

TRAFFIC VOLUMES

1984

DEPARTMENT OF PUBLIC WORKS

T. A. TIDEMANSON, DIRECTOR

PREFACE

The current edition of Traffic Volumes provides a complete listing of vehicular traffic volume counts taken by the Los Angeles County Department of Public Works during the year 1984. In addition, previous years count data is included for arterial highways without current counts. Twenty-four hour machine counts and six-hour manual counts are both included, although in the case of manual counts, the volumes shown in the listing represent twenty-four hour totals expanded from six-hour counts.

Manual counts are so designated in the listing under the heading 24-HOUR VOLUME. It should be noted that peak hours shown for manual counts apply only to the hours counted and may not necessarily represent the true A. M. or P. M. peaks. Also, to rule out any strong directional bias, directional volumes for manual counts are indicated only if the count was split to include a sampling of both A. M. and P. M. hours. They are not shown if the count was taken exclusively in the morning or afternoon. In cases where volumes do not appear for certain manual counts, it indicates that the original six-hour count did not include all intersection movements.

1984

The traffic volume information contained in this report has been largely gathered from the unincorporated areas of the County. Those counts taken in a city have the abbreviated name of the city shown in the RD/CITY column. The abbreviations APRCH and EXIT in the Condition column indicate that the traffic was counted in one direction only, as vehicles were approaching or leaving the intersection of the reference streets.

In addition to the volumes listed in this edition, compilations of automatic machine counts taken in prior years are on file in the Department. Many intersection manual counts containing pedestrian and vehicular turning movement data are also available upon request.

Included in this publication is a summary for 24 count locations that are counted year round and the average daily traffic data is listed for these. With all other count locations, a degree of caution should be exercised in using Traffic Volume information. The 24-Hour Volumes given are not necessarily the Average Daily Traffic (ADT). Weekday counts have been adjusted for daily variations, but not for seasonal fluctuations in traffic flow. These fluctuations are generally not especially significant, but the fact that they can and do occur is good

reason for not applying volume figures too precisely. Rounding off any volume to the nearest hundred or even thousand is generally a good rule to follow. The reason is twofold: 1) Count data, even though carefully collected, are subject to a certain degree of human and/or mechanical error. Automatic machine counters, for example, are prone to overlook lightweight vehicles and regularly overcount multi-axled trucks. Human counters, under pressure of recording all movements at busy intersections, may make mistakes. 2) Individual traffic volumes are not averages based on an extensive sampling of traffic flows over a period of time.

A diagram of a typical machine counting setup is shown on the next page. It provides answers to many questions concerning the notations and procedures used in taking traffic counts. Further questions regarding the information presented in this book should be referred to the Traffic Investigations Section of the Traffic and Lighting Division, 1540 Alcazar Street, Los Angeles 90033, telephone (213) 226-8381.
