A Statistical Abstract Supplement

County and City Data Book

1983

10th Edition

U.S. Department of Commerce BUREAU OF THE CENSUS

Subjects Covered, by Type of Area

[Subjects covered in this volume are indicated by an "X" in the applicable geographic column. State data are found in table A on pages 1-15; county data in table B on pages 17-647; city data in table C on pages 649-809; and data for places in table D on pages 811-927]

Subject	States	Counties	Cities	Places
Land area	X	X	X	X
Population:				
Total persons	X	X	X	X
Age	X	X	X	X
Sex	X	X	X	
Race	X	X	X	
Spanish origin	X	X	X	
Urban	X	X	X	
Residence in 1975	X	X		
Place of birth	X	X	X	
Group quarters	X	X	X	
Households *(See also* Housing, Occupied units):				
Type	X	X	X	
Income	X	X	X	X
Families:				
Type	X	X	X	
Income	X	X	X	X
Poverty status	X	X	X	
Vital statistics:				
Births	X	X	X	
Deaths	X	X	X	
Marriages	X	X		
Divorces	X	X		
Health:				
Physicians	X	X		
Dentists	X	X		
Nurses	X	X		
Hospitals	X	X	X	
Nursing homes	X	X		
Medicare (health insurance)	X	X		
Social insurance and health services:				
Social Security program	X	X		
Medicare (health insurance)	X	X		
Supplemental Security Income program	X	X		
Crime and law enforcement:				
Type of offense	X	X	X	
Police protection expenditures	X	X	X	
Housing:				
Building permits	X	X	X	
Total units	X	X	X	X
Year-round units:				
Vacancy status	X	X	X	
Units in structure	X	X	X	
Air conditioning	X	X		
Year structure built	X	X	X	
Occupied units:				
Lacking complete plumbing facilities	X	X	X	
With 1.01 or more persons per room	X	X	X	
House heating fuel	X	X	X	
Tenure	X	X	X	X
Financial characteristics	X	X	X	X
Journey to work:				
Employment/residents ratio	X	X	X	
Place of work	X	X	X	
Means of transportation	X	X	X	
Education:				
School enrollment	X	X	X	
Years of school completed	X	X	X	
Local government expenditures	X	X	X	
Labor force:				
Female	X	X	X	
Employment status	X	X	X	
Unemployment	X	X	X	
Industry	X	X	X	
Class of worker	X	X	X	
Journey to work	X	X	X	

Subject	States	Counties	Cities	Places
Income:				
Money income:				
Families	X	X	X	X
Households	X	X	X	X

CENSUS REGIONS AND GEOGRAPHIC DIVISIONS OF THE UNITED STATES

U.S. DEPARTMENT OF COMMERCE

BUREAU OF THE CENSUS

Introduction

This volume, the 10th issue in the *County and City Data Book* series, presents a variety of information on States, counties, cities, and places in the United States. These statistics represent generally useful summary measures that are available in comparable form for the geographic areas covered. For this edition, many of the results from the 1980 Census of Population and Housing have been emphasized and presented, especially sample data on such subjects as education, labor force, income, and journey to work. Information has also been included for the first time on nursing homes, Medicare, personal income and earnings, bond ratings, and heating- and cooling-degree days. Some of the other subjects follow:

- Agriculture
- Area and population
- Banks
- Climate
- Crimes
- Elections
- Government finance and employment
- Health
- Households
- Housing
- Manufactures
- Poverty
- Retail and wholesale trade
- School enrollment
- Vital statistics

In addition to statistics from the 1980 Census of Population and Housing, data are presented from the 1977 Censuses of Governments, Manufactures, Wholesale Trade, Retail Trade, and Service Industries, and the 1978 Census of Agriculture. Data are also available from the following governmental and private agencies: Bureau of Economic Analysis, Bureau of Labor Statistics, Energy Information Administration, Federal Bureau of Investigation, Federal Deposit Insurance Corporation, Federal Home Loan Bank Board, Health Care Financing Administration, National Center for Health Statistics, National Oceanic and Atmospheric Administration, Office of Personnel Management, Social Security Administration, American Dental Association, American Hospital Association, American Medical Association, American Nurses Association, Elections Research Center, International City Management Association, and Moody's Investors Service, Inc.

Explanations of Symbols and Terms.—The following symbols are used in the statistical tables:

- – Zero.
- B Base figure too small to meet statistical standards for reliability of derived figure.
- D Figure withheld to avoid disclosure of information pertaining to a specific organization or individual.
- NA Data not collected, tabulated, or otherwise available separately.
- S Figure suppressed; does not meet publication standards for reasons other than those covered by symbols B and D, above.
- X Figure not applicable because column heading and stub line make an entry impossible or meaningless.
- Z Rounds to less than half the unit of measure shown.

The following terms are used throughout this publication:

An **average** is a number or value that is used to represent the "typical value" of a group of numbers. It is regarded as a measure of "location" or "central tendency" of a group of numbers.

The **arithmetic mean** is an average derived by summing the individual item values of a particular group and dividing the total by the number of items (e.g., average monthly payment of Social Security benefits to retired workers). It is often referred to simply as the "mean" or "average."

The **median** of a group is the middle number or value when each item in the group is arranged according to size (e.g., median monthly costs per specified owner-occupied year-round housing unit). It generally has the same number of items above it and below it.

A **rate** is a quantity or amount of an item measured in relation to a number of units of another item (e.g., the number of births per 1,000 persons. The birth rate is obtained by dividing the number of births for a given

year by the population as of a specified date and multiplying the result by 1,000).

Per capita is a rate per individual (e.g., per capita direct local general expenditure).

A **percent** is a rate per 100 units of an item (e.g., percent of persons 25 years old and over, with 12 or more years of school completed).

Arrangement of tables.—The data in this book are organized in four tables: Table A presents figures for the United States as a whole, each geographic region and division, and each State. Table B presents for each county data for exactly the same items as those shown in table A. Table C presents data for cities (incorporated places) with 25,000 or more inhabitants in 1980. Table C differs somewhat in content from tables A and B. For example, data on agriculture, shown for counties, are not applicable to cities; climate data, shown for cities, are not available for counties.

Table D presents data for every place with 2,500 or more inhabitants in 1980. This table includes both incorporated places (e.g., cities) and census designated places. Also included are data for towns and townships with 2,500 or more inhabitants in 11 States, mostly in the Northeast, where these units have the greatest importance. Since the decennial census is the only uniform source of data for all of these areas and places of 2,500 or more inhabitants are so numerous, the data in table D are limited to 15 items from the 1980 Census of Population and Housing.

Data on metropolitan areas are not included in this book. A companion volume, providing summary data utilizing the new metropolitan statistical area concepts defined by the Office of Management and Budget as of June 1983, will follow in late 1983 or early 1984. If you wish to be notified of the release of that volume, please send your name and address to the Chief, Statistical Compendia Staff, Data User Services Division, U.S. Bureau of the Census, Washington, D.C. 20233.

To assist in interpreting the statistics presented, text explaining geographic concepts and codes and the data items of each table is included, along with source notes. In addition, supplemental information is provided in maps and charts.

Use of percents in place of absolute figures.—The figures for many subject items are presented in percentage form. In most cases where this occurs, the items on which the percents are based are shown in absolute or primary form (e.g., actual counts or dollars). This enables the user to convert the percents to actual figures by a simple computation.

Although percents in themselves are often more revealing analytically than the actual figures they reflect, the decision to use percents in place of absolute figures for a particular item or group of items was primarily a practical one. A percent figure requires less space (usually four-digit places, including one for the decimal) than an absolute figure (usually five to nine digits). The space saved thereby enables additional subject items to be shown.

Statistical reliability and responsibility.—All data from censuses, surveys, or administrative records are subject to error arising from a number of factors: Sampling variability (for statistics based on samples), reporting errors in the data for individual units, incomplete coverage, nonresponse, imputations, and processing error.

For some items, details may not add to the totals shown; for example, a State total may differ from the sum of the component counties, or the U.S. total may differ from the sum of the States. Rounding of the data may be the reason for these occurrences, or the total may include values that could not be allocated to the lower geographic levels shown. Other examples are generally footnoted in the tables or explained in the text.

The Bureau of the Census cannot accept the responsibility for the accuracy or limitations of the data presented in this publication, other than for those it collects. The responsibility for selection of the material and for proper presentation, however, rests with the Bureau.

Sources of data.—Source references are given for each item of data included in this volume. For additional information on data presented, please consult the source publications, available in local libraries, or write to the agencies indicated in "Source Notes and Explanations." Users of this volume and of the *Statistical Abstract of the United States* and its other supplements are urged to make their data needs known for consideration in planning future editions. (See "Statistical Abstract Publications," inside back cover.) Suggestions and comments for improving coverage and presentation of data should be sent to the Director, U.S. Bureau of the Census, Washington, D.C. 20233.

Availability of computer tape.—Computer tapes containing the data for the *Data Book* are available. The process of reproducing selected items of data on computer tapes for appreciably less than the total cost of the entire file would not be feasible because of the additional programming and computer processing that would be required. For further information, write to the Data User Services Division, Customer Services Branch, U.S. Bureau of the Census, Washington, D.C. 20233.

For more information concerning compatibility of these tapes with various computers or similar matters, please write to the Chief, Data User Services Division, U.S. Bureau of the Census, Washington, D.C. 20233.

Geographic Concepts and Codes

Areas for Which Data Are Presented

Regions, divisions, and States.—Table A shows data for States grouped by geographic regions and divisions. The 50 States and the District of Columbia are the primary constituent units of the United States. The groupings in this publication are those used for many decades by the Bureau of the Census. In this geographic arrangement, the United States is divided into four major regions, which are further subdivided into nine geographic divisions; each is composed of a specific group of contiguous States, except that Alaska and Hawaii are included in the Pacific division of the West region.

Counties.—Table B presents data for counties and county equivalents, which are the primary divisions of States. In Louisiana, these divisions are known as parishes. In Alaska, the county equivalents are the organized boroughs together with the census areas that were developed for general statistical purposes by the State of Alaska and the Census Bureau. Four States—Maryland, Missouri, Nevada, and Virginia—have one or more incorporated places that are legally independent of any county and thus constitute primary divisions of their States. Similarly, the portion of Yellowstone National Park in Montana is treated as a county equivalent. The District of Columbia has no primary divisions; the entire area is considered equivalent to a county for census purposes. The 133 areas classified as county equivalents for the 1980 census include 11 organized boroughs and 12 census areas in Alaska; the District of Columbia; 64 parishes in Louisiana; Baltimore city, Maryland; St. Louis city, Missouri; the part of Yellowstone National Park in Montana; Carson City, Nevada; and 41 independent cities in Virginia.

Most data for Alaska were published for 29 census divisions recognized in the 1970 census; a minor redefinition occurred in July 1972 when North Slope Borough was established. Extensive revision resulted in 23 boroughs/census areas recognized in the 1980 census and shown in this publication. This causes some problems in data presentation. For 1980, data from noncensus sources may not relate to exactly the same geographic areas as the census population figures, resulting in slightly inaccurate rates. Eleven of the entities experienced no significant change in area definition between July 1972 and January 1980, although some name changes did occur, as follows:

Borough/Census Area (1980)	Census Division (1970)
Anchorage	Anchorage
Bristol Bay	Bristol Bay Borough
Fairbanks North Star	Fairbanks
Juneau	Juneau
Ketchikan Gateway	Ketchikan
Kobuk	Kobuk
Kodiak Island	Kodiak
Matanuska-Susitna	Matanuska-Susitna
Nome	Nome
North Slope	Barrow-North Slope
Wade Hampton	Wade Hampton

Six of the entities consist of a 1970 census division plus or minus some territory, as indicated below:

Borough/Census Area (1980)	Census Division (1970)
Aleutian Islands	Aleutian Islands minus territory to Dillingham
Dillingham	Bristol Bay plus territory from Aleutian Islands
Haines	Haines minus territory to Skagway-Yakutat-Angoon

Borough/Census Area (1980)—Con.	Census Division (1970)—Con.
Sitka	Sitka minus territory to Wrangell-Petersburg
Southeast Fairbanks	Southeast Fairbanks plus territory from Upper Yukon
Wrangell-Petersburg	Wrangell-Petersburg plus territory from Sitka minus territory to Skagway-Yakutat-Angoon

Two 1980 entities represent a combination of census divisions: Kenai Peninsula Borough is composed of the Kenai-Cook Inlet and Seward Census Divisions; Prince of Wales-Outer Ketchikan Census Area is composed of Outer Ketchikan and Prince of Wales Census Divisions. Two 1980 census areas result from a combination of census divisions plus some territory from other divisions: Skagway-Yakutat-Angoon Census Area is composed of Angoon and Skagway-Yakutat Census Divisions plus small portions of Haines and Wrangell-Petersburg Census Divisions; Valdez-Cordova Census Area is composed of Cordova-McCarthy and Valdez-Chitina-Whittier Census Divisions plus a small portion of Southeast Fairbanks Census Division. Data for the other two census areas generally are shown as NA (not available) because major splits of census divisions are involved: Bethel Census Area is composed of Bethel Census Division and approximately half of Kuskokwim Census Division; Yukon-Koyukuk Census Area is composed of Yukon-Koyukuk Census Division, approximately half of Kuskokwim Census Division, and most of Upper Yukon Census Division.

Data from the 1978 Census of Agriculture for Alaska are only available for five groupings of census divisions. The groupings of census divisions and the groupings of current boroughs/census areas are identical for the Juneau and Kenai Peninsula areas but differ for the Aleutian Islands, Anchorage, and Fairbanks areas. The Aleutian Islands area includes the Aleutian Islands, Barrow-North Slope, Bethel, Bristol Bay, Bristol Bay Borough, Kobuk, Kodiak, Nome, and Wade Hampton Census Divisions. The Anchorage area includes Anchorage, Cordova-McCarthy, Matanuska-Susitna, and Valdez-Chitina-Whittier Census Divisions. The Fairbanks area includes Fairbanks, Kuskokwim, Southeast Fairbanks, Upper Yukon, and Yukon-Koyukuk Census Divisions. See the above text for changes between census divisions and boroughs/census areas.

Data for Virginia usually have entries for all counties and independent cities (county equivalents), but in some cases data for an independent city are included with the surrounding county. This has been footnoted on the appropriate entries of table B, and adjustments have been made to the population figures used in calculating any rates.

For two subject areas, physicians and agriculture, data for most independent cities have been included with the appropriate counties. For these subject areas, a footnote appears on the Virginia State total that refers the user to this section of the text; the table entries for the independent cities involved are "-." Any rates shown are based on adjusted population figures. The following list identifies the Virginia independent cities that have been combined and the county in which each is included:

Independent city	County
Alexandria	Fairfax
Bedford	Bedford
Bristol	Washington
Buena Vista	Rockbridge
Charlottesville	Albemarle
Clifton Forge	Alleghany
Colonial Heights	Chesterfield
Covington	Alleghany
Danville	Pittsylvania
Emporia	Greensville
Fairfax	Fairfax
Falls Church	Fairfax
Franklin	Southampton
Fredericksburg	Spotsylvania
Galax	Carroll
Hampton	York
Harrisonburg	Rockingham
Hopewell	Prince George
Lexington	Rockbridge
Lynchburg	Campbell
Manassas	Prince William
Manassas Park	Prince William
Martinsville	Henry
Newport News	York
Norfolk	Chesapeake (independent city)
Norton	Wise
Petersburg	Dinwiddie
Poquoson	York
Portsmouth (for agriculture)	Chesapeake (independent city)
Portsmouth (for physicians)	Norfolk (independent city)
Radford	Montgomery
Richmond	Henrico
Roanoke	Roanoke
Salem	Roanoke

Independent city—Con.	County—Con.
South Boston	Halifax
Staunton	Augusta
Waynesboro	Augusta
Williamsburg	James City
Winchester	Frederick

Cities.—Table C shows data for cities. As used in this volume, the term "city" refers to those places that have been incorporated as cities, boroughs, towns, and villages under the laws of their respective State with the following exceptions: the towns in the New England States, New York, and Wisconsin and the boroughs in Alaska and New York. The boroughs in New York, while not cities, are presented in table C following New York city; the boroughs in Alaska are county equivalents and are shown in table B. The towns in the States noted above are treated as minor civil divisions (MCDs) for census purposes, similar to townships in other States; data for MCDs are presented in table D.

The cities for which data are included in table C are those incorporated places that had a population of 25,000 or more in 1980, with the exception of Hawaii, for which the Bureau does not recognize any incorporated places, and the five boroughs of New York city, which are MCDs. In the case of Hawaii, the seven census designated places (CDPs) with a population of 25,000 or more in 1980 are shown. Data from non-census sources for Hawaii are usually shown with county data for Honolulu CDP footnoted appropriately and NA (not available) for the other six CDPs, which, with the exception of Hilo, are all located in Honolulu County.

A useful census publication for relating changes in city data over time is *Boundary and Annexation Survey: 1970-1979,* Report GE-30-4. This publication lists such things as effects of incorporations and annexation activity that could have a significant impact on how certain changes are interpreted.

Places.—Table D presents data for places and MCDs (in 11 States) with 2,500 or more inhabitants in 1980. Typically, places are discrete settlements, usually occupying only a portion of the county in which they are located. Places may extend across county boundaries but never across State boundaries. Two types of places are recognized in the 1980 census—incorporated places, discussed previously under Cities, and CDPs, as defined below.

Census designated places.—As in the 1950, 1960, and 1970 censuses, boundaries were delineated for closely settled communities without corporate limits or status. In the 1970 and earlier censuses, the name of each such place was followed by (U), meaning unincorporated place. In 1980, the description for each such place was changed to (CDP) meaning census designated place to identify clearly that it was defined for census purposes and to avoid confusion in States where many "unincorporated places" are parts of incorporated MCDs. To be recognized for the 1980 census, CDPs must have a minimum 1980 population as follows:

1. All States except Alaska and Hawaii
   a. Inside urbanized areas with one or more places with a population of 50,000 or more (5,000)
   b. Inside urbanized areas with no place of 50,000 population (1,000)
   c. Outside urbanized areas (1,000)
2. Alaska (25)
3. Hawaii (300)

Minor civil divisions.—In 11 States (Connecticut, Maine, Massachusetts, Michigan, New Hampshire, New Jersey, New York, Pennsylvania, Rhode Island, Vermont, and Wisconsin), data are presented for MCDs. These areas are subdivisions of counties established under State law. They are variously designated as towns, townships, and boroughs. If an MCD coincides with a CDP, data are shown for the MCD only.

Geographic Codes

Region, division, and State codes are presented in the first column on the first page of items in table A. In table B, State and county codes and, where appropriate, corresponding metropolitan statistical area/primary metropolitan statistical area (MSA/PMSA) codes are presented in the first two columns on the first page of each set of items in the table. In table C, State and place codes and, where appropriate, corresponding MSA/PMSA codes are presented in the first two columns on the first page of each set of items in the table. Table D shows State, place, or MCD sequence codes in the first column on each page of items. Code numbers facilitate cross-reference among statistics for the areas included in this volume and are helpful in processing related computer tapes.

The codes for States, counties, and metropolitan areas are those established in the Federal Information Processing Standards Publications (FIPS PUB) series of the National Bureau of Standards (NBS). This is the official publication series relating to Federal computer and information processing standards adopted and promulgated under the provisions of Public Law 89-306 and under U.S. Office of Management and Budget (OMB) Circular A-86. The FIPS series contain Federal standards for hardware, software, applications, and data.

The following FIPS PUBs are the sources of the codes used:

5-1. *States and Outlying Areas of the United States* (as amended by NBS)
6-3. *Counties and County Equivalents of the United States* (as amended by NBS)
8-5. *Metropolitan Statistical Areas* (as amended by OMB on June 30, 1983)
Note: Revision to 8-4 in process.

Each county code shown is the combination of the FIPS two-digit State code followed by the three-digit FIPS county code. The State code is a sequential numbering, with some gaps, of the alphabetical arrangement of the States and the District of Columbia: Alabama (01) to Wyoming (56). Within each State, the counties and county equivalents are numbered in alphabetical order, beginning with 001 (usually omitting even numbers), except that independent city listings begin with 510, follow the listings of counties in their respective States and usually are multiples of 5. The county code, when prefixed by the State code, distinguishes each county in the United States.

The four-digit MSA/PMSA codes preceding county and place codes in tables B and C identify the metropolitan areas in which these entities are located. The codes represent the areas as defined by the Office of Management and Budget on June 30, 1983. An asterisk (*) following the code indicates the code is for a PMSA, not an MSA. A PMSA is a component of a consolidated metropolitan statistical area (CMSA). Appendix A of this publication is a listing of the new MSAs, CMSAs, PMSAs, and their county components (place and MCD components for New England) with their 1980 population. Other data for these areas are not presented in this volume but will be published in a forthcoming special supplement, *Metropolitan Area Statistics, 1983.*

The codes for regions, divisions, places, and MCDs are those established by the Bureau of the Census. The codes for places and MCDs are published in *Geographic Identification Code Scheme, 1980* (GICS). The information in GICS is also available on computer tape or microfiche. GICS is used as a source of the geographic codes for counties, places, and MCDs. It provides a means of associating area names with the geographic codes. For places, the four-digit census place codes are used; for MCDs, the four-digit MCD sequence codes are used.

Source Notes and Explanations

Table A—States

Table A presents 216 items of data for the United States as a whole, each census geographic region and division where possible, the States, and the District of Columbia.

States are grouped by census region and division in this presentation. On the first page of the table, the stub presents Federal Information Processing Standards (FIPS) codes for each State. For a discussion of FIPS codes, see "Geographic Concepts and Codes." Data items are numbered from item 1 to item 216 across the top of the pages. In the text, an "A" precedes the item numbers to refer readers to information on items in tables A and B.

Table B—Counties

In table B, data are presented for the same 216 items as in table A for each State and for each of the 3,137 counties and county equivalents (boroughs, independent cities, parishes, etc.).

Counties and county equivalents are presented in alphabetical order within States, which are also presented in alphabetical order. Independent cities, which are found in Maryland, Missouri, Nevada, and Virginia, are placed at the end of the county listings for those States. Data items are numbered from 1 to 216 across the top of the pages. All 216 items of data are provided in 14 consecutive pages for each of the 45 sets of counties, etc., before the listing is continued. Where the counties in a State carry over from one set to the next, corresponding data items appear exactly 14 pages apart.

FIPS codes for States and counties, with corresponding metropolitan statistical area/primary metropolitan statistical area (MSA/PMSA) codes, are shown in the first two columns on the first page within each set of 14 pages. These codes are given to facilitate cross-reference with other publications and to provide necessary information for access to data available on computer tape. For more information regarding these code numbers, see "Geographic Concepts and Codes," p. xix.

AREA AND POPULATION

Items A1-22. General note.

Decennial censuses.—The population statistics for 1980 are based on results from the 1980 Census of Population and Housing, conducted by the Bureau of the Census as of April 1, 1980. As provided by article 1, section 2, of the U.S. Constitution, adopted in 1787, a census is taken every 10 years commencing with 1790. The original purposes of the census were to apportion the seats in the U.S. House of Representatives based on the population of each State and to derive an equitable tax on each State for the payment of the Revolutionary War debt. Through the years, the Nation's needs and interests have become more complex, and the content of the decennial census has changed accordingly. Presently, census data not only are used to apportion seats in the House and to aid legislators in the realignment of legislative district boundaries, but are also used in the distribution of billions of Federal dollars each year, and are vital to private firms for such functions as market analysis, site selection, and environmental impact studies.

Data presented in this publication from the 1980 decennial census are based on tabulations of 100-percent, or complete, counts (i.e., information obtained for all persons and housing units) and sample estimates (i.e., additional information asked of approximately one out of every six households in most areas). In most cases, the sources used for these data were machine-readable computer files or tapes. Data from the 1980 Census of Population and Housing are released in three types of data products—computer tapes, printed reports, and microfiche. The Census Bureau has released or will release most summary data on tape in a series of public-use "files" called summary tape files (STF). Each STF constitutes a particular set of data; most summary tape files have two or more parts (designated by letters, i.e., "A," "B," etc.) that differ in the types of geographic areas for which data are reported. Items from the 1980 census presented in this publication were excerpted from STF 1A, STF

1C, STF 3A, and STF 3C and are so identified in the source notes for items. STF 1 contains complete-count data such as age, sex, and household type; STF 3 contains sample data such as migration, education, labor force, income, and home-heating fuel.

Much of the data found on summary tape files are also released in printed reports or on microfiche. The population and housing items shown in this publication appear or will appear in the *1980 Census of Population, Characteristics of the Population* (series PC80-1), and the *1980 Census of Housing, Characteristics of Housing Units* (series HC80-1). Each of these volumes is subdivided into "chapters" issued as separate reports. *Number of Inhabitants* (series PC80-1-A) and *General Population Characteristics* (series PC80-1-B) present population data collected on a 100-percent basis. *General Social and Economic Characteristics* (series PC80-1-C) and *Detailed Population Characteristics* (series PC80-1-D) present data collected on a sample basis. In the two housing "chapters," *General Housing Characteristics* (series HC80-1-A) presents data collected on a 100-percent basis, and *Detailed Housing Characteristics* (series HC80-1-B) presents data collected on a sample basis.

For the 1980 census, two sampling rates were employed. For most of the country, one in every six households (about 17 percent) received the "long form" or sample questionnaire; in counties, incorporated places, and minor civil divisions estimated to have fewer than 2,500 inhabitants, every other household (50 percent) received the sample questionnaire to increase the reliability of sample data in small areas. Exact agreement is not expected between data based on samples and data resulting from complete counts. Sample estimates may be used with confidence where large numbers are involved and are assumed to indicate patterns, trends, and relationships where small numbers are involved. Standard errors for the sample estimates can be determined by using information in the appendixes to the PC80-1-C and HC80-1-B reports listed above.

Persons enumerated in the census were counted as inhabitants of their usual place of residence, which generally means the place where a person lives and sleeps most of the time. This place is not necessarily the same as a legal residence, voting residence, or domicile. In the vast majority of cases, however, the use of these different bases of classification would produce substantially the same statistics, although appreciable differences may exist for a few areas.

The implementation of this practice has resulted in the establishment of residence rules for certain categories of persons whose usual place of residence is not immediately apparent (e.g., children in boarding schools below the college level were counted at their parental home while college students were counted at their college of residence). As in the above example, persons were not always counted as residents of the place where they happened to be staying on census day. However, persons without a usual place of residence were counted where they were enumerated.

For detailed discussions of the background, purposes, planning, and procedures used for the 1980 Census of Population and Housing, as well as a facsimile of the questionnaires, and descriptions of the data products resulting from the census (including printed reports, summary tape files, and microfiche), see U.S. Bureau of the Census, *1980 Census of Population and Housing: Users' Guide* (series PHC80-R1).

Boundary changes.—The boundaries of some areas changed between January 1, 1970, and January 1, 1980. The historic counts shown for counties have been adjusted for such changes where possible; counts for cities have not been adjusted and thus reflect the population as defined for each census.

Item A1. Land area, 1980.

Source: U.S. Bureau of the Census, *1980 Census of Population, Characteristics of the Population, Number of Inhabitants* (series PC80-1-A); and unpublished data. Data shown may reflect revisions made after publication.

Land area includes dry land and land temporarily or partially covered by water, such as marshland, swamps, and river floodplains. In addition, it generally includes streams, sloughs, estuaries, and canals less than one-eighth of a statute mile in width, and lakes, reservoirs, and ponds less than 40 acres in area; for Alaska, the corresponding values are one-half mile and 640 acres.

Data are shown in square miles. To derive area in square kilometers, multiply by 2.59.

See also general note for items A1-22.

Items A2-22. Population—total and general characteristics, 1980.

Source: U.S. Bureau of the Census, *1980 Census of Population and Housing.* Items A2-6, A12, and A17-21: Summary Tape File 1C; items A7-11, A13-16, and A22: Summary Tape File 3C.

Figures for total persons (item A2) are based on a complete, or 100-percent, count of the population as of April 1, 1980.

Rank numbers (item A3) are assigned on the basis of population size, with each area placed in descending order, largest to smallest. Where ties occur—two or more areas with identical populations—the same rank is assigned to each of the tied areas. In such cases, the following rank number is omitted so that the lowest rank is usually equal to the number of areas ranked.

Percent change (item A4) represents simple percent change between 1970 and 1980.

Population per square mile (item A5) is the average number of inhabitants per square mile of land area. These figures are derived by dividing the total number of residents in the specified geographic area by the number of square miles of land area. To determine population per square kilometer, multiply the population per square mile by .3861.

According to the 1980 census definition, the urban population (item A6) comprises all persons living in (a) places of 2,500 or more inhabitants incorporated as cities, villages, boroughs (except in Alaska and New York), and towns (except in the New England States, New York, and Wisconsin), but excludes those persons living in the rural portions of extended cities (places with low population density in one or more large parts of their area); (b) census designated places (previously termed unincorporated places) of 2,500 or more inhabitants; and (c) other territory, incorporated or unincorporated, included in urbanized areas. An urbanized area consists of a central city or a central core, together with contiguous, closely settled territory, that combined have a total population of at least 50,000. The definition of urban has remained substantially unchanged since 1950. For comments on exceptions, see U.S. Bureau of the Census, *1980 Census of Population, Characteristics of the Population, Number of Inhabitants* (series PC80-1-A), "Appendix A—Area Classifications."

Population by race (items A7-10), as defined by the Census Bureau, reflects self-identification by respondents; it does not denote any clear-cut scientific definition of biological stock. In the 1980 census, data were obtained through self-classification. For persons who could not provide a single response to the race question, the race of the person's mother was used. However, if a single response could not be provided for the person's mother, the first race reported by the person was used. The White population (item A7) is defined as persons who indicated their race as White, as well as persons who did not classify themselves in one of the specific race categories listed on the questionnaire but entered a nationality such as Canadian, German, Italian, Lebanese, or Polish. The Black population (item A8) includes persons who indicated their race as Black or Negro, as well as persons who did not classify themselves in one of the specific race categories but reported entries such as Black Puerto Rican, Haitian, Jamaican, Nigerian, or West Indian. The American Indian, Eskimo, and Aleut population (item A9) includes persons who indicated their race as Indian (American), Eskimo, and Aleut; also, persons who did not indicate a specific race category but reported the name of an Indian tribe or such entries as Canadian Indian, French American Indian, or Spanish American Indian were classified as American Indian. The Asian and Pacific Islander population (item A10) includes persons who indicated their race as Chinese, Filipino, Japanese, Asian Indian, Korean, Vietnamese, Hawaiian, Samoan, or Guamanian. Persons who did not report themselves in one of the specific race categories but reported a write-in entry indicating one of these categories were classified accordingly. For example, entries of Nipponese and Japanese American were classified as Japanese; entries of Taiwanese and Cantonese, as Chinese, etc. Not included in this presentation is "Other" race, which includes persons reporting "Other" race and providing write-in entries that could not be coded to the specific race category.

Differences between 1970 and 1980 census population totals by race seriously affect the comparability for certain race groups. First, a much larger proportion of the Spanish origin population reported their race as "Other" in 1980 than in 1970. Second, in 1970, most persons who marked the "Other" race category and wrote in a Spanish designation such as Mexican, Venezuelan, Latino, etc., were reclassified as "White." In 1980, such persons were not reclassified but remained in the "Other" category. As a result of this procedural change and the differences in reporting by this population, the proportion of the Spanish origin population classified as "Other" race in the 1980 census was substantially higher than that in the 1970 census. As a consequence of these differences, 1980 population totals for "White" and "Other" races are not comparable with corresponding 1970 figures. For a fuller explanation about the comparability between 1970 and 1980 census data on racial groups, see U.S. Bureau of the Census, *1980 Census of Population, Characteristics of the Population* (series PC80-1-B, C, or D), "Appendix B—Definitions and Explanations."

The 1980 figures for the Spanish origin population (item A11) are based on a sample question that asked respondents to self-identify whether they were of Spanish origin or descent. Persons marking any one of the four Spanish categories (i.e., Mexican, Puerto Rican, Cuban, or other Spanish) are collectively referred to as "persons of Spanish origin." If, when interviewed, the person reported a multiple origin and could not provide a single origin, the origin of the person's mother was used. If a single response was not provided for the person's mother, the first reported origin of the person was used. Spanish origin is not a race category, and persons of Spanish origin may be of any race.

The quotients for the ratio of males per 100 females (item A12) were derived by dividing the total number of males in a given geographic area by the number of females in that area and multiplying the results by 100.

Data for movers, 1975-1980 (items A13-15), are based on a sample of persons 5 years old and over and represent the percent of the population that lived in a different house or apartment on April 1, 1975, than on April 1, 1980. Residence in 1975 is used in conjunction with residence in 1980 to measure the residential mobility of the population. Statistics are shown here for persons who lived in a different house in the same county in 1975 (item A13), in a different county in the same State (item A14), and in a different State or abroad in 1975 (item A15). Data for item A15 include persons in the Armed Forces overseas, as well as civilians living outside the United States in 1975.

Data for persons born in State of current residence (item A16) represent the percent of persons who were born in the same State in which they were living on April 1, 1980. State of birth data are estimates based on the sample.

Age (items A17-21) is classified as age at last birthday (i.e., number of completed years from birth to April 1, 1980) and is based on replies to a question on month and year of birth. The percent figures were derived by dividing the sum of persons in a specified age group by the total population of a given geographic area. For a definition of median, see "Introduction."

Data for the population living in group quarters (item A22) include persons in living arrangements that are not households, such as nursing homes or rooming houses. One general category of persons in group quarters is inmates of institutions (i.e., persons living under care or in custody). Such facilities include homes, schools, hospitals, or wards for the physically or mentally handicapped; hospitals or wards for mental, tubercular, or chronic diseases; homes for unmarried mothers; nursing, convalescent, and rest homes for the aged and dependent; orphanages; and correctional institutions. A second group is classified as "persons in other group quarters" and includes noninstitutional persons. Places that fall into the latter category are rooming and boarding houses, communes, workers' dormitories, convents or monasteries, and other living quarters if the place is occupied by 9 or more persons unrelated to the person listed in column 1 of the census questionnaire, or 10 or more unrelated persons. Persons residing in certain other types of living arrangements are classified as living in noninstitutional group quarters regardless of the number or the relationship of the people in the unit. These include persons residing in military barracks, on ships, in college dormitories, or in sorority and fraternity houses; patients in general or maternity wards of hospitals who have no usual residence elsewhere; staff members in institutional quarters; and persons enumerated in missions, flophouses, Salvation Army shelters, railroad stations, etc.

See also general note for items A1-22.

HOUSEHOLDS

Items A23-29. Households—total, persons per household, family, and nonfamily, 1980.

Source: U.S. Bureau of the Census, *1980 Census of Population and Housing,* Summary Tape File 1C.

Data for total households (item A23) include all persons occupying housing units. A housing unit is a house, an apartment, a group of rooms, or a single room occupied as separate living quarters or, if vacant, intended for occupancy as separate living quarters. The occupants may be a single family, one person living alone, two or more families living together, or any other group of related or unrelated persons who share a household, except as described in the definition of persons in group quarters (see item A22). The number of households is the same as the number of year-round occupied housing units (see item A78).

Persons per household (item A24) represent the number of persons in households divided by the number of households (or householders).

A family household (items A25-27) consists of two or more persons, including the householder, who are related by birth, marriage, or adoption and who live together as one household; all such persons are considered as members of one family. A married-couple family (item A26) is one in which the householder and his or her spouse are enumerated as members of the same household. A family with a female householder (item A27) has no husband present.

Not all households contain families since a household can be composed of one person living alone or a group of two or more unrelated persons (items A28 and A29).

VITAL STATISTICS

Items A30-32. Births, 1980.

Source: U.S. National Center for Health Statistics, *Vital Statistics of the United States,* Volume I, *Natality,* 1980.

These statistics are based on the definition of live birth, which is considered to be every product of conception that gives a sign of life after birth, regardless of the length of the pregnancy.

Total births (item A30) represent the number of live births to U.S. residents occurring within the United States, classified by mother's place of residence. Births

to nonresidents of the United States occurring within the country are excluded.

Figures for 1980 are based on information obtained from two sources: (1) For some States, from a file of all vital records data on computer tape provided to the National Center for Health Statistics through the Vital Statistics Cooperative Program; and (2) for the remainder of the States, from a 50-percent sample of copies of the original certificates of live births filed in those States. The National Center for Health Statistics receives these records from the registration offices of each State.

Birth rates (item A32) represent the number of births per 1,000 resident population enumerated as of April 1, 1980. For a discussion of the decennial censuses, see general note for items A1-22.

Items A33 and A34. Deaths, 1980.

Source: U.S. Bureau of the Census, Federal-State Cooperative Program, unpublished data.

Data are by place of residence; deaths of nonresidents occurring within the United States are not included.

Death rate (item A34) represents the number of deaths per 1,000 resident population enumerated as of April 1, 1980.

Items A35-38. Marriages and divorces, 1980.

Source: U.S. National Center for Health Statistics, *Vital Statistics of the United States,* Volume III, *Marriage and Divorce,* 1980.

The marriage and divorce statistics are based on complete counts of events obtained from all States, except as noted. Marriage and divorce statistics for the United States and for the registration areas are limited to events occurring during the year and registered within the specific area. Tabulations for States and other areas are by place of occurrence and include events occurring to nonresidents. Marriages or divorces that occur outside the United States are excluded. Reported annulments are included in the divorce statistics.

State and local officials annually provide complete counts of marriages and divorces by county of occurrence and marriages by month of occurrence. From these counts, marriage and divorce totals are derived for each State, geographic division, region, and the United States as a whole.

Marriage and divorce rates (items A36 and A38) are based on resident population enumerated as of April 1, 1980. For a discussion of the decennial censuses, see general note for items A1-22.

HEALTH

Items A39 and A40. Physicians—active non-Federal, number and rate, 1980.

Source: Division of Survey and Data Resources, American Medical Association, *Physician Characteristics and Distribution in the United States, 1981 edition.* (Copyright 1982.)

The number of physicians (item A39) represents the distribution of non-Federal physicians with known addresses who are professionally active in the United States. The figures are based on information contained in the *AMA Physician Masterfile.* The File has been maintained by the American Medical Association since 1906 and includes information on every physician in the country and on those graduates of American medical schools who are temporarily practicing overseas. The File also includes members and nonmembers of the AMA and graduates of foreign medical schools who are in the United States and meet U.S. education standards for recognition as physicians. Thus, all physicians comprising the total manpower pool are included on the File. However, data presented here exclude Federal physicians, non-Federal physicians who are temporarily in foreign locations, and physicians not classified by type of professional activity.

The *AMA Physician Masterfile* data are obtained from both AMA surveys and input from the following sources: Medical schools, hospitals, medical societies, national boards, State licensing agencies, Educational Commission for Foreign Medical Graduates, Surgeon General of the U.S. Government, American Board of Medical Specialties, and physicians. For details, see the source.

The AMA's reporting system divides Alaska into four judicial divisions; therefore, comparable data for county equivalents in Alaska are not available for publication.

Physician rate (item A40) represents the number of physicians per 100,000 resident population enumerated as of April 1, 1980. For a discussion of the decennial censuses, see general note for items A1-22.

Item A41. Dentists, active, 1979.

Source: American Dental Association, *Distribution of Dentists in the United States by State, Region, District, and County, 1979.* (Copyright.)

These data represent the number of professionally active dentists, excluding those who are retired, who are no longer practicing, or whose locations are unknown. The count for 1979 is based on results of a survey conducted by the American Dental Association from April 1978 through March 1979. The figures exclude 1978 graduates. The total includes clinical

practitioners, dental school faculty or staff, dentists in the Armed Forces or public health field, members of hospital and health organization staffs, graduate students, and students involved in residency programs.

Item A42. Nurses, active, registered, 1977.

Source: American Nurses Association, *Inventory of Registered Nurses, 1977-1978.* (Copyright.)

These figures represent the number of employed registered nurses. Most of the data were collected in 1977 and 1978. Since the States collect the data at varying license renewal dates, the data are not strictly comparable between States without adjustment. The American Nurses Association adjusted the data for nonresponse for nurses who did not answer questions on status and place of employment.

Items A43-45. Hospitals—number and beds, 1980.

Source: American Hospital Association (AHA), *Hospital Statistics, 1981.* (Copyright.)

These statistics were compiled by the AHA from surveys of all hospitals in the United States and its outlying areas. They include nonregistered hospitals, as well as those registered by the AHA. Hospitals were asked to report data for a full year ending September 30, 1980.

A hospital is defined as a facility with at least six beds that is licensed by the State as a hospital or that is operated as a hospital by a Federal or State agency and is therefore not subject to State and local licensing laws. The data cover hospitals of all types and are fairly complete for general, tuberculosis, mental, and Federal Government hospitals. Institutions and services commonly referred to as convalescent and rest homes, nursing homes, infirmaries, old-age homes, and sanatoriums are excluded almost entirely.

Hospital beds comprise beds, cribs, and pediatric bassinets regularly maintained (set up and staffed for use) for inpatients during the 12-month period. They exclude newborn infant bassinets.

Rates (item A45) represent the number of beds per 100,000 resident population enumerated as of April 1, 1980. For a discussion of the decennial censuses, see general note for items A1-22.

Items A46-48. Nursing homes, 1980.

Source: U.S. National Center for Health Statistics, unpublished data.

These items cover nursing homes as defined in the National Master Facility Inventory (NMFI), a comprehensive file of inpatient health facilities in the United States. The three broad categories of facilities in NMFI are hospitals, nursing and related care homes, and other custodial or remedial care facilities. To be included in NMFI, nursing and related care homes must have at least three inpatient beds. However, data presented here include only those nursing homes with 25 or more beds.

NMFI is kept current by the periodic addition of names and addresses obtained from State licensing agencies and other organizations for all newly established inpatient facilities. In addition, periodic surveys of nursing homes and other facilities are conducted to update name and location, type of ownership, number of beds, and number of residents or patients in the facilities.

Statistics derived from the surveys were adjusted for both facility and item nonresponse. Missing items on the questionnaire were imputed, when possible, by using information reported by the same facility in a previous survey. When data were not available from a previous census for a responding facility, the data were imputed by using data from similar responding facilities. Similar facilities are defined as those with the same types of service, ownership, and approximate number of beds.

The minimum standards and regulations for nursing homes vary among the States; therefore, no uniform definition is possible.

HEALTH INSURANCE (MEDICARE) UNDER SOCIAL SECURITY

Items A49-52. Hospital insurance and medical insurance, 1980.

Source: U.S. Health Care Financing Administration, *Medicare Health Insurance for Aged and Disabled, 1980 and 1981, Reimbursement by State and County.*

The Medicare program, enacted on July 30, 1965, became effective on July 1, 1966. Effective July 1, 1973, Medicare coverage was extended to disabled beneficiaries under the Social Security or Railroad Retirement program and to persons under 65 years old who require dialysis or kidney transplant for end-stage renal disease.

Medicare makes available two separate but complementary insurance programs: (a) Hospital insurance (items A49 and A50), covering nearly all persons 65 years old and over, disabled beneficiaries under 65 who were entitled to benefits for at least 24 consecutive months, and covered workers or their dependents with end-stage renal disease who require renal dialysis or a kidney transplant; and (b) supplementary medical insurance (items A51 and A52), covering those

persons entitled to hospital insurance or U.S. residents who have attained age 65 and voluntarily pay the premiums or have the premiums paid on their behalf. Beginning July 1973, most persons 65 years old and over otherwise ineligible for hospital insurance may enroll voluntarily and pay the premiums for hospital coverage if they are enrolled for supplementary medical insurance.

The number of persons enrolled represents those persons enrolled for coverage in each program as of July 1, 1980, the midpoint of the calendar year, as shown by information entered in Social Security records through March 1981.

Benefit payments shown are interim amounts reimbursed and represent amounts paid in a calendar year to, or on behalf of, insured persons. Included in the figures presented are payments representing bills paid in earlier years but received too late to be included in reports covering those years. The amounts for 1980 represent bills recorded by the U.S. Health Care Financing Administration through June 1981.

The hospital insurance program pays for covered hospital services, including room and board, nursing services (except for private duty nursing), drugs and biologicals, and other services ordinarily furnished by a hospital to its patients. It also covers related health care services provided by skilled nursing facilities (formerly termed extended-care facilities) and by approved home health agencies following a period of hospitalization.

The supplementary medical insurance program provides coverage for a variety of medical services and supplies furnished by physicians or others in connection with physicians' services. Included in this category are such services as visits to the home, office, hospital, and other institutions. Also included are other services and supplies, such as drugs and biologicals that cannot be self-administered, if they are furnished as a part of a physician's professional service; diagnostic tests, X-rays, radium and radioactive isotope therapy; splints, casts, and other devices used for reduction of fractures and dislocations; purchase or rental of durable medical equipment; ambulance service; and prosthetic devices that replace all or part of an internal organ. Also provided are miscellaneous services, including home health visits provided by a certified home health agency in accordance with a home health plan established by the patient's physician, hospital services incident to physicians' services rendered to outpatients, outpatient speech and physical therapy services, services of a physical therapist in independent practice furnished in his or her office or the patient's home, and some services of a licensed chiropractor.

SOCIAL SECURITY

Items A53-56. Social Security benefits (OASDI), 1980.

Source: U.S. Social Security Administration, *Social Security Beneficiaries by State and County, December 1980;* and unpublished data.

The old-age, survivors, and disability insurance program (OASDI) provides monthly benefits to retired and disabled workers and their dependents and to survivors of insured workers. To be eligible for benefits, a worker must have had a specified period of employment in which OASDI taxes were paid. A worker becomes eligible for full retirement benefits at age 65, although reduced benefits may be obtained up to 3 years earlier. Benefits are payable to qualified dependents of a deceased insured retired worker and also to certain dependents of a worker who had paid OASDI taxes during a minimum period of current employment. Disability benefits are payable to an insured worker under age 65 with a prolonged disability and to that person's dependents on the same basis as dependents of a retired worker. Also, disability benefits are payable at age 50 to the disabled widow or widower of a deceased worker who was fully insured at the time of death. A lump-sum benefit is also payable on the death of an insured worker.

Disability is the inability to engage in a gainful activity by reason of any medically determinable physical or mental impairment that can be expected to result in death or to last for a continuous period of not less than 12 months. Except in cases involving second and subsequent disabilities, the law requires that a person be disabled continuously for 5 months before he or she can qualify for a "period of disability" or a disabled-worker benefit.

Figures for total recipients and payments for year (items A53 and A54) represent the number of, or payments to, insured retired or disabled workers; the spouses, dependents, and survivors of insured persons; and those persons in the special age-72 category. Payments for year cover all OASDI payments for calendar year 1980 and include lump-sum benefits.

Retired workers (items A55 and A56) include persons in special age-72 category and exclude dependents of insured retired workers. The average monthly payments are derived by dividing the payments to retired workers during the month of December 1980 by the total number of retired worker recipients.

SUPPLEMENTAL SECURITY INCOME

Items A57-59. Supplemental Security Income program, 1982 (June).

Source: U.S. Social Security Administration, *Supplemental Security Income, State and County Data, June 1982.*

The Supplemental Security Income (SSI) program, administered by the Social Security Administration, provides cash payments in accordance with nationwide eligibility requirements to persons with limited income and resources who are aged, blind, or disabled. Under the SSI program, each person is provided a cash payment from the Federal Government that, when added to the person's countable income (the total gross money income of an individual less certain exclusions), will bring the total monthly income up to a specified level (the Federal benefit rate). In June 1982, the Federal benefit rate for an individual living in his or her own household and without other countable income was $264.70 monthly; for a couple, $397.

An aged person is defined as an individual who is 65 years old or over. A blind individual is one with vision of 20/200 or less in the better eye with the use of correcting lenses or with tunnel vision of 20 degrees or less. The disabled classification refers to any person unable to engage in any substantial gainful activity by reason of any medically determinable physical or mental impairment expected to result in death or that has lasted or can be expected to last for a continuous period of at least 12 months. For a child under age 18, eligibility is based on disability of severity comparable with that of an adult, since the criterion of "substantial gainful activity" is inapplicable for children.

Data cover persons with Federal SSI payments and/or federally administered State supplementation. States have the option to supplement the Federal SSI payment for all or selected categories of recipients. Data are for persons with Federal SSI payments only for the following States: Alabama, Alaska, Arizona, Colorado, Connecticut, Idaho, Illinois, Indiana, Kentucky, Minnesota, Missouri, Nebraska, New Hampshire, New Mexico, North Carolina, North Dakota, Oklahoma, Oregon, South Carolina, Utah, Virginia, and Wyoming; these States have State-administered supplementation. Data for Texas cover Federal SSI payments only; no State supplementary payments are made.

County data on SSI benefit payments and number of recipients are collected by the Social Security Administration in June and December; however, beginning in 1983, only December data will be published. This table presents data on the county distribution of persons receiving federally administered payments under the SSI program in June 1982.

A special procedure (controlled random rounding) was used by the Social Security Administration to avoid disclosing the reason for eligibility of particular individuals and the amount of benefits received. Under this procedure, county data on the number of persons were changed as follows: (1) Odd numbers were rounded either to the next higher or to the next lower even number in such a way that the probabilities of rounding up or rounding down were equal; (2) even numbers were not changed. Subsequent to the rounding of numbers, the dollar amounts were proportionately adjusted upwards or downwards as appropriate.

Data on monthly payments exclude payments to persons with recent adult unit classification changes or with inconsistent county designations. The average monthly payments are derived by dividing the total payments for the month by the total number of recipients.

CRIME

Items A60-63. Serious crimes known to police—number, rate, and offenses, 1981.

Source: U.S. Federal Bureau of Investigation (FBI), unpublished data.

Through the voluntary contribution of crime statistics by law enforcement agencies across the United States, the Uniform Crime Reporting (UCR) Program provides periodic assessments of crime in the Nation as measured by offenses coming to the attention of the law enforcement community. The Committee on Uniform Crime Records of the International Association of Chiefs of Police initiated this voluntary national data-collection effort in 1930. The UCR Program contributors compile and submit their crime data in one of two ways: Either directly to the FBI or through the State UCR Programs.

Seven offenses, because of their seriousness, frequency of occurrence, and likelihood of being reported to police, were initially selected to serve as an index for evaluating fluctuations in the volume of crime. These crimes, known as the Crime Index offenses, were murder and nonnegligent manslaughter, forcible rape, robbery, aggravated assault, burglary, larceny-theft, and motor vehicle theft. By congressional mandate, arson was added as the eighth Crime Index offense in 1978. Totals shown do not include arson.

The number of serious crimes known to police (item A60) includes all Crime Index offenses, except arson. Each month, law enforcement agencies report the number of Crime Index offenses that become known to them. A count of these crimes is taken from records of all reports of crime received by law enforcement agencies from victims, officers who discovered the infractions, or other sources. Whenever complaints of crime are determined through investigation to be unfounded or false, they are excluded from an agency's count. The number of "actual offenses known" is reported to the FBI regardless of whether anyone is arrested for the crime, stolen property is recovered, or prosecution is undertaken.

Rates (item A61) are based on resident population estimated as of July 1, 1981, by the FBI. For an explanation of rate, see "Introduction."

Property offenses (item A62) include three crime categories: (1) Burglary is the unlawful entry of a structure to commit a felony or theft. The use of force to gain entry is not required. (2) Larceny-theft is the unlawful taking, carrying, leading, or riding away of property from the possession or constructive possession of another. It includes crimes such as shoplifting, pocket picking, purse snatching, thefts from motor vehicles, thefts of motor vehicle parts and accessories, bicycle thefts, etc., in which no use of force, violence, or fraud occurs. This crime category does not include embezzlement, "con" games, forgery, worthless checks, and motor vehicle theft. (3) Motor vehicle theft is the theft or attempted theft of a motor vehicle. This definition excludes the taking of a motor vehicle for temporary use by those persons having lawful access.

Violent offenses (item A63) include four crime categories: (1) Murder and nonnegligent manslaughter, as defined in the UCR Program, is the willful (nonnegligent) killing of one human being by another. This offense excludes deaths caused by negligence, suicide, or accident; justifiable homicides; and attempts to murder or assaults to murder. (2) Forcible rape is the carnal knowledge of a female forcibly and against her will. Assaults or attempts to commit rape by force or threat of force are also included; however, statutory rape (without force) and other sex offenses are excluded. (3) Robbery is the taking or attempting to take anything of value from the care, custody, or control of a person or persons by force or threat of force or violence and/or by putting the victim in fear. (4) Aggravated assault is an unlawful attack by one person upon another for the purpose of inflicting severe or aggravated bodily injury. This type of assault is usually accompanied by the use of a weapon or by means likely to produce death or great bodily harm. Attempts are included since an injury does not necessarily have to result when a gun, knife, or other weapon is used, which could and probably would result in a serious personal injury if the crime were successfully completed.

Not all law enforcement agencies provide data for all 12 months of the given year. Data are shown as reported to the FBI.

During 1981, law enforcement agencies active in the UCR Program represented 93 percent of the rural population, 99 percent of the metropolitan statistical area population, and 95 percent of the combined population of cities outside metropolitan areas. When considering national population, as reported by the Bureau of the Census, the total combined coverage for all geographic areas accounted for 97 percent.

NEW PRIVATE HOUSING UNITS AUTHORIZED

Items A64-67. New private housing units authorized by building permits, 1981.

Source: U.S. Bureau of the Census, *Housing Units Authorized by Building Permits and Public Contracts, 1981* (series C40); and unpublished data.

These figures represent private housing units authorized by building permits in approximately 16,000 places in the United States that were identified in 1978 as having local building permit systems. These statistics relate to the issuance of a permit and should not be confused with data on housing starts, which represent the actual start of construction. For a definition of housing unit, see text for items A68-70. Mobile home units (trailers), hotels, motels, and other group residential structures such as nursing homes and college dormitories are excluded.

The 16,000-place universe accounts for a major portion of all new residential housing units started in the United States. In 1981, about 90 percent of all new private housing was constructed within permit-issuing places. For additional information on the limitations and geographic coverage of the data, see the source.

The data-cell entry for a number of counties with no known permit-issuing places or with permit-issuing places not included in the 16,000-place universe is "X." Counties with permit-issuing places that issued no permits during the period are represented by a dash (-). For counties, data shown for some permit-issuing places include imputed data for those places that did not report for all 12 months. Therefore, these data will not agree with the data shown in the source publication. For some counties, 10 percent or more of the annual total has been imputed for nonresponse and, therefore, has been suppressed (an "S" in the data cell). U.S. and State totals include data for the suppressed cells. For an explanation of other symbols, see "Introduction."

The percent figures (items A65 and A66) are derived by dividing the number of new private one-unit structures or the sum of the housing units in structures of five or more units by the total of all newly authorized units during the period. A one-unit structure is a separate building that either has open space on all four sides (detached) or, in the case of semidetached, row, and town houses, is separated from its neighbor by a wall that extends from ground to roof. Also, there are no common heating systems or interstructural public utilities such as water supply/sewage disposal. This category also includes buildings containing one housekeeping unit in combination with space for business or professional purposes, provided the buildings are primarily for residential use. In structures with five or more units, each building contains five or more units

having a common basement, entrance, stairs, or public utilities. If built side by side, they either do not have a wall that extends from ground to roof or share a heating system or have interstructural public utilities such as water supply/sewage disposal. Included are buildings containing five or more housekeeping units in combination with space for business or professional use, provided the buildings are primarily for residential purposes.

Valuation (item A67) represents the cost of construction as recorded on the building permit. This figure usually excludes the cost of on-site and off-site development and improvements and the cost of heating, plumbing, electrical, and elevator installations.

HOUSING

Items A68-88. General note.

The housing statistics presented here are based on results of the 1980 Census of Population and Housing conducted by the Bureau of the Census on April 1, 1980. Some of the data were collected on a 100-percent, or complete-count, basis of the housing inventory while other data were obtained from sample estimates. For a discussion of the decennial censuses, including data based on samples, see general note for items A1-22.

Items A68 and A69. Housing units—total, 1980, and percent change, 1970-1980.

Source: U.S. Bureau of the Census, *1980 Census of Population and Housing,* Summary Tape File 1C.

Counts of the total housing inventory (item A68) include both year-round units and seasonal and migratory units. The data were collected on a 100-percent basis. A housing unit is a house, an apartment, a mobile home or trailer, a group of rooms, or a single room occupied as separate living quarters or, if vacant, intended for occupancy as separate living quarters. Separate living quarters are those in which the occupants live and eat separately from any other persons in the building and that have direct access from the outside or through a common hall. The occupants may be a single family, one person living alone, two or more families living together, or any other group of related or unrelated persons who share living arrangements (except those described in the definition of group quarters; see item A22). Boats, caves, tents, railroad cars, and the like are included only if they are occupied as someone's usual place of residence.

Hotel and motel accommodations are included as housing units if they are the usual residence of the occupants. Vacant rooms or suites of rooms are classified as housing units only in those hotels in which 75 percent or more of the accommodations are occupied by permanent residents. In institutions, dormitories, residence halls, or similar places, living quarters of staff personnel are classified as separate housing units if they satisfy the housing-unit criteria.

Occupied quarters that do not qualify as housing units are considered to be group quarters and are not included in the housing inventory.

Percent change (item A69) represents the difference in the number of total housing units in a specified area over the decade 1970-1980.

See also general note for items A68-88.

Items A70-88. Year-round housing units—selected characteristics, 1980.

Source: U.S. Bureau of the Census, *1980 Census of Population and Housing.* Items A70, A71, A78-80, A84, A86, and A87: Summary Tape File 1C; items A72-77, A81-83, A85, and A88: Summary Tape File 3C.

Total year-round housing units data (item A70) include all occupied units plus vacant units intended for year-round use. Almost all data on housing characteristics are limited to year-round housing units. Vacant units held for seasonal use or migratory labor are excluded because it is difficult to obtain reliable information for them. The data are based on complete-count information.

Percent vacant (item A71) represents the proportion of year-round housing units that are vacant. Included in this vacant classification are year-round vacant units offered for sale; offered for rent; offered for rent or sale; rented or sold but awaiting occupancy; held for weekend or other occasional use; and held for a janitor or caretaker, settlement of an estate, pending repairs or modernizations, or personal reasons of the owner. Also included are units temporarily occupied by persons all of whom have a usual home elsewhere.

Units in structure (items A72 and A73) represent the number of housing units in the structure in which the unit is located. The number of units in structure includes all housing units, whether occupied or vacant. The statistics are presented for the number of units in structures of specified types and sizes, not for the number of residential buildings. A structure is a separate building that either has open space on all sides or is separated from other structures by dividing walls that extend from ground to roof. These figures are based on sample estimates of the housing inventory.

Air conditioning (item A74) is the cooling of air by a refrigeration unit, such as a central system and/or an individual-room unit. The data do not include evaporative coolers, fans, or blowers that are not connected to a refrigeration unit; however they do include heat pumps. The data were obtained from sample estimates.

Year structure built statistics (items A75-77) refer to when the building was first constructed, not when it was remodeled, added to, or converted. The figures show the number of units in structures built during the specified periods and in existence at the time of enumeration. These figures are based on sample estimates.

A housing unit is classified as occupied (item A78) if it is the usual place of residence of the person or group of persons living in it at the time of enumeration or if the occupants are temporarily absent (e.g., away on vacation). The number of occupied housing units is the same as the number of households (see item A23) and are based on complete-count information.

Data for housing units lacking complete plumbing facilities (item A79) include units with (1) complete plumbing facilities (hot and cold piped water, flush toilet, and bathtub or shower) but also used by another household; (2) some but not all three of the plumbing facilities; and (3) no plumbing facilities. This information was obtained on a 100-percent basis.

Units with 1.01 or more persons per room (item A80) represent the percentage of units occupied by more persons than there are rooms. The data were derived by dividing the number of persons in each occupied housing unit by the number of rooms in the unit. Rooms include whole rooms used for living purposes such as living rooms, dining rooms, family rooms, etc. Bathrooms, halls, kitchenettes, utility rooms, unfurnished attics, etc., are not included. The data were obtained on a complete-count basis.

Figures on house heating fuels (items A81-83) represent the primary types of fuel used (such as gas, electricity, fuel oil, kerosene, etc.). Gas (item A81) includes utility gas (gas piped underground from a central system that serves the neighborhood) and bottled, tanked, and LP gas (gas stored in tanks that are refilled or exchanged when empty). Fuel oil, kerosene, etc. (item A83), include fuel oil, kerosene, gasoline, alcohol, and other combustible liquids. These figures are based on sample estimates.

A housing unit is owner occupied (items A84-86) if the owner or co-owner lives in the unit even if the unit is mortgaged or not fully paid for. The owner or co-owner must live in the unit but need not be the person listed in column 1 of the 1980 census questionnaire. Monthly owner costs for units with mortgages (item A85) cover payments for mortgages, real estate taxes, insurance on the property, utilities, and fuel costs. Value (item A86) represents the respondent's estimate of how much the property would sell for if it were for sale. Both monthly owner costs and value are presented for specified owner-occupied units, which are one-family houses on less than 10 acres, without a commercial establishment or medical office on the property. Items A84 and A86 are based on complete-count information; item A85, on sample estimates.

Renter-occupied housing units (items A87 and A88) include all units that are not owner occupied, including units rented for cash rent and those occupied without payment of cash rent. Specified renter-occupied units include all renter-occupied housing units except one-family houses on 10 or more acres. Gross rent (item A88), which is presented for specified renter-occupied units, is the contract rent plus the average estimated monthly cost of utilities and fuels if these are paid for by the renter (or paid for the renter by someone else) in addition to rent. Item A87 was obtained on a 100-percent basis; item A88 was derived from sample estimates.

See also general note for items A68-88. For a definition of median, see "Introduction."

JOURNEY TO WORK

Items A89-93. Employment/residents ratio, persons working outside county of residence, and means of transportation to work, 1980.

Source: U.S. Bureau of the Census. Item A89: Unpublished data; items A90-93: *1980 Census of Population and Housing,* Summary Tape File 3C.

Data presented for journey to work in 1980 were obtained from a sample of the population as part of the 1980 Census of Population and Housing, conducted by the Bureau of the Census. The figures cover workers 16 years old and over. For a discussion of the decennial censuses, including data based on samples, see general note for items A1-22.

The employment/residents ratio (item A89) represents the number of workers working in the county divided by the number of workers residing in the county whose place of work was reported. Ratios greater than 1.00 result from net incommuting; those less than 1.00 result from net outcommuting.

The percent of workers working outside the county of residence (item A90) represents the number of workers whose place of work was outside the county as a percentage of the number of workers residing in the county whose place of work was reported.

Transportation to work (items A91-93) refers to the principal means of travel or type of conveyance usually used during the reference week in traveling from home to work at the address given in the place-of-work question; for an explanation of reference week, see text for items A104-115. If more than one means of transportation was used, the respondent was instructed to report the one usually used for most of the distance. Major categories of means of transpor-

tation include car, truck, or van (either drive alone or carpool); public transportation; miscellaneous other means (motorcycle, bicycle, walked only); and worked at home, not shown separately. Drive alone data (item A91) include persons who usually drove alone, as well as persons who were driven to work by someone who then drove back home or to a nonwork destination. Carpool (item A92) refers to persons who shared driving (e.g., persons in carpools who took turns in driving on different days), drove others only, or rode as a passenger only (includes persons who were usually driven to work by another worker, not necessarily someone who worked at the same place as the respondent). Public transportation (item A93) includes buses or streetcars, railroads (including commuter trains), subway or elevated trains (rapid transportation operating on its own right-of-way underground, on the surface, or elevated), and taxicabs.

EDUCATION

Items A94-100. School enrollment and years of school completed, 1980.

Source: U.S. Bureau of the Census, *1980 Census of Population and Housing,* Summary Tape File 3C.

Data presented for education in 1980 were obtained from a sample of the population as part of the 1980 Census of Population and Housing, conducted by the Bureau of the Census. For a discussion of the decennial censuses, including data based on samples, see general note for items A1-22.

Persons 3 years old and over were classified as enrolled in school (items A94-97) if they attended regular school or college at any time since February 1,1980. "Regular school or college" includes nursery school, kindergarten, elementary school, and schooling that leads to a high school diploma or college degree. Enrollment in a trade or business school, company training, or tutoring was counted if the course would be accepted for credit at a regular elementary school, high school, or college. Elementary and high school enrollment (items A95 and A96) includes kindergarten, or an organized education program the year before first grade. Children in "Head Start" or similar programs were to be reported in nursery school or kindergarten as appropriate. Private school enrollment statistics (item A96) cover nonpublic elementary and high schools controlled and supported primarily by religious and private organizations. Data for college enrollment (item A97) include junior or community colleges, regular 4-year colleges, and graduate or professional schools.

Statistics for years of school completed (items A98-100) are shown for persons 25 years old and over. The data were derived from two questions on the 1980 census questionnaire, one identifying the highest grade attended in regular school and the second asking whether the respondent finished that grade. Persons who passed a high school equivalency examination were marked "12" under the highest grade attended (if they had not completed or were not enrolled in a higher grade). Schooling received in foreign schools was to be reported as the equivalent grade or year in the regular American school system.

CIVILIAN LABOR FORCE (BLS)

Items A101-103. Civilian labor force—total and unemployment, 1982.

Source: U.S. Bureau of Labor Statistics, *Employment and Unemployment for States and Local Areas, 1982.*

These estimates are the product of a Federal-State cooperative program in which State employment security agencies prepare labor force and unemployment estimates under concepts, definitions, and technical procedures established by the Bureau of Labor Statistics (BLS).

The national unemployment statistics published monthly by BLS are obtained from the Current Population Survey (CPS), a Bureau of the Census survey of households. The size of the CPS is sufficiently large to obtain reliable annual average unemployment estimates for all States and the District of Columbia. County estimates, which are controlled to the CPS-based State totals, are then derived through the use of statistics derived from State unemployment insurance operations, as well as adjustments based on data from the CPS, decennial census, and other sources.

Unemployment data include all persons who did not work during the survey week, made specific efforts to find a job in the prior 4 weeks, and were available for work during the survey week (except for temporary illness). Persons waiting to be called back to a job from which they had been laid off and those waiting to report to a new job within the next 30 days are also included in unemployment figures.

An explanation of the technical procedures used to develop monthly and annual local area labor force estimates appears monthly in the "Explanatory Note" for State and area unemployment data in the BLS periodical *Employment and Earnings.*

Due to the limitations of the estimation procedures, the estimates shown, especially on the county/city level, are subject to potentially significant error.

LABOR FORCE (CENSUS)

Items A104-115. Labor force—total and civilian, 1980.

Source: U.S. Bureau of the Census, *1980 Census of Population and Housing,* Summary Tape File 3C.

Data presented for labor force status in 1980 were obtained from a sample of the population as part of the 1980 Census of Population and Housing, conducted by the Bureau of the Census. For a discussion of the decennial censuses, including data based on samples, see general note for items A1-22.

The total labor force (item A104) consists of persons 16 years old and over on active duty in the Armed Forces (Army, Air Force, Navy, Marine Corps, and Coast Guard) and in the civilian labor force. Members of the Merchant Marine and civilian employees of the Department of Defense are not members of the Armed Forces. Service in a National Guard or reserve unit for short periods of active duty for training does not count as active duty in the Armed Forces.

The total civilian labor force (item A105) includes employed and unemployed civilians. The employed category covers civilians 16 years old and over who were either (a) "at work"—those who did any work at all as paid employees or in their own business or profession, worked on their own farm, or worked 15 hours or more as unpaid workers on a family farm or in a family business—or (b) "with a job but not at work"—those who did not work during the reference week but had jobs or businesses from which they were temporarily absent due to illness, bad weather, industrial dispute, vacation, or other personal reasons. Reference week refers to the calendar week prior to the date on which respondents completed their census questionnaires or were interviewed by enumerators. Since the week of enumeration was not the same for all persons, the reference week for labor force data is not uniform. For many persons, however, the reference week was the last week in March 1980. The unemployed category covers civilians 16 years old and over who were neither "at work" nor "with a job but not at work" and who were (a) looking for work during the last 4 weeks and (b) available to accept a job. Also included as unemployed are persons who did not work at all during the reference week and were waiting to be called back to a job from which they had been laid off.

The data on employment by industry (items A108-113) represent the kind of business or industrial activity in which the person was employed during the reference week. Persons working at more than one job were instructed to describe the job at which they worked the most hours during the reference week. For discussions of manufacturing, wholesale trade, and retail trade (items A109 and A110), see general notes for items A159-167, A168-172, and A173-181, respectively. Employed in professional and related services (item A111) includes legal, educational, and social services; museums, art galleries, and zoos; religious and membership organizations; engineering, architectural, and surveying services; noncommercial educational and scientific research; and miscellaneous services. Other significant industry codes (item A112) identify a major industry within the specified area other than the industries presented in items A109-111. The universe from which the industry categories were taken included the following: Agriculture, forestry, fisheries, and mining; construction; transportation, communications and other public utilities; finance, insurance, and real estate; business and repair services; personal, entertainment, and recreational services; and public administration. The industries represented by the codes are explained in footnote 1 on pages where these codes appear. For definitions of industry categories, see U.S. Bureau of the Census, *Classified Index of Industries and Occupations* (series PHC80-R3). For details of how the data were derived, see the source.

Class of worker (items A114 and A115) represents the classification of workers according to the type of ownership of the employing organization. The determination of class of worker is independent of the industry classification but refers to the same job. Government workers (item A114) are persons who work for any governmental unit, regardless of the activity of the particular agency. Employees of public schools, government-owned bus lines, government-owned electric power utilities, etc., are included; but employees of private organizations who do contract work for government agencies are not included. Self-employed workers (item A115) are persons who work for profit or fee in their own unincorporated business, profession, or trade, or who operate a farm. Included here are the owner-operators of large stores and manufacturing establishments, as well as small merchants, independent craftspersons and professionals, farmers, peddlers, and other persons who conduct enterprises on their own.

PERSONAL INCOME

Items A116-124. Total, per capita, transfer payments, and industry earnings, 1981.

Source: U.S. Department of Commerce, Bureau of Economic Analysis, *Local Area Personal Income, 1976-1981*.

Total personal income (item A116) is the current income received by residents of an area from all sources. It is measured before deduction of income and other personal taxes but after deduction of personal contributions for Social Security, government retirement, and other social insurance programs. It consists of wage and salary disbursements (covering all employee earnings, including executive salaries, bonuses, commissions, payments-in-kind, incentive payments, and tips), various types of supplementary earnings termed "other labor income," proprietors'

income, rental income of persons, dividends, personal interest income, and government and business transfer payments, such as Social Security benefits, military pensions, etc.

Per capita personal income (item A117) is based on the aggregate personal income in a specified area during calendar year 1981, divided by the resident population, estimated as of July 1, 1981. It serves as an indicator of consumer markets and of the economic well-being of counties. This measure, however, can vary widely from county to county and should be used with caution. For a definition of per capita, see "Introduction."

Transfer payments (item A118) are payments not resulting from current production and include both government and business transfer payments. Government transfer payments include payments under the following programs: Federal old-age, survivors, disability, and hospital insurance; supplementary medical insurance, State unemployment insurance, railroad retirement and unemployment insurance; government retirement; Federal and State government-insured workers' compensation; veterans' benefits, including veterans' life insurance; food stamps; black lung; Supplemental Security Income; and Aid to Families with Dependent Children. Government payments to nonprofit institutions, other than for work under research and development contracts, are also included. The principal business transfers are liability payments for personal injury, corporate gifts to nonprofit institutions, and consumer bad debts.

Earnings cover wage and salary disbursements, other labor income, and proprietors' income. Wage and salary income consists of monetary remuneration of employees, including corporate officers; commissions, tips, and bonuses; and receipts in-kind that represent income to the recipients. Retroactive wages are counted when paid rather than when earned. Other labor income includes employer contributions to private pension and welfare funds, employers' payments for privately administered workmen's compensation insurance, and directors' fees. Proprietors' income is the monetary income and income in-kind of sole proprietorships and partnerships, including the independent professions and producers' cooperatives.

For discussions of manufacturing, wholesale trade, retail trade, and services, see general notes for items A159-167, A168-172, A173-181, and A182-190, respectively. Other significant industry codes (item A123) identify a major industry within the specified area other than the major industries presented here. The universe from which the industry categories were taken is slightly different from that used for employment; it includes the following: Farm; agricultural services, forestry, fisheries, and other; mining; construction; transportation and public utilities; finance, insurance, and real estate; and government and government enterprises. The industries represented by the codes are explained in footnote 2 on pages where these codes appear. Percent figures (item A124) represent the other significant industry as a portion of all major industries. Farm earnings are also shown in item A197. Data for items A119-124 are based on place of work, unlike items A109-113, which are based on place of residence.

MONEY INCOME

Items A125-139. Median family, household, per capita, and income below poverty level, 1979.

Source: U.S. Bureau of the Census, *1980 Census of Population and Housing,* Summary Tape File 3C.

Data are presented for money income received in 1979, based on a sample of all persons 15 years old and over, as part of the 1980 Census of Population and Housing. Total money income is the sum of amounts reported separately for income from wages and salaries; net nonfarm and farm self-employment; interest, dividends, and net rentals; Social Security; public assistance; and other sources, such as veterans' payments, pensions, receipts from insurance policies, workmen's compensation, alimony, child support, etc. The data represent the amount of income received before deductions for personal income taxes, Social Security, bond purchases, union dues, Medicare, etc. Receipts from the following sources were not included as income: Money received from the sale of property (unless the recipient was engaged in the business of selling such property); the value of income "in kind" (such as free living quarters or food produced and consumed in the home); withdrawal of bank deposits; money borrowed; tax refunds; exchange of money between relatives living in the same household; and gifts and lump-sum inheritances, insurance payments, and other types of lump-sum receipts. For a discussion of the decennial censuses, including data based on samples, see general note for items A1-22.

Median income (items A125 and A132) is based on the distribution of the total number of families and households. For a definition of median, see "Introduction."

Household income (items A126-133) represents total money income received in calendar year 1979 by all household members 15 years old and over. Household income differs from family income by including income received by (a) all household members 15 years old and over, not just those related to the householder, and (b) persons living alone and in other nonfamily households. The lowest income group shown here (item A126) includes households that were classified as having no 1979 income as defined in the

census. Income rankings (item A133) were based on median household income, with each area placed in descending order, greatest to smallest. Where ties occurred—two or more areas with identical median incomes—the same rank was assigned to the tied areas. In such cases, the following number or numbers were omitted so that the lowest rank usually equals the number of areas ranked. For a discussion of households, see text for items A23-29.

Per capita money income (item A134) is based on the aggregate money income in 1979 in a specified area, divided by the resident population enumerated as of April 1, 1980.

Families were classified as below poverty level (items A135 and A136) if their family income in 1979 was less than the poverty threshold specified for the applicable family size, age of householder, and number of related children under 18 present (see table below with poverty level thresholds). Poverty status is determined for all families (and, by implication, all family members). Poverty status is also determined for persons not in families (items A137-139), except for inmates of institutions, persons in military group quarters and in college dormitories, and unrelated individuals under 15 years old. For details of how the data were derived and limitations of the data, see the source.

Poverty Level Thresholds, by Size of Family and Related Children Under 18 Years Old: 1979

(In dollars)

Size of family	Weighted average thresholds	Related children under 18 years old								
		None	1	2	3	4	5	6	7	8 or more
1 person (unrelated individual)	3,686	(X)	(X)	(X)	(X)	(X)	(X)	(X)	(X)	(X)
Under 65 years old	3,774	3,774	(X)	(X)	(X)	(X)	(X)	(X)	(X)	(X)
65 years old and over	3,479	3,479	(X)	(X)	(X)	(X)	(X)	(X)	(X)	(X)
2 persons	4,723	(X)	(X)	(X)	(X)	(X)	(X)	(X)	(X)	(X)
Householder under 65 years old	4,876	4,858	5,000	(X)	(X)	(X)	(X)	(X)	(X)	(X)
Householder 65 years old and over	4,389	4,385	4,981	(X)	(X)	(X)	(X)	(X)	(X)	(X)
3 persons	5,787	5,674	5,839	5,844	(X)	(X)	(X)	(X)	(X)	(X)
4 persons	7,412	7,482	7,605	7,356	7,382	(X)	(X)	(X)	(X)	(X)
5 persons	8,776	9,023	9,154	8,874	8,657	8,525	(X)	(X)	(X)	(X)
6 persons	9,915	10,378	10,419	10,205	9,999	9,693	9,512	(X)	(X)	(X)
7 persons	11,237	11,941	12,016	11,759	11,580	11,246	10,857	10,429	(X)	(X)

9 or more persons	14,812	16,066	16,144	15,929	15,749	15,453	15,046	14,677	14,586	14,024

LOCAL GOVERNMENT EMPLOYMENT AND FINANCES

Items A140-156. General note.

Data on local governments are based on results of the 1977 Census of Governments. The census is conducted by the Bureau of the Census every fifth year (for years ending in 2 and 7). For each county, the financial data comprise amounts for all local governments—not only the county government but also any municipalities, townships, school districts, and special districts within the county. Statistics from governmental units located in two or more county areas are prorated to the county areas involved. Totals for the United States, regions, divisions, and States represent sums of the counties and do not reflect State or Federal governmental activities. Figures for local government finances are for fiscal years that closed at various dates for each government during the 12 months ending June 30, 1977.

These statistics are based mainly on a mail canvass that covered substantially all of the local governments in existence in fiscal year 1976-1977. However, for the 46 municipalities of over 300,000 population in 1975 and for a considerable fraction of all county governments, as well as numerous other sizable local governments, Census Bureau representatives compiled basic information from official local reports and records.

October is the reference date for the employment phase of the census since it is one of the most stable months in terms of public employment, being relatively free from seasonal employment fluctuations.

Revenue and expenditure items include all amounts of money received and paid out, respectively, by a

government and its agencies (net of correcting transactions such as recoveries or refunds), with the exception of amounts for debt issuance and retirement and for loan and investment, agency, and private trust transactions.

Payments among the various funds and agencies of a particular government are excluded from revenue and expenditure items as representing internal transfers. Therefore, a government's contribution to a retirement fund that it administers is not counted as expenditure, nor is the receipt of this contribution by the retirement fund counted as revenue.

Governmental expenditure includes all capital outlay, of which a major portion is commonly financed by borrowing, while governmental revenue does not include receipts from borrowing. Thus, the relationship between totals of revenue and expenditure figures that are presented should not be considered a direct measure of the degree of budgetary "balance," as that term is usually applied.

In some cases, a major local government may serve two or more county areas. These intercounty local governments are primarily school districts and special districts (water, sewage, etc.). In the data presented, all figures for these governments have been included in the county area in which each government's principal administrative office is located. See the source for more detail.

All per capita local government finance figures are based on estimates of the resident population as of July 1, 1977. For a definition of per capita, see "Introduction."

Items A140 and A141. Employment—total, full-time equivalent; and payroll, 1977 (October).

Source: U.S. Bureau of the Census, *1977 Census of Governments, Public Employment, Compendium of Public Employment* (series GC77(3)-2).

Full-time equivalent employment (item A140) is a computed statistic representing the number of full-time employees that could have been employed at the same total payroll cost if all persons were employed on a full-time basis at the average monthly pay for full-time workers. Employment refers to all persons gainfully employed by and performing services for a government. Employees include all persons paid for personal services performed, including persons paid from federally funded programs, paid elected officials, persons on paid leave status, and persons paid on a "per meeting" (annual, semiannual, or quarterly) basis.

Payroll amounts (item A141) represent gross payrolls for the 1-month period of October 1977. The gross payroll includes all salaries, wages, fees, or commissions paid to employees during the pay period that included October 15, 1977. Payroll amounts reported for a period other than 1 month were converted to represent an amount for the month of October.

See also general note for items A140-156.

Items A142-156. Finances—general revenue, direct general expenditure, and general debt outstanding, 1976-1977.

Source: U.S. Bureau of the Census, *1977 Census of Governments, Governmental Finances, Compendium of Government Finances* (series GC77(4)-5).

General revenue (item A142) includes all revenue except utility, liquor stores, and insurance trust revenue. All tax revenue and intergovernmental revenue, even if designated for employee-retirement or local utility purposes, are classified as general revenue. However, to avoid duplication, revenue figures are net of reported transactions among local governments.

Intergovernmental revenue (items A143 and A144) covers amounts received from other governments as fiscal aid, reimbursements for performance of general government functions and specific services for the paying government, or in lieu of taxes. It excludes any amounts received from other governments for sale of property, commodities, and utility services. Figures for intergovernmental revenue from State government represent all intergovernmental revenue received from the State government, including amounts originally from the Federal Government but channeled through the State.

Taxes (items A145-148) consist of compulsory contributions exacted by governments for public purposes. However, this category excludes employer and employee payments for retirement and social insurance purposes, which are classified as insurance trust revenue, and special assessments, which are classified as nontax general revenue. Property taxes (items A146 and A147) are taxes conditioned on ownership of property and assessed by its value. Sales and gross receipts (item A148) are taxes, including "licenses" at more than nominal rates, based on volume or value of transfers of goods or services, on gross receipts therefrom, or on gross income, and related taxes based on use, storage, production, importation, or consumption of goods. Sales and gross receipts exclude dealer discounts or "commissions" allowed to merchants for collection of taxes from consumers. General sales taxes and selected taxes on sales of motor fuels, tobacco products, and other particular commodities and services are included.

Direct general expenditure (item A149) comprises all expenditures of the local governments, excluding utility, liquor stores, and insurance trust expenditures and any intergovernmental payments.

Local government expenditures for education (item A151) are mainly for provision and support of schools

and other educational facilities and services, including those for educational institutions beyond the high school level operated by local governments. They cover such related services as pupil transportation; school lunch and other cafeteria operations; school health, recreation, and library services administered by local school systems; and dormitories, dining halls, and bookstores operated by public institutions of higher education.

Highway expenditures (item A152) are for provision and maintenance of highway facilities, including toll turnpikes, bridges, tunnels, and ferries, as well as regular roads, highways, and streets. Also included are expenditures for street lighting and for snow and ice removal.

Public welfare expenditures (item A153) cover support of, and assistance to, needy persons contingent upon their needs. Included are cash assistance payments directly to needy persons under categorical (e.g., Aid to Families with Dependent Children and Medical Assistance) and other welfare programs; vendor payments made directly to private purveyors for medical care, burials, and other services provided under welfare programs; welfare institutions; and any intergovernmental or other direct expenditure for welfare purposes. Pensions to former employees and other benefits not contingent on need are excluded.

Health and hospital expenditures (item A154) include health research, clinics, nursing, immunization, and other categorical, environmental, and general health services provided by health agencies; and establishment and operation of hospital facilities, provision of hospital care, and support of other public or private hospitals.

Police protection expenditures (item A155) provide for maintenance of law, order, and traffic safety, and include highway police patrols, crime-prevention activities, police communications, detention and custody of persons awaiting trial, vehicular inspection, and the like.

General debt outstanding (item A156) includes all long-term credit obligations of the government and its agencies (exclusive of utility debt) and all interest-bearing short-term (i.e., repayable within 1 year) credit obligations remaining unpaid at the close of the fiscal year. It includes judgments, mortgages, and revenue bonds, as well as general obligation bonds, notes, and interest-bearing warrants. It excludes noninterest-bearing short-term obligations, interfund obligations, amounts held in a trust or agency capacity, advances and contingent loans from other governments, and rights of individuals to benefits from employee-retirement funds.

See also general note for items A140-156.

FEDERAL CIVILIAN GOVERNMENT EMPLOYEES

Items A157 and A158. Number and earnings, 1981.

Source: U.S. Bureau of Economic Analysis. Item A157: Unpublished data; item A158: *Local Area Personal Income, 1976-81.*

The estimates for number of employees (item A157) are a companion series to the personal income estimates. They are constructed from similar sources, primarily the Unemployment Compensation for Federal Employees program, using the same concepts and definitions. They are not published by the source agency.

For a discussion of earnings, see text for items A116-124.

MANUFACTURES

Items A159-167. General note.

The first census of manufactures covered the year 1809. Between 1809 and 1963, a census was conducted periodically. Beginning with the 1967 census, Congress authorized the economic censuses to be taken at 5-year intervals covering years ending in 2 and 7.

The censuses of manufactures for 1947 through 1977 cover operating manufacturing establishments as defined in the 1972 and earlier editions of the *Standard Industrial Classification (SIC) Manual,* issued by the Office of Management and Budget. The SIC is a classification structure for the entire national economy, which is revised periodically to reflect the changing industrial composition of the economy. This structure provides data on a division and industry code basis, according to the level of industrial detail. For example, manufacturing is a major industrial division. One of its major groups is Food and kindred products (code 20), which is also divided into industry groups, including Meat products (code 201). The industry groups are further divided into industries, such as Meatpacking plants (code 2011). The *1972 SIC Manual* and its 1977 supplement may be obtained from the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

The *1972 SIC Manual* defines manufacturing as the mechanical or chemical transformation of inorganic or organic substances into new products. The assembly of component parts of products is also considered to be manufacturing if the resulting product is neither a structure nor other fixed improvement. These activities are usually carried on in plants, factories, or mills that characteristically use power-driven machines and materials-handling equipment.

The data were obtained on an establishment basis. For all establishments with fewer than 5 employees and, depending on the industry, some establishments with fewer than 20 employees, data were based on administrative records. All establishments with 20 or more employees were mailed report forms. Each of the establishments tabulated was classified in one of the approximately 450 manufacturing industries as defined in the *1972 SIC Manual*. Mainly, an establishment is classified in a particular industry if its output of a product or product group exceeds in value its output of any other product group. The statistics on payrolls, employment, value added, inventories, and expenditures, therefore, reflect both the primary and secondary activities of the establishments in that industry.

In all geographic totals published since 1949, the employment and payroll data for administrative offices and auxiliaries are also included. The relative importance of these establishments has increased substantially in recent years because of a tendency to centralize functions formerly performed in manufacturing plants. Such functions include accounting (particularly where computerized), warehousing, repair services, and miscellaneous others.

The 1977 Census of Manufactures universe included approximately 350,000 establishments. Approximately 145,000 small single-establishment companies were excused from filing reports. Selection of these small establishments was done on an industry-by-industry basis and was based on annual payroll and total shipments data, as well as on the industry classification codes contained in the administrative files of the Internal Revenue Service (IRS) and Social Security Administration (SSA). The cutoffs were selected so that these administrative records cases would account for no more than 3 percent of the value of shipments for the industry.

Information on the physical location of the establishment, as well as information on payrolls, receipts (shipments), and industry classification, was obtained from the administrative records of the IRS and SSA under special arrangements that safeguarded the confidentiality of both tax and census records. Estimates for data other than payrolls and value of shipments for these small establishments were developed from industry averages.

In 1977, as in earlier years, a minimum-size limit was set for including establishments in the census. All establishments employing one or more persons at any time during the census year are included.

U.S. totals for manufactures may differ slightly from the sum of the States because a few establishments included at the national level could not be accurately coded to the States.

In accordance with Federal law governing census reports, no data are published that would disclose the operations of an individual establishment or business. However, the number of establishments in a kind-of-business classification is not considered a disclosure, so this information may be given even though other information is withheld.

Items A159 and A160. Establishments—total and with 20 or more employees, 1977.

Source: U.S. Bureau of the Census, *1977 Census of Manufactures, Geographic Area Statistics* (series MC77-A).

The term "establishment" signifies a single physical location where business is conducted or where services or industrial operations are performed. It is not necessarily identical with the business or company, which may consist of one or more establishments.

The total establishment count should be viewed as an approximation rather than a precise measurement. The counts for establishments with 20 or more employees are far more reliable than the count of the total number of establishments.

See also general note for items A159-167.

Items A161 and A162. All employees—number and annual payroll, 1977.

Source: Same as items A159 and A160.

The all employees number is the average number of production workers plus the number of other employees in mid-March. Included are all persons on paid sick leave, paid holidays, and paid vacations during these pay periods. Excluded are members of the Armed Forces and pensioners on the active rolls but not working during the period. Officers of corporations are included as employees; proprietors and partners of unincorporated firms are excluded.

Payroll figures (item A162) include the gross annual earnings of all employees on the payroll of operating manufacturing establishments. Respondents were told they could follow the definition of payrolls used for calculating the Federal withholding tax. This definition includes all forms of compensation such as salaries, wages, commissions, dismissal pay, all bonuses, vacation and sick leave pay, and compensation-in-kind (such as free meals and lodgings), prior to such deductions as employees' Social Security contributions, withholding taxes, group insurance, union dues, and savings bonds. The total includes salaries of officers of corporations but excludes payments to proprietors or partners of unincorporated concerns. Also excluded are payments to members of the Armed Forces and to pensioners carried on the active payroll of manufacturing establishments.

See also general note for items A159-167.

Items A163-165. Production workers—number, hours, and wages, 1977.

Source: Same as items A159 and A160.

Production workers include all production and related workers (up through the working foreman level) engaged in fabricating, processing, assembling, inspecting, receiving, storing, handling, packing, warehousing, shipping (but not delivering), maintenance, repair, janitorial and watchguard services, product development, auxiliary production for plant's own use (e.g., power plant), recordkeeping, and other services closely associated with these production operations. Supervisory employees above the working foreman level are excluded.

The number of production workers is the average for the midmonth pay periods of March, May, August, and November. Not included in this classification are all the other employees, defined as nonproduction personnel, engaged in such activities as factory supervision above the working foreman level, sales, advertising, credit, collection, installation and servicing of own products, clerical and routine office functions, executive, and purchasing. Also excluded are employees on the payroll engaged in the construction of major additions or alterations to the plant and utilized as a separate work force.

Production hours (item A164) cover hours worked or paid for at the plant, including actual overtime hours (not straight-time equivalent hours). The data exclude hours paid for vacations, holidays, or sick leave when the employee was not at the plant.

Production wages (item A165) represent all compensation paid to production workers.

See also general note for items A159-167.

Items A166 and A167. Value added by manufacture and value of shipments, 1977.

Source: Same as items A159 and A160.

Value added by manufacture (item A166) is derived by subtracting the cost of materials, supplies, containers, fuel, purchased electricity, and contract work from the value of shipments (products manufactured plus receipts for services rendered). The result of this calculation is then adjusted by the addition of value added by merchandising operations (i.e., the difference between the sales value and the cost of merchandise sold without further manufacture, processing, or assembly) plus the net change in finished goods and work-in-process inventories between the beginning and the end of the year.

Value of shipments (item A167) covers the received or receivable net selling values, free on board plant (exclusive of freight charges and taxes), of all products shipped, both primary and secondary, as well as miscellaneous receipts, such as receipts for contract work performed for others, installation and repair, sales of scrap, and sale of products bought and resold without further processing. Included are all items made by or for the establishment from materials owned by it whether sold, transferred to other plants of the same company, or shipped on consignment. The net selling value of products made in one plant on a contract basis from materials owned by another was reported by the plant providing the materials. In the case of multiunit companies, the manufacturer was requested to report the value of products transferred to other establishments of the same company at full economic or commercial value, i.e., including not only the direct costs of production but also a reasonable proportion of "all other costs" (including company overhead) and profit.

See also general note for items A159-167.

WHOLESALE TRADE

Items A168-172. General note.

The first census of business, which included wholesale trade, was conducted in 1929. Between 1933 and 1963, seven subsequent business censuses were taken. Beginning with the 1967 census, Congress authorized the economic censuses to be taken at 5-year intervals covering years ending in 2 and 7.

The 1977 Census of Wholesale Trade covered wholesale trade as defined in the *1972 SIC Manual* (i.e., the selling of merchandise to retailers; to industrial, commercial, institutional, farm, or professional users; or to other wholesalers; or acting as agents or brokers in buying merchandise for or selling merchandise to such persons or companies). For a discussion of the *1972 SIC Manual,* see general note for items A159-167. Two major industry groups, durable goods and nondurable goods, are classified in wholesale trade. Their respective two-digit SIC code numbers are 50 and 51. The census included wholesale liquor warehouses operated by State and local governments. Excluded were warehouses and other units that serviced or were auxiliary to wholesale establishments within the same organization.

Item A168. Number of establishments, 1977.

Source: U.S. Bureau of the Census, *1977 Census of Wholesale Trade, Geographic Area Statistics* (series WC77-A).

For a definition of establishments, see text for items A159 and A160. The count of establishments represents the number in business at the end of 1977.

See also general note for items A168-172.

Items A169 and A170. Sales—total and merchant wholesalers, 1977.

Source: Same as item A168.

Sales figures represent sales of all establishments in business at any time during 1977. Sales include merchandise sold for cash or credit at wholesale and retail by establishments primarily engaged in wholesale trade; receipts from rental or leasing of vehicles, equipment, instruments, tools, etc.; receipts for delivery, installation, maintenance, repair, alteration, storage, and other services; and gasoline, liquor, tobacco, and other excise taxes that are paid by the manufacturer and passed along to the wholesaler.

Sales are net after deductions for refunds and allowances for merchandise returned by customers. Trade-in allowances are not deducted from total sales. Total sales do not include carrying or other charges and sales (or other) taxes collected from customers and forwarded to taxing authorities. Also, nonoperating income from such sources as investments, rental or sale of real estate, etc., is not included.

Sales figures do not include wholesale sales made by manufacturers, retailers, service establishments, or other businesses whose primary activity is other than wholesale trade. They do include receipts other than the sale of merchandise at wholesale (e.g., service receipts, retail sales, etc.) by establishments primarily engaged in wholesale trade.

Although the count of establishments represents the number in business at the end of the year, the receipts figures include receipts of all establishments in business at any time during the year.

Merchant wholesalers (item A170) represent establishments primarily engaged in buying and selling merchandise on their own account. Included are such types of establishments as wholesale merchants or jobbers, industrial distributors, voluntary group wholesalers, importers, exporters, cash-and-carry wholesalers, retailer cooperative warehouses, terminal and country grain elevators, farm products assemblers, wholesale cooperative associations, and petroleum bulk plants and terminals operated by nonrefining companies.

See also general note for items A168-172.

Items A171 and A172. Paid employees and annual payroll, 1977.

Source: Same as item A168.

Paid employees data comprise all employees, including salaried officers and executives of corporations, who were on the payroll in the pay period including March 12, 1977. Included are employees on paid sick leave, paid holidays, and paid vacations. Proprietors and partners of unincorporated businesses are not included.

Annual payroll includes all forms of compensation, such as salaries, wages, commissions, bonuses, vacation allowances, sick leave pay, and the value of payments in-kind (e.g., free meals and lodgings) paid during the year to all employees. For corporations, it includes amounts paid to officers and executives; for unincorporated businesses, it does not include profit or other compensation of proprietors or partners. Payroll is reported before deductions for Social Security, income tax, insurance, union dues, etc.

See also general note for items A168-172.

RETAIL TRADE

Items A173-181. General note.

The first census of business, which included retail trade, was conducted in 1929. Between 1933 and 1963, seven subsequent censuses were taken. Beginning with the 1967 census, Congress authorized the economic censuses to be taken at 5-year intervals covering years ending in 2 and 7.

The 1977 Census of Retail Trade covered retail trade as defined in the *1972 SIC Manual* (see general note for items A159-167); the two-digit major-industry classifications are numbered from 52 through 59. The census included all establishments primarily engaged in selling merchandise for personal or household consumption and rendering services incidental to the sale of goods. Liquor stores operated by State and local governments were also included. Data for post exchanges, ship stores, and similar establishments operated on military posts by the Federal Government were not included. Also excluded were central administrative offices, captive warehouses, and other units that service or are auxiliary to retail establishments within the same organization.

Establishments with payroll are those that had some paid employment during 1977.

Items A173 and A174. Establishments—total and percent with payroll, 1977.

Source: U.S. Bureau of the Census, *1977 Census of Retail Trade, Geographic Area Statistics* (series RC77-A).

For a definition of establishment, see text for items A159 and A160. The number of establishments represents those in business at the end of 1977. In the case of leased departments (separately owned businesses operated as departments or concessions of retail business under another ownership, such as a separately owned shoe department in a department store), only a single establishment combining leased departments with the main retail establishment in which they are located is recognized for census purposes.

However, when information is obtained from IRS and SSA sources rather than a census report, it is generally not possible to differentiate between leased departments and separate establishments. Leased retail departments located in other than retail establishments (e.g., a gift shop located in a hotel) are considered separate retail establishments.

When two or more activities were carried on at a single location under a single ownership, all activities generally were grouped together as a single establishment, and the entire establishment was classified on the basis of its major activity, with all data for it included in that classification. In those cases, however, where distinct and separate economic activities (for which different industry classification codes were appropriate) were conducted under the same ownership at a single location, and where conditions prescribed by the *1972 SIC Manual* for recognizing the existence of more than one establishment were met, separate establishment reports for each of the different activities were obtained in the census.

See also general note for items A173-181.

Items A175-179. Sales—all establishments, establishments with payroll, and by selected kind of business, 1977.

Source: Same as items A173 and A174.

Retail sales (item A175) include merchandise sold for cash or credit at retail and wholesale by establishments primarily engaged in retail trade; amounts received from customers for layaway purchases; receipts from rental or leasing of vehicles, equipment, instruments, tools, etc.; receipts for delivery, installation, maintenance, repair, alteration, storage, and other services; and gasoline, liquor, tobacco, and other excise taxes that are paid by the manufacturer or wholesaler and passed on to the retailer. Per capita (item A176) is based on revised intercensal estimates of resident population as of July 1, 1977.

Sales are net after deductions for refunds and allowances for merchandise returned by customers. Trade-in allowances are not deducted from total sales. Total sales do not include (1) carrying or other charges and (2) sales (or other) taxes collected from customers and forwarded to taxing authorities. Also, nonoperating income from such sources as investments and rental or sale of real estate are not included.

Retail sales made by manufacturers, wholesalers, service establishments, or other businesses whose primary activity is other than retail trade are not included. However, receipts other than from the sale of merchandise at retail (e.g., service receipts, sales to industrial users, and sales to other retailers) by establishments primarily engaged in retail trade are included. Although the count of establishments represents the number in business at the end of the year, the sales figures include sales of all establishments in business at any time during the year.

General merchandise group stores (item A178) include retail stores that sell a number of lines of merchandise, such as dry goods, apparel and accessories, furniture and home furnishings, small wares, hardware, and food. The stores included are known as department stores, variety stores, general merchandise stores, general stores, etc. Establishments primarily engaged in selling used general merchandise and those selling general merchandise by mail, vending machines, or direct selling are not included.

Eating and drinking places (item A179) include retail establishments selling prepared foods and drinks for consumption on the premises; they also include lunch counters and refreshment stands selling prepared foods and drinks for immediate consumption. Restaurants, lunch counters, and drinking places operated as a subordinate service facility by other establishments are not included unless they are operated as leased departments by outside operators.

See also general note for items A173-181.

Items A180 and A181. Paid employees and annual payroll, 1977.

Source: Same as items A173 and A174.

For discussions of paid employees and annual payroll, see text for items A171 and A172.

See also general note for items A173-181.

SELECTED SERVICE INDUSTRIES

Items A182-190. General note.

These statistics are based on the results of the 1977 Census of Service Industries. The census covers services as defined in the *1972 SIC Manual* and its 1977 supplement (see general note for items A159-167), except religious organizations, private households, and governmental organizations classified in the covered industries. Also excluded are elementary and secondary schools operated by churches. Data are shown for establishments in the "selected" service industries or those establishments subject to Federal income tax ("for profit") that were classified in industries covered in prior censuses. The "selected" service industries include hotels, motels, trailering parks, and camps; personal services; business services; automotive repair, services, and garages; miscellaneous repair services; amusement and recreation services, including motion pictures; dental laboratories; legal services; and engineering, agricultural, and surveying services. Data on service establishments exempt from Federal income tax ("nonprofit") classi-

fied in industries covered in prior censuses, along with all establishments in industries covered for the first time in 1977, are available from census reports, but not at the county and city levels.

The data exclude central administrative offices, captive warehouses, and other auxiliary units that primarily service establishments within the same organization. For the 1977 Census of Service Industries, large- and medium-size firms, plus all firms known to operate more than one establishment, were sent questionnaires to be completed and returned to the Bureau of the Census by mail. For most very small firms, including those with no paid employees, data from existing records of the IRS and the SSA were used.

Items A182 and A183. Establishments—total and with payroll, 1977.

Source: U.S. Bureau of the Census, *1977 Census of Service Industries, Geographic Area Statistics* (series SC77-A).

For a definition of total establishments (item A182), see text for items A159 and A160. Total establishments represent the number in business at the end of 1977. Establishments with payroll (item A183) are those that had some paid employment during 1977.

See also general note for items A182-190.

Items A184-188. Receipts—all establishments, establishments with payroll, and by selected kind of business, 1977.

Source: Same as items A182 and A183.

Receipts, all establishments (item A184), include the total receipts from customers for services rendered and merchandise sold during 1977, whether or not payment was received in 1977 (except for legal services, which reported payments received in 1977). Receipts are net after deductions for refunds and allowances for merchandise returned by customers. Gasoline, liquor, tobacco, and other excise taxes, which are paid by the manufacturer or wholesaler and included in the cost of goods purchased, are also included. Total receipts do not include sales, occupancy, admissions, or other taxes collected by the establishment directly from customers and paid directly by the establishment to a local, State, or Federal tax agency; nor do they include nonoperating income from such sources as investments or rental of real estate. They also do not include service receipts of manufacturers, wholesalers, retail establishments, nor other businesses whose primary activity is other than service. They do, however, include receipts other than from services rendered (e.g., sale of merchandise to individuals or other businesses) by establishments primarily engaged in performing services. Although the count of establishments represents the number in business at the end of the year, the receipts figures include receipts of all establishments in business at any time during the year.

Hotels, motels, trailering parks, and camps (item A186) are establishments primarily engaged in providing lodging or lodging and meals to the general public. Establishments that provide camping facilities or camping and trailer space on a fee basis are included; however, residential mobile home parks are not included. Also, rooming and boarding houses and organization hotels and lodging houses that operate on a membership basis are not included.

Automotive repair, services, and garages (item A187) are establishments primarily engaged in furnishing automotive repair, parking, rental, and other services to the general public. Similar facilities owned and operated by concerns for their own use and not available to the general public are treated as auxiliary establishments of those concerns and are not included. Automobile repair departments maintained by establishments engaged in the sale of new automobiles are classified in retail trade, as are gasoline service stations. Among the kinds of businesses included are general automotive repair shops; top and body repair shops; tire retreading and repair shops; paint shops; shops primarily engaged in specialized automotive repair, not elsewhere classified, such as fuel service, brake relining, and exhaust system repair; automotive rental and leasing, without drivers; parking lots; parking structures; car washes; and establishments primarily engaged in furnishing automotive services not elsewhere classified, such as lubricating, waxing, towing, diagnostic service, and undercoating.

Amusement and recreation services, including motion pictures (item A188), are establishments primarily engaged in providing amusement, recreation, or entertainment upon payment of a fee or admission charge. Symphony orchestras, ballet and opera companies, and similar entertainment groups as well as membership sports and recreation clubs and commercial museums and botanical and zoological gardens are included only if they are organized on a for-profit basis and pay Federal income tax. Gambling businesses, where legal, are also included in this major group; however, combined gambling and lodging facilities with 25 or more guest rooms are classified under the "hotels, motels, trailering parks, and camps" major group. In addition, this group includes establishments producing and distributing motion pictures, exhibiting motion pictures in commercially operated theaters, and furnishing services to the motion picture industry. The term "motion pictures" includes similar productions for television or other media using film, tape, or other means.

Items A189 and A190. Paid employees and annual payroll, 1977.

Source: Same as items A182 and A183.

For discussions of paid employees and annual payroll, see text for items A171 and A172.

See also general note for items A182-190.

BANKING

Items A191 and A192. Bank deposits—total and savings and other time, 1981 (June).

Source: Federal Deposit Insurance Corporation, *Summary of Accounts and Deposits in All Commercial and Mutual Savings Banks, June 30, 1981.*

These figures represent deposits in all commercial and mutual savings banks in the United States. For all counties and other geographic areas, individual banking offices—not the combined totals of the bank—are the source of the data. Banking offices include all offices that actually hold deposits and exclude consumer installment loan offices, computer centers, and other nondeposit installations, such as some electronic funds transfer units. They also exclude "nondeposit" trust companies.

Deposits cover only deposits of individuals, partnerships, and corporations. The public sector is not included.

Item A193. Savings and loan associations, savings capital, 1981.

Source: Federal Home Loan Bank Board, *Summary of Savings Accounts by Geographic Area, September 1981.*

These figures are based on the results of the survey of the dollar volume of accounts of savings and loan associations insured by the Federal Savings and Loan Insurance Corporation as of September 30, 1981.

For a given geographic area, data are presented for offices of savings and loan associations—whether home or branch—located in the area.

ELECTIONS

Items A194 and A195. Total vote cast for President and vote for leading party (percent), 1980.

Source: Elections Research Center, *America Votes, 14.* (Copyright.)

Data presented here may differ somewhat from the official figures issued by the Clerk of the House of Representatives in *Statistics of the Presidential and Congressional Elections* because some data were revised by State sources after submission to Congress. The Elections Research Center receives data from the States after such revisions are made. Write-in votes are not available in all cases by county.

The percent of the vote cast for the leading party represents the percent of the total vote cast for the party with a majority or plurality.

FARM POPULATION AND EARNINGS

Item A196. Farm population (Census), 1980.

Source: U.S. Bureau of the Census, *1980 Census of Population and Housing,* Summary Tape File 3C.

Data presented here for farm population were obtained from a sample of the population as part of the 1980 Census of Population and Housing, conducted by the Bureau of the Census. Farm population covers all persons living in rural areas on farms as of April 1, 1980. Farms are defined as places from which sales of crops, livestock, and other farm products amounted to $1,000 or more during 1979.

For a discussion of the decennial censuses, including data based on samples, see general note for items A1-22.

Item A197. Farm earnings (BEA), 1980.

Source: U.S. Bureau of Economic Analysis, *Local Area Personal Income, 1976-1981.*

Farm earnings include the income of farm workers (wages and salaries and other labor income) and farm proprietors. Farm proprietors' income includes only the income of sole proprietorships and partnerships. Therefore, an adjustment is made to exclude the net farm income of corporate farms, including the salaries of officers of corporate farms.

Farm earnings estimates are benchmarked to data collected in the 1974 Census of Agriculture and the revised U.S. Department of Agriculture State totals of income and expense items.

For a discussion of earnings, see general note for items A116-124.

AGRICULTURE

Items A198-216. General note.

The Bureau of the Census has taken a census of agriculture every 10 years from 1840 to 1920 and roughly every 5 years from 1925 to 1978. The 1978 Census of Agriculture included a mailout/mailback enumeration supplemented by a thorough direct interview in a sample of area segments. This approach was instituted to improve completeness of coverage for State-level agriculture census statistics. The 1978 county farm data do not include totals from the direct

enumeration sample; however, the State and national figures in both tables A and B do include such totals.

Over time, the definition of a farm has varied. Data shown here from the 1978 Census of Agriculture are based on the definition that was announced in August 1975. That revision defines a farm, for statistical purposes, as any place from which $1,000 or more of agriculture products were sold or normally would have been sold during the census year.

For details on the methodology used in the 1978 Census of Agriculture, see the source for items A198-202.

Items A198-202. Farms—total, size, and operators, 1978.

Source: U.S. Bureau of the Census, *1978 Census of Agriculture, State and County Data* (series AC78-A).

All farms are classified by size (items A199 and A200) according to the total land area in each operation. The land area of a farm is an operating-unit concept and includes land owned and operated as well as land rented from others. Land rented or assigned to a tenant was considered the tenant's farm and not the owner's.

The term "operator" (items A201 and A202) refers to a person who operates a farm, either doing the work or making day-to-day decisions about such things as planting, harvesting, feeding, marketing, etc. The operator may be the owner, a member of the owner's household, a salaried manager, a tenant, a renter, or a sharecropper. For partnerships, only one partner is counted as an operator. For census purposes, the number of operators is the same as the number of farms.

See also general note for items A198-216.

Items A203-207. Land in farms, 1978.

Source: Same as items A198-202.

The acreage designated as "land in farms" consists primarily of agricultural land used for crops, pasture, or grazing. It also includes woodland and wasteland not actually under cultivation or used for pasture or grazing, provided it was part of the operator's total operation.

Land in farms is an operating-unit concept and includes land owned and operated as well as land rented from others. All land in Indian reservations used for growing crops or grazing livestock was to be included as land in farms.

With few exceptions, the land in each farm was tabulated as being in the operator's principal county. The principal county was defined as the one where the largest value of agricultural products were raised or produced. It was usually the county containing all or the largest proportion of the land in the farm. For a limited number of Western States, this procedure resulted in the allocation of more land in farms to a county than the total land area of the county. To minimize this distortion, separate reports were required for large farms, identified from the 1974 census and prior special surveys as having more than one separately reportable farm unit. Other reports showing land in more than one county were separated into two or more reports if the data would significantly affect the county totals. These reports were assigned to the appropriate counties during office processing.

Land in farms as a percent of all land (item A205) is based on the approximate total land area of counties and States as determined by records and calculations updated as of January 1, 1979.

Irrigated land in farms (item A206) covers any land in farms to which water was artificially applied in the census year. Land irrigated prior to but not in the census year is not included. Irrigation may have been used for producing a harvested crop, for pasture or grazing lands, for cultivated summer fallow, or for land planted to a crop intended for future harvest. Land flooded during high water periods was to be included as irrigation only if water was diverted to agricultural lands by dams, canals, or other works.

Cropland (item A207) consists of land from which crops were harvested and land that could have been used for crops without additional improvement. This includes land in nonbearing orchards and vineyards, land from which any hay was cut, land on which crops failed, idle or fallow land, and land used for grazing purposes.

See also general note for items A198-216.

Items A208 and A209. Value of land and buildings, 1978.

Source: Same as items A198-202.

Farm operators receiving the sample form were asked to report their estimate of the current market value of land and buildings owned, rented, or leased from others, and rented or leased to others. Market value refers to the respondent's estimate of what the land and buildings would sell for under current market conditions. If the value of land and buildings was not reported, it was estimated during processing by using the average value of land and buildings from a similar farm in the same geographic area.

See also general note for items A198-216.

Items A210-214. Farms with sales of $2,500 and over, 1978.

Source: Same as items A198-202.

The source reports give counts of farms by value of sales for various sales-size groups in addition to

those presented, including farms with sales under $2,500.

The value of farm products sold by farms (items A212-214) represents the gross market value before taxes and production expenses of all agricultural products sold or removed from the place in 1978, regardless of who received the payment. It includes sales by the operator as well as the value of any shares received by partners, landlords, contractors, and others associated with the operation. It represents the sum of all crops, including nursery products sold and livestock and poultry and their products sold. It excludes income from farm-related sources such as customwork or agricultural service, income from nonfarm sources, and sales of forest products from farms and ranches. The value of agricultural products sold was collected from all operators. Where the operator failed to report a value of sales, estimates were made based on the amount of crops harvested or the number of livestock or poultry sold. Extensive estimation was required for farmers growing crops and livestock under contract.

The value of crops sold in 1978 (item A213) does not necessarily represent the sales from crops harvested in 1978. The data include sales from crops produced in earlier years and exclude some crops produced in 1978 but held in storage and not sold in 1978. For crops sold through a co-op that made payments in several installments, only the total value received in 1978 was to be reported. Livestock and livestock products (item A214) include dairy products but exclude poultry.

See also general note for items A198-216.

Items A215 and A216. Family (or individual) farms, 1978.

Source: Same as items A198-202.

These statistics represent individual or family operations (sole proprietorships), excluding partnerships and corporations.

See also general note for items A198-216.

Table C—Cities

Table C presents 170 items of data for 945 incorporated cities, boroughs, towns, and villages in the United States and 7 census designated places in Hawaii that had 25,000 or more inhabitants in April 1980.

The stub on each page provides an alphabetical listing of States, together with their cities, boroughs, towns, and villages, also in alphabetical order. Data items are numbered from 1 to 170 across the top of the pages. All 170 items of data are provided in 10 pages for each of the 16 sets of cities, etc., before the listing is continued.

Census place codes for cities, with corresponding Federal Information Processing Standards codes for MSA/PMSA and States, are shown in the first two columns on the first page within each set of 10 pages. MSAs are not presented in this volume but will be published separately in a later supplement.

AREA AND POPULATION

Item C1. Land area, 1980.

Source: U.S. Bureau of the Census, *1980 Census of Population, Characteristics of the Population, Number of Inhabitants* (series PC80-1-A), *U.S. Summary.*

For explanatory notes, see text for item A1.

Annexations and other boundary changes were made by cities between January 1, 1970, and January 1, 1980. Generally, land areas are as reported by local officials, and the Bureau of the Census assumes no responsibility for their accuracy. Because of a lack of response, the Bureau of the Census measured some areas based on the best available maps.

Items C2-18. Population—total and general characteristics, 1980.

Source: U.S. Bureau of the Census, *1980 Census of Population and Housing.* Items C2-5 and C11-16: Summary Tape File 1C; items C6-10, C17, and C18: Summary Tape File 3C.

For explanatory notes, see general note for items A1-22 and text for items A2-22.

HOUSEHOLDS

Items C19-25. Total, persons per household, family, and nonfamily, 1980.

Source: U.S. Bureau of the Census, *1980 Census of Population and Housing,* Summary Tape File 1C.

For explanatory notes, see text for items A23-29.

VITAL STATISTICS

Items C26-28. Births, 1980.

Source: U.S. National Center for Health Statistics, *Vital Statistics of the United States,* Volume I, *Natality,* 1980.

For explanatory notes, see text for items A30-32.

Items C29 and C30. Deaths, 1979.

Source: U.S. National Center for Health Statistics, *Vital Statistics of the United States,* Volume II, *Mortality,* 1979.

Mortality statistics shown are based on information from all death certificates filed in the 50 States and the District of Columbia. Tabulations for the United

States and specified geographic areas in this publication are by place of residence. Deaths of nonresidents of the United States occurring within the States are not included.

Tabulations of deaths are based on information obtained from copies of the original certificates received from the State registration offices and from precoded data provided on computer tape from the Vital Statistics Cooperative Program.

Death rate (item C30) represents the number of deaths per 1,000 resident population estimated as of July 1, 1979.

HOSPITALS

Items C31-33. Number and beds, 1980.

Source: American Hospital Association, unpublished data. (Copyright.)

For explanatory notes, see text for items A43-45.

CRIME

Items C34-37. Serious crimes known to police—number, rate, and offenses, 1981.

Source: U.S. Federal Bureau of Investigation, *Crime in the United States,* 1981 and unpublished data.

For explanatory notes, see text for items A60-63. Cities with incomplete reports are noted on pages where items C34-37 appear.

NEW PRIVATE HOUSING UNITS AUTHORIZED

Items C38-41. New private housing units authorized by building permits, 1981.

Source: U.S. Bureau of the Census, *Housing Units Authorized by Building Permits and Public Contracts, 1981* (series C40); and unpublished data.

For explanatory notes, see text for items A64-67.

HOUSING

Items C42-62. Total and selected characteristics, 1980 (April 1).

Source: U.S. Bureau of the Census, *1980 Census of Population and Housing.* Items C42-45, C52-54, C58, and C60-62: Summary Tape File 1C; items C46-51, C55-57, and C59: Summary Tape File 3C.

For explanatory notes, see general note and text for individual and grouped elements of items A68-88.

JOURNEY TO WORK

Items C63-67. Employment/residents ratio, persons working outside county of residence, and means of transportation to work, 1980.

Source: U.S. Bureau of the Census. Item C63: Unpublished data; items C64-67: *1980 Census of Population and Housing,* Summary Tape File 3C.

For explanatory notes, see text for items A89-93.

EDUCATION

Items C68-74. Years of school completed and school enrollment, 1980.

Source: U.S. Bureau of the Census, *1980 Census of Population and Housing,* Summary Tape File 3C.

For explanatory notes, see text for items A94-100.

LABOR FORCE (CENSUS)

Items C75-86. Total and civilian labor force, 1980.

Source: U.S. Bureau of the Census, *1980 Census of Population and Housing,* Summary Tape File 3C.

For explanatory notes, see text for items A104-115.

CIVILIAN LABOR FORCE (BLS)

Items C87-89. Total and unemployment, 1982.

Source: U.S. Bureau of Labor Statistics, *Employment and Unemployment for States and Local Areas.*

Data are shown only for those cities with 50,000 or more inhabitants. Most city estimates are derived from county estimates (see text for items A101-103) and reflect relative employment/unemployment between cities and their component counties as determined by the decennial census.

WORKERS AND MONEY INCOME

Items C90-106. Workers in families and money income, 1979.

Source: U.S. Bureau of the Census, *1980 Census of Population and Housing,* Summary Tape File 3C.

Workers in families include family members 16 years old and over who worked 1 or more weeks in 1979. The data cover those workers who did any work for pay or profit (including weeks on paid vacation or on paid sick leave) or worked without pay on a family farm or in a family business or were on active duty in the Armed Forces.

For explanatory notes on money income, see text for items A125-139.

FORM OF GOVERNMENT

Item C107. Form of government.

Source: International City Management Association, Washington, D.C., *The Municipal Yearbook, 1983.* (Copyright.)

Information for this item was obtained from the master computer file of the source agency. The two-letter code designating the form of government is identified in footnotes on pages where item C107 appears.

CITY GOVERNMENT FINANCES AND EMPLOYMENT

Items C108-123 and C125-127. General note.

The data presented relate only to municipal corporations and their dependent agencies and do not include amounts for other local governments outlying city areas. Therefore, expenditure figures for "education" do not include spending by the separate school districts that administer public schools within most municipal areas. Variations in the assignment of governmental responsibility for public assistance, health, hospitals, public housing, and other functions also affect comparability of reported amounts of city expenditure, revenue, and debt.

The 1980-1981 fiscal year reported is that closing between July 1, 1980, and June 30, 1981. A majority of municipalities end their fiscal years on December 31; the next most common financial period is the 12 months ending June 30.

The financial statistics are based mainly on a mail canvass that covered substantially all cities with 25,000 or more inhabitants on April 1, 1980. For cities with 300,000 or more inhabitants and for a limited number of smaller cities, the basic data were compiled by Census Bureau representatives from official reports and records, with the advice and assistance of local officials and employees. Information for other cities was supplied by local officials in response to a mail canvass that involved the use of detailed census questionnaires.

Data for cities with population of 50,000 and over are published in *City Government Finances in 1980-81* and in *City Employment in 1981.*

Items C108-123. Finances—general revenue, general expenditure, and debt outstanding, 1980-1981.

Source: U.S. Bureau of the Census, Public Use Tape, *Survey of Governments, 1981: Finance Statistics.*

For explanatory notes relating to subjects not discussed below, see general note for items A140-156 and text for items A142-156. The information there relates to the 1977 Census of Governments, but the explanatory material applies equally to the data presented here from the source cited.

Total general expenditure (item C115) includes all city expenditures other than those for utilities, liquor stores, and employee-retirement or other insurance trusts.

Sanitation (item C121) comprises street cleaning and collection and disposal of garbage and other waste. Sewerage covers sanitary and storm sewers, sewage disposal facilities and services, and payments to other local governments for such purposes.

Revisions were made after the release of the data tape; therefore, some data may differ from those on the tape.

See also general note for items C108-123 and C125-127.

Item C124. Moody's bond rating, 1982.

Source: Moody's Investors Service, Inc., *Moody's Bond Record: Corporates, Convertibles, Governments, Municipals, and Commercial Paper Ratings,* September 1982. (Copyright.)

The purpose of Moody's ratings is to provide investors with a simple system of gradation by which relative investment qualities of bonds may be noted. Where no rating has been assigned ("NA" appears in the data cell), it may be for reasons unrelated to the quality of the issue such as the lack of data pertaining to the issue, private placement of the issue, no application for rating, etc.

The quality of most bonds is not fixed over a period of time, but tends to undergo change. For this reason changes in ratings occur so as to reflect variations in the investment risks of the individual bond. The data shown represent Moody's general obligation bond rating as of September 1982.

Moody's municipal ratings presented range from issues rated Aaa, which are judged to be of the best quality, to B, which are those generally lacking characteristics of a desirable investment. Also, bonds carrying the same rating are not claimed to be of absolutely equal quality as it is unlikely, for example, that two bonds identically rated are of precisely the same investment quality. Those bonds in the Aa, A, Baa, Ba, and B groups that Moody's believes possess the strongest investment attributes are designated by the symbols Aa1, A1, Baa1, Ba1, and B1.

Items C125-127. Employment—total, full-time equivalent; employees per 10,000 population; and payroll, 1981 (October).

Source: U.S. Bureau of the Census, Public Use Tape, *Survey of Governments, 1981: Employment Statistics.*

For explanatory notes, see general note for items A140-156 and text for items A140 and A141. See also general note for items C108-123 and C125-127.

FEDERAL GOVERNMENT EMPLOYEES

Item C128. Federal civilian government employees, 1980.

Source: U.S. Office of Personnel Management, unpublished data.

The major source of these data is an automated system of individual records for most Federal civilian employees, the Central Personnel Data File (CPDF), established in 1972 and maintained by the Office of Personnel Management (OPM). It is organized and updated on a monthly basis from data collected from each department and agency of the Federal Government except the Central Intelligence Agency and the National Security Agency, which are exempt by law from personnel reporting requirements for reasons of security. Also excluded from the OPM CPDF coverage are the following agencies or groups of employees in the Executive Branch: Nonappropriated fund employees in defense activities; and commissioned officers serving in the Environmental Protection Agency, Department of Commerce, and Department of Health and Human Services. The following legislative branch agencies and groups are also excluded: Members and employees of Congress, Congressional Budget Office, Commission on Security and Cooperation in Europe, Copyright Royalty Tribunal, and Office of Technology Assessment. With the exception of the Administrative Office of the U.S. Courts, the entire judicial branch is excluded. Employment data are based on duty locations (i.e., where employees work, not where they reside). The U.S. Postal Service, however, reports employees based on the site from which they are paid rather than actual work site.

MANUFACTURES

Items C129-137. Establishments, all employees, production workers, value added by manufacture, and value of shipments, 1977.

Source: U.S. Bureau of the Census, *1977 Census of Manufactures*. Items C129 and C130: Location of Manufacturing Plants File, not available in printed form; items C131-137: *Geographic Area Statistics* (series MC77-A).

For explanatory notes, see general note and text for individual and grouped elements of items A159-167.

WHOLESALE TRADE

Items C138-142. Total establishments, sales, paid employees, and annual payroll, 1977.

Source: U.S. Bureau of the Census, *1977 Census of Wholesale Trade, Geographic Area Statistics* (series WC77-A).

For explanatory notes, see general note and text for individual and grouped elements of items A168-172.

RETAIL TRADE

Items C143-153. Total establishments, sales, and establishments with payroll, 1977.

Source: U.S. Bureau of the Census, *1977 Census of Retail Trade, Geographic Area Statistics* (series RC77-A).

For explanatory notes, see general note and text for individual and grouped elements of items A173-181. For cities, the population estimates used for calculating the per capita (item C146) have not been revised.

Food stores (item C148) are classified as retail stores primarily engaged in selling food for home preparation and consumption. Among the kinds of businesses included are grocery stores; freezer and locker meat provisioners; meat markets; fish (seafood) markets; fruit stores and vegetable markets; candy, nut, and confectionery stores; dairy products stores; retail bakeries; and other miscellaneous food stores (stores that sell specialized foods not elsewhere classified, such as eggs and poultry, health foods, spices, herbs, coffee, and tea).

Gasoline service stations (item C149) include establishments primarily selling gasoline and automotive lubricants. Usually, these establishments also sell tires, batteries, and accessories, and perform minor repair work and services. Establishments called garages but deriving more than half of their receipts from the sale of gasoline and automotive lubricants are included.

SELECTED SERVICE INDUSTRIES

Items C154-162. Total establishments, receipts, and establishments with payroll, 1977.

Source: U.S. Bureau of the Census, *1977 Census of Service Industries, Geographic Area Statistics* (series SC77-A).

For explanatory notes, see general note and text for individual and grouped elements of items A182-190.

CLIMATE AND RESIDENTIAL ELECTRIC BILLS

Items C163-169. Climate.

Source: National Oceanic and Atmospheric Administration (NOAA), *Climatography of the United States,* Number 81 (September 1982); and *Comparative Climatic Data,* for the United States through 1981 (August 1982).

All climate data are average values for the 30-year period, 1951-1980.

Mean temperatures for January and July (items C163 and C164) were determined by adding the average daily maximum temperatures and average daily minimum temperatures and dividing by 2. For an explanation of mean, see "Introduction."

Temperature limits represent average daily minimum for January (item C165) and average daily maximum for July (item C166).

Annual precipitation values (item C167) are the average annual water equivalent of all precipitation for the 30-year period. The totals include accumulated rain, drizzle, and the water equivalent of all forms of freezing and frozen precipitation such as hail, snow, sleet, and freezing rain.

Heating- and cooling-degree days (items C168 and C169) are used as relative measures of the energy required for heating and cooling buildings. One heating-degree day is accumulated for each whole degree that the mean daily temperature is below 65°F (i.e., a mean daily temperature of 62°F will produce 3 heating-degree days). Cooling-degree days are accumulated in similar fashion for deviations of the mean daily temperature above 65°F.

Item C170. Typical monthly residential electric bills, January 1, 1982.

Source: U.S. Energy Information Administration, *Typical Electric Bills, 1982.*

Data presented are based on information reported on Energy Information Administration Form EIA-213 "Annual Retail Bills for Electric Utilities." The form provides data on the cost of electricity of residential, commercial, and industrial consumers throughout the United States. The data are used to compare the range of electric bills for similar services from different localities. Bills for residential electric service are reported by utilities for various energy-consumption levels (250, 500, 750, 1,000, and 2,500 kilowatt-hours) for each community of 2,500 or more inhabitants. Item C170 is based on a 750 kilowatt-hour consumption level, which approximates the 740 kilowatt-hours of electric energy used by the average residential customer.

See also general note for items A159-167.

For an explanation of mean, see "Introduction."

Table D—Places

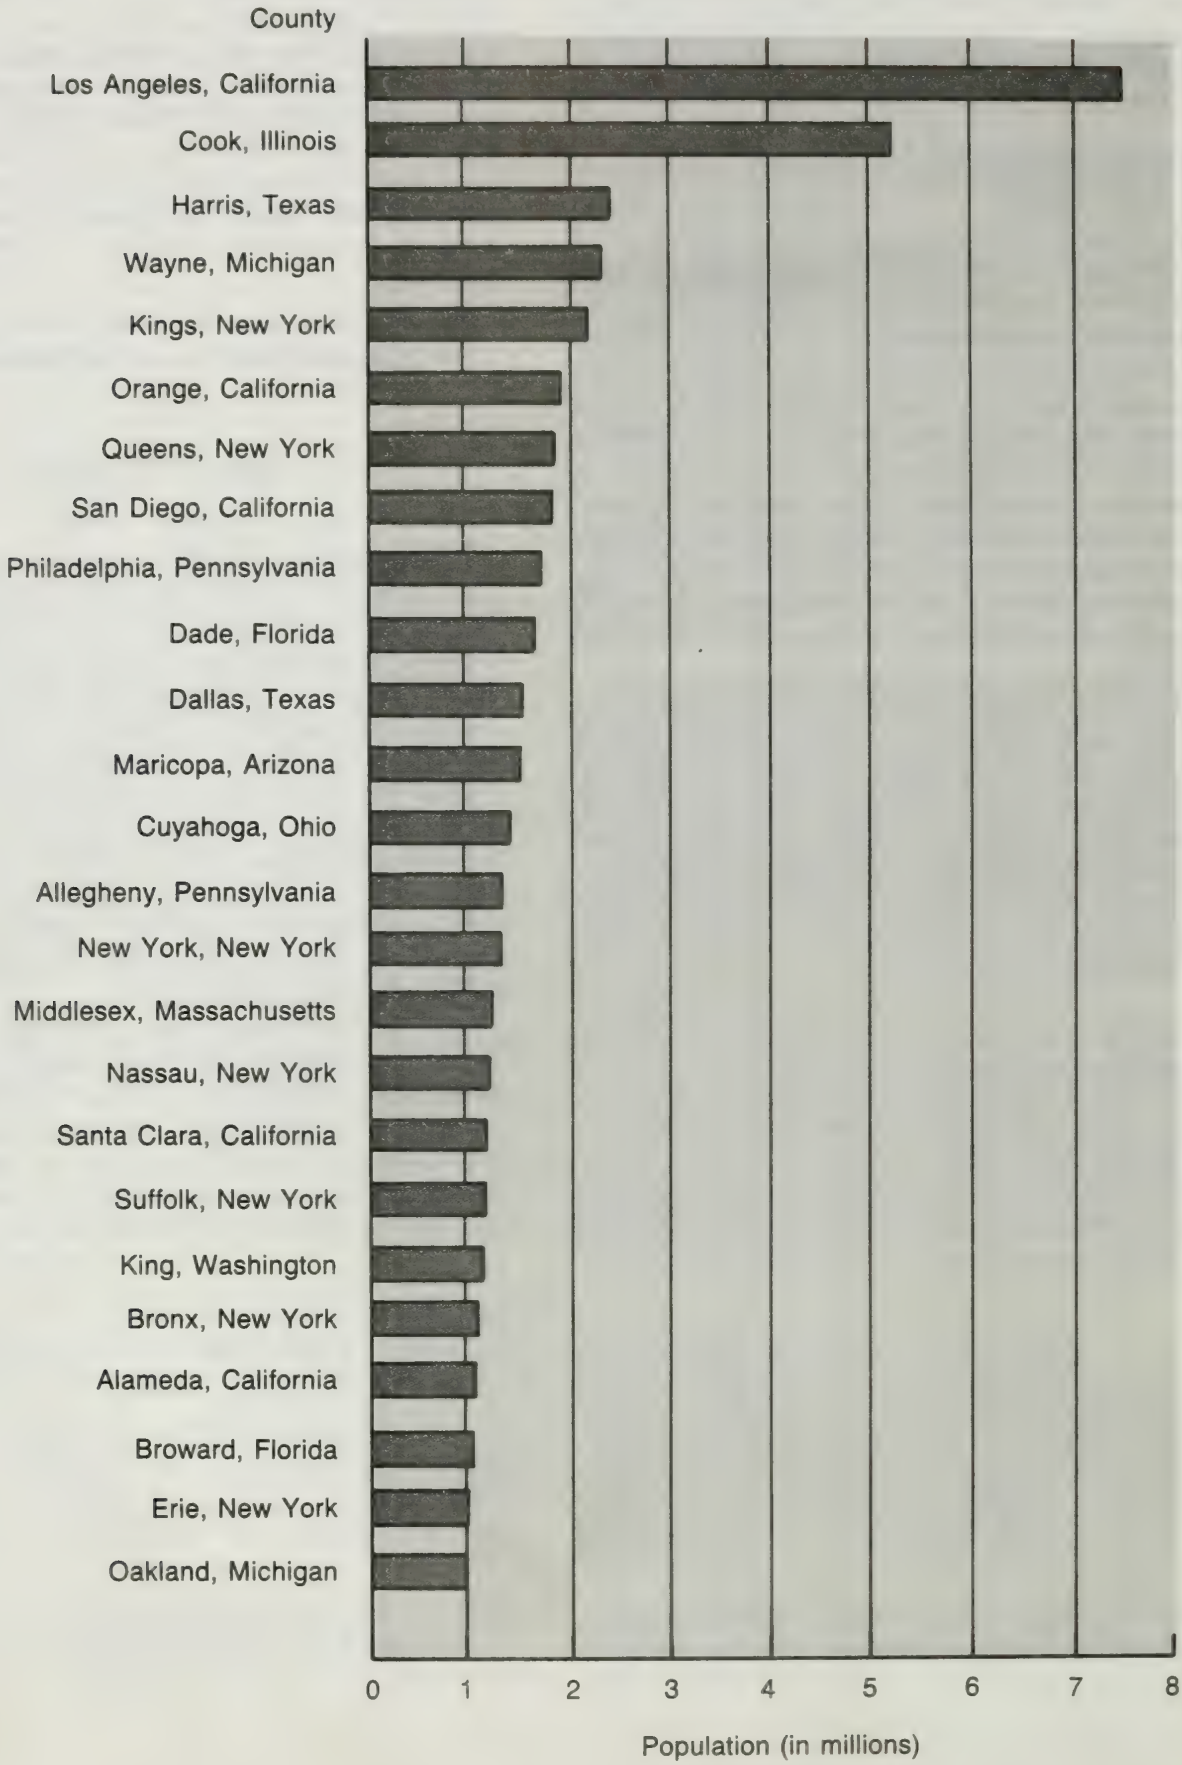
Table D presents 15 data items from the 1980 Census of Population and Housing for approximately 10,000 places of 2,500 or more inhabitants. The stub provides an alphabetical listing of the States, followed by an alphabetical listing of their places (including the name of the county or counties in which each place is located). FIPS codes for States or census place codes are shown in the first column of each page.

For 11 States, alphabetical listings of MCDs (with four-digit MCD sequence codes instead of place codes) follow the listings of places. These States are Connecticut, Maine, Massachusetts, Michigan, New Hampshire, New Jersey, New York, Pennsylvania, Rhode Island, Vermont, and Wisconsin.

Data items are numbered 1 through 15 across the top of each page. For more information regarding the codes, see "Geographic Concepts and Codes," p. xix.

For discussions of area and population, see general note and text for items A1-22; for money income, 1979, see text for items A125-139; and for housing, see general note and text for items A68-88.

Top 25 Counties by Size of Population: 1980



Area Rankings:

Page

liv Table 1. **Highest Ranking Counties by Selected Subjects**

lx Table 2. **Rankings of 75 Largest Cities for Selected Items**

Table 1– Highest Ranking Counties by Selected Subjects

[Rankings cover all counties and county equivalents such as independent cities (IC) and census divisions. When counties share the same rank, the next lower rank is omitted. Because of rounded data, counties may have identical values shown but different ranks]

[1] Percent of total civilian labor force. [2] Ranks are only for cities of 50,000 or more. [3] Based on resident population enumerated as of April 1, 1980. [4] Excludes inmates of institutions, persons in military group quarters and college dormitories, and unrelated individuals under 15 years. [5] Excludes Central Intelligence Agency and National Security Agency. [6] Data are for Honolulu county.

Top 25 Cities by Size of Population: 1980

*Data on serious crimes have not been adjusted for underreporting; this may affect comparability among geographic areas. Data may differ from that shown in FBI publications. [1]Per 100,000 resident population estimated as of July 1, 1981. [2]Includes burglary, larceny-theft, and motor vehicle theft. [3]Includes murder and nonnegligent manslaughter, forcible rape, robbery, and aggravated assault.

Table A. States — Housing and Journey to Work

Region, division, and State	Year structure built, percent built—			Year-round housing units, 1980 (Apr. 1) —Con.											Journey to work, 1980[7]				
				Occupied units												Percent—			
					Percent—					Owner-occupied			Renter-occupied				Means of transportation		
	1970 to Mar. 1980	1960 to 1969	1939 or earlier	Total	Lacking complete plumbing facilities[1]	With 1.01 or more persons per room	By type of house heating fuel: Gas[2]	By type of house heating fuel: Electricity	By type of house heating fuel: Fuel oil, kerosene[3]	Percent of total occupied units	Median monthly costs[4] (Dol.)	Median value[5] (Dol.)	Total	Median gross rent[6] (Dol.)	Employment/residents ratio[8]	Persons working outside county of residence	Drive alone	Car-pool	Public transportation[9]

[1]Totals include data not distributed by county. [2]Includes nursery and greenhouse products.

TABLE B:

Counties

(For explanation of symbols, see page xvii)

Note:
Table B presents data for 216 items for each State, county, and county equivalent. Counties and county equivalents are presented in alphabetical order within States, which are also in alphabetical order. Items are numbered from 1 to 216 across the top of the pages. All 216 items of data are provided before the listing is continued (i.e., all data for Autauga, Ala., are presented on pages 18 through 31.) Census area codes for States and counties, with MSA/PMSA codes, are shown in the first two columns on the first page within each set of 45 pages.

[1]Based on resident population enumerated as of April 1, 1980. [2]Excludes inmates of institutions, persons in military group quarters and college dormitories, and unrelated individuals under 15 years. [3]Children living with relatives; excludes persons under 18 years who are householders or spouses of householders. [4]Includes balance of state in non-borough areas, which do not have individual local governments. [5]Data are for Census Divisions. See Geographic Concepts section of text for more information.

*Data on serious crimes have not been adjusted for underreporting; this may affect comparability among geographic areas. Data may differ from that shown in FBI publications. [1]Per 100,000 resident population estimated as of July 1, 1981. [2]Includes burglary, larceny-theft, and motor vehicle theft. [3]Includes murder and nonnegligent manslaughter, forcible rape, robbery, and aggravated assault. [4]Includes data not distributed by county.

County	Year-round housing units, 1980 (Apr. 1) —Con.														Journey to work, 1980[7]				
	Year structure built, percent built—			Occupied units												Percent—			
					Percent—					Owner-occupied			Renter-occupied				Means of transportation		
	1970 to Mar. 1980	1960 to 1969	1939 or earlier	Total	Lacking complete plumbing facilities[1]	With 1.01 or more persons per room	By type of house heating fuel: Gas[2]	By type of house heating fuel: Electricity	By type of house heating fuel: Fuel oil, kerosene[3]	Percent of total occupied units	Median monthly costs[4] (Dol.)	Median value[5] (Dol.)	Total	Median gross rent[6] (Dol.)	Employment/residents ratio[8]	Persons working outside county of residence	Drive alone	Car pool	Public transportation[9]
