FOREWORD

I. NEED FOR FACTUAL DATA

Basic traffic data is necessary for the development of sound, realistic and practical plans. Mere observations are often deceptive and conclusions based thereon may be fallacious. Factual statistical information of this type is important in the development of plans for transit, thoroughfares, parking facilities, terminals, and related phases of transportation.

Downtown Los Angeles is the focal point of the entire Metropolitan area. It is therefore the first and most important area for which accurate information is required.

II. NATURE OF THE CORDON COUNT

Downtown Los Angeles, for this cordon count, is bounded generally by:

Los Angeles Street on the east,
Pico Boulevard on the south,
Harbor Freeway on the west, and
Santa Ana Freeway on the north.

The exact detail locations of the cordon are shown in Exhibit 1.

The cordon count shows the actual volume of vehicles (by types) and persons (by mode of transportation) who entered and left Downtown on each street during each half-hour period from 6:00 a.m. to 10:00 p.m. Pedestrians as well as passengers are indicated. The accumulation of vehicles as well as persons at each period of the day by mode of transportation is an important derivative of the count.

III. METHOD

A count was made of all vehicles actually parked in lots and garages, at the curb, and moving on the streets within the downtown area at 6:00 a.m. This information was used as the "initial accumulation" in table 3, indicating the accumulation of vehicles within the area during the day.

On each street at the cordon line, a count was made of:

Vehicles entering
Vehicles leaving
Pedestrians entering
Pedestrians leaving
Transit passengers entering
Transit passengers leaving
Persons in passenger vehicles entering
(vehicle occupancy)
Persons in passenger vehicles leaving
(vehicle occupancy).

Automatic traffic counters only were used at very light traffic locations.

Passenger vehicle occupancy checks were made at twenty-four of the fifty-six cordon line stations on a sample basis. One man checked both entering and leaving occupancy, altering the direction of count each fifteen minute period. The average occupancy for each period by direction was derived from this sample. The occupancy of "trucks" and "other vehicles" was assumed to be one. On each shift, (6:00 a.m. to 2:00 p.m., and 2:00 p.m. to 10:00 p.m.) a total of 106 men and eight automatic counters counted 133 motor vehicle movements and 196 pedestrian movements.

The Department of Public Utilities and Transportation served as the coordinator for obtaining all counts of transit vehicles and passengers from transit companies. The two large transit companies—Los Angeles Transit Lines and Metropolitan Coach Lines—made sixteen-hour field checks at cordon stations. Other metropolitan area and out-of-town bus companies furnished data which they obtained at their downtown terminals.

Vehicles in cordon tabulations are classified as follows:

PRIVATE PASSENGER VEHICLES—include all passenger vehicles except taxis and commercial vehicles.

TAXIS, with or without fares.

PASSENGER VEHICLES is the total of private passenger vehicles and taxis.

SMALL TRUCKS include commercial, station and panel delivery wagons, and single body trucks.

LARGE TRUCKS are those which have a semi or full trailer.

STREET CARS are rail operated transit cars.

BUSSES include non-rail metropolitan area transit vehicles in service (both trolley busses and gas or diesel busses).

OUT-OF-TOWN BUSSES are those with origins or destinations outside the Metropolitan area.

TOTAL TRANSIT is the total of all street cars, busses, and out-of-town busses.

OTHER VEHICLES are out-of-service busses and street cars, passenger cars with house trailers, non-scheduled sight seeing busses, truck tractors without trailers, emergency vehicles, or other non-classified vehicles.

The tabulation and summarizing of data were made by the Department of Traffic. The summary tables and the exhibits are published herein.

IV. PURPOSE OF PUBLICATION

No analysis of the cordon data is presented in this publication and no conclusions are drawn. These data are presented to make them available in a convenient and accessible form for use by authorities. This report is a working tool from which numerous and varied analyses on many aspects of the overall transportation problem can be drawn. Also, it may be useful to operations of taxi cabs, intercity busses and trucks, or to property owners and businessmen. It is of value historically and will give added usefulness to previous and future cordon counts by the establishment of trends. It is the intent of the Department of Traffic to conduct the cordon count every other year. In summary, it is a valuable statistical compilation of data on the movement of vehicles and persons in DOWNTOWN LOS ANGELES.

V. ACKNOWLEDGEMENTS

Grateful acknowledgement is due to many persons and organizations for their help in the conduct of this survey. The following departments and organizations furnished valuable assistance:

Department of Public Utilities

Police Department

Accounting Department

Los Angeles Transit Lines

Metropolitan Coach Lines

Other bus companies

Chamber of Commerce

Junior Chamber of Commerce

Downtown Businessmen's Association

Yellow Cab Company.

NOTE

The following percentages and values are interpolated using the valid 1941 and 1955 counts as bases: 1939 IN from 6:00-7:00 AM, 7:00-10:00 PM and TOTAL; 1939 OUT, entire column (the 12 hour total was the only data obtainable); 1947 and 1950 IN and OUT from 6:00-8:00 AM, 11:00 to 3:00 PM and 6:00-10:00 PM.

ACCUMULATED figures are related directly to the IN and OUT values.
