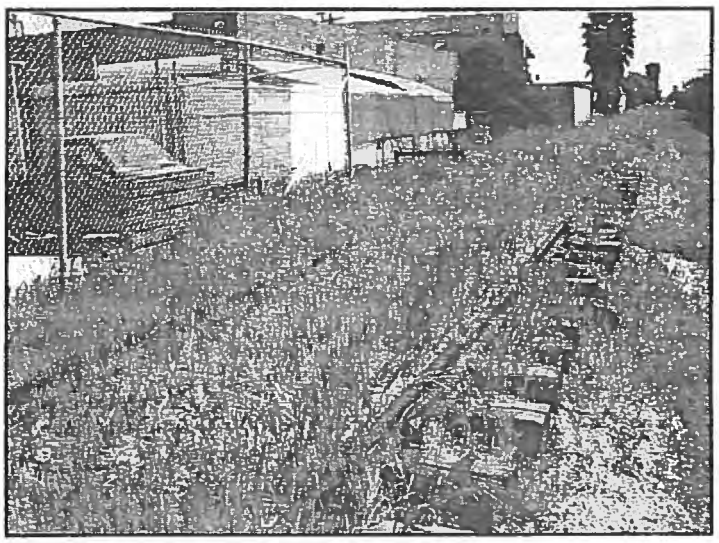

Per the request of Clarence Caesar at the California Office of Historic Preservation, the purpose of this letter is to state the nature of the work proposed to protect historic railroad tracks and ties within the Exposition Boulevard MTA right-of way and to submit photographs of existing conditions at three shaft sites and the Redondo utility site, as follows:

La Cienega Boulevard and Jefferson Boulevard: There are visible tracks at this location, but the ties are generally hidden below at-grade asphalt or soil. The proposed work at this location includes covering over the tracks and any remaining ties and hardware so they would be protected in place during construction, and returning them to their current condition, without damage, at the completion of work at this site. Tracks and ties at this location are to be left in place and covered with Geoturf and soil for their protection and ease of uncovering.

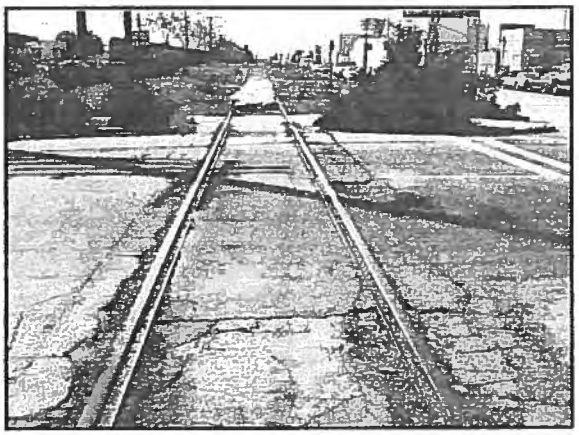

19-188984

Redondo Utility Relocation: There are visible above-grade ties and tracks at this location. Tracks at this location are to be carefully removed in the existing sections along with their related ties and hardware. These historic resources are to be stored at the site. After relocation of the underground utilities and completion of related construction activities, the tracks, ties and hardware are to be returned to their original locations in a manner that would return the area to essentially its original appearance. The utilities are to be placed underground. No new visual effects will be introduced into the right-of-way.

Farmdale Avenue and Exposition Boulevard Site. The proposed work at this site is to move the existing storm drain and also raise and widen it. Two options exist to accomplish the proposed work: The work may be accomplished by an open trench method or by tunneling under the existing resources. Exact location and treatment of the historical resources will depend on which option is selected. It is possible that the careful removal of existing tracks, ties and related hardware and the storage of these resources at the site will be required. After relocation of the storm drain and related construction activities, the tracks, ties and hardware are to be returned to their original locations in a manner that would return the area to its original appearance. No new visual effects will be introduced into the right-of-way at this location.

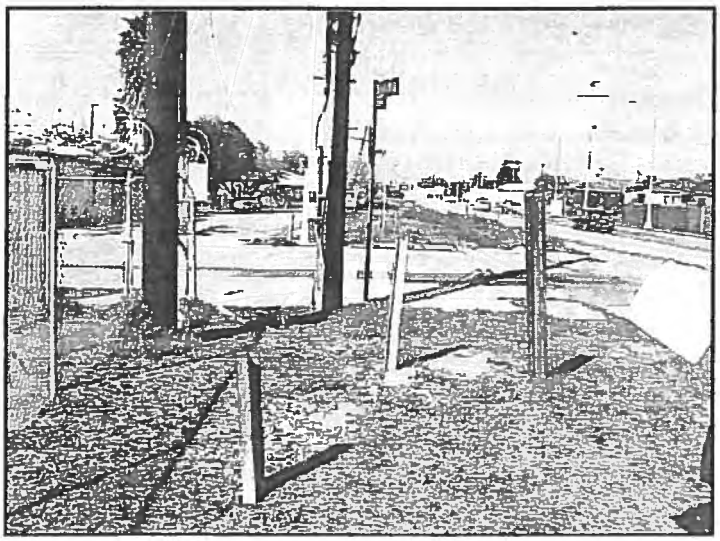

Farmdale Avenue intersection with MTA right-of-way, facing west.

West of Farmdale Avenue intersection, facing toward the west along the MTA right-of-way.

Arlington Shaft Site. A number of upright remnant track sections and abandoned wires and poles are at this location. These track remnants are not in their original positions and therefore are to be removed and discarded. With the exception of the upright track sections, the site is to be returned to its original condition.

In accordance with the Memorandum of Agreement for the NOS-ECIS project, please forward this information to Clarence Caesar at the California Office of Historic Preservation at your earliest convenience. If you have any questions, please feel free to call Alma Carlisle or myself at (213) 627-5376.

Sincerely,

Rick Starzak

***P3a. Description:** (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries)
APN 4334009161 is located at 8560 Burton Way in a heavily developed urban commercial setting. It is a Spanish Colonial Revival-style (with Italian Renaissance ornamentation) church. It occupies the southeast corner of the lot, adjacent to two other church buildings, and has a southeast-facing orientation. It is one story with a traditional church rectangular plan (nave and transepts). The building features medium-pitch front gable roof and symmetrical shed roofs on either side, all covered in red clay tiles and without an overhang. The windows bays are recessed and contain wood frame casement multi-light sashes, some with stain glass. The entries on the southeast and northwest elevations are recessed, with a classical molded trim, and filled with double wooden doors, each containing a single etched fixed glass pane. The walls are clad in stucco. The primary façade in particular is ornamented with engaged columns, molded cornices, a rounded arch, and a small window topped with a broken pediment and a ledge below. A molded cornice wraps around the entire building at about two-thirds height point. The primary façade is symmetrical. The building appears to be unaltered and is in good condition.

Period of Significance 1937/39 **Property Type** Church
Applicable Criteria NRHP Criterion C/CRHR Criterion 3 (Architecture) (Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity.)
The historical significance of APN 4334009161 within the APE was determined by applying the procedure and criteria for the *National Register of Historic Places* (NRHP), *California Register of Historical Resources* (CRHR), and the definition of a historical resource used for CEQA. Criteria Consideration A of the NRHP dictates that a religious property is eligible only if it derives its primary significance from architectural or artistic distinction or historical importance to avoid any appearance of judgment by government about the validity of any religion or belief.

Based on site investigations and historic research, APN 4334009161 appears to possess the requisite significance to be eligible for listing on the NRHP, CRHR, as well as considered a historical resource for purposes of CEQA under Criterion C of the NRHP and Criterion 3 of the CRHR, as a building that significantly embodies the distinctive characteristics of the Spanish Colonial (and Italian Renaissance-style ornamentation) architectural style. Spanish Colonial Revival, most popular between 1915 and the commencement of World War II, is characterized by stucco surfaces which predominate over the openings; low-pitched tile roofs, limited number of openings, loosely related to outdoors through use of French doors, terraces, pergolas; use of decorative ironwork for windows, doors, balconies and roof supports; glazed and unglazed tile used for walls and floors, commercial buildings generally organized with their facades in deep-set vertical bands (with windows and spandrels recessed); and Plateresque and especially rich Churrigueresque ornament of cast concrete or terracotta. The Italian Renaissance style, most popular between 1890 and 1935, is characterized by decorate details such as quoins, roof-line balustrades, pedimented windows, classical door surrounds, molded cornices, and belt courses.

For a property to qualify for listing in the NRHP and CRHR, besides meeting one of the criteria, it must also retain a significant amount of its historic integrity. APN 4334009161 appears to retain sufficient historic integrity of location, design, setting, materials, workmanship, feeling, and association.

***P3a. Description:** (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries)
APN 4336008909 is located at 715 N. San Vicente Blvd. in a park setting and across the street from the Pacific Design Center. It is a Contemporary-style educational building. It occupies the west-center of the lot and has an east-facing orientation. It is one-story with a rectangular plan. The building features a primarily flat roof. Centered on the flat roof is a double folded-plate roof with glazed front-gables to mark the entry. The window bays are symmetrically located and contain metal-frame, fixed-pane window walls. The façade features brick end walls and painted metal panels above the doors and windows. The primary façade is symmetrical with an entry underneath the south gable through metal-frame commercial doors. The north and south ends of the building's façade are adjacent to a fence, which is connected to the roof of the building by horizontal metal beams. The five feet between the fence and the building are filled with flat concrete blocks and landscaping. The building appears to be minimally altered and is in good condition.

***B10. Significance: Theme** Architecture **Area** West Hollywood, Los Angeles County
Period of Significance 1960 **Property Type** Library
Applicable Criteria NRHP Criterion C/CRHR Criterion 3 (Architecture) (Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity.)
The historical significance of APN 4336008909 within the APE was determined by applying the procedure and criteria for the *National Register of Historic Places* (NRHP), *California Register of Historical Resources* (CRHR), and the definition of a historical resource used for CEQA.

Based on site investigations and historic research, APN 4336008909 appears to possess the requisite significance to be eligible for listing on the NRHP, CRHR, as well as considered a historical resource for purposes of CEQA under Criterion C of the NRHP and Criterion 3 of the CRHR, as a building that significantly embodies the distinctive characteristics of the Contemporary architectural style and as the work of master architect Edward H. Fickett. Architect Edward H. Fickett was a master architect and this represents his work and style of small modern houses as applied to an institutional building. The Contemporary style, popular between circa 1940 and 1980, is characterized by strong roof forms including flat, gabled, shed, or butterfly, typically with deep overhangs; large windows, often aluminum framed; non-traditional exterior finishes include vertical wood siding, concrete block, stucco, flagstone, and mullion-free glass; angular massing; sun shades, screens, or shadow block accents; horizontally oriented commercial buildings; distinctive triangular, parabolic, or arched forms; "eyebrow" overhangs on commercial buildings, and integrated, stylized signage on commercial buildings.

For a property to qualify for listing in the NRHP and CRHR, besides meeting one of the criteria, it must also retain a significant amount of its historic integrity. APN 4336008909 appears to retain sufficient historic integrity of location, design, setting, materials, workmanship, and feeling.

***P3a. Description:** (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries)
APN 4339007012 is located at 8703 Santa Monica Boulevard in a heavily developed urban commercial setting. It is a Gothic Revival-style commercial building. It occupies the front of the lot and has a southeast-facing orientation. It is one story on the west end and two stories with a corner tower and thin tower on the east end. It has a rectangular plan and irregular massing. The building features a medium-pitch gable roof on the one-story portion and a medium-pitch pyramidal roof on the tower; the roofs are covered in red clay tile. The windows are arranged irregularly, with rounded arch, metal frame, fixed pane glass storefront sashes on the ground floor. The second floor has a cantilevered bay window on the southeast corner filled with wood frame, multi-light casement sashes and topped with delicate tracery. The second story also contains two window bays with pointed arch tracery above and engaged pilasters on the sides and a group of four rectangular window bays surrounded by tracery; the bays are filled with wood frame, multi-light casement sashes. The walls are clad in stucco and a beige masonry veneer. The main entry is recessed on the southwest corner; the main entry and other entries to the respective storefronts are filled with metal frame, fixed pane glass commercial doors. The primary façade is asymmetrical. The building appears to be minimally altered and is in good condition.

Applicable Criteria NRHP Criterion C/CRHR Criterion 3 (Architecture) (Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity.)
APN 4339007012 was listed as a West Hollywood Cultural Resource (Resolution 94-1255) in 1994. As part of the Westside Subway Extension Project, URS investigators relocated this property in the field. The historical significance of APN 4339007012 within the APE was determined by applying the procedure and criteria for the *National Register of Historic Places* (NRHP), *California Register of Historical Resources* (CRHR), and the definition of a historical resource used for CEQA.

Based on site investigations and historic research, APN 4339007012 appears to possess the requisite significance to be eligible for listing on the NRHP, CRHR, as well as considered a historical resource for purposes of CEQA under Criterion C of the NRHP and Criterion 3 of the CRHR, as a building that significantly embodies the distinctive characteristics of the Gothic Revival architectural style. Gothic Revival, most popular between 1840 and 1880 (though later examples are not uncommon), is characterized by a steeply pitched roof, usually with cross gables; gables commonly have decorated vergeboards; wall surface extending into gable without break; windows commonly extending into gables, frequently having pointed-arch shape; one-story porches, commonly supported by flattened Gothic arches.

For a property to qualify for listing in the NRHP and CRHR, besides meeting one of the criteria, it must also retain a significant amount of its historic integrity. APN 4339007012 appears to retain sufficient historic integrity of location, design, setting, materials, workmanship, and feeling.

***P3a. Description:** (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries)
APN 5531017020 is located at 7118 Santa Monica Boulevard in a heavily developed urban commercial setting. It is a comprised of an out-of-service streetcar and a Block-style commercial building. It occupies the northwest corner of the lot (the rest of the lot is occupied by a shopping center constructed in 2003) and has a north- and west-facing orientation. The Block addition is primarily one story, with a two-story portion at the rear, and a rectangular plan. The building has a flat roof; the streetcar retains its rounded roof with apparent pipes and other equipment mounted on top. The streetcar has metal frame window sashes and a striped awning mounted on the west elevation. The building has metal frame windows with striped awnings on the west elevation and metal frame window walls on the north elevation. The streetcar is metal clad, and the building is stucco clad. The building is not ornamented. The building appears to be unaltered and is in good condition.

***P3a. Description:** (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries)
APN 5510027035 is located at 6101 Wilshire Boulevard. It is a Futurist-Googie-style restaurant building. It occupies the southeast corner of the lot and has a south-facing orientation. It is one story with a generally rectangular plan. The building features an asymmetrical folded roof covered in composite roll roofing and studded with marquee-style lights and metal cursive letters that spell "Johnie's Coffee Shop Restaurant" on the south elevation and "Coffee Shop Restaurant" on the east elevation. Aluminum-frame, fixed pane glass sashes form a continuous band of glass around the building. Wall cladding includes veneer rock at the wall junctions, stucco, and wood panel siding below the windows. The primary façade is asymmetrical with an entry on the south elevation that is filled with a metal frame, fixed pane glass standard commercial door with transom. The building appears to be unaltered and is in poor condition (vacant).

***P3a. Description:** (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries) The subject building is a circa 1950s-1980s three-story private/industrial building with four story west wing tower, executed in Modern style, particularly Streamline with International influence. The building appears to be constructed of a frame (lath and plaster), with various masonry veneers; brick, stucco, and tile. The building form is that of rectangular with curvilinear tower like appearance at the southeast corner. The principal façade is stucco with ventilation louvers (steel) along the first-floor. This industrial application appears to be an in-fill of a former ribbon-window arrangement. A wide band of projecting square tile separates the first and third stories. The third story is a running window-ribbon of single light aluminum-clad sliding window. The west wing tower is devoid of decorative elements and is four-story wall of stucco with the AT&T plaque at the cornice.

B1. Historic Name: unknown
B2. Common Name: AT&T Switch building
B3. Original Use: Commercial or Commercial/Industrial B4. Present Use: Private/Industrial
***B5. Architectural Style:** Modern, with Streamline and International style elements
***B6. Construction History:**
According to AT&T, the date of construction is 1958. According to the LACAO the date of recordation for the address and APN is 1967. However, it is unclear, given the numerous renovations that the date of recordation is equivalent to the date of construction for the building. At best, as date of construction circa 1958-1967 is given.

According to Sanborn Map (Los Angeles, Volume 20, 1926-1955, Sheet 2043) the Site building location is partially vacant. One rectangular free-standing split-level building identified as an electroplating facility is present just east of center along Melrose Avenue, between North Crescent Heights Boulevard and North Laurel Avenue. Circa 1972 (www.historicaerials.com), the electro-plating building appears to have been subsumed into the AT&T Switch building, or demolished and replaced with the Site building. The Site building is free-standing rectangular building extending ¾ the length of Melrose Avenue, from North Crescent Height Boulevard toward North Laurel Avenue. Circa 1980, the Site building has undergone renovation to include the curvilinear Streamline element at the Melrose Avenue and North Laurel Avenue intersection.

Period of Significance: 1950s **Property Type:** Commercial/Industrial **Applicable Criteria:** all
(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity.)

Historic architectural resources are evaluated in part, according to seven aspects of integrity as stated in the NHPA; (1) *Location* of the resource, (2) *Design* of the resource, (3) *Setting* of the resource, (4) *Materials* of construction, (5) *Workmanship* of the resource, (6) *Feeling* evoked by the resource, and/or (7) *Association* of the resource with a person or even of historical significance. These seven aspects of integrity are assessed and weighed against the four "Criteria of Significance" also found within the NHPA. The four Criteria are; (A) Associated with events which have made a significant contribution to the broad patterns of our history, or (B) Associated with the lives of persons significant in our past, or (C) Embody the distinctive characteristics of a type, period, or method of construction, or represent the work of a master, or possess high artistic value, or are representative of a significant and distinguishable entity of which the component may lack individual distinction, or (D) Yield, or are likely to yield, data important to our understanding of prehistory and/or history.

The subject building is a multiple level, asymmetrical, rectangular shaped, Modern style, public utility building located in a mixed commercial and residential neighborhood in Los Angeles. The building has a concrete foundation, concrete and stucco exterior and a multilevel flat roof. The front section of the building rises above the rest of the roofline. The corner of the two main facades curves around the corner. The facades contain long horizontal sections which form the dominant element on the sides of the building. A narrow section of metal framed, fixed pane windows are placed in a contiguous row through the middle of the section. Doors are single metal doors; some doors have small windows. The building is in good condition with no major alterations noted.

(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity.)

The subject property was built as a switch building for the Pacific Telephone and Telegraph Company in 1958. No original building permits were located for the property. Permits were filed for interior alterations to change the equipment to meet the rising demands for services and to keep pace with the technological advances of the telephone industry. The city of Los Angeles was undergoing a commercial and residential building boom in the years after World War II and the Pacific Telephone Company built the structure as part of its overall development of telephone service in the Los Angeles area. The building is one of many across the Los Angeles basin and played no greater role than any of the other similar buildings. The building is in good condition with no major alterations noted. .

Integrity Statement

In regard to the seven aspects of integrity – location, design, setting, materials, workmanship, feeling and association – the c. 1958 Modem style public utility building on this property has retained its original location. The building has not been moved. The setting, feeling, and association have not remained intact as the urban area surrounding the structure has changed. The design, materials and workmanship do not appear to have undergone major alterations. The integrity level is good and the condition of the building is good.

National Register of Historic Places Eligibility Evaluation

The property was assessed under National Register of Historic Places **Criterion A** for its potential significance as part of any historic trends or events that may have made a significant contribution to the broad patterns of our history. The building was constructed as part of the overall continuing commercial and residential development of the Melrose area of Los Angeles which began in the 1880s and continues to the present time. The building is one of many public utility buildings constructed during the post-World War II years to deal with the rise of population during the 1950s. There is no significant trend or event associated with the property. **Therefore, the property does not appear to meet the criteria for significance under Criterion A: Event.**

The property was assessed under National Register of Historic Places **Criterion B** for its potential significance and association with a person of importance in national history. There is no evidence to suggest that any of the persons associated with the construction or development of the building were considered important in the history of the property or nation. None of the persons associated with the property appear to be historically significant at the level necessary to meet the criteria for National Register of Historic Places. **Therefore, the property does not appear to meet the criteria for significance under Criterion B: Person.**

The property was assessed under National Register of Historic Places **Criterion C** for its potential significance as a property which embodies the distinctive characteristics of a type, period, method of construction or style of Modern architecture, represents the work of a master architect, builder or craftsman, possesses high artistic values, or represents a significant or distinguishable entity whose components lack individual distinction. The building's style does not rise to a level of significance to qualify for the National Register of Historic Places. The building is not a good example of the work of a master architect or craftsman as the no persons associated with the design or construction were identified. Therefore, the building cannot be considered to represent the work of a master architect, builder or craftsman. **Therefore, the property does not appear to meet the criteria for significance under Criterion C: Architecture as a good example of Modern style architecture.**

The property was assessed under National Register of Historic Places **Criterion D** for its potential significance and its ability to convey information. The property does not yield, or may not be likely to yield, information important in prehistory or history. In order for buildings, structures, or objects to be significant under Criterion D, they need to "be, or must have been, the principal source of information." This is not the case with this property. **Therefore, the property does not appear to meet the criteria for significance under Criterion D: Information Potential.**

In summary, the property does not appear to qualify for the National Register of Historic Places under any of the above criteria. Therefore, the building is not considered to be an historic resource for the purposes of the NHPA. The property was not accessed for eligibility under the California Register or local Los Angeles Register eligibility.

***P3a. Description** (Describe resource and its major elements, include design, materials, condition, alterations, size, setting and boundaries.)
The resource is a three-story, irregular shaped, asymmetrical, Modern style, commercial building located on a main commercial artery in the city of Los Angeles. The building has a concrete foundation, stucco and block exterior and a flat roof. The rear of the building is two-stories high. The block exterior on the front façade creates incised geometric detailing and strong vertical and horizontal lines. A hexagonal tower structure set on a four-sided base rises from the center of the building in the middle of the front façade. Several retail units are present on the ground floor of the structure and include non-historic metal and glass doors, metal framed fixed pane plate glass windows. Signage is present over the storefronts. The second floor windows are shorter than the windows on the third floor. All the windows are non-historic with metal frames and fixed pane, multilite sections. The rear portion of the south side of the building contains a large mural design. The north and east facades are plain blank facades utilized for pipes and wiring. An alley runs behind the building and along the south side of the structure. The building is in good condition.

B9a. Architect: Preston M. Jones **b. Builder:** Marshall P. Wilkinson
***B10. Significance:** Modern Architecture **Area:** Los Angeles **Period of Significance:** 1931 - Present **Property Type:** Commercial **Applicable Criteria:** C
(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity.)
The subject building was constructed in 1931 for the Bell and Howell company. The company was founded by Albert Howell, a film projector inventor in 1907 with his partner, Donald Bell, a movie projectionist. The men were pioneers in the early development of the film industry. The company introduced a movie camera in the 1920s, helped to make 35-millimeter film the industry standard, and served as a leading supplier to Hollywood. During World War II, the company made gun cameras and optical equipment for the military. After the war, the company expanded into microfilm equipment, electronic imaging and related concepts. Permits for construction of the building, Permit #LA06701, dated April 1, 1931, state that the building was built for the Bell and Howell Company at a cost of $40,000. The building was designed by Preston M. Jones and built by Marshall P. Wilkinson. The building underwent a variety of upgrades, repairs and alterations in 1939, 1951, 1957, 1958, 1968, 1972, 1975, 1976, 1977, 1988, 1989, and 1998. The building was altered by additions in 1976, 1977, and 1987. Sound rooms were added to the building with these permitted changes for the Federated Electronics Inc. company. The building has continued to operate as a retail operation until the present time.

Integrity Statement

In regard to the seven aspects of integrity – location, design, setting, materials, workmanship, feeling and association – the c. 1931 Modern style building on this property has retained its original location. The building has not been moved. The setting, feeling, and association have not remained intact as the commercial area surrounding the structure has changed substantially. Major changes from 1931 to the present have altered the original neighborhood setting, feeling and association. The design, materials and workmanship of the structure have not remained intact as various alterations and renovations have taken place. The building has not retained its integrity and the condition of the building is good.

National Register of Historic Places Eligibility Evaluation

The property was assessed under National Register of Historic Places **Criterion A** for its potential significance as part of any historic trends or events that may have made a significant contribution to the broad patterns of our history. The commercial complex was constructed as part of the overall continuing commercial development of the Los Angeles area which began in the 1880s. **Therefore, the property does not appear to meet the criteria for significance under Criterion A: Event.**

The property was assessed under National Register of Historic Places **Criterion B** for its potential significance and association with a person of importance in national history. There is no evidence to suggest that any of the persons associated with the construction or development of the building were considered important in the history of the property or nation. None of the persons associated with the property appear to be historically significant at the level necessary to meet the criteria for National Register of Historic Places. **Therefore, the property does not appear to meet the criteria for significance under Criterion B: Person.**

The property was assessed under National Register of Historic Places **Criterion C** for its potential significance as a property which embodies the distinctive characteristics of a type, period, method of construction or style of Modern architecture, represents the work of a master architect, builder or craftsman, possesses high artistic values, or represents a significant or distinguishable entity whose components lack individual distinction. The c. 1931 commercial building is a standard example of the main characteristics of the Modern style and does not display any unusual features or elements that would raise it to a level of significance to qualify for the National Register of Historic Places. The building has also been altered significantly and virtually none of the c. 1931 exterior appearance remains. The building is not an example of the work of a master architect, builder or craftsman as Preston M. Jones and Marshall P. Wilkinson were not identified as masters in their fields. Therefore, the building cannot be considered to represent the work of a master architect, builder or craftsman. **Therefore, the property does not appear to meet the criteria for significance under Criterion C: Architecture as a good example of Modern style architecture.**

The property was assessed under National Register of Historic Places **Criterion D** for its potential significance and its ability to convey information. The property does not yield, or may not be likely to yield, information important in prehistory or history. In order for buildings, structures, or objects to be significant under Criterion D, they need to "be, or must have been, the principal source of information." This is not the case with this property. **Therefore, the property does not appear to meet the criteria for significance under Criterion D: Information Potential.**

In summary, the property does not appear to qualify for the National Register of Historic Places under any of the above criteria. Therefore, the building is not considered to be an historic resource for the purposes of the NHPA. The property was not accessed for eligibility under the California Register or local Los Angeles Register eligibility.

***P3a. Description** (Describe resource and its major elements, include design, materials, condition, alterations, size, setting and boundaries.)
The subject building is two- and three-story, asymmetrical, irregular shaped, Modern style commercial building located on a main commercial artery in the city of Los Angeles. The building has a concrete foundation, stucco exterior and a flat roof with a domed tower projection. The tower contains cell towers. The roof steps up in two levels and the tower structure is placed at the center of the structure. The front façade contains horizontal detailing at various points on the elevation. The building has several retail units and includes a variety of entrances which consist of non-historic metal and glass doors. Windows vary in size, shape and placement around the facades and include non-historic metal framed, multilite, casement and fixed pane styles. The building is in good condition.

B1. Historic Name: None
B2: Common Name: None
B3. Original Use: Commercial/Retail
B4: Present Use: Public Commercial/Retail
***B5: Architectural Style:** Modern
***B6: Construction History:** (Construction Date, alterations and dates of alterations)
The subject building was constructed in approximately 1931. The original doors and windows have been replaced with non-historic doors and windows at an unknown time. Interior renovations have taken place to accommodate a variety of changing tenants.
***B7. Moved?** X **No** Yes Unknown Date: Original Location
***B8. Related Features:** None
B9a. Architect: Unknown **b. Builder:** Unknown
***B10. Significance:** Development of Los Angeles and Modern Architecture **Area:** Los Angeles **Period of Significance:** 1931-Present **Property Type:** Commercial **Applicable Criteria:** A and C
(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity.)
. The subject building was built in the 1930s as part of the commercial development of the City of Los Angeles. The city was undergoing a major population expansion and development of retail enterprises were common in the city as it met the commercial needs of the old and new residents. The building has undergone various alterations to upgrade the interior with a variety of tenant improvements and maintenance work over the decades. The front façade has been upgraded to modernize the structure and maintain its exterior appearance. No building permits were located for many of these changes but the changes are apparent from the visual observation of the property. The building has been used as a commercial retail building since it's construction with numerous retail units. The building is in good condition but it's integrity has been reduced by the various alterations over the decades.
B11. Additional Resource Attributes: (List attributes and codes) None

Integrity Statement

In regard to the seven aspects of integrity – location, design, setting, materials, workmanship, feeling and association – the c. 1931 Modern style commercial building on this property has retained its original location. The building has not been moved. The setting, feeling, and association have not remained intact as the urban area surrounding the structure has changed. The design, materials and workmanship have been altered by removal of original doors, windows and other elements. The integrity level is fair and the condition of the building is good.

National Register of Historic Places Eligibility Evaluation

The property was assessed under National Register of Historic Places **Criterion A** for its potential significance as part of any historic trends or events that may have made a significant contribution to the broad patterns of our history. The building was constructed as part of the overall continuing commercial and residential development of the Los Angeles area which began in the 1850s and continues to the present time. There is no significant trend or event associated with the property. **Therefore, the property does not appear to meet the criteria for significance under Criterion A: Event.**

The property was assessed under National Register of Historic Places **Criterion B** for its potential significance and association with a person of importance in national history. There is no evidence to suggest that any of the persons associated with the construction or development of the building were considered important in the history of the property or nation. None of the persons associated with the property appear to be historically significant at the level necessary to meet the criteria for National Register of Historic Places. **Therefore, the property does not appear to meet the criteria for significance under Criterion B: Person.**

The property was assessed under National Register of Historic Places **Criterion C** for its potential significance as a property which embodies the distinctive characteristics of a type, period, method of construction or style of Modern architecture, represents the work of a master architect, builder or craftsman, possesses high artistic values, or represents a significant or distinguishable entity whose components lack individual distinction. The building's style does not rise to a level of significance to qualify for the National Register of Historic Places. The building is not a good example of the work of a master architect or craftsman as the no persons associated with the design or construction were identified. Therefore, the building cannot be considered to represent the work of a master architect, builder or craftsman. **Therefore, the property does not appear to meet the criteria for significance under Criterion C: Architecture as a good example of Modern style architecture.**

The property was assessed under National Register of Historic Places **Criterion D** for its potential significance and its ability to convey information. The property does not yield, or may not be likely to yield, information important in prehistory or history. In order for buildings, structures, or objects to be significant under Criterion D, they need to "be, or must have been, the principal source of information." This is not the case with this property. **Therefore, the property does not appear to meet the criteria for significance under Criterion D: Information Potential.**

In summary, the property does not appear to qualify for the National Register of Historic Places under any of the above criteria. Therefore, the building is not considered to be an historic resource for the purposes of the NHPA. The property was not accessed for eligibility under the California Register or local Los Angeles Register eligibility.

***P3a. Description** (Describe resource and its major elements, include design, materials, condition, alterations, size, setting and boundaries.)
The subject property is an asymmetrical, four-story, rectangular shaped, Modern style, commercial storage building located on a main commercial artery in the city of Los Angeles. The building has a concrete foundation, stucco exterior, and a flat roof with penthouse structures. The building has vertical and horizontal incising in the walls to create a limited visual effect. The building includes long bands of metal framed windows which are the dominant features on the otherwise plain façade. The building has painted bands of color at the top of the facades at the roofline. Signage is present on the facades. The west façade contains an opening into the interior spaces and parking garage. The building is in good condition.

(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity.)

The building was constructed as part of the overall commercial and residential development of Los Angeles in the post-World War II period In approximately 1960. No original building permits were located for the property. Minimal permits were filed for various maintenance issues over the decades. The building has served as a storage facility since the time of its construction. No significant trends or events were connected with the facility as it is a standard type of storage facility, one of hundreds across the Los Angeles area. The building appears to have maintained its integrity as no major alterations were noted.

Integrity Statement

In regard to the seven aspects of integrity – location, design, setting, materials, workmanship, feeling and association – the c. 1960 Modern style commercial building on this property has retained its original location. The building has not been moved. The setting, feeling, and association have not remained intact as the urban area surrounding the structure has changed. The design, materials and workmanship do not appear to have been altered in any significant way. The integrity level is good and the condition of the building is good.

National Register of Historic Places Eligibility Evaluation

The property was assessed under National Register of Historic Places **Criterion A** for its potential significance as part of any historic trends or events that may have made a significant contribution to the broad patterns of our history. The building was constructed as part of the overall continuing commercial and residential development of the Los Angeles area which began in the 1850s and continues to the present time. There is no significant trend or event associated with the property. **Therefore, the property does not appear to meet the criteria for significance under Criterion A: Event.**

The property was assessed under National Register of Historic Places **Criterion B** for its potential significance and association with a person of importance in national history. There is no evidence to suggest that any of the persons associated with the construction or development of the building were considered important in the history of the property or nation. None of the persons associated with the property appear to be historically significant at the level necessary to meet the criteria for National Register of Historic Places. **Therefore, the property does not appear to meet the criteria for significance under Criterion B: Person.**

The property was assessed under National Register of Historic Places **Criterion C** for its potential significance as a property which embodies the distinctive characteristics of a type, period, method of construction or style of Modern architecture, represents the work of a master architect, builder or craftsman, possesses high artistic values, or represents a significant or distinguishable entity whose components lack individual distinction. The building's style does not rise to a level of significance to qualify for the National Register of Historic Places. The building is not a good example of the work of a master architect or craftsman as the no persons associated with the design or construction were identified. Therefore, the building cannot be considered to represent the work of a master architect, builder or craftsman. **Therefore, the property does not appear to meet the criteria for significance under Criterion C: Architecture as a good example of Modern style architecture.**

The property was assessed under National Register of Historic Places **Criterion D** for its potential significance and its ability to convey information. The property does not yield, or may not be likely to yield, information important in prehistory or history. In order for buildings, structures, or objects to be significant under Criterion D, they need to "be, or must have been, the principal source of information." This is not the case with this property. **Therefore, the property does not appear to meet the criteria for significance under Criterion D: Information Potential.**

In summary, the property does not appear to qualify for the National Register of Historic Places under any of the above criteria. Therefore, the building is not considered to be an historic resource for the purposes of the NHPA. The property was not accessed for eligibility under the California Register or local Los Angeles Register eligibility.

The City of Los Angeles is located on land that was originally occupied by Native Americans, and after 1769 by Spanish settlers, Mexican ranchers, and American entrepreneurs. By 1850, California had become a state and Americans began to change the character of California with ranches, orchards, and new cities. The property was owned by the Wilshire Medical Arts Corporation and they contracted with the contracting firm of Chotiner and Gumbiner for the building to be constructed (Permit #LA61351, dated February 19, 1957.) The cost of the building was $995,000.00. The building has been owned by the same owners since the time of its construction and has always been used for medical offices until the present time. The firm of Welton Becket and Associates was responsible for the design of numerous buildings in the Los Angeles area, including: Ackerman-Union Building, Beverly Center, Bullocks Wilshire, Bullocks Woodland Hills, Capitol Records Tower, Lever Brothers Office and Soap Company, Los Angeles Performing Arts Center, Pomona Central Library, Pomona City Hall, Santa Monica Civic Auditorium, and Schoenberg Hall.

(continued from page 2)

Integrity Statement

In regard to the seven aspects of integrity of location, design, setting, materials, workmanship, feel and association, the ca. 1957 building on this property has retained its original location. It has not been moved. The building's setting, feel and association have remained intact since its construction. The setting has not been altered extensively by the construction of numerous buildings from 1957-Present. The urban setting has not changed substantially since its construction. The integrity level of the property is good and the condition of the building is good.

National Register of Historic Places Eligibility Evaluation

The property was assessed under National Register Criterion A for its potential significance as part of a historic trend that may have made a significant contribution to the broad patterns of our history. The building was constructed as part of the overall continuing residential and commercial development of Los Angeles which began in the 1880s and continued through the 20th century. There is no significant historic trend or event that is associated with this property. **Therefore, the property does not appear to qualify for the National Register of Historic Places (NHRP) under Criterion A.**

The property was considered under Criterion B for its association with the lives of persons significant in our past. There is no evidence to suggest that any of the persons associated with the construction or development of the property were considered important in the history of this property. None of the persons associated with this building appear to have made any significant contributions to the development of the area and do not appear to be historically significant in any way. **Therefore, the property does not appear to qualify for the National Register of Historic Places (NHRP) under Criterion B.**

The property was evaluated for Criterion C for embodying the distinctive characteristics of a type, period, or method of Modern construction, or representing the work of a master, or possessing high artistic values, or representing a significant and distinguishable entity whose components lack individual distinction. The building was designed in a basic Modern style, typical of mid-20th century construction for structures such as commercial buildings. The building does not represent a significant and distinguishable entity whose components may lack individual distinction. The building does not serve as a good example of the Modern style which was used in Southern California for structures in the 1950s. The building does not include distinctive elements of this style and its design does not rise to a level of architectural significance. The building does not serve as a significant example of the style to qualify for National Register significance. The building does not include significant artistic values. The building was designed by the architectural firm of Welton Becket and Associates who are responsible for the design of many landmark buildings in the Los Angeles area. However, when the current building under investigation was compared to their overall body of work, the building fails to embody their basic design concepts. The building does not serve as a good example of their work and is one of the lesser examples of their design concepts. **Therefore, the property does not appear to qualify for the National Register of Historic Places (NHRP) under Criterion C.**

The property was considered for Criterion D for the potential to yield, or may be likely to yield, information important to prehistory or history. In order for buildings, structures and objects to be eligible under this criterion, they would need to "be, or must have been, the principal source of information." This is not the case with this property. **Therefore, the property does not appear to qualify for the National Register of Historic Places (NHRP) under Criterion D.**

In summary, the property does not appear to qualify for the NHRP under Criterion C. Therefore, the building is not considered to be a historic resource for the purposes of NHPA. The property was not assessed for California Register or local designation eligibility.

***P3a. Description** (Describe resource and its major elements, include design, materials, condition, alterations, size, setting and boundaries.)
The subject property is a six-story, rectangular shaped, symmetrical, Modern style, medical office complex located on a main commercial artery through the Beverly Hills area of Los Angeles. The building has a concrete foundation, stucco exterior and a flat roof. The building contains over 55,000 square feet of office space. The dominant feature of the north and south elevations are long continuous rows of metal framed, fixed pane, multilite windows. Slanted awnings extend along the banks of windows. The east and west walls are blank facades with signage. The ground floor of the building contains several retail units. The main entrance into the office complex is centered on the front façade and contains an arched window over the front entrance. The entrance is shaded by a flat roof which projects forward from the main mass of the building. The entrance doors are metal and glass. The various units contain metal framed, fixed pane, plate glass windows with metal and glass doors. Non-historic brown marble tiles were applied to the wall space between the units and frame the individual units and the entrance area. The building is in good condition.

(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity.)

The building was constructed as part of the overall commercial and residential development of Los Angeles in the post-World War II period In approximately 1957. No original building permits were located for the property. Minimal permits were filed for various maintenance issues and tenant improvements over the decades. The ground floor of the front façade has been modernized with the addition of new doors, new windows, and the application of tile details. The building has served as office space for medical tenants since the time of its construction. No significant trends or events were connected with the facility as it is a standard type of offices, one of hundreds across the Los Angeles area. The building appears to have maintained its integrity as no major alterations were noted and the overall mass, design, and footprint have remained the same.

Integrity Statement

In regard to the seven aspects of integrity – location, design, setting, materials, workmanship, feeling and association – the c. 1957 Mmodern style commercial building on this property has retained its original location. The building has not been moved. The setting, feeling, and association have not remained intact as the urban area surrounding the structure has changed. The design, materials and workmanship have been altered by ground floor additions on the front façade. The integrity level is good and the condition of the building is good.

National Register of Historic Places Eligibility Evaluation

The property was assessed under National Register of Historic Places **Criterion A** for its potential significance as part of any historic trends or events that may have made a significant contribution to the broad patterns of our history. The building was constructed as part of the overall continuing commercial and residential development of the Los Angeles area which began in the 1850s and continues to the present time. There is no significant trend or event associated with the property. **Therefore, the property does not appear to meet the criteria for significance under Criterion A: Event.**

The property was assessed under National Register of Historic Places **Criterion B** for its potential significance and association with a person of importance in national history. There is no evidence to suggest that any of the persons associated with the construction or development of the building were considered important in the history of the property or nation. None of the persons associated with the property appear to be historically significant at the level necessary to meet the criteria for National Register of Historic Places. **Therefore, the property does not appear to meet the criteria for significance under Criterion B: Person.**

The property was assessed under National Register of Historic Places **Criterion C** for its potential significance as a property which embodies the distinctive characteristics of a type, period, method of construction or style of Modern architecture, represents the work of a master architect, builder or craftsman, possesses high artistic values, or represents a significant or distinguishable entity whose components lack individual distinction. The building's style does not rise to a level of significance to qualify for the National Register of Historic Places. The first floor alterations have reduced the overall integrity of the structure to a degree. The building is not a good example of the work of a master architect or craftsman as the no persons associated with the design or construction were identified. Therefore, the building cannot be considered to represent the work of a master architect, builder or craftsman. **Therefore, the property does not appear to meet the criteria for significance under Criterion C: Architecture as a good example of Modern style architecture.**

The property was assessed under National Register of Historic Places **Criterion D** for its potential significance and its ability to convey information. The property does not yield, or may not be likely to yield, information important in prehistory or history. In order for buildings, structures, or objects to be significant under Criterion D, they need to "be, or must have been, the principal source of information." This is not the case with this property. **Therefore, the property does not appear to meet the criteria for significance under Criterion D: Information Potential.**

In summary, the property does not appear to qualify for the National Register of Historic Places under any of the above criteria. Therefore, the building is not considered to be an historic resource for the purposes of the NHPA. The property was not accessed for eligibility under the California Register or local Los Angeles Register eligibility.

(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity.)
The subject property was built in 1933 as a commercial property with residential space on the second floor. No original building permits were located for the property. Permits have been filed for door and window alterations, interior improvements and overall plumbing, electrical, and roofing improvements. The building has been used by the Gussman Meat Company for decades. The building was used as a warehouse for meat products by the Gussman family. The Gussman family has been in the meat business for over 70 years, supplying the Los Angeles restaurant industry with high quality meats and poultry. In 1987, current owner, Harvey Gussman, who inherited the business from his father, added a retail store on the ground floor of the building. The company sells meat to both wholesale and retail customers at the present time.

Integrity Statement

In regard to the seven aspects of integrity – location, design, setting, materials, workmanship, feeling and association – the c. 1933 Modern style commercial building on this property has retained its original location. The building has not been moved. The setting, feeling, and association have not remained intact as the urban area surrounding the structure has changed. The design, materials and workmanship have been altered by alterations to the building. The integrity level is fair and the condition of the building is good.

National Register of Historic Places Eligibility Evaluation

The property was assessed under National Register of Historic Places **Criterion A** for its potential significance as part of any historic trends or events that may have made a significant contribution to the broad patterns of our history. The building was constructed as part of the overall continuing commercial and residential development of the Los Angeles area which began in the 1850s and continues to the present time. There is no significant trend or event associated with the property. **Therefore, the property does not appear to meet the criteria for significance under Criterion A: Event.**

The property was assessed under National Register of Historic Places **Criterion B** for its potential significance and association with a person of importance in national history. There is no evidence to suggest that any of the persons associated with the construction or development of the building were considered important in the history of the property or nation. None of the persons associated with the property appear to be historically significant at the level necessary to meet the criteria for National Register of Historic Places. **Therefore, the property does not appear to meet the criteria for significance under Criterion B: Person.**

The property was assessed under National Register of Historic Places **Criterion C** for its potential significance as a property which embodies the distinctive characteristics of a type, period, method of construction or style of Modern architecture, represents the work of a master architect, builder or craftsman, possesses high artistic values, or represents a significant or distinguishable entity whose components lack individual distinction. Alterations have reduced the building's integrity. The building's style does not rise to a level of significance to qualify for the National Register of Historic Places. The building is not a good example of the work of a master architect or craftsman as the no persons associated with the design or construction were identified. Therefore, the building cannot be considered to represent the work of a master architect, builder or craftsman. **Therefore, the property does not appear to meet the criteria for significance under Criterion C: Architecture as a good example of Modern style architecture**.

The property was assessed under National Register of Historic Places **Criterion D** for its potential significance and its ability to convey information. The property does not yield, or may not be likely to yield, information important in prehistory or history. In order for buildings, structures, or objects to be significant under Criterion D, they need to "be, or must have been, the principal source of information." This is not the case with this property. **Therefore, the property does not appear to meet the criteria for significance under Criterion D: Information Potential.**

In summary, the property does not appear to qualify for the National Register of Historic Places under any of the above criteria. Therefore, the building is not considered to be an historic resource for the purposes of the NHPA. The property was not accessed for eligibility under the California Register or local Los Angeles Register eligibility.

The subject property is a tow- and three-story, asymmetrical, irregular shaped, Modern style apartment complex located on a major commercial artery in the city of Los Angeles in a mixed commercial and residential neighborhood. The 152,652 square foot complex has a concrete foundation, stucco exterior and a flat roof in varying levels with a wide eave overhang.. Many of the units are grouped around a large center courtyard with a swimming pool. The building has a large entrance area with signage and archways leading into the complex. Doors are single wood doors and the majority of the units contain balconies accessed by metal and glass sliding doors. The balconies have metal railings. Windows are metal framed, slider style primarily. The complex is heavily landscaped with mature palm trees and other types of trees, large bushes, flowers and grass lawns. The building complex is in good condition but a major renovation of the entire complex took place in 2000.

***B6: Construction History:** (Construction Date, alterations and dates of alterations)
The subject building was constructed in approximately 1963. The apartment complex was completely renovated in 2000.
***B7. Moved?** X **No** Yes Unknown Date: Original Location
***B8. Related Features:** None
B9a. Architect: Unknown **b. Builder:** Unknown
***B10. Significance:** Development of Los Angeles and Modern Architecture **Area:** Los Angeles **Period of Significance:** 1963-Present **Property Type:** Residential **Applicable Criteria:** A and C
(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity.)
The city of Los Angeles was founded in the late 1700s during the Spanish period of occupation, passed into the control of Mexico in the 1800s, and, by 1850 became American territory. Los Angeles is one of the major cities of the United States as a major banking, industrial, entertainment, and other major economic developments. The city has steadily grown and expanded over the decades. The city expanded greatly after World War II as returning veterans chose to move to the Los Angeles area for its climate and job opportunities. Thousands of apartment complexes were constructed to house these newcomers, many of which are still fully operational at the present time. The subject property was built in 1963 as one of these many new complexes and has no particular distinction. No original building permits were located for the structure but permits were filed over the years for general tenant improvements including electrical, plumbing and roofing permits. The apartment complex underwent a full scale, major renovation in 2000 to upgrade the building's appearance, deal with plumbing and electrical systems that were forty years old and attract new residents with a more modern, upscale apartment building. The building has been used as an apartment complex which contains studios and one-bedroom apartments, catering to single individuals or couples. The building is in good condition but its' historical integrity has been reduced by the replacement of original doors and windows, addition of new elements, upgrades of interiors and other alterations. .
B11. Additional Resource Attributes: (List attributes and codes) None

Integrity Statement

In regard to the seven aspects of integrity – location, design, setting, materials, workmanship, feeling and association – the c. 1963 Modern style residential building on this property has retained its original location. The building has not been moved. The setting, feeling, and association have not remained intact as the urban area surrounding the structure has changed. The design, materials and workmanship have been altered by a major renovation in 2000. The integrity level is fair and the condition of the building is good.

National Register of Historic Places Eligibility Evaluation

The property was assessed under National Register of Historic Places **Criterion A** for its potential significance as part of any historic trends or events that may have made a significant contribution to the broad patterns of our history. The building was constructed as part of the overall continuing commercial and residential development of the Los Angeles area which began in the 1850s and continues to the present time. There is no significant trend or event associated with the property. **Therefore, the property does not appear to meet the criteria for significance under Criterion A: Event.**

The property was assessed under National Register of Historic Places **Criterion B** for its potential significance and association with a person of importance in national history. There is no evidence to suggest that any of the persons associated with the construction or development of the building were considered important in the history of the property or nation. None of the persons associated with the property appear to be historically significant at the level necessary to meet the criteria for National Register of Historic Places. **Therefore, the property does not appear to meet the criteria for significance under Criterion B: Person.**

The property was assessed under National Register of Historic Places **Criterion C** for its potential significance as a property which embodies the distinctive characteristics of a type, period, method of construction or style of Modern architecture, represents the work of a master architect, builder or craftsman, possesses high artistic values, or represents a significant or distinguishable entity whose components lack individual distinction. The building is a standard, limited example of the Modern style with no innovative or distinctive design elements and the building has been completely remodeled and renovated in 2000. The building's style does not rise to a level of significance to qualify for the National Register of Historic Places. The building is not a good example of the work of a master architect or craftsman as the no persons associated with the design or construction were identified. Therefore, the building cannot be considered to represent the work of a master architect, builder or craftsman. **Therefore, the property does not appear to meet the criteria for significance under Criterion C: Architecture as a good example of Modern style architecture.**

The property was assessed under National Register of Historic Places **Criterion D** for its potential significance and its ability to convey information. The property does not yield, or may not be likely to yield, information important in prehistory or history. In order for buildings, structures, or objects to be significant under Criterion D, they need to "be, or must have been, the principal source of information." This is not the case with this property. **Therefore, the property does not appear to meet the criteria for significance under Criterion D: Information Potential.**

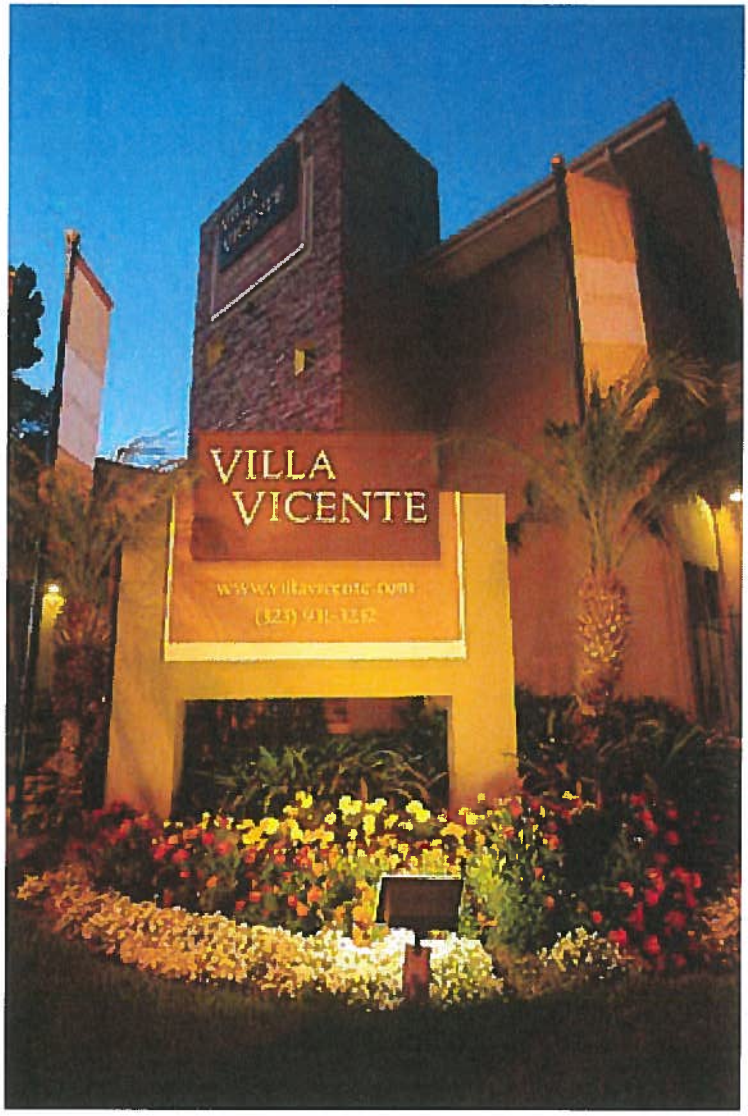

In summary, the property does not appear to qualify for the National Register of Historic Places under any of the above criteria. Therefore, the building is not considered to be an historic resource for the purposes of the NHPA. The property was not accessed for eligibility under the California Register or local Los Angeles Register eligibility.

DESCRIPTION

6. Property category building If district, number of documented resources 1
*7. Briefly describe the present physical appearance of the property, including condition, boundaries, related features, surroundings, and (if appropriat architectural style.

This 1,500 seat open-air amphitheatre is built in an oval-shaped plan within a natural bowl in the Hollywood Hills. The west side (back) of the theater contains a tall outer wall of poured-in-place concrete with an inner wall rising from the second story. The back inside wall of the theatre is broken by three heavy, double wood paneled doors decorated with a recessed grill pattern, accessing the seating isles. A centered, corbelled arch at the base of the outside wall is flanked by fluted convex and concave concrete surfaces broken by ornamental wood grilles on each side of the recessed entry. Above the arched entry is a pointed arched parapet. A grand stairway lead up to the main entry from the parking lot below. On the second level is a stucco clad addition attached to the main second story portion, housing a lighting and sound booth. Also attached is a tall corrugated metal parapet wall running along the top of the amphitheatre wall. These two major additions have not altered the original building, but merely rest on top of the original walls. The integrity of the original architecture remains intact.

The north and south walls of the amphitheatre are stepped downward towards the stage and are decorated with cross reliefs. The stage is flanked by two, elaborate two story towers with crenelated parapets. The corbelled arch is repeated in the doors and recessed panels. The side walls towards the rear of the stage also feature crenelated parapets. Rustic stonework forms the foundation of the stage and the walls at the rear of the stage. The natural hillside setting with stone retaining walls encloses the amphitheatre at the east side. Additional details include the heavy, Gothic-arched wooden paneled doors along the side walls. Period 1920 to 1964 Property Type amphitheatre Context formally developed? no

*19. Briefly discuss the property's importance within the context. Use historical and architectural analysis as appropriate. Compare with similar properties.

The Pilgrimage Theater is significant under Criterion A because of the historic role it played as an important cultural event and major tourist draw for Hollywood and Los Angeles. The "Life of Christ," also called the Pilgrimage Play, was performed every summer between 1920 and 1964 except after the first theater burned in 1929-30 and once in 1934. The Pilgrimage Theater was the personal vision of Christine Wetherill Stevenson, a wealthy Philadelphia Quaker, who sought to promote open-air dramas focusing on the lives of great religious leaders. As the founder of the Theater Arts Alliance in 1918, she spearheaded the search for a natural setting to build an amphitheater to produce the plays. She and Mrs. Chauncey Clarke first purchased 65 acres that became the site of the Hollywood Bowl. In 1920, Mrs. Stevenson purchased a smaller 29 acre site across from the Hollywood Bowl, and hired director H. Ellis Reed to produce the drama of the Life of Christ, having written the play herself. After Christine Stevenson died in 1923, Los Angeles Times owner Harry Chandler acquired the property and performance rights to the play from her estate. Los Angeles County obtained the amphitheatre during the early 1940s. In 1978 the county renamed it after John Anson Ford, a popular member of the board of supervisors who served from 1934 to 1958.

Continuation Sheet

#7 Description

The site is enhanced by landscape features on the adjacent hillsides, including a variety of trees. Adjacent and the north of the theater is a small, detached rectangular shaped flat roofed stucco-clad building that serves as a ticket office.

#19 Significance and Evaluation

The building is also eligible under Criterion C for its unique architectural style. The original design and layout of the amphitheater was apparently prepared by Bernard Maybeck between 1921 and 1922, but Maybeck's work was evidently largely destroyed in the fire of 1929. The present building was built on the same site as the earlier theater, apparently incorporating some of the original stone walls. This design was produced in 1930 by Los Angeles architect William Lee Woollett to reflect the ancient Judean architecture of Assyria and Babylon. The corbelled arches and crenelated parapets prominently displayed on the building reflect a free and largely speculative interpretation of the architecture of the Holy Land. The Gothic-arched, massive wooden paneled doors with metal straps also suggests a Medieval flavor. Religious symbols incorporated into the building, including cross and tablet motifs, relate directly to the building's intended purpose. This building is significant as an especially rare example of a period revival style of architecture which was employed only rarely, particularly relative to the huge popularity of the other period revival modes during the 1920s.

The building is also significant for its association with the architect and designer, William Lee Woollett, who was known for his flamboyant approach to ornament and rather liberal view of architectural historicism. Perhaps his best-known extant work is his collaboration with Albert C. Martin on the Million Dollar Theater (Los Angeles, 1918). He also designed interior murals for the Paramount Theater (Los Angeles, 1920), prepared plans for the Santa Monica Pier Amusement Company to reflect Pompeian architecture, and designed a theater in Venice. Woollett's non-architectural works included murals, set designs, sculptures and books. He was appointed to the Municipal Arts Commission in 1933.

The building is also associated with two important historical themes present in Southern California during the 1920s: religion and the entertainment industry. Both conventional and non-traditional forms of faith were gaining strength during this era, with the latter perhaps best typified by the theatrical evangelist, Aimee Semple McPherson. The Pilgrimage Theater represents a similar melding together of the entertainment and religious themes in a manner which perhaps would not have been possible elsewhere.

National Park Service: National Register of Historic Places
Progress on Updating National Register Bulletin 38 (Traditional Cultural Properties)

You are cordially invited to participate in a webinar with Paul Loether, NPS Chief of the National Register of Historic Places/National Historic Landmarks Program. The workshop will serve as a forum for discussing the current status of NPS' efforts to update the guidelines for identifying, evaluating, and documenting NR-eligible Traditional Cultural Properties as well as to discuss the proposed development of similar guidelines related to Native American landscapes.
The webinar will be held on Thursday, September 12, 2013 from 2:30 to 4:00 pm Eastern time.
If you would like to participate please contact Alexis Abernathy via e-mailalexis_abernathy@nps.gov.

***P3a. Description** (Describe resource and its major elements, include design, materials, condition, alterations, size, setting and boundaries.)
The subject property is a c.1928, Spanish Eclectic style, rectangular shaped, twenty-unit, apartment building located in a mixed commercial and residential neighborhood on a main commercial artery in the city of Los Angeles. The 12,000 square foot building has a concrete foundation, stucco exterior, and a flat roof with a shed style roof with Spanish tile on the front façade. The recessed, arched main entrance is centered on the front façade and includes an arched, front gable roof section that accentuates the front façade. Concrete steps lead into the main wood and glass entrance door. Windows vary in size, shape and placement around the facades and include metal or wood framed, fixed pane, multilight or slider style windows. Large focal windows are present on either side of the main entrance. The building is in good condition but has lost integrity due to the replacement of the original windows with non-historic windows.

Period of Significance: 1928-Present **Property Type:** Residential **Applicable Criteria:** A and C
(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity.)

The subject property is located on Crenshaw Boulevard, a main commercial artery in the city of Los Angeles. Los Angeles has developed from its founding in the late 1700s by Spanish missionaries and soldiers as ann outpost of the Spanish empire. It has grown from this humble beginning to become one of the largest and most important cities in the United States. The city has transitioned from a Spanish pueblo to part of the Mexican empire, to a city of California after 1850 and California's statehood. The city has grown exponentially with each decade and has become a major economic, cultural, trade, and manufacturing center which is globally important. In the 1920s, Los Angeles experienced major growth and development, especially with the advent of the automobile allowing it to expand across the landscape. The Crenshaw District neighborhood was developed in the 1920s and was initially a very diverse neighborhood with Jewish and Eastern European residents. Property covenants prevented African Americans and Asians from owning property. The area underwent an influx of new residents moving to participate in the movie industry, manufacturing and oil industries. The subject property was built as part of this process to house new residents. The twenty unit apartment building is one o thousands of similar style, type, and size that filled the neighborhoods of Los Angeles during this period. The building has undergone various interior renovations, general tenant improvements, and exterior changes to maintain and upgrade the structure. The building is in good condition but has lost integrity due to the changes. The area now is has a diverse population with Japanese, Hispanic and African American residents living in the small bungalows and apartment buildings in the area.

(Continued from page 2)

Integrity Statement

In regard to the seven aspects of integrity – location, design, setting, materials, workmanship, feeling and association – the c.1928 Spanish Eclectic style multiple family building on this property has retained its original location. The building has not been moved. The setting, feeling, and association have not remained intact as the urban area surrounding the structure has changed. The design, materials and workmanship have been altered by the replacement of original historic door and window elements and interior changes. The integrity level is fair and the condition of the building is good.

National Register of Historic Places Eligibility Evaluation

The property was assessed under National Register of Historic Places **Criterion A** for its potential significance as part of any historic trends or events that may have made a significant contribution to the broad patterns of our history. The building was constructed as part of the overall continuing commercial and residential development of the Los Angeles area which began in the 1700s and continues to the present time. There is no significant trend or event associated with the property. **Therefore, the property does not appear to meet the criteria for significance under Criterion A: Event.**

The property was assessed under National Register of Historic Places **Criterion B** for its potential significance and association with a person of importance in national history. There is no evidence to suggest that any of the persons associated with the construction or development of the building were considered important in the history of the property or nation. None of the persons associated with the property appear to be historically significant at the level necessary to meet the criteria for National Register of Historic Places. **Therefore, the property does not appear to meet the criteria for significance under Criterion B: Person.**

The property was assessed under National Register of Historic Places **Criterion C** for its potential significance as a property which embodies the distinctive characteristics of a type, period, method of construction or style of Spanish Eclectic architecture, represents the work of a master architect, builder or craftsman, possesses high artistic values, or represents a significant or distinguishable entity whose components lack individual distinction. The building's original doors and windows have been replaced, causing a loss of integrity. The building's style does not rise to a level of significance to qualify for the National Register of Historic Places. The building is not a good example of the work of a master architect or craftsman as the no persons associated with the design or construction were identified. Therefore, the building cannot be considered to represent the work of a master architect, builder or craftsman. **Therefore, the property does not appear to meet the criteria for significance under Criterion C: Architecture as a good example of Spanish Eclectic style architecture.**

The property was assessed under National Register of Historic Places **Criterion D** for its potential significance and its ability to convey information. The property does not yield, or may not be likely to yield, information important in prehistory or history. In order for buildings, structures, or objects to be significant under Criterion D, they need to "be, or must have been, the principal source of information." This is not the case with this property. **Therefore, the property does not appear to meet the criteria for significance under Criterion D: Information Potential.**

In summary, the property does not appear to qualify for the National Register of Historic Places under any of the above criteria. Therefore, the building is not considered to be an historic resource for the purposes of the NHPA. The property was not accessed for eligibility under the California Register or local Los Angeles Register eligibility.

1127-1129 N. Detroit Street contains a one-story Craftsman style bungalow with a detached rear dwelling. The primary dwelling is capped by a front gabled roof with projecting beam ends and rafter ends. Rectangular in plan, the residence is clad with medium wood clapboard siding. Fenestration consists of wood tripartite windows on the primary elevation while most windows on secondary elevations are largely obscured by screening and security bars. A concrete walkway with two steps leads to a centered front porch with Tuscan columns and a sheltered simple slab entrance door. A brick chimney and a bracketed wood ledge distinguish the south elevation. A detached, two-story, vernacular garage with a clay tile side-gabled roof is located at the rear of the property. The garage provides parking on the ground floor and units with a balcony on the second story. Landscaping is limited to lawn and shrubs surrounding the primary dwelling.

(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity.)

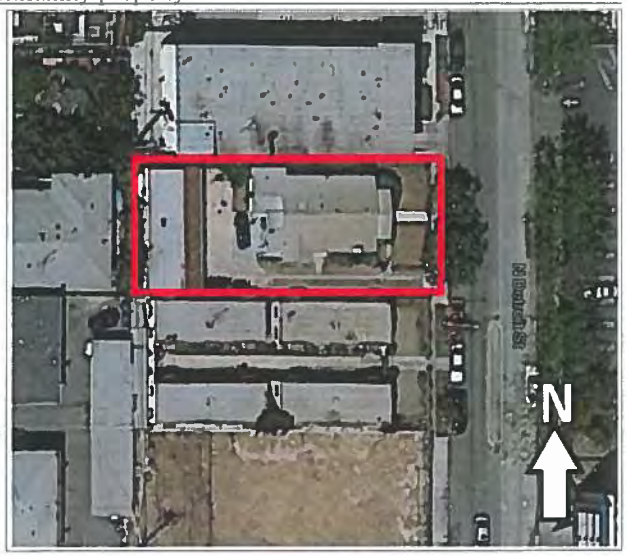

The dwellings at 1127-1129 North Detroit Street were constructed in 1922 according to County Assessor information. No original building permits were located for this property. The development of the property is associated with the general trend of housing stock expansion in West Hollywood in the 1920s. The growth at this time was fueled in part by the expansion of local film studio in and adjacent to West Hollywood as well as the general growth of the Los Angeles region. Despite this, newspaper and city directory research did not indicate a particularly strong association with property, its residents, and the local film industry. Research also did not uncover any notable historic events related to the address. The property and neighborhood don't reflect a distinctive pattern of planning or an important singular example of broad pattern of development, and therefore does meet NRHP Criterion A, CRHR Criterion 1, or West Hollywood Criterion C.

Los Angeles City Directories did not uncover any former residents of the property that were significant to the past. Although one resident named Mamie Wagner worked as a film editor, she only appears to have been credited in three films in 1914 and there is little indication that she played a major role in the motion industry during the 1910s and 1920s. Ancestry research on other residents did not reveal any individuals of historic note. Therefore, research does not indicate that the property ever had an association with the lives of significant persons of the past and does not meet NRHP Criterion B, CRHR Criterion 2, or

B10. Significance, continued.

West Hollywood Criterion C.

The bungalow on this property represents a very modest, undistinguished example of the Craftsman style. While the house contains typical Craftsman features like exposed rafter tails, wood siding, and overhanging eaves, it lacks many features found in better examples of the type such as elaborate stickwork, trellised features, an oriental peak roof, pier supports, dormers, and triangular knee braces. The modest design also suggests the dwelling is not the work of a master architect. More distinguished examples of Craftsman architecture can easily be found throughout West Hollywood and Los Angeles. Alterations to the dwelling include non-original Tuscan column porch roof supports and window security grills. The rear garage with upstairs units is a simple vernacular building and clearly not the work of a master. Therefore, due to the undistinguished Craftsman architecture with limited character defining features, the subject property does not meet NRHP Criterion C, CRHR Criterion 3, or West Hollywood Criterion A (1-5), B, and D.

D1. Historic Name: Fairfax Substation **D2.** Common Name: Fairfax Substation Property
***D3. Detailed Description**:
Initially constructed in 1929, the Fairfax Substation property is enclosed with a high wall along Orange Grove Avenue (east elevation) and along the south property line where the property is bound by an alley. The wall is stucco-clad and capped with cordova terra cotta tile. Today the Fairfax Substation property includes the following buildings or structures:

- Main Substation Building (constructed in 1929), and
- Relay House and Switchgear Structure (constructed in c.1964-1972).

Ground cover is asphalt. Mature trees obstruct view of the substation property from Orange Grove Avenue.

***D4. Boundary Description**: The Fairfax Substation Property is located at 1051 N Orange Grove Avenue, Los Angeles, CA 90046. It comprises .59-acres on two rectilinear lots identified as Los Angeles County Assessors Parcel Numbers 5530-012-800 and 5530-012-801, and is bounded by Orange Grove Avenue to the east and at the north by an alley immediately south of Santa Monica Boulevard.

***D5. Boundary Justification:** The boundary consists of the substation property owned by SCE, identified as Assessors Parcel Numbers 5530-012-800 and 5530-012-801.

***D6. Significance:**
Theme: N/A **Area:** N/A **Period of Significance:** N/A **Applicable Criteria:** NRHP/CRHR/Local Ineligible
In its current appearance, configuration, and condition the Fairfax Substation property, comprised of the Main Substation Building and the Switchgear Structure, appears to be ineligible for listing on the NRHP / CRHR / Local Register as an intact historic-era substation complex or historic district. The property was originally constructed to include the substation building with ancillary structures and with an adjacent Caretaker's Cottage, which if extant, would form an intact historic substation complex. The Caretaker's Cottage and an adjacent dwelling, and a 9' x 9' storage room at the rear corner of the lot were demolished or removed from the property between 1952 and 1964. The loss of these buildings negates the possibility of the substation being identified as an intact historic district that could be considered eligible under any of the NRHP / CRHR criteria.

The Fairfax Substation property Main Substation Building does appear to be individually eligible under NRHP / CRHR Criterion C / 3 and under City of West Hollywood Criterion A1. Refer to the Primary and BSO records prepared for the building within this DPR set.

The Relay House and Switchgear Structure is not individually eligible for the NRHP / CRHR. Refer to the Primary and BSO records prepared for the structure within this DPR set.

Table 1: Features on the Fairfax Substation Property

Feature	Year Built	NRHP / CRHR Eligible
Main Substation Building	1929	Yes (Individual)
Relay House and Switchgear Structure	1964-1972	No

See Continuation Sheets, pages 5-10 of this DPR set, for a contextual and property specific historical narrative of SCE and the Fairfax Substation property.

Brief History of the Faifax Substation Property and its Environs

Built in 1929 in western Los Angeles, the Fairfax Substation is located in the city of West Hollywood, which incorporated as a municipality in 1984. The first major land development occurred at present-day West Hollywood in 1895-1896 when Moses Sherman and Eli P. Clark established a rail yard and steam plant in the vicinity of present-day Santa Monica Boulevard and San Vicente Boulevard. The yard and plant serviced the Los Angeles Pacific Railroad, an interurban railroad line that later became part of the Pasadena and Pacific Electric Railway system. Sherman and Clark platted a small tract next to the rail yard and sold lots for $150. Soon, from the rail yard sprouted a small working-class town populated by railroad workers and their families, just to the west of today's San Vicente Boulevard. The town took the name of its co-founder: Sherman.[1] Railroad employees settled in the town, and with its blue-collar population, Sherman developed a reputation as a loosely regulated place for unconventional people wary of government interference. By 1918 Sherman received electrical service from the SCE Beverly Hills Substation, and later, from 1929 forward, received service via the Fairfax Substation.[2] In 1925 the residents of Sherman adopted "West Hollywood" for the community's new name using a moniker put in place a decade earlier by the West Hollywood Realty Board.[3] The area continued to develop with residential streets, but was most known for the proliferation of nightclubs, hotels, and entertainment establishments along Sunset Boulevard. The twenties and thirties brought the construction of several movie studios and distinctive apartment houses and hotels serving the actors and musicians who frequented the area. Into the 1960s and 1970s resurgence in the music and celebrity social scene created new buzz for West Hollywood. The area continued to thrive into the contemporary-period, and incorporated in 1984.[4]

Fairfax Substation Property

Constructed in 1929, the Fairfax Substation property was built to complement the surrounding residential neighborhood. As plotted on SCE Drawing No. 410653, the substation property was initially developed to include the Main Substation Building, a Caretaker's Cottage adjacent to the south side of the substation building, and a second dwelling built adjacent to the Caretaker's Cottage. Both dwellings featured garages at their southwest corner. The substation itself was enclosed at the rear with a wall that bound the property's alley. This rear courtyard contained two transformer racks and a 9' x 9' storeroom sited at the northwest corner of the lot.

The Main Substation Building was rectilinear in plan measuring 50' wide x 79'-4" length over two stories in height.[5] Roof tiles were specified as Granada type in a red shade. The building was finished in sand colored stucco. The building's rear courtyard was enclosed by a cement plaster wall approximately 16' in height. Windows were primarily six-lite steel sash units: 14 at the north elevation and 10 at the south elevation.

A review of historic aerial imagery disclosed that the Caretaker's Cottage and adjacent dwelling were demolished or removed from the property between 1952 and 1964, and by 1972, the substation was enclosed with a high wall along Orange Grove Avenue (east elevation) and the southern property line. The existing Relay House and Switchgear Structure was installed in the 1964-1972 period.[6] Today, the Fairfax Substation property is comprised of the Main Substation Building and Relay House. The property is enclosed with a contemporary period stucco clad wall capped with cordova terra cotta tile. Ground cover is asphalt.

HISTORICAL OVERVIEW OF SCE

The SCE service territory covers approximately 50,000 square miles and is comprised of electrical infrastructure built by SCE and its predecessor companies obtained through a series of mergers and acquisitions in the company's history from 1886 forward. The SCE territory covers all or portions of Fresno, Inyo, Kern, Kings, Los Angeles, Madera, Mono, Orange, Riverside, San Bernardino, San Diego, Santa Barbara, Tulare, and Ventura Counties. Additionally, SCE owns facilities in eastern Arizona and Nevada that transmit electricity to southern California.

Formative Years

SCE traces its origins back to July 4, 1886. On that day, the partnership of Holt and Knupp, which later became the Visalia Electric Light and Gas Company, first used a steam engine fueled by cord wood to power arc lights during Visalia's evening 4th of July celebrations. Later that same year, the Santa Barbara Electric Light Company was formed and quickly installed outdoor arc lights to illuminate the balmy resort evenings in downtown Santa Barbara. Both the Visalia and Santa Barbara companies would later be merged into SCE in the early 1900s.[7] In 1887 the first commercial hydroelectric plant in the west was built at the community of Highgrove near the city of Riverside. Built by the Riverside Water Company, the plant took advantage of a 50-foot water drop in an irrigation canal to turn three waterwheels and direct current dynamos. The electricity was transmitted a very short distance to illuminate 30 arc lights in Riverside and Colton. In 1888, the Riverside Water Company was incorporated as the San Bernardino Electric Company and was later acquired by SCE in the early 1900s.[8] That same year the Pasadena Electric Light and Power Company installed steam-driven current generators to power arc lights for street lighting in Pasadena. Likewise, in 1890, the Ventura Land and Power Company installed hydroelectric generation to power arc lights in downtown Ventura, thereby catching up with their neighbors in Santa Barbara further up the coast.[9]

In 1891, businessman Henry Sinclair and Dr. Cyrus G. Baldwin, the first president of Pomona College, co-founded the San Antonio Light and Power Company with the intention to provide electric street lighting to the city of Pomona. The technical challenge they faced was that direct current power could not be practically transmitted long distances. Baldwin hired A.W. Decker, an engineer familiar with the cutting edge of advances being made with alternating current. Decker installed the first single-phase alternating current hydroelectric generator in San Antonio Canyon above Claremont. In late 1892, power was transmitted 14-miles to Pomona and, one month later, 29-miles to San Bernardino. The age of long-distance transmission had begun, thereby opening access to remote hydroelectric resources. Most history texts consider the Niagara Falls to Buffalo, New York transmission line as the first long-distance line in the nation built in 1896, but the reality is that the San Antonio Light andPower Company (with A.W. Decker) did it four years earlier in San Antonio Canyon. A bronze plaque marks the spot on Mt. Baldy Road.[10] In 1892 Henry Sinclair formed the Redlands Electric Light and Power Company to provide power to the Union Ice Company for the new electric motors in its ice-making facility in Mentone. The closest hydroelectric resource was eight-miles away at Mill Creek. This long distance would require a high-voltage alternating current. Decker recommended that a new three-phase alternating current generator be installed. The new three-phase system enabled electric motors to start and stop independently of the generator and delivered a smoother power torque to the rotating equipment. The Mill Creek plant was the first commercial power plant in the United States to use three-phase alternating current. Today, the three-phase power generation remains the standard for power generation worldwide.[11] In 1894 the Mill Creek plant powered electric pumps installed to irrigate many of the orange groves in Redlands. This was the earliest recorded use of electric pumps for irrigation purposes.[12] Although the original equipment was upgraded in 1934, the Mill Creek plant remains in operation today as the oldest active poly-phase power plant in the United States.

In 1895, the Kaweah Power and Water Company was formed to survey the potential development of hydroelectric facilities on the Kaweah River above Visalia and Tulare County. The Kaweah Hydro Plant began operating in 1899 and its operations were folded into the larger Mount Whitney Power Company. In 1909 the Mount Whitney Power Company was renamed as the Mount

Whitney Power and Electric Company, and in 1920 was acquired by SCE.[13] Based in the central valley, the Mt. Whitney Power Company focused primarily on rural customers with Visalia being the largest town on its system. The company covered most of Tulare County and portions of the neighboring Kings and Kern Counties, and built two additional hydroelectric plants on the Kaweah River; Plant Two in 1905 and Plant Three in 1913. The company purchased the Tule River hydroelectric plant in 1909 from the Globe Light and Power Company, enlarged its existing Visalia Steam Plant in 1914 and acquired a smaller plant at Tulare in 1915 from the Tulare County Power Company. Henry Huntington, of the Pacific Light and Power Company, purchased controlling interest of the Mount Whitney Power and Electric Company in June 1916.[14]

West Side Lighting Company and the Edison Electric Company

In 1896, in Los Angeles, California, a syndicate of businessmen formed the West Side Lighting Company in response to the city's increased need for electricity. The West Side Lighting Company sought to utilize the 'Edison three-wire' conduit technology invented years earlier by Thomas Edison. They soon discovered, however, that use of the Edison technology was prohibited due to a special contract negotiated between a speculative and inactive company established in 1884 under the name Los Angeles Edison Electric Company and Thomas Edison's own General Electric Company. The contract provided the Los Angeles Edison Electric Company with exclusive Southern California rights to the three-wire technology. In that same year, Henry Sinclair of the Redlands Electric Light and Power Company teamed up with Henry Fisher, a prominent Redlands resident, to form the Southern California Power Company to pursue the construction of a new hydroelectric facility on the Santa Ana River. In 1897, West Side Lighting Company President George H. Barker met with General Electric officials in San Francisco to negotiate for use of the Edison technology in the Los Angeles area and to discuss a potential merger between the West Side Lighting Company and General Electric. The new Edison Electric Company of Los Angeles (EEC) was incorporated on December 1, 1897, and with George Barker as the company head, the new company took over all the properties and franchises of the West Side Lighting Company and secured the valuable equipment licenses of the inactive Los Angeles Edison Electric Company. Thirsty for more power supplies for downtown Los Angeles, the EEC purchased the Southern California Power Company in 1898 and constructed the Santa Ana River No. 1 to Los Angeles Transmission Line, an 83-mile high-voltage transmission line to bring the power into downtown Los Angeles. At the time, this was by far the longest and highest voltage transmission line built anywhere in the country. Edison engineer Orville Ensign designed "the Redlands" insulator for use on the line.

This innovative insulator design was rapidly adopted throughout the West.[15] In the following years, EEC merged with and acquired additional electric lighting and power companies and soon expanded into communities outside of Los Angeles as far north as Santa Barbara and as far east as Redlands. The West Side Lighting Company and the EEC, with the Pacific Light and Power Company, are among the most important of SCE's ancestral companies.

At the turn-of-the-century, the EEC, alongside its primary competitors, Pacific Light and Power Company, the San Joaquin Power & Light Company, and Pacific Gas & Electric Company, served as the pioneering commercial entities for electrical generation and distribution in California. In California, at the inception of electrical transmission technology, power was distributed via wood poles and later iron poles, but was limited to short spans carrying a low voltage. The development of hydroelectric power at the end of the 19th century set precedent for satisfying the demands of commercial electrical needs of the 20th century, and led to the installation of electrical transmission lines spanning great distances from generating facilities at California's river banks, through mountain ranges and deserts, before terminating within the urbanizing communities of southern California. Leading the company in this period of innovation and expansion was John Barnes Miller. He had joined the West Side Lighting Company as its General Manager in 1897. Miller coined the company motto that survives to this day: "Good Service, Square Dealing, and Courteous Treatment." Known as the "Great Amalgamator" he recognized that lower costs could be achieved by expanding the scale of the company through mergers and acquisitions. Miller served as President of the EEC (and later SCE) for 31 years, presiding over the most expansive period in its history. He died in 1932. To date John Barnes Miller has been the longest serving chief executive officer of SCE.[16]

In 1907 EEC began operations at the Kern River #1 Power House, a 75,000-volt facility on the banks of the Kern River north of Bakersfield, California. Five years earlier, in 1902, EEC Chief Hydraulic Engineer, F. C. Finkle surveyed the remote area of Kern Canyon with a vision of a great hydroelectric power plant supplying the electrical needs of the rapidly growing region of Los Angeles. Two years after the initial survey, EEC Vice President Henry Sinclair chose a suitable location along the Kern River – what was reckoned to become the location of Kern River Powerhouse No. 1. Situated approximately 14-miles upstream from the mouth of Kern River, the EEC Kern River Power House No.1 was set for service in early 1907.[17] The Power House served as the generating facility for the EEC's Kern River to Los Angeles Transmission Line, a 117-mile span supported by 1,140 galvanized steel transmission towers that were modeled after windmill frames, and supplied by the Wind Engine and Pump Company of Batavia, Illinois. The towers are generally regarded as one of the first steel lattice transmission tower types in the United States. The Kern River to Los Angeles Transmission Line conveyed 60,000-volts over its 117-mile span, and terminated at EEC's pre-existing Steam & Transformer Plant No. 3 in Los Angeles, where the electricity was then distributed into Los Angeles via EEC's wood pole distribution system.[18] The Kern River to Los Angeles Transmission Line was cited in an August 10, 1907 *Electrical World* article as one of the longest transmission lines operating on the North American continent. With its steel towers and specially designed insulators intended for a voltage capacity of 75kV, the Kern River to Los Angeles Transmission Line with its associated power house "typified the latest modern practice in hydroelectric power plant design."[19] At the start of operation, the Kern River Hydroelectric Project was identified as the "most permanent and costly hydraulic waterway in the country.[20]

Reincorporation, Mergers, Acquisitions, Expansion, and Innovation

By 1909 the EEC provided electricity to over 600,000 people throughout five counties. To reflect this expanded presence, the company was reincorporated as the Southern California Edison Company (SCE). In the first two decades of the Twentieth Century SCE continued to expand throughout the growing southern California region. The company initiated construction of its Long Beach Steam Plant in 1910 and implemented a new system of 66kV steel tower transmission lines to replace its previous network of 33kV wood pole lines. In 1916 SCE merged with Henry Huntington's Pacific Light & Power Corporation (PLPC). The merger was viewed as beneficial to both parties. Huntington received about $12 million in Edison stock and SCE gained absolute control over all former PLPC holdings and future expansion efforts, including the Borel Powerhouse and associated Borel to Los Angeles Transmission Line, and the Big Creek Hydroelectric System. After the successful merger between SCE and PLPC, the company focused its labors at expanding the Big Creek Hydroelectric System, initially in-service in 1913 at a level of 150kV, and upgraded to 220kV in 1923. By 1916, the year of the PLPC and SCE merger, 56 Southern California communities were lit by SCE infrastructure. Of those 56 communities serviced, 22 were initially serviced by infrastructure installed in the EEC-period (1897-1909) and 34 were serviced by SCE-period (1910-1916) infrastructure. By 1920, an additional 153 communities were serviced by SCE resulting from the 1917 merger with Huntington's PLPC and the 1920 acquisition of the Mount Whitney Power and Electric Company.[21]

Into the late 1920s SCE continued to develop its Big Creek Hydroelectric System through the creation of dams and reservoirs, building of powerhouses, rail lines, and tunnels, as well as support camps replete with food and housing for workers, recreation and entertainment offerings, medical facilities, and administrative offices. Upgrades were completed at the existing East and West Transmission Lines, and additional transmission lines were installed to convey electricity from Big Creek to Los Angeles. By 1929, when the initial Big Creek Hydroelectric system was completed, its capacity consistently generated more electrical power than any other systems in place at the time. The Big Creek system boasted many innovative engineering features, including the longest water tunnel in the world (Florence Lake [Ward] Tunnel), the 243-mile Big Creek East and West 150 / 220kV Transmission Lines, the 224-mile Vincent 220kV Transmission Line, with all three lines spanning between the Big Creek generating facilities on the upper San Joaquin River and the Eagle Rock and Gould Substation in Los Angeles, the longest electrical transmission lines in the world at that time.

Developing in a parallel path to these early PLPC and SCE projects were the hydroelectric facilities at Bishop Creek. Built by a syndicate of investors under multiple successor corporations, including the Nevada Power, Mining and Milling Company (incorporated in 1904), the Nevada-California Power Company (incorporated in 1907), the Southern Sierras Power Company

(incorporated in 1911), and the Nevada-California Electric Corporation (incorporated in 1914), the Bishop Creek Hydroelectric System included multiple powerhouses, each with an associated residential complex for operators and maintenance crews, and a control station which served as the switching point for the collection and distribution of electricity from the system. In 1941 the Nevada-California Power Company was renamed as the California Electric Power Company. Several early long-distance transmission records originated from Bishop Creek. In 1905, two 55,000 volts (55kV) a high-voltage wood pole lines were installed 118-miles power line was installed between Bishop Creek and Tonopah, Nevada and Goldfield, Nevada. In 1912, a double circuit 115,000 volts (115kV) transmission line was constructed on double circuit lattice steel towers from Control Substation on Bishop Creek to the San Bernardino Substation (renamed Caletric) in San Bernardino, California for a total span of 239-miles. The line was called the "Tower Line" because of the new 'off the shelf' towers being used from the Milliken Brothers of New York, which had become the norm, as opposed to the wooden or metal poles, pole towers, or windmill poles as found in early lines like the Kern-Los Angeles 60kV Transmission Line (built in 1907). In 1912 the Tower line was built between Bishop Creek and San Bernardino, California for a total span of 239-miles.[22]

On April 26, 1930 SCE entered into a contract with the United States Interior Department to generate electricity for itself and other investor-owned electric utility companies, and to distribute that power to its southern California service territory. The source of power was intended for construction: the Hoover Dam, and SCE's contract, along with similar contracts in place between the United States government, the City of Los Angeles, and the Southern Sierra Power Company (SSPC), helped to guarantee the amortization of the project expenses over a 50-year period.[23] The SSPC Boulder Dam to San Bernardino transmission line was energized in 1931 to initially convey power to the dam for construction purposes, and then was later reversed to carry electricity to San Bernardino when the dam was completed and in operation. Into the late 1940s, in the post-WWII period, additional SCE projects were undertaken at Big Creek to make improvements to existing powerhouses including the addition of new generators, and construction of new dams and powerhouses. This later phase of construction continued through the 1960s. The modern-period upgrade campaign at Big Creek was instrumental in responding to the increased electricity needs of southern California resultant from post-war suburban expansion. In 1964 the California Electric Power Company and its holdings were acquired by SCE, including the Bishop Creek Hydroelectric System and its associated transmission lines, the SSPC Boulder Line and numerous other hydroelectric systems, substations and transmission lines. Today SCE maintains an electrical infrastructure comprised of individually constructed substations, transmission lines, and other electrical generation and distribution equipment supporting fourteen million customers over an approximate 50,000 square-mile service territory.

SCE Substations

Early SCE substations (and other facilities such as hydroelectric plants, steam plants, and ice houses), developed in the early service-area expansion period (circa 1909 through the 1930s), often incorporated a historicist architectural aesthetic into the substation complex by housing the utilitarian activities and engineering equipment inside an ornately decorated building modeled after the popular architectural style of the time. Early SCE substations were developed in the Classical Revival, Mission Revival, Spanish Revival, and Stripped Classical styles. These early substation buildings were typically constructed as stand-alone structures throughout the SCE service territory. The substation properties were expanded as necessary based on customer demand, usually in the form of additional buildings or structures and the requisite electrical engineering equipment including transformers and switches. In some instances the company designed substation buildings to resemble housing to complement the surrounding residential neighborhood. Known examples include the Spanish Revival style Ramona Substation built in 1926 in Alhambra, and the Spanish Revival style Fairfax Substation built in 1929 in West Hollywood.[24] Prior to 1950, SCE and its predecessor companies had installed approximately 138 substation facilities within its service territory.

In 1950 SCE acquired or put-in-service approximately 402 additional substation facilities. Today there are at least 1,300 substations facilities within the SCE portfolio. In the post WWII-period, with the construction of bulk power stations SCE no longer incorporated stylistic elements or a clear architectural aesthetic into its substation properties. The company promoted a more efficient program with less architectural intervention at the utilitarian electrical engineering complexes.

In most instances, monumental substation buildings were no longer erected; rather, the properties were improved with just the basic electrical engineering structures including transformer racks, cable trenches, and water towers. The structures built to house traditional uses including switching room, oil house, and other functions, were of utilitarian design constructed of corrugated aluminum or transite siding, and void of stylistic details and ornamentation.

d. UTM: (Give more than one for large and/or linear resources) Zone ____, _____ mE/_____ mN
e. Other Locational Data: The Fairfax Substation Property is located at 1051 N Orange Grove Avenue, Los Angeles, CA 90046. It comprises .59-acres on two rectilinear lots identified as Los Angeles County Assessors Parcel Numbers 5530-012-800 and 5530-012-801, and is bounded by Orange Grove Avenue to the east and at the north by an alley immediately south of Santa Monica Boulevard.

***P3a. Description:** The Fairfax Substation was constructed in 1929 in the appearance of an apartment building with Spanish Revival elements including a hipped terra cotta tile roof with moderate eave overhang, ornamental iron grilles at front facade ground floor windows, ornamental iron balconettes at second floor windows (front elevation), aligned horizontal and vertical fenestration around the street-facing facades, and paneled wood door entry door surmounted by a classical pediment with a small entry stoop. Today the building retains its original Spanish Revival design features, but is obscured from full view by overgrown trees planted along the front facade. The building's rectilinear plan and symmetrical composition remains in place. The building is consistent with its original appearance, including six lite steel sash windows at all facades, and ornamental entry surround and iron grilles and balconettes at the front elevation. The original wood panel front entry door has been replaced with a solid door and the wrought iron light posts visible at the porch walls are also removed; however, these minor changes have not impacted the building's integrity of design or materials. The rear courtyard wall is intact, although in fair to poor condition. The building retains its terra cotta roof tiles. The enclosing wall installed along the north side of the substation building is intended to be compatible with the historic-era building, featuring a stucco finish and terra cotta roof tiles and large grilles that offer some articulation to an otherwise blank facade; however, the wall is clearly identifiable as a more recent feature than the historic-era substation building. The building's setting is diminished slightly by the c.1964-1972 enclosing wall and the loss of the Caretaker's Cottage, however, because the building is a substation intended for electrical infrastructure uses (although designed to be similar to a residential property), removal of the Caretaker's Cottage for installation of additional substation equipment and enclosing the property for safety purposes would be considered an appropriate modification to the substation, both as a complex and for the individual substation building. Overall the exterior of the Fairfax Substation Building appears to be in good condition with no major damage or spalling observed, and with only minor modifications to its original design and appearance. Today, the building is surrounded by contemporary-period infill apartment buildings. The Fairfax Substation Building is one of the most architecturally distinctive buildings in its immediate vicinity.

BUILDING, STRUCTURE, AND OBJECT RECORD

*Resource Name or # Fairfax Substation Main Substation Building *NRHP Status Code 3S
Page 12 of 14
B1. Historic Name: Southern California Edison Fairfax Substation
B2. Common Name: Southern California Edison Fairfax Substation Main Substation Building
B3. Original Use: Electrical Substation B4. Present Use: Electrical Substation
*B5. Architectural Style: Spanish Revival built to resemble an apartment building
*B6. Construction History: Initially constructed in 1929; no major alterations observed to the building exterior – front entry doors replaced (date unknown).
*B7. Moved? ☒ No ☐ Yes ☐ Unknown Date: _____ Original Location: _____
*B8. Related Features: Relay House and Switchgear Structure, built between 1964-1972. This structure does not contribute to the individual significance / eligibility of the Main Substation Building.
B9a. Architect: unknown / SCE b. Builder: unknown / SCE
*B10. Significance: Theme Utility Industry Area Los Angeles County
Period of Significance 1929 Property Type substation Applicable Criteria NRHP / CRHR C/3

In its current appearance, configuration, and condition the Fairfax Substation property, comprised of the Main Substation Building, appears to be eligible for listing on the NRHP / CRHR under NRHP / CRHR Criterion C / 3 and City of West Hollywood Criterion A1 for embodying the distinctive characteristics of the Spanish revival style applied to a substation property type, and for its representation of SCE architectural programming and aesthetic ideology for substations in the historic-period when historicist design details were thoughtfully applied to this utilitarian property type. In particular, the Fairfax Substation Building was designed in the form of a multiple-family dwelling, an apartment building that would complement and blend in with the surrounding residential street in West Hollywood. This typology is rare within the SCE substation portfolio, and captures a particular aesthetic focused on the popularized Spanish Revival movement that occurred in the 1920s and reinforced the appearance of residential communities, which by the 1920s were increasingly protected through exclusive use residential zoning laws. The substation building was designed in a manner and aesthetic that was harmonious with the surrounding residential community. For these reasons the Fairfax Substation appears to be eligible under NRHP / CRHR Criterion C / 3 and under City of West Hollywood Criterion A1 with a period of significance identified as 1929. No information was identified during the course of contextual or property-specific historical research to indicate that the Fairfax Substation is associated with important events in local, regional, state, or national history including the development of West Hollywood, the industrialization of the Los Angeles region, or the expansion of SCE's service territory. The property is not eligible under NRHP / CRHR Criterion A / 1. Similarly, the property has not been found eligible under NRHP / CRHR Criterion B / 2. It has not been identified as maintaining a direct association with important persons in local, regional, state, or national history. Lastly, the Fairfax Substation property is not eligible under NRHP / CRHR Criterion D / 4. The property does not appear to be eligible under any other City of West Hollywood Cultural Resource criteria. Beyond what is discussed in this report, further study of the property would not yield additional information that could be considered important in local, regional, state, or national history.

The Fairfax Substation Property is located at 1051 N Orange Grove Avenue, Los Angeles, CA 90046. It comprises .59-acres on two rectilinear lots identified as Los Angeles County Assessors Parcel Numbers 5530-012-800 and 5530-012-801, and is bounded by Orange Grove Avenue to the east and at the north by an alley immediately south of Santa Monica Boulevard.

***P3a. Description:** (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries)

The Relay House with attached Switchgear Structure is approximately 25' x 40' and was installed between 1964 and 1972. The structure is single-story and was erected to house 16kV transformers and switches. The metal clad structure does not physically touch the historic substation building. It is sited immediately adjacent to the north side of the substation building. The structure is not visible from the street or adjacent alley.

(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity.)

The Relay House and Switchgear Structure, installed between c.1964-1972, is not eligible under any of the NRHP / CRHR Criteria, nor is it eligible under the City of West Hollywood Cultural Resource designation criteria. The structure is a utilitarian in form and use. It was built at the end of the historic-period or in the early contemporary period and does not contribute to the significance or eligibility of the Main Substation Building. No information was identified to support a positive eligibility conclusion for the Switchgear Structure.

e. Other Locational Data (APN #): The subject property is located on the south side of San Vicente Boulevard between S. Hauser Boulevard and S. Ridgeley Drive. APN. 355-131-47.

***P3a. Description:** The subject property consists of a single-story, concrete masonry, commercial building, encompassing 4,170 square feet that faces San Vicente Boulevard. The building occupies a level, rectangular-shaped parcel surrounded by other commercial buildings. Character defining features of the building include rectangular massing, a flat parapet roof, three painted and stepped vertical pilasters along the exterior of the building facing San Vicente Boulevard, and a series of plate glass store front windows also facing San Vicente Boulevard, having aluminum frames with clerestory windows and aluminum entry doors. Below the display windows are seven rows of brightly glazed tiles forming a low skirt. Above the display windows is a narrow frieze with lettering that reads "BAKERY DELI LIQUOR." Above that frieze is a larger frieze that reads "SUNNY," the name of the business. To the right centered between two of the vertical pilaster is another frieze with the words " BEST BARGAIN BEST SERVICE LOWEST PRICE." The corner of the building that faces northwest features a canted wall with additional display windows that continue around the side of the building, framed by two more vertical pilasters that face S. Hauser Boulevard and a similar tiled skirt, but with 12 rows of glazed tiles. The west elevation features three square fixed windows and at the southwest end two additional vertical pilasters. The east elevation of the building features a row of vertical concrete spandrels and no fenestration. A metal security fence and gate allows access to the side parking along the east elevation of the building. The rear or south elevation of the building is characterized by a concrete wall with one opening and a corrugated metal storage shed that is attached to the rear wall.

Period of Significance: 1936 **Property Type:** Commercial Building **Applicable Criteria:** A, B and C

The subject property is located on the south side of San Vicente Boulevard, and north of the I-10 Freeway in a combination commercial/mixed-use residential section of Los Angeles between "Little Ethiopia and Dockweiler." This area of Los Angeles was largely developed during the 1920s through the 1940s with later infill. Los Angeles was a product of several major building booms, the first occurring in the 1880s with more expansive development between 1900 and the 1920s, after World War II, and in the last few decades. The historic context for the subject property lies in the Depression Era commercial development in neighborhoods that were part of the 1920s expansive period of development, which resulted in the construction of hundreds of commercial and residential buildings (Gebhard and Winters 1977:140-166). Between 1900 and 1910, many of the commercial buildings were constructed of reinforced brick masonry. Later buildings were constructed of reinforced concrete and often included brick facing. In central downtown Los Angeles, almost every building in the historic core was constructed between 1900 and 1930, many of which are still standing today. The predominant architectural style of commercial buildings constructed between 1910 and 1940 were designed in the more formal Beaux Arts styles, but other commercial buildings took on more playful architecture, which included Spanish Colonial Revival, Art Deco, and Moderne. Main, Spring, Broadway, Hill, and Olive Streets formed the core of the central part of Los Angeles. Trolley systems connected the various parts of the city, including linkage to Santa Monica. The 1960s brought about dramatic changes to the skyline of central Los Angeles with high rise construction, and infill and redevelopment to outlying suburban areas, such as those along San Vicente Boulevard (Roseman et al. 2004:7). Refer to BSO, Page 3 of 3.

BUILDING, STRUCTURE, AND OBJECT RECORD

Page 3 **of** 3 ***Resource Name or #:** 5520 San Vicente Boulevard Commercial Building **NRHP Status Code:** 6Y

***B10. Significance (Continued):**

The subject property, which was constructed in 1936, bears several design elements symbolic of Art Deco Architecture. Those design elements include rectilinear walls, simple rectangular-shaped friezes, and stepped pilasters. All of the windows in the building appear to have been replaced in the late 1950s or 1960s with aluminum-sash windows. The brightly colored glazed tile skirt is also likely a replacement, reflecting the multi-colored scheme of the building. The subject property is surrounded by older properties from the 1930s and more modern infill properties dating to the 1960s and 1970s. Overall, the neighborhood lacks architectural continuity. According to the building's owner, Maher Hanoun, the building has been used as a combination grocery and liquor store through to the present. In conclusion, the property does not appear to be significant under National Register of Historic Places (NRHP) Criterion A, since its association with commerce and trade in Los Angeles does not rise to a level of significance. Nor has any documentation been found to suggest that the property is significant under Criterion B, for its association with a significant person or persons in the history of Los Angeles. Under Criterion C, the building does not represent an important example of Art Deco Architecture, in part due to its minor Art Deco design elements and because of incremental alterations that have diminished its integrity of design, materials, workmanship, and feeling. Furthermore, the property does not appear to be a contributing resource within a potential historic district.

The subject property (AIN: 5530-013-020) is situated on a rectangular lot on the west side of Ogden Drive and is improved with an altered one-story single-family Colonial Revival Style Residence at the front of the lot, and at the rear of the lot, an altered two-story Garage (1982) and Storage Shed (c. 1980s). The Residence is situated in residential neighborhood of West Hollywood, and surrounded by multi-family apartment residences and a few single-family residences. The Residence was constructed in 1920, with an addition added to the northwest rear (alteration). The Storage Shed on the northwest corner of the property was built circa 1980s. The new Garage, which replaced the original garage was built in 1982, and now serves as an additional apartment. The Residence is set back from the sidewalk along North Ogden Drive. The perimeter of the subject property is lined with non-original shrubs, non-original small trees, and one original mature tree. A non-original concrete driveway is located on the south side of the Residence and starts at the road and ends at the garage at the southwest corner. (Continued).

(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity.)

ESA found the current improvements on the subject property, including the Residence, ineligible under all of the applicable federal, state, and local criteria as they lack significance. The subject property does not convey a significant association with early development patterns in West Hollywood, and there is no evidence to suggest that it is associated with productive lives of historic personages. Moreover, the subject property lacks architectural merit. Lastly, the subject property has not yielded, and is not likely to yield, information important in prehistory or history. The subject property does not retain integrity of what would be the most important aspects for this type of property: the design, setting, materials, and feeling. Therefore, ESA recommends that all the current improvements on the subject property not be considered historical resources pursuant to CEQA and that the subject property be assigned a CHR Status Code of 6Z, "Found ineligible for NR, CR or Local designation through survey evaluation." [See attached continuation sheets for complete evaluation]

P3a. Description

The Property is entered from the driveway on the south side, and the Residence is entered from either a porch located on the east elevation or through a door located on the addition of the west elevation.

The Residence is a one-story bungalow in the Colonial Revival style. It is covered by a side-gabled roof that intersects with a hipped roof. The front entrance has a front-gabled roof with boxed eaves. The foundation of the Residence is The south elevation features an extensively altered original brick chimney. The exterior walls are clad in original clapboard siding, but have been extensively altered and painted (alteration) and the roof is covered by composition shingles (alteration).

The primary (east) elevation is symmetrically organized around a centrally located one-bay entry porch with a front-gabled roof, molded box cornice with returns, a broken pediment, and a denticulated frieze. The original porch has been rebuilt and lengthened. The porch's original concrete steps have been covered with non-original tiles, the two Doric columns and denticulated frieze has been replaced (alteration). Steps have also been added to the porch on the south elevation (alteration). The entire porch has also been covered with tile and has been painted over (alteration). The porch does not retain its wood soffit or light fixture; however, the porch does retain its original a multi-paned wood door. Two large multi-paned, original tri-partite windows are on the front elevation of the Residence to either side of the wood porch.

The west (rear) elevation has been substantially altered and is organized in two parts: a long, north portion (addition) and a projecting, front-gabled entrance at the south end. The north portion features two sliding casement windows on the south side of the entrance and a large sliding picture window on the north side of the entrance. All these windows on this addition have metal sashes. The entrance has a small elevated concrete porch with steps and is covered with a metal roof. The addition has a multi-paned wood door. The south entrance has a door with inset metal window (replacement) and a single multi-paned window. The projecting section on the south side of the west elevation features triple window with eight panes. A small metal awning is located over the triple window (alteration). Another entrance to the addition is located to the left of the triple window on the south elevation of the addition.

The south elevation has five windows, three of which are covered up with painted plywood (alteration). One of the remaining windows is an original large tri-partite wood window with one-over-one sash; the other window is a rectangular fixed window with six lights and wood muntins (alteration). The original chimney is in poor condition and has signs of settling, cracking, and brick deterioration. The chimney has been extensively altered; it has been painted and there are inappropriate mortar repairs at the base (alteration). Two foundation vents are located on this elevation, one vent is original the other event has been removed and replaced (replacement).

The north (secondary or side) elevation has been extensively altered and parts of it are inaccessible. The addition on the north side features long vertical metal-sash sliding windows with an air conditioner (alteration), and inappropriate repairs to siding. A gate/door has been added between the fence and north elevation of the Residence (alteration).

The Garage built in 1982 is located at the southwest corner of the property and has a rectangular footprint, is a two story-story, side-gabled building with exposed rafter tails. The exterior walls are clad in stucco (alteration). The

garage doors (east elevation) have been sealed and a widow and air conditioning unit installed. The entrance is located on the north elevation and features a wood door with window.

The Shed is located in the southwest corner of the subject property and was constructed circa 1980. The shed is small, has a rectangular footprint, features an entrance at the south elevation, and a sliding aluminum-sash window on the east elevation.

B6. Construction History

A construction history of the subject property was developed utilizing permits on file with the City's Building and Safety Department, Assessor records, and Sanborn Maps. Furthermore, during the site investigation, alterations to the Residence that were not documented in the Assessor records or building permits were observed and are documented below.

The earliest known record for the Residence is an Assessor record dated March 4, 1937, which records its original construction date as 1920. The Residence was described as a one-story, single-family bungalow with a concrete foundation, rustic siding, a gable roof with shingles, heating provided by a fireplace and coal, and a cesspool. The interior included a living room, dining room, two bedrooms, one bath and a kitchen. Two of the rooms had hardwood floors. A buffet and bookcases were built-in features. A sketch plan on the record shows that the Residence measured 36 feet wide by 28 feet long with a larger southwestern rear corner for a total of 1,132 square-feet; it also appeared to have a nine-foot by six-foot centered porch protruding from the front of the house. The assessor records also indicated a garage on the property, but did not include the construction date for the building. The original garage was most likely constructed at the same time as the Residence, or several years after.

The 1951 Sanborn map, shows the configuration of the Residence and a garage. It is unknown when the original garage was constructed on the subject property, but assessor records indicated that the "old garage" was replaced with the current Garage in 1982. Furthermore, assessor records also indicate that the kitchen was remodeled and the rear patio was added in 1977. Assessor records also documented the following undated changes to the subject property: alterations to the front and rear porch, and an addition of a small stuccoed shed, which had been added to the southwest corner of the subject property in the 1980s (probably at the same time of the existing garage).

CONTINUATION SHEET

Page 9 **of** 21 ***Resource Name or #** (Assigned by recorder) 1011 North Ogden Drive
***Recorded by:** A. Brown, ESA ***Date** 5/5/2017 ✠ **Continuation** Update

Only two building permit applications were available from the City of West Hollywood. The earliest permit dated April 8, 1982, involve the construction of the new two-car garage. An additional permit dated October 28, 1984 involved partial repairs to roof and reinforcement of rafters by Raymono Steinberg for insurance repairs.

During the site investigation, the following alterations to the Residence that are not documented in available Assessor records and building permits were observed: inappropriate repairs to the chinking on the brick chimney, the original brick chimney has been painted (non-original inappropriate finish); composite shingle roof has been added (alteration); replacement of the soffits (in kind); and removal of the original light fixtures (not in kind). Furthermore, the porch has experienced several alterations including: lengthening, addition of stairs on the south elevation of the porch, and the surface has been tiled (not in kind). The rear and sides of the Residence have been severely altered. A rear addition has been added to the northwest corner. Additionally, alteration to the rear door have been undertaken; windows have been boarded up on the south (side) elevation; foundation vents have been replaced; and windows that are visible from the public right-of-way have been replaced on the south elevation. The interior has experienced extensive renovations.

B10. Significance

West Hollywood

The area currently known as West Hollywood was once part of Rancho La Brea, a land grant given to Spanish soldiers for their service in the early nineteenth century. At the turn of the twentieth century, many small communities rose up within the former lands of Rancho La Brea. Many of these new towns voted to join the growing metropolis of Los Angeles during this period. By 1910, both Colegrove and Hollywood were annexed by the City of Los Angeles. A 1902 topographic map notes the settlements of Sherman, Colegrove, and Hollywood as the primary towns within the vicinity. The 1902 map depicts only a few major streets, which indicates that, aside from these residential settlements, the majority of the area was undeveloped, agricultural, or used for the production of various raw materials (oil, asphalt, etc.).

For nearly thirty years, between 1896 and 1924, the area presently comprising West Hollywood was known as Sherman. The introduction of local rail transportation was a major influence in the early development of the town, named after Moses H. Sherman, owner of the Los Angeles Pacific Railway. In 1898, Mr. Sherman established the western terminus of the Los Angeles line at the corner of Venice and San Vicente. Sherman Station, as it was known, supported a surrounding community of railroad workers. During the period, the town was roughly bounded by Holloway Drive, Hancock Avenue, Santa Monica Boulevard, and Doheny Drive. In 1910, Sherman was well-established as a community and consisted of a public school, a few general stores, a brothel, a handful of taverns and pool halls, an ice cream parlor, a church, rail worker's homes, and a scattering of roads.[1] Regional development was along the railway lines, both the South Hollywood-Sherman Line that ran along what is currently Santa Monica

Boulevard and the Sherman Junction Line, running along Beverly Boulevard from downtown Los Angeles to the railyard.[2]

From 1909 until the start of World War I in 1914, residential subdivisions became predominant within what is now Hollywood and West Hollywood. The burgeoning motion picture industry was a key factor spurring the change. Motion pictures were being made in Los Angeles as early as 1907, primarily in Hollywood and Beverly Hills, which at the time were among the most desirable and flourishing communities in the region. As the industry expanded, Sherman became especially attractive for movie-industry housing.[3] Residential development in the first two decades of the twentieth century began to "spill-over" from Hollywood and Beverly Hills to Sherman, as spacious lots and "beautiful homes" offered in that town at bargain prices, which provided the impetus for early subdivisions.[4] Most of the single-family residences built in the 1920s were modest one-story houses with garages at the rear of the lot.[5] These bungalows were in the Craftsman Colonial Revival, Spanish Colonial, and Tudor Revival styles.[6]

Despite the establishment of a chamber of commerce in 1920, there was still no municipal government in Sherman. In 1925, the town renamed itself West Hollywood to capitalize on the growth of its eastern neighbor. The community continued to grow into the 1930s, adding residential neighborhoods south of the rail yards. Beginning in the 1920s new industrial districts also developed west of the yards.[7]

McNair Place Tract

The subject property is situated in the McNair Place Tract, subdivided in 1913 by the Los Angeles Trust and Savings Bank Title Insurance and Trust Company. The Tract, laid out with rectangular lots, each measuring approximately fifty feet wide, was bound by Santa Monica Boulevard to the north, the eastern lots along Gardner Avenue to the east, an alley (now Willoughby Avenue) to the south, and Crescent Avenue to the west. The Tract was horizontally bisected by Olive Avenue (now Romaine Street), one two lots south of the subject property. Substantial development within the Tract, including the lots along Friend Avenue (now North Ogden Drive) does not appear to have occurred until the 1920s when numerous single-family residences were constructed in response to the regional housing boom. By 1951, according to a Sanborn Map, both sides of the 900 and 1000 blocks of Ogden Drive were developed and primarily with single-family residences, except the northeast corner lot at Ogden Drive and Romaine Street; 929 North Ogden Drive; and 932 North Ogden Drive. During the post-World War II period, and again in the late twentieth-century, the original character of the neighborhood surrounding the subject property substantially changed with the replacement of single-family residences associated with the early development of the Tract with multi-family residential buildings.

Period Revival Architecture 1880-1940

California in the 1920s and 30s. This, in turn, resulted in a high demand for housing. The McNair Place Tract appears to have been developed at the height of the population and real estate boom and also during a time in which Period Revival styles were immensely popular. Early, intact residences erected in Sherman during this time reflect these trends.

By the 1920s, some of the new architecture in Southern California area was derived from European precedents. However, architects and designers also borrowed heavily from non-European and "exotic" sources that captured the public imagination. An architecture of fantasy then emerged from eclectic sources, and Southern California proved to be a fertile testing ground for these experiments. Period Revival styles were popular during the first forty years of the twentieth-century and patterned after buildings of various earlier periods. Styles included Colonial Revival, Spanish Colonial Revival, and Pueblo Revival.

Despite the widespread popularity of Period Revival in Southern California, detractors dismissed Los Angeles as a back-lot simulacrum. Modernist architect Richard Neutra "blamed" the motion picture industry for the proliferation of Period Revival architecture. Carey McWilliams offered a more generous explanation:

> Lacking socially prominent first families or deeply rooted social traditions, Los Angeles quickly adopted the motion-picture elite as its arbiters of taste and style. Although the movie elite moved in a world of their own, this world was all the more conspicuous for having the spotlight riveted on its isolated, stage-like gyrations. Hence the movies came to set the tone of opinion in style and taste, manner of living, and attitudes. In other words, Los Angeles imitated Hollywood.[8]

The Residence is an example of the Colonial Revival style. Based on the Georgian style of the Colonial period, the Colonial Revival style became popular again after the 1876 Centennial Exposition in Philadelphia, and its popularity continued through the 1930s and into the 1940s. Common characteristics of the Colonial Revival include a symmetrical massing and composition, one, one-and-a-half, or two stories, side-gabled roofs, stone or brick masonry chimneys, gabled dormers, box cornices with returns, one-story center front porches, wood double-hung sash windows, slender columns, fanlights or sidelights, and brick masonry construction or wood clapboard cladding.[9] Colonial Revival residences in West Hollywood were usually small bungalows or duplexes that reflected Craftsman style influences with open eaves, rafter tails, and tall windows with patterned muntins.[10]

Occupants

City directories, and building permits on file with the City's Building Division, as well as Assessor, city directories, voter registration, and U. S. Census records, were reviewed to determine if the subject property has any significant

associations with the productive lives of historic personages. The known occupants of the home were generally of the working middle-class and moved to California from other regions of the United States.

The earliest known owner of the subject property, based upon Assessor Records, was Dora E. Tom in 1937. Known later residents of 1011 North Ogden Drive, including their dates of occupancy, are as follows: Henry J. and Hope Henrietta Flohr (1954-1969), and Amalia B. Lejbowitz (1982-1984).

Known facts about the above individuals are as follows. No information was found on Dora E. Tom. Henry J. Flohr was born May 28, 1892 in Buffalo, New York. The earliest record available noting his move to California is his 1917 World War I draft card, he was listed as living at 820 South Oxford Street in Los Angeles.[11] Henry worked odd jobs, until he became a Civil Engineer for the Los Angeles Board of Education.[12] Prior to moving to the subject property, the Flohrs lived at 1319 Cole Place. Henry Flohr died on July 31, 1967 and is interned at the Hollywood Forever Cemetery.[13]

Hope Henrietta *Reutti* Flohr was born August 19, 1892 in New York. Henrietta was an actress doing pianologues in New York when in November 1912, she married her first husband Walter Lathrop Hanson, of the prominent Stanford Family.[14] On April 9, 1916 the *Washington Post* reported in an article entitled "Sues Mother-In-Law for $100,000 for Alienation," that Mrs. Walter Hanson sued her mother-in-law for $100,000 for the alleged alienation of her husband's affections after Walter's mother declared her son incompetent to deter him from his claim to his great uncle, Leland Stanford's one-million-dollar estate. The article also reported that Hanson was now working in San Diego and his wife, Henrietta who was a former actress. Hanson died in 1918. After the ordeal with her first husband, Henrietta married Henry Flohr and was a hairdresser to the stars. Henrietta passed away on June 30, 1974 and is interred with her second husband.[15]

The most recent owner from the building permit record was listed as Amalia B. Lejbowitz. Amalia was born on January 25, 1956. Amalia presently teaches AP Spanish and High School Spanish at Heritage Christian School in Grana Hills, California.[16]

Significance Evaluation

ESA evaluated the subject property under the following historical and architectural themes: Early Residential Development (1880-1930) including West Hollywood and the McNair Place Tract and Period Revival Architecture

[11] "Henry J. Flohr," United States World War II Draft Registration Cards, NARA microfilm publication M1936, M1937, M1939, M1951, M1962, M1964, M1986, M2090, and M2097 (Washington D.C.: National Archives and Records Administration, n.d.).

(1880-1940). ESA also conducted research on the history of the Residence, Garage and the Shed's construction and occupancy. The period of significance assigned to the subject property is 1920, the original construction date of the Residence. ESA only evaluated the significance and integrity of the Residence, since the Garage and Shed were both built after the period of significance and were found to be non-contributing ineligible buildings.

The subject property has not been previously surveyed and does not appear to be situated in a designated or potential historic district.

As explained below, ESA found the subject property ineligible under all of the applicable federal, state, and local criteria due to a lack of significance. It does not appear to be associated with significant events or the productive lives of historic personages. Moreover, it lacks architectural merit and has not yielded, and is not likely to yield, information important in prehistory or history.

During a previous survey in 2005-2006 near the vicinity of the project site, a Colonial Revival single-family residence was evaluated. The Colonial Revival residence at 1220 Orange Grove Avenue had a larger number of distinguishing characteristics of the building style and a much higher-level of integrity (original windows, siding, porch paving, original door and sidelights) than the subject property today. That comparable Colonial Revival single-family property was evaluated as not significant on local, state, and national levels under the historical and architectural themes, though it was evaluated as a potential contributor to a historic district. ESA evaluated the subject property in an equivalent way that corresponds to the previous survey results that evaluated a much better example as not individually significant.

Broad Patterns of History

With regard to broad patterns of history, the following are the relevant criteria:

> *National Register Criterion A: Is associated with events that have made a significant contribution to the broad patterns of our history.*
>
> *California Register Criterion 1: Is associated with events that have made a significant contribution to the broad patterns of California's history and cultural heritage.*

The subject property was historically associated with the early residential development of the McNair Place Tract, subdivided in 1913 by the Los Angeles Trust and Savings Bank Title Insurance and Trust Company. Although a few residential buildings were erected in that Tract shortly after its subdivision. Substantial development did not occur in the tract until the regional housing boom of the 1920s following World War I. The erection of the Residence and its original garage on the subject property in 1920 was among thousands of single-family residences constructed during this time throughout Southern California in response to the need for housing.

The subject property is not individually significant under this theme because the Residence was constructed seven years after the Tract subdivision, and the subject property did not play a significant role in the Tract's development.

CONTINUATION SHEET

Page 14 **of** 21 ***Resource Name or #** (Assigned by recorder) 1011 North Ogden Drive
***Recorded by:** A. Brown, ESA ***Date** 5/5/2017 ☒ **Continuation** Update

The subject property was merely one of many residences constructed during the 1920s housing boom. It is also not a contributor to a potential historic district that would be considered significant under this criterion. **Therefore, the subject property is found ineligible for listing under National Register Criterion A and California Register Criterion 1.**

Significant Persons

With regard to associations with important persons, the following are the relevant criteria:

> *National Register Criterion B: Is associated with the lives of persons significant in our past.*
>
> *California Register Criterion 2: Is associated with the lives of persons important in our past.*

There does not appear to be any evidence to suggest that the subject property is associated with the productive lives of historic personages. The name of the original owner is unknown. Later occupants of the subject property, as summarized above in Chapter III, Occupancy History include Dora Tom (1937) Henry J. Flohr (195201967), and Amalia Lejbowicz (1982-1984) who do not appear to be significant in national, state, or local history. Hope Henrietta Flohr (1952-1969), though originally married to a well-known individual is not significant in a local context and though she had a reputation in back in the Eastern United States, she was not influential or significant in local history. **Therefore, the subject property is found ineligible for listing under National Register Criterion B and California Register Criterion 2.**

Architecture

With regard to architecture, design, or construction, the following are the relevant criteria:

> *National Register Criterion C: Embodies the distinctive characteristics of a type, period, or method of construction or that represent the work of a master, or that possess high artistic values, or that represent a significant and distinguishable entity whose components may lack individual distinction.*
>
> *California Register Criterion 3: Embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of an important creative individual, or possesses high artistic values.*

The Residence is presently improved with a one-story wood-frame single-family dwelling constructed in 1920 in the Colonial Revival style. The Residence was constructed during a period in which Period Revival styles were extremely popular in the United States. Though it does embody some characteristics of the Colonial Revival style such as symmetrical massing and composition, cornice, and clapboard siding, it lacks other characteristics such as double-hung windows on the façade, side-gabled roof, slender columns, fanlights or sidelights, and central porch (the original porch was altered). Furthermore, this Colonial Revival Residence also has elements of the Craftsman style and features has tall windows with patterned muntins on the front elevation. The property is a relatively modest example of the style and does not convey common characteristics of the Colonial Revival style. It is a poorly executed example of the style built by an owner/builder without an architect and does not rise to the level of separate

***Recorded by:** A. Brown, ESA ***Date** 5/5/2017 ✠ **Continuation** Update

significance due to lack of architectural merit. During a previous survey in 2005-2006 near the vicinity of the project site, another better example of a Colonial Revival single-family residence was evaluated but found ineligible. The other Colonial Revival residence at 1220 Orange Grove Avenue had a larger number of distinguishing characteristics of the building style and a much higher-level of integrity (original windows, siding, porch paving, original door and sidelights) than the subject property. **Therefore, the subject property is found ineligible for listing under National Register Criterion C and California Register Criterion 3.**

Archaeology

> *National Register Criterion D. It yields, or may be likely to yield, information important in prehistory or history.*
>
> *California Register Criterion 4. Has yielded, or may be likely to yield, information important in prehistory or history.*

The potential to encounter archaeological or Native American resources on the subject property is considered remote. Moreover, research indicates that there were no improvements on the parcel prior to the construction of the Main Residence and Garage on the subject property. **Therefore, the subject property is found ineligible or listing under National Register Criterion D and California Register Criterion 4.**

City of West Hollywood

> *Criterion A: Exemplifies Special Elements of the City. It exemplifies or reflects special elements of the city's aesthetic, architectural, cultural, economic, engineering, political, natural, or social history and possesses integrity of design, location, materials, setting, workmanship feeling, and association.*

The subject property is presently improved with a 1920 Residence in the Colonial Revival style. The Residence was constructed during a period in which Period Revival styles were extremely popular in the United States, including in West Hollywood. The Residence does not rise to the level of separate significance, and lacks architectural merit for the Colonial Revival style. The Residence does not reflect the development patterns of West Hollywood. Furthermore, the Residence does not reflect elements of the city's architectural, cultural, economic, engineering, political, or social history. **Therefore, the subject property is found ineligible for listing under Criterion A.**

> *Criterion A.1: It embodies distinctive characteristics of a period, method, style, or type of construction, or is a valuable example of the use of indigenous materials or craftsmanship.*

The subject property does not appear to embody the distinctive characteristics of a period, method, style, or type of construction and does not appear to make use of indigenous materials or craftsmanship. The subject property is presently improved with a 1920 Residence in the Colonial Revival style. The Residence was constructed during a period in which Period Revival styles were extremely popular in the United States. Though it does embody some characteristics of the Colonial Revival style such as symmetrical massing and composition, cornice, and clapboard siding, but it lacks other characteristics such as wood double-hung sash windows on the façade, side-gabled roof, slender columns, fanlights or sidelights, and central porch (the original porch was altered). Furthermore, this Colonial

Trinomial

CONTINUATION SHEET

Page 16 **of** 21 ***Resource Name or #** (Assigned by recorder) 1011 North Ogden Drive
***Recorded by:** A. Brown, ESA ***Date** 5/5/2017 ✠ **Continuation** Update

Revival Residence also has elements of the Craftsman style and has tall windows with patterned muntins. The property does not convey distinctive characteristics of the Colonial Revival style, and do not rise to the level of separate significance, and lack architectural merit. During a previous survey in 2005-2006 near the vicinity of the project site, a Colonial Revival single-family residence was evaluated. The Colonial Revival residence at 1220 Orange Grove Avenue had a larger number of distinguishing characteristics of the building style and a much higher-level of integrity (original windows, siding, porch paving, original door and sidelights) than the subject property today. The materials and features of the Residence are commonplace, the design is poor quality and lacks architectural distinction, and later alterations substantially detract from its integrity. **Therefore, the subject property is found ineligible for listing under Criterion A.1.**

Criterion A.2: It contributes to the significance of a historic area by being:
a. A geographically definable area possessing a concentration of historic or scenic properties.
b. A thematically related grouping of properties, which contribute to each other and are unified aesthetically by plan or physical development.

The subject property does not satisfy Criterion A.2.a or A.2.b as it fails to convey its period of significance and does not appear to be situated in a potential historic district or grouping. ESA conducted a windshield survey of the neighborhood of the subject property finding that it does not qualify as a historic district to an insufficient concentration of intact single-family residences associated with the early residential development of the McNair Place Tract. This is due to demolitions to make way for larger multi-family residential buildings, like the property to south. In some cases, lots have been merged to accommodate these new, larger buildings. Examples of post-World War II development include the apartment buildings on the same block, adjacent and across the street. Of 20 original buildings in the 1100 block of Ogden Drive, only ten buildings from 1920 to 1930 remain. Therefore, the area immediately surrounding the subject property is recommended ineligible as a potential historic district under all of the applicable federal, state, and local criteria. The subject property is not located in a geographically definable area, there is no concentration of historic or scenic properties in the vicinity, or any thematically related grouping of properties. **Therefore, the subject property is found ineligible for listing under Criterion A.2.**

Criterion A.3: It reflects significant geographical patterns, including those associated with different eras of growth and settlement, particular transportation modes, or distinctive examples of community or park planning

The subject property was historically associated with the residential development of the McNair Place Tract, subdivided in 1913 by the Los Angeles Trust and Savings Bank Title Insurance and Trust Company. Substantial development did not occur in the tract until the regional housing boom of the 1920s The erection of the Residence and its original garage on the subject property in 1922 was among thousands of single-family residences constructed during this time throughout Southern California in response to the need for housing.

Moreover, there is no evidence to suggest that the Residence was one of the earliest single-family residences constructed in the area or otherwise influential upon the development of McNair Place Tract, as most of the lots were developed with single family residences as shown in the 1926 Sanborn Map. Furthermore, the subject property does not reflect significant geographical patterns. It was not associated with the original town of Sherman, the early

State of California ♁ Natural Resources Agency Primary#

residential development following the streetcar line in the 1910s, or any distinctive example of community planning. **Therefore, the subject property is found ineligible for listing under Criterion A.3.**

> *Criterion A.4: It embodies elements of architectural design, craftsmanship, detail, or materials that represent a significant structural or architectural achievement or innovation.*

Though the Residence does embody some characteristics of the Colonial Revival style such as symmetrical massing and composition, cornice, and clapboard siding, it lacks other characteristics such as double-hung windows on the façade, side-gabled roof, slender columns, fanlights or sidelights, and central porch (the original porch was altered). Furthermore, this Colonial Revival Residence also has elements of the Craftsman style and has tall windows with patterned muntins. The property is a relatively modest example of the style and does not convey distinctive characteristics of the Colonial Revival style. It is a poorly executed example of the style built by an owner/builder without an architect and does not rise to the level of separate significance due to lack of architectural merit. **Therefore, the subject property is found ineligible for listing under Criterion A.4.**

> *Criterion A.5: It has a unique location or singular physical characteristic or is a view or vista representing an established and familiar visual feature of a neighborhood, community, or the city.*

There is no evidence to suggest that the subject property has a unique location or singular physical characteristic or is a view or vista representing an established and familiar visual feature of a neighborhood. **Therefore, the subject property is found ineligible for listing under Criterion A.5.**

> *Criterion B. Example of Distinguishing Characteristics. It is one of the few remaining examples in the city, region, state or nation, possessing distinguishing characteristics of an architectural or historical type or specimen.*

The subject property does not satisfy this criterion as it does not represent a rare remaining example of an architectural type specimen. The subject property is presently improved with a single-family residence constructed during a period in which Period Revival styles were extremely popular in the United States. Period Revival architecture is not rare in West Hollywood, and compared to the subject property, there are better and more intact local examples, such as 1220 Orange Grove Avenue in the City. **Therefore, the subject property is found ineligible for listing under Criterion B.**

> *Criteria C: Identified with Persons or Events. It is identified with persons or events significant in local, state, or national history.*

There does not appear to be any evidence to suggest that the subject property is associated with the productive lives of historic personages. The name of the original owner is unknown. Later occupants of the subject property, as summarized above in Chapter III, Occupancy History include Dora Tom (1937) Henry J. Flohr (195201967), and Amalia Lejbowicz (1982-1984) do not appear to be significant in national, state, or local history. Hope Henrietta Flohr (1952-1969), though originally married to a well-known individual is not significant in a local context and though she

had a reputation in back in the Eastern United States, she was not influential or significant in local history. **Therefore, the subject property is found ineligible for listing under Criterion C.**

Criteria D: Notable Work. It is representative of the work of a notable architect, builder, or designer.

The California Register requires that a resource retain enough of its historic character or appearance to be recognizable as a historical resource and to convey the reasons for its significance.

Extensive alterations and replacement or removal of original materials occurred throughout the Residence's existence, including a kitchen remodel in the 1970s, the demolition of the original garage in 1982, the addition to the southwest rear (1977), removal of most of the original windows, inappropriate repairs to the chimney (foam caulking, instead of mortar for the chinking), major alterations to the porch including surface tiling, extension of the porch and additional stairs. Furthermore, the driveway now features concrete tile, the original light fixtures have been removed from the façade and porch, the original roof has been replaced with a composite-shingle roof, and the original foundation vents have been altered or replaced. Additionally, alterations and repairs to the original clapboard siding have been undertaken.

Integrity Analysis

The National and California Registers have specific language regarding integrity. Both require that a resource retain sufficient integrity to convey its significance.[17] In accordance with the guidelines of the National Register, integrity is evaluated in regard to the retention of location, design, setting, materials, workmanship, feeling, and association. The property must retain, however, the essential physical features that enable it to convey its historic identity.

Furthermore, National Register Bulletin 15 states,

> *A property retains association if it is the place where the event or activity occurred and is sufficiently intact to convey that relationship to an observer. Like feeling, association requires the presence of physical features that convey a property's historic character. Because feeling and association depend on individual perceptions, their retention alone is never sufficient to support eligibility of a property for the National Register.*[18]

The California Register requires that a resource retain enough of its historic character or appearance to be recognizable as a historical resource and to convey the reasons for its significance.

Extensive alterations and replacement of original materials occurred throughout the Residence's existence, including the replacement of the original garage in 1982, the addition to the southwest rear (circa 1980s), replacement of windows, inappropriate repairs to the chimney, the tiling and extension of the porch, concrete tile driveway, the replacement of original light fixtures, replacement composite-shingle roof, replacement of the original foundation vent, and alterations to the original clapboard siding.

***Recorded by:** A. Brown, ESA ***Date** 5/5/2017 ☒ **Continuation** Update

Location

The subject residence has not been moved. Therefore, the subject property retains integrity of location.

Setting

The immediate setting of the subject property that faces the street has been altered by the addition of a tall hedge, trees, wood fence, and metal gate, the larger garage, and shed which were not part of the original design. The neighborhood setting of the subject property has remained one and two-story residential use. However, the early twentieth-century character in the immediate vicinity of the subject property has been eroded by the construction of numerous post-war multi-family apartments that differ in scale, such as the courtyard apartment on the adjacent south lot. Of the 20 single-family and duplex properties constructed on the block, ten remain. The subject property is flanked by a multifamily building to the west and south, and an original 1920s residence on the north and, while it looks directly across to an early residence, that house too is flanked by a multi-family building and an original 1920s residence. Current development is further eroding the former early twentieth-century character of the surrounding setting. The addition of the multiple post-war multi-family apartment buildings in the vicinity, along with new multi-family residential projects in the McNair Tract, have and are continuing to detract from the integrity of the setting. The lot adjacent to 1013 North Genesee Avenue is entitled for a 7-unit contemporary building. Lots at 1008, 1016, and 1020 Ogden Drive are also each entitled for 7-unit contemporary buildings. The lot at 1021 Ogden Drive is similarly under development for 7 units. The lots at 950 Ogden Drive and 7760 Romaine Street are already each under construction for 5-unit contemporary style townhouses. **Therefore, the subject property is found to lack integrity of setting.**

Design

The subject property does not retain its historical appearance. The earliest record of the original design described the Residence as a one-story, single-family bungalow with a concrete foundation, wood clapboard siding, a gable roof with shingles, heating provided by a fireplace and coal, and a cesspool. The interior included a three-room living room, two bedrooms, one bath and a kitchen. Two of the rooms had hardwood floors. A buffet and bookcases were built-in features. A sketch plan on the record shows that the bungalow measured 36 feet wide by 28 feet long with a larger southwestern rear corner for a total of 1,132 square-feet; it also appeared to have a nine-foot by six-foot centered porch protruding from the front of the house. The assessor records also indicated a garage on the property, but did not include the construction date for the building. The original design of the Residence has experienced changes since its construction in 1910. Though the front facades of the Residence with its front gable porch remains, the lengthening of the porch floor, extensive replacement and change of material on the exterior, and the extension of the plan with a rear addition have changed the overall design of the subject property. The porch appears to have been rebuilt. It has been lengthened to extend the extent of the east elevation, the original concrete steps and flooring have been covered by non-original tile, which does not match the original porch design. Furthermore, the denticulated frieze and columns have been replaced. The concrete walkway and driveway were also not part of the original design. **Therefore, the subject property is found to lack integrity of design.**

***Recorded by:** A. Brown, ESA ***Date** 5/5/2017 ✠ **Continuation** Update

Materials

The majority of the Residence's original materials have been replaced. Almost all of the original exterior materials of the Residence are new: the windows, the roof, porch, porch tiling, garage, shed, steps, and addition. The primary façade features alterations to the original clapboard, the removal of original light fixtures, and extensive changes to the porch. The only original material appears to be sections of wood clapboard siding, east elevation of the front porch, the wooden window frames and the brick chimney. The Garage has its original wooden rafters and door. The rest of the original exterior materials of the Garage are new: the exterior siding, the double French doors on the north elevation, and the roof. **Therefore, the subject property is found to lack integrity of materials.**

Workmanship

The Residence does not appear to have much workmanship in their original design, other than the original windows on the front elevation. Many of the original materials have been removed or not replaced in kind. **Therefore, the subject property does retain its integrity of workmanship.**

Feeling

Some of the original materials were not replaced in-kind, so the feeling of a 1920 residence of the original McNair Place subdivision has been lost. The extension of the front porch and alterations to the porch's materials, which are primary character-defining features, do not match the original Period Revival architectural design of the Residence. The original roofing was replaced with non-historic composition sheet, which lessens the feeling of a historic residence. A majority of the original wood windows have been replaced by metal-sash windows, boarded up or removed. The addition and major alterations to the south, west, and north elevations also lessens the feeling of a historic residence constructed in 1920. The new "tiled" concrete driveway is not found in the 1920s, which also lessens the feeling of a historic residence. **Therefore, the subject property is found to lack integrity of feeling.**

Association

Research did not indicate any significant associations with early residential development, Period Revival Architecture, or any historically significant residents associated with the property. The Residence lacks integrity from the period of significance and therefor does not convey its association with the themes discussed in the historic context. **Therefore, the subject property does not maintain integrity of association.**

Summary

The subject property does not retain integrity of design, setting, materials, or feeling, but does retain location, workmanship, and association. For a small house in this residential neighborhood, the most important integrity aspects for this property to have would be design, setting, materials, workmanship, and feeling, which are the ones that the subject property does not retain.

CONTINUATION SHEET

Page 21 **of** 21 ***Resource Name or #** (Assigned by recorder) 1011 North Ogden Drive
***Recorded by:** A. Brown, ESA ***Date** 5/5/2017 ✠ **Continuation** Update

The subject property has not been previously evaluated or individually designated at the federal, state, or local level and does not appear to be a contributor to a potential or designated historic district. As a result of its investigations, ESA found the current improvements on the subject property, including the Residence, ineligible under all of the applicable federal, state, and local criteria as they lack significance. The subject property does not convey a significant association with early development patterns in West Hollywood, and there is no evidence to suggest that it is associated with productive lives of historic personages. Moreover, the subject property lacks architectural merit. Lastly, the subject property has not yielded, and is not likely to yield, information important in prehistory or history. The subject property does not retain integrity of what would be the most important aspects for this type of property: the design, setting, materials, and feeling. Therefore, ESA recommends that all the current improvements on the subject property not be considered historical resources pursuant to CEQA and that the subject property be assigned a CHR Status Code of 6Z, "Found ineligible for NR, CR or Local designation through survey evaluation."

St. Ambrose Catholic Church is located in West Hollywood southwest of the intersection of North Fairfax and Fountain Avenues, roughly equidistant between commercial areas on Santa Monica and Sunset Boulevards. North Fairfax Avenue has five lanes and Fountain Avenue four, and both streets are heavily trafficked. The neighborhood is primarily one- and two-story historic-period dwellings, with occasional institutional properties and a handful of apartment buildings built after 1985. There are street trees and occasional side yards and other small landscaped areas, but many buildings are immediately adjacent to sidewalks. The St. Ambrose parcel, which occupies the northeast quarter of the long block, has seven buildings as well as parking areas:

- The church building just south of the intersection
- The rectory building adjacent to the intersection at the northeast corner of the parcel
- The convent building west of the rectory on Fountain Avenue
- The school building south of the large parking lot adjacent to the church
- The parish hall at the southern end of the parcel (continued p. 3).

Description: (cont.)

Church

The Midcentury Modern style church has a rectangular plan and a low pitch gabled roof with minimal eave overhang. Constructed of reinforced concrete with steel frame and clad in smooth stucco, its dominant decorative feature is the 80' reinforced concrete tower topped with a bronze cross. Beveled rectangular openings in all four sides of the uppermost section of the tower both frame the sky and highlight the thickness of the tower's walls. A frieze of subtly recessed rectangular shapes wraps around the tower at the bottom of the windows. Narrow rectangular windows in the lower section are at different heights on each elevation and are fitted with multi-light windows.

A second bronze cross stands atop the roofline at the main (east) elevation, which fronts onto North Fairfax Avenue. A tripartite stained-glass window is set in the upper section of the wide and deeply recessed entryway. An 11' x 12' cast stone relief mural designed by George Snowden depicts the Consecration of St. Ambrose, and angles outward above the doorway. Double wooden doors (more deeply recessed than the relief mural and window above) have cruciform stained-glass windows and a marble surround. A set of concrete steps with simple metal handrails leads to the doors. The façade flanking the entryway is blank except for small, deeply recessed rectangular windows roughly 10' high. There are low brick planters adjacent to the sidewalk. Eight tall stained-glass windows on the upper portion of the south façade are separated by heavy concrete columns. They are rectangular in shape rather than the using the more traditional pointed arch used for church windows. A lower projecting volume (which houses the confessionals) has its own low pitch gabled roof and small rectangular windows. It has a recessed secondary entryway near the bell tower and another roughly at the center of the elevation sheltered by a projecting flat-roofed awning. Both of these entryways are accessed via accessible ramps.

The north elevation is virtually identical to the south, with stained glass windows in the upper section separated by concrete columns. A lower projecting volume like that on the south has its own low pitch gabled roof and small rectangular windows. The east end of this volume houses the baptistry and has three narrow rectangular windows on its east façade. The west elevation of the church is immediately adjacent to the garage/dwelling and shed, and is not visible from the street or most areas of the parcel. It has small rectangular windows fitted with clear glass steel casement and an entryway (which leads to the sacristry) sheltered by a projecting flat-roofed awning and accessed via a set of concrete steps.

Interior

The interior of St. Ambrose Church is characterized by a blend of modernist and traditional elements. Primary materials include terrazzo, marble, light-colored Lauan wood, acoustic tile, and bronze. The double doors at the east façade lead to a narthex, which has the bronze-grilled baptistry at the north and a glassed-in "cherub room" at the south. It is separated from the nave by a glass wall with bronze trim and wood swinging doors. A choir loft with organ at the rear of the sanctuary (above the narthex) is dominated by the large stain-glassed window on the main façade. Terrazzo floors with marble trim in cruciform pattern lead to the altar between two rows of wooden pews with simple geometric forms and a lack of ornamentation. The south side aisle leads to confessional rooms behind light Lauan wood doors, and a similar set of doors that lead to the parking lot. There are four shrines with statues of saints separated from the north side aisle by bronze and stainless steel rails. Carved wooden relief sculptures of the twelve Stations of the Cross are positioned under the tall stained-glass windows along the aisles. Tall bronze light fixtures are installed between each window. The ceiling has recessed lighting and acoustic tiles.

The sanctuary is demarcated only by a wide set of marble steps. Altars and pulpit are marble, and intricate twin hanging sanctuary lamps executed in bronze have symbols of the four stages of Jesus' life worked into their design. The sanctuary is dominated by the mural that rises from the main altar to the 30' ceiling. Executed in tempera by John H. (Jan Henryk) de Rosen, its primary subject is the Trinity, but it also features St. Ambrose and a number of religious symbols.

Rectory

The rectory is adjacent to the church at the northeast corner of the parcel. It is rectangular in plan with a low pitch hipped roof and moderate eave overhang. Constructed of reinforced concrete and clad in smooth stucco, it has rectangular windows on both stories and all four elevations fitted with multi-light steel casement. Those on the Fairfax and Fountain Avenue facades are flanked by decorative wood shutters. The main entrance is on the east facing Fairfax Avenue. A covered breezeway connecting the rectory to the church is enclosed in decorative wrought-iron fencing. Its massing and stylistic details are similar to small multi-family buildings of the era that featured Ranch-inspired architectural characteristics. It lacks the Midcentury Modern design features that distinguish the associated church building.

Convent

State of California – The Resources Agency
DEPARTMENT OF PARKS AND RECREATION
CONTINUATION SHEET

Primary # _____

Page 4 of 26 *Resource Name or # (Assigned by recorder) 1271 North Fairfax Avenue
*Recorded by Kara Brunzell *Date: January 11, 2016 ☒ Continuation ☐ Update

The convent is west of the rectory (to which it is connected by a brick wall) and fronts onto Fountain Avenue. The two-story Spanish Revival building is rectangular in plan with a hipped clay tile roof and board-form concrete construction. The segmental arched doorway is flanked by a pair of windows of similar shape with octagonal windows at the corner. There is a statue of Mary above the door at the center of a row of smaller rectangular windows. Windows are fitted with steel casement, except for the octagonal windows, which are stained glass. The building is a common example of Spanish Revival architecture.

Garage/Dwelling
The garage/dwelling is just to the west of the church. It is rectangular in plan with a flat roof and a small dwelling above a double garage. Two metal roll-up doors provide vehicle access at the south and there is an entryway at the north. Windows are vinyl sliders. The building lacks ornamental details or architectural distinction.

Shed
There is a small rectangular-plan shed north of the garage/dwelling. It is a utilitarian building constructed of corrugated metal and lacks fenestration.

School
The school building is across the parking lot from the church near the south end of the parcel. The two-story Spanish Revival building is rectangular in plan with a hipped clay tile roof and board-form concrete construction. Most of the main façade is not visible because of a tall fence. There is a projecting single-story section at the main (east) façade with a shed clay tile roof. The deeply recessed entryway is fitted with a glazed modern aluminum frame door, sidelight, and transom. Windows are small rectangles fitted with steel casement. The building is a common example of Spanish Revival architecture, and has been altered several times over the years.

Parish Hall
The parish hall is adjacent to the school at the south end of the parcel. It has a rectangular plan, flat roof, and is clad brick laid in stack bond. A wide entryway is centered on the main (east) façade and is fitted with glazed double doors, sidelights, and transom. Side elevations have tall vertical windows. The building lacks architectural distinction.

B10. Significance (continued):
Historic Context
The first Europeans to settle in Los Angeles arrived 1781 to found one of the earliest civilian towns the Spanish established in California. A handful of settlers from Mexico arrived to form the pueblo of Los Angeles. The settlement remained a tiny village throughout the Spanish and brief Mexican eras. After Mexico gained its independence in 1821, the Mexican Alcalde of Los Angeles granted the nearly 4,500-acre Rancho La Brea (named for its famous tar pits) to Antonio Jose Roca and Nemisio Dominguez. Even after California statehood in 1850, Southern California remained sparsely populated, and the primary local activity was agriculture. Rancho La Brea (which would later become Hancock Park, Hollywood, and West Hollywood) was used for cattle ranching and later fruit trees and oil wells.[1]

Los Angeles finally began to grow as a population center in the 1880s, after completion of the transcontinental railroads facilitated the relocation of large numbers of Midwesterners to California. In the 1890s, improved water infrastructure further stimulated development. In 1896, Moses H. Sherman (who gave his name to Sherman Oaks) and Eli P. Clark built a line of their Pasadena and Pacific Interurban Railway from Downtown to Santa Monica, along the alignment of Santa Monica Boulevard. The rail yards were located about halfway between the two towns, and the partners platted a town named Sherman adjacent the yards as a speculative venture.[2]

By 1919, Sherman was still surrounded by open fields. It had a number of houses for railway workers and a Catholic church as well as taverns and a brothel. Meanwhile, Los Angeles was growing into a metropolis, and the establishment of the film industry in Hollywood meant that its borders were encroaching on Sherman, which at this point was also referred to as West Hollywood. Although Los Angeles absorbed dozens of small communities in this era, Sherman fought off annexation (the first of several attempts) in the early 1920s before officially renaming itself West Hollywood. Several attempts at incorporation over the ensuing decades also failed.[3]

With the growth of the film industry in nearby Hollywood in the 1920s, West Hollywood became an attractive bedroom community for those in the film industry and experienced a population boom. Because of its unincorporated status, police enforcement was relatively lax,

and West Hollywood became a center for gambling and night life. The cultural ferment of the late 1960s and 1970s brought hippies and musicians to West Hollywood. It also became a haven for gays attempting to avoid discrimination. In 1984, a coalition of Russian Jewish emigres, the elderly, and gay residents successfully incorporated West Hollywood as a city, electing a gay-majority city council and passing rent control ordinance to protect residents from the rising cost of living. In the intervening years, West Hollywood has grown and remained a diverse city that strongly advocates for legal rights for the LGBT community.[4]

St. Ambrose Parish History

St. Victor's Catholic Church (about a mile to the west of St. Ambrose) was established in 1906 to serve the population of railway workers in Sherman, many of whom were Mexican immigrants. As the population of West Hollywood grew in the 1920s, a second church was needed, and the Archdiocese of Los Angeles tasked Fr. Thomas Nolan O'Toole with forming a new parish.

Thomas Nolan O'Toole

O'Toole was born in Carnew, County Wicklow, Ireland in 1882. He grew up Catholic, and was the oldest of Michael and Mary O'Toole's six children. Research has not revealed how O'Toole spent his youth, but he was ordained as a Roman Catholic priest in Dublin in 1912 at the age of 30. He was sent to Los Angeles almost immediately, and arrived in New York aboard the Lusitania in September, 1912. O'Toole served as an assistant priest at St. Agnes Catholic Church in Los Angeles, and became a naturalized U.S. Citizen in 1917. After the U.S. entered World War I, he volunteered for the Chaplains Corps and was accepted August 18, 1918. He trained in Kentucky and served with the 82nd Division in Europe, returning to Los Angeles in 1919 after a visit to Ireland. He served brief assignments in small local parishes over the next three years.[5]

In 1922, the Archdiocese of Los Angeles and San Diego (which had recently been formed out of a larger archdiocese) sent Fr. O' Toole to found a new parish in West Hollywood. O'Toole found a temporary church (fittingly for West Hollywood in the 1920s) in a movie theater that the Archdiocese rented for $50. Almost immediately, St. Ambrose's pastor began searching for a more permanent church building. When attempts to purchase an existing church failed, O'Toole began searching for property. He purchased the parcel at 1265 North Fairfax (where the current school is sited) in 1923, and began using its existing house as a rectory.[6]

Almost immediately after purchase of the parcel, O'Toole hired Los Angeles architect Ross Montgomery to design a church building. The parcel did not include the corner lot, which in the 1920s was an avocado farm with a house and barn. The new church was completed in a few short months, and O'Toole celebrated mass in the building on Easter Sunday, 1924. Ross Montgomery designed several ecclesiastical buildings in Southern California, some of which are considered architectural landmarks. The original St. Ambrose, however, though designed in the Spanish Revival style he deployed so skillfully elsewhere, appears to have been a modest and unassuming example of the style. O'Toole immediately began making plans to acquire the avocado farm next door. By 1929, he had been successful, and he converted the farmhouse into a rectory.[7]

As developers constructed new houses and apartment buildings in West Hollywood and the population exploded in the 1920s, the parish grew. O'Toole began planning for a parish school. In 1935, O'Toole received permission to build a parochial school. Parishioners began raising funds in June, and had $6,500 within ten days. The new building was designed by architects Henry Carlton Newton and Robert Dennis Murray. O'Toole was an active administrator that pushed his projects toward completion, and construction began in July, just days after the architects completed the plans. In its first year of operation, the school had 130 students. Originally one story, two rooms were added to the second floor to accommodate increasing enrollment a few years after construction. Less than two years later, St. Ambrose broke ground on the convent building around the corner on Fountain Avenue, which was also designed by Newton. The Spanish Revival school and convent buildings are not outstanding examples of the style.[8]

Henry Clayton Newton (1896 – 1981) was born in Illinois. He relocated to Los Angeles, studied architecture at Los Angeles Polytechnic, and worked briefly as a petroleum engineer. In 1918, he served as a field artillery officer in World War I. After the war, he returned to Los Angeles and married Bessie Burke. The young couple lived with her parents at first while Newton worked as an oil company engineer. The Newtons never had children. Henry Newton soon established an architectural practice, and designed a number of churches including the landmark Precious Blood Catholic Church in 1924. Newton was known as a devout Catholic, and the couple were St. Ambrose parishioners during their years in Los Angeles.[9]

In addition to practicing architecture, Newton was a California National Guard officer during the 1920s and 1930s. At the age of 47 he was called to active service once again after the U.S. joined the hostilities in World War II. After commanding the Armored Officers' School at Fort Knox, the Army selected Newton to coordinate the Monuments, Fine Arts, and Archives (MFAA) section's activities in Europe. Known as the Monuments Men, this group was tasked with identifying significant European works of art and architecture and saving them from the Nazis. (George Clooney directed and starred in a movie based on the MFAA's wartime exploits in 2014.) With his extensive architectural and military experience, Newton was uniquely qualified for this work, and the plan he developed served as the basis for the Monuments Men's salvage work. Newton received a Bronze Star and Legion of Merit for his military service. He retired from the military in 1956 and lived in Washington, D.C.[10]

Construction of Current Church Building

The Ross Montgomery church building appears to have been intended as a temporary structure, and by the time it was a decade old, O'Toole was planning to replace the original church building. During the 1930s, the parish was already actively putting money into a fund for a new building. O'Toole planned to build the new church on the avocado farm at the corner and selected Consulting Engineers Beatty & Clar, who had formed a partnership in the mid-1940s. By spring 1949, the Archdiocese had agreed to pay the firm $250,000 for design of new church and rectory buildings, and had made an initial payment for the preliminary drawings, which had been completed. The new church was sited where the barn and farmhouse had been, and the old church (where the current parking lot is located) was left standing during construction. The cornerstone was laid in 1950, and the building completed the following year. The rectory, also designed by Beatty & Clar, was completed about the same time. J.A. MacNeil was the contractor for the church, and Don S. Ely built the rectory. The church building included what was then state-of-the-art technology: a microphone system that piped the sermon into the "cherub room," sound-proofing, recessed lighting, and large expanses of glass.

Beatty & Clar

Harold Clar was born in Germany in 1897, and moved to the United States with his family as an infant. Clar became a civil engineer after attending college, and married a Michigan native named Ruth in 1927. She was about seven years younger than Clar. They lived in Brooklyn, New York in the early 1930s. Ruth was a housewife, and the Clars had no children. Clar worked at Henderson and Purdy in New York. The couple had moved to Los Angeles by 1935. In 1939, he worked as a designer for William Mellema's firm, Architect-Engineer. Clar became head engineer for Mellema's company, which specialized in seismic design. He formed a partnership with Beatty in the 1940s. Their offices were on South Hill Street Downtown. The firm designed several Mid-century Modern churches in the Los Angeles area. By 1964, the firm had become Clar & Spitzer, Architects and Engineers, and continued to operate from the same office. He lived until 1997. Research has not revealed any information about Spitzer, Clar's later partner. He appears to have been an architect, but his first names and biographical details are not known.[11]

Blake Elwood Beatty (1897 – 1974) was a native of Ontario, Canada. He married Dorothy Hull in the 1910s, and the couple had a son named Richard. Beatty became an engineer after attending a polytechnic high school rather than attending college. Between 1925 and about 1930, the family lived in the Bronx, where Beatty worked as a mining engineer. By 1940, they had relocated to California. Beatty became president of the Structural Engineers Association of Southern California, and went into partnership with Clar in the 1940s.[12]

Like many Catholic churches, St. Ambrose features stained glass windows, works of art, and interior fixtures that were specially created or carefully chosen to imbue the sanctuary with a sacred atmosphere. The Wagner-Woodruff Company designed custom lighting for many Los Angeles area churches and other institutions during the twentieth century. The firm not only designed but manufactured and installed the lighting and most of the bronze fixtures in the building, including the unique twin bronze sanctuary lamps. George McKenzie of Wagner-Woodruff also designed and donated the baptistry, and may have been a parishioner.[13]

Many of the other decorative fixtures in St. Ambrose were created by parishioners or skilled local craftspeople; however, at least three works of art are attributed to artists of international renown. Harry Clarke Stained Glass, Ltd. of Dublin, Ireland created art glass windows for the church. Clarke (1889 – 1931) grew up in a family-owned stained glass business, which by 1930 was being operated under his name. He created stained glass windows for churches all over Ireland, the UK, and a dozen other countries. He is considered one of Ireland's most distinguished twentieth-century artists.[14]

The creators of the St. Ambrose relief plaque over the main entrance to the church and the Trinity mural behind the altar were both famous artists when they designed these works. George Holburn Snowden (1901 – 1990) created the clay sculptures for the exterior relief mural over the entryway. Born in Yonkers, Snowden attended Yale and the Beaux Arts Institute as well as art academies in Europe. His work adorns the pediment of the U.S. Postal Service Building and he designed sculptures for a number of films as well as for Disney's theme parks. John H. (Jan Henryk) de Rosen was a renowned artist with a colorful biography. Born in Poland in 1891, de Rosen's father was a painter who worked for the Russian Czars, and the family relocated to Paris during his childhood. He fought for the Polish, French, and British armies during World War I. Between the wars he returned to Poland, where he studied painting and worked as a diplomat. He painted a mural in a Polish cathedral and was later hired to paint the pope's chapel. While he was in the United States in 1939 to create murals for the Polish Embassy, World War II erupted. He never returned to Poland, but created many murals (often on religious themes) in the United States, including the towering St. Ambrose altar mural. In 1955, de Rosen chaired the Iconography Committee for the National Shrine in Washington D.C. George Snowden (who also created a statue of Mary for the National Shrine's main altar) was one of the artists who de Rosen chose to ornament the East Porch.[15]

The church has undergone very few alterations since its completion in 1951. North Fairfax Avenue has been widened since the early 1950s, so the sidewalk is now immediately adjacent to the church steps. Original clear glass cruciform windows on the main exterior doors were replaced with stained glass within a few years of original construction. The most significant alterations were the removal of the original communion rail about 1962 (when Vatican II modernized some aspects of Catholic worship). The altar was cut away from the wall and moved forward about the same time. These changes are typical of Catholic Churches.

Later History of the Parish

Monsignor Thomas N. O'Toole, who had founded the parish and spent nearly four decades as its pastor, died of heart failure in 1960. In 1962, after O'Toole's death, his replacement Msgr. M.H. Benso retained J. George Szeptycki to design a Parish Hall south of the school. The Parish Hall was a fairly utilitarian design, and did not reflect the architectural styles of either of the older buildings (the school and convent) on the parcel or the 1951 Beatty and Clar church.[16]

Because of its location in West Hollywood with its large gay population, the AIDS epidemic had a strong impact on the parish. In 1982, at the height of the epidemic, St. Ambrose was in the news when it was vandalized by activists angered by Cardinal Roger Mahony's prohibition on condom use. At other times, St. Ambrose's priests anointed HIV and AIDS patients and offered special masses for those who had died of AIDS.[17]

From 1987 until his death in 1997, Msgr. John (Jack) Beattie was pastor at St. Ambrose. Beattie had served in several other Los Angeles-area parishes, and while at St. Ambrose chaired the Archdiocesan Council of Priests. The Archdiocese closed the parish school during Beattie's pastorate in 1993, and the school building was unused. Beattie allowed parishioner and veteran director Robert Ginty to transform the building into an Irish performing arts center, which hosted many plays and dance performances over the next several years.[18]

In 2008, the Larchmont Charter School opened an elementary school in the old parish school building.

Evaluation:
The NRHP and California Register of Historical Resources (CRHR) require that a significance criterion from A-D or 1-4 (respectively) be met for a resource to be eligible. The West Hollywood criteria for listing historic resources are based on and similar to the state and national standards.

Criterion A/1: St. Ambrose Church is not associated with events that have made a significant contribution to the broad patterns of local, regional, or national history. The church is generally associated with the historical trends that governed the development of West Hollywood, such as the relocation of the film industry to Los Angeles and the residential expansion of Hollywood in the twentieth century. However, every property is constructed within a particular historic context, but not every property is historically significant. Originally constructed as a church, the property does not uniquely exemplify any important event or series of events in the history of West Hollywood. Therefore, the church lacks historic significance and is not eligible to the NRHP or CRHR under Criterion 1/A.

Criterion B/2: St. Ambrose Church is not associated with the lives of persons important to local, state, or national history, and therefore is not eligible to the NRHP or CRHR under Criterion B/2.

Criterion C/3: St. Ambrose Church is significant under Criterion 3 for its architecture. The church building possesses high artistic values as exemplified by its architectural design as well as important works of exterior and interior art. The building is a strong example of a Mid-century Modern church. After 1945, architects began adapting the stark formalism of International Style architecture into a more populist style. Mid-century Modern ecclesiastical architecture began to blend the clean lines and geometric forms of the International Style with references to historic religious buildings. Beatty & Clar's St. Ambrose design skillfully utilizes the principals of modernism by eschewing exterior ornament, deploying large areas of blank white façade and a deeply recessed entryway, and creating a rigidly geometrical bell tower as a focal point. The shallow pitch of the roof with its narrow eaves and the concrete columns on the side facades are modernist features that simultaneously reference the steeply pitched roofs and buttresses of traditional churches. Irregular fenestration on the lower bell tower subtly alludes to historic precedent. Stained glass provides a traditional element set within modernistic rectangular openings. In addition to significant architectural features, the building has several noteworthy artistic and decorative elements. The cast stone relief mural over the entryway, which was designed by George Snowden, represents the work of an important American artist who was at the height of his career when he created the relief. The stunning sanctuary mural by John H. de Rosen is the work of an artist that was internationally renowned for his ecclesiastical paintings. Harry Clarke created the art glass in the church, and was also widely renowned for his craft. And although the local Wagner-Woodruff does not appear to have been well-known outside Los Angeles, the custom bronze fixtures they created for the building are important elements of its interior, particularly the unique sanctuary lamps. For these reasons, the church is significant for its architecture and associated artworks and is eligible for the NRHP and CRHR under Criterion C/3.

Criterion D/4: In rare instances, buildings themselves can serve as sources of important information about historic construction materials or technologies and be significant under Criterion D/4. St. Ambrose Church does not appear to be a principal source of important information in this regard.

The St. Ambrose Church meets the criteria for national and state historic listing. It has been altered only slightly over the years, and therefore retains integrity. It has been assigned a Historic Resource Status Code of 3S, and therefore qualifies as a historic resource under CEQA.

The associated rectory and other buildings on the parcel lack historical or architectural significance and are therefore not eligible for historic listing at any level. They therefore do not qualify as historic resources under CEQA.

Los Angeles Department of City Planning
RECOMMENDATION REPORT

CULTURAL HERITAGE COMMISSION

CASE NO.: CHC-2012-195-HCM
ENV-2012-196-CE

HEARING DATE:	April 5, 2012	Location: 800 S. La Brea Ave
TIME:	3:00 PM	Council District: 4
PLACE:	City Hall, Room 1010 200 N. Spring Street Los Angeles, CA 90012	Community Plan Area: Wilshire Area Planning Commission: Central Neighborhood Council: Greater Wilshire Legal Description: FR 17, Tract TR 4642

PROJECT: Historic-Cultural Monument Application for the FIRESTONE TIRE BUILDING

REQUEST: Declare the property a Historic-Cultural Monument

APPLICANT: Art Deco Society of Los Angeles

APPLICANT'S REPRESENTATIVE: Charles J. Fisher
140 S. Avenue 57
Los Angeles, CA 90042

OWNER: BFS Retail and Commercial Operations, LLC
535 Marriott Drive, 9th Floor
Nashville, TN 37214

RECOMMENDATION **That the Cultural Heritage Commission:**

1. **Declare** the property a Historic-Cultural Monument per Los Angeles Administrative Code Chapter 9, Division 22, Article 1, Section 22.171.7

2. **Adopt** the report findings.

Firestone Tire Building
CHC-2012-195-HCM
Page 2 of 3

FINDINGS

The building "embodies the distinguishing characteristics of an architectural type specimen, inherently valuable for a study of a period style or method of construction" as an example of Streamline Moderne style auto-related architecture.

CALIFORNIA ENVIRONMENTAL QUALITY ACT ("CEQA") FINDINGS

The Commission hereby recommends that Council find the proposed designation of the Firestone Tire Building as a Historic-Cultural Monument to be exempt from further analysis under the California Environmental Quality Act pursuant to Title 14 of the California Code of Regulations, Sections 15308 (Class 8) and 15331 (Class 31).

CRITERIA

The criterion is the Cultural Heritage Ordinance which defines a historical or cultural monument as any site (including significant trees or other plant life located thereon) building or structure of particular historic or cultural significance to the City of Los Angeles, such as historic structures or sites in which the broad cultural, economic, or social history of the nation, State or community is reflected or exemplified, or which are identified with historic personages or with important events in the main currents of national, State or local history or which embody the distinguishing characteristics of an architectural type specimen, inherently valuable for a study of a period style or method of construction, or a notable work of a master builder, designer or architect whose individual genius influenced his age.

SUMMARY

Constructed in 1937, this one-story commercial building exhibits character-defining features of the Streamline Moderne style. Located at the intersection of S. La Brea Ave and 8th Street, the subject building has two primary facades at the northern and western elevations and is square in plan. The curved northwest corner of the building creates a continuous elevation and is a primary character-defining feature of the building. Constructed of masonry, the building exhibits a bowstring truss roof. The western façade is highlighted by a distinctive, cantilevered overhang that abuts the buildings south wall and the adjacent building. A large, bow tie shaped metal pole sign reading "Firestone" is affixed atop the canopy facing 8th Ave. Individual metal box letters spelling out "Firestone" and "Complete Car Service" are attached at the roof line on both facades. The exterior is clad with porcelain enamel panels interrupted by large, open bays for auto access. A string of metal and glass storefront windows punctuate the elevations. The interior consists of a waiting room, office space, and large open auto servicing areas.

Built by the Firestone Tire and Rubber Company, it was used as a retail outlet for the company's tires and related automotive products. Designed by structural engineer R.E. Ward in 1937, the garage remains one of the flagship stores of the company's operations in Los Angeles.

An alteration to the garage was an additional roof sign constructed in 1962. While other alterations may have occurred, they appear not to be documented in building permits. The subject building appears to retain sufficient architectural integrity.

Firestone Tire Building
CHC-2012-195-HCM
Page 3 of 3

DISCUSSION

The Firestone Tire Building property successfully meets one of the specified Historic-Cultural Monument criteria: "embodies the distinguishing characteristics of an architectural type specimen, inherently valuable for a study of a period style or method of construction." As a auto-related commercial building designed in the Streamline Moderne, the property qualifies for designation as a Historic-Cultural Monument based on this criterion.

BACKGROUND

At its meeting of February 2, 2012, the Cultural Heritage Commission voted to take the application under consideration. On March 1, 2012, the Cultural Heritage Commission toured the subject property.

CALIFORNIA ENVIRONMENTAL QUALITY ACT ("CEQA") REVIEW

State of California CEQA Guidelines, Article 19, Section 15308, Class 8 "*consists of actions taken by regulatory agencies, as authorized by state or local ordinance, to assure the maintenance, restoration, enhancement, or protection of the environment where the regulatory process involves procedures for protection of the environment.*"

State of California CEQA Guidelines Article 19, Section 15331, Class 31 "*consists of projects limited to maintenance, repair, stabilization, rehabilitation, restoration, preservation, conservation or reconstruction of historical resources in a manner consistent with the Secretary of the Interior's Standards for the Treatment of Historic Properties with Guidelines for Preserving, Rehabilitating, Restoring, and Reconstructing Historic buildings*."

The designation of the Firestone Tire Building property as a Historic-Cultural Monument in accordance with Chapter 9, Article 1, of The City of Los Angeles Administrative Code ("LAAC") will ensure that future construction activities involving the subject property are regulated in accordance with Section 22.171.14 of the LAAC. The purpose of the designation is to prevent significant impacts to a Historic-Cultural Monument through the application of the standards set forth in the LAAC. Without the regulation imposed by way of the pending designation, the historic significance and integrity of the subject property could be lost through incompatible alterations and new construction and the demolition of irreplaceable historic structures. The Secretary of the Interior's Standards of Rehabilitation are expressly incorporated into the LAAC and provide standards concerning the historically appropriate construction activities which will ensure the continued preservation of the subject property.

The use of Categorical Exemption Class 8 in connection with the proposed designation is consistent with the goals of maintaining, restoring, enhancing, and protecting the environment through the imposition of regulations designed to prevent the degradation of Historic-Cultural Monuments.

The use of Categorical Exemption Class 31 in connection with the proposed designation is consistent with the goals relating to the preservation, rehabilitation, restoration and reconstruction of Historic buildings in a manner consistent with the Secretary of the Interior's Standards for the Treatment of Historic Properties with Guidelines for Preserving Rehabilitating, Restoring, and Reconstructing Historic Buildings.

Los Angeles Department of City Planning
RECOMMENDATION REPORT

CULTURAL HERITAGE COMMISSION

CASE NO.: CHC-2012-195-HCM

SUMMARY

Constructed in 1937, this one-story commercial building exhibits character-defining features of the Streamline Moderne style. Located at the intersection of S. La Brea Ave and 8th Street, the subject building has two primary facades at the northern and western elevations and is square in plan. The curved northwest corner of the building creates a continuous elevation and is a primary character-defining feature of the building. Constructed of masonry, the building exhibits a bowstring truss roof. The western façade is highlighted by a distinctive, cantilevered overhang that abuts the buildings south wall and the adjacent building. A large, bow tie shaped metal pole sign reading "Firestone" is affixed atop the canopy facing 8th Ave. Individual metal box letters spelling out "Firestone" and "Complete Car Service" are attached at the roof line on both facades. The exterior is clad with porcelain enamel panels interrupted by large, open bays for auto access. A string of metal and glass storefront windows punctuate the elevations. The interior consists of a waiting room, office space, and large open auto servicing areas.

Built by the Firestone Tire and Rubber Company, it was used as a retail outlet for the company's tires and related automotive products. Designed by structural engineer R.E. Ward in 1937, the garage remains one of the flagship stores of the company's operations in Los Angeles.

An alteration to the garage was an additional roof sign constructed in 1962. While other alterations may have occurred, they appear not to be documented in building permits. The subject building appears to retain sufficient architectural integrity.

CRITERIA

The criterion is the Cultural Heritage Ordinance which defines a historical or cultural monument as any site (including significant trees or other plant life located thereon) building or structure of particular historic or cultural significance to the City of Los Angeles, such as historic structures or sites in which the broad cultural, economic, or social history of the nation, State or community is reflected or exemplified, or which are identified with historic personages or with important events in the main currents of national, State or local history or which embody the distinguishing characteristics of an architectural type specimen, inherently valuable for a study of a period style or method of construction, or a notable work of a master builder, designer or architect whose individual genius influenced his age.

FINDINGS

Based on the facts set forth in the summary and application, the Commission determines that the application is complete and that the property may be significant enough to warrant further investigation as a potential Historic-Cultural Monument.

Complete One or Both of the Upper and Lower Portions of This Page

ARCHITECTURAL SIGNIFICANCE

THE FIRESTONE TIRE BUILDING (NAME OF PROPOSED MONUMENT) IS AN IMPORTANT EXAMPLE OF

STREAMLINE MODERNE (ARCHITECTURAL STYLE (SEE LINE 8)) ARCHITECTURE

AND MEETS THE CULTURAL HERITAGE ORDINANCE BECAUSE OF THE HIGH QUALITY OF ITS DESIGN AND THE RETENTION OF ITS ORIGINAL FORM, DETAILING AND INTEGRITY.

AND/OR

HISTORICAL SIGNIFICANCE

THE FIRESTONE TIRE BUILDING (NAME OF PROPOSED MONUMENT) WAS BUILT IN 1937 (YEAR BUILT)

FIRESTONE TIRE AND RUBBER AND STREAMLINE MODERNE ARCHITECTURE (NAME OF FIRST OR OTHER SIGNIFICANT OWNER) WAS IMPORTANT TO THE DEVELOPMENT OF LOS ANGELES BECAUSE THE FIRESTONE TIRE AND RUBBER COMPANY, WHICH WAS FOUNDED IN 1900 BY HARVEY FIRESTONE, WAS ONE OF THE LARGEST AND MOST INFLUENTIAL TIRE COMPANIES IN THE WORLD. THE COMPANY BEGAN IN AKRON OHIO. AN EARLY CONTRACT WITH FORD MOTOR COMPANY (1905) MADE THE SMALL AKRON, OHIO TIRE COMPANY A MAJOR PLAYER IN THE NEW WORLD OF THE AUTOMOBILE. THE FORD CONTRACT RESULTED IN THE IMMEDIATE EXPANSION OF THE SMALL COMPANY'S PRODUCTION CAPACITY. ALL MODEL "T"S AND MODEL "A"S CAME EQUIPPED WITH FIRESTONE TIRES WHICH CONTINUED TO SUPPLY VIRTUALLY ALL FACTORY FORD TIRES UNTIL THE MID-1990S. THIS RELATIONSHIP WAS MOSTLY DUE TO A CLOSE PERSONAL FRIENDSHIP BETWEEN HARVEY FIRESTONE AND HENRY FORD. THE FORD CONTRACT ALLOWED FIRESTONE TO GROW QUICKLY, BECOMING A BOOMING RIVAL TO FELLOW AKRON BASED TIRE COMPANY, GOODYEAR. BY THE END OF WORLD WAR I, FIRESTONE WAS MARKETING TIRES IN ALL 48 STATES SEVERAL FOREIGN. IT BUILT AN ART DECO STYLE FACTORY IN ENGLAND IN 1928. THE COMPANY HAD BEEN MARKETING MOST OF ITS TIRES THROUGH LOCAL GAS STATIONS AND REPAIR GARAGES, BUT BY THE 20S, HAD ALSO BEGUN TO OPEN ITS OWN RETAIL GARAGES. THIS EXPANSION SLOWED DOWN DURING THE GREAT DEPRESSION, WHEN NEW CAR SALES TOOK A NOSE DIVE AND MOTORISTS MADE THEIR TIRES LAST LONGER TO PUT OFF THE COST OF REPLACING THEM. BY THE LATE 1930S, THE ECONOMY WAS SLOWLY STARTING TO PICK UP AND FIRESTONE BEGAN TO BUILD NEW RETAIL OUTLETS. THE STORE AT 8TH AND LA BREA AVENUE WAS BUILT IN 1937 TO REPLACE AN EARLIER OUTLET AT 9TH AND LA BREA. THE COMPANY

CITY OF LOS ANGELES

SIGNIFICANCE WORK SHEET

CONTINUED

chose the streamline Moderne design using porcelain covered steel as the main surface of the building. The majority of the exterior is a mustard colored rectangular sheets with red (painted over the original black porcelain) trim for horizontal bands at the roof line, lower bulkheads and lentils above the bay entry and windows. The cantilevered overhang of the dramatic engineered truss roof gave the building a most dramatic and ultra-modern look, making it the flagship store for the companies Los Angeles operations. The use of porcelain steel in automotive buildings dates back a decade before with the material first appearing in service station construction, usually in prefabricated buildings. This enabled the stations to be built along the same general lines, with variations for each of the different oil companies. The Firestone Tire Building on La Brea utilizes the material as a significant design element, along with the design of the roof and the copious use of neon lighting to accent the building at night. In a way, the building serves as its own signage by calling attention to itself as a means of marketing the product (Firestone tires). Very little has been found on R. E. Ward, the structural engineer for the building. According to the original building permit, he had California State license No. 2768 as an engineer. It's possible that the actual design of the building may have been drawn up by an in-house architect at Firestone's headquarters in Akron, but only Ward is credited with the design of the building. Since no contractor is called out on the permit, it would indicate that the Firestone Company served as the general contractor for the project. Whatever it's origins, the design is unique and appears just as fresh today as it was in 1937. The building is still owned and operated by the company and stands as a visible reminder of what was once on the cutting edge of commercial design. The building is called out as a historic resource in the Environmental Impact Reports for both the "Wilshire La Brea Project", just to the North, and the Westside Subway Extension Project. It is also cited in "Architecture in Los Angeles, The Compleat Guide", by David Gebhart and Robert W. Winter. An attachment describes the use of porcelain in commercial buildings during the 1930s.

Firestone to Erect Store Building

Los Angeles Times (1923-Current File); Apr 4, 1937;
ProQuest Historical Newspapers: Los Angeles Times (1881-1987
pg. E7

Firestone to Erect Store Building

A $30,000 reinforced brick and concrete store building will be built at 755 South La Brea avenue for the Firestone Tire & Rubber Company.

The structure will be one story and is to cover a ground area ninety-eight by 125 feet.

By CAREFUL DRIVING and with TIRES THAT ARE TRIPLE-SAFE

NEVER before have motorists given so much attention to the subject of tire safety. That is why car owners by the thousands are changing over to Firestone Tires, the only tires made that are TRIPLE-SAFE. What does TRIPLE-SAFE mean? It means—

1. **PROTECTION AGAINST BLOWOUTS.** Firestone Tires run up to 28° cooler because every fiber of every cord in every ply is saturated with liquid rubber. This patented Gum-Dipping process counteracts internal friction and heat that ordinarily cause blowouts.
2. **PROTECTION AGAINST PUNCTURES.** Two extra layers of Gum-Dipped cords under the tread add great strength to the tire and give extra protection against punctures.
3. **PROTECTION AGAINST SKIDDING.** The scientific tread design gives longer non-skid mileage and will stop your car up to 25% quicker.

Help prevent highway accidents by making your car *tire-safe* for your vacation trip. Join the Firestone SAVE A LIFE Campaign today by equipping your car with a set of new Firestone TRIPLE-SAFE Tires—the safest tires that money can buy.

Firestone HIGH SPEED TIRE

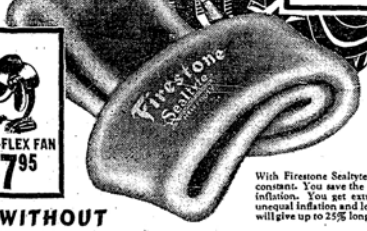

4.50-21.	$10.05	5.50-16.	$13.75
4.75-19.	10.60	6.00-16.	15.55
5.00-17.	10.80	6.25-16.	17.40
5.00-19.	11.40	6.50-16.	19.15
5.25-17.	12.25	7.00-16.	20.80
5.25-18.	12.70	7.50-16.	26.40

HEAVY DUTY

4.75-19.	$13.05	6.25-16.	$20.45
5.50-16.	16.25	6.50-16.	21.15
5.50-17.	16.55	7.00-16.	24.45
6.00-16.	18.40	7.50-16.	32.00
6.00-17.	18.60	8.25-16.	38.90

OTHER SIZES PROPORTIONATELY LOW

25% MORE TIRE MILEAGE

With Firestone Sealtyte Tubes air pressure remains constant. You save the time and work of periodic inflation. You get extra safety because you avoid unequal inflation and loss of air pressure. Your tires will give up to 25% longer mileage.

YOU CANNOT AFFORD TO DRIVE WITHOUT TRIPLE-SAFE TIRES ON YOUR CAR!

Ab Jenkins has driven 1,500,000 miles without an accident on Firestone Triple-Safe Tires. He broke 72 world records on Firestone Tires. For 18 consecutive years Firestone Tires have been on the winning cars in the Indianapolis Race. Such records prove Firestone Tires the safest tires built.

Last year highway accidents cost the lives of more than **38,000 men, women and children** and a **million more** were injured!

More than **40,000 of these deaths and injuries** were caused directly by **punctures, blowouts and skidding due to smooth, worn, unsafe tires!**

Right is section cut from a new Firestone Tire. Note the thick, non-skid protection against skidding, blowouts and punctures. Come in and see a demonstration.

Left is a section cut from a smooth, worn tire, with non-skid protection worn off. Tires in this condition are liable to punctures, blowouts and skidding.

18 CONSECUTIVE WINS at INDIANAPOLIS Prove

Firestone TRIPLE-SAFE TIRES GIVE YOU GREATEST BLOWOUT PROTECTION

Gum-dipped cords

PROVIDE THE EXTRA MARGIN OF SAFETY ON THE SPEEDWAY OR THE HIGHWAY

THE MASTERPIECE OF TIRE CONSTRUCTION

For eighteen years, each brick on the surface of the Indianapolis speedway; each tortuous, twisting turn; the terrific heat; the gruelling speeds, have all tried to make Firestone Tires "give up." Every year Firestones have proved their safety and dependability by having been on the winning car of this race. SUCH IS PROOF OF PERFORMANCE.

Firestone HIGH SPEED TIRES

Size	Price	Size	Price
4.50-20	$9.65	5.50-17	$13.95
4.50-21	10.05	6.00-16	15.55
4.75-19	10.60	6.50-16	19.15
5.25-18	12.70	7.00-17HD	24.90

LOW AS 81c A WEEK

Size	Per Week	Size	Per Week
4.50-20	$0.81	5.50-17	$1.18
4.50-21	.84	6.00-16	1.29
4.75-19	.89	6.50-16	1.79
5.25-18	1.06	7.00-17HD	2.06

ONLY Firestone TIRES ARE *TRIPLE-SAFE*

1. Protection from Blowouts

Firestone's patented Gum-Dipping process, whereby every fibre of every cord of every ply is insulated with pure liquid rubber, counteracts internal friction and heat, the greatest enemies of tire life. *Tests prove Firestone Tires run up to 28° cooler.*

2. Protection from Punctures

Another patented process—that of having two extra Gum-Dipped plies under the tread—*protects Firestone Tires from punctures.* These extra plies, in addition, bind the tread and the body of the tire into one inseparable unit.

3. Protection from Skids

Firestone's scientific tread design offers 37% more angles to the road in stopping your car. The center of the tread is ribbed to give you longer non-skid mileage. *Tests prove Firestone Tires stop your car up to 25% quicker.*

YOU, TOO, NEED THE *Tire Safety* CHAMPIONS DEMAND
EQUIP YOUR CAR with FIRESTONES TODAY!

BY EVERY TEST Firestone TRIPLE SAFE TIRES ARE BEST!

DON'T WAIT FOR PAY DAY!

TO REPLACE *Smooth* WORN TIRES

Buy 4 New Firestone STANDARD TIRES for only 1.63 per week

NO *Cash* DOWN

Here's your chance to get new tire safety with no large cash outlay! Avoid skidding dangers this winter with these first grade quality tires. No money down — pay as you earn. Drive in and open a Budget Account NOW! There's no red tape — no delay. Five minutes and your account is open.

FIRST GRADE QUALITY at VOLUME PRODUCTION PRICES

Firestone's efficient methods of manufacture and distribution enable you to buy these outstanding tires at such low prices. Get the PLUS Safety of 4 new Firestone Gum-Dipped Tires today and pay only the price of a pack of cigarettes per day.

FIRESTONE STANDARD TIRE ★

SIZE	Per Week 1 Tire	Per Week 4 Tires
4.40-21	$ .65	$1.63
4.50-21	.75	1.81
4.75-19	.79	1.91
5.25-18	.95	2.28
5.50-17	1.04	2.50
6.00-16	1.16	2.79

Other sizes proportionately low.

BRAKES OVERHAULED

The closest thing to a reline you ever had. A complete checking and overhaul of your braking system, at this low price. Regular $3.50 value. Remember, Safe Brakes May Save a Life. Drive in today for this bargain! $1.95

Brakes Relined 81¢ PER WEEK

PREPARE NOW FOR COLD WEATHER

Firestone EXTRA POWER ALL-RUBBER SEPARATOR BATTERY

To overcome cold starting difficulties, and take care of additional electrical equipment. As low as $1.18 PER WEEK

TESTS PROVE
Firestone
TRIPLE-SAFE TIRES
WILL *Stop* YOUR CAR
UP TO **25%**
QUICKER
and here's how:

NO SWERVE LEFT
NO SWERVE RIGHT

To protect your life and the lives of others you'll want to be able to stop quickly and surely in an emergency. The scientific tread design of Firestone Triple-Safe Tires gives you this safety assurance.

ONLY
Firestone
TIRES ARE
TRIPLE-SAFE

PROTECTION FROM SKIDDING

The distinctive, scientifically designed tread of Firestone High Speed Tires gives 37% more angles to the road on the sides of the tread, where the strain of stopping and starting occurs. The ribbed center of the tread gives longer non-skid mileage. Tests by a leading university show that Firestone tires will stop your car up to 25% quicker.

BLOW-OUT PROTECTION

Firestone's patented Gum-Dipping process so resists heat and internal friction that Firestone Tires run up to 28 degrees cooler. This absence of heat eliminates the chief cause of blow-outs. 18 consecutive wins at Indianapolis prove Firestone Triple-Safe Tires give you greatest blow-out protection.

PUNCTURE PROTECTION

Another patented feature — two extra Gum-Dipped plies under the tread, gives added protection against punctures and a cushion against the road shocks which destroy tire life. In addition, it serves to unite the tread and body of the tire into one inseparable unit.

Here's A REAL TEST!

87 SPEED RECORDS BROKEN TO PROVE

Firestone

TRIPLE-SAFE TIRES are THE SAFEST TIRES BUILT!

The most gruelling torture ever devised for tires . . . Tremendous speeds . . . terrific heat . . . rough, abrasive surfaces couldn't break down the Triple-Safety of the Firestone Tires on Ab Jenkins' car. You, too, need the tire safety champions demand. Equip your car with Firestones today!

Ab Jenkins, World's Safest Driver, Establishes 87 New Records for Safety, Speed, Mileage and Endurance . . . He Drove 3,774 Miles in 24 Hours on the Sharp Granite-Like Surface of the Bonneville Salt Beds at Average Speed of 157.27 Miles an Hour.

BLOW-OUT PROTECTION

Patented Gum-Dipping process impregnates every fibre of every cord of every ply with pure, liquid rubber - adding 8 lbs. of rubber to every 100 lbs. of cotton fabric. Blow-out hazard is eliminated by this process which stops internal friction and heat

Firestone HIGH SPEED TIRE

Size	Price	Size	Price
4.50x20	$10.15	5.50x17	$13.95
4.50x21	10.35	6.00x16	13.70
4.75x19	10.85	6.50x16	19.35
5.25x18	12.85	7.00x17/18	25.00

As low as 85¢ per week

Size	Per Week	Size	Per Week
4.50x20	$0.85	5.50x17	$1.16
4.50x21	.88	6.00x16	1.31
4.75x19	.91	6.50x16	1.61
5.25x18	1.07	7.00x17/18	2.09

Other sizes proportionately low.

SKID PROTECTION

Scientific tread design gives 37% more angles and projections against skidding — stopping your car up to 25% quicker. The four ribs in the center, where most of the wear occurs, allow longer non-skid mileage.

PUNCTURE PROTECTION and SHOCK ABSORPTION

Two extra Gum-Dipped plies under the tread — another Firestone Patented process, protect the inside of the tire and the tube from punctures and road shocks which destroy tire life, and weld the tread and body of the tire into one inseparable unit.

PREPARE FOR WINTER DRIVING

TIRES BOUGHT NOW GIVE 30% More Wear

FIGURE IV.C-1

Potential Historical Resources On and In the Vicinity of the Project Site

906-001•08/07

served as board chairman. This company, which became one of the largest construction companies in southern California, was incorporated in 1952.

The building appears on the 1927 Sanborn map where it is shown as subdivided into three stores, an art studio, and a restaurant. Additional detail is provided in the 1935 aerial photograph where the south elevation is visible.

Although no ground-level historic photographs of the building have been located, examination of the exterior suggests significant alteration to the principal façade. While there are some remnants of the original Zig Zag Moderne architecture, including the fluted piers, angled, corner entrance and chevron decoration, fenestration has been altered, most significantly at the ground level storefronts.

800 La Brea Avenue, Firestone Tire and Rubber

800 La Brea Avenue, the Firestone Tire retail store, is located on the southeast corner of La Brea Avenue and West 8th Street on the opposite side of 8th Street from the project site. Constructed in 1937, it is a one-story, masonry building, roughly square in plan with a bowstring truss roof and two primary facades (north and west) clad in porcelain enamel panels. Built in the Streamline Moderne style, a curved wall at northwest corner of building creates a continuous elevation of the north and west façades. These elevations are broken by large, open bays for auto access and by strings of metal and glass storefront windows (the windows also curve at northwest corner of building). The front (west) façade is highlighted by a distinctive, cantilevered overhang that abuts the building's south wall and adjacent building. The corbelled underside of overhang is highlighted by curved rows of neon light fixtures. A large, bow tie-shaped, metal pole sign reading "Firestone" is affixed atop the canopy, while individual metal box letters spelling out "Firestone" and "Complete Car Service" are attached at top of roof edge on both north and west façades. Aerial photographs indicate that there are several rectangular skylights in roof of building.

Firestone received a building permit for the new store in September 1937. This permit was issued for construction of a "public garage" at 800 La Brea Avenue. R.E. Ward was noted as engineer on project. No architect was included on the permit. Subsequent permits were issued in 1938 for installation of "roof sign" and "neon letters on roof."

The building does not appear to have been much altered over the years. There is only one building permit dating from after the initial construction phase; this permit, from 1962, is for a roof sign addition. While other alterations may have occurred, they are not documented in recorded permits. The building appears in aerial photographs after 1937 with a footprint that does not appear to have been altered based on review of later aerial views, such as a 1962 image.

Porcelain Steel

MODERN BUSINESS UNITS

As the latest expression of American Progress, Modern Business Units of Porcelain Steel make possible:

Effective merchandising appeal through the building itself.

The advertising value of identifying a product or a service exclusively with a specific organization.

A means of making idle property profitable.

A solution to the problem of the vacant lot not yet ready for a larger, inflexible structure.

An opportunity to test the value of a vacant lot without losing the building investment.

A building that, through its flexibility, can be changed to fit various types of businesses and can be put to other uses than that for which originally built.

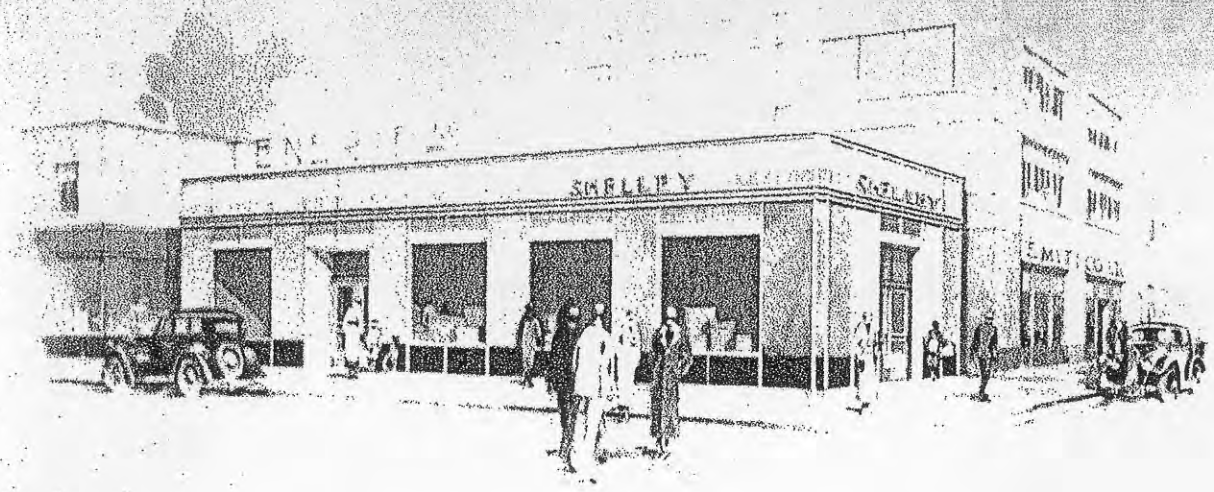

A building that retards the process of aging and provides comparative freedom from maintenance costs.

A building of indefinitely extended usefulness through mobility and one which can, at small cost, be moved from one location to another.

A building of a material that offers a range of color and attractive effects heretofore unattainable.

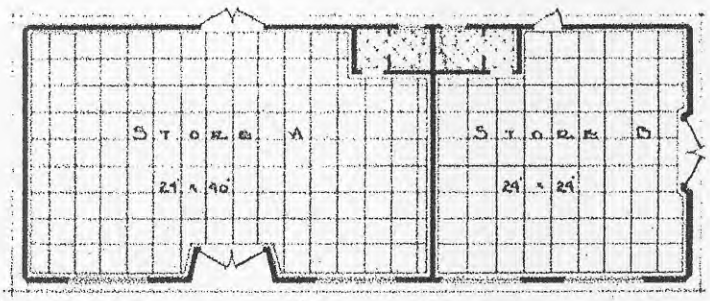

A building that, because of its beauty and attractiveness, will be sought by tenants.

Architectural effects and mechanical adaptations of Modern Business Units are available in a practically unlimited range, impossible to picture within the limits of this book.

MODERN BUSINESS UNIT No. A-3

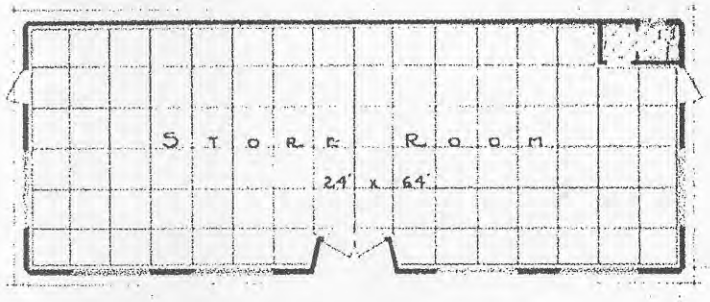

(Outside Dimensions: 25 ft. x 65 ft.)

This floor plan is only one suggestion of the varied arrangements possible in this Modern Business Unit.

The unit construction principle used in Porcelain Steel Modern Business Units makes it possible to obtain a variety of window and door openings to fit any desired needs.

This floor plan is only one suggestion of the varied arrangements possible in this Modern Business Unit

MODERN BUSINESS UNIT No. A-1

[Outside Dimensions: 25 ft. x 65 ft.]

An effective merchandising appeal through the beauty, color and distinctiveness of design of the structure itself is achieved by Porcelain Steel Modern Business Units.

PORCELAIN STEEL BUILDINGS

PAGE FIVE

Re-packaging a Business Through MODERN BUSINESS UNITS

EVERYONE who has something to sell or a service to offer realizes the importance of the setting or atmosphere through which this product or service is presented.

Likewise, every merchant is aware that the re-styling and re-packaging of the most prosaic and commonplace products result in increased business.

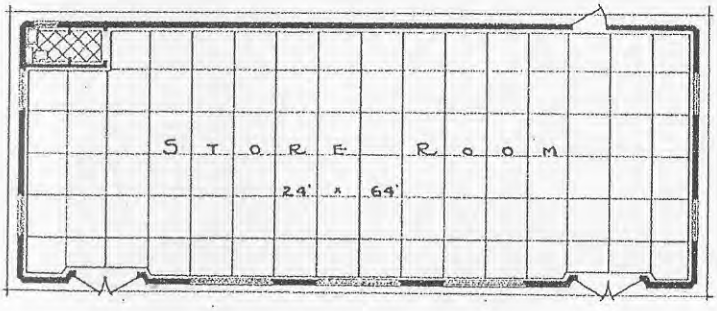

If the sale of a single article of merchandise can be increased through enhancing the attractiveness of the package, surely an entire business can be stimulated by being established in a beautiful, colorful, distinctive "package" — the Modern Business Unit of Porcelain Steel.

This idea can be applied to the entire range of public service institutions; to the doctor's or dentist's office as well as the grocery or drug store; to the specialty shop as well as the gasoline service station; to the independent merchant as well as the chain organization.

Along with the appearance appeal and style that make for an attractive and effective "package" for an entire business, Modern Business Units of Porcelain Steel offer unusual utility values, such as real movability, flexibility and minimum maintenance costs.

Buildings of the same material and type of construction have been used for a number of years by the White Castle System of restaurants as well as by several oil companies. Their experience, as reflected by actual figures, proves an increased sale of merchandise as well as a definite construction and maintenance economy through the use of these structures.

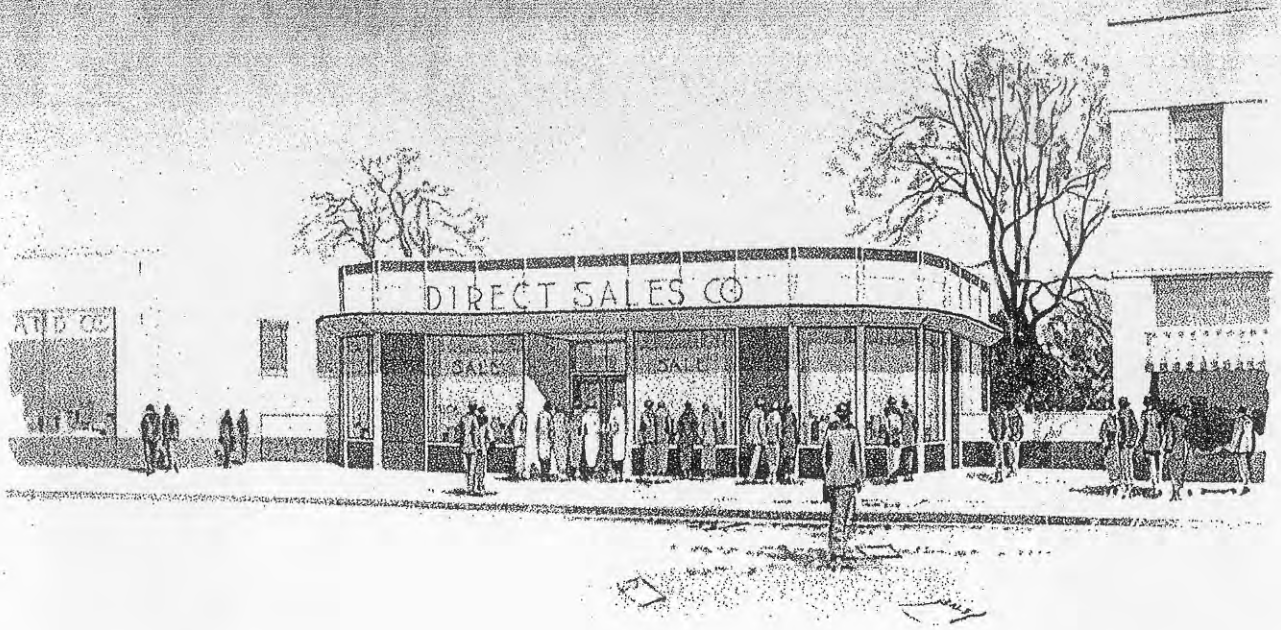

This floor plan is only one suggestion of the varied arrangements possible in this Modern Business Unit.

MODERN BUSINESS UNIT No. A-2

[Outside Dimensions: 25 ft. x 65 ft.]

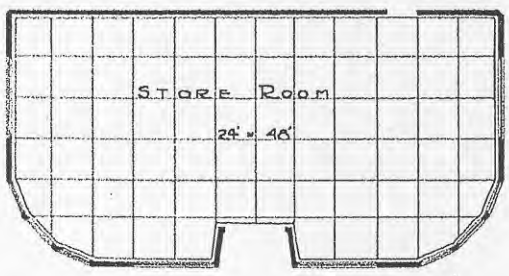

An ideal solution to the problem of the vacant lot not yet ready for a larger, inflexible structure is offered by Porcelain Steel Modern Business Units.

PORCELAIN STEEL BUILDINGS

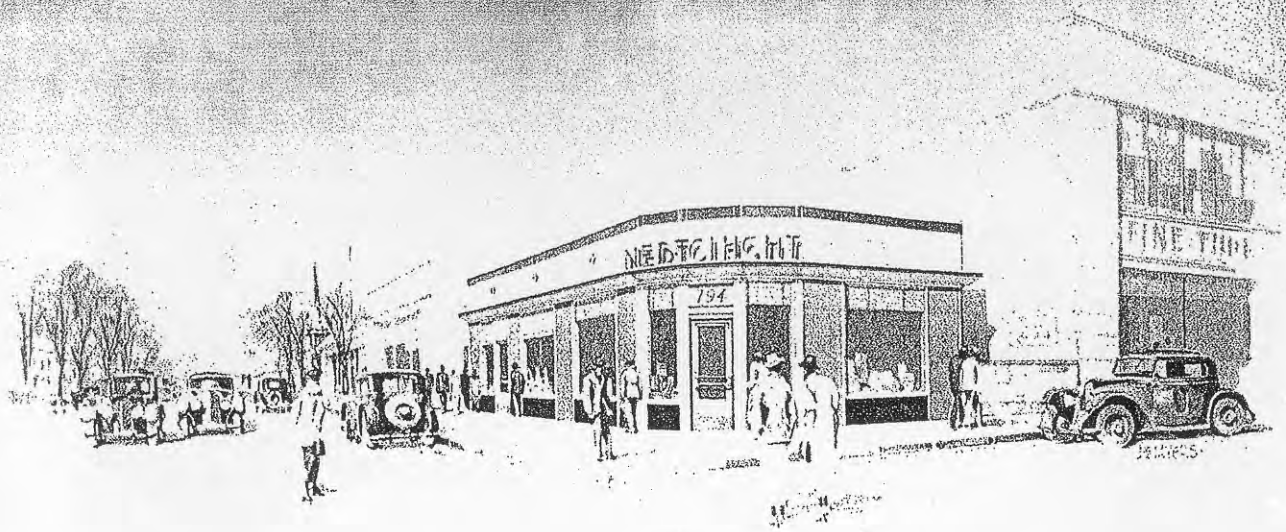

MODERN BUSINESS UNIT No. B-1

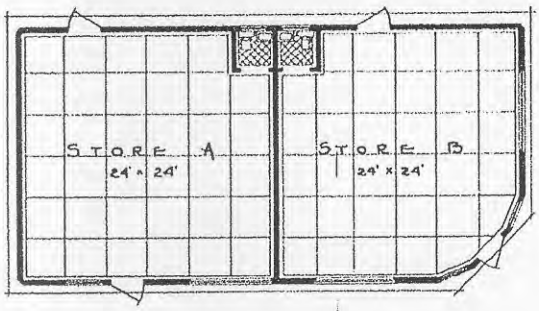

[Outside Dimensions: 25 ft. x 49 ft.]

This floor plan is only one suggestion of the varied arrangements possible in this Modern Business Unit.

A practically unlimited range of color, design and attractive effects heretofore unattainable in other materials is made possible by Porcelain Steel Modern Business Units.

This floor plan is only one suggestion of the varied arrangements possible in this Modern Business Unit.

MODERN BUSINESS UNIT No. B-3

[Outside Dimensions: 25 ft. x 49 ft.]

The ease with which Porcelain Steel Modern Business Units may be successfully moved at small cost, present an opportunity to test the value of a vacant lot without losing the building investment.

Building Permit History
2143 S. Victoria Avenue
Los Angeles

September 10, 1937: Building Permit No. 29955 to construct a 1-story 98’ X 125’ steel and masonry public garage at 800 S. La Brea Avenue, on Lots 263 & 117 of Tract No 4642, Wilshire Highlands.
Owner: Firestone Tire and Rubber Company
Architect: None
Engineer: R. E. Ward
Contractor: None
Cost: $30,000.00

February 7, 1938: Building Permit No. 3562 to construct a roof sign.
Owner: Firestone Tire Co.

Name: Park La Brea Garden Apartment

Description:

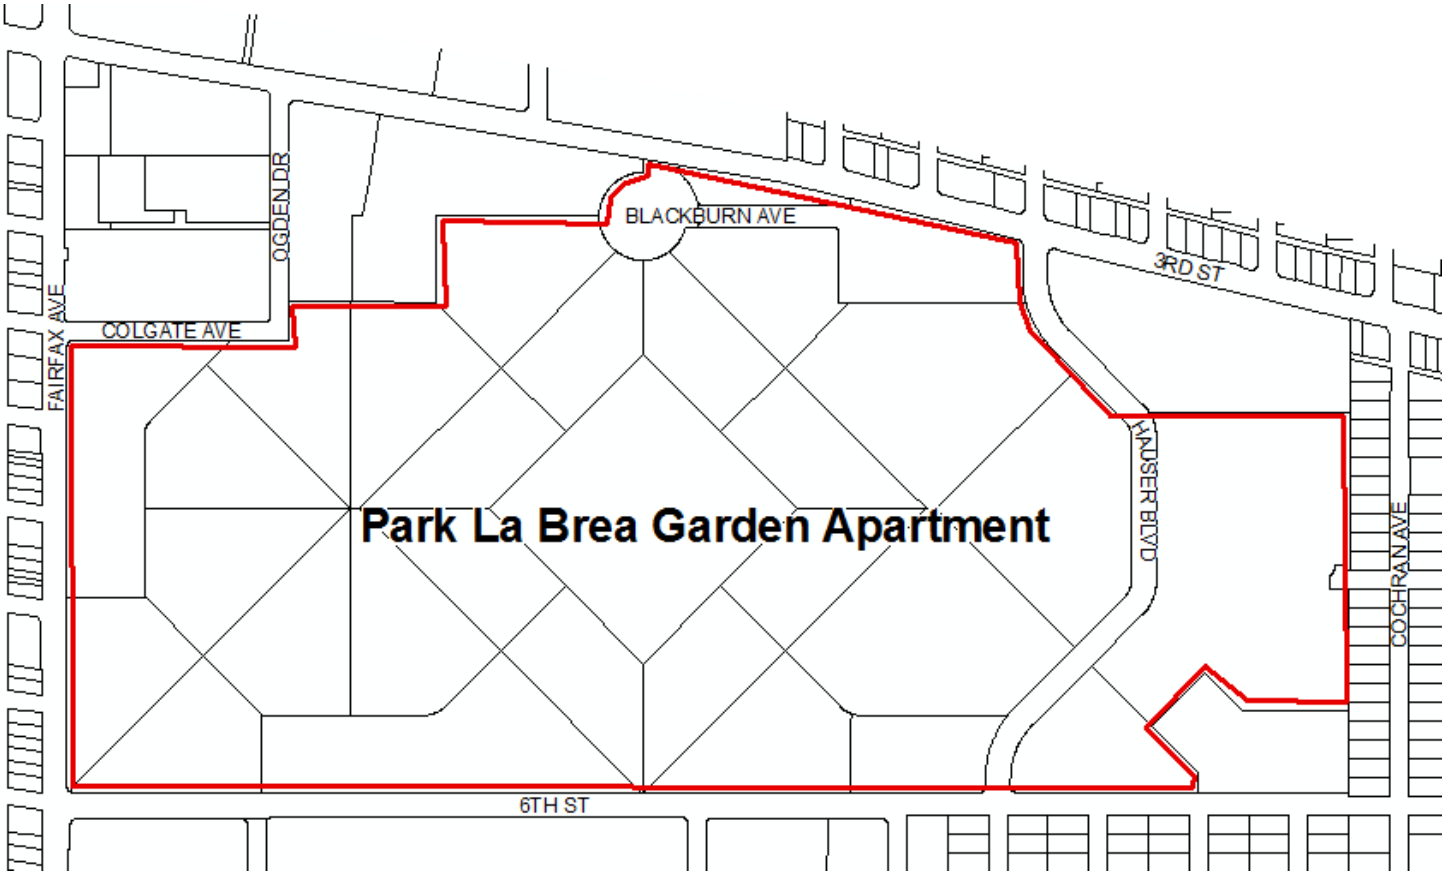

Park La Brea (known as Parklabrea at the time of its construction) is a very large garden apartment complex on an approximately 175-acre superblock bounded by 3rd Street, Hauser Boulevard, Drexel Avenue, Alta Vista Boulevard, 6th Street, Fairfax Avenue, Colgate Avenue, and multiple parcel lines. The complex contains 49 residential buildings; 31 are two-story buildings completed in 1943 and 18 are 13-story high rises completed in 1951. It also contains community buildings and parking structures. All of the complex's buildings are contributors to its significance.

Park La Brea's buildings are arranged in an innovative radial plan, with intersecting interior streets converging on circular landscaped areas. The two-story buildings are largely U-shaped, surrounding landscaped courtyards, and are in a Modern interpretation of the American Colonial Revival style. They are clad in brick and have steel casement windows. The high-rises are X-shaped, Modern style buildings with unornamented concrete cladding and steel casement windows. There are no apparent alterations.

Significance:

Park La Brea is an excellent example of a 1940s-1950s garden apartment complex in the area, unique in Los Angeles for its inclusion of high-rise as well as low-rise multi-family residential buildings. The largest garden apartment complex in the city, Park La Brea was one of seven housing projects developed across the country by the Metropolitan Life Insurance Company to provide much-needed rental housing in a park-like setting. It was designed by Leonard Schultze & Associates with Earl T. Heitschmidt. The first phase's landscape design was by Tommy Tomson and the second phase was by Thomas Church.

Copyright © 2011

Context 1:

Context:	Residential Development and Suburbanization, 1850-1980
Sub context:	Multi-Family Residential Development, 1910-1980
Theme:	Multi-Family Residential, 1910-1980
Sub theme:	Garden Apartments, 1938-1960
Property type:	Residential-Multi Family
Property sub type:	Garden Apartment Complex
Criteria:	C/3/3
Status code:	3S;3CS;5S3
Reason:	Excellent example of a massive World War II- and postwar-era garden apartment complex in the Wilshire area. Designed by Leonard Schultze & Associates in association with Earl T. Heitschmidt, with landscape design by Tommy Tomson (first phase) and Thomas Church (second phase), Park La Brea is notable as Los Angeles' largest garden apartment complex and as an unusual example incorporating both low-rise and high-rise multi-family housing.

Project Title: K Line Northern Extension Transit Corridor Project

Local Government/Lead Agency: Los Angeles County Metropolitan Transportation Authority

Contact Person: Allison Hill, M.A., RPA, AECOM

Street Address: 300 S Grand Ave, Suite 200

City: Los Angeles **Zip:** 90071

Phone: 909 637-6279 **Fax:**

Email: allison.hill@aecom.com

Specific Area Subject to Proposed Action

County: Los Angeles **City/Community:**

Project Description:

The project would provide a northern extension of the Los Angeles County Metropolitan Transportation Authority (Metro) K light rail transit (LRT) Line (Crenshaw/LAX) from the Metro E Line (Expo) to the Metro D Line (Purple) and B Line (Red) heavy rail transit lines. The Project would link the South Bay, LAX area, South Los Angeles, Inglewood, and Crenshaw corridor to Mid-City, Central Los Angeles, West Hollywood, and Hollywood.

Re: Native American Tribal Consultation, Pursuant to the Assembly Bill 52 (AB 52), Amendments to the California Environmental Quality Act (CEQA) (Chapter 532, Statutes of 2014), Public Resources Code Sections 5097.94 (m), 21073, 21074, 21080.3.1, 21080.3.2, 21082.3, 21083.09, 21084.2 and 21084.3, K Line Northern Extension Transit Corridor Project, Los Angeles County

Dear Ms. Hill:

Pursuant to Public Resources Code section 21080.3.1 (c), attached is a consultation list of tribes that are traditionally and culturally affiliated with the geographic area of the above-listed project. Please note that the intent of the AB 52 amendments to CEQA is to avoid and/or mitigate impacts to tribal cultural resources, (Pub. Resources Code §21084.3 (a)) ("Public agencies shall, when feasible, avoid damaging effects to any tribal cultural resource.")

Public Resources Code sections 21080.3.1 and 21084.3(c) require CEQA lead agencies to consult with California Native American tribes that have requested notice from such agencies of proposed projects in the geographic area that are traditionally and culturally affiliated with the tribes on projects for which a Notice of Preparation or Notice of Negative Declaration or Mitigated Negative Declaration has been filed on or after July 1, 2015. Specifically, Public Resources Code section 21080.3.1 (d) provides:

Within 14 days of determining that an application for a project is complete or a decision by a public agency to undertake a project, the lead agency shall provide formal notification to the designated contact of, or a tribal representative of, traditionally and culturally affiliated California Native American tribes that have requested notice, which shall be accomplished by means of at least one written notification that includes a brief description of the proposed project and its location, the lead agency contact information, and a notification that the California Native American tribe has 30 days to request consultation pursuant to this section.

The AB 52 amendments to CEQA law does not preclude initiating consultation with the tribes that are culturally and traditionally affiliated within your jurisdiction prior to receiving requests for notification of projects in the tribe's areas of traditional and cultural affiliation. The Native American Heritage Commission (NAHC) recommends, but does not require, early consultation as a best practice to ensure that lead agencies receive sufficient information about cultural resources in a project area to avoid damaging effects to tribal cultural resources.

The NAHC also recommends, but does not require that agencies should also include with their notification letters, information regarding any cultural resources assessment that has been completed on the area of potential effect (APE), such as:

1. The results of any record search that may have been conducted at an Information Center of the California Historical Resources Information System (CHRIS), including, but not limited to:

- A listing of any and all known cultural resources that have already been recorded on or adjacent to the APE, such as known archaeological sites;
- Copies of any and all cultural resource records and study reports that may have been provided by the Information Center as part of the records search response;
- Whether the records search indicates a low, moderate, or high probability that unrecorded cultural resources are located in the APE; and
- If a survey is recommended by the Information Center to determine whether previously unrecorded cultural resources are present.

2. The results of any archaeological inventory survey that was conducted, including:

    - Any report that may contain site forms, site significance, and suggested mitigation measures.

      All information regarding site locations, Native American human remains, and associated funerary objects should be in a separate confidential addendum, and not be made available for public disclosure in accordance with Government Code section 6254.10.

3. The result of any Sacred Lands File (SLF) check conducted through the Native American Heritage Commission was positive. Please contact the Fernandeno Tataviam Band of Mission Indians and the Gabrieleno/Tongva San Gabriel Band of Mission Indians on the attached list for more information.

4. Any ethnographic studies conducted for any area including all or part of the APE; and

5. Any geotechnical reports regarding all or part of the APE.

Lead agencies should be aware that records maintained by the NAHC and CHRIS are not exhaustive and a negative response to these searches does not preclude the existence of a tribal cultural resource. A tribe may be the only source of information regarding the existence of a tribal cultural resource.

This information will aid tribes in determining whether to request formal consultation. In the event that they do, having the information beforehand will help to facilitate the consultation process.

If you receive notification of change of addresses and phone numbers from tribes, please notify the NAHC. With your assistance, we can assure that our consultation list remains current.

If you have any questions, please contact me at my email address: Andrew.Green@nahc.ca.gov.

Sincerely,

Andrew Green

***P3a. Description (continued):**

The Merle Norman Cosmetics, Inc. factory building is a 70,000 square foot warehouse with a west facing façade. The building is entered toward the southern end of the façade. The entrance is accented with a vertical boxed, concrete projection with commercial signage that reads, "MERLE NORMAN COSMETICS." A flat, concrete, asymmetrical awning covers a partial porch entry accessed by a set of concrete stairs. The partial porch entry includes an anodized metal-framed glazed entrance characterized by a double-entry door with sidelights. The entry door is flanked to the south by a wall of decorative concrete block with geometric designs. The partial porch entry is flanked to the north by a row of concrete sunshades and to the south by a ribbon of sash windows covered by a slight concrete awning. The south half of the façade is enclosed in a metal fence supported by brick veneer columns and landscaped with pebble. The northernmost half of the façade includes an entrance to the roof top parking space, as well as loading and receiving bays. Additional fixed windows, as well as two roll-up bay doors, are located within a second fenced area landscaped with pebbles. A concrete awning with four circular columns partitions the fenestration details. The south elevation includes exterior air vents and fencing that allows access to more loading and receiving bays; however, they are not fully visible to the public right-of-way. The north elevation is connected to the adjacent building and does not include additional fenestration and/or architectural detail. The rear (east) elevation borders Portal Avenue and includes additional loading and receiving bays; however, this elevation is not visible to the public right-of-way.

***B10. Significance (continued):**

The Merle Norman Cosmetics, Inc. factory building was constructed in 1952 as a manufacturing, shipping, and receiving facility. Merle Norman Cosmetics, Inc. was founded in 1931 in Santa Monica by Merle Norman. In 1932, Norman hired J.B. Nethercutt, her nephew, as the company's first employee. By 1934, the company managed 94 franchises across the nation (Merle Norman Cosmetics, Inc. 2023). In the 1940s, during World War II, Merle Norman Cosmetics, Inc. created a machine to create gun oil and camouflage sticks for American troops. In the 1950s, the Good Housekeeping Seal of Approval for 3 Steps of Beauty recognized Merle Norman Cosmetics, Inc. as a household item. Between the 1960s and 1980s, Merle Norman Cosmetics, Inc. continued to expand and opened up studios throughout Hollywood, in addition to hiring beauty consultants to educate clientele. In the 1990s, Entrepreneur Magazine named Merle Norman Cosmetics, Inc. as the #1 Cosmetic Services Franchisor for 1996, 1997, and 1998. At the time of this evaluation, Merle Norman Cosmetics, Inc. continues to operate as a family-owned business under the authority of Jack and Helen Nethercutt, the great nephew of Merle Norman and his wife (Merle Norman Cosmetics, Inc. 2023).

Merle Norman Cosmetics, Inc. constructed the 70,000 square foot and $2 million factory and office building in 1952. The company purchased the five-acre tract of land a few blocks north of the Los Angeles International Airport. The tract was large enough to encompass all operations under one roof with a spur railroad track alongside the factory to facilitate receiving and shipping materials. At the time of its construction, the factory included offices, manufacturing, warehousing, and shipping; it manufactured and shipped 175 variations of 73 different cosmetic items. The factory building, which currently operates as the headquarters for Merle Norman Cosmetics, Inc., opened on September 11, 1952. The factory employed 112 persons and included an employee cafeteria (*The Los Angeles Times* 1952).

Evaluation

Under NRHP Criterion A or CRHR Criterion 1, this building has no significant association with important historic events. The building on this parcel, constructed in 1952, is associated with commercial and industrial development in Los Angeles, as well as the operations of the Merle Norman Cosmetics, Inc. However, research did not reveal that the building played a distinct or important role in the development of the cosmetics company. The company was founded in 1931 and, by 1934, over 94 franchises opened across the nation. Therefore, the subject factory building is not the best representative example of the Merle Norman Cosmetics, Inc. franchise; nor does it represent the commercial and industrial development of Los Angeles. Therefore, the building does not meet eligibility for the NRHP or CRHR under Criterion A/1.

Under NRHP Criterion B or CRHR Criterion 2, this building is not significant for any associations with the lives of persons important to history. Research did not indicate that any individuals, such as business owners, like Merle

Norman and her nephew, related to the development and use of this building made demonstrably important contributions to history at the local, state, or national level. Therefore, the building does not meet eligibility for the NRHP or CRHR under Criterion B/2.

Under NRHP Criterion C or CRHR Criterion 3, this building is not significant because it is not an important example of a type, period, or method of construction. The Contemporary style building proliferated on main streets and commercial rows throughout the nation during the mid to late twentieth century. The Contemporary style building at 9130 Bellanca Avenue is a typical and unremarkable late example reflecting the twentieth century trends of this style. The building on this parcel also lacks the high artistic value and distinctive design that would merit listing on the NRHP and CRHR. There is no master architect or builder associated with this building; therefore, it is not significant as the work of a master. Therefore, the building does not meet eligibility for the NRHP or CRHR under Criterion C/3.

Under NRHP Criterion D or CRHR Criterion 4, this building is not significant as a source (or likely source) of important information regarding history. It does not appear to have any likelihood of yielding important information about historic construction materials or technologies. Therefore, the building is not eligible for the NRHP or CRHR under Criterion D/4.

In summary, the Merle Norman Cosmetics, Inc. factory building does not meet any of the significance criteria of the NRHP or CRHR. Therefore, the building does not meet eligibility for listing in the NRHP or CRHR.

***P3a. Description (continued):**

The industrial building faces west and the façade is characterized by a large concrete awning supported by three circular columns and two red brick veneer walls. The awning covers the entrance, which includes fixed windows, an additional concrete awning, and a glazed double-entry door with transoms and sidelights. The southernmost end of the façade includes a loading dock with five roll-up bay doors. The northernmost portion of the façade includes a ramp with a roll-up metal gate that provides access to the rooftop parking lot. The north elevation includes an additional bay entrance to the interior of the factory. The southern elevation does not include any additional fenestration and/or architectural detail. The rear (west) elevation is not visible to the public right-of-way.

***B10. Significance (continued):**

The Merle Norman Cosmetics, Inc. factory building was constructed in 1970 as an addition to the original building at 9130 Bellanca Avenue, constructed in 1952. Merle Norman Cosmetics, Inc. was founded in 1931 in Santa Monica by Merle Norman. In 1932, Norman hired J.B. Nethercutt, her nephew, as the company's first employee. By 1934, the company managed 94 franchises across the nation (Merle Norman Cosmetics, Inc. 2023). In the 1940s, during World War II, Merle Norman Cosmetics, Inc. created a machine to create gun oil and camouflage sticks for American troops. In the 1950s, the Good Housekeeping Seal of Approval for 3 Steps of Beauty recognized Merle Norman Cosmetics, Inc. as a household item. Between the 1960s and 1980s, Merle Norman Cosmetics, Inc. continued to expand and opened up studios throughout Hollywood, in addition to hiring beauty consultants to educate clientele. In the 1990s, Entrepreneur Magazine named Merle Norman Cosmetics, Inc. as the #1 Cosmetic Services Franchisor for 1996, 1997, and 1998. At the time of this evaluation, Merle Norman Cosmetics, Inc. continues to operate as a family-owned business under the authority of Jack and Helen Nethercutt, the great nephew of Merle Norman (Merle Norman Cosmetics, Inc. 2023).

Evaluation

Under NRHP Criterion A or CRHR Criterion 1, this building has no significant association with important historic events. The building on this parcel, constructed in 1970, is associated with commercial and industrial development in Los Angeles, as well as the operations of the Merle Norman Cosmetics, Inc. However, research did not reveal that the building played a distinct or important role in the development of the cosmetics company. The company was founded in 1931 and, by 1934, over 94 franchises opened across the nation. Therefore, the subject factory building is not the best representative example of the Merle Norman Cosmetics, Inc. franchise; nor does it represent the commercial and industrial development of Los Angeles. Therefore, the building does not meet eligibility for the NRHP or CRHR under Criterion A/1.

Under NRHP Criterion B or CRHR Criterion 2, this building is not significant for any associations with the lives of persons important to history. Research did not indicate that any individuals, such as business owners, like Merle Norman and her nephew, related to the development and use of this building made demonstrably important contributions to history at the local, state, or national level. Therefore, the building does not meet eligibility for the NRHP or CRHR under Criterion B/2.

Under NRHP Criterion C or CRHR Criterion 3, this building is not significant because it is not an important example of a type, period, or method of construction. The Contemporary style building proliferated on main streets and commercial rows throughout the nation during the mid to late twentieth century. The Contemporary building at 9130 Bellanca Avenue is a typical and unremarkable late example reflecting the twentieth century trends of this style. The building on this parcel also lacks the high artistic value and distinctive design that would merit listing on the NRHP and CRHR. There is no master architect or builder associated with this building; therefore, it is not significant as the work of a master. Therefore, the building does not meet eligibility for the NRHP or CRHR under Criterion C/3.

Under NRHP Criterion D or CRHR Criterion 4, this building is not significant as a source (or likely source) of important information regarding history. It does not appear to have any likelihood of yielding important information about historic construction materials or technologies. Therefore, the building is not eligible for the NRHP or CRHR under Criterion D/4.

The building located at 9030 Bellanca Avenue is a one to two-story commercial and industrial building that demonstrates Contemporary architectural design. The building features a rectangular plan on a concrete foundation. The building is composed a three-tiered roof that gradually descends from the west facing façade to the rear (east) elevation. Wide, overhanging eaves with a vertical sunshade covers the façade and north elevation. The exterior walls are constructed of concrete clad in stucco. Fenestration details include fixed windows and single-entry doors.

Recorded by: Mackall, E. and M. Wilson ***Date:** February 2023 ☒ Continuation ☐ Update

***P3a. Description (continued):**

The building faces west and the façade is characterized by a glazed, single-entry door flanked on both sides by a sunshade system that wraps onto the north elevation. The sunshade covers several window details; however, it is difficult to determine if they are sash or fixed windows. A hipped pent awning clad in asphalt composition shingles covers the entry door and wraps from the façade onto the north elevation. Multi-light sash windows are located on the second level of the façade and north elevation. The south elevation includes a two pairs of sash windows on the second level and two windows with sunshades on the ground level. The north elevation a pair of sash windows on the second level, as well as windows covered by the wraparound sunshade on the ground level.

The rear elevation is not visible to the public right-of-way; however, aerial photographs indicate a helicopter pad was constructed at the rear between 1982 and 1983. A building with a flat roof and an L-shaped plan, as well as a side gabled building, are also located at the east border of the parcel along Portal Avenue. Aerial photography indicates that the L-shaped building and the gabled building were likely constructed at the same time as the subject building.

***B10. Significance (continued):**

Research did not reveal significant context about the building at 9030 Bellanca Avenue. However, newspaper research did indicate that Aircraft Tools, Inc. occupied the building in the 1960s. In the 1970s, the building provided space for public meetings, like the Toastmasters International and Business Women's Toastmistress Club (*The Los Angeles Times* 1961; *Southwest Topics-Wave* 1972). It is unclear if the building is currently occupied or vacant.

Evaluation

Under NRHP Criterion A or CRHR Criterion 1, this building has no significant association with important historic events. The building on this parcel, constructed in 1950, is associated with the commercial and industrial development of Los Angeles; however, the building hosted several businesses, but research did not reveal that the building played a distinct or important role in their respective industries. Therefore, the building is not eligible for the NRHP or CRHR under Criterion A/1.

Under NRHP Criterion B or CRHR Criterion 2, this building is not significant for any associations with the lives of persons important to history. Research did not indicate that any individuals, such as business owners related to the development and use of this building made demonstrably important contributions to history at the local, state, or national level. Therefore, the building is not eligible for the NRHP or CRHR under Criterion B/2.

Under NRHP Criterion C or CRHR Criterion 3, this building is not significant because it is not an important example of a type, period, or method of construction. The Contemporary-style building proliferated on main streets and commercial rows throughout the nation during the mid to late-twentieth century. The Contemporary building at 9030 Bellanca Avenue is a typical and unremarkable example reflecting the twentieth century trends of this style. The building on this parcel also lacks the high artistic value and distinctive design that would merit listing on the NRHP and CRHR. There is no master architect or builder associated with this building; therefore, it is not significant as the work of a master. Therefore, the building is not eligible for the NRHP or CRHR under Criterion C/3.

Under NRHP Criterion D or CRHR Criterion 4, this building is not significant as a source (or likely source) of important information regarding history. It does not appear to have any likelihood of yielding important information about historic construction materials or technologies. Therefore, the building is not eligible for the NRHP or CRHR under Criterion D/4.

In summary, the building does not meet any of the significance criteria outline by the NRHP or the CRHR. Therefore, it is recommended not eligible for the NRHP or the CRHR.

Recorded by: Mackall, E. and M. Wilson ***Date:** February 2023 ☒ Continuation ☐ Update

***P3a. Description (continued):**

The building faces west and the façade is entered through a glazed single-entry door set back from the road at the southernmost end of the west elevation. A ribbon of three fixed windows is located on the second and third floor above the single-entry door. The entrance is flanked to the north by five CMU block pilasters that hide additional fenestration details and support a slight roof projection. An additional east facing entrance is located at the north elevation and appears to include similar fenestration details as the southernmost entrance. The south elevation includes a vertical strip of fixed windows that span the first, second, and third levels; the north elevation does not include any fenestration details. A security gate allows access to the rear (west) elevation of the building; however, it is not visible to the public right-of-way. A freestanding pole sign with a digital screen is located directly east of the security gate; the sign reads, "Spartan College of Aeronautics and Technology."

***B10. Significance (continued):**

Research did not reveal the original operations of the building at the time of its construction in 1958. However, by 1968, a classified newspaper ad indicated the building operated as the Cottage Shops, a home furnishing store (*The Los Angeles Times* 1968). By 1977, Northrop University began to rent space in the building to host events, like the Air Youth Day for the Southern Section of the California Aerospace Education Association (*Santa Monica-Northside Advertiser and Penny Pincher* 1977). John K. Northrop founded Northrop University in 1942 as the Northrop Aeronautical Institute, an institution that trained allied military personnel in maintaining aircraft during World War II (Spartan College of Aeronautics and Technology 2022). The name changed to Northrop University in 1975. Sometime between 1975 and the early 2000s, Crimson Technical College moved into the building. Crimson Technical College, founded in the late 1930s when California Flyers, Inc. School of Aeronautics was located at Mines Field, now Los Angeles International Airport, specialized in aviation technology (Spartan College of Aeronautics and Technology 2022). In 2014, the current occupant, Spartan College of Aeronautics and Technology, acquired Crimson Technical College and moved into the subject building. Spartan College of Aeronautics and Technology was founded in 1928 in Tulsa, Oklahoma as the Spartan School of Aeronautics by W.G. Skelly, former President of Skelly Oil Company (Spartan College of Aeronautics and Technology 2022). The school continues to own and operate 8911 Aviation Boulevard.

Evaluation

Under NRHP Criterion A or CHRIR Criterion 1, this building has no significant association with important historic events. The building on this parcel, constructed in 1958, is associated with commercial and industrial development of Los Angeles; however, several businesses and educational institutions occupied this building, but research did not reveal that the building played a distinct or important role in their respective industries. Both Northrop University, Crimson Technical College and Spartan College of Aeronautics and Technology advanced their respective industries elsewhere in California and Oklahoma. Therefore, the building is not the best representative example as an educational facility for aviation technology, and it is not eligible for the NRHP/CRHR under Criterion A/1.

Under NRHP Criterion B or CRHR Criterion 2, this building is not significant for any associations with the lives of persons important to history. Research did not indicate that any individuals, such as business owners, students, or engineers related to the development and use of this building made demonstrably important contributions to history at the local, state, or national level. Therefore, the building is not eligible for the NRHP or CRHR under Criterion B/2.

Under NRHP Criterion C or CRHR Criterion 3, this building is not significant because it is not an important example of a type, period, or method of construction. The Contemporary style building, constructed in 1958, proliferated on main streets and commercial rows throughout the nation during mid to late-twentieth century. The Contemporary building at 8911 Aviation Boulevard is a typical and unremarkable example reflecting the twentieth century trends of this style. The building on this parcel also lacks the high artistic value and distinctive design that would merit listing on the NRHP and CRHR. There is no master architect or builder associated with this building; therefore, it is not significant as the work of a master. Therefore, the building is not eligible for the NRHP or CRHR under Criterion C/3.

Under NRHP Criterion D or CRHR Criterion 4, this building is not significant as a source (or likely source) of important information regarding history. It does not appear to have any likelihood of yielding important information about historic construction materials or technologies. Therefore, the building is not eligible for the NRHP or CRHR under Criterion D/4.

In summary, the building does not meet any of the significance criteria for listing in the NRHP or CRHR. Therefore, it is recommended not eligible for the NRHP or the CRHR.

***B10. Significance (continued):**

The subject building was constructed in 1923 and historically operated as the West Hollywood Social Club (*The Los Angeles Times* 1934). By 1953, the King Vendors of California, a vending machine company, operated inside the building (*The Los Angeles Times* 1953). By 1999, the current occupant, Trunks, moved into the building. Trunks is a local LGBTQ+ bar (*LA Weekly* 1999).

Evaluation

Under NRHP Criterion A or CRHR Criterion 1, this building has no significant association with important historic events. The building on this parcel, constructed in 1923, is associated with commercial development in Los Angeles; however, many businesses occupied this building, but research did not reveal that the building played a distinct or important role in their respective industries. Therefore, the building is not eligible for the NRHP or CRHR under Criterion A/1.

Under NRHP Criterion B or CRHR Criterion 2, this building is not significant for any associations with the lives of persons important to history. Research did not indicate that any individuals, such as business owners, related to the development and use of this building made demonstrably important contributions to history at the local, state, or national level. Therefore, the building is not eligible for the NRHP or CRHR under Criterion B/2.

Under NRHP Criterion C or CRHR Criterion 3, this building is not significant because it is not an important example of a type, period, or method of construction. The One-Part Commercial Block building was prolific on main streets and commercial rows throughout the nation during the early to mid-twentieth century. The commercial building at 8809 Santa Monica Boulevard is a typical and unremarkable example reflecting the twentieth century trends of this style. The building on this parcel also lacks distinctive design elements that would merit listing on the NRHP and CRHR. There is no master architect or builder associated with this building; therefore, it is not significant as the work of a master. Therefore, the building is not eligible for the NRHP or CRHR under Criterion C/3.

Under NRHP Criterion D or CRHR Criterion 4, this building is not significant as a source (or likely source) of important information regarding history. It does not appear to have any likelihood of yielding important information about historic construction materials or technologies. Therefore, the building is not eligible for the NRHP or CRHR under Criterion D/4.

In summary, the building does not meet any of the eligibility criteria of the NRHP or CRHR. Therefore, it does not meet eligibility for listing in the NRHP or the CRHR at the national, state, or local level.

The Santa Palm Car Wash, constructed in 1965, is a single-story, contemporary car wash building with a rectangular plan on a concrete foundation. The exterior walls are constructed of a steel frame and include several open bays for car detailing on the north elevation. The south elevation features a row of nine stone veneer clad pylons topped with a lantern. Each pylon is separated by metal fencing and supported on a low sitting concrete wall with a planter box at the northeast end. The building has a low pitch gable roof with exposed I-beam rafters in each gable that extend outward from the roof line. The gable roof is clad in corrugated sheet metal on the north elevation and asphalt composition shingle on the south.

Applicable Criteria NRHP/CRHR Criterion A/1

The building at 8787 Santa Monica Boulevard appears to meet the criteria for listing in the National Register of Historic Places (NRHP), the California Register of Historical Resources (CRHR), and appears to be an historical resource for purposes of the California Environmental Quality Act (CEQA). The building generally retains integrity to its original construction and meets Criterion A of the NRHP and Criterion 1 of the CRHR at the local level. The building has been evaluated in accordance with Section 15064.5(a)(2)-(3) of the CEQA Guidelines, using the criteria outlined in Section 5024.1 of the California Public Resources Code. The boundary for the historic property/historical resource is its legal parcel.

***P3a. Description (continued):**

The north elevation includes several open bays reserved for car detailing. The bays span the length of the rectangular building. The west end of the north elevation includes two wood framed trellis canopies that wrap onto the west elevation. The canopies cover customer seating areas. A standalone canopy is located towards the southern end of the DIRECTION façade and is likely used as a self-wash station. The west elevation includes a single-entry door flanked to the north by a ribbon of three fixed windows. The south end of the west elevation features an open bay that allows cars to exit from the car washing station. The east elevation features an enclosed interior space that is flanked to the south by the entrance to the car washing station.

A historical pole sign is located near the west elevation, along the public right-of-way of Santa Monica Boulevard (Historic Route 66). The pole sign supports four boxed signs that reads in order from top to bottom, "Alliance," "Hand Wash Plus," "Santa Palm, Car Wash of the Stars," and "Entrance on Palm." Another pole sign is located in the parking lot along Palm Avenue. The pole sign reads, "Welcome to Santa Palm Car Wash – Car Was of the Stars."

Additional details include exterior light fixtures, commercial signage and vinyl awnings along the open bays, and a commercial billboard that juts over the car wash at the west elevation.

***B10. Significance (continued):**

The Santa Palm Car Wash opened in 1965 at the time of the building's initial construction and has continuously operated along Santa Monica Boulevard in West Hollywood. The car wash became a local landmark over the last five decades because it cleaned the cars of "many Angeleno," as well as countless celebrities (*The Los Angeles Times* 2004). The Santa Palm Car Wash includes a row of headshot photographs in their shaded waiting area that highlights serviced celebrities. This includes Shirley Temple, Jimmy Connors, Dom DeLuise, Young MC, Farrah Fawcett, Eddie Murphy, Jean Stapleton, and the Smothers Brothers. As a result, the Santa Palm Car Wash became known as the "Car Wash of the Stars" (*The Los Angeles Times* 2004).

Former General Manager, Glen Rodgers, indicated that the most popular service was the Deluxe Star Wash, priced at $12.99. On an average day, the Santa Palm Car Wash was between 300 and 350 cars; however, the number reached 600 cars on a busy weekend (*The Los Angeles Times* 2004).

Kalman H. "Sunny" Sunshine (b. 1935) and Marvin Kalin (b. 1920) jointly owned and operated the Santa Palm Car Wash throughout the late-twentieth century. Sunshine was the Past President of the California Car Wash Association and served on the Board of Directors of the International Car Wash Association. Sunshine died on July 24, 1997, after a battle with cancer (*The Los Angeles Times* 1997). Kalin, born in Chicago and raised in Los Angeles, attended UCLA and fought in World War II. Kalin died on February 1, 2015 (*The Los Angeles Times* 2015).

Evaluation

Under NRHP Criterion A and CRHR Criterion, the Santa Palm Car Wash appears to have significant association with important historic events. The building on this parcel, constructed in 1965, is associated with commercial and social development of West Hollywood, as well as automobile history related to Santa Monica Boulevard (Historic Route 66). The associated pole sign, located along Santa Monica Boulevard, served as a roadside advertisement to entice travelers on Historic Route 66 to pull over and pay for a car wash. The building is also known as the "Car Wash of the Stars," an unofficial local landmark that served, and continues to serve, Hollywood celebrities, like Eddie Murphy and Shirley Temple. The Santa Palm Car Wash has continuously operated since the building's construction in 1965 and has become a cornerstone of West Hollywood's commercial and social development. Therefore, the Santa Palm Car Wash meets eligibility for the NRHP/CRHR at the local level under Criterion A/1.

Under NRHP Criterion B or CRHR Criterion 2, this building is not significant for any associations with the lives of persons important to history. Research did not indicate that any individuals, such as business owners, like Kalman H. "Sunny" Sunshine and Marvin Kalin, or celebrities, related to the development and use of this building made

demonstrably important contributions to history at the local, state, or national level. Therefore, the Santa Palm Car Wash does not meet eligibility for the NRHP or CRHR under Criterion B/2.

Under NRHP Criterion C or CRHR Criterion 3, this building is not significant because it is not an important example of a type, period, or method of construction. The Contemporary style building proliferated on main streets and commercial rows throughout the nation during the mid to late twentieth century. The Contemporary building at 8787 Santa Monica Boulevard is a typical, and late example reflecting the twentieth century trends of this style. The building on this parcel also lacks the high artistic value that would merit listing on the NRHP and CRHR. There is no master architect or builder associated with this building; therefore, it is not significant as the work of a master. Therefore, the Santa Palm Car Wash does not meet eligibility for the NRHP or CRHR under Criterion C/3.

Under NRHP Criterion D or CRHR Criterion 4, this building is not significant as a source (or likely source) of important information regarding history. It does not appear to have any likelihood of yielding important information about historic construction materials or technologies. Therefore, the Santa Palm Car Wash does not meet eligibility for the NRHP or CRHR under Criterion D/4.

The building appears to retain its integrity of location, setting, design, materials, workmanship, feeling, and association because it does not appear to have been altered since the date of construction. Therefore, because it meets one of the significance criteria necessary for eligibility for listing in the NRHP or CRHR and retains sufficient integrity to convey that significance, the building appears to be eligible for listing in the NRHP and CRHR at the local level.

The building located at 8417 Beverly Boulevard, constructed in 1954, is a Two-Part Commercial Block building with a rectangular plan on a concrete foundation. The exterior walls are constructed of concrete block clad in stucco. Fenestration includes fixed storefront windows. The building is composed of a flat roof clad in a membrane material with parapets. The building faces south and the façade is characterized by ribbon of eight fixed windows recessed within a concrete frame on the second level. The ground level includes a glazed double-entry door with a transom and sidelights flanked on each side by a fixed storefront window with a stone veneer surround. Additional details include brick veneer pilasters at either end of the façade. The east and west elevations do not include any additional fenestration and/or architectural detail. The rear (north) elevation features three three-light sash windows on the second level and a single-entry door on the ground level.

Page 3 **of** 6 ***Resource Name or #** (Assigned by recorder) 8417 Beverly Boulevard
Recorded by: Mackall, E. and M. Wilson ***Date:** February 2023 ☒ Continuation ☐ Update

***B10. Significance (continued):**

The building located at 8417 Beverly Boulevard was constructed in 1954 as "new de luxe offices" that offered 2700 square feet and divided suites (*The Los Angeles Times* 1954). The commercial space hosted several businesses throughout the latter half of the twentieth century. This included a bookstore in 1961 and an accounting firm in 1980 (*The Los Angeles Times* 1961, 1980). Currently, the building is occupied by Remington Moving and Storage, as well as Tailoring & Alterations (Google Maps 2022).

The subject building features a Two-Part Commercial Block architectural style. The Two-Part Commercial Block style, popular between circa 1850s and 1950s, was usually used for small and moderate-sized commercial buildings, generally limited to structures of two to four stories, and included a horizontal division into two distinct zones which reflects the differences of use inside (lower zones are street level and contain public spaces such as stores and upper zones suggest more private spaces for apartments and offices) (Longstreth 2000:24-53).

Evaluation

Under NRHP Criterion A or CRHR Criterion 1, this building has no significant association with important historic events. The building on this parcel, constructed in 1954, is associated with commercial development in Los Angeles; however, many businesses occupied this building, but research did not reveal that the building played a distinct or important role in their respective industries. Therefore, the building is not eligible for the NRHP or CRHR under Criterion A/1.

Under NRHP Criterion B or CRHR Criterion 2, this building is not significant for any associations with the lives of persons important to history. Research did not indicate that any individuals, such as business owners, related to the development and use of this building made demonstrably important contributions to history at the local, state, or national level. Therefore, the building is not eligible for the NRHP or CRHR under Criterion B/2.

Under NRHP Criterion C or CRHR Criterion 3, this building is not significant because it is not an important example of a type, period, or method of construction. The Two-Part Commercial Block building proliferated on main streets and commercial rows throughout the nation during the early to mid-twentieth century. The commercial building at 8417 Beverly Boulevard is a typical and unremarkable example reflecting the twentieth century trends of this style. The building on this parcel also lacks distinctive design elements that would merit listing on the NRHP and CRHR. There is no master architect or builder associated with this building; therefore, it is not significant as the work of a master. Therefore, the building is not eligible for the NRHP or CRHR under Criterion C/3.

Under NRHP Criterion D or CRHR Criterion 4, this building is not significant as a source (or likely source) of important information regarding history. It does not appear to have any likelihood of yielding important information about historic construction materials or technologies. Therefore, the building is not eligible for the NRHP or CRHR under Criterion D/4.

In summary, the building does not meet any of the eligibility criteria of the NRHP or CRHR. Therefore, it does not meet eligibility for listing in the NRHP or the CRHR at the national, state, or local level.

Page 3 **of** 5 ***Resource Name or #** (Assigned by recorder) Reggie's Stereo
Recorded by: Mackall, E. and M. Wilson ***Date:** February 2023 ☒ Continuation ☐ Update

***B10. Significance (continued):**

The commercial building was constructed in 1982 and historically operated as Reggie's Stereo (*LA Weekly* 1982). However, newspaper research did not reveal additional information. By 2007, the building operated under its current occupant, Executive Car Leasing.

The building demonstrates a Contemporary architectural style. The Contemporary style, popular between circa 1940 and 1980, is characterized by strong roof forms including flat, gabled, shed, or butterfly, typically with deep overhangs; large windows, often aluminum framed; non-traditional exterior finishes include vertical wood siding, concrete block, stucco, flagstone, and mullion-free glass; angular massing; sun shades, screens, or shadow block accents; horizontally oriented commercial buildings; distinctive triangular, parabolic, or arched forms; "eyebrow" overhangs on commercial buildings, and integrated, stylized signage on commercial buildings (McAlester and McAlester 1984:482).

Evaluation

Under NRHP Criterion A or CRHR Criterion 1, this building has no significant association with important historic events. The building on this parcel, constructed in 1982, is associated with commercial development; however, many businesses likely occupied this building, but research did not reveal that the building played a distinct or important role in their respective industries. Therefore, the building is not eligible for the NRHP or CRHR under Criterion A/1.

Under NRHP Criterion B or CRHR Criterion 2, this building is not significant for any associations with the lives of persons important to history. Research did not indicate that any individuals, such as businesses like Reggie's Stereo, related to the development and use of this building made demonstrably important contributions to history at the local, state, or national level. Therefore, the building is not eligible for the NRHP or CRHR under Criterion B/2.

Under NRHP Criterion C or CRHR Criterion 3, this building is not significant because it is not an important example of a type, period, or method of construction. The Contemporary style building proliferated on main streets and commercial rows throughout the nation during the mid to late- twentieth century. The commercial building at 7800 Santa Monica Boulevard is a typical and unremarkable example reflecting the twentieth century trends of this style. The building on this parcel also lacks distinctive design elements that would merit listing on the NRHP and CRHR. There is no master architect or builder associated with this building; therefore, it is not significant as the work of a master. Therefore, the building is not eligible for the NRHP or CRHR under Criterion C/3.

Under NRHP Criterion D or CRHR Criterion 4, this building is not significant as a source (or likely source) of important information regarding history. It does not appear to have any likelihood of yielding important information about historic construction materials or technologies. Therefore, the building is not eligible for the NRHP or CRHR under Criterion D/4.

In summary, the building does not meet any of the eligibility criteria of the NRHP or CRHR. As a result, it is also not eligible for Criterion Consideration G. Therefore, it does not meet eligibility for listing in the NRHP or the CRHR at the national, state, or local level.

The building located 7760 Santa Monica Boulevard, constructed in 1935, is a single-story, One-Part Commercial Block building with a rectangular plan on a concrete foundation. The exterior walls are sheathed in stucco; however, the rear (south) elevation is clad in exposed red brick. The building faces north and the façade is characterized by eccentric Art Deco-type designs that include horizontal lines, zig zags, waves, and other fluting and reeding details; the building also includes an original box sign that reads, "PAWN SHOP." The building is entered through a glazed double-entry door with a transom flanked on each side by fixed storefront windows. A tile veneer is located beneath the fixed windows. A double-entry security gate enclosed the recessed entrance. The building is composed of a flat roof clad in a membrane material with parapets. The east and west elevations share party walls with the adjacent buildings. The rear (south) elevation includes fixed windows and a sheet metal clad awning with an additional entry door.

Applicable Criteria NRHP Criterion C; CRHR Criterion 3

The building at 7760 Santa Monica Boulevard appears to meet the criteria for listing in the National Register of Historic Places (NRHP), the California Register of Historical Resources (CRHR), and appears to be an historical resource for purposes of the California Environmental Quality Act (CEQA). The building generally retains integrity to its original construction and meets Criterion C of the NRHP and Criterion 3 of the CRHR at the local level. The building has been evaluated in accordance with Section 15064.5(a)(2)-(3) of the CEQA Guidelines, using the criteria outlined in Section 5024.1 of the California Public Resources Code. The boundary for the historic property/historical resource is its legal parcel.

Recorded by: Mackall, E. and M. Wilson ***Date:** February 2023 ☒ Continuation ☐ Update

***B10. Significance (continued):**

The building located at 7760 Santa Monica Boulevard was constructed in 1935 and operated as N.A. Clum, a business that sold a variety of wheeled carts, like wheelchairs, roller chairs, and baby strollers (*Los Angeles Evening Citizen News* 1935). N.A. Clum operated in the building until circa 1969, when it became Hollywood Radio (*The Los Angeles Times* 1969). By 1976, Elliot Salter Pawn Shop, the current occupant, opened at 7760 Santa Monica Boulevard. The pawn shop continues operation at the time of this evaluation and is locally known for selling an eclectic array of items (*The Los Angeles Times* 1976).

Evaluation

Under NRHP Criterion A or CRHR Criterion 1, this building has no significant association with important historic events. The building on this parcel, constructed in 1935, is associated with commercial development; however, many businesses occupied this building, but research did not reveal that the building played a distinct or important role in their respective industries. Therefore, the building is not eligible for the NRHP or CRHR under Criterion A/1.

Under NRHP Criterion B or CRHR Criterion 2, this building is not significant for any associations with the lives of persons important to history. Research did not indicate that any individuals, such as businesses like N.A. Clum or Elliot Salter Pawn Shop, related to the development and use of this building made demonstrably important contributions to history at the local, state, or national level. Therefore, the building is not eligible for the NRHP or CRHR under Criterion B/2.

Under NRHP Criterion C and CRHR Criterion 3, this building is significant because it is an important example of a type, period, and method of construction. The One-Part Commercial Block style building was prolific on main streets and commercial rows throughout the nation during the early to mid-twentieth century. The commercial building at 7760 Santa Monica Boulevard is an excellent and remarkable example reflecting local twentieth century trends of this style. The building includes distinctive design elements, like fluting, zigzags, and stylized motifs, that merit its listing on the NRHP and CRHR. There is no master architect or builder associated with this building; therefore, it is not significant as the work of a master. Therefore, the building meets eligibility for listing in the NRHP and CRHR under Criterion C/3.

Under NRHP Criterion D or CRHR Criterion 4, this building is not significant as a source (or likely source) of important information regarding history. It does not appear to have any likelihood of yielding important information about historic construction materials or technologies. Therefore, the building meets eligibility for listing in the NRHP and CRHR under Criterion D/4.

The building appears to retain its integrity of location, setting, design, materials, workmanship, feeling, and association because it does not appear to have been altered since the date of construction. Therefore, because it meets one of the significance criteria necessary for eligibility for listing in the NRHP or CRHR and retains sufficient integrity to convey that significance, the building appears to be eligible for listing in the NRHP and CRHR at the local level.

***P3a. Description:** (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries)

The building located at 7066 Santa Monica Boulevard is a single-story, One-Part Commercial Block commercial building with Modern stylistic influences. The building features a rectangular plan on a concrete foundation and is composed of a flat roof with parapets. The exterior walls are constructed of concrete clad in stucco. The building does not include any window details that are visible to the public right of way; it is unclear if the façade historically included a storefront with visible fenestration details. The building faces north and the façade is characterized by a partial brick veneer with portions that expose the stucco wall cladding. The building is entered through a single-entry door located in a recessed entry way at the west end of the façade. A commercial sign is located along the cornice that reads, "Gardenia." A boxed sign projects above the roof line that provides information about musical acts. The east, west, and rear (south) elevation are not visible to the public right-of-way.

***B10. Significance (continued):**

The building was constructed in 1953 and historically operated as a coffee shop; research did not reveal the name of the coffee shop (*Los Angeles Evening Citizen News* 1965). By 1970, the coffee shop closed and the building reopened as Steer – N – Stein, a steakhouse restaurant. The steakhouse advertised its chopped ground sirloin and steak plate (*Los Angeles Evening Citizen News* 1970). In 1977, the building reopened as Mom's, a "home-styled" lunch and dinner restaurant. Mom's specialized in home cooked-style meals and advertised itself as an "attractive, semi-fancy restaurant – with a pianist playing show tunes – that serves slightly fancified version of what Mom might make herself at home, complete with secret touches" (*The Los Angeles Times* 1977, 1979).

Sometime between 1979 and 1981, Mom's closed and the building reopened as its current occupant, Gardenia Restaurant & Lounge. Tom Rolla, owner and head chef of Gardenia, opened the restaurant in West Hollywood after he realized his love of food outweighed his love of the theater. Rolla prepared an eclectic menu of international food items; however, he specialized in Italian dishes. Rolla's specialty included *zuppa di pesce*, a fish soup based on a hefty, wine-rich base with scallops, clams, shrimp, and other seasonal fish. By 1983, Rolla featured a "club" element to Gardenia Restaurant & Lounge (*The Los Angeles Times* 1981; *LA Weekly* 1983). This included live musical acts. The restaurant continues to operate and host live music at the time of this evaluation.

The Gardenia Restaurant & Lounge demonstrates a Modern style of architecture. Modern architecture began in the late 1920s and early 1930s and extended through the 1970s, although the modern era in the United States is most closely associated with the two decades following World War II. The overarching label of "Modern," although imprecise, can generally be characterized by buildings exhibiting simple volumes (in institutional and commercial buildings) and a lack of decorative detail. Additional characteristics include use of materials in place of decorative details, and the use of natural colors and textures of materials to embellish a building (for example, employing brick or concrete for decorative effect). The modern era was also a time, however, when new materials and construction methods were explored. An example is curtain wall construction, which utilizes aluminum frames for window walls in place of steel, and new material combinations in the solid spandrel panels that separate them. Additional examples include thin shell construction, folded plate construction, and the hyperbolic paraboloid (Painter 2010: 22-23).

Evaluation

Under NRHP Criterion A or CRHR Criterion 1, this building has no significant association with important historic events. The building on this parcel, constructed in 1953, is associated with commercial development; however, many businesses occupied this building, but research did not reveal that the building played a distinct or important role in their respective industries. Therefore, the building is not eligible for the NRHP or CRHR under Criterion A/1.

Under NRHP Criterion B or CRHR Criterion 2, this building is not significant for any associations with the lives of persons important to history. Research did not indicate that any individuals, such as business owners like Tom Rolla, related to the development and use of this building made demonstrably important contributions to history at the local, state, or national level. Therefore, the building is not eligible for the NRHP or CRHR under Criterion B/2.

Under NRHP Criterion C or CRHR Criterion 3, this building is not significant because it is not an important example of a type, period, or method of construction. The One-Part Commercial Block building was prolific on main streets and commercial rows throughout the nation during the early to mid-twentieth century. The commercial building at 7066 Santa Monica Boulevard is a typical and unremarkable example reflecting the twentieth century trends of this style. The building on this parcel also lacks distinctive design elements that would merit listing on the NRHP and CRHR. There is no master architect or builder associated with this building; therefore, it is not significant as the work of a master. Therefore, the building is not eligible for the NRHP or CRHR under Criterion C/3.

Under NRHP Criterion D or CRHR Criterion 4, this building is not significant as a source (or likely source) of important information regarding history. It does not appear to have any likelihood of yielding important information about historic construction materials or technologies. Therefore, the building is not eligible for the NRHP or CRHR under Criterion D/4.

The building located at 7051 Santa Monica Boulevard is an 18,500 square foot, one to two-story Modern commercial building with a square plan on a concrete foundation constructed in 1953. The exterior walls are constructed of concrete masonry unit (CMU) block; however, portions of the façade are clad in brick veneer pilasters and the second level of the northeast corner appears to be constructed of poured concrete clad in stucco. Fenestration details include fixed and sash windows, as well as single and double-entry doors and roll-up bay doors. The building is composed of an irregular flat roof clad in a membrane material with parapets and wide, overhanging eaves on the south facing façade. However, the northern portion of the building features a bowstring roof clad in sheet metal.

The property at 7051 Santa Monica Boulevard does not appear to meet the criteria for listing in the National Register of Historic Places (NRHP) or the California Register of Historical Resources (CRHR), nor does it appear to be an historical resource for purposes of the California Environmental Quality Act (CEQA). The property does not retain its overall integrity and does not meet any of the significance criteria necessary for eligibility for listing in either the NRHP or CRHR or local register. The property has been evaluated in accordance with Section 15064.5(a)(2)-(3) of the CEQA Guidelines, using the criteria outlined in Section 5024.1 of the California Public Resources Code.

***P3a. Description (continued):**

The building faces south and the façade is characterized by a Modern-style entry that straddles the corner of N. Sycamore Avenue and Santa Monica Boulevard; the northeast corner entry wraps from the façade to the east elevation. The original entry features an L-shaped concrete awning that vertically projects above the roof line and transitions into a flat, horizontal awning that extends from the façade onto the east elevation. The awning covers a storefront system that features a glazed, single-entry door with a transom and sidelights; a stone veneer, planter box, and fixed windows surround the entry door. Additional details include three sash windows inset into projecting concrete frames, as well as original metal casement windows located on the second level of the façade and east elevation, as well as eight-light sash windows recessed behind security grilles on the ground level of the east elevation.

The west portion of the south façade includes six metal-framed sash windows on the second level and three metal-framed casement windows recessed behind metal security grilles on the ground level. Brick veneer clad pilasters partition the fenestration details. The westernmost bay of the façade includes two additional storefronts; one storefront features a glazed, double-entry door with a double-entry security gate; the other storefront features a single-entry door recessed behind a security gate.

The northern half of the east elevation includes a pair of sash windows recessed behind a security grille; a single and double-entry door covered by vinyl awnings; and a roll-up bay door. The west elevation is connected to the neighboring building and does not include any additional fenestration and/or architectural detail. The rear (north) elevation features five pairs of sash windows recessed behind security grilles, as well as an additional roll-up bay door.

***B10. Significance (continued):**

The building located at 7051 Santa Monica Boulevard featured several commercial businesses and offices that operated within its walls. In 1968, the building functioned as general office space and published a classified advertisement that sought an experienced typist (*Los Angeles Evening Citizen News* 1968). By 1979, the building operated as F & B/ Ceco, a business that sold used movie equipment, like props, camera lens, and outfits (*The Los Angeles Times* 1979). In 1986, the building offered space for public auctions (*The Los Angeles Times* 1986). By 1988, the European Design Import sold European-style clothes at discounted and wholesale rates (*LA Weekly* 1988). By 1998, the Celebration Theater hosted live performances in the building (*The Los Angeles Times* 1998). Research did not indicate how long the Celebration Theater utilized the building. In present-day, the building is shared by Hollywood High Grade and a recording studio; however, the rear section of the building appears to still sell used props and costumes.

Evaluation

Under NRHP Criterion A or CRHR Criterion 1, this building has no significant association with important historic events. The building on this parcel, constructed in 1953, is associated with commercial development of Los Angeles; however, many businesses occupied this building, but research did not reveal that the building played a distinct or important role in their respective industries. Therefore, the building is not eligible for the NRHP or CRHR under Criterion A/1.

Under NRHP Criterion B or CRHR Criterion 2, this building is not significant for any associations with the lives of persons important to history. Research did not indicate that any individuals, such as business-owners related to the development and use of this building made demonstrably important contributions to history at the local, state, or national level. Therefore, the building is not eligible for the NRHP or CRHR under Criterion B/2.

Under NRHP Criterion C or CRHR Criterion 3, this building is not significant because it is not an important example of a type, period, or method of construction. The Modern style building was prolific on main streets and commercial rows throughout the nation during the mid to late-twentieth century. The Modern building at 7051 Santa Monica Boulevard is a typical and unremarkable example reflecting the twentieth century trends of this style. The building on this parcel also lacks distinctive design that would merit listing on the NRHP and CRHR. There is no master architect or builder

associated with this building; therefore, it is not significant as the work of a master. Therefore, the building is not eligible for the NRHP or CRHR under Criterion C/3.

Under NRHP Criterion D or CRHR Criterion 4, this building is not significant as a source (or likely source) of important information regarding history. It does not appear to have any likelihood of yielding important information about historic construction materials or technologies. Therefore, the building is not eligible for the NRHP or CRHR under Criterion D/4.

In summary, the building at 7051 Santa Monica Boulevard does meet any of the significance criteria for listing on the NRHP and CRHR. Therefore, 7051 Santa Monica Boulevard is recommended not eligible for listing in the NRHP or CRHR.

The building located at 7000 West 3rd Street, constructed in 1988, is a four-story, Contemporary commercial office building with a rectangular plan and minor irregularities on a concrete foundation. The building is composed of a flat roof clad in a membrane material with parapets. The exterior walls are constructed of tilt-up concrete sheathed in stucco and marble detailing. Fenestration details include rows of fixed windows on each level. The southeast corner includes a cylindrical wall element sheathed in curtain wall windows; the cylindrical element transitions into the roofline. The north east corner includes an additional cylindrical wall elements sheathed in curtain wall widows that extends above the roofline and is flanked on each side by stepped details. The cylindrical element includes a commercial wall sign that reads, "WRITERS GUILD OF AMERICA WEST." Additional details include single and double-entry doors; fixed windows along the ground floor; stair cases; and open bay garage doors that provide access to below grade parking.

***B10. Significance (continued):**

The subject building, constructed in 1988, has operated as the Writers Guild of America West (WGAW) building since the time of its construction. The WGAW, a labor union formed in 1954, and a successor of the Screen Writers Guild of 1933, is a labor union that represents film, television, radio, and new media writers in the entertainment industry.

In 1988, the WGAW infamously organized a 22-week strike against the entertainment industry, including the Alliance of Motion Picture and Television Producers. Grievances included increased payment for reruns broadcasted overseas, as well as compensation for new technology for the presentation of written work. The strike changed the culture of television when scheduled shows and movies for Fall 1988 were either delayed or permanently canceled. As a result, the public stopped watching television, and 10% of watchers quit television altogether after the strike. In order to fill screen time, late night shows, like David Letterman, sought creative solutions. For example, because the show lacked writers, Letterman got a shave on the air. Fox also picked up a show called *Cops* to fill unscheduled television hours. *Cops* ran for 20 seasons and became the longest running reality TV show; the strike helped created unscripted shows like *Cops*. The 22-week strike cost the entertainment industry, and individual writers, up to $500 million (CBS News 2007).

Research did not reveal if the strike occurred in or around the Writers Guild of America West building at 7000 W. 3rd Street. As a result, the building did not play an important role in the strike.

Evaluation

Under NRHP Criterion A or CRHR Criterion 1, this building has no significant association with important historic events. The building on this parcel, constructed in 1988, is associated with commercial development in Los Angeles; however, many businesses occupied this building, but research did not reveal that the building played a distinct or important role in their respective industries. Research also did not indicate that the building played any important role in the Writers Guild of America West strike in 1988. Therefore, the building is not eligible for the NRHP or CRHR under Criterion A/1.

Under NRHP Criterion B or CRHR Criterion 2, this building is not significant for any associations with the lives of persons important to history. Research did not indicate that any individuals, such as business owners, related to the development and use of this building made demonstrably important contributions to history at the local, state, or national level. Therefore, the building is not eligible for the NRHP or CRHR under Criterion B/2.

Under NRHP Criterion C or CRHR Criterion 3, this building is not significant because it is not an important example of a type, period, or method of construction. The Contemporary building proliferated on main streets and commercial rows throughout the nation during the mid to late-twentieth century. The commercial building at 7000 West 3rd Street is a typical and unremarkable example reflecting the late twentieth century trends of this style. The building on this parcel also lacks the high artistic value and distinctive design that would merit listing on the NRHP and CRHR. There is no master architect or builder associated with this building; therefore, it is not significant as the work of a master. Therefore, the building is not eligible for the NRHP or CRHR under Criterion C/3.

Under NRHP Criterion D or CRHR Criterion 4, this building is not significant as a source (or likely source) of important information regarding history. It does not appear to have any likelihood of yielding important information about historic construction materials or technologies. Therefore, the building is not eligible for the NRHP or CRHR under Criterion D/4.

In summary, the building at 7000 West 3rd Street does not meet any of the significance criteria of the NRHP or CRHR. In addition, it does not meet NRHP eligibility for Criteria Consideration G. Therefore, the building is recommended not eligible for listing in the NRHP or CRHR.

***P3a. Description:** (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries)

The Wilshire Center Building is a multi-story, high-rise building that demonstrates the Contemporary architectural style. The building features a rectangular plan on a concrete foundation. The building is divided into two components: the ground level and the upper level. The ground level is primarily clad in stucco on its east, west, and rear (south) elevation. However, the north facing façade includes a large, honeycombed concrete veneer that covers fixed, curtain wall windows. Additional details include an entrance to a parking garage at the façade's east end, as well as two glazed automatic sliding doors with transoms. The upper level sits on the ground level and the design creates the effect that it is freestanding and floating above the building. The upper level is sheathed in curtain wall windows partitioned with metal panels. The building is composed of a flat roof clad in built-up material and HVAC units with parapets.

NRHP Status Code 3S; 3CS; 5S3

Page 3 **of** 6 ***Resource Name or** # (Assigned by recorder) Wilshire Center Building
Recorded by: Mackall, E. and M. Wilson ***Date:** February 2023 ☒ Continuation ☐ Update

***B10. Significance (continued):**

Sheldon L. Pollock Corp. designed and constructed the Wilshire Center Building in 1970 (*The Los Angeles Times* 1970). The building historically housed many commercial businesses and medical offices. This includes the office of Paul E. Keith III, MD, also known as the Keith Medical Group (*LA Weekly* 1990). Other offices in the 1980s included Professional Podiatry Group and the offices of Dr. Paul R. Bilovsky and Dr. Dennis G. Smiler (*The Los Angeles Times* 1986, 1987).

The Wilshire Center Building features a Contemporary architectural style. The Contemporary style, popular between circa 1940 and 1980, is characterized by strong roof forms including flat, gabled, shed, or butterfly, typically with deep overhangs; large windows, often aluminum framed; non-traditional exterior finishes include vertical wood siding, concrete block, stucco, flagstone, and mullion-free glass; angular massing; sun shades, screens, or shadow block accents; horizontally oriented commercial buildings; distinctive triangular, parabolic, or arched forms; “eyebrow” overhangs on commercial buildings, and integrated, stylized signage on commercial buildings (McAlester and McAlester 1984:482).

Evaluation

Under NRHP Criterion A or CRHR Criterion 1, this building has no significant association with important historic events. The building on this parcel, constructed in 1970, is associated with commercial and medical development of the Los Angeles area; however, many businesses and offices occupied this building, but research did not reveal that the building played a distinct or important role in their respective industries. Therefore, the building does not meet eligibility for the NRHP or CRHR under Criterion A/1.

Under NRHP Criterion B or CRHR Criterion 2, this building is not significant for any associations with the lives of persons important to history. Research did not indicate that any individuals, such as business owners or doctors, related to the development and use of this building made demonstrably important contributions to history at the local, state, or national level. Therefore, the building does not meet eligibility for the NRHP or CRHR under Criterion B/2.

Under NRHP Criterion C or CRHR Criterion 3, this building is a significant example of a type, period, and method of construction. The Contemporary style building proliferated on main streets and commercial rows throughout the nation during the late twentieth century. The commercial high-rise building at 6200 Wilshire Boulevard is an excellent and remarkable example reflecting the local twentieth century trends of this style. The building retains its overall integrity and features distinctive design elements indicative of the Contemporary style; this includes the free-standing high-rise elements, as well as the honeycombed details on the façade. Research did not indicate that the Sheldon L. Pollock Corp. is a master architect or builder; therefore, it is not significant as the work of a master. As a result, the building does meet eligibility for the NRHP or CRHR under Criterion C/3.

The building appears to retain its integrity of location, setting, design, materials, workmanship, feeling, and association because it does not appear to have been altered since the date of construction. Therefore, because it meets one of the significance criteria necessary for eligibility for listing in the NRHP or CRHR and retains sufficient integrity to convey that significance, the building appears to be eligible for listing in the NRHP and CRHR at the local level.

The building located at 6148-50 Orange Street, constructed in 1926, is a two-story, multi-family property that demonstrates the Spanish Eclectic architectural style defined by red Spanish tiles, a Moorish arched porte-cochere, and a turret. The building features a rectangular plan on a concrete foundation. The exterior walls are clad in stucco. Fenestration details include sash windows. The building is composed of a flat roof clad in a membrane material with parapets that feature red Spanish tile trim; however, additional details include cylindrical elements on the north facing façade.

Applicable Criteria NRHP Criterion C; CRHR Criterion 3

The building at 6148-50 Orange Street appears to meet the criteria for listing in the National Register of Historic Places (NRHP), the California Register of Historical Resources (CRHR), and appears to be an historical resource for purposes of the California Environmental Quality Act (CEQA). The building generally retains integrity to its original construction and meets Criterion C of the NRHP and Criterion 3 of the CRHR at the local level. The building has been evaluated in accordance with Section 15064.5(a)(2)-(3) of the CEQA Guidelines, using the criteria outlined in Section 5024.1 of the California Public Resources Code. The boundary for the historic property/historical resource is its legal parcel.

Recorded by: Mackall, E. and M. Wilson ***Date:** February 2023 ☒ Continuation ☐ Update

***P3a. Description (continued):**

The building faces north and the façade is largely obstructed by landscaped foliage. Character-defining features include a single-story partial porch entry with ornate moldings along its cornice; arched Moorish windows and door surrounds; multi-light windows; a single-entry door recessed within an arch; an arched bay entry that provides access to the rear driveway that runs along the east elevation; rounded corners that accent the cylindrical roof projections; and decorative moldings along the cornice at the second level. Fenestration details on the east and west elevations include multi-light sash windows of varying sizes. The rear (south) elevation is not visible to the public right-of-way; however, it likely includes similar fenestration details.

***B10. Significance (continued):**

Research did not reveal significant information about the multi-family property located at 6148 Orange Street. The building demonstrates a Spanish Eclectic design with influences from both Spanish Colonial Revival and Mission Revival architecture.

Spanish Colonial Revival, most popular between 1915 and the commencement of World War II, is typically one- or two-story asymmetrical, side gabled house characterized by stucco walls; low-pitched red barrel tile roofs with pent eaves or false gables and sometime low towers and decorative chimney caps; limited number of openings filled with rectangular and arched wooden casement windows and heavy, carved wooden doors; close relation to the outdoors through use of French doors, terraces, and pergolas; decorative ironwork for windows, doors, balconies and roof supports; glazed and unglazed tile for walls and floors; arcaded porches; and Plateresque and especially rich Churrigueresque ornament of cast concrete or terracotta (Gebhard and Winter 1985:486; Massey and Maxwell 1996:232; Foster 2004:330).

Mission Revival architecture manifested in California between 1890 and 1920 and quickly spread throughout the southwest by the early twentieth century. The architectural style gained national attention when several California architects introduced it at the 1893 World's Columbian Exposition, in addition to its popularity among Santa Fe hotels/resorts and Southern Pacific Railroad stations. Character defining features include mission-shaped dormers/roof parapets; red tile roof cladding; wide eave overhangs; arcaded entry porch or porch roofs supported by large, square piers; smooth stucco walls; quatrefoil windows; Islamic ornamentation; and bell towers, sometimes smaller in scale and paired (McAlester 2013).

Evaluation
Under NRHP Criterion A or CRHR Criterion 1, this building has no significant association with important historic events. The building on this parcel, constructed in 1926, is associated with residential development in the Los Angeles area; however, many residents likely occupied this building, but research did not reveal that the building played a distinct or important role in historical events at the national, state, or local level. Therefore, the building is not eligible for the NRHP or CRHR under Criterion A/1.

Under NRHP Criterion B or CRHR Criterion 2, this building is not significant for any associations with the lives of persons important to history. Research did not indicate that any individuals, such as residents, related to the development and use of this building made demonstrably important contributions to history at the local, state, or national level. Therefore, the building is not eligible for the NRHP or CRHR under Criterion B/2.

Under NRHP Criterion C or CRHR Criterion 3, this building is a significant example of a type, period, and method of construction. The Spanish Eclectic style building proliferated on main streets and residential tracts throughout the nation during the early twentieth century. The multi-family building at 6148 Orange Street is an excellent and remarkable example reflecting the twentieth century trends of this style. The building on this parcel retains its overall integrity and features distinctive design that merits listing on the NRHP and CRHR. There is no master architect or builder associated with this building; therefore, it is not significant as the work of a master. The building meets eligibility for the NRHP and CRHR under Criterion C/3 at the local level.

Page 4 **of** 6 ***Resource Name or #** (Assigned by recorder) 6148-50 Orange Street
Recorded by: Mackall, E. and M. Wilson ***Date:** February 2023 ☒ Continuation ☐ Update

Under NRHP Criterion D or CRHR Criterion 4, this building is not significant as a source (or likely source) of important information regarding history. It does not appear to have any likelihood of yielding important information about historic construction materials or technologies. Therefore, the building is not eligible or the NRHP or CRHR under Criterion D/4.

The building appears to retain its integrity of location, setting, design, materials, workmanship, feeling, and association because it does not appear to have been altered since the date of construction. Therefore, because it meets one of the significance criteria necessary for eligibility for listing in the NRHP or CRHR and retains sufficient integrity to convey that significance, the building appears to be eligible for listing in the NRHP and CRHR at the local level.

***P3a. Description (continued):**

The building faces south and the façade is characterized by a large plate of glass that covers nearly 90% of the building. The glass plate is covered by a modern metal-framed truss system. The ground floor includes a glazed double-entry door and a glazed single-entry door. The west elevation includes a concrete trapezoidal-like addition with a fitted plate of glass and metal-framed truss system on its south facing side. A glazed single-entry door is located within the fitted glass. An additional trapezoidal-like wall constructed of concrete masonry units partitions the south end of the west elevation from the north end. The north end of the west elevation appears to include office attachments with a mansard awning; however, they are not entirely visible to the public right-of-way. Additional details include fixed windows on each floor. The east elevation features eight fixed windows on the fourth and third floors. The rear (north) elevation is not visible to the public right-of-way.

***B10. Significance (continued):**

Research did not reveal significant information about the building at its initial time of construction in 1954. By 1968, the building operated as Aram Katcher's salon. Between 1968 and 1976, the building operated as a travel consulting business. The business, called, "Persian Caravan Tour & Travel," specialized in travel to Middle Eastern locations like Cairo, Egypt (*The Los Angeles Times* 1968, 1976). In 1992, the building appears to have rented its space for various seminars, including those that taught how to purchase foreclosures (*The Los Angeles Times* 1992). By 2008, the building functioned as its current occupant, Radio Tel and Megatronics International Export.

The building at 6133 Wilshire Boulevard demonstrates elements of the Brutalist architectural style, with exception of the 1980s post-modern storefront alteration. Brutalism rose in popularity in the United States between the 1950s and the 1970s. Brutalism favored bulky and angular designs with fewer visible glass surfaces; a direct opposition of the glass curtain wall. Additional details include exposed building materials, like rough concrete and structural supports. The style is typically found in civic, and commercial buildings; however, residential architecture can rain the main components, like bulky angular exterior details and unornamental facades (McAlester 2013).

Evaluation

Under NRHP Criterion A or CRHR Criterion 1, this building has no significant association with important historic events. The building on this parcel, constructed in 1954, is associated with commercial development of Los Angeles; however, many businesses occupied this building, but research did not reveal that the building played a distinct or important role in in the economic development of the Los Angeles itself. Therefore, the building does not meet eligibility for the NRHP or CRHR under Criterion A/1.

Under NRHP Criterion B or CRHR Criterion 2, this building is not significant for any associations with the lives of persons important to history. Research did not indicate that any individuals, such as business owners related to the development and use of this building made demonstrably important contributions to history at the local, state, or national level. Therefore, the building does not meet eligibility for the NRHP or CRHR under Criterion B/2.

Under NRHP Criterion C or CRHR Criterion 3, this building is not significant because it is not an important example of a type, period, or method of construction. The Brutalist style building proliferated in commercial and civic buildings on main streets and commercial rows throughout the nation in the mid to late-twentieth century. The Brutalist building at 6133 Wilshire Boulevard is a typical and unremarkable example reflecting the twentieth century trends of this style. The building also features a modern truss system that compromises the integrity of several character-defining features, namely the trapezoidal elements on the west elevation. The building on this parcel also lacks the high artistic value that would merit listing on the NRHP and CRHR. There is no master architect or builder associated with this building; therefore, it is not significant as the work of a master. Therefore, the building does not meet eligibility for the NRHP or CRHR under Criterion C/3.

Under NRHP Criterion D or CRHR Criterion 4, this building is not significant as a source (or likely source) of important information regarding history. It does not appear to have any likelihood of yielding important information about historic

***P3a. Description (continued):**

The building faces north and the façade is characterized by a second-level building projection with decorative brackets partitioned by arched details. Fenestration includes three single-entry doors (one that leads to the backyard); two sash windows with fanlights; a sash window with a wrought iron grille and tile clad awning; terra cotta breeze block; a sash window with a wrought iron balconette; a sash window with an HVAC unit and wood sill; and an arched window opening that is part of a second-story balcony on the west elevation. The east elevation includes additional fenestration details of varying size. The west elevation is not entirely visible to the public right-of-way. However, it appears to include an additional second level building projection with decorative brackets partitioned by arched details in the stucco; a rounded open bay on a second-story balcony; an open second story breezeway; and fenestration details of varying size with wrought iron grilles. The rear (south) elevation is not visible to the public right-of-way; however, it likely includes similar fenestration details as the other elevations.

***B10. Significance (continued):**

The building located at 6132 Orange Street, constructed in 1930, was historically owned by George Drexel McDonald and Virginia Patterson Callender. McDonald and Callender purchased the property in 1932 after their wedding (*The Los Angeles Times* 1932). By 1935, ownership transitioned to Mr. and Mrs. Harold Lavon. The Lavon family opened their home on Christmas Eve and Christmas Day to their friends and family in the neighborhood; newspaper research suggests it was a holiday tradition (*Daily News* 1935). In 1939, *The Los Angeles Times* published a classified advertisement for the property at 6132 Orange Street. The advertisement indicated the building features five studio apartments, two bedrooms, and two bathrooms (*The Los Angeles Times* 1939). By 1953, C. & J. Construction Co. rented the building for business operations (*Los Angeles Evening Citizen News* 1953). The building continues to function as a multi-family property at the time of this evaluation.

The subject building demonstrates a Spanish Colonial Revival architectural style. The Spanish Colonial Revival building, most popular between 1915 and the commencement of World War II, is typically one- or two-story asymmetrical, side gabled house characterized by stucco walls; low-pitched red barrel tile roofs with pent eaves or false gables and sometime low towers and decorative chimney caps; limited number of openings filled with rectangular and arched wooden casement windows and heavy, carved wooden doors; close relation to the outdoors through use of French doors, terraces, and pergolas; decorative ironwork for windows, doors, balconies and roof supports; glazed and unglazed tile for walls and floors; arcaded porches; and Plateresque and especially rich Churrigueresque ornament of cast concrete or terracotta (Gebhard and Winter 1985:486; Massey and Maxwell 1996:232; Foster 2004:330).

Evaluation

Under NRHP Criterion A or CRHR Criterion 1, this building has no significant association with important historic events. The building on this parcel, constructed in 1930, is associated with residential development in the Los Angeles area; however, many residents occupied this building, but research did not reveal that the building played a distinct or important role in historic events that may have occurred at the national, state, or local level. Therefore, the building does not meet eligibility for the NRHP or CRHR under criterion A/1.

Under NRHP Criterion B or CRHR Criterion 2, this building is not significant for any associations with the lives of persons important to history. Research did not indicate that any individuals, such as residents, related to the development and use of this building made demonstrably important contributions to history at the local, state, or national level. Therefore, the building does not meet eligibility for the NRHP or CRHR under criterion B/2.

Under NRHP Criterion C and CRHR Criterion 3, this building is significant because it is an important example of a type, period, and method of construction: Spanish Colonial Revival. The Spanish Colonial Revival style building proliferated on main streets and residential tracts through the nation during the early twentieth century. The multi-family property at 6132 Orange Street is a remarkable and excellent example reflecting the twentieth century trends of this style because is demonstrates character-defining features indicative of the Spanish Colonial Revival style. This

includes red Spanish title roof cladding, stucco wall cladding, arched entryways, terra cotta breeze block, bracketed wall projections, and wrought iron fenestration details. The building on this parcel retains the high artistic value and distinctive design that would merit listing on the NRHP and CRHR. While there is no master architect or builder associated with the building, it retains its overall integrity to demonstrate its original type, period, and method of construction from 1930. Therefore, the building meets eligibility for listing in the NRHP and CRHR under Criterion C/3.

Under NRHP Criterion D or CRHR Criterion 4, this building is not significant as a source (or likely source) of important information regarding history. It does not appear to have any likelihood of yielding important information about historic construction materials or technologies. Therefore, the building is not eligible for the NHRP or CRHR under Criterion D/4.

Although the building includes minor alterations, which include the sandblasted garage entry in 2003 and the exterior wall repair in 2018, alterations were done in kind. Therefore, the building retains its integrity of location, setting, design, materials, workmanship, feeling, and association because it does not appear to have been heavily altered since the date of construction. Therefore, because it meets one of the significance criteria necessary for eligibility for listing in the NRHP or CRHR and retains sufficient integrity to convey that significance, the building appears to be eligible for listing in the NRHP and CRHR.

The building at 6122 Orange Street appears to meet the criteria for listing in the National Register of Historic Places (NRHP), the California Register of Historical Resources (CRHR), and appears to be an historical resource for purposes of the California Environmental Quality Act (CEQA). The building generally retains integrity to its original construction and meets Criterion C of the NRHP and Criterion 3 of the CRHR at the local level. The building has been evaluated in accordance with Section 15064.5(a)(2)-(3) of the CEQA Guidelines, using the criteria outlined in Section 5024.1 of the California Public Resources Code. The boundary for the historic property/historical resource is its legal parcel.

***P3a. Description (continued):**

The building faces north and the façade includes on its second level two eight-light sash windows flanked on each side by a ribbon of three ten-light sash windows with a sill and ornate arched surround. The ground level includes a recessed entry with a stone veneer arched surround. The entry includes four paneled, single-entry doors with single-panel diamond glazing. The entry is flanked on both sides by two sash windows with security grilles. The west elevation includes multi-light sash windows of varying size on the second and ground level; the ground level windows include security grilles. The east elevation is similar to the west elevation; however, a window towards the rear includes a vinyl awning, as well as a roof access ladder and exterior piping. The rear (south) elevation features a wood framed staircase that provides access to two second story single-entry doors. The doors are flanked on each side by a vertical and horizontal sash window. The ground level is not entirely visible to the public right-of-way; however, it appears to include additional single-entry doors and sash windows.

The rear boundary line includes a rectangular shaped garage building with red Spanish tile roof cladding and four roll-up garage doors.

***B10. Significance (continued):**

Research did not reveal significant information about the multi-family property located at 6122 Orange Street, constructed in 1926. The building demonstrates a Spanish Eclectic architectural design, which features influences from both Mission and Spanish Colonial Revival.

Spanish Colonial Revival, most popular between 1915 and the commencement of World War II, is typically one- or two-story asymmetrical, side gabled house characterized by stucco walls; low-pitched red barrel tile roofs with pent eaves or false gables and sometime low towers and decorative chimney caps; limited number of openings filled with rectangular and arched wooden casement windows and heavy, carved wooden doors; close relation to the outdoors through use of French doors, terraces, and pergolas; decorative ironwork for windows, doors, balconies and roof supports; glazed and unglazed tile for walls and floors; arcaded porches; and Plateresque and especially rich Churrigueresque ornament of cast concrete or terracotta (Gebhard and Winter 1985:486; Massey and Maxwell 1996:232; Foster 2004:330).

Mission Revival architecture manifested in California between 1890 and 1920 and quickly spread throughout the southwest by the early twentieth-century. The architectural style gained national attention when several California architects introduced it at the 1893 World's Columbian Exposition, in addition to its popularity among Santa Fe hotels/resorts and Southern Pacific Railroad stations. Character defining features include mission-shaped dormers/roof parapets; red tile roof cladding; wide eave overhangs; arcaded entry porch or porch roofs supported by large, square piers; smooth stucco walls; quatrefoil windows; Islamic ornamentation; and bell towers, sometimes smaller in scale and paired (McALester 2013).

Evaluation
Under NRHP Criterion A or CRHR Criterion 1, this building has no significant association with important historic events. The building on this parcel, constructed in 1926, is associated with residential development in the Los Angeles area; however, many residents occupied this building, but research did not reveal that the building played a distinct or important role in any historic events that may have happened at the national, state, or local level. Therefore, the building does not meet eligibility for the NRHP or CRHR under Criterion A/1.

Under NRHP Criterion B or CRHR Criterion 2, this building is not significant for any associations with the lives of persons important to history. Research did not indicate that any individuals, such as residents, related to the development and use of this building made demonstrably important contributions to history at the local, state, or national level. Therefore, the building does not meet eligibility for the NRHP or CRHR under Criterion B/2.

Under NRHP Criterion C or CRHR Criterion 3, this building is an important example of a type, period, and method of construction. The Spanish Eclectic building proliferated on main streets and residential tracts throughout the nation

during the early twentieth century. The multi-family building at 6122 Orange Street is a remarkable and excellent example reflecting local twentieth century trends of this style. The building on this parcel retains its overall integrity and includes distinctive design elements that merit listing on the NRHP and CRHR. There is no master architect or builder associated with this building; therefore, it is not significant as the work of a master. Therefore, the building does meet eligibility for the NRHP or CRHR under Criterion C/3 at the local level.

Under NRHP Criterion D or CRHR Criterion 4, this building is not significant as a source (or likely source) of important information regarding history. It does not appear to have any likelihood of yielding important information about historic construction materials or technologies. Therefore, the building does not meet eligibility for the NRHP or CRHR under Criterion D/4.

The building appears to retain its integrity of location, setting, design, materials, workmanship, feeling, and association because it does not appear to have been altered since the date of construction. Therefore, because it meets one of the significance criteria necessary for eligibility for listing in the NRHP or CRHR and retains sufficient integrity to convey that significance, the building appears to be eligible for listing in the NRHP and CRHR at the local level.

The building located at 6120-6130 Wilshire Boulevard, constructed in 1925, is a three-story Spanish Eclectic commercial building with a U-shaped plan on a concrete foundation; the north facing façade includes a pair of one-story storefronts likely added sometime between 1925 and 1948. The exterior walls are constructed of concrete clad in stucco. Fenestration details include one-over-one sash windows and fixed storefront windows. The building is composed of a hipped roof with clipped gables at the rear clad in red Spanish tile shingles and slight, overhanging eaves. Evidence of an earthquake retrofit is located along the cornice.

Recorded by: Mackall, E. and M. Wilson ***Date:** February 2023 ☒ Continuation ☐ Update

***P3a. Description (continued):**

The building faces north and the façade is characterized by one-over-one sash windows on the third and second levels, as well as a metal-frame fire escape and access ladder. The ground level features a wood paneled, single-entry door recessed between two single-story commercial additions; these storefronts systems were likely added sometime between 1925 and 1948, according to historic aerials. The storefront systems include a flat roof clad in a membrane material with parapets. Together, both storefront systems include six storefronts that include both single and double-entry glazed doors with transoms, sidelights, and fixed windows. Commercial wall signs are located above each storefront entry. The east elevation includes three levels of single one-over-one sash windows of varying size, as well as pairs of one-over-one sash windows. The east elevation also includes additional evidence of an earthquake retrofit indicated by the metal endcaps. The west elevation includes similar details as the east elevation. The rear (south) elevation is not visible to the public right-of-way.

***B10. Significance (continued):**

Research indicated that the main three-story block of the building functioned as an apartment complex at the time of its construction in 1925. However, sometime in the mid-twentieth century, the building included commercial activity with its single-story storefronts on the north facing façade. However, research did not reveal when this addition was constructed. At the time of this evaluation, the original 1925 building operates as a bed and breakfast called 33WILFAX. The storefronts include businesses like Wilshire Foot Spa, LAVC, Lice Clinics, Lyte Nutrition & Fitness, and the Wilshire Fairfax Chiropractic. The east elevation parking lot was added in 1999.

The subject building demonstrates a Spanish Eclectic architectural style that includes influences from both Spanish Colonial Revival and Mediterranean design.

Spanish Colonial Revival, most popular between 1915 and the commencement of World War II, is typically one- or two-story asymmetrical, side gabled house characterized by stucco walls; low-pitched red barrel tile roofs with pent eaves or false gables and sometime low towers and decorative chimney caps; limited number of openings filled with rectangular and arched wooden casement windows and heavy, carved wooden doors; close relation to the outdoors through use of French doors, terraces, and pergolas; decorative ironwork for windows, doors, balconies and roof supports; glazed and unglazed tile for walls and floors; arcaded porches; and Plateresque and especially rich Churrigueresque ornament of cast concrete or terracotta (Gebhard and Winter 1985:486; Massey and Maxwell 1996:232; Foster 2004:330).

The Mediterranean architectural style, popular between 1918 and 1942, is closely related to the Spanish Colonial Revival style. The style originates in Italy and is less picturesque than Spanish Colonial styles, defined by its uniformly horizontal roof lines and little emphasis on separate massing. Character defining features include stucco exterior walls; low-pitched clay tile roof cladding, usually hipped; simple massing with stress on horizontal features; formal composition with symmetry; Arched openings and arched focal windows; limited use of decorative features; exterior landscaped gardens extending from the building (Survey LA 2018).

Evaluation

Under NRHP Criterion A or CRHR Criterion 1, this building has no significant association with important historic events. The building on this parcel, constructed in 1925, is associated with commercial development of the Los Angeles area; however, research did not reveal that the building played a distinct or important role in the region's commercial history. Therefore, the building is not eligible for the NRHP or CRHR under Criterion A/1.

Under NRHP Criterion B or CRHR Criterion 2, this building is not significant for any associations with the lives of persons important to history. Research did not indicate that any individuals, such as business owners or residents, related to the development and use of this building made demonstrably important contributions to history at the local, state, or national level. Therefore, the building is not eligible for the NRHP or CRHR under Criterion B/2.

State of California — The Resources Agency

NRHP Status Code 6Z

Page 4 **of** 6 ***Resource Name or #** (Assigned by recorder) 6120-6130 Wilshire Boulevard
Recorded by: Mackall, E. and M. Wilson ***Date:** February 2023 ☒ Continuation ☐ Update

Under NRHP Criterion C or CRHR Criterion 3, this building is not significant because it is not an important example of a type, period, or method of construction. The Spanish Eclectic style building proliferated on main streets and commercial rows throughout the nation during the early to mid-twentieth century. The commercial building at 6120-6130 Wilshire Boulevard is a typical and unremarkable example reflecting the twentieth century trends of this style. The building on this parcel also lacks distinctive design that would merit listing on the NRHP and CRHR. There is no master architect or builder associated with this building; therefore, it is not significant as the work of a master. Therefore, the building is not eligible for the NRHP or CRHR under Criterion C/3.

Under NRHP Criterion D or CRHR Criterion 4, this building is not significant as a source (or likely source) of important information regarding history. It does not appear to have any likelihood of yielding important information about historic construction materials or technologies. Therefore, the building is not eligible for the NRHP or CRHR under Criterion D/4.

In summary, the building located at 6120 -6130 Wilshire Boulevard does not meet any of the significance criteria of the NRHP or the CRHR. Therefore, the building is recommended not eligible for listing in the NRHP or CRHR.

The building located at 6100 Wilshire Boulevard, constructed in 1986, is a 13+ story office and commercial building with an irregular plan on a concrete foundation. The building is composed of a stepped, flat roof clad in membrane material; a helicopter pad is also located on the roof. The exterior walls are constructed of concrete and steel and clad in a curtain wall system that sheath a majority of the building. The building faces north and the recessed entry includes a glazed, double-entry door with sidelights and a transom. The south half of the east and west elevations include metal framed balconies on each floor. Additional details include a rear loading bay, as well as single-entry doors.

Recorded by: Mackall, E. and M. Wilson ***Date:** February 2023 ☒ Continuation ☐ Update

***B10. Significance (continued):**

The building located at 6100 Wilshire Boulevard was designed by Johnson Fain Partners, an architectural firm, and constructed in 1986 (*The Los Angeles Times* 2000). Research indicated that many businesses and medical offices operated inside the building located at 6100 Wilshire Boulevard; this included doctor offices and general commercial offices. For example, in 1989, Unity Healthcare Holding Company, Inc. rented an office in Suite 1470 (*The Los Angeles Times* 1989). In 1997, MOVO MEDIA, Inc. published an advertisement that sought an experienced receptionist (*LA Weekly* 1997).

Evaluation

Under NRHP Criterion A or CRHR Criterion 1, this building has no significant association with important historic events. The building on this parcel, constructed in 1986, is associated with commercial development of the Los Angeles area; however, research did not reveal that the building played a distinct or important role in the region's commercial history. Therefore, the building is not eligible for the NRHP or CRHR under Criterion A/1.

Under NRHP Criterion B or CRHR Criterion 2, this building is not significant for any associations with the lives of persons important to history. Research did not indicate that any individuals, such as residents, related to the development and use of this building made demonstrably important contributions to history at the local, state, or national level. Therefore, the building is not eligible for the NRHP or CRHR under Criterion B/2.

Under NRHP Criterion C or CRHR Criterion 3, this building is not significant because it is not an important example of a type, period, or method of construction. The Contemporary style building proliferated on main streets and commercial rows throughout the nation during the late twentieth century. The commercial building at 6100 Wilshire Boulevard is a typical and unremarkable example reflecting the twentieth century trends of this style. The building on this parcel also lacks the high artistic value that would merit listing on the NRHP and CRHR. There is no master architect or builder associated with this building; therefore, it is not significant as the work of a master. Therefore, the building is not eligible for the NRHP or CRHR under Criterion C/3.

Under NRHP Criterion D or CRHR Criterion 4, this building is not significant as a source (or likely source) of important information regarding history. It does not appear to have any likelihood of yielding important information about historic construction materials or technologies. Therefore, the building does not meet eligibility for the NRHP or CRHR under Criterion D/4.

In summary, the building located at 6100 Wilshire Boulevard does not meet any of the significance criteria of the NRHP or the CRHR. As a result, it is not eligible for Criteria Consideration G. Therefore, the building is recommended not eligible for listing in the NRHP or CRHR.

***P3a. Description (continued):**

The building faces southeast and the building is entered through its primary façade on the corner of S. La Brea Avenue and West 8th Street. The entrance is characterized by geometric floral designs in bas-relief and one-over-one sash windows flanked on each side by two-story fluted piers; the northernmost pier features a historic blade sign that reads, "Met Her At A Bar." The ground level includes a wood-framed awning that covers a glazed single-entry door with a transom. The east elevation includes three additional fluted piers and chevron designs that accent the concrete banding. Fenestration includes a combination of original and modern one-over-one sash windows on the second level and fixed store front windows and transoms on the ground level. The south elevation features six fluted piers of varying sizes. Fenestration details include eight modern horizontal sliding sash windows on the second level; the windows at the easternmost end include concrete sills with vertical zigzag patterns. The eastern end of the ground level includes a ribbon of fixed transom windows above a wood-framed awning; the awning covers two fixed storefront windows. The fixed windows are flanked to the west by a wood paneled single-entry door with a vinyl awning. The western end includes three storefronts with ribbons of fixed transom windows and single-entry doors flanked by fixed display windows; the westernmost storefront includes a vinyl awning.

***B10. Significance (continued):**

Research did not reveal significant commercial history about the Art Deco building at 5301 W. 8th Street. The building is currently occupied by "Met Her At A Bar," "The Little Bar," and "The HAIR PARLOR on 8th." The building demonstrates an Art Deco architectural design in a Two-Part Commercial Block fashion.

The Art Deco style, popular between the 1920s and the commencement of World War II, is characterized by a linear, hard-edge composition often with a vertical emphasis; windows arranged in sunken vertical panels; elimination of any classical or medieval termination at the top of the building; symmetry and balance for each elevation; frequent use of a central tower whose summit recedes in a stepped pattern; flat roof usually headed by parapets; tendency for buildings to be monumental, formal and heavy; and ornamentation of zigzags, chevrons, sun bursts, spirals, stylized plant motifs, and stylized animals (Blumenson 1981: 77; Gebhard and Winter 1985: 489).

The Two-Part Commercial Block style, popular between circa 1850s and 1950s, was usually used for small and moderate-sized commercial buildings, generally limited to structures of two to four stories, and included a horizontal division into two distinct zones which reflects the differences of use inside (lower zones are street level and contain public spaces such as stores and upper zones suggest more private spaces for apartments and offices) (Longstreth 2000:24-53).

Evaluation

Under NRHP Criterion A or CRHR Criterion 1, this building has no significant association with important historic events. The building on this parcel, constructed in 1925, is associated with commercial development in Los Angeles; however, many businesses likely occupied this building, and research did not reveal that the building played a distinct or important role in their respective industries. Therefore, the building does not meet eligibility for the NRHP or CRHR under Criterion A/1.

Under NRHP Criterion B or CRHR Criterion 2, this building is not significant for any associations with the lives of persons important to history. Research did not indicate that any individuals, such as business owners, related to the development and use of this building made demonstrably important contributions to history at the local, state, or national level. Therefore, the building does not meet eligibility for the NRHP or CRHR under Criterion B/2.

Under NRHP Criterion C or CRHR Criterion 3, this building is not significant because it is not an important example of a type, period, or method of construction. The Art Deco style building proliferated on main streets and commercial rows throughout the nation during the early twentieth century. The commercial building at 5301 W. 8th Street is a typical and unremarkable example reflecting the twentieth century trends of this style. The building on this parcel also lacks the high artistic value and distinctive design that would merit listing on the NRHP and CRHR; the building also

does not retain its integrity due to a re-roof in 2008 and altered fenestration and entry details on its south elevation between 2019 and 2021. There is no master architect or builder associated with this building; therefore, it is not significant as the work of a master. Therefore, the building does not meet eligibility for the NRHP or CRHR under Criterion C/3.

Under NRHP Criterion D or CRHR Criterion 4, this building is not significant as a source (or likely source) of important information regarding history. It does not appear to have any likelihood of yielding important information about historic construction materials or technologies. Therefore, the building does not meet eligibility for the NRHP or CRHR under Criterion D/4.

The building does not meet any of the significance criteria required for listing in the NRHP or the CRHR. Therefore, the building is recommended not eligible for listing in the NRHP or the CRHR.

The building at 4450 W. Adams Boulevard appears to meet the criteria for listing in the National Register of Historic Places (NRHP), the California Register of Historical Resources (CRHR), and appears to be an historical resource for purposes of the California Environmental Quality Act (CEQA). The building generally retains integrity to its original construction and meets Criterion C of the NRHP and Criterion 3 of the CRHR at the local level. The building has been evaluated in accordance with Section 15064.5(a)(2)-(3) of the CEQA Guidelines, using the criteria outlined in Section 5024.1 of the California Public Resources Code. The boundary for the historic property/historical resource is its legal parcel.

Page 3 **of** 6 ***Resource Name or #** (Assigned by recorder) Security First National Bank
Recorded by: Mackall, E. and M. Wilson ***Date:** February 2023 ☒ Continuation ☐ Update

***P3a. Description (continued):**

The building faces north and the façade is characterized by six Corinthian pilasters with fluting that partition a double-entry door with a transom and four fixed multi-light windows. Classical details in bas-relief accent the top of each fixed window. The west elevation is connected to the neighboring building and does not include any additional fenestration and/or architectural detail. The east elevation includes four concrete pilasters that partition four fixed multi-light windows accented with classical details in bas-relief. The southernmost end of the east elevation includes four-light sash window and three air vents. The rear (south) elevation features exposed masonry work clad in stucco, as well as two small air vents with an arch, a fixed sash window with a concrete sill, and a single-entry door.

***B10. Significance (continued):**

The building located at 4450 W. Adams Boulevard was constructed in 1930 and first operated as an automotive service shop called the Sorrell Brothers. The shop provided gas and other motor oils, as well as tire replacements and car batteries (*Los Angeles Evening Post-Record* 1936). Sometime between 1936 and 1949, the Sorrell Brothers closed and the building reopened as the Security First National Bank. Research indicates that the Security First National Bank operated at 4450 W. Adams Boulevard through the 1970s; however, it is unclear when the ceased its operations (*Los Angeles Evening Citizen News* 1949). By 2007, the building operated as the Morris Memorial Full Gospel Church. Between 2018 and 2019, the church closed. The building is currently vacant and for lease (Google Maps 2007, 2018, 2019).

The subject building demonstrates the Italian Renaissance architectural style. Character-defining features include a flat roof with a dentil detail along the cornice and roof-line balustrade, classical influenced pilasters and ornate detailing in bas-relief, and vertical fixed storefront windows on its façade and side elevation. The Italian Renaissance style was prolific in early twentieth century houses throughout the nation. However, it was less common than the contemporaneous Craftsman, Tudor, and Colonial Revival styles. Italian Renaissance buildings were primarily for architect-designed landmarks in major urban centers, like Los Angeles, prior to World War I. Many examples in the 1920s demonstrated vernacular interpretations that included the perfection of masonry veneer techniques. After 1935, and into the 1940s, the style steadily declined, and examples became significantly more rare (McAlester 2013).

Evaluation

Under NRHP Criterion A or CRHR Criterion 1, this building has no significant association with important historic events. The building on this parcel, constructed in 1930, is associated with commercial and financial development in Los Angeles; however, the automotive shop and bank, as well as the church, did not play a distinct or important role in their respective industries. Therefore, the building is not eligible for listing in the NRHP or CRHR under Criterion A/1.

Under NRHP Criterion B or CRHR Criterion 2, this building is not significant for any associations with the lives of persons important to history. Research did not indicate that any individuals, such as business owners or bankers, related to the development and use of this building made demonstrably important contributions to history at the local, state, or national level. Therefore, the building is not eligible for listing in the NRHP or CRHR under Criterion B/2.

Under NRHP Criterion C and CRHR Criterion 3, this building is significant at the local level because it is an important example of a type, period, and method of construction that reflects the Italian Renaissance architectural style. The Italian Renaissance style building was prolific on main streets and commercial rows throughout the nation between 1890 and 1935. The commercial building at 4450 W. Adams Boulevard is an excellent and remarkable example reflecting the early twentieth trends of this style. The building on this parcel retains sufficient integrity, despite replaced fenestration details and its roof replacement, and demonstrates character-defining features indicative of Italian Renaissance. This includes fluted Corinthian pilasters, classical details in bas-relief, and parapets stepped on the exterior with pilasters in bas-relief that run along the cornice of a classical entablature. There is no master architect or builder associated with this building; therefore, it is not significant as the work of a master. The building meets eligibility for the NRHP and CRHR under Criterion C/3 at the local level.

NRHP Status Code 3S; 3CS; 5S3

Page 4 **of** 6 ***Resource Name or #** (Assigned by recorder) Security First National Bank
Recorded by: Mackall, E. and M. Wilson ***Date:** February 2023 ☒ Continuation ☐ Update

Under NRHP Criterion D or CRHR Criterion 4, this building is not significant as a source (or likely source) of important information regarding history. It does not appear to have any likelihood of yielding important information about historic construction materials or technologies. Therefore, the building does not meet eligibility for the NRHP or CRHR under Criterion D/4.

The building retains its integrity of location, design, setting, workmanship, feeling, and association. The building lacks integrity of materials due to the roof replacement and replaced fenestration details. Therefore, because it meets one of the significance criteria necessary for eligibility for listing in the NRHP or CRHR and retains sufficient integrity to convey that significance, the building appears to be eligible for listing in the NRHP and CRHR under Criterion C/3 at the local level.

The building located at 2620 Crenshaw Boulevard is a single-story, Streamline Modern building with an L-shaped plan on a concrete foundation. The building is composed of a flat roof with parapets clad PVC membrane system; however, the rear section appears to be clad in sheet metal. The exterior walls are constructed of concrete clad in stucco. Fenestration details include fixed, storefront windows as well as a relocated entrance that likely moved from the west elevation to the south elevation.

***P3a. Description (continued):**

The building faces west and the façade features an inward, bowed design with a rounded, concrete element at the center of the roofline. A painted wall sign flanks each side of the rounded element and reads, “ACE Hardware.” A blade sign projects above the roofline that reads, “Benjamin Moore Paintcraft – Paintcraft Supply Hardware.” A slight concrete awning extends outward and features horizontal, metal flashing along its cornice. A neon commercial sign is located on the awning that reads, “Paintcraft HARDWARE.” The awning covers a boxed, storefront window that sits on a concrete foundation; this fenestration likely operated as the primary entrance prior to its relocation. The boxed window is flanked on both sides by a single fixed window and a ribbon of three fixed windows. A concrete block planter box with metal fencing is located along the sidewalk on each side of the concrete window foundation. The building is entered through the south elevation. The south elevation features a vinyl awning that covers an aluminum framed double-entry door with a transom. The eastern end of the south elevation also includes a steel-framed, warehouse addition with a metal framed awning and roll-up garage door. Additional details include two wall signs that read, “Paintcraft ACE Hardware” and “Benjamin Moore,” as well as exterior light fixtures. The north elevation is connected to the adjacent building, and the rear (east) elevation is not visible to the public right-of-way.

***B10. Significance (continued):**

The building , constructed in 1946, historically operated as the Paintcraft Supply Co. The business specialized in house paint, and sold tools and equipment like caulking guns and ladders (*The Los Angeles Times* 1961). The Paintcraft Supply Co. operated through the 1950s and 1980s. It is unclear if it continued through the 1990s and early 2000s. By 2007, the building operated as ACE Hardware; however, the Paintcraft Supply Co. brand continued to be advertised on the exterior elevations.

The Paintcraft Supply Co. building demonstrates the Streamline Modern architectural style. Streamline Moderne (or Art Moderne), popular from 1920 to the commencement of World War II, is characterized by smooth stucco wall surface; rounded corners, parapets, and windows; emphasis on the horizontal through the use of banded surfaces and banded windows; curved projecting wings; glass brick; round windows (ship portholes); steel (ship) railing and door and window trim; and an asymmetrical façade (McAlester and McAlester 1984:465; Blumenson 1981:79).

Evaluation

Under NRHP Criterion A or CRHR Criterion 1, this building has no significant association with important historic events. The building on this parcel, constructed in 1946, is associated with commercial development in Los Angeles; however, many businesses occupied this building, but research did not reveal that the building played a distinct or important role in their respective industries. Therefore, the building does not meet eligibility for the NRHP or CRHR under Criterion A/1.

Under NRHP Criterion B or CRHR Criterion 2, this building is not significant for any associations with the lives of persons important to history. Research did not indicate that any individuals, such as business owners, related to the development and use of this building made demonstrably important contributions to history at the local, state, or national level. Therefore, the building does not meet eligibility for the NRHP or CRHR under Criterion B/2.

Under NRHP Criterion C or CRHR Criterion 3, this building is not significant because it is not an important example of a type, period, or method of construction. The Streamline Moderne style building proliferated on main streets and commercial rows throughout the nation during early twentieth century. The Streamline Moderne building at 2620 Crenshaw Boulevard is a typical example reflecting the twentieth century trends of this style. The building on this parcel also lacks its overall integrity; its primary entrance was moved from the west to south elevation, and a warehouse addition was constructed at the rear between 1999 and 2000. There is no master architect or builder associated with this building; therefore, it is not significant as the work of a master. The building also features extensive modern alterations that include a rear warehouse addition from circa 1999 to 2000. Therefore, the building does not meet eligibility for the NRHP or CRHR under Criterion C/3.

Under NRHP Criterion D or CRHR Criterion 4, this building is not significant as a source (or likely source) of important information regarding history. It does not appear to have any likelihood of yielding important information about historic construction materials or technologies. Therefore, the building does not meet eligibility for the NRHP or CRHR under Criterion D/4.

In summary, the Paintcraft Supply Co. building does not meet any of the significance criteria for listing in the NRHP or CRHR. Therefore, the building is not eligible for listing in the NRHP and CRHR.

The building at 2614 Crenshaw Boulevard, constructed in 1928, is a Two-Part Commercial Block building with Italian Renaissance style elements. The building features a rectangular plan with minor irregularities on a concrete foundation. The roof is flat with parapets clad in built-up material; however, the northwest corner of the building features a hipped roof section. The façade includes classical designs in bas-relief that extend along the northwest portion of the cornice. The exterior walls are constructed of concrete clad in stucco and fenestration details include one-over-one sash and fixed windows. Vertical classical designs in bas-relief partition the windows on the second level at the north end of the façade. Two concrete belt courses extend along the cornice and just beneath the second level of the building.

***P3a. Description (continued):**

The building faces west and the façade features two fixed windows on the second level that are flanked to the south by six one-over-one single-hung sash windows, each with a wrought iron Juliette balcony. The ground level includes a fixed, multi-light storefront window; a double-entry door recessed behind a security gate and covered by a vinyl awning; a fixed storefront window with two lights; and a single-entry door with a transom recessed behind a security gate. The south elevation is connected to the adjacent building and does not include any additional fenestration and/or architectural detail. The north elevation features four one-over-one single-hung sash windows, each with a wrought iron Juliette balcony on the second level, as well as fixed, two-light windows on the ground level. The east end of the north elevation includes a second story, outdoor balcony that includes additional fenestration details. However, their view is limited to the public right-of-way. The rear (east) elevation is not visible to the public right-of-way; however, it appears to include additional fenestration details, as well as a boxed, second-story balcony.

***B10. Significance (continued):**

The building located at 2614 Crenshaw Boulevard was constructed in 1928 and historically operated as Martha Washington Candies. The candy store themed itself after former first President of the United States, George Washington, and his wife, Martha Washington. Candy included vanilla and chocolate butter cream logs, called, George Washington Logs, as well as sweet cherry spoons, called, Cherry Tree Kisses (*The Los Angeles Times* 1933). Martha Washington Candies operated through the 1940s; they published classified ads in 1948 and 1949 for chocolate dippers and candy salespeople (*The Los Angeles Times* 1948, 1949). Sometime between 1949 and 1956, Martha Washington Candies closed. The store reopened as Mike's Shoe-O-Rama, a shoe store that operated at least through the mid-1960s (*California Eagle* 1956, 1957, 1964). By 2007, the building housed the State of California Department of Rehabilitation (Google Maps 2007). The department closed by 2009 and the building remained vacant until 2012, when it opened as Compassion Care Center, a rehabilitation facility. The facility closed in 2014 and the building again remained vacant until circa 2015 to 2016, when it opened as the Premier Label Water Company, a business that sold wholesale water products. However, sometime after 2016, the business closed. The building remains vacant at the time of this evaluation.

Evaluation

Under NRHP Criterion A or CRHR Criterion 1, this building has no significant association with important historic events. The building on this parcel, constructed in 1928, is associated with commercial development in Los Angeles; however, many businesses occupied this building, and research did not reveal that the building played a distinct or important role in their respective industries. Therefore, the building does not meet eligibility for the NRHP or CRHR under Criterion A/1.

Under NRHP Criterion B or CRHR Criterion 2, this building is not significant for any associations with the lives of persons important to history. Research did not indicate that any individuals, such as business owners, related to the development and use of this building made demonstrably important contributions to history at the local, state, or national level. Therefore, the building does not meet eligibility for the NRHP or CRHR under Criterion B/2.

Under NRHP Criterion C or CRHR Criterion 3, this building is not significant because it is not an important example of a type, period, or method of construction. The Two-Part Commercial Block style building proliferated on main streets and commercial rows throughout the nation during the late nineteenth and early twentieth centuries. The Two-Part Commercial Block building at 2614 Crenshaw Boulevard is a typical example reflecting the twentieth century trends of this style. The building on this parcel also lacks sufficient integrity due to altered fenestration patterns in 1970. There is no master architect or builder associated with this building; therefore, it is not significant as the work of a master. Therefore, the building does not meet eligibility for the NRHP or CRHR under Criterion C/3.

Under NRHP Criterion D or CRHR Criterion 4, this building is not significant as a source (or likely source) of important information regarding history. It does not appear to have any likelihood of yielding important information about historic construction materials or technologies. Therefore, the building does not meet eligibility for the NRHP or CRHR under

The Faust Café, constructed between 1920 and 1923, is a single-story One-Part Commercial Block building with a rectangular plan on a concrete foundation; the building also includes Art Deco stylistic influence (**Photograph 1**). The building is composed of a flat roof clad in built-up material with no parapets. The exterior walls are constructed of concrete masonry unit block clad in stucco. The southern portion of the façade features the historic period stucco. Fenestration details include fixed storefront windows with metal awnings with scalloped edges that cover the window and entry details.

Applicable Criteria n/a

The property at 1714 N. Highland Avenue does not appear to meet the criteria for listing in the National Register of Historic Places (NRHP) or the California Register of Historical Resources (CRHR), nor does it appear to be an historical resource for purposes of the California Environmental Quality Act (CEQA). The property does not retain its overall integrity and does not meet any of the significance criteria necessary for eligibility for listing in either the NRHP or CRHR or local register. The property has been evaluated in accordance with Section 15064.5(a)(2)-(3) of the CEQA Guidelines, using the criteria outlined in Section 5024.1 of the California Public Resources Code.

Trinomial _____
NRHP Status Code 6Z

Page 3 **of** 6 ***Resource Name or #** (Assigned by recorder) Faust Café
Recorded by: Mackall, E. and M. Wilson ***Date:** February 2023 ☒ Continuation ☐ Update

***P3a. Description (continued):**

The building faces west and the façade includes stucco clad CMU block and zig zag geometric banding along the cornice. Fenestration includes a recessed single-entry door flanked to the north by a fixed picture window; both the single-entry door and window are covered by a mansard awning. A neon blade sign is located above the window and reads, "Power House Cocktails." The fenestration details are covered by metal mansard awnings with scalloped details. The north and south elevations are connected to the adjacent buildings. The rear (east) elevation is not visible to the public right-of-way.

***B10. Significance (continued):**

The building was constructed between 1920 and 1923 and originally operated as a café and/or restaurant. In 1925, the building first appeared in classified newspaper ads as a rentable space. The ad indicated that the building included a horseshoe bar and sat up to 30 people (*The Los Angeles Times* 1925a). That same year, *The Los Angeles Times* published a classified ad that indicated the restaurant sought an experienced employee for $21 per week (*The Los Angeles Times* 1925b). By 1935, newspaper research indicates the building operated as the Faust Café, a restaurant that specialized in fish dinners (*Los Angeles Evening Post-Record* 1935). By 1953, the building reopened as the Minkins Café (*Los Angeles Evening Citizen News* 1953). By 1988, the building operated as Powerhouse (*LA Weekly* 1988). The Powerhouse bar continues to operate in the southern portion of the building.

Evaluation

Under NRHP Criterion A or CRHR Criterion 1, this building has no significant association with important historic events. The building on this parcel, constructed between 1920 and 1923, is associated with commercial development; however, many businesses occupied this building, and research did not reveal that the building played a distinct or important role in their respective industries. Therefore, the Faust Café is not eligible for the NRHP or CRHR under Criterion A/1.

Under NRHP Criterion B or CRHR Criterion 2, this building is not significant for any associations with the lives of persons important to history. Research did not indicate that any individuals, such as business-owners related to the development and use of this building made demonstrably important contributions to history at the local, state, or national level. Therefore, the building is not eligible for the NRHP or CRHR under Criterion B/2.

Under NRHP Criterion C or CRHR Criterion 3, this building is significant because it is an important example of a type, period, or method of construction. The one-part commercial block and Art Deco style proliferated on main streets and commercial rows throughout the nation during the early twentieth century. The commercial building at 1714 N. Highland Avenue is an excellent and remarkable example reflecting the local twentieth century trends of this style. The building on this parcel retains its overall integrity to demonstrate its distinctive design that merits listing on the NRHP and CRHR. There is no master architect or builder associated with this building; therefore, it is not significant as the work of a master. The building does meet eligibility for listing in the NRHP and CRHR under Criterion C/3 at the local level.

Under NRHP Criterion D or CRHR Criterion 4, this building is not significant as a source (or likely source) of important information regarding history. It does not appear to have any likelihood of yielding important information about historic construction materials or technologies. Therefore, the building is not eligible for the NRHP or CRHR under Criterion D.

The building includes alterations to its façade between 2007 and 2014. Therefore, it lacks integrity of design, materials, and workmanship. The building does retain its integrity of location, setting, feeling, and association. However, it does not retain sufficient integrity to convey its historical significance under Criterion C/3 of the NRHP and CRHR. Therefore, the building does not meet eligibility for listing in the NRHP or CRHR.

The Hollywood Draperies building, constructed between 1909 and 1917, is a two-part commercial block building with a rectangular plan on a concrete foundation. The building is composed of a flat roof with stepped parapets clad in a modern PVC membrane system. A commercial billboard is located on the roof. The exterior walls are constructed of concrete clad in stucco; however, the façade is sheathed in vertical wood boards. Fenestration details include fixed storefront units. The building faces west and the façade includes a recessed modern storefront entrance that features glazed fixed windows and a single-entry door behind a security gate. The storefront entrance is flanked to the north by a CMU block wall. Commercial signage is located on the façade and reads, "Le Oriental Bistro." The north elevation is connected to the neighboring building, the south elevation features three fixed windows, and the rear (east) elevation is not visible to the public right-of-way.

Page 3 **of** 6 ***Resource Name or #** (Assigned by recorder) Hollywood Draperies
Recorded by: Mackall, E. and M. Wilson ***Date:** February 2023 ☒ Continuation ☐ Update

***B10. Significance (continued):**

Research did not reveal the historical operations of the building at the time of its construction between 1909 and 1917. The building does not appear in newspapers until 1935, when a classified newspaper ad was published for Hollywood Draperies at the location (*Los Angeles Evening Citizen News* 1935). By 1949, the building operated as a meeting space. For example, the Hollywood Democratic Club used the space for political speakers (*Los Angeles Evening Citizen News* 1949). In 1955, a classified ad for a waitress at this location was published. However, the ad did not indicate the name of the restaurant (*Los Angeles Evening Citizen News* 1955). By 1965, the building operated as an Asian restaurant that served Mandarin style cooking (*The Los Angeles Times* 1965). By 2007, the building housed its current occupant, Le Oriental Bistro (Google Maps N.d.).

Evaluation

Under NRHP Criterion A or CRHR Criterion 1, this building has no significant association with important historic events. The building on this parcel, constructed between 1909 and 1917, is associated with commercial development; however, many businesses occupied this building, and research did not reveal that the building played a distinct or important role in their respective industries. Therefore, the building is not eligible for the NRHP or CRHR under Criterion A/1.

Under NRHP Criterion B or CRHR Criterion 2, this building is not significant for any associations with the lives of persons important to history. Research did not indicate that any individuals, such as business owners, related to the development and use of this building, made demonstrably important contributions to history at the local, state, or national level. Therefore, the building is not eligible for listing in the NRHP or CRHR under Criterion B/2.

Under NRHP Criterion C or CRHR Criterion 3, this building is not significant because it is not an important example of a type, period, or method of construction. The two-part commercial block style building proliferated on main streets and commercial rows throughout the nation during the late nineteenth and early twentieth centuries. The commercial building at 1710 N. Highland Avenue is a typical and unremarkable, late example reflecting the twentieth century trends of this style. The building on this parcel also includes major alterations to the façade, which include modern cladding material, as well partial infill of façade openings with CMU block. There is no master architect or builder associated with this building; therefore, it is not significant as the work of a master. Therefore, the building does not meet eligibility for the NRHP or CRHR under Criterion C/3.

Under NRHP Criterion D or CRHR Criterion 4, this building is not significant as a source (or likely source) of important information regarding history. It does not appear to have any likelihood of yielding important information about historic construction materials or technologies. Therefore, the building is not eligible for the NRHP or CRHR under Criterion D/4.

In summary, the building does not meet any of the eligibility criteria of the NRHP or CRHR. Therefore, it does not meet eligibility for listing in the NRHP or the CRHR at the national, state, or local level.

***P3a. Description (continued):**

The building faces east and the façade is characterized by a porch entry supported by square columns and dentils along the top; an air vent is located within the gable of the porch entry. The partial porch entry includes a wood paneled single-entry door. The entry is flanked by a multi-light, horizontal sliding sash window on the north and a modern three-part bay window with a multi-light muntin grid in the center and original wood-framed one-over-one double-hung sash windows on either side on the south side. The south elevation includes a one-over-one window in the gabled roof dormer. The ground level includes modern vinyl framed fenestration details. From east to west, this includes a framed picture window with a multi-light sash window and two one-over-one sash windows; a bay window with a multi-light sash window and two one-over-one sash windows; a pair of one-over-one sash windows; a single one-over-one sash window; and a pair of horizontal sliding sash windows. The north and rear (west) elevations are not visible to the public right-of-way. Additional details include a brick veneer supported fence and gate that provides access into the front yard of the Craftsman residence.

***B10. Significance (continued):**

The Craftsman residence, also called a Craftsman Bungalow, at 1547 N. McCadden Place, was constructed in 1907; fenestration details were likely replaced and altered in 1992 or 1993. The Craftsman Bungalow, widely popular between 1905 and 1930, is typically one to one-and-a-half stories tall and characterized by a low-pitched, gable roof (sometimes hipped) with oversized eaves, exposed roof rafters, full or partial-width porches supported by tapered square columns or battered columns, and windows placed in groups or bands. The walls are usually clad with clapboard, shingle, stone, brick, and clinker brick. Early examples exhibit characteristics of the transitional Arts and Crafts style (McAlester and McAlester 1984:453; City of Los Angeles 2003:25).

Evaluation

Under NRHP Criterion A or CRHR Criterion 1, this building has no significant association with important historic events. The building on this parcel, constructed in 1907, is associated with residential development in Los Angeles; however, many residents occupied this building, but research did not reveal that the building played a distinct or important role in the neighborhood. Therefore, the building does meet eligibility for the NRHP or CRHR under Criterion A/1.

Under NRHP Criterion B or CRHR Criterion 2, this building is not significant for any associations with the lives of persons important to history. Research did not indicate that any individuals, such as residents, related to the development and use of this building made demonstrably important contributions to history at the local, state, or national level. Therefore, the building does meet eligibility for the NRHP or CRHR under Criterion B/2.

Under NRHP Criterion C or CRHR Criterion 3, this building is not significant because it is not an important example of a type, period, or method of construction. The Craftsman style building was common on residential tracts throughout the nation during the early twentieth century. The Craftsman building at 1547 N. McCaddden Place is a typical example reflecting the twentieth century trends of this style. The building on this parcel also lacks the high artistic value that would merit listing on the NRHP and CRHR. There is no master architect or builder associated with this building; therefore, it is not significant as the work of a master. The building also features extensive modern alterations that include updated fenestration details and roof cladding. Therefore, the building does meet eligibility for the NRHP or CRHR under Criterion C/3.

Under NRHP Criterion D or CRHR Criterion 4, this building is not significant as a source (or likely source) of important information regarding history. It does not appear to have any likelihood of yielding important information about historic construction materials or technologies. Therefore, the building does meet eligibility for the NRHP or CRHR under Criterion D/4.

In summary, Craftsman residence at 1547 N. McCadden Place does not meet any of the significance criteria for listing in the NRHP or CRHR. Therefore, the building is not eligible for listing in the NRHP and CRHR.

The building located at 1133 N. Detroit Street is a two-story, multi-family Stucco Box/ Dingbat building constructed in 1962. The building features a rectangular plan on a concrete foundation. The building is composed of a flat roof with wide, overhanging eaves that covers its east facing façade and south elevation. There are covered balconies at the northwest and northeast corners. The building is constructed of concrete clad in stucco; however, the façade includes a portion along its foundation that features a brick veneer that may be modern infill. Fenestration details include sliding sash windows.

The building at 1133 N. Detroit Street appears to meet the criteria for listing in the National Register of Historic Places (NRHP), the California Register of Historical Resources (CRHR), and appears to be an historical resource for purposes of the California Environmental Quality Act (CEQA). The building generally retains integrity to its original construction and meets Criterion C of the NRHP and Criterion 3 of the CRHR at the local level. The building has been evaluated in accordance with Section 15064.5(a)(2)-(3) of the CEQA Guidelines, using the criteria outlined in Section 5024.1 of the California Public Resources Code. The boundary for the historic property/historical resource is its legal parcel.

Page 3 **of** 6 ***Resource Name or #** (Assigned by recorder) 1133 N. Detroit Street
Recorded by: Mackall, E. and M. Wilson ***Date:** February 2023 ☒ Continuation ☐ Update

***P3a. Description (continued):**

The building faces east and the façade is characterized by several character-defining features indicative of Stucco Box/ Dingbat designs. Features include a metal mesh screen with circular designs at the south end of the east façade, as well as the north end that covers two outdoor balconies; slight vertical projections in bas-relief also accent the northern half of the façade. Fenestration includes a garage entrance with a metal gate that provides access to residence parking beneath the building.

The north elevation features two outdoor balconies on the first and second levels at the east and west ends of the elevation. Each balcony is enclosed with metal safety railings and features sliding glass doors. The balconies are flanked to the west by recessed openings that provide access to stairs, as well as additional horizontal sliding sash windows and exterior HVAC units. The south elevation includes rows of horizontal sliding sash windows on the second and first levels. The rear, west, elevation is not visible to the public right-of-way.

***B10. Significance (continued):**

The subject building, constructed in 1962 at 1133 N. Detroit Street, features a Stucco Box/ Dingbat architectural design. The Stucco Box design, often nicknamed the Dingbat, became a popular California architectural style between the 1950s and 1960s. The Stucco Box, a multi-family residential building type, first manifested in the Los Angeles area in response to World War II and the increase of returning veterans. These low-cost apartment buildings are characterized by rectangular plans that occupy full residential lots with little to no useable outdoor space; flat surfaces; flush-mounted metal-framed windows; stucco wall cladding; exterior staircases and corridors; lower story parking recessed into one or more side of the building; Dingbat address number and/or signage; and exaggerated façade details like light fixtures, starburst, and decorative patterns in the stucco (HRG 2018).

Evaluation

Under NRHP Criterion A or CRHR Criterion 1, this building has no significant association with important historic events. The building on this parcel, constructed in 1962, is associated with the residential development of Los Angeles; however, many residents occupied this building, and research did not reveal that the building played a distinct or important role in the residential development of Los Angeles itself. Therefore, the building does not meet eligibility for the NRHP or CRHR under Criterion A/1.

Under NRHP Criterion B or CRHR Criterion 2, this building is not significant for any associations with the lives of persons important to history. Research did not indicate that any individuals, such as residents related to the development and use of this building made demonstrably important contributions to history at the local, state, or national level. Therefore, the building does not meet eligibility for the NRHP or CRHR under Criterion B/2.

Under NRHP Criterion C or CRHR Criterion 3, this building is significant because it is an important example of a type, period, or method of construction: Stucco Box/ Dingbat. The Stucco Box/ Dingbat-style building proliferated on residential and urban corridors throughout the nation during the mid-twentieth century. The Stucco Box/ Dingbat at 1133 N. Detroit Street is a rare, remarkable, and excellent example reflecting the twentieth-century trends of this style because it demonstrates character-defining features like flat surfaces with stucco cladding, an exaggerated façade with decorative patterns in the stucco, and resident parking located beneath the apartment units. The building on this parcel retains the distinctive design that would merit listing on the NRHP and CRHR. There is no master architect or builder associated with this building; therefore, it is not significant as the work of a master. The lower parking lot may have been enclosed to create a secure parking space; however, research and building records did not indicate when this alteration may have occurred. Overall, the building retains sufficient integrity to convey its significance and is, therefore, eligible for the NRHP and CRHR under Criterion C/3 at the local level.

Under NRHP Criterion D or CRHR Criterion 4, this building is not significant as a source (or likely source) of important information regarding history. It does not appear to have any likelihood of yielding important information about historic construction materials or technologies. Therefore, the building is not eligible for the NRHP or CRHR under Criterion

D/4.

The building appears to retain its integrity of location, setting, design, materials, workmanship, feeling, and association because it does not appear to have been altered since the date of construction. Therefore, because it meets one of the significance criteria necessary for eligibility for listing in the NRHP or CRHR and retains sufficient integrity to convey that significance, the building appears to be eligible for listing in the NRHP and CRHR under Criterion C/3 as a type, period, and method of construction related to Stucco Box/ Dingbat architecture.

The building located at 1129 N. Orange Grove Avenue, constructed between 1964 and 1972, is a double-height industrial building with an L-shaped plan that opens to the northeast; the building sits on a concrete foundation. The building is composed of a flat roof clad in built-up material and solar panels. The exterior walls are constructed of concrete and clad in a brick veneer. Fenestration details include fixed storefront windows, automatic doors, and roll-up industrial doors. The building faces south and the façade is characterized by a steel-frame awning that covers the storefront system. The awning includes commercial signage that reads, "Whole Foods Market." The storefront system features ribbon fixed windows and transoms, as well as automatic sliding double-entry doors. The west elevation does not include any fenestration and/or architectural detail. The rear (north) elevation features a loading dock and roll-up industrial doors. The east elevation is not visible to the public right-of-way.

Page 3 **of** 5 ***Resource Name or** # (Assigned by recorder) 1129 N. Orange Grove Ave
Recorded by: Mackall, E. and M. Wilson ***Date:** February 2023 ☒ Continuation ☐ Update

***B10. Significance (continued):**

Research did not reveal significant information about the industrial building located at 1129 N. Orange Grove Avenue in West Hollywood. According to historical aerials, the building was constructed in 1965 and likely operated as a warehouse or grocery store in its associated shopping mall. Since 2007, the building has been continuously operating as a Whole Foods Market.

Evaluation

Under NRHP Criterion A or CRHR Criterion 1, this building has no significant association with important historic events. The building on this parcel, constructed between 1964 and 1972, is associated with commercial development; however, many businesses likely occupied this building, but research did not reveal that the building played a distinct or important role in their respective industries. Therefore, the building is not eligible for the NRHP or CRHR under Criterion A/1.

Under NRHP Criterion B or CRHR Criterion 2, this building is not significant for any associations with the lives of persons important to history. Research did not indicate that any individuals, such as business owners, related to the development and use of this building made demonstrably important contributions to history at the local, state, or national level. Therefore, the building is not eligible for the NRHP or CRHR under Criterion B/2.

Under NRHP Criterion C or CRHR Criterion 3, this building is not significant because it is not an important example of a type, period, or method of construction. The industrial style building is ubiquitous on main streets and commercial rows throughout the nation during the early to mid-twentieth century. The industrial building at 1129 N. Orange Grove Avenue is a typical and unremarkable example reflecting the late-twentieth-century trends. The building on this parcel also lacks the high artistic value and distinctive design that would merit listing on the NRHP and CRHR. There is no master architect or builder associated with this building; therefore, it is not significant as the work of a master. Therefore, the building is not eligible for the NRHP or CRHR under Criterion C/3.

Under NRHP Criterion D or CRHR Criterion 4, this building is not significant as a source (or likely source) of important information regarding history. It does not appear to have any likelihood of yielding important information about historic construction materials or technologies. Therefore, the building is not eligible for the NRHP or CRHR under Criterion D/4.

In summary, the building does not meet any of the eligibility criteria of the NRHP or CRHR. Therefore, it does not meet eligibility for listing in the NRHP or the CRHR at the national, state, or local level.

***P3a. Description (continued):**

The building faces east, and the façade is characterized by a stepped façade with a rounded corner at the north end. The primary entry is covered by the eaves of the flat roof, and the south elevation wall extends outwards towards N. Fairfax Avenue. The entry includes an aluminum framed, glazed single-entry door with a sidelight and transom. A ribbon of eleven fixed windows flank the single-entry door to the south; the windows are covered by metal security grilles. A historic period wall sign is located above the fenestration details that read, "UNITED STATES POST OFFICE." Two ribbons of four fixed windows with security grilles are located at the north end of the façade. The north elevation features a ribbon of three fixed windows with security grilles and a pair of fixed windows with security grilles. The south elevation is connected to the adjacent building and does not include any additional fenestration and/or architectural detail visible to the public right-of-way. The rear (west) elevation is characterized by a loading dock that includes double-entry doors and fixed windows covered by security grilles. A metal-framed awning covers sheathed in sheet metal covers the loading dock.

***B10. Significance (continued):**

The United States Post Office building was constructed in 1947 as an extension of the Cole Branch historically located at 7818 Santa Monica Boulevard. Between 1937 and 1947, postal receipts increased from $80,000 annually to $300,000. Carriers also increased from 25 to 65, in addition from 5 clerks to 10 clerks. As a result, the subject building was constructed to mitigate the increased staff and postal sales (*The Los Angeles Times* 1947). In 1957, the United States Post Office building enlarged its northern elevation, an increase from 5,746 square-feet to 8,148 square-feet (*Los Angeles Evening Citizen News* 1957). The building continues to operate as the United States Post Office at the time of this evaluation.

Evaluation

Under NRHP Criterion A or CRHR Criterion 1, this building does demonstrate significant associations with the population growth and development of the Los Angeles area during the post-war period in 1947. The building on this parcel, constructed in 1947, is associated with the development of the United States Post Office, as well as the population boom that resulted from the end of World War II. Research indicated that the subject post office was constructed as an extension of the Cole Branch, historically located at 7818 Santa Monica Boulevard. The USPS post office at 1125 N. Fairfax Avenue was constructed to mitigate the increased local population. In 1957, the USPS post office was expanded at its north elevation to further service the surrounding community. Therefore, the building is an important example of USPS history and developmental trends in Los Angeles. Therefore, it meets eligibility for inclusion in the NRHP and CRHR under Criterion A/1.

Under NRHP Criterion B or CRHR Criterion 2, this building is not significant for any associations with the lives of persons important to history. Research did not indicate that any individuals, such as post office employees, related to the development and use of this building made demonstrably important contributions to history at the local, state, or national level. Therefore, the building is not eligible for the NRHP or CRHR under Criterion B/2.

Under NRHP Criterion C or CRHR Criterion 3, this building is an important example of a type, period, and method of construction. The Streamline Moderne style building proliferated on main streets and commercial rows throughout the nation during the early to mid-twentieth century. The government building at 1125 N. Fairfax Avenue is an excellent and remarkable example reflecting the twentieth trends of this style. The building on this parcel also includes the distinctive elements indicative of Streamline Modern architecture. These include rounded corners, a stepped façade, ribbons of fixed windows, and stacked and stretched bonding of the red brick veneer. While there is no master architect or builder associated with this building, the building does retain its overall integrity. Therefore, the building is eligible for the NRHP or CRHR under Criterion C/3.

Under NRHP Criterion D or CRHR Criterion 4, this building is not significant as a source (or likely source) of important information regarding history. It does not appear to have any likelihood of yielding important information about historic construction materials or technologies. Therefore, the building is not eligible for the NRHP or CRHR under Criterion

D/4.

The building appears to retain its integrity of location, setting, design, materials, workmanship, feeling, and association because it does not appear to have been altered since the date of construction. Therefore, because it meets one of the significance criteria necessary for eligibility for listing in the NRHP or CRHR and retains sufficient integrity to convey that significance, the building appears to be eligible for listing in the NRHP and CRHR at the local level.

***P3a. Description (continued):**

The building features eight retail spaces; four at the east elevation and four at the north elevation. The primary façade is located on the east elevation, along S. La Brea Avenue. The façade includes seven bays with four retail storefronts that extend from south to north. The southmost storefront includes a vinyl awning that covers a single-entry door flanked on each side by a red brick veneer and fixed storefront windows. The storefront is flanked to the north by two additional storefronts. One storefront includes a boxed awning that reads, "ROJII BAKERY." The awning covers a glazed single-entry door flanked on each side by multi-light fixed windows; the awning also covers an outdoor dining space. The other storefront includes a glazed double-entry door and a transom flanked on each side by fixed storefront windows behind a sliding security gate. The northmost storefront includes a wood paneled single-entry door with a rounded transom flanked by ornate tile; the door is covered by a rounded vinyl awning and flanked to the north and south by fixed storefront windows behind security grilles. A blade sign is located at the northeast corner that reads, "Met Him At A Bar; PASTA."

The north elevation, located along W. 8th Street, includes four additional storefronts. There are two retail spaces at the west. Each retail space is two bays across with a single-entry door with a transom flanked by a fixed storefront window; each storefront has a modern security gate. The easternmost storefront includes a single-entry door with a pivot transom flanked to the east by fixed storefront windows; a blade sign is located along the roofline that reads, "FLOWERS." The eastmost point of the elevation includes a single-entry door and transom flanked by fixed windows. A ribbon of three fixed windows covered by a vinyl awning is located near the corner of W. 8th Street and S. La Brea Avenue. Additional details include exterior light fixtures.

The south elevation is bounded by a gated parking lot and does not include any fenestration and/or architectural detail. The west elevation is not visible to the public right-of-way.

***B10. Significance (continued):**

Research did not reveal significant commercial information about the building at 801 S. La Brea Avenue. The building demonstrates a commercial architectural design that likely operated as several commercial businesses throughout its history.

Evaluation

Under NRHP Criterion A or CRHR Criterion 1, this building has no significant association with important historic events. The building on this parcel, constructed in 1924, is associated with commercial development in Los Angeles; however, many businesses likely occupied this building, but research did not reveal that the building played a distinct or important role in their respective industries. Therefore, the building does not meet eligibility for the NRHP or CRHR under Criterion A/1.

Under NRHP Criterion B or CRHR Criterion 2, this building is not significant for any associations with the lives of persons important to history. Research did not indicate that any individuals, such as business owners, related to the development and use of this building made demonstrably important contributions to history at the local, state, or national level. Therefore, the building does not meet eligibility for the NRHP or CRHR under Criterion B/2.

Under NRHP Criterion C or CRHR Criterion 3, this building is not significant because it is not an important example of a type, period, or method of construction. The One-Part Commercial Block and Art Deco style building proliferated on main streets and commercial rows throughout California, and the nation, during the early to mid-twentieth century. The commercial building at 801 S. La Brea Avenue is a typical example reflecting the twentieth century trends of this style. The building lacks the high artistic value and distinctive design that would merit listing on the NRHP or CRHR. There is no master architect or builder associated with this building; therefore, it is not significant as the work of a master. Therefore, the building does not meet eligibility for the NRHP or CRHR under Criterion C/3.

Under NRHP Criterion D or CRHR Criterion 4, this building is not significant as a source (or likely source) of important

***P3a. Description (continued):**

The building faces east and the façade is characterized by a central two-story, recessed primary entrance with fluted, concrete piers and geometric floral designs partitioned by floral grilles. A slight awning with metal flashing covers the anodized metal-framed, glazed double-entry door. The primary entrance is flanked on each side by additional modern storefront systems that both include an awning with metal flashing. The north storefront entrance includes a ribbon of three fixed windows on the second level and a glazed single-entry door with a transom, sidelight, and fixed display window on the ground level. An additional glazed double-entry door with a transom is located at the north end. The south storefront includes a ribbon of five fixed windows and a pair of fixed windows on the second level and a glazed double-entry door with a transom and sidelights flanked on each side by fixed display windows on the ground level. An additional glazed single-entry door with a transom and sidelight is located at the south end. The north and south elevations do not include any additional fenestration and/or architectural details. The rear (west) elevation is not visible to the public right-of-way.

***B10. Significance (continued):**

Research did not reveal any businesses that historically operated inside 735 S. La Brea Avenue. Most of the building is currently vacant, with exception of the I Love Lulu Hair Spa at the northernmost storefront.

The building demonstrates a Two-Part Commercial Block and Streamline Modern style of architecture.

The Two-Part Commercial Block style, popular between circa 1850s and 1950s, was usually used for small and moderate-sized commercial buildings, generally limited to structures of two to four stories, and included a horizontal division into two distinct zones which reflects the differences of use inside (lower zones are street level and contain public spaces such as stores and upper zones suggest more private spaces for apartments and offices) (Longstreth 2000:24-53).

Streamline Moderne (or Art Moderne), popular from 1920 to the commencement of World War II, is characterized by smooth stucco wall surface; rounded corners, parapets, and windows; emphasis on the horizontal through the use of banded surfaces and banded windows; curved projecting wings; glass brick; round windows (ship portholes); steel (ship) railing and door and window trim; and an asymmetrical façade (McAlester and McAlester 1984:465; Blumenson 1981:79).

Evaluation

Under NRHP Criterion A or CRHR Criterion 1, this building has no significant association with important historic events. The building on this parcel, constructed in 1932, is associated with commercial development in Los Angeles; however, many businesses likely occupied this building, but research did not reveal that the building played a distinct or important role in their respective industries. Therefore, the building does not meet eligibility for the NRHP or CRHR under Criterion A/1.

Under NRHP Criterion B or CRHR Criterion 2, this building is not significant for any associations with the lives of persons important to history. Research did not indicate that any individuals, such as business owners, related to the development and use of this building made demonstrably important contributions to history at the local, state, or national level. Therefore, the building does not meet eligibility for the NRHP or CRHR under Criterion B/2.

Under NRHP Criterion C or CRHR Criterion 3, this building is not significant because it is not an important example of a type, period, or method of construction. The Two-Part Commercial Block and Streamline Moderne style building proliferated on main streets and commercial rows throughout California, and the nation, during the early to mid-twentieth century. The commercial building at 735 S. La Brea Avenue is a typical example reflecting the twentieth century trends of this style. The building lacks the high artistic value and distinctive design that would merit listing on the NRHP or CRHR. There is no master architect or builder associated with this building; therefore, it is not significant as the work of a master. Lastly, the building does not retain its overall integrity due to the 1999 remodel on the façade.

Period of Significance n/a **Property** Commercial Building
Applicable Criteria n/a

The property at 625 S. Fairfax Avenue does not appear to meet the criteria for listing in the National Register of Historic Places (NRHP) or the California Register of Historical Resources (CRHR), nor does it appear to be an historical resource for purposes of the California Environmental Quality Act (CEQA). The property does not retain its overall integrity and it does not meet any of the significance criteria necessary for eligibility for listing in either the NRHP or CRHR or local register. The property has been evaluated in accordance with Section 15064.5(a)(2)-(3) of the CEQA Guidelines, using the criteria outlined in Section 5024.1 of the California Public Resources Code.

Page 3 **of** 6 ***Resource Name or #** (Assigned by recorder) The Viking Horn
Recorded by: Mackall, E. and M. Wilson ***Date:** February 2023 ☒ Continuation ☐ Update

***P3a. Description (continued):**

The building faces south and the façade includes an off centered, recessed storefront entrance at the eastern end. The storefront entrance features a glazed single-entry door with sidelights and a transom. The entrance is flanked to the east by a commercial wall sign that reads, "HANASAB Insurance Services," and to the west by two fixed windows with asymmetrical windowpanes. The west elevation includes two single-entry doors and exterior air vents and HVAC units, as well as a fixed one-over-one window with asymmetrical panes. The east elevation features a recessed, fixed storefront window with asymmetrical windowpanes. The rear (north) elevation is connected to the adjacent building.

***B10. Significance (continued):**

The building at 625 S. Fairfax Avenue, constructed in 1930, included several commercial restaurants during the second half of the twentieth century; however, research did not reveal information prior to the 1960s. In 1969, the building operated as the Viking Horn, a restaurant that served Scandinavian inspired food (*The Los Angeles Times* 1969). In 1987, the building operated as the Peking Panda, a Szechwan and Mandarin restaurant (*LA Weekly* 1987). In 1993, the building operated as the Royal Continental (*LA Weekly* 1993). In 2003, the building operated as Monte Carlo Restaurant (*The Los Angeles Times* 2003). Sometime between 2003 and 2007, the building opened as Pica + Sullivan Architects LTD (Google Maps 2007). By 2014, the building opened as its current occupants, Hanasab Insurance Services.

Evaluation

Under NRHP Criterion A or CRHR Criterion 1, this building has no significant association with important historic events. The building on this parcel, constructed in 1939, is associated with commercial development of Los Angeles; however, many businesses occupied this building, and none played a distinct or important role in their respective industries. Therefore, the building is not eligible for listing in the NRHP or CRHR under Criterion A/1.

Under NRHP Criterion B or CRHR Criterion 2, this building is not significant for any associations with the lives of persons important to history. Research did not indicate that any individuals, such as business owners, related to the development and use of this building made demonstrably important contributions to history at the local, state, or national level. Therefore, the building is not eligible for listing in the NRHP or CRHR under Criterion B/2.

Under NRHP Criterion C or CRHR Criterion 3, this building is not significant because it is not an important example of a type, period, or method of construction. The One-Part Commercial Block style building was prolific on main streets and commercial rows throughout the nation during the early to mid-twentieth century. The One-Part Commercial Block building at 625 S. Fairfax Avenue is a typical and unremarkable example reflecting the twentieth century trends of this style. The building on this parcel also lacks the high artistic value and distinctive design that would merit listing on the NRHP and CRHR. There is no master architect or builder associated with this building; therefore, it is not significant as the work of a master. Therefore, the building is not eligible for listing in the NRHP or CRHR under Criterion C/3.

Under NRHP Criterion D or CRHR Criterion 4, this building is not significant as a source (or likely source) of important information regarding history. It does not appear to have any likelihood of yielding important information about historic construction materials or technologies. Therefore, the building is not eligible for listing in the NRHP or CRHR under Criterion D/4.

In summary, the building does not meet any of the significance criteria for listing in the NRHP or CRHR. Therefore, the building is not recommended eligible for listing in the NRHP or CRHR.

611 S. La Brea Avenue, constructed in 1929, is a single-story, Art Deco commercial building with a rectangular plan on a concrete foundation. The building is composed of an arched roof blocked from view by parapets. The exterior walls are constructed of concrete brick clad in stucco; the façade is clad in smooth stucco. Fenestration details include modern, fixed, storefront windows. The building faces east and the façade is characterized by a belt course accented with a centrally placed ornamental floral and geometric designs in bas-relief; the ornamental designs demonstrate Moorish influence. The façade also includes a large central Moorish arch flanked on each side by two smaller Moorish arches; each arch is infilled with a fixed plate of glass used to showcase interior product. The north elevation does not include any fenestration and/or architectural detail. The building is entered through the south elevation, which includes an ADA ramp and single-entry door. Additional details include painted commercial wall signs that read, "DESIGN – MIX – GALLERY," as well as additional details about the business. The rear (west) elevation is not visible to the public right-of-way.

Page 3 **of** 5 ***Resource Name or #** (Assigned by recorder) 611 S. La Brea Avenue
Recorded by: Mackall, E. and M. Wilson ***Date:** February 2023 ☒ Continuation ☐ Update

***B10. Significance (continued):**

Between 1935 and 1973, newspaper research indicates that the building likely operated as various car dealerships and mechanic shops. Additional evidence includes the interior double-height volume with a mezzanine. However, it is unclear what dealerships and shops occupied the building. By 2007, the building operated as Diamond, a foam and fabric shop. In 2020, the building opened with the current occupant, Mix, a home design and gallery shop (Google Maps N.d.).

Evaluation

Under NRHP Criterion A or CRHR Criterion 1, this building has no significant association with important historic events. The building on this parcel, constructed in 1929, is associated with commercial and automobile development in the Los Angeles area, as well as the rise in personal transportation ownership located along South La Brea Avenue; however, many businesses likely occupied this building, but research did not reveal that the building played a distinct or important role in their respective industries. Therefore, the building is not eligible for the NRHP or CRHR under Criterion A/1.

Under NRHP Criterion B or CRHR Criterion 2, this building is not significant for any associations with the lives of persons important to history. Research did not indicate that any individuals, such as business owners related to the development and use of this building made demonstrably important contributions to history at the local, state, or national level. Therefore, the building is not eligible for the NRHP or CRHR under Criterion B/2.

Under NRHP Criterion C or CRHR Criterion 3, this building is not a significant and important example of a type, period, and method of construction. The Art Deco style building was prolific on main streets and commercial rows throughout the nation during the early twentieth century. The commercial building at 611 S. La Brea Avenue is not a remarkable or excellent example reflecting the twentieth century trends of this style. The building does not feature high artistic value or distinctive design that would merit listing on the NRHP and CRHR. The building has undergone significant exterior alterations. This includes various exterior wall signs in 1969, 1989, and 1991; also, between 2019 and 2020, the storefront system was replaced and altered with fixed windows. The alterations compromised the overall fenestration patterns and integrity of materials and design. There is no master architect or builder associated with this building; therefore, it is not significant as the work of a master. Therefore, the building does not meet eligibility for the NRHP or CRHR under Criterion C/3.

Under NRHP Criterion D or CRHR Criterion 4, this building is not significant as a source (or likely source) of important information regarding history. It does not appear to have any likelihood of yielding important information about historic construction materials or technologies. Therefore, the building is not eligible for the NRHP or CRHR under Criterion D/4.

In summary, the building does not meet any of the eligibility criteria of the NRHP or CRHR. Therefore, it does not meet eligibility for listing in the NRHP or the CRHR at the national, state, or local level.

Recorded by: Mackall, E. and M. Wilson ***Date:** February 2023 ☒ Continuation ☐ Update

***P3a. Description (continued):**

The building faces east and the façade includes a boarded storefront system behind a city fence. The remnants of a commercial wall sign read, "The House of A…" A blade sign extends above the roof line that reads, "YARDAGE; COTTON; WOOLENS; SILKS." The south elevation does not include additional fenestration and/or architectural details. The north elevation is connected to the adjacent building. The rear (west) elevation includes additional fenestration details recessed behind security grilles.

***B10. Significance (continued):**

The building at 611 S. Fairfax Avenue historically operated as the House of a Thousand Fabrics. A 1976 article indicates they sold suede clothes, drapery, upholstery, and a self-service needlepoint department and pattern and notions department (*The Los Angeles Times* 1976). The House of Thousand Fabrics operated through the 1970s and 1980s. However, by 2001, the building housed a silent movie theater (*The Los Angeles Times* 2001). By 2007, the movie theater closed. The building has remained vacant since circa 2007 (Google Mapes 2007).

Evaluation

Under NRHP Criterion A or CRHR Criterion 1, this building has no significant association with important historic events. The building on this parcel, constructed in 1930, is associated with commercial development of Los Angeles; however, the House of a Thousand Fabrics and the movie theater play a distinct or important role in their respective industries. Therefore, the building is not eligible for listing in the NRHP or CRHR under Criterion A/1.

Under NRHP Criterion B or CRHR Criterion 2, this building is not significant for any associations with the lives of persons important to history. Research did not indicate that any individuals, such as business owners, related to the development and use of this building made demonstrably important contributions to history at the local, state, or national level. Therefore, the building is not eligible for listing in the NRHP or CRHR under Criterion B/2.

Under NRHP Criterion C or CRHR Criterion 3, this building is not significant because it is not an important example of a type, period, or method of construction. The One-Part Commercial Block style building proliferated on main streets and commercial rows throughout the nation during the early to mid-twentieth century. The One-Part Commercial Block building at 611 S. Fairfax Avenue is a typical and unremarkable example reflecting the twentieth century trends of this style. The building on this parcel also lacks the distinctive design that would merit listing on the NRHP and CRHR. There is no master architect or builder associated with this building; therefore, it is not significant as the work of a master. Therefore, the building is not eligible for listing in the NRHP or CRHR under Criterion C/3.

Under NRHP Criterion D or CRHR Criterion 4, this building is not significant as a source (or likely source) of important information regarding history. It does not appear to have any likelihood of yielding important information about historic construction materials or technologies. Therefore, the building is not eligible for listing in the NRHP or CRHR under Criterion D/4.

In summary, the building does not meet any of the significance criteria for listing in the NRHP or CRHR. Therefore, the building is not recommended eligible for listing in the NRHP or CRHR.

The property at 585 S. Fairfax Avenue does not appear to meet the criteria for listing in the National Register of Historic Places (NRHP) or the California Register of Historical Resources (CRHR), nor does it appear to be an historical resource for purposes of the California Environmental Quality Act (CEQA). The property retains its overall integrity however, it does not meet any of the significance criteria necessary for eligibility for listing in either the NRHP or CRHR or local register. The property has been evaluated in accordance with Section 15064.5(a)(2)-(3) of the CEQA Guidelines, using the criteria outlined in Section 5024.1 of the California Public Resources Code.

***P3a. Description (continued):**

The building faces east and the façade is characterized by a stepped storefront system with rounded corners. Each storefront is located at the north, central, and south portions of the façade; a modern concrete ADA ramp provides access to each storefront system. The north storefront features an east facing fixed window with a security grille and a south facing glazed single-entry door; two commercial box signs are located above the fenestration details that read, "Elegant Mode Tailoring," in addition to an exterior HVAC unit. The central storefront faces southeast and includes a slight concrete awning that covers a glazed single-entry door with a glass block surround; the door is flanked to the north by a fixed window and an exterior HVAC unit. The south storefront includes a multi-light glazed single-entry door with a sidelight. The south elevation includes four exterior HVAC units; three fixed windows of varying size with security grilles; two vinyl framed, horizontal sliding sash windows; a recessed, bay entrance with rounded corners that includes a concrete awning and a glazed single-entry door with a concrete staircase and handrails; two wood framed double-hung sash windows; and a glazed single-entry door with a sidelight and concrete staircase with metal safety railings. The north elevation is connected to the adjacent building and does not include any additional fenestration and/or architectural detail. The rear (west) elevation includes additional fenestration details; however, they are obstructed from view by landscaped foliage.

***B10. Significance (continued):**

The building located at 585 S. Fairfax Avenue, constructed in 1940, historically operated as a doctor's office. Research did not reveal the name of the office, or how long it operated at the subject location. However, in 1949, newspaper research indicated that Dr. Benno Z. Reinard performed an illegal surgery at 585 S. Fairfax Avenue. Dr. Reinard's patient died in the building and police charged him with murder (*Los Angeles Evening Citizen News* 1949, 1950).

By 2007, the building included three individual storefronts that included businesses like Elegant Mode Tailoring, Foot & Ankle Wellness Clinic, and Gold Star Jewelry. The tailor and jewelry store continue to operate at the time of this evaluation. Rose's Agency Home Care opened in 2018 (Google Maps 2007, 2018).

Evaluation

Under NRHP Criterion A or CRHR Criterion 1, this building has no significant association with important historic events. The building on this parcel, constructed in 1940, is associated with commercial development; however, many businesses occupied this building, but research did not reveal that the building played a distinct or important role in their respective industries. Therefore, the building is not eligible for the NRHP or CRHR under Criterion A/1.

Under NRHP Criterion B or CRHR Criterion 2, this building is not significant for any associations with the lives of persons important to history. Research did not indicate that any individuals, such as business owners or doctors, related to the development and use of this building made demonstrably important contributions to history at the local, state, or national level. Therefore, the building is not eligible for the NRHP or CRHR under Criterion B/2.

Under NRHP Criterion C or CRHR Criterion 3, this building is not significant because it is not an important example of a type, period, or method of construction. The One-Part Commercial Block building proliferated on main streets and commercial rows throughout the nation during the early to mid-twentieth century. The commercial building at 585 S. Fairfax Avenue is a typical and unremarkable example reflecting the twentieth century trends of this style. The building on this parcel also lacks the high artistic value and distinctive design that would merit listing on the NRHP and CRHR. There is no master architect or builder associated with this building; therefore, it is not significant as the work of a master. Therefore, the building is not eligible for the NRHP or CRHR under Criterion C/3.

Under NRHP Criterion D or CRHR Criterion 4, this building is not significant as a source (or likely source) of important information regarding history. It does not appear to have any likelihood of yielding important information about historic construction materials or technologies. Therefore, the building is not eligible for the NRHP or CRHR under Criterion D/4.

***P3a. Description (continued):**

The building faces east and the façade is characterized by two concrete framed storefront systems. A commercial wall sign spans the length of both storefront systems and reads, "MOLLY MALONE'S IRISH PUB; Est. 1969; 575 S. Fairfax Ave." The north storefront is recessed and includes a single-entry door flanked two fixed, glass block windows flanked on each side by infilled windows. A stone veneer is located beneath the fenestration details. The south storefront includes a single-entry door flanked on both sides by fixed, boxed windows with wood panel surrounds. The north and south elevations are connected to the adjacent buildings; the south elevation includes a painted wall sign that reads, "Molly Malones – 1969 – Since – 1969." The rear elevation is not visible to the public right-of-way; however, it includes sash windows recessed behind security grilles on the second level and two single-entry doors on the ground level.

***B10. Significance (continued):**

The commercial building located at 575 S. Fairfax Avenue, constructed in 1929, historically operated as a bar. A publication in the *Los Angeles Evening Citizen News* indicated the building applied to a liquor license in 1942; however, the name of the 1940s bar remains unclear (*Los Angeles Evening Citizen News* 1966). In 1966, the building applied for an application to operate a pool room. In 1969, the building opened as its current occupant, Molly Malone's Irish Pub (*Los Angeles Evening Citizen News* 1966).

The building demonstrates a Spanish Eclectic architectural design that includes both Spanish Colonial Revival and Mediterranean elements.

Spanish Colonial Revival, most popular between 1915 and the commencement of World War II, is typically one- or two-story asymmetrical, side gabled house or commercial building characterized by stucco walls; low-pitched red barrel tile roofs with pent eaves or false gables and sometime low towers and decorative chimney caps; limited number of openings filled with rectangular and arched wooden casement windows and heavy, carved wooden doors; close relation to the outdoors through use of French doors, terraces, and pergolas; decorative ironwork for windows, doors, balconies and roof supports; glazed and unglazed tile for walls and floors; arcaded porches; and Plateresque and especially rich Churrigueresque ornament of cast concrete or terracotta (Gebhard and Winter 1985:486; Massey and Maxwell 1996:232; Foster 2004:330).

The Mediterranean architectural style, popular between 1918 and 1942, is closely related to the Spanish Colonial Revival style. The style originates in Italy and is less picturesque than Spanish Colonial styles, defined by its uniformly horizontal roof lines and little emphasis on separate massing. Character defining features include stucco exterior walls; low-pitched clay tile roof cladding, usually hipped; simple massing with stress on horizontal features; formal composition with symmetry; Arched openings and arched focal windows; limited use of decorative features; exterior landscaped gardens extending from the building (Survey LA 2018).

Evaluation

Under NRHP Criterion A or CRHR Criterion 1, this building does demonstrate significant association with important historic events at the local level. The building on this parcel, constructed in 1929, is associated with the commercial development of the Los Angeles Area. The building has operated as Molly Malone's Irish Pub since 1969. The pub functions as an important commercial business in the local area that provides a direct link to mid-twentieth century commerce and entertainment in Los Angeles. Therefore, the building meets eligibility for the NRHP and CRHR under Criterion A/1 at the local level.

Under NRHP Criterion B or CRHR Criterion 2, this building is not significant for any associations with the lives of persons important to history. Research did not indicate that any individuals, such as business owners, related to the development and use of this building made demonstrably important contributions to history at the local, state, or national level. Therefore, the building is not eligible for the NRHP or CRHR under Criterion B/2.

Under NRHP Criterion C or CRHR Criterion 3, this building is not significant because it is not an important example of

State of California — The Resources Agency

a type, period, or method of construction. The Spanish Eclectic building, as well as Spanish Colonial Revival and Mediterranean style buildings, was prolific on main streets and commercial rows throughout the nation during the early to mid-twentieth century. The commercial building at 575 S. Fairfax Avenue is a typical and unremarkable example reflecting the twentieth century trends of this style; the building also lacks its overall integrity due to significant alterations to the storefront facade. The building on this parcel also lacks the high artistic value and distinctive design that would merit listing on the NRHP and CRHR. There is no master architect or builder associated with this building; therefore, it is not significant as the work of a master. Therefore, the building is not eligible for the NRHP or CRHR under Criterion C/3.

Under NRHP Criterion D or CRHR Criterion 4, this building is not significant as a source (or likely source) of important information regarding history. It does not appear to have any likelihood of yielding important information about historic construction materials or technologies. Therefore, the building is not eligible for the NRHP or CRHR under Criterion D/4.

The building appears to retain its integrity of location, setting, design, workmanship, feeling, and association. However, it does not retain its integrity of materials due to significant alterations on its façade. Therefore, because it meets one of the significance criteria necessary for eligibility for listing in the NRHP or CRHR and retains sufficient integrity to convey that significance, the building appears to be eligible for listing in the NRHP and CRHR under Criterion A/1 at the local level.

The building located at 571 S. Fairfax Avenue, constructed in 1929, is a single-story, Spanish Eclectic building with a rectangular plan on a concrete foundation. The exterior walls are constructed of concrete and clad in an ashlar, square cut stone veneer with no courses. Evidence of metal end caps from an earthquake retrofit are present on the east facing façade. Additional exterior details include classical floral design in bas-relief on the cornice of the tower; a concrete entablature beneath the eave of the false front; a broken pediment in bas-relief that accents the storefront system on the south end of the façade; and a concrete entablature above the commercial sign of the storefront on the north end of the façade. Fenestration details include fixed storefront windows, as well as a historical period sash window with arched decorative stonework, sill, and bracket in bas-relief located directly above the broken pediment. The building is composed of a flat roof with parapets clad in built-up material; however, the façade includes an angled, false front clad in red Spanish tile shingles, as well as an off-center decorative tower with a pyramidal roof clad in red Spanish tile shingles.

***P3a. Description (continued):**

The building faces east and the façade is characterized by three storefront systems. The storefront at the northern end includes a recessed single-entry door behind a metal storm door flanked by a fixed display window. The storefront is recessed behind a horizontal sliding security gate and a commercial sign reads, "LAKE EFFECT." The central storefront features a commercial sign that reads, "HAIR TEAM; Styling Salon," and includes a vinyl awning that covers a recessed single-entry door behind a metal storm door flanked by a fixed display window. The storefront is also recessed behind a horizontal sliding security gate. The southernmost storefront includes a commercial wall sign that reads, "Euphoria; Hookah Lounge," and features a glazed single-entry door with a transom flanked by a fixed storefront window. The north and south elevations connect with the neighboring buildings. The rear elevation is not visible to the public right-of-way; however, it includes a pair of two sash windows, recessed behind security grilles, two single-entry doors, and a roof access ladder.

***B10. Significance (continued):**

Research did not reveal significant information about the construction or operations of the building. However, its location and architectural design indicate that it historically operated, and continues to operate, as a commercial building.

The building demonstrates a Spanish Eclectic architectural design that includes both Spanish Colonial Revival and Mediterranean elements.

Spanish Colonial Revival, most popular between 1915 and the commencement of World War II, is typically one-or two-story asymmetrical, side gabled house or commercial building characterized by stucco walls; low-pitched red barrel tile roofs with pent eaves or false gables and sometime low towers and decorative chimney caps; limited number of openings filled with rectangular and arched wooden casement windows and heavy, carved wooden doors; close relation to the outdoors through use of French doors, terraces, and pergolas; decorative ironwork for windows, doors, balconies and roof supports; glazed and unglazed tile for walls and floors; arcaded porches; and Plateresque and especially rich Churrigueresque ornament of cast concrete or terracotta (Gebhard and Winter 1985:486; Massey and Maxwell 1996:232; Foster 2004:330).

The Mediterranean architectural style, popular between 1918 and 1942, is closely related to the Spanish Colonial Revival style. The style originates in Italy and is less picturesque than Spanish Colonial styles, defined by its uniformly horizontal roof lines and little emphasis on separate massing. Character defining features include stucco exterior walls; low-pitched clay tile roof cladding, usually hipped; simple massing with stress on horizontal features; formal composition with symmetry; Arched openings and arched focal windows; limited use of decorative features; exterior landscaped gardens extending from the building (Survey LA 2018).

Evaluation

Under NRHP Criterion A or CRHR Criterion 1, this building has no significant association with important historic events. The building on this parcel, constructed in 1929, is associated with commercial development; however, many businesses occupied this building, but research did not reveal that the building played a distinct or important role in their respective industries. Therefore, the building is not eligible for the NRHP or CRHR under Criterion A/1.

Under NRHP Criterion B or CRHR Criterion 2, this building is not significant for any associations with the lives of persons important to history. Research did not indicate that any individuals, such as business owners, related to the development and use of this building made demonstrably important contributions to history at the local, state, or national level. Therefore, the building is not eligible for the NRHP or CRHR under Criterion B/2.

Under NRHP Criterion C or CRHR Criterion 3, this building is significant because it is an important example of a type, period, or method of construction at the local level. The Spanish Eclectic building, as well as Spanish Colonial Revival and Mediterranean style buildings, were prolific on main streets and commercial rows throughout the nation during the

early to mid-twentieth century. The commercial building at 571 S. Fairfax Avenue is an excellent and remarkable local example reflecting the early twentieth century trends of this style. The building on this parcel includes distinctive design that would merit listing on the NRHP and the CRHR. While there is no master architect or builder associated with the building, it retains its overall integrity and includes character-defining features like the red Spanish tile shingles, decorative tower with ornate detailing, and exterior stone cladding. Therefore, the building meets eligibility for inclusion in the NRHP and CRHR under Criterion C/3 at the local level.

Under NRHP Criterion D or CRHR Criterion 4, this building is not significant as a source (or likely source) of important information regarding history. It does not appear to have any likelihood of yielding important information about historic construction materials or technologies. Therefore, the building does not meet eligibility for the NRHP or CRHR under Criterion D/4.

The building appears to retain its integrity of location, setting, design, materials, workmanship, feeling, and association because it does not appear to have been altered since the date of construction. Therefore, because it meets one of the significance criteria necessary for eligibility for listing in the NRHP or CRHR and retains sufficient integrity to convey that significance, the building appears to be eligible for listing in the NRHP and CRHR at the local level.

The building at 453 S. La Brea Avenue appears to meet the criteria for listing in the National Register of Historic Places (NRHP), the California Register of Historical Resources (CRHR), and appears to be an historical resource for purposes of the California Environmental Quality Act (CEQA). The building generally retains integrity to its original construction and meets Criterion c of the NRHP and Criterion 3 of the CRHR at the local level. The building has been evaluated in accordance with Section 15064.5(a)(2)-(3) of the CEQA Guidelines, using the criteria outlined in Section 5024.1 of the California Public Resources Code. The boundary for the historic property/historical resource is its legal parcel.

***P3a. Description (continued):**

The building faces east. The storefront includes a metal-framed, glazed single entry door with glass block transoms and sidelights at the north and south ends of the façade. A ribbon of four fixed storefront windows angled forward and set on a brick veneer foundation is located between the original chrome and glass entry doors. The façade includes an angled blade sign at the south end that reads, "HARDWARE," in vertically oriented letters. Other commercial signage reads, "LIZ'S ANTIQUE HARDWARE," and, "the LOFT at Liz's." Slight metal banding projects over the storefront system. The south elevation is connected to the adjacent building; however, the two-story portion of the south elevation includes a painted mural. The north elevation does not include any fenestration and/or architectural detail. The rear (west) elevation features three twelve-light sash windows at the second level. The ground level includes a sash window with security grille and single-entry door flanked to the south by a roll-up garage door and two single-entry doors. Additional commercial signage reads, "the LOFT at Liz's."

***B10. Significance (continued):**

Since at least 2005, the subject building, constructed in 1937, has operated as Liz's Antique Hardware. The building demonstrates a One-Part Commercial Block architectural style with heavy Streamline Moderne stylistic influence. Streamline Moderne (or Art Moderne), popular from 1920 to the commencement of World War II, is characterized by smooth stucco wall surface; rounded corners, parapets, and windows; emphasis on the horizontal through the use of banded surfaces and banded windows; curved projecting wings; glass brick; round windows (ship portholes); steel (ship) railing and door and window trim; and an asymmetrical façade (McAlester and McAlester 1984:465; Blumenson 1981:79).

Evaluation

Under NRHP Criterion A or CRHR Criterion 1, this building has no significant association with important historic events. The building on this parcel, constructed in 1937, is associated with commercial development in Los Angeles; however, many businesses likely occupied this building, but research did not reveal that the building played a distinct or important role in their respective industries. Therefore, the building does not meet eligibility for the NRHP or CRHR under Criterion A/1.

Under NRHP Criterion B or CRHR Criterion 2, this building is not significant for any associations with the lives of persons important to history. Research did not indicate that any individuals, such as business owners, related to the development and use of this building made demonstrably important contributions to history at the local, state, or national level. Therefore, the building does not meet eligibility for the NRHP or CRHR under Criterion B/2.

Under NRHP Criterion C or CRHR Criterion 3, this building is locally significant because it is an important example of a type, period, or method of construction. The Streamline Moderne and One-Part Commercial Block building type proliferated on main streets and commercial rows throughout California, and the nation, during the early twentieth century. The commercial building at 453 S. La Brea Avenue is an excellent example reflecting the twentieth century trends of this style. The building generally retains its overall integrity and retains character-defining features like its one-part commercial design, glass block, a angled blade sign, metal flashing, chrome entry doors, and metal fixed awning with pleated metal details. There is no master architect or builder associated with this building; therefore, it is not significant as the work of a master. Therefore, the building does meet eligibility for the NRHP or CRHR under Criterion C/3 at the local level.

Under NRHP Criterion D or CRHR Criterion 4, this building is not significant as a source (or likely source) of important information regarding history. It does not appear to have any likelihood of yielding important information about historic construction materials or technologies. Therefore, the building does not meet eligibility for the NRHP or CRHR under Criterion D/4.

The building appears to retain its integrity of location, setting, design, materials, workmanship, feeling, and association because it does not appear to have been heavily altered since the date of construction. Therefore, because it meets

***P3a. Description (continued):**

The building faces east and the façade is characterized by a porte-cochère with a flat roof clad in sheet metal material with a center projection, as well as rounded corners with horizontal metal flashing. The porte-cochère likely covered gas pumps, however, city fencing encloses the space typically occupied by pumps. The porte-cochère also covers a single-entry door with sidelights and a transom and is flanked to the north by two roll-up garage doors. The garage doors are partitioned by three rough-cut stone veneer pilasters. The south elevation is clad in a rough-cut stone veneer and includes fixed storefront windows, a one-over-one sash window, a single-entry door. The north elevation features two additional sash window units. The rear (west) elevation includes five sash window units that are partially infilled and boarded due to vacancy, in addition to severe graffiti damage.

***B10. Significance (continued):**

Research did not reveal significant information about the building located at 371 S. Fairfax Avenue. However, the building was likely constructed as a gas station and operated as such until its vacancy.

The building demonstrates a vernacular architectural style with modest influences from Streamline Moderne. Streamline Moderne (or Art Moderne), popular from 1920 to the commencement of World War II, is characterized by smooth stucco wall surface; rounded corners, parapets, and windows; emphasis on the horizontal through the use of banded surfaces and banded windows; curved projecting wings; glass brick; round windows (ship portholes); steel (ship) railing and door and window trim; and an asymmetrical façade (McAlester and McAlester 1984:465; Blumenson 1981:79).

Evaluation
Under NRHP Criterion A or CRHR Criterion 1, this building has no significant association with important historic events. The building on this parcel, constructed in 1947, is associated with commercial development; however, many businesses occupied this building, but research did not reveal that the building played a distinct or important role in their respective industries. Therefore, the building is not eligible for the NRHP or CRHR under Criterion A/1.

Under NRHP Criterion B or CRHR Criterion 2, this building is not significant for any associations with the lives of persons important to history. Research did not indicate that any individuals, such as business owners, related to the development and use of this building made demonstrably important contributions to history at the local, state, or national level. Therefore, the building is not eligible for the NRHP or CRHR under Criterion B/2.

Under NRHP Criterion C or CRHR Criterion 3, this building is not significant because it is not an important example of a type, period, or method of construction. The vernacular, Streamline Moderne influenced building proliferated on main streets and commercial rows throughout the nation during the early to mid-twentieth century. The commercial building at 371 S. Fairfax Avenue is a typical and unremarkable example reflecting the twentieth century trends of this style. The building on this parcel also lacks the distinctive design that would merit listing on the NRHP and CRHR. There is no master architect or builder associated with this building; therefore, it is not significant as the work of a master. Therefore, the building is not eligible for the NRHP or CRHR under Criterion C/3.

Under NRHP Criterion D or CRHR Criterion 4, this building is not significant as a source (or likely source) of important information regarding history. It does not appear to have any likelihood of yielding important information about historic construction materials or technologies. Therefore, the building is not eligible for the NRHP or CRHR under Criterion D/4.

In summary, the building located at 371 S. Fairfax Avenue does not meet any of the eligibility criteria for listing in the NRHP or the CRHR. Therefore, the building is recommended not eligible for listing in the NRHP or the CRHR.

The building located at 365 S. Fairfax Avenue, constructed in 1946, is a single-story vernacular building with a rectangular plan on a concrete foundation. The exterior walls are constructed of concrete brick clad in stucco; the façade includes a brick veneer. Fenestration includes fixed storefront windows. The building faces east and the façade includes a glazed single-entry modern aluminum door flanked to the south by a ribbon of three fixed windows. The building is composed of a flat roof; however, the portion of the roof at the east facing façade slightly rises above the rest of the roof line. The roofline slightly projects above the storefront entrance and includes a commercial sign that reads, "PIZZA WORLD." The south elevation includes six sash windows with security grilles. The north elevation is connected to the adjacent building. The rear (west) elevation includes a single-entry door with a storm door flanked to the north by a horizontal sliding sash window and to the south by a vertical sliding sash window; both windows include security grilles.

The property at 365 S. Fairfax Avenue does not appear to meet the criteria for listing in the National Register of Historic Places (NRHP) or the California Register of Historical Resources (CRHR), nor does it appear to be an historical resource for purposes of the California Environmental Quality Act (CEQA). The property retains its overall integrity, however, it does not meet any of the significance criteria necessary for eligibility for listing in either the NRHP or CRHR or local register. The property has been evaluated in accordance with Section 15064.5(a)(2)-(3) of the CEQA Guidelines, using the criteria outlined in Section 5024.1 of the California Public Resources Code.

Recorded by: Mackall, E. and M. Wilson ***Date:** February 2023 ☒ Continuation ☐ Update

***B10. Significance (continued):**

Research did not reveal significant information about the commercial vernacular building at 365 S. Fairfax Avenue. The location of the building, as well as its architectural One-Part Commercial Block design, suggests that it has operated as a commercial storefront since its construction in 1946. The building was vacant in 2007 and 2008. In 2009, the current occupant, Pizza World, opened its business (Google Maps 2007, 2008, 2009).

Evaluation
Under NRHP Criterion A or CRHR Criterion 1, this building has no significant association with important historic events. The building on this parcel, constructed in 1946, is associated with commercial development in the Los Angeles area; however, many businesses likely occupied this building, but research did not reveal that the building played a distinct or important role in their respective industries. Therefore, the building is not eligible for the NRHP or CRHR under Criterion A/1.

Under NRHP Criterion B or CRHR Criterion 2, this building is not significant for any associations with the lives of persons important to history. Research did not indicate that any individuals, such as business owners, related to the development and use of this building made demonstrably important contributions to history at the local, state, or national level. Therefore, the building is not eligible for the NRHP or CRHR under Criterion B/2.

Under NRHP Criterion C or CRHR Criterion 3, this building is not significant because it is not an important example of a type, period, or method of construction. The vernacular, One-Part Commercial Block building proliferated on main streets and commercial rows throughout the nation during the early to mid-twentieth century. The commercial building at 365 S. Fairfax Avenue is a typical and unremarkable example reflecting the twentieth century trends of this style. The building on this parcel also lacks the high artistic value and distinctive design that would merit listing on the NRHP and CRHR. There is no master architect or builder associated with this building; therefore, it is not significant as the work of a master. Therefore, the building is not eligible for the NRHP or CRHR under Criterion C/3.

Under NRHP Criterion D or CRHR Criterion 4, this building is not significant as a source (or likely source) of important information regarding history. It does not appear to have any likelihood of yielding important information about historic construction materials or technologies. Therefore, the building is not eligible for the NRHP or CRHR under Criterion D/4.

In summary, the building located at 365 S. Fairfax Avenue does not meet any of the eligibility criteria for listing in the NRHP or the CRHR. Therefore, the building is recommended not eligible for listing in the NRHP or the CRHR.

The building located at 359 S. Fairfax Avenue, constructed in 1948, is a single-story, vernacular commercial building characterized by four modern storefronts with fixed display windows. The overall form of the building features a rectangular plan on a concrete foundation. The building is composed of a flat roof clad in built-up material with parapets. The exterior walls are constructed of concrete masonry unit (CMU) block clad in stucco. Fenestration details include fixed storefront windows.

***P3a. Description (continued):**

The building faces east and the façade is characterized by four commercial storefronts. Each storefront includes commercial signage on the concrete parapet that extends above the roofline; the corner of each storefront parapet includes rounded edges. Each storefront also features a brick veneer.

The southernmost storefront, which includes commercial signage that reads, "Frank's Mexican Food," features a recessed glazed single-entry door with a transom flanked to the south by a fixed display window; a vinyl awning covers the entry. Moving north, the next commercial storefront, with commercial signage that reads, "Westside Opticians," features a vinyl awning that covers a recessed glazed single-entry door with a transom flanked to the south by a fixed display window. The next commercial storefront, with commercial signage that reads, "Blue Collar," includes a vinyl awning that covers a recessed glazed single-entry door with a transom flanked to the north by a fixed display window. Additional details include a blade sign with neon writing that reads, "Blue Collar," with the image of a martini glass. The northernmost storefront, with commercial signage that reads, "Lena's Nail Shop," features a recessed glazed single-entry door with a transom flanked to the north by a fixed display window.

The north elevation does not include any fenestration and/or architectural detail, which exception of commercial signage and a painted mural. The south elevation is connected to the adjacent building. The rear (west) elevation includes additional single-entry doors, sash windows, and exterior piping and HVAC units.

***B10. Significance (continued):**

Newspaper research indicates that the commercial building located at 359 S. Fairfax Avenue operated under several different businesses since its construction in 1948. In 1956, one of the four storefronts operated as Yolanda's, an Italian restaurant (*Los Angeles Evening Citizen News* 1956). In 1958, Mr. Delson operated a business that provided real estate loans (*California Eagle* 1958). In 1973, the Independent Travel Service, which provided services like cruise experts, operated within the building (*The Los Angeles Times* 1973). In 1991, a children's clothing store, called Small Details, operated in one of the four storefronts, at the time of this evaluation, the storefronts include Frank's Mexican Food, Westside Opticians, Blue Collar, and Lena's Nail Shop (Google Maps N.d.).

Evaluation
Under NRHP Criterion A or CRHR Criterion 1, this building has no significant association with important historic events. The building on this parcel, constructed in 1948, is associated with commercial development; however, many businesses occupied this building, but research did not reveal that the building played a distinct or important role in their respective industries. Therefore, the building is not eligible for the NRHP or CRHR under Criterion A/1.

Under NRHP Criterion B or CRHR Criterion 2, this building is not significant for any associations with the lives of persons important to history. Research did not indicate that any individuals, such as business owners, related to the development and use of this building made demonstrably important contributions to history at the local, state, or national level. Therefore, the building is not eligible for the NRHP or CRHR under Criterion B/2.

Under NRHP Criterion C or CRHR Criterion 3, this building is not significant because it is not an important example of a type, period, or method of construction. The vernacular, One-Part Commercial Block building proliferated on main streets and commercial rows throughout the nation during the early to mid-twentieth century. The commercial building at 359 S. Fairfax Avenue is a typical and unremarkable example reflecting the twentieth century trends of this style. The building on this parcel also lacks the high artistic value and distinctive design that would merit listing on the NRHP and CRHR. There is no master architect or builder associated with this building; therefore, it is not significant as the work of a master. Therefore, the building is not eligible for the NRHP or CRHR under Criterion C/3.

Under NRHP Criterion D or CRHR Criterion 4, this building is not significant as a source (or likely source) of important information regarding history. It does not appear to have any likelihood of yielding important information about historic construction materials or technologies. Therefore, the building is not eligible for the NRHP or CRHR under Criterion D/4.

The building at 357 N. La Brea Avenue appears to meet the criteria for listing in the National Register of Historic Places (NRHP), the California Register of Historical Resources (CRHR), and appears to be an historical resource for purposes of the California Environmental Quality Act (CEQA). The building generally retains integrity to its original construction and meets Criterion C of the NRHP and Criterion 3 of the CRHR at the local level. The building has been evaluated in accordance with Section 15064.5(a)(2)-(3) of the CEQA Guidelines, using the criteria outlined in Section 5024.1 of the California Public Resources Code. The boundary for the historic property/historical resource is its legal parcel.

Page 3 **of** 6 ***Resource Name or** # (Assigned by recorder) 357 N. La Brea Avenue
Recorded by: Mackall, E. and M. Wilson ***Date:** February 2023 ☒ Continuation ☐ Update

***P3a. Description (continued):**

The building faces east and the façade is characterized by a vertical projection with zigzags in bas-relief and two stepped pilasters with ornate moldings at the southernmost end of the façade. An additional stepped pilaster with an ornate molding is located at the northern end of the façade. A slight concrete projection, topped with pilasters in bas-relief, covers two horizontal fixed windows a fixed storefront window. The storefront window is accented with zigzag designs on either side. The building is entered through the southern end of the façade; it includes a glazed single-entry door with a transom shaped to mimic the zigzags and sidelights. The south and north elevations do not include any additional fenestration and/or architectural details. The rear (west) elevation features a single-entry door with a transom and sidelight flanked on each side by multi-light sash windows; metal security grilles cover the fenestration details.

***B10. Significance (continued):**

The building located at 357 N. La Brea Avenue, constructed in 1930, does not appear in newspaper research until 1982. Between 1982 and 2005, the building hosted several different art performances and galleries. This includes a Spanish artist named Antoni Tapies, a Belgian artist named Pierre Alechinsky, and Jack Rutberg Fine Arts (*LA Weekly* 1982; *The Los Angeles Times* 1999, 2005). The building is currently occupied by Sonia Boyajian Jewelry.

The subject building features character-defining features of the Art Deco style. The Art Deco style, popular between the 1920s and the commencement of World War II, is characterized by a linear, hard edge composition often with a vertical emphasis; windows arranged in sunken vertical panels; elimination of any classical or medieval termination at the top of the building; symmetry and balance for each elevation; frequent use of central tower, whose summit recedes in a stepped pattern; flat roof usually headed by parapets; tendency for buildings to be monumental, formal and heavy; and ornamentation of zigzags, chevrons, sun bursts, spirals, stylized plant motifs, and stylized animals (Blumenson 1981: 77; Gebhard and Winter 1985: 489).

Evaluation

Under NRHP Criterion A or CRHR Criterion 1, this building has no significant association with important historic events. The building on this parcel, constructed in 1930, is associated with commercial development; however, many businesses occupied this building, and research did not reveal that the building played a distinct or important role in their respective industries. Therefore, the building is not eligible for the NRHP or CRHR under Criterion A/1.

Under NRHP Criterion B or CRHR Criterion 2, this building is not significant for any associations with the lives of persons important to history. Research did not indicate that any individuals, such as business-owners related to the development and use of this building made demonstrably important contributions to history at the local, state, or national level. Therefore, the building is not eligible for the NRHP or CRHR under Criterion B/2.

Under NRHP Criterion C or CRHR Criterion 3, this building is significant because it is an important example of a type, period, and method of construction. The Art Deco style building proliferated on main streets and commercial rows throughout the nation during the early twentieth century. The commercial building at 357 N. La Brea Avenue is an excellent and remarkable example reflecting local twentieth century trends of this style. Character-defining features include ornate detailing in zigzag, chevron and sunburst designs in bas-relief on the façade. There is no master architect or builder associated with this building; therefore, it is not significant as the work of a master. Therefore, the building meets eligibility for listing in the NRHP and CRHR under Criterion C/3 at the local level.

Under NRHP Criterion D or CRHR Criterion 4, this building is not significant as a source (or likely source) of important information regarding history. It does not appear to have any likelihood of yielding important information about historic construction materials or technologies. Therefore, the building is not eligible for the NRHP or CRHR under Criterion D/4.

The building includes minor alterations, like updated fenestration details on the façade. However, the modern fenestration does not detract from the overall integrity. Therefore, the building appears retains its integrity of location,

setting, design, materials, workmanship, feeling, and association because it does not appear to have been altered since the date of construction. Because it meets one of the significance criteria necessary for eligibility for listing in the NRHP or CRHR and retains sufficient integrity to convey that significance, the building appears to be eligible for listing in the NRHP and CRHR at the local level.

***P3a. Description:** (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries)

The Congregation Bais Yehuda is a synagogue that operates at 356 N. La Brea Avenue, constructed in 1951, and the neighboring building directly north, 360 N. La Brea Avenue, constructed in 1983. However, the primary function of the building occurs in the 360 N. La Brea Avenue location.

The primary building (360 N. La Brea Avenue) is a two-story Contemporary building with an irregular rectangular plan on a concrete foundation. The building is composed of a flat roof clad in built-up material with parapets. The exterior walls are constructed of tilt-up concrete clad in stucco; however, the north and west elevations are sheathed in a red brick veneer with a stretcher bond pattern. Fenestration details include lancet-inspired sash windows and single-entry doors.

The property at 356-360 N. La Brea Avenue does not appear to meet the criteria for listing in the National Register of Historic Places (NRHP) or the California Register of Historical Resources (CRHR), nor does it meet Criteria Considerations A and G, or appear to be an historical resource for purposes of the California Environmental Quality Act (CEQA). The property retains its overall integrity however, it does not meet any of the significance criteria necessary for eligibility for listing in either the NRHP or CRHR or local register. The property has been evaluated in accordance with Section 15064.5(a)(2)-(3) of the CEQA Guidelines, using the criteria outlined in Section 5024.1 of the California Public Resources Code.

Page 3 **of** 6 ***Resource Name or** # (Assigned by recorder) Congregation Bais Yehuda
Recorded by: Mackall, E. and M. Wilson ***Date:** February 2023 ☒ Continuation ☐ Update

***P3a. Description (continued):**

The building faces northwest and the façade is characterized by a rounded corner at the corner of Oakwood Avenue and North La Brea Avenue. Two fixed lancet-inspired windows with brick surrounds and a wall sign in Hebrew are located above the entrance. The entrance includes a concrete block flanked on each side by wood paneled, single-entry doors. The concrete block extends from ground level to above the single entry doors and includes Hebrew inscriptions. The west elevation includes five lancet-inspired windows with brick surrounds, while the north elevation includes four lancet-inspired windows with brick surrounds. An exterior light fixture is located between each window detail. The east elevation includes interior parking similar to Stucco Box/ Dingbat multi-family properties. The south elevation includes a single-story, One-Part Commercial Block attachment (356 N. La Brea Avenue) that includes two single-entry doors on its west facing façade, as well as a vertically orientated brick veneer. The rear elevation of the single-story attachment is covered by a vinyl tent awning and features additional parking space.

***B10. Significance (continued):**

Research did not reveal significant context about the Congregation Bais Yehuda located at 356-360 N. La Brea Avenue. The building appears to have operated as synagogue since the time of its construction in 1983.

Jewish history in Los Angeles dates to as early as 1841, when Jacob Frankfort, a German tailor and likely the first Jewish man to arrive in Los Angeles, arrived in the city. By 1850, the United States admitted California into the Union and census records indicated that eight Jewish people lived in Los Angeles. In the early twentieth century, Los Angeles's Jewish community entered the Hollywood entertainment industry with Cecil B. DeMille's, *The Squaw Man*, arguably the movie capital's first blockbuster. In 1932, the first Sephardic synagogue was dedicated in Los Angeles. In 1935, the Sephardic Hebrew Center's synagogue was dedicated in Los Angeles. In 1936, Los Angeles incorporated the Los Angeles Jewish Community Council, presently known as the Jewish Federation Council (Jewish Genealogical Society of Los Angeles N.d.).

Evaluation
Under NRHP Criterion A or CRHR Criterion 1, this building has no significant association with important historic events. The building on this parcel, constructed in 1983, is associated with the Los Angeles Jewish community located in and around N. La Brea Avenue, and Los Angeles as a whole. However, Los Angeles Jewish history dates to as early as 1841 and significantly increased in the early 1930s. Therefore, the subject building was constructed well after the community's historical development in the city. Therefore, the building does not meet eligibility for the NRHP or CRHR under Criterion A/1.

Under NRHP Criterion B or CRHR Criterion 2, this building is not significant for any associations with the lives of persons important to history. Research did not indicate that any individuals, such as rabbis or synagogue goers, related to the development and use of this building made demonstrably important contributions to history at the local, state, or national level. Therefore, the building does not meet eligibility for the NRHP or CRHR under Criterion B/2.

Under NRHP Criterion C or CRHR Criterion 3, this building is not significant because it is not an important example of a type, period, or method of construction. The Contemporary-style building proliferated on main streets and commercial rows throughout the nation during the late twentieth century. The religious building at 356-360 N. La Brea Avenue is a typical example reflecting the twentieth century trends of this style. The building on this parcel also lacks the distinctive design that would merit listing on the NRHP and CRHR. There is no master architect or builder associated with this building; therefore, it is not significant as the work of a master. Therefore, the building does not meet eligibility for the NRHP or CRHR under Criterion C/3.

Under NRHP Criterion D or CRHR Criterion 4, this building is not significant as a source (or likely source) of important information regarding history. It does not appear to have any likelihood of yielding important information about historic construction materials or technologies.

In summary, the building does not meet any of the significance criteria of the NRHP or the CRHR. As a result, it is not

Recorded by: Mackall, E. and M. Wilson ***Date:** February 2023 ☒ Continuation ☐ Update

***P3a. Description (continued):**

The building faces east and the façade is characterized by a slanted, false front sheathed in asphalt composition shingles. The false front includes three hipped air vent dormers. The storefront system includes a single and double-entry door covered by a vinyl awning. The entry doors are partitioned by three projecting hipped fixed bay windows with a stone veneer foundation. The north and south elevations are connected to the adjacent buildings. The rear (west) elevation includes a single and double-entry door, as well as horizontal sliding sash windows behind security grilles, three air vents, and a roof access ladder.

***B10. Significance (continued):**

The subject building demonstrates a French Eclectic architectural design. Character-defining features of the subject building include hipped dormers and projecting bay windows, as well as the projecting concrete bulkheads at the north and south elevation roof lines and the slanted false front sheathed in asphalt composition shingles.

French Eclectic falls within the Period Revival architectural trend. Period Revival architecture became popular in the United States in the late nineteenth and early twentieth century. The eclectic style, that intended to mimic designs of earlier revival styles, typically manifested in the form of Spanish Colonial, Mediterranean, Tudor, French Provincial, and Colonial. Architects evoked a number of revival influences to design facades that demonstrated a unification of materials, setback, massing, and form. The Period Revival style experienced its peak in the 1920s as a result of World War I veterans. The war exposed American soldiers to rural European countryside architecture, in addition to postcards that depicted the designs to a wider audience. Until about the 1950s, magazines advertised “Old War charm,” and architects designed residential homes that combined the aesthetic of castles and chateaus with medieval designs and elements of a vernacular European style (Sunset District Historic Context Statement, 2013).

Evaluation

Under NRHP Criterion A or CRHR Criterion 1, this building has no significant association with important historic events. The building on this parcel, constructed in 1948, is associated with commercial development; however, many businesses occupied this building, and research did not reveal that the building played a distinct or important role in their respective industries. Therefore, the building is not eligible for the NRHP or CRHR under Criterion A/1.

Under NRHP Criterion B or CRHR Criterion 2, this building is not significant for any associations with the lives of persons important to history. Research did not indicate that any individuals, such as business-owners related to the development and use of this building made demonstrably important contributions to history at the local, state, or national level. Therefore, the building is not eligible for the NRHP or CRHR under Criterion B/2.

Under NRHP Criterion C or CRHR Criterion 3, this building is not significant because it is not an important example of a type, period, or method of construction. The One-Part Commercial block style building proliferated on main streets and commercial rows throughout the nation during the early twentieth century. The commercial building at 353 N. La Brea Avenue is a typical and unremarkable, late example reflecting the twentieth century trends of this style. While the building retains its overall integrity, it lacks the distinctive design that would merit listing on the NRHP and CRHR. There is no master architect or builder associated with this building; therefore, it is not significant as the work of a master. Therefore, the building is not eligible for the NRHP or CRHR under Criterion C/3.

Under NRHP Criterion D or CRHR Criterion 4, this building is not significant as a source (or likely source) of important information regarding history. It does not appear to have any likelihood of yielding important information about historic construction materials or technologies. Therefore, the building is not eligible for the NRHP or CRHR under Criterion D/4.

In summary, the building does not meet any of the eligibility criteria of the NRHP or CRHR. Therefore, it does not meet eligibility for listing in the NRHP or the CRHR at the national, state, or local level.

Recorded by: Mackall, E. and M. Wilson ***Date:** February 2023 ☒ Continuation ☐ Update

***P3a. Description (continued):**

The building faces east and the façade is characterized by a slanted false front clad in black Spanish tile shingles. The second level includes three nine-light fixed windows recessed within the stuccoed concrete. The ground level features a recessed entry cut within a Mission parapet-styled entrance enclosed with a double-entry metal gate. The recessed entrance includes three single-entry doors; two facing inwards and one facing east. The entrance is flanked on each side by fixed storefront windows covered by a vinyl awning. The north elevation is connected to the adjacent building. The south elevation includes a single sash window covered by a security grilled. The rear (west) elevation features four additional multi-light vertical sash windows and a single-entry door.

***B10. Significance (continued):**

The building located at 341 N. La Brea Avenue, constructed in 1928, likely included several commercial businesses throughout the twentieth century. However, research did not reveal context about any of the businesses. In present-day, the building is occupied by Collar & Comb – Luxury Grooming.

The building demonstrates a Spanish Eclectic architectural design, which accurately falls beneath the Period Revival trend. Period Revival architecture became popular in the United States in the late nineteenth and early twentieth century. The eclectic style, that intended to mimic designs of earlier revival styles, typically manifested in the form of Spanish Colonial, Mediterranean, Tudor, French Provincial, and Colonial. Architects evoked a number of revival influences to design facades that demonstrated a unification of materials, setback, massing, and form. The Period Revival style experienced its peak in the 1920s as a result of World War I veterans. The war exposed American soldiers to rural European countryside architecture, in addition to postcards that depicted the designs to a wider audience. Until about the 1950s, magazines advertised “Old War charm,” and architects designed residential homes that combined the aesthetic of castles and chateaus with medieval designs and elements of a vernacular European style (Sunset District Historic Context Statement, 2013).

Evaluation
Under NRHP Criterion A or CRHR Criterion 1, this building has no significant association with important historic events. The building on this parcel, constructed in 1928, is associated with commercial development of Los Angeles; however, many businesses likely occupied this building, but research did not reveal that the building played a distinct or important role in their respective industries. Therefore, the building does not meet eligibility for the NRHP or CRHR under Criterion A/1.

Under NRHP Criterion B or CRHR Criterion 2, this building is not significant for any associations with the lives of persons important to history. Research did not indicate that any individuals, such as business-owners related to the development and use of this building made demonstrably important contributions to history at the local, state, or national level. Therefore, the building does not meet eligibility for the NRHP or CRHR under Criterion B/1.

Under NRHP Criterion C or CRHR Criterion 3, this building is not significant because it is not an important example of a type, period, or method of construction. The Two-Part Commercial Block style building, with Spanish Eclectic influence, was prolific on main streets and commercial rows throughout the nation during early twentieth century. The commercial building at 341 N. La Brea Avenue is a typical and unremarkable example reflecting the twentieth century trends of this style. The building on this parcel does not retain its integrity; modern alterations include the removal of a Juliette balcony and window header on the second level, as well as replacement modern storefront systems. There is no master architect or builder associated with this building; therefore, it is not significant as the work of a master. Additionally, the building includes various exterior alterations in 1961, 1981, and 1983; however, records did not reveal specific details. Therefore, the building does not meet eligibility for the NRHP or CRHR under Criterion C/3.

Under NRHP Criterion D or CRHR Criterion 4, this building is not significant as a source (or likely source) of important information regarding history. It does not appear to have any likelihood of yielding important information about historic construction materials or technologies. Therefore, the building does not meet eligibility for the NRHP or CRHR under Criterion D/4.

***P3a. Description (continued):**

The building faces west and the façade features three storefronts. The north storefront is accented by slight overhanging eaves, vertical and horizontal projections in bas-relief, and infilled window details above the fenestration details. The storefront is accessed by two glazed single-entry doors with a transom; each door is flanked by a fixed display window. The storefront is enclosed by a horizonal sliding security gate. The center storefront includes a cornice, lattice work in bas-relief, and decorative banding above the fenestration details. The storefront is accessed by a glazed single-entry door with a transom flanked on each side by fixed storefront windows that are angled inward. The storefront is enclosed by a horizonal sliding security gate. The southmost storefront includes a stepped cornice and decorative banding above the fenestration details. The storefront includes two glazed single-entry doors flanked on each side by fixed windows that are angled inward. A commercial wall sign is located above the storefront system. The north and south elevations abut the adjacent buildings. The rear (east) elevation includes six single-entry doors, two with vinyl awnings. Additional details include eleven one-over-one sash windows with security grilles, exterior light fixtures, air vents, and a rear parking lot.

***B10. Significance (continued):**
The building located at 338 N. La Brea Avenue, constructed in 1948, likely operated under various commercial businesses throughout the second half of the twentieth century. However, research did not reveal what businesses rented the space. In 2011, the building included Ray Ferra's Iron 'N Antique Accents (Google Maps 2011). The building became vacant around 2019. The building remains vacant at the time of this evaluation.

Evaluation
Under NRHP Criterion A or CRHR Criterion 1, this building has no significant association with important historic events. The building on this parcel, constructed in 1948, is associated with commercial development in Los Angeles; however, many businesses likely occupied this building, and research did not reveal that the building played a distinct or important role in their respective industries. Therefore, the building does not meet eligibility for the NRHP or CRHR under Criterion A/1.

Under NRHP Criterion B or CRHR Criterion 2, this building is not significant for any associations with the lives of persons important to history. Research did not indicate that any individuals, such as business owners, related to the development and use of this building made demonstrably important contributions to history at the local, state, or national level. Therefore, the building does not meet eligibility for the NRHP or CRHR under Criterion B/2.

Under NRHP Criterion C or CRHR Criterion 3, this building is not significant because it is not an important example of a type, period, or method of construction. The One-Part Commercial Block style building was prolific on main streets and commercial rows throughout California, and the nation, during the early to mid-twentieth century. The commercial building at 338 N. La Brea Avenue is a typical example reflecting the twentieth century trends of this style. The building includes modern fenestration details and also lacks the high artistic value that would merit listing on the NRHP or CRHR. There is no master architect or builder associated with this building; therefore, it is not significant as the work of a master. Additionally, the building includes exterior alterations, like a wall sign added in 2011, and a reroof in 2019. Therefore, the building does not meet eligibility for the NRHP or CRHR under Criterion C/3.

Under NRHP Criterion D or CRHR Criterion 4, this building is not significant as a source (or likely source) of important information regarding history. It does not appear to have any likelihood of yielding important information about historic construction materials or technologies. Therefore, the building does not meet eligibility for the NRHP or CRHR under Criterion D/4.

In summary, the building does not meet any of the significance criteria outlined by the NRHP or the CRHR. Therefore, the building is recommended not eligible for the NRHP or the CRHR.

***P3a. Description (continued):**

The building faces west the façade includes a central recessed entry accented with ornate Islamic design and lattice work in bas-relief. The entry includes a modern glazed single-entry door with a historic period transom shaped to match the Islamic design. The entry is flanked on each side by modern fixed display windows and additional glazed single-entry doors. The second level includes wood framed, horizontal sliding sash windows with decorative banding along the attic story. The north and south elevations are connected to the adjacent buildings; however, the upper level includes additional fenestration details. The rear (east) elevation includes four pairs of horizontal sliding sash windows with concrete sills on the second level, and four single-entry and one double-entry door with a transom on the ground level, in addition to two horizontal sliding sash windows with security grilles.

***B10. Significance (continued):**

The subject building demonstrates a Two-Part Commercial Block architectural style with Mission Revival influence.

The Two-Part Commercial Block style, popular between circa 1850s and 1950s, was usually used for small and moderate-sized commercial buildings, generally limited to structures of two to four stories, and included a horizontal division into two distinct zones which reflects the differences of use inside (lower zones are street level and contain public spaces such as stores and upper zones suggest more private spaces for apartments and offices) (Longstreth 2000:24-53).

Mission Revival architecture manifested in California between 1890 and 1920 and quickly spread throughout the southwest by the early twentieth-century. The architectural style gained national attention when several California architects introduced it at the 1893 World's Columbian Exposition, in addition to its popularity among Santa Fe hotels/resorts and Southern Pacific Railroad stations. Character defining features include mission-shaped dormers/roof parapets; red tile roof cladding; wide eave overhangs; arcaded entry porch or porch roofs supported by large, square piers; smooth stucco walls; quatrefoil windows; Islamic ornamentation; and bell towers, sometimes smaller in scale and paired (McAlester 2013).

Evaluation

Under NRHP Criterion A or CRHR Criterion 1, this building has no significant association with important historic events. The building on this parcel, constructed in 1928, is associated with commercial development in Los Angeles; however, many businesses likely occupied this building, but research did not reveal that the building played a distinct or important role in their respective industries. Therefore, the building does not meet eligibility for the NRHP or CRHR under Criterion A/1.

Under NRHP Criterion B or CRHR Criterion 2, this building is not significant for any associations with the lives of persons important to history. Research did not indicate that any individuals, such as business owners, related to the development and use of this building made demonstrably important contributions to history at the local, state, or national level. Therefore, the building does not meet eligibility for the NRHP or CRHR under Criterion B/2.

Under NRHP Criterion C or CRHR Criterion 3, this building is locally significant because it is an important example of a type, period, or method of construction. The Two-Part Commercial Block and Mission Revival styles proliferated on main streets and commercial rows throughout California, and the nation, during the early twentieth century. The commercial building at 330 N. La Brea Avenue is an excellent example reflecting the twentieth century trends of this style. The building generally retains its overall integrity, with exception of replaced fenestration details; however, it continues to include character-defining features like its two-part commercial design, Mission style parapet, red Spanish tile shingles, exterior lattice work and banding, and ornate Islamic design on the entry and transom. There is no master architect or builder associated with this building; therefore, it is not significant as the work of a master. Therefore, the building does meet eligibility for the NRHP or CRHR under Criterion C/3 at the local level.

Under NRHP Criterion D or CRHR Criterion 4, this building is not significant as a source (or likely source) of important

information regarding history. It does not appear to have any likelihood of yielding important information about historic construction materials or technologies. Therefore, the building does not meet eligibility for the NRHP or CRHR under Criterion D/4.

The building appears to retain its integrity of location, setting, design, workmanship, feeling, and association because it does not appear to have been heavily altered since the date of construction. Modern fenestration compromises integrity of materials. However, the building retains its overall integrity. Therefore, because it meets one of the significance criteria necessary for eligibility for listing in the NRHP or CRHR and retains sufficient integrity to convey that significance, the building appears to be eligible for listing in the NRHP and CRHR under Criterion C/3 at the local level.

The building located at 314 N. La Brea Avenue is a single-story, Art Deco building with a rectangular plan on a concrete foundation. The building is composed of a flat roof with parapets clad in built-up material. The exterior walls are constructed of concrete clad in stucco. Fenestration details include fixed storefront windows.

The building faces west and the façade is characterized by four ornamental diamond-shaped designs in bas-relief that extend vertically beyond the roofline. Other details include four pilasters with five engaged columns that separate the former window openings along the upper portion of the façade. A slight concrete overhang covers the storefront entrance; the overhang supports commercial signage that reads, "WONDERBRETT." The storefront features a recessed entrance flanked on both sides by fixed storefront windows. The north and south elevations are adjoined to the neighboring buildings, and the rear (east) elevation is not visible to the public right-of-way.

Recorded by: Mackall, E. and M. Wilson ***Date:** February 2023 ☒ Continuation ☐ Update

***B10. Significance (continued):**

Research did not reveal significant historical context about the building located at 314 N. La Brea Avenue. The building was constructed between 1932 and 1947 and demonstrates the Art Deco architectural style. The building is located in a densely urban and commercial corridor. Based on this information, the building likely operated as several commercial businesses before it opened as the current occupant, Wonderbrett between 2019 and 2021.

Evaluation

Under NRHP Criterion A or CRHR Criterion 1, this building has no significant association with important historic events. The building on this parcel, constructed between 1909 and 1917, is associated with commercial development; however, many businesses occupied this building, and research did not reveal that the building played a distinct or important role in their respective industries. Therefore, the building is not eligible for the NRHP or CRHR under Criterion A/1.

Under NRHP Criterion B or CRHR Criterion 2, this building is not significant for any associations with the lives of persons important to history. Research did not indicate that any individuals, such as business owners related to the development and use of this building made demonstrably important contributions to history at the local, state, or national level. Therefore, the building is not eligible for the NRHP or CRHR under Criterion B/2.

Under NRHP Criterion C or CRHR Criterion 3, this building is not significant because it is not an important example of a type, period, or method of construction. The Art Deco style building was prolific on main streets and commercial rows throughout the nation during the early twentieth century. The commercial building at 314 N. La Brea Avenue is a typical and unremarkable, late example reflecting the twentieth century trends of this style. The building on this parcel also lacks sufficient integrity for listing on the NRHP and CRHR; this includes the infilled Art Deco details on the façade that existed prior to the 2019 and 2021 alterations. There is no master architect or builder associated with this building; therefore, it is not significant as the work of a master. Lastly, the building includes several alterations on its façade, which include infilled details and new fixed storefront window. Therefore, the building does not meet Criterion C/3 of the NRHP or CRHR.

Under NRHP Criterion D or CRHR Criterion 4, this building is not significant as a source (or likely source) of important information regarding history. It does not appear to have any likelihood of yielding important information about historic construction materials or technologies. Therefore, the building is not eligible for the NRHP or CRHR under Criterion D/4.

In summary, the building does not meet any of the eligibility criteria of the NRHP or CRHR. Therefore, it does not meet eligibility for listing in the NRHP or the CRHR at the national, state, or local level.

The building located at 145 S. Fairfax Avenue, constructed in 1984, is a four-story, Contemporary commercial building with a rectangular plan on a concrete foundation. The building is composed of a flat roof clad in built-up material and covered in several HVAC units. The exterior walls are constructed of concrete rows of marble and fixed windows. The façade is characterized by a single-story entrance flanked to the south by sliding glass doors and fixed windows and to the north by a parking garage entrance. The entrance is topped with large characters that reads, "145 SOUTH." The entrance is covered by a Modern awning sheathed in metal panels. Additional details include concrete stairs and ADA ramps, as well as planter boxes and safety railings. Commercial signage near the roof line includes, "US BANK," and, "COMMERCIAL BANK OF CALIFORNIA." The rear elevation is primarily clad in stucco, includes three rows of fixed windows, provides an exit from the parking garage, and includes a ramp to a below-level garage. The north and south elevations do not include additional fenestration and/or architectural detail.

Recorded by: Mackall, E. and M. Wilson ***Date:** February 2023 ☒ Continuation ☐ Update

***B10. Significance (continued):**

The subject commercial building, constructed in 1984, includes various offices and commercial businesses that occupied the building from the time of its construction. Research did not indicate that any of these previous businesses played significant roles in their respective industries. At the time of this evaluation, the building houses both the US Bank and Commercial Bank of California.

The commercial building demonstrates a Contemporary architectural style. The Contemporary style, popular between circa 1940 and 1980, is characterized by strong roof forms including flat, gabled, shed, or butterfly, typically with deep overhangs; large windows, often aluminum framed; non-traditional exterior finishes include vertical wood siding, concrete block, stucco, flagstone, and mullion-free glass; angular massing; sun shades, screens, or shadow block accents; horizontally oriented commercial buildings; distinctive triangular, parabolic, or arched forms; “eyebrow” overhangs on commercial buildings, and integrated, stylized signage on commercial buildings (McAlester and McAlester 1984:482).

Evaluation

Under NRHP Criterion A or CRHR Criterion 1, this building has no significant association with important historic events. The building on this parcel, constructed in 1984, is associated with commercial development; however, many businesses occupied this building, and research did not reveal that the building played a distinct or important role in their respective industries. Therefore, the building is not eligible for the NRHP or CRHR under Criterion A/1.

Under NRHP Criterion B or CRHR Criterion 2, this building is not significant for any associations with the lives of persons important to history. Research did not indicate that any individuals, such as business owners, related to the development and use of this building, made demonstrably important contributions to history at the local, state, or national level. Therefore, the building is not eligible for the NRHP or CRHR under Criterion B/2.

Under NRHP Criterion C or CRHR Criterion 3, this building is not significant because it is not an important example of a type, period, or method of construction. The Contemporary style building proliferated on main streets and commercial rows throughout the nation during the mid to late-twentieth century. The commercial building at 145 S. Fairfax Avenue is a typical and unremarkable example reflecting the twentieth century trends of this style. The building on this parcel also lacks the high artistic value and distinctive design that would merit listing in the NRHP and CRHR. There is no master architect or builder associated with this building; therefore, it is not significant as the work of a master. Therefore, the building is not eligible for the NRHP or CRHR under Criterion C/3

Under NRHP Criterion D or CRHR Criterion 4, this building is not significant as a source (or likely source) of important information regarding history. It does not appear to have any likelihood of yielding important information about historic construction materials or technologies. Therefore, the building is not eligible for the NRHP or CRHR under Criterion D/4.

In summary, the building does not meet any of the eligibility criteria of the NRHP or CRHR. As a result, it is not able to meet Criterion Consideration G as a building less than 50 years old. Therefore, it does not meet eligibility for listing in the NRHP or the CRHR at the national, state, or local level.

***P3a. Description (continued):**

The building faces north and the façade is characterized by an off-center concrete stairwell with a fixed curtain wall window that provides access to the second and third-story balconies. Additional staircases are located at the western end of the façade. Each balcony includes a metal safety railing clad in horizontal vinyl boards. Fenestration features vinyl framed, horizontal sliding windows and single-entry doors. The east and west elevations do not include any additional fenestration and/or architectural detail. The rear (south) elevation is connected to the adjacent building.

***B10. Significance (continued):**

Research did not reveal significant information about the building located at 123 S. Fairfax Avenue. The design and method of construction indicate it likely operated as a motel or hotel since the time of its construction in 1971. At present, the building operates as the south wing to the Short Stories Hotel directly north of its associated parking lot.

Evaluation

Under NRHP Criterion A or CRHR Criterion 1, this building has no significant association with important historic events. The building on this parcel, constructed in 1971, is associated with commercial and tourist development in the Los Angeles area; however, many businesses likely occupied this building, but research did not reveal that the building played a distinct or important role in their respective industries, nor in the tourist industry of Los Angeles. Therefore, the building is not eligible for the NRHP or CRHR under Criterion A/1.

Under NRHP Criterion B or CRHR Criterion 2, this building is not significant for any associations with the lives of persons important to history. Research did not indicate that any individuals, such as business owners related to the development and use of this building made demonstrably important contributions to history at the local, state, or national level. Therefore, the building is not eligible for the NRHP or CRHR under Criterion B/2.

Under NRHP Criterion C or CRHR Criterion 3, this building is not significant because it is not an important example of a type, period, or method of construction. The Modern style building proliferated on main streets and commercial rows throughout the nation during the mid to late-twentieth century. The commercial building at 123 S. Fairfax Avenue is a typical and unremarkable example reflecting the twentieth century trends of this style. The building on this parcel also lacks the high artistic value and distinctive design that would merit listing on the NRHP and CRHR. There is no master architect or builder associated with this building; therefore, it is not significant as the work of a master. Therefore, the building is not eligible or the NRHP or CRHR under Criterion C/3.

Under NRHP Criterion D or CRHR Criterion 4, this building is not significant as a source (or likely source) of important information regarding history. It does not appear to have any likelihood of yielding important information about historic construction materials or technologies. Therefore, the building is not eligible or the NRHP or CRHR under Criterion D/4.

In summary, the building does not meet any of the eligibility criteria of the NRHP or CRHR. Therefore, it does not meet eligibility for listing in the NRHP or the CRHR at the national, state, or local level.

***P3a. Description:**

The Farmers Market, constructed in 1935, is a complex property composed of various rectangular and irregular shaped buildings that feature an array of Colonial Revival and Spanish Eclectic architectural styles. The market features an overall compound rectangular plan and is composed of gabled, hipped, flat, and pyramidal roof formations; a majority of the roof formations are clad in modern asphalt composition shingles. The market is constructed of a wood frame and sheathed in combinations of wood boards, stucco, and brick veneers. Fenestration details include modern sash windows and storefront systems. The Farmers Market is bounded to the north by Farmers Market Place, to the south by West 3rd Street, to the east by Gilmore Lane, and to the west by South Fairfax Avenue.

The north side of the Farmers Market includes a Colonial Revival bell tower constructed in 1949; the tower features a rectangular plan, a pointed roof with a cupola, horizontal vinyl boards, and a brick veneer. Additional details of the Farmers Market include exposed rafters beneath the wide, overhanging eaves, cupolas, commercial signage, and outdoor patios and balconies. Parking flanks the complex on the north, south, and western elevations. The Rancho La Brea Adobe building is located in the adjacent parcel to the northeast. However, the adobe remains out of view from the public right-of-way.

☐ Continuation ☒ Update

***B10. Significance: Theme** Commercial Development, 1850-1980 **Area** Los Angeles County
Period of Significance 1934-1964 **Property Type** Commercial Building
Applicable Criteria NRHP Criterion A; CRHR Criterion 1

(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity.)

In 1991, Los Angeles City Planning adopted the Farmers Market and Rancho La Brea Adobe property as Los Angeles Historic Cultural Monument number 543. On August 19, 2014, the SurveyLA found that the property continues to meet the criteria for HCM designation because it reflects the broad cultural, political, economic, and social history of the region as an example of a 1930s produce market in Los Angeles. The Farmers Market was built on the land leased from E.B. Gilmore to Roger Dahlhjelm and Fred Beck, the entrepreneurs who developed the market. The Farmers Market features stalls and design elements reminiscent of early roadside produce stands, as a well as a Colonial Revival-style clock tower constructed in 1949, and Gilmore's original adobe single-family residence constructed in 1852; however, it was extensively remodeled in 1880. The adobe residence homed the Gilmore family until 1976, when it was converted into office space. The property retains the level of integrity of location, design, setting, materials, workmanship, feeling, and association it had at the time of last recordation. After review of the previous recordation and current field check and research, the present evaluation concludes that the property appears to meet the criteria for listing in the NRHP and CRHR and the property is considered an historical resource for the purpose of the California Environmental Quality Act (CEQA). The building has been evaluated in accordance with Section 15064.5(a)(2)-(3) of the CEQA Guidelines, using the criteria outlined in Section 5024.1 of the California Public Resources Code. The boundary for the historic property/historical resource is the building itself.

P1. Other Identifier: 800 S. La Brea Avenue
***P2 e. Other Locational Data:** Assessor's Parcel Number (APN): 5084-003-001
***P3a. Description:**

The building located at 800 S. La Brea Avenue, constructed in 1937, is a single-story, Streamline Moderne commercial building with a parallelogram shaped plan on a concrete foundation. The exterior walls are constructed of board form concrete clad in a tile veneer on its north and west elevations. The east elevation includes red brick veneer. Fenestration details include fixed storefront windows. The building is composed of a flat roof clad in built-up material with parapets, as well as projecting commercial signage.

The building faces west and the façade is characterized by a wide awning with a stepped design on its underside. The awning is rounded on the northwest corner and includes a freestanding pole sign that reads, "Firestone." An additional commercial sign is located on the rounded corner that also reads, "Firestone." An additional neon sign hangs from the façade that reads, "All Season Brewing Company." The north and west elevations include standing letters that read, "Complete Car Service."

The façade awning covers several points of entry. The north elevation includes the tile veneer clad entry with a northwest and southwest rounded corner. The entry includes an anodized metal framed single-entry door with sidelights and a transom. The entry door is flanked to the south by a ribbon of fixed rounded windows and to the north by an additional ribbon of fixed rounded windows that wrap onto the north elevation. The central portion of the façade includes a wood, glaze paneled single-entry door flanked by a large roll-up metal gate. The south portion includes a single-story concrete building with a north facing entry door and west facing garage door; the concrete building includes a north facing mural. The north elevation includes an off centered recessed entry with a glazed double-entry door and a transom. A ribbon of eight horizontal fixed windows, accented with black horizontal tiles, is located above the double-entry door. The recessed entry is flanked to the west by a fixed window, as well as the wrapped ribbon of fixed windows, and to the east by additional fixed window, as well as a large thirty-light fixed window with clouded panes. The south elevation is connected to the adjacent building and the rear (east) elevation is not visible the public right-of-way.

The Art Deco Society of Los Angeles inventoried, evaluated, and nominated this property for local designation as a Los Angeles Historic-Cultural Monument in April 2012. The society concluded that the property was eligible for local listing because it exhibits character-defining features of the Streamline Moderne style. The property retains the level of integrity of location, design, setting, materials, workmanship, feeling, and association it had at the time of last recordation. After review of the previous recordation and current field check and research, the present evaluation concludes that the property appears to meet the criteria for listing in the NRHP and CRHR and the property is considered an historical resource for the purpose of the California Environmental Quality Act (CEQA). The building has been evaluated in accordance with Section 15064.5(a)(2)-(3) of the CEQA Guidelines, using the criteria outlined in Section 5024.1 of the California Public Resources Code. The boundary for the historic property/historical resource is the building itself.

☐ Continuation ☒ Update

P1. Other Identifier: 2100 North Highland Avenue
***P2 e. Other Locational Data:** Assessor's Parcel Number (APN): 5575-019-907
***P3a. Description:**

The Lasky DeMille Studio Barn, constructed in 1913 and relocated to its current location in 1927, is a two-story studio barn building with a rectangular plan on a concrete foundation. The building is composed of two-tiered front facing gables with a sharp pitch and wide, overhanging eaves clad in asphalt composition shingles. The south elevation gable end features decorative brackets. A hipped wraparound awning hugs the north and west elevations. The exterior walls are construction of a wood frame sheathed in horizontal wood siding. Fenestration details include vertical sliding sash windows.

The building faces north and the façade is characterized by a wraparound porch entry with a hipped roof supported by eleven square columns. The façade features three air vents, a six-over-six double-hung sash window, and a two-over-two double-hung sash window all within the gable. The gable also includes a single-entry door. The building is entered through the wraparound porch entry. The porch entry includes double-entry barn doors with brace framed construction flanked to the west by three one-over-one double hung sash windows and a single-entry door with brace framed construction. A sign hangs from the hipped porch awning that reads, "Hollywood Heritage Museum." Additional details include exterior light fixtures in the gable.

The west elevation features a ribbon of three one-over-one double-hung sash windows, a standalone one-over-one double-hung sash window, and a pair of one-over-one double-hung sash windows. The southernmost end of the west elevation includes a wood-framed hay door. A commercial sign is located on the gable slope that reads, "Hollywood Heritage Museum – Lasky DeMille Studio Barn, Est. 1913." The south elevation features two air vents and two six light casement windows within the tiered gable end. The southernmost gable end features a double-entry hay door flanked on each side by six light casement windows. The ground level includes a double-entry door constructed of a brace frame accessed by a set of wood stairs. The door is flanked to the west by a six light casement window. The east elevation is not visible to the public right-of-way but appears to include additional fenestration details similar to the associated elevations.

Additional setting details include two historic period light posts located immediately west on a strip of landscaped grass and trees. The two light posts are constructed of cast iron and sit on a poured concrete circular foundation. The base of the cast iron includes a wave-like Art Deco design. Both light posts feature a vertical orientation and include modern LED fixtures that project over the associated parking lot. A maker's mark indicate the light posts were constructed circa 1936.

Period of Significance 1913 **Property Type** Film Studio
Applicable Criteria NRHP Criteria A and B; CRHR Criteria 1 and 2

(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity.)

The California Historical Landmarks Advisory Committee inventoried and evaluated this property in 1956 on behalf of Paramount Pictures Corporation. The property was inventoried as a California Registered Historical Landmark (see attached). In 2014, the property was listed on the National Register of Historical Places (NRHP) for its association with art, communications, entertainment/recreation, and industry (NRIS# 14000034).

The California Historical Landmarks Advisory Committee found the property significant as a state landmark for its association with Cecil B. DeMille, who converted the barn to a studio to film the first feature-length motion picture in Hollywood, *The Squaw Man*, in 1913. Originally located at the corner of Selma Avenue and Vine Street, the studio barn was relocated to its current location in 1927 under the ownership of Paramount Studios. The property retains its overall integrity of location, design, setting, materials, workmanship, feeling, and association. Although the property was relocated in 1927, it was done so in the historic period; the relocation of the building is also associated with its use as a film studio. Therefore, it does not compromise its integrity. After review of the previous recordation and current field check and research, the present evaluation concludes that the property appears to meet the criteria for listing in the NRHP and CRHR and the property is considered an historical resource for the purpose of the California Environmental Quality Act (CEQA). The building has been evaluated in accordance with Section 15064.5(a)(2)-(3) of the CEQA Guidelines, using the criteria outlined in Section 5024.1 of the California Public Resources Code. The boundary for the historic property/historical resource is the building itself.

***P3a. Description:**

The Max Factor Makeup Salon, an Art Deco commercial building constructed in 1916, features a four-story section to the north and one-story section to the south. The building features a rectangular plan on a concrete foundation. The building is composed of flat roof clad in built-up material. The exterior walls are concrete clad in stucco. Fenestration details include metal framed fixed windows.

The building faces east and the north half of the façade is characterized by three bays divided by fluted pilasters without capitals. Each bay is topped by curved pediment-like parapets with floral ornamentation above and a medallion below. The ground story window bays contain protruding marble surrounded window display cases. The cases are framed by half-circle pediments decorated with the floral motif and swags and a metal lintel. The window sashes are concave on the second and third floors and separated by marble panels. The top set of triple windows is crowned with a pediment of a central floral motif and stars. On either side of the windows there are narrow reeded columns with a spike at the top. The central entry to the four-story portion is framed with marble and topped by a floral and scroll ornament with two stylized metal lanterns on each side. The one-story portion of the building is the same style and consists of five bays. The windows and display cases are identical to those on the ground story of the four-story portion. The lower third of the wall is clad in marble with a decorative band at top and metal trim. A neon sign has been added in the past ten years to the one-story façade. The building appears to be minimally altered and is in good condition. The south part of the parcel contains surface parking.

P1. Other Identifier: 5209 Wilshire Boulevard
***P2 e. Other Locational Data:** Assessor's Parcel Number (APN): 5507-023-017
***P3a. Description:**

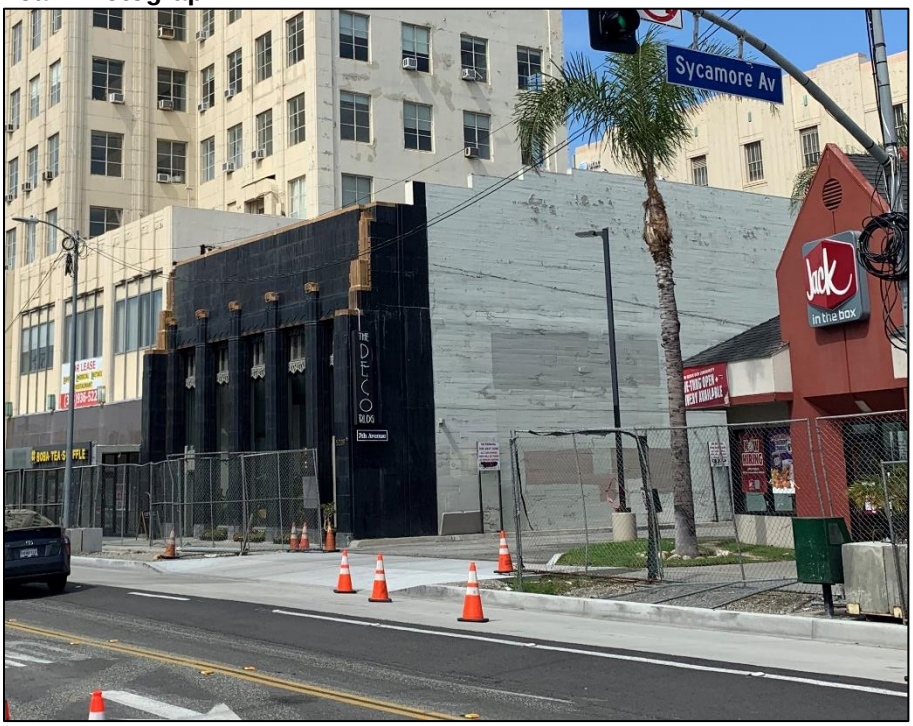

The Zephyn Club, constructed in 1929, is a single-story Art Deco building with a rectangular plan on a concrete foundation. The building is composed of a flat roof clad in built-up material and stepped parapets along the east elevation. The exterior walls are constructed of concrete masonry unit block clad in stucco, which exception of the south facing façade which is sheathed in black and gold terra cotta. Fenestration details include fixed windows.

The building faces south and the façade features five bays of recessed windows separated between obelisk columns that extend 75% of the height of the façade. The remaining 25% is likely used for storage. A large, stepped column defines each corner of the façade, and four smaller ones divide it. The two corner columns extend to the flat roof line. Two double glass, metal-framed doors are adjacent to each corner column. Pressed aluminum sheathing in a zig zag pattern forms rectangular panels above the doors. Circular and triangular aluminum cutwork embellishes the top of each window and extends between the doors at the base of the building.

The east and west elevations do not include any additional fenestration and/or architectural detail; the rear (north) elevation is not visible to the public right-of-way.

Roger Hatheway inventoried the Hollywood Bowl in July 1977. On June 27, 1982, Westec Services, Inc. re-surveyed the Hollywood Bowl for the report titled *Los Angeles Rail Rapid Transit Project* (see attached).

Westec Services, Inc. concluded that the property was eligible for the National Register of Historic Places (NRHP) for its association with the arts and leisure in the early twentieth century. The Hollywood Bowl is listed on the California Register of Historical Resources (CRHR). The property retains its integrity of location, workmanship, feeling, and association it had at the time of last recordation. However, urban development and continuous alterations and maintenance diminish the resource's integrity of design, setting, and materials. After review of the previous recordation and current field check and research, the present evaluation concludes that the property appears to meet the criteria for listing in the NRHP and CRHR and the property is considered an historical resource for the purpose of the California Environmental Quality Act (CEQA). The building has been evaluated in accordance with Section 15064.5(a)(2)-(3) of the CEQA Guidelines, using the criteria outlined in Section 5024.1 of the California Public Resources Code. The boundary for the historic property/historical resource is the building itself.

P1. Other Identifier: 1521 N. Highland Avenue
***P2 e. Other Locational Data:** Assessor's Parcel Number (APN): 5548-014-900
***P3a. Description:**

The Hollywood High School Auditorium, constructed circa 1954, is a New Formalist-style theater building located at the corner of Hawthorne Avenue and N. Highland Avenue in Los Angeles. The building features a rectangular plan with minor irregularities on a concrete foundation. The building is composed of a low-pitch gable roof behind a parapet. The exterior walls are constructed of concrete clad in stucco, with exception of the façade which includes gray, white, and black tile in a mosaic pattern. Fenestration details include sash windows.

The building faces east and the symmetrical façade includes a row of double-entry doors divided by a row of concrete pilasters. The entrance is marked by a flat, rectangular canopy. The entrance is reached by a flight of concrete steps with brick podium foundation. The north elevation is a symmetrical arrangement of rectangular blocks and features five glazed windows between simple pilaster-like projections. Additional details on the north and south elevations include access doors, flights of stairs, and exterior metal piping. The façade, and portions of the north and south elevations, include a mural of famous alumni.

URS Corp. inventories and evaluated this property in March 2010 for the report titled, "Westside Subway Extension, Project No. PS-4350-2000, Cultural Resources Technical Report (261A), Task 14.1.13" (see attached).

URS Corp. concluded that the property was eligible for listing on the NRHP, CRHR, as well as considered a historical resource for purposes of CEQA under Criterion C of the NRHP and Criterion 3 of the CRHR, as a building that significantly embodies the distinctive characteristics of the New Formalism architectural style as applied to a theater or auditorium. The property retains the level of integrity of location, design, setting, materials, workmanship, feeling, and association it had at the time of last recordation. After review of the previous recordation and current field check and research, the present evaluation concludes that the property appears to meet the criteria for listing in the NRHP and CRHR and the property is considered an historical resource for the purpose of the California Environmental Quality Act (CEQA). The building has been evaluated in accordance with Section 15064.5(a)(2)-(3) of the CEQA Guidelines, using the criteria outlined in Section 5024.1 of the California Public Resources Code. The boundary for the historic property/historical resource is the building itself.

 ***Resource Name or #:** (Assigned by recorder) Clem Wilson/ Mutual of Omaha Building

☐ Continuation ☒ Update

P1. Other Identifier: 5225 Wilshire Blvd.
***P2 e. Other Locational Data:** Assessor's Parcel Number (APN): 5508-007-019
***P3a. Description:**

The Clem Wilson/ Mutual of Omaha Building, constructed in 1930, is a twelve-story commercial, office building that features an Art Deco and Streamline Moderne architectural style. The building features a rectangular plan with minor irregularities on a concrete foundation. The building is composed of a flat roof clad in built-up material with parapets. The exterior walls are constructed of concrete and concrete masonry unit block clad in stucco. Fenestration details include metal framed fixed windows.

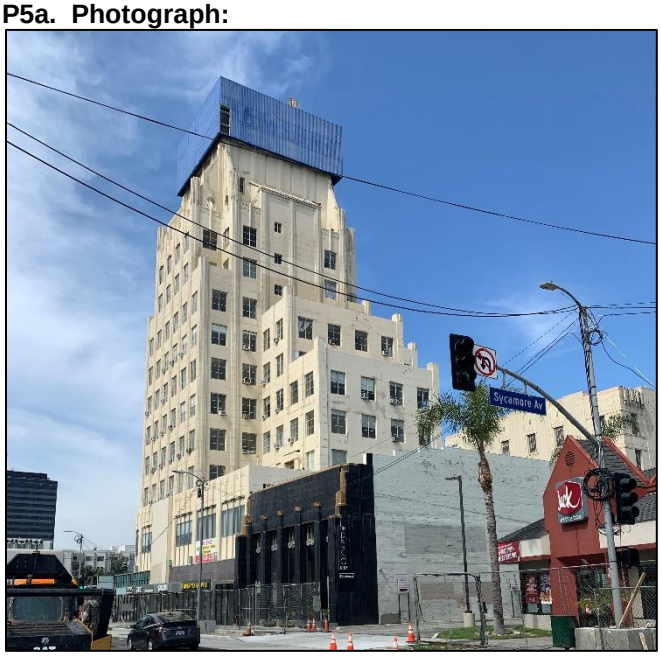

The street level of the building includes modified storefronts that feature a Mexican restaurant, a barbershop, a café, and a boba tea shop. The corner storefront remains vacant at the time of this update. Entrances along the ground floor include modernized recessed doorways with anodized metal storefronts and fixed windows. A slight overhang is located above the storefronts on the south elevation and include commercial signage.

The lower three floors are rounded at the corners in Streamline Modern fashion. The fixed windows are flush with the southwest facing façade. The windows on the second and third story extend vertically for the two floor distance and are comprised of peach-colored panels and rectangular panes of glass. The second and third stories of the façade have been modified with vertical lattice work on the south elevation that previously included a large circular emblem of the Mutual of Omaha logo. The third floor windows are 6-light, double-casement windows that open vertically and are topped by a plain lintel. The decorative relief above the third floor is an alternating tassel and an irregular horizontal zig zag motif.

Other details include square corner posts, at the levels that are stepped, that extend beyond the roof-line and are decorated with geometric reliefs. The high level elevations include deeply molded zig zag ornamentation. The ninth and eleventh floors feature spirals and stylized heads with rocket-like bodies. The build is topped with a metal-framed, boxed structure that supports a commercial screen. The screen reads, "SAMSUNG MOBILE."

The May Company building, constructed between 1939 and 1940, is four story Streamline Modern building located at the corner of S. Fairfax Avenue and Wilshire Boulevard. The building features a rectangular plan on a concrete foundation. The building is composed of a flat roof clad in built-up material and solar panels, as well as parapets. The exterior walls are constructed of concrete clad in stucco, and fenestration details include fixed windows.

The building faces west and the façade is characterized by a large gold, round column that rises from the second story to the roof and is backed by a curved black tile surround. The ground level window bays are steel frame fixed pane glass window walls, which are tucked beneath a cantilevered roof that curves around the southeast corner. The window bays on the top story are narrow horizontal bands, slightly protruding from the wall, that are filled with metal frame, fixed, single pane sashes. The primary façade is generally symmetrical with a main entry on the northwest corner filled with metal frame, fixed glass pane, standard commercial doors.

P1. Other Identifier: 8703 Santa Monica Boulevard
***P2 e. Other Locational Data:** Assessor's Parcel Number (APN): 4339007012
***P3a. Description:**

The building located at 8703 Santa Monica Boulevard, constructed in 1928, is a two-story, Gothic Revival commercial building with a rectangular plan on a concrete foundation. The building occupies the front of the lot and has a southeast-facing orientation. The building is composed of one story on the west elevation and two stories with a corner tower and thin tower on the east elevation. The building features a rectangular plan and irregular massing, as well as features a medium-pitch gabled roof on the on-story portion and a medium-pitch pyramidal roof on the tower; the roofs are sheathed in red clay tile shingles. The exterior walls are sheathed in stucco and a beige masonry veneer. The main entry is recessed on the southwest corner; the main entry and other entries to their respective storefronts are filled with metal framed, fixed pain class commercial doors. The primary façade is asymmetrical.

Fenestration details include irregularly arranged windows with rounded arches, a metal frame, and fixed pane glass storefront sashed on the ground floor. The second floor includes a cantilevered bay window on the southeast corner filled with wood frame, multi-light casement sashes and topped with delicate tracery. The second story also contains two window bays with pointed arch tracery above and engaged pilasters on the sides and a group of four rectangular window bays surrounded by tracery; the bays are filled with wood frame, multi-light casement sashes.

Johnie's Coffee Shop Restaurant, constructed in 1956, is a Futurist-Googie-style restaurant building that occupies the southeast corner of parcel at the corner of South Fairfax Avenue and Wilshire Boulevard. The building features a rectangular plan on a concrete foundation and is composed of an asymmetrical folded roof covered in roll roofing and studded with marquee-style lights. Metal cursive letters on the south elevation read, "Johnie's Coffee Shop Restaurant," and on the east elevation they read, "Coffee Shop Restaurant." The exterior walls are sheathed in a combination of veneer rough cut rock, stucco, and wood paneling beneath the window details. Aluminum-frame, fixed pane glass sashes form a continuous band of glass around the building.

The building faces south and the façade is asymmetrical with an entry on the south elevation that is filled with a metal frame, fixed pane glass standard commercial door with transom. Additional details include a mural panted between the roof line and fenestration details on the east elevation.

P1. Other Identifier: 555 S. Ogden Drive
***P2 e. Other Locational Data:** Assessor's Parcel Number (APN): Multiple
***P3a. Description:**

The Park La Brea Garden Apartments, constructed between the 1940s and 1950s as Parklabrea, is a large garden apartment complex that sits on a 175-acre superblock bounded by 3rd Street, Hauser Boulevard, Drexel Avenue, Alta Vista Boulevard, 6th Street, Fairfax Avenue, Colgate Avenue, and multiple parcel lines. The complex features 49 residential buildings; this includes 31 two-story buildings constructed in 1943 and 18 thirteen-story high rises completed in 1951. Additional resources include community buildings and parking structures. The buildings are arranged in a radial plan, with intersection interior streets that converge at circular landscape spaces. The two-story buildings are primarily U-shaped, include surrounding landscape courtyards, and feature a Modern interpretation of the American Colonial Revival style. The two-story buildings are clad in brick and feature steel casement windows. The high-rises are X-shaped, feature a Modern style, and include unornamented concrete cladding and steel casement windows. All the buildings are contributing resources to the overall Park La Brea Garden Apartments. There are no significant alterations.

***B10. Significance: Theme** Multi-Family Residential, 1910-1980 **Area** Los Angeles County
Period of Significance 1940s-1950s **Property Type** Apartment complex
Applicable Criteria NRHP Criterion C; CRHR Criterion 3

(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity.)

Los Angeles City Planning inventoried and evaluated the Park La Brea Garden Apartments on January 26, 2015 as the part of the SurveyLA project. Los Angeles City Planning concluded that the property was eligible for the National Register of Historic Places (NRHP) under Criterion C, and the California Register of Historical Resources (CRHR) under Criterion 3, as an apartment complex that embodies the distinctive characteristics of a garden apartment complex constructed between the 1940s and 1950s. The complex was designed by Leonard Schultze & Associates with Earl T. Heitschmidt. The property retains the level of integrity of location, design, setting, materials, workmanship, feeling, and association it had at the time of last recordation. After review of the previous recordation and current field check and research, the present evaluation concludes that the property appears to meet the criteria for listing in the NRHP and CRHR and the property is considered an historical resource for the purpose of the California Environmental Quality Act (CEQA). The building has been evaluated in accordance with Section 15064.5(a)(2)-(3) of the CEQA Guidelines, using the criteria outlined in Section 5024.1 of the California Public Resources Code. The boundary for the historic property/historical resource is the building itself.

Refer to the attached SurveyLA evaluation of the Park La Brea Garden Apartments.
