7th/Metro Stand-Alone Validator Relocation

Construction Notice - Sealing of Garage Floors Due to Maintenance

7th/Metro Stand-Alone Validator Relocation

Metro is relocating stand-alone validators at 7th/Metro Station in order to make it easier for customers to TAP when transferring between lines. Work started yesterday that includes moving the existing validators and adding new ones to form virtual gate arrays. The validators will now be placed in a line across the platforms on both sides of the stairwells. Customers will be able to walk by the validators and tap without having to go out of their way and queue up at inconveniently placed equipment. Metro tested the validator placements in a variety of arrays and found that this particular array encouraged the best crowd flow and most frequent tapping by customers. The arrays were vetted by Fire-Live-Safety personnel as well as ADA staff. Please be courteous and careful as always during construction.

Construction Notice - Sealing of Garage Floors Due to Maintenance

Beginning on Monday, April 15, 2013, areas within the Gateway Plaza parking garage will be temporarily closed for maintenance. This includes waterproofing, cleaning, sealing and restriping. The work will start on P-4 and it will progress up to higher levels until finished. Please respect all signage in the closed areas during construction.
