California - Hazardous Waste Tracking System - Datamart

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D018  
Waste name: BENZENE

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Off-site waste receiver: Commercial status unknown

Hazardous Waste Summary:

Waste code: D001  
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D018  
Waste name: BENZENE

Violation Status: No violations found

California - Hazardous Waste Tracking System - Datamart

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Description:	The caller is a former employee and wants to report the releases and associated activities at his former employer, a semi-conductor manufacturing facility. The Trichloroethane III is being stored in old tin cans and coffee cans and is evaporating. The caller says does not know how they can obtain this substance as they do not have a permit for it. For the Propyl-Bromide, when employees open the ultrasonic cleaner, they can vent this to a window, releasing it into the atmosphere. The isopropyl alcohol is being released through the cleaner and through evaporation during use. This has been going on

Registry ID: 110002644103

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Handler Activities Summary:

U.S. importer of hazardous waste: No  
Mixed waste (haz. and radioactive): No  
Recycler of hazardous waste: No  
Transporter of hazardous waste: No  
Treater, storer or disposer of HW: No  
Underground injection activity: No  
On-site burner exemption: No  
Furnace exemption: No  
Used oil fuel burner: No  
Used oil processor: No  
User oil refiner: No  
Used oil fuel marketer to burner: No  
Used oil Specification marketer: No  
Used oil transfer facility: No  
Used oil transporter: No  
Off-site waste receiver: Commercial status unknown

Historical Generators:

Date form received by agency: 01/31/2000  
Facility name: HOME DEPOT USA INC HD 6673  
Site name: THE HOME DEPOT NO 6673  
Classification: Small Quantity Generator

Hazardous Waste Summary:

Waste code: D001  
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002  
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D009  
Waste name: MERCURY

Waste code: D016  
Waste name: 2,4-D

Waste code: D018  
Waste name: BENZENE

California - Hazardous Waste Tracking System - Datamart

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and its Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Hazardous Waste Summary:

Waste code: D001  
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Other Pertinent Environmental Activity Identified at Site

Registry ID: 110012228473

TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

RCRAInfo is a national information system that supports the Resource

California - Hazardous Waste Tracking System - Datamart

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

EPA Region: 09  
Land type: Private  
Classification: Small Small Quantity Generator  
Description: Handler: generates more than 100 and less than 1000 kg of hazardous waste during any calendar month and accumulates less than 6000 kg of hazardous waste at any time; or generates 100 kg or less of hazardous waste during any calendar month, and accumulates more than 1000 kg of hazardous waste at any time

Owner/Operator Summary:

Owner/operator name: PARKS PROPERTIES  
Owner/operator address: 903 RTE 66 #D  
GLENDORA, CA 91740  
Owner/operator country: US  
Owner/operator telephone: Not reported  
Legal status: Private  
Owner/Operator Type: Owner  
Owner/Op start date: 06/01/1976  
Owner/Op end date: Not reported

Owner/Op end date: Not reported

Handler Activities Summary:

U.S. importer of hazardous waste: No  
Mixed waste (haz. and radioactive): No  
Recycler of hazardous waste: No  
Transporter of hazardous waste: No  
Treater, storer or disposer of HW: No  
Underground injection activity: No  
On-site burner exemption: No  
Furnace exemption: No  
Used oil fuel burner: No  
Used oil processor: No  
Used oil refiner: No  
Used oil fuel marketer to burner: No  
Used oil Specification marketer: No  
Used oil transfer facility: No  
Used oil transporter: No  
Off-site waste receiver: Commercial status unknown

Registry ID: 110000898618

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AFS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

California - Hazardous Waste Tracking System - Datamart

TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

California - Hazardous Waste Tracking System - Datamart

TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and its Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

RACT/BACT/LAER Clearinghouse (RBLC) data base contains case-specific information on the 'Best Available' air pollution technologies that have been required to reduce the emission of air pollutants from stationary sources (e.g., power plants, steel mills, chemical plants, etc.). This information has been provided by State and local permitting agencies. The Clearinghouse also contains a regulation data base that summarizes EPA emission limits required in New Source Performance Standards (NSPS), National Emission Standards for Hazardous Air Pollutants (NESHAP), and Maximum Achievable Control Technology (MACT) standards.

facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Alias Name: SAN GABRIEL VALLEY (AREA 1)  
Alias Address: PECK RD & REAL  
EL MONTE, CA 91733

Site Description: The San Gabriel Valley has been the subject of environmental investigation since 1979 when groundwater contaminated with volatile organic compounds (VOCs) was first identified. Subsequent investigation by EPA and others revealed the extent of groundwater contamination in the aquifers of the San Gabriel Valley (the San Gabriel Valley groundwater system is known as the San Gabriel Basin). In May 1984, four broad areas of contamination within the basin were listed as San Gabriel Areas 1 through 4 on EPA's National Priorities List (NPL). The WNOU is officially part of the San Gabriel Valley Area 1 Superfund Site. EPA

subsequently divided the basin into eight operable units (OUs) to provide a means of planning remedial activities in the basin. The term "Operable Unit" (OU) is used to define a discrete action that is an incremental step toward a comprehensive site remedy. Operable units may address certain geographic areas, specific site problems, initial phases of a remedy, or a set of actions over time. The WNOU is one of eight OUs within the San Gabriel Valley Superfund Site. The other OUs identified by EPA are Alhambra, Baldwin Park, El Monte, Puente Valley, Richwood, South El Monte and Suburban. The groundwater contamination in the San Gabriel Basin results from the historic use and improper handling and disposal of tetrachloroethene (PCE), trichloroethene (TCE), and other chemicals. These chemicals were used in large quantities at industrial facilities across much of the San Gabriel Valley as early as the 1940s, and by hundreds of businesses in the 1960s, 1970s and 1980s for degreasing, metal cleaning, and other purposes. The chemicals were probably released to the ground by a combination of disposal, careless handling, leaking tanks and pipes, and other means. EPA conducted Remedial Investigation/Feasibility Study (RI/FS) activities in the WNOU beginning in the late 1980s. The RI/FS approach is a methodology that the Superfund program has established for characterizing the nature and extent of risks posed by uncontrolled hazardous waste sites to evaluate potential remedial options. The RI serves as a mechanism to collect data for site characterization. The FS serves as the mechanism for development, screening, and evaluation of potential remedial alternatives. An Operable Unit Feasibility Study (OUFS) Report for the WNOU was completed and issued for public review in September 1992 (EPA, 1992b). At that time, contaminant concentrations were low and posed a minimal threat to human health and groundwater supplies in the Central Basin. In March 1993, EPA issued a ROD that called for installation of wells and additional sampling to supplement the existing groundwater monitoring program. For several years, contaminant concentrations were relatively low throughout Whittier Narrows and groundwater resources in the Central Basin were not threatened. However, in the last few years, contaminated groundwater from upgradient areas has been migrating into the western side of Whittier Narrows causing significant increases in contaminant concentrations. The increases in contaminant concentrations suggest an imminent threat to groundwater resources in the Central Basin. This threat prompted EPA to initiate additional data collection activities and evaluation of active remedial actions. In 1997, EPA initiated additional groundwater monitoring and further characterization of the hydrogeology in western Whittier Narrows. Since then, nineteen new monitoring wells were installed. In addition, large-scale aquifer tests were conducted using City of Whittier, Pico Rivera, and Texaco production wells (EPA, 1997b). Results of EPA's recent investigations in Whittier Narrows are presented in the Site Characterization Report for Whittier Narrows (EPA, 1998a). An FS Addendum was performed for the WNOU in 1998. The FS identified remedial action objectives, assembled remedial alternatives, and provided an evaluation of the alternatives with nine evaluation criteria that EPA established. EPA issued the Final FS Addendum Report (EPA, 1998b) and a Proposed Plan in October 1998. Groundwater contamination in the San Gabriel Valley was discovered in 1979. In 1984, the EPA added four portions of the San Gabriel Valley to the national Superfund list. The El Monte OU is officially part of the San Gabriel Valley Area 1 Superfund site. Investigations by the EPA and others revealed the large extent of groundwater contamination in the El Monte OU and the San Gabriel Valley. During the past 20 years, numerous water supply wells throughout the San Gabriel Valley have been found to be contaminated with chlorinated solvents and other VOCs. In response to the contamination, water companies have shut down contaminated wells, installed new treatment facilities, and taken other steps to ensure that they can continue to supply water meeting State and Federal drinking water standards for VOCs. In 1998, the

Northwest El Monte Community Task Force ("NEMCTF"), a group of fifteen parties considered potentially responsible for contamination of groundwater (Potentially Responsible Parties or "PRPs") in the El Monte area, completed the remedial investigation/feasibility study ("RI/FS") for the El Monte OU of the San Gabriel Valley Superfund sites. The remedial investigation determined that PCE, TCE, and other volatile organic compounds were contaminating the shallow and deep groundwater aquifers in a ten-square-mile area of the San Gabriel Valley around El Monte. Businesses in El Monte and surrounding areas had used these chemicals for degreasing, metal cleaning, and other purposes, and had probably released them to the ground through a combination of on-site disposal, careless handling, leaking pipes, and other means. The study found that the uppermost, or shallow, aquifer includes most of the known sources of the groundwater contamination. VOC contaminant concentrations in portions of the shallow aquifer are hundreds of times drinking water standards. In the deep aquifer, VOC contaminant concentrations are lower but still exceed drinking water standards. The NEMCTF has since continued to install and sample monitoring, extraction, and compliance wells, model the groundwater aquifers, and evaluate options for discharging treated groundwater, all in order to prepare for the implementation of cleanup work. The San Gabriel Valley encompasses a basin that is approximately 170 square miles. Groundwater in the San Gabriel Basin is the primary drinking water source for more than one million people. Regional groundwater contamination by volatile organic compounds (VOCs) prompted the Environmental Protection Agency (EPA) to place the San Gabriel Valley on the National Priorities List (NPL) in 1984.

EPA has identified several Operable Units (OUs) at the San Gabriel Valley Superfund Site. These are the El Monte OU, Baldwin Park OU, Alhambra OU, Puente Valley OU, Richwood OU, South El Monte OU, Suburban OU, and Whittier Narrows OU. El Monte Operable Unit (OU1): The El Monte OU is part of the San Gabriel Valley Superfund Site Area 1, located in eastern Los Angeles County, California. The OU covers approximately 10 square miles in the south central portion of the San Gabriel Basin. The El Monte OU is generally bounded by the San Bernardino Freeway on the south, Rosemead Boulevard on the west, and Santa Anita Avenue and the Rio Hondo on the east. The El Monte OU is highly developed and lies within the cities of El Monte, Rosemead, and Temple City. Most of the area is zoned for residential use and is likely to remain residential. Industrial activity in the El Monte OU is primarily concentrated in the central portion of the OU. EPA began its enforcement efforts in the El Monte OU in 1985 by searching historical federal, state, and local records for evidence of chemical usage, handling, and disposal in the El Monte OU area. At approximately the same time, the Regional Water Quality Control Board (RWQCB) initiated its Well Investigation Program (WIP) to identify sources of groundwater contamination. In 1989, EPA entered into a cooperative agreement with the RWQCB to expand the WIP program, to assist EPA in determining the nature and extent of the sources of groundwater contamination in the San Gabriel Valley, and to identify responsible parties. From 1990 to 1994, EPA sent General Notice of Liability letters to approximately 40 entities in and around the El Monte OU area. In October 1994, EPA sent Special Notice letter to potentially responsible parties (PRPs), requesting that these parties present a good faith offer to perform the remedial investigation/feasibility study (RI/FS) for the El Monte OU. Fifteen of these PRPs formed the Northwest El Monte Community Task Force (NEMCTF) and in March 1995 entered into an Administrative Order on Consent (AOC) with EPA to conduct the RI/FS. In May 1995, EPA issued a Unilateral Administrative Order (UAO) to one PRP, Crown City Plating, that failed to present a good faith offer. Crown City Plating completed the activities that the UAO required in 1997, and the NEMCTF completed the RI/FS in July 1998. An Interim Record of Decision (ROD) addressing the El Monte OU was completed in June 1999. This ROD calls for

MAP FINDINGS  
FOCUS MAP 10

Map ID Site Database(s) EPA ID Number

**SAN GABRIEL VALLEY (AREA 1) (Continued)**

**1000114959**

pumping the VOC-contaminated groundwater from two aquifers beneath the El Monte OU and treating it to remove the contaminants. More specifically, the plan calls for the construction and operation of groundwater extraction wells, treatment facilities, and conveyance facilities capable of pumping and treating approximately 1,325 and 330 gallons per minute of VOC-contaminated groundwater from the deep and shallow aquifers, respectively. The plan will require construction of new wells and treatment facilities for the shallow aquifer. For the deep aquifer, the plan allows for the use of existing water supply wells, treatment systems, and pipelines if possible, and the construction of new facilities where needed. Final decisions on extraction rates and locations will be made during the remedial design phase of the project. After the discovery in 1997 and 1998 of perchlorate, NDMA, and 1,4-dioxane in the Baldwin Park area, and hexavalent chromium in the San Fernando Valley approximately 10 miles northeast of the San Gabriel Valley, the Los Angeles Regional Water Quality Control Board requested that facilities in several areas of the San Gabriel Valley, including the El Monte OU, sample their groundwater monitoring wells for these "emergent chemicals." In 2000 - 2001, the NEMCTF and its members sampled selected shallow groundwater monitoring wells within areas of VOC contamination as part of the pre-design activities in the El Monte OU and tested for emergent chemicals. Perchlorate, hexavalent chromium, NDMA, and 1,4-dioxane were detected in shallow groundwater in the El Monte OU. Maximum concentrations of perchlorate and NDMA exceed the State drinking water action levels of 4 ppb and 0.010 ppb, respectively. The maximum concentration of 1,4-dioxane is more than 20 times the State drinking water action level of 3 ppb. The maximum concentration of hexavalent chromium does not pose a risk to human health but exceeds the Federal standard for protection of freshwater aquatic life in inland surface waters and is of concern if treated water is discharged to surface water. Sampling of groundwater in the deep aquifer of the El Monte OU shows that perchlorate is the only one of the four constituents that has exceeded the State drinking water action level. Perchlorate was detected at a concentration of 5.9 ppb in a well that was subsequently destroyed. Perchlorate was not detected in wells downgradient of the destroyed well and thus additional treatment processes for groundwater extracted from the deep aquifer in the El Monte OU are not anticipated to be necessary at this time, but may be required in the future. EPA amended the Record of Decision to address these additional contaminants by issuing an Explanation of Significant Differences (ESD) in August 2002. After the discovery in 1997 and 1998 of perchlorate, NDMA, and 1,4-dioxane in the Baldwin Park area, and hexavalent chromium in the San Fernando Valley approximately 10 miles northeast of the San Gabriel Valley, the Los Angeles Regional Water Quality Control Board requested that facilities in several areas of the San Gabriel Valley, including the El Monte OU, sample their groundwater monitoring wells for these "emergent chemicals." In 2000 - 2001, the NEMCTF and its members sampled selected shallow groundwater monitoring wells within areas of VOC contamination as part of the pre-design activities in the El Monte OU and tested for emergent chemicals. Perchlorate, hexavalent chromium, NDMA, and 1,4-dioxane were detected in shallow groundwater in the El Monte OU. Maximum concentrations of perchlorate and NDMA exceed the State drinking water action levels of 4 ppb and 0.010 ppb, respectively. The maximum concentration of 1,4-dioxane is more than 20 times the State drinking water action level of 3 ppb. The maximum concentration of hexavalent chromium does not pose a risk to human health but exceeds the Federal standard for protection of freshwater aquatic life in inland surface waters and is of concern if treated water is discharged to surface water. Sampling of groundwater in the deep aquifer of the El Monte OU shows that perchlorate is the only one of the four constituents that has exceeded the State drinking water action level. Perchlorate was detected at a concentration of 5.9 ppb in a well that was subsequently destroyed. Perchlorate was not

**1000114959**

detected in wells downgradient of the destroyed well and thus additional treatment processes for groundwater extracted from the deep aquifer in the El Monte OU are not anticipated to be necessary at this time, but may be required in the future. In July 2001, EPA sent Special Notice letters to 27 PRPs to begin formal EPA-PRP negotiations to obtain a binding commitment from the PRPs to carry out the El Monte cleanup plan for the design, construction, and operation of the groundwater extraction, treatment, and discharge facilities specified in the El Monte OU ROD. EPA is currently negotiating this commitment, called a Consent Decree, including provisions for treatment of emergent chemicals, if warranted, with a group of El Monte OU PRPs. Because the emergent chemicals were discovered after EPA issued the El Monte OU ROD, EPA is now modifying the cleanup decision to address the emergent chemicals. The emergent chemicals may require treatment, and if so, one or more of the treatment technologies described below will be required. To the extent treatment is required for the emergent chemicals, the groundwater has to be treated to achieve the treatment levels. An Explanation of Significant Differences (ESD) was completed August 22, 2002 in order to modify the selected remedy of the ROD to include these additional treatment technologies. Operable Unit 03: Currently, there are three mutual water companies - Richwood, Rurban Homes, and Hemlock - that have no alternative water supply and have been providing their customers with water that is contaminated with PCE at concentrations above the DOHS Action Level. At present, no other organics have been found at levels above the DOHS action limits in the mutuals' wells. Mutual water companies are cooperatively owned water companies; in other words, the customers own shares in the company. Of all the water purveyors in the basin, only the three mutual water companies mentioned above (located in San Gabriel Area 1) are currently unable to supply water that has contamination levels below the EPA SNARL levels, due to lack of any alternative water supply. Consequently, EPA and the State have identified a need for initial remedial measures (IRM) to assist these water purveyors in mitigating their water contamination problem. Richwood Mutual Water Company serves approximately 204 households with water from two wells. PCE was first detected in October 1980, and since that time has been found in concentrations ranging from 12 to 92 ppb, greatly exceeding the SNARL level of 4 ppb. The most current data show PCE levels of 62 ppb for Well No. 1 (6/1/83) and 92 ppb for Well No. 2 (5/17/83). In addition to a PCE contamination problem, Richwood suffers from potential bacteriological problems and a severely deteriorated distribution system. Well No. 2 was temporarily taken out of service in May 1983, so that bacteriological problems could be eliminated by chlorination. Hemlock Mutual Water Company owns two wells and provides water to approximately 199 households. PCE was first detected in May 1982. The South Well was taken out of service in 1982, on the order of the Los Angeles County Department of Health Services (LACDHS) when a PCE level of 184 ppb was detected. The latest test results showed PCE levels of 50 ppb in the South Well (12/14/82) and 38 ppb in the North Well (4/12/83). Hemlock has considered using an activated carbon treatment system to lower PCE levels. Pilot tests of the system were performed from February through April 1983; the tests showed that PCE will be removed. Hemlock has bought the system from a vendor, but it is not yet in operation. At EPA's Region IX's request, the design of the Hemlock carbon filter system reviewed; the analysis concluded that the system was under-designed and did not include a margin of safety normally included in these systems. Rurban Homes Mutual Water Company serves approximately 290 households with water from two wells. PCE was detected first in October 1980. The latest sampling data (5/17/83) showed PCE concentrations of 1.7 and 3.7 ppb for Wells No. 1 and 2, respectively. In the past, however, PCE concentrations have ranged as high as 16 ppb for Well No. 1 and 54 ppb for Well No. 2. This latest sampling is the first time the PCE concentration in both wells has been lower than 4 ppb since contamination was detected. However, results of sampling

MAP FINDINGS  
FOCUS MAP 10

Map ID Site Database(s) EPA ID Number

**SAN GABRIEL VALLEY (AREA 1) (Continued)**

**1000114959**

over time have shown significant fluctuations that do not indicate either an increasing or decreasing trend and the average concentration of PCE has remained above the DOHS action level. Therefore, the recent sampling cannot be considered sufficient evidence that the PCE SNARL level has been and will continue to be; met in the near future. Because these two contaminated wells are Rurban's only water supply, EPA and the State have determined that a solution to Rurban's contamination problem should also be included in initial remedial measures for San Gabriel Area 1. At the request of EPA Region IX, the Field Inspection Team (FIT) prepared a list of potentially responsible parties (PRP's) in the San Gabriel basin, for use in preparing RCRA Section 3007/CERCLA Section 104 letters. This list was based on the results of the 1980 RWQCB investigation, cited above, which identified several industries as warranting further investigation, and a review of records and the history of development in the San Gabriel basin. EPA Region IX sent 16 section 3007/104 letters to PRP's on August 19, 1983, based on an initial list provided by FIT. This initial list was based primarily on the 1980 RWQCB study which focused on San Gabriel Area 2. Consequently, only two of these initial 16 PRP's are located in the San Gabriel Area 1. After FIT provided its final list of PRP's, Region IX sent 72 additional section 3007/104 letters to PRP's in the San Gabriel basin on January 12, 1984; 31 of these PRP's were located in San Gabriel Area 1. Since no responsible parties have been identified yet in San Gabriel Area 1, it is recommended that the Trust Fund be used to finance initial remedial measures at the San Gabriel Area 1 site. Immediate action must be taken to provide an uncontaminated water source for residents of El Monte served by the three mutual water companies. If parties responsible for contamination of the mutual water companies' wells are identified through the source investigation, a cost recovery action can be taken to recover Trust Fund monies used for the implementation of initial remedial measures in San Gabriel Area 1. A ROD addressing Operable Unit 03 was completed in May of 1984. OU5: Groundwater contamination in the San Gabriel Valley was discovered in 1979. In 1984, the EPA added four portions of the San Gabriel Valley to the national Superfund list. The South El Monte Operable Unit (OU) is officially part of the San Gabriel Valley Area 1 Superfund site. Investigations by the EPA and others revealed the large extent of groundwater contamination in the South El Monte OU and the San Gabriel Valley. During the past 20 years, numerous water supply wells throughout the San Gabriel Valley have been found to be contaminated with chlorinated solvents and other volatile organic compounds (VOCs). In response to the contamination, water companies have shut down contaminated wells, installed new treatment facilities, and taken other steps to ensure that they can continue to supply clean drinking water to the public. The remedial investigation/feasibility study (RI/FS) for the South El Monte OU of the San Gabriel Valley Superfund sites was funded by a group of potentially responsible parties (PRPs) for contamination of groundwater in the South El Monte area and was completed in 1999. The remedial investigation determined that tetrachloroethene (PCE), trichloroethene (TCE), and other VOCs were contaminating the shallow and intermediate depth groundwater aquifers in a fifteen-square-mile area of the San Gabriel Valley around South El Monte. Businesses in South El Monte and surrounding areas had used these chemicals for degreasing, metal cleaning, and other purposes, and had probably released them to the ground through a combination of on-site disposal, careless handling, leaking pipes, and other means. The study found that the upper most, or shallow aquifer includes most of the known sources of the groundwater contamination. VOC contaminant concentrations in portions of the shallow aquifer are hundreds of times the drinking water standards. In the intermediate aquifer, VOC contaminant concentrations are generally lower, but still exceed drinking water standards. On September 29, 2000, the EPA adopted a cleanup plan for the South El Monte OU known as the South El Monte Operable Unit Interim Record of

MAP FINDINGS  
FOCUS MAP 10

Map ID Site Database(s) EPA ID Number

**SAN GABRIEL VALLEY (AREA 1) (Continued)**

**1000114959**

Decision (ROD). The plan addresses the contamination described in the RI/FS. The goals of the 2000 cleanup plan are to prevent exposure of the public to VOC-contaminated groundwater, limit the movement of VOC-contaminated groundwater into clean or less contaminated areas and depths of the intermediate zone, reduce the impact of continued contaminant migration on downgradient water supply wells in the intermediate zone, and protect future uses of uncontaminated areas. In the South El Monte OU, nearly all of the shallow zone groundwater and a portion of the intermediate zone groundwater migrate south towards Whittier Narrows. As part of a separate cleanup plan (identified in the Whittier Narrows OU Interim Record of Decision Amendment, issued by EPA in November 1999), EPA has already constructed a groundwater remedy in the Whittier Narrows OU that is anticipated to capture any shallow zone and intermediate zone VOC contamination in the South El Monte OU that is migrating to the south. This leaves only the portion of the intermediate-zone VOC contamination in the northwest half of the South El Monte OU that migrates towards the west to be addressed in the South El Monte OU cleanup plan. The South El Monte OU (SEMOU) 2000 cleanup plan calls for pumping the VOC-contaminated groundwater from a portion of the intermediate aquifer beneath the South El Monte OU and treating it to remove the contaminants. More specifically, the plan allows for the use of existing water supply wells, treatment systems, and pipelines if possible, and the construction of new facilities where needed, to pump and treat approximately 10,000 gallons per minute (gpm) of VOC-contaminated groundwater from the intermediate aquifer. Final decisions on extraction rates and locations will be made during the remedial design phase of the project. The 2000 Interim ROD selected a remedy that "is an interim action and is focused on controlling the migration of contamination". The EPA has installed and sampled monitoring wells and modeled the groundwater aquifers to prepare for the implementation of cleanup work for the intermediate aquifer. Water purveyors' facilities in the SEMOU have been proposed as part of the SEMOU VOC containment remedy. These facilities are: 1) San Gabriel Valley Water Company's Plant 8 production Wells b, c, and d and their associated VOC treatment facility, 2) City of Monterey Park (MP) Wells 12 and 15 and their associated VOC treatment facility, 3) MP Well 5 and its associated VOC treatment facility, and 4) Southern California Water Company (SCWC) San Gabriel Wells 1 and 2 and their associated VOC treatment facility. In addition to VOC treatment, perchlorate treatment may be required at the two MP facilities and the SCWC facility listed above. After the discovery in 1997 and 1998 of perchlorate, n-nitrosodimethylamine (NDMA), and 1,4-dioxane in the Baldwin Park area of the San Gabriel Valley, the Los Angeles Regional Water Quality Control Board requested that facilities in several areas of the San Gabriel Valley sample their groundwater monitoring wells for these newly-discovered "emergent chemicals." During the same time period, widespread testing for perchlorate was conducted in the San Gabriel Valley by water suppliers. EPA also began testing for the emergent chemicals in several areas of the San Gabriel Valley, including the South El Monte OU. Perchlorate and 1,4-dioxane were detected in the groundwater in the South El Monte OU. 1,4-dioxane was detected at concentrations more than 20 times the State drinking water advisory level of 3 ppb in the shallow aquifer in the northern and southern portions of the South El Monte OU. Concentrations of 1,4-dioxane detected in the intermediate aquifer were generally less than the State drinking water advisory level. Perchlorate detected in the groundwater in the South El Monte OU did not exceed the State drinking water advisory level of 18 micrograms per liter (ug/l) established in 1997. In early 2002 and 2004, the State issued new drinking water advisory levels for perchlorate of 4 ppb and 6 ppb respectively. Subsequently, perchlorate was detected at concentrations above the State drinking water advisory level of 6 ppb during testing of groundwater in the intermediate aquifer of the South El Monte OU. Some water

purveyors' wells were impacted by perchlorate contamination, and consequently, intermediate zone groundwater pumped from these wells has to be treated for perchlorate. In some cases where the perchlorate concentration in water purveyor wells is just slightly above the State drinking water advisory level, water purveyors may be able to blend perchlorate contaminated water with clean water to meet the State drinking water advisory level. Concentrations of perchlorate in the shallow aquifer were generally less than the State drinking water advisory level and shallow zone perchlorate treatment is not needed at this time. If EPA determines containment and treatment for perchlorate in the shallow zone is necessary, this decision will be addressed in a subsequent decision document. The need for containment of 1,4-dioxane detected above State drinking water advisory level in the shallow aquifer is currently being evaluated by EPA using groundwater modeling. If EPA determines containment for 1,4-dioxane in the shallow zone is necessary, this decision will be documented in a subsequent decision document. In the intermediate aquifer, concentrations of 1,4-dioxane in the South El Monte OU are generally less than the State drinking water advisory level. Treatment for 1,4-dioxane in the intermediate aquifer is not included as part of the remedy at this time. NDMA and hexavalent chromium have also been detected in groundwater in the South El Monte OU, but do not exceed Federal or State water quality regulatory levels. Thus, additional treatment processes for NDMA and hexavalent chromium are not needed at this time. In March 2002, EPA sent Special Notice letters to 67 PRPs to begin formal EPA-PRP negotiations to obtain a binding commitment from the PRPs to carry out the South El Monte OU cleanup plan for the design, construction, and operation of the groundwater extraction, treatment, and discharge facilities specified in the South El Monte OU Interim ROD. EPA is currently negotiating this commitment, called a Consent Decree, with a group of South El Monte OU PRPs. Because perchlorate at concentrations above the State drinking water advisory level was discovered after EPA issued the South El Monte OU Interim ROD, EPA is now modifying the cleanup decision to address the need to potentially treat perchlorate at those portions of the Interim ROD remedy that are operating in the intermediate zone. In some cases, where the perchlorate concentration is close to the State drinking water advisory level, there may be an opportunity to blend perchlorate contaminated water with clean water to meet the State drinking water advisory level, under the purview of the California Department of Health Services. An Explanation of Significant Differences (ESD) addressing Operable Unit 5 (South El Monte) at the San Gabriel Valley - Area 1 Superfund Site was completed in November 2005.

**FINDS:**

Other Pertinent Environmental Activity Identified at Site

Registry ID: 110009329538

CERCLIS (Comprehensive Environmental Response, Compensation, and Liability Information System) is the Superfund database that is used to support management in all phases of the Superfund program. The system contains information on all aspects of hazardous waste sites, including an inventory of sites, planned and actual site activities, and financial information.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and its Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

**SAN GABRIEL VALLEY (AREA 1) (Continued)**

**1000114959**

Scoring: 2

Summary Details:

Conditions at listing September 1983): San Gabriel Valley Area 1) is a ground water plume that runs along the axis of the Rio Hondo Wash and the Salt Pit Wash in the San Gabriel ground water basin in El Monte, Los Angeles County, California. The plume also parallels the San Gabriel River to the east. It is approximately 4 miles long and 1.5 miles wide. Ground water is contaminated with trichloroethylene (TCE), perchloroethylene (PCE), and carbon tetrachloride (CTC) according to analyses by State agencies and local water companies. Many public wells in this area exceed the EPA Suggested No Adverse Response Levels (SNARL) for TCE and PCE. Approximately 200,000 people are affected. Cities and public water companies in the area have tested to ensure that their water supplies contain less than 5 parts per billion (ppb) of TCE and 4 ppb PCE, levels considered safe for human consumption. When alternative methods of reducing the TCE and PCE levels below such levels are not effective, wells are removed from service. Currently, three small mutual water companies have no alternate water supply and have advised their customers to use bottled water. Status June 1984): As a result of EPA's analysis of initial remedial measures, completed in December 1983, EPA will install water treatment systems to provide clean water to two of the three companies that have no alternate supply. The third company has already purchased a treatment system and will begin operation of the system soon. A supplemental sampling program of contaminated wells will begin soon to get a snapshot view of the degree of contamination. The State Department of Health Services and EPA are preparing to initiate a remedial investigation/feasibility study to determine the aerial and vertical extent of contamination and to develop alternatives for treatment and management of the problem. EPA continues its investigation to identify sources of contamination. This site, along with the three other San Gabriel Valley sites, was added to the NPL in May 1984 because it involves a serious problem that required taking immediate remedial action.

Site Status Details:

NPL Status: Final  
Proposed Date: 09/08/1983  
Final Date: 05/08/1984  
Deleted Date: Not reported

User oil refiner: No  
Used oil fuel marketer to burner: No  
Used oil Specification marketer: No  
Used oil transfer facility: No  
Used oil transporter: No  
Off-site waste receiver: Commercial status unknown

Hazardous Waste Summary:

Waste code: D001  
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D018  
Waste name: BENZENE

Violation Status: No violations found

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

California - Hazardous Waste Tracking System - Datamart

TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 POTW: Not reported  
 Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.  
 Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 Primary Waste: Not reported  
 Primary Waste Type: Not reported  
 Secondary Waste: Not reported  
 Secondary Waste Type: Not reported  
 Design Flow: 0  
 Baseline Flow: 0  
 Reclamation: No reclamation requirements associated with this facility.  
 POTW: The facility is not a POTW.  
 Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.  
 Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Other Pertinent Environmental Activity Identified at Site

Registry ID: 110002860431

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Registry ID: 110002629932

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:

Waste code: D001  
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

**HOME DEPOT USA INC HD 6673 (Continued)**

**1001959849**

Waste code:	D002
Waste name:	A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
Waste code:	D009
Waste name:	MERCURY
Waste code:	D016
Waste name:	2,4-D

California - Hazardous Waste Tracking System - Datamart

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Registry ID: 110002678647

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.  
 Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Registry ID: 110002689412

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Registry ID: 110002795618

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.

Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Registry ID: 110002143065

TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

	Comments:	THE FACILITY IS IDENTIFIED AS A REFERRAL FROM USEPA. THIS FACILITY WENT OUT OF BUSINESS IN APRIL 1990 AND WAS CONSIDERED ABANDONED. THE COMPANY WAS CITED FOR NUMEROUS VIOLATIONS IN THE PAST. THE SITE ASSESSMENT AND INVESTIGATIONS WERE CONDUCTED IN CONJUNCTION WITH EL MONTE FIRE DEPT, EL MONTE POLICE DEPT, LA COUNTY HEALTH DEPT AND CALIFORNIA RWQCB. THE PRIMARY CONTAMINANTS FOUND AT THE SITE WERE CYANIDE, CORROSIVES AND METALS. THE SITE IS CURRENTLY IN THE POST MITIGATION STAGE. THE PREVIOUS ACTIVITIES WERE CONDUCTED UNDER THE LEAD OF USEPA. EPA TRANSFERRED THE LEAD STATUS TO CAL-EPA. ON MARCH 4, 1992 DTSC OF CAL-EPA TRANSFERRED THE LEAD AGENCY STATUS TO THE COUNTY OF LOS ANGELES FIRE DEPT, HAZARDOUS MATERIALS CONTROL PROGRAM. NO FURTHER ACTION FOR DTSC AT THIS TIME.

**U001569395**

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.

Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

CERCLIS Site Alias Name(s):

Alias Name:	SAN GABRIEL VALLEY (AREA 1)
Alias Address:	PECK RD & REAL EL MONTE, CA 91733

Site Description: The San Gabriel Valley has been the subject of environmental investigation since 1979 when groundwater contaminated with volatile organic compounds (VOCs) was first identified. Subsequent investigation by EPA and others revealed the extent of groundwater contamination in the aquifers of the San Gabriel Valley (the San Gabriel Valley groundwater system is known as the San Gabriel Basin). In May 1984, four broad areas of contamination within the basin were listed as San Gabriel Areas 1 through 4 on EPA's National Priorities List (NPL). The WNOU is officially part of the San Gabriel Valley Area 1 Superfund Site. EPA

subsequently divided the basin into eight operable units (OUs) to provide a means of planning remedial activities in the basin. The term "Operable Unit" (OU) is used to define a discrete action that is an incremental step toward a comprehensive site remedy. Operable units may address certain geographic areas, specific site problems, initial phases of a remedy, or a set of actions over time. The WNOU is one of eight OUs within the San Gabriel Valley Superfund Site. The other OUs identified by EPA are Alhambra, Baldwin Park, El Monte, Puente Valley, Richwood, South El Monte and Suburban. The groundwater contamination in the San Gabriel Basin results from the historic use and improper handling and disposal of tetrachloroethene (PCE), trichloroethene (TCE), and other chemicals. These chemicals were used in large quantities at industrial facilities across much of the San Gabriel Valley as early as the 1940s, and by hundreds of businesses in the 1960s, 1970s and 1980s for degreasing, metal cleaning, and other purposes. The chemicals were probably released to the ground by a combination of disposal, careless handling, leaking tanks and pipes, and other means. EPA conducted Remedial Investigation/Feasibility Study (RI/FS) activities in the WNOU beginning in the late 1980s. The RI/FS approach is a methodology that the Superfund program has established for characterizing the nature and extent of risks posed by uncontrolled hazardous waste sites to evaluate potential remedial options. The RI serves as a mechanism to collect data for site characterization. The FS serves as the mechanism for development, screening, and evaluation of potential remedial alternatives. An Operable Unit Feasibility Study (OUFS) Report for the WNOU was completed and issued for public review in September 1992 (EPA, 1992b). At that time, contaminant concentrations were low and posed a minimal threat to human health and groundwater supplies in the Central Basin. In March 1993, EPA issued a ROD that called for installation of wells and additional sampling to supplement the existing groundwater monitoring program. For several years, contaminant concentrations were relatively low throughout Whittier Narrows and groundwater resources in the Central Basin were not threatened. However, in the last few years, contaminated groundwater from upgradient areas has been migrating into the western side of Whittier Narrows causing significant increases in contaminant concentrations. The increases in contaminant concentrations suggest an imminent threat to groundwater resources in the Central Basin. This threat prompted EPA to initiate additional data collection activities and evaluation of active remedial actions. In 1997, EPA initiated additional groundwater monitoring and further characterization of the hydrogeology in western Whittier Narrows. Since then, nineteen new monitoring wells were installed. In addition, large-scale aquifer tests were conducted using City of Whittier, Pico Rivera, and Texaco production wells (EPA, 1997b). Results of EPA's recent investigations in Whittier Narrows are presented in the Site Characterization Report for Whittier Narrows (EPA, 1998a). An FS Addendum was performed for the WNOU in 1998. The FS identified remedial action objectives, assembled remedial alternatives, and provided an evaluation of the alternatives with nine evaluation criteria that EPA established. EPA issued the Final FS Addendum Report (EPA, 1998b) and a Proposed Plan in October 1998. Groundwater contamination in the San Gabriel Valley was discovered in 1979. In 1984, the EPA added four portions of the San Gabriel Valley to the national Superfund list. The El Monte OU is officially part of the San Gabriel Valley Area 1 Superfund site. Investigations by the EPA and others revealed the large extent of groundwater contamination in the El Monte OU and the San Gabriel Valley. During the past 20 years, numerous water supply wells throughout the San Gabriel Valley have been found to be contaminated with chlorinated solvents and other VOCs. In response to the contamination, water companies have shut down contaminated wells, installed new treatment facilities, and taken other steps to ensure that they can continue to supply water meeting State and Federal drinking water standards for VOCs. In 1998, the

Northwest El Monte Community Task Force ("NEMCTF"), a group of fifteen parties considered potentially responsible for contamination of groundwater (Potentially Responsible Parties or "PRPs") in the El Monte area, completed the remedial investigation/feasibility study ("RI/FS") for the El Monte OU of the San Gabriel Valley Superfund sites. The remedial investigation determined that PCE, TCE, and other volatile organic compounds were contaminating the shallow and deep groundwater aquifers in a ten-square-mile area of the San Gabriel Valley around El Monte. Businesses in El Monte and surrounding areas had used these chemicals for degreasing, metal cleaning, and other purposes, and had probably released them to the ground through a combination of on-site disposal, careless handling, leaking pipes, and other means. The study found that the uppermost, or shallow, aquifer includes most of the known sources of the groundwater contamination. VOC contaminant concentrations in portions of the shallow aquifer are hundreds of times drinking water standards. In the deep aquifer, VOC contaminant concentrations are lower but still exceed drinking water standards. The NEMCTF has since continued to install and sample monitoring, extraction, and compliance wells, model the groundwater aquifers, and evaluate options for discharging treated groundwater, all in order to prepare for the implementation of cleanup work. The San Gabriel Valley encompasses a basin that is approximately 170 square miles. Groundwater in the San Gabriel Basin is the primary drinking water source for more than one million people. Regional groundwater contamination by volatile organic compounds (VOCs) prompted the Environmental Protection Agency (EPA) to place the San Gabriel Valley on the National Priorities List (NPL) in 1984.

EPA has identified several Operable Units (OUs) at the San Gabriel Valley Superfund Site. These are the El Monte OU, Baldwin Park OU, Alhambra OU, Puente Valley OU, Richwood OU, South El Monte OU, Suburban OU, and Whittier Narrows OU. El Monte Operable Unit (OU1): The El Monte OU is part of the San Gabriel Valley Superfund Site Area 1, located in eastern Los Angeles County, California. The OU covers approximately 10 square miles in the south central portion of the San Gabriel Basin. The El Monte OU is generally bounded by the San Bernardino Freeway on the south, Rosemead Boulevard on the west, and Santa Anita Avenue and the Rio Hondo on the east. The El Monte OU is highly developed and lies within the cities of El Monte, Rosemead, and Temple City. Most of the area is zoned for residential use and is likely to remain residential. Industrial activity in the El Monte OU is primarily concentrated in the central portion of the OU. EPA began its enforcement efforts in the El Monte OU in 1985 by searching historical federal, state, and local records for evidence of chemical usage, handling, and disposal in the El Monte OU area. At approximately the same time, the Regional Water Quality Control Board (RWQCB) initiated its Well Investigation Program (WIP) to identify sources of groundwater contamination. In 1989, EPA entered into a cooperative agreement with the RWQCB to expand the WIP program, to assist EPA in determining the nature and extent of the sources of groundwater contamination in the San Gabriel Valley, and to identify responsible parties. From 1990 to 1994, EPA sent General Notice of Liability letters to approximately 40 entities in and around the El Monte OU area. In October 1994, EPA sent Special Notice letter to potentially responsible parties (PRPs), requesting that these parties present a good faith offer to perform the remedial investigation/feasibility study (RI/FS) for the El Monte OU. Fifteen of these PRPs formed the Northwest El Monte Community Task Force (NEMCTF) and in March 1995 entered into an Administrative Order on Consent (AOC) with EPA to conduct the RI/FS. In May 1995, EPA issued a Unilateral Administrative Order (UAO) to one PRP, Crown City Plating, that failed to present a good faith offer. Crown City Plating completed the activities that the UAO required in 1997, and the NEMCTF completed the RI/FS in July 1998. An Interim Record of Decision (ROD) addressing the El Monte OU was completed in June 1999. This ROD calls for

MAP FINDINGS

**SAN GABRIEL VALLEY (AREA 1) (Continued)**

**1000114959**

pumping the VOC-contaminated groundwater from two aquifers beneath the El Monte OU and treating it to remove the contaminants. More specifically, the plan calls for the construction and operation of groundwater extraction wells, treatment facilities, and conveyance facilities capable of pumping and treating approximately 1,325 and 330 gallons per minute of VOC-contaminated groundwater from the deep and shallow aquifers, respectively. The plan will require construction of new wells and treatment facilities for the shallow aquifer. For the deep aquifer, the plan allows for the use of existing water supply wells, treatment systems, and pipelines if possible, and the construction of new facilities where needed. Final decisions on extraction rates and locations will be made during the remedial design phase of the project. After the discovery in 1997 and 1998 of perchlorate, NDMA, and 1,4-dioxane in the Baldwin Park area, and hexavalent chromium in the San Fernando Valley approximately 10 miles northeast of the San Gabriel Valley, the Los Angeles Regional Water Quality Control Board requested that facilities in several areas of the San Gabriel Valley, including the El Monte OU, sample their groundwater monitoring wells for these "emergent chemicals." In 2000 - 2001, the NEMCTF and its members sampled selected shallow groundwater monitoring wells within areas of VOC contamination as part of the pre-design activities in the El Monte OU and tested for emergent chemicals. Perchlorate, hexavalent chromium, NDMA, and 1,4-dioxane were detected in shallow groundwater in the El Monte OU. Maximum concentrations of perchlorate and NDMA exceed the State drinking water action levels of 4 ppb and 0.010 ppb, respectively. The maximum concentration of 1,4-dioxane is more than 20 times the State drinking water action level of 3 ppb. The maximum concentration of hexavalent chromium does not pose a risk to human health but exceeds the Federal standard for protection of freshwater aquatic life in inland surface waters and is of concern if treated water is discharged to surface water. Sampling of groundwater in the deep aquifer of the El Monte OU shows that perchlorate is the only one of the four constituents that has exceeded the State drinking water action level. Perchlorate was detected at a concentration of 5.9 ppb in a well that was subsequently destroyed. Perchlorate was not detected in wells downgradient of the destroyed well and thus additional treatment processes for groundwater extracted from the deep aquifer in the El Monte OU are not anticipated to be necessary at this time, but may be required in the future. EPA amended the Record of Decision to address these additional contaminants by issuing an Explanation of Significant Differences (ESD) in August 2002. After the discovery in 1997 and 1998 of perchlorate, NDMA, and 1,4-dioxane in the Baldwin Park area, and hexavalent chromium in the San Fernando Valley approximately 10 miles northeast of the San Gabriel Valley, the Los Angeles Regional Water Quality Control Board requested that facilities in several areas of the San Gabriel Valley, including the El Monte OU, sample their groundwater monitoring wells for these "emergent chemicals." In 2000 - 2001, the NEMCTF and its members sampled selected shallow groundwater monitoring wells within areas of VOC contamination as part of the pre-design activities in the El Monte OU and tested for emergent chemicals. Perchlorate, hexavalent chromium, NDMA, and 1,4-dioxane were detected in shallow groundwater in the El Monte OU. Maximum concentrations of perchlorate and NDMA exceed the State drinking water action levels of 4 ppb and 0.010 ppb, respectively. The maximum concentration of 1,4-dioxane is more than 20 times the State drinking water action level of 3 ppb. The maximum concentration of hexavalent chromium does not pose a risk to human health but exceeds the Federal standard for protection of freshwater aquatic life in inland surface waters and is of concern if treated water is discharged to surface water. Sampling of groundwater in the deep aquifer of the El Monte OU shows that perchlorate is the only one of the four constituents that has exceeded the State drinking water action level. Perchlorate was detected at a concentration of 5.9 ppb in a well that was subsequently destroyed. Perchlorate was not

**1000114959**

detected in wells downgradient of the destroyed well and thus additional treatment processes for groundwater extracted from the deep aquifer in the El Monte OU are not anticipated to be necessary at this time, but may be required in the future. In July 2001, EPA sent Special Notice letters to 27 PRPs to begin formal EPA-PRP negotiations to obtain a binding commitment from the PRPs to carry out the El Monte cleanup plan for the design, construction, and operation of the groundwater extraction, treatment, and discharge facilities specified in the El Monte OU ROD. EPA is currently negotiating this commitment, called a Consent Decree, including provisions for treatment of emergent chemicals, if warranted, with a group of El Monte OU PRPs. Because the emergent chemicals were discovered after EPA issued the El Monte OU ROD, EPA is now modifying the cleanup decision to address the emergent chemicals. The emergent chemicals may require treatment, and if so, one or more of the treatment technologies described below will be required. To the extent treatment is required for the emergent chemicals, the groundwater has to be treated to achieve the treatment levels. An Explanation of Significant Differences (ESD) was completed August 22, 2002 in order to modify the selected remedy of the ROD to include these additional treatment technologies. Operable Unit 03: Currently, there are three mutual water companies - Richwood, Rurban Homes, and Hemlock - that have no alternative water supply and have been providing their customers with water that is contaminated with PCE at concentrations above the DOHS Action Level. At present, no other organics have been found at levels above the DOHS action limits in the mutuals' wells. Mutual water companies are cooperatively owned water companies; in other words, the customers own shares in the company. Of all the water purveyors in the basin, only the three mutual water companies mentioned above (located in San Gabriel Area 1) are currently unable to supply water that has contamination levels below the EPA SNARL levels, due to lack of any alternative water supply. Consequently, EPA and the State have identified a need for initial remedial measures (IRM) to assist these water purveyors in mitigating their water contamination problem. Richwood Mutual Water Company serves approximately 204 households with water from two wells. PCE was first detected in October 1980, and since that time has been found in concentrations ranging from 12 to 92 ppb, greatly exceeding the SNARL level of 4 ppb. The most current data show PCE levels of 62 ppb for Well No. 1 (6/1/83) and 92 ppb for Well No. 2 (5/17/83). In addition to a PCE contamination problem, Richwood suffers from potential bacteriological problems and a severely deteriorated distribution system. Well No. 2 was temporarily taken out of service in May 1983, so that bacteriological problems could be eliminated by chlorination. Hemlock Mutual Water Company owns two wells and provides water to approximately 199 households. PCE was first detected in May 1982. The South Well was taken out of service in 1982, on the order of the Los Angeles County Department of Health Services (LACDHS) when a PCE level of 184 ppb was detected. The latest test results showed PCE levels of 50 ppb in the South Well (12/14/82) and 38 ppb in the North Well (4/12/83). Hemlock has considered using an activated carbon treatment system to lower PCE levels. Pilot tests of the system were performed from February through April 1983; the tests showed that PCE will be removed. Hemlock has bought the system from a vendor, but it is not yet in operation. At EPA's Region IX's request, the design of the Hemlock carbon filter system reviewed; the analysis concluded that the system was under-designed and did not include a margin of safety normally included in these systems. Rurban Homes Mutual Water Company serves approximately 290 households with water from two wells. PCE was detected first in October 1980. The latest sampling data (5/17/83) showed PCE concentrations of 1.7 and 3.7 ppb for Wells No. 1 and 2, respectively. In the past, however, PCE concentrations have ranged as high as 16 ppb for Well No. 1 and 54 ppb for Well No. 2. This latest sampling is the first time the PCE concentration in both wells has been lower than 4 ppb since contamination was detected. However, results of sampling

MAP FINDINGS  
FOCUS MAP 11

Map ID Site Database(s) EPA ID Number

**SAN GABRIEL VALLEY (AREA 1) (Continued)**

**1000114959**

over time have shown significant fluctuations that do not indicate either an increasing or decreasing trend and the average concentration of PCE has remained above the DOHS action level. Therefore, the recent sampling cannot be considered sufficient evidence that the PCE SNARL level has been and will continue to be; met in the near future. Because these two contaminated wells are Rurban's only water supply, EPA and the State have determined that a solution to Rurban's contamination problem should also be included in initial remedial measures for San Gabriel Area 1. At the request of EPA Region IX, the Field Inspection Team (FIT) prepared a list of potentially responsible parties (PRP's) in the San Gabriel basin, for use in preparing RCRA Section 3007/CERCLA Section 104 letters. This list was based on the results of the 1980 RWQCB investigation, cited above, which identified several industries as warranting further investigation, and a review of records and the history of development in the San Gabriel basin. EPA Region IX sent 16 section 3007/104 letters to PRP's on August 19, 1983, based on an initial list provided by FIT. This initial list was based primarily on the 1980 RWQCB study which focused on San Gabriel Area 2. Consequently, only two of these initial 16 PRP's are located in the San Gabriel Area 1. After FIT provided its final list of PRP's, Region IX sent 72 additional section 3007/104 letters to PRP's in the San Gabriel basin on January 12, 1984; 31 of these PRP's were located in San Gabriel Area 1. Since no responsible parties have been identified yet in San Gabriel Area 1, it is recommended that the Trust Fund be used to finance initial remedial measures at the San Gabriel Area 1 site. Immediate action must be taken to provide an uncontaminated water source for residents of El Monte served by the three mutual water companies. If parties responsible for contamination of the mutual water companies' wells are identified through the source investigation, a cost recovery action can be taken to recover Trust Fund monies used for the implementation of initial remedial measures in San Gabriel Area 1. A ROD addressing Operable Unit 03 was completed in May of 1984. OU5: Groundwater contamination in the San Gabriel Valley was discovered in 1979. In 1984, the EPA added four portions of the San Gabriel Valley to the national Superfund list. The South El Monte Operable Unit (OU) is officially part of the San Gabriel Valley Area 1 Superfund site. Investigations by the EPA and others revealed the large extent of groundwater contamination in the South El Monte OU and the San Gabriel Valley. During the past 20 years, numerous water supply wells throughout the San Gabriel Valley have been found to be contaminated with chlorinated solvents and other volatile organic compounds (VOCs). In response to the contamination, water companies have shut down contaminated wells, installed new treatment facilities, and taken other steps to ensure that they can continue to supply clean drinking water to the public. The remedial investigation/feasibility study (RI/FS) for the South El Monte OU of the San Gabriel Valley Superfund sites was funded by a group of potentially responsible parties (PRPs) for contamination of groundwater in the South El Monte area and was completed in 1999. The remedial investigation determined that tetrachloroethene (PCE), trichloroethene (TCE), and other VOCs were contaminating the shallow and intermediate depth groundwater aquifers in a fifteen-square-mile area of the San Gabriel Valley around South El Monte. Businesses in South El Monte and surrounding areas had used these chemicals for degreasing, metal cleaning, and other purposes, and had probably released them to the ground through a combination of on-site disposal, careless handling, leaking pipes, and other means. The study found that the upper most, or shallow aquifer includes most of the known sources of the groundwater contamination. VOC contaminant concentrations in portions of the shallow aquifer are hundreds of times the drinking water standards. In the intermediate aquifer, VOC contaminant concentrations are generally lower, but still exceed drinking water standards. On September 29, 2000, the EPA adopted a cleanup plan for the South El Monte OU known as the South El Monte Operable Unit Interim Record of

Decision (ROD). The plan addresses the contamination described in the RI/FS. The goals of the 2000 cleanup plan are to prevent exposure of the public to VOC-contaminated groundwater, limit the movement of VOC-contaminated groundwater into clean or less contaminated areas and depths of the intermediate zone, reduce the impact of continued contaminant migration on downgradient water supply wells in the intermediate zone, and protect future uses of uncontaminated areas. In the South El Monte OU, nearly all of the shallow zone groundwater and a portion of the intermediate zone groundwater migrate south towards Whittier Narrows. As part of a separate cleanup plan (identified in the Whittier Narrows OU Interim Record of Decision Amendment, issued by EPA in November 1999), EPA has already constructed a groundwater remedy in the Whittier Narrows OU that is anticipated to capture any shallow zone and intermediate zone VOC contamination in the South El Monte OU that is migrating to the south. This leaves only the portion of the intermediate-zone VOC contamination in the northwest half of the South El Monte OU that migrates towards the west to be addressed in the South El Monte OU cleanup plan. The South El Monte OU (SEMOU) 2000 cleanup plan calls for pumping the VOC-contaminated groundwater from a portion of the intermediate aquifer beneath the South El Monte OU and treating it to remove the contaminants. More specifically, the plan allows for the use of existing water supply wells, treatment systems, and pipelines if possible, and the construction of new facilities where needed, to pump and treat approximately 10,000 gallons per minute (gpm) of VOC-contaminated groundwater from the intermediate aquifer. Final decisions on extraction rates and locations will be made during the remedial design phase of the project. The 2000 Interim ROD selected a remedy that "is an interim action and is focused on controlling the migration of contamination". The EPA has installed and sampled monitoring wells and modeled the groundwater aquifers to prepare for the implementation of cleanup work for the intermediate aquifer. Water purveyors' facilities in the SEMOU have been proposed as part of the SEMOU VOC containment remedy. These facilities are: 1) San Gabriel Valley Water Company's Plant 8 production Wells b, c, and d and their associated VOC treatment facility, 2) City of Monterey Park (MP) Wells 12 and 15 and their associated VOC treatment facility, 3) MP Well 5 and its associated VOC treatment facility, and 4) Southern California Water Company (SCWC) San Gabriel Wells 1 and 2 and their associated VOC treatment facility. In addition to VOC treatment, perchlorate treatment may be required at the two MP facilities and the SCWC facility listed above. After the discovery in 1997 and 1998 of perchlorate, n-nitrosodimethylamine (NDMA), and 1,4-dioxane in the Baldwin Park area of the San Gabriel Valley, the Los Angeles Regional Water Quality Control Board requested that facilities in several areas of the San Gabriel Valley sample their groundwater monitoring wells for these newly-discovered "emergent chemicals." During the same time period, widespread testing for perchlorate was conducted in the San Gabriel Valley by water suppliers. EPA also began testing for the emergent chemicals in several areas of the San Gabriel Valley, including the South El Monte OU. Perchlorate and 1,4-dioxane were detected in the groundwater in the South El Monte OU. 1,4-dioxane was detected at concentrations more than 20 times the State drinking water advisory level of 3 ppb in the shallow aquifer in the northern and southern portions of the South El Monte OU. Concentrations of 1,4-dioxane detected in the intermediate aquifer were generally less than the State drinking water advisory level. Perchlorate detected in the groundwater in the South El Monte OU did not exceed the State drinking water advisory level of 18 micrograms per liter (ug/l) established in 1997. In early 2002 and 2004, the State issued new drinking water advisory levels for perchlorate of 4 ppb and 6 ppb respectively. Subsequently, perchlorate was detected at concentrations above the State drinking water advisory level of 6 ppb during testing of groundwater in the intermediate aquifer of the South El Monte OU. Some water

purveyors' wells were impacted by perchlorate contamination, and consequently, intermediate zone groundwater pumped from these wells has to be treated for perchlorate. In some cases where the perchlorate concentration in water purveyor wells is just slightly above the State drinking water advisory level, water purveyors may be able to blend perchlorate contaminated water with clean water to meet the State drinking water advisory level. Concentrations of perchlorate in the shallow aquifer were generally less than the State drinking water advisory level and shallow zone perchlorate treatment is not needed at this time. If EPA determines containment and treatment for perchlorate in the shallow zone is necessary, this decision will be addressed in a subsequent decision document. The need for containment of 1,4-dioxane detected above State drinking water advisory level in the shallow aquifer is currently being evaluated by EPA using groundwater modeling. If EPA determines containment for 1,4-dioxane in the shallow zone is necessary, this decision will be documented in a subsequent decision document. In the intermediate aquifer, concentrations of 1,4-dioxane in the South El Monte OU are generally less than the State drinking water advisory level. Treatment for 1,4-dioxane in the intermediate aquifer is not included as part of the remedy at this time. NDMA and hexavalent chromium have also been detected in groundwater in the South El Monte OU, but do not exceed Federal or State water quality regulatory levels. Thus, additional treatment processes for NDMA and hexavalent chromium are not needed at this time. In March 2002, EPA sent Special Notice letters to 67 PRPs to begin formal EPA-PRP negotiations to obtain a binding commitment from the PRPs to carry out the South El Monte OU cleanup plan for the design, construction, and operation of the groundwater extraction, treatment, and discharge facilities specified in the South El Monte OU Interim ROD. EPA is currently negotiating this commitment, called a Consent Decree, with a group of South El Monte OU PRPs. Because perchlorate at concentrations above the State drinking water advisory level was discovered after EPA issued the South El Monte OU Interim ROD, EPA is now modifying the cleanup decision to address the need to potentially treat perchlorate at those portions of the Interim ROD remedy that are operating in the intermediate zone. In some cases, where the perchlorate concentration is close to the State drinking water advisory level, there may be an opportunity to blend perchlorate contaminated water with clean water to meet the State drinking water advisory level, under the purview of the California Department of Health Services. An Explanation of Significant Differences (ESD) addressing Operable Unit 5 (South El Monte) at the San Gabriel Valley - Area 1 Superfund Site was completed in November 2005.

**FINDS:**

Other Pertinent Environmental Activity Identified at Site

Registry ID: 110009329538

CERCLIS (Comprehensive Environmental Response, Compensation, and Liability Information System) is the Superfund database that is used to support management in all phases of the Superfund program. The system contains information on all aspects of hazardous waste sites, including an inventory of sites, planned and actual site activities, and financial information.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and its Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

**SAN GABRIEL VALLEY (AREA 1) (Continued)**

**1000114959**

Scoring: 2

Summary Details:

Conditions at listing September 1983): San Gabriel Valley Area 1) is a ground water plume that runs along the axis of the Rio Hondo Wash and the Salt Pit Wash in the San Gabriel ground water basin in El Monte, Los Angeles County, California. The plume also parallels the San Gabriel River to the east. It is approximately 4 miles long and 1.5 miles wide. Ground water is contaminated with trichloroethylene (TCE), perchloroethylene (PCE), and carbon tetrachloride (CTC) according to analyses by State agencies and local water companies. Many public wells in this area exceed the EPA Suggested No Adverse Response Levels (SNARL) for TCE and PCE. Approximately 200,000 people are affected. Cities and public water companies in the area have tested to ensure that their water supplies contain less than 5 parts per billion (ppb) of TCE and 4 ppb PCE, levels considered safe for human consumption. When alternative methods of reducing the TCE and PCE levels below such levels are not effective, wells are removed from service. Currently, three small mutual water companies have no alternate water supply and have advised their customers to use bottled water. Status June 1984): As a result of EPA's analysis of initial remedial measures, completed in December 1983, EPA will install water treatment systems to provide clean water to two of the three companies that have no alternate supply. The third company has already purchased a treatment system and will begin operation of the system soon. A supplemental sampling program of contaminated wells will begin soon to get a snapshot view of the degree of contamination. The State Department of Health Services and EPA are preparing to initiate a remedial investigation/feasibility study to determine the aerial and vertical extent of contamination and to develop alternatives for treatment and management of the problem. EPA continues its investigation to identify sources of contamination. This site, along with the three other San Gabriel Valley sites, was added to the NPL in May 1984 because it involves a serious problem that required taking immediate remedial action.

Site Status Details:

NPL Status: Final  
Proposed Date: 09/08/1983  
Final Date: 05/08/1984

**Hazardous Waste Summary:**

Waste code: D001  
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D018  
Waste name: BENZENE

Violation Status: No violations found

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Reclamation:	Not reported
POTW:	Not reported
Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

California - Hazardous Waste Tracking System - Datamart

TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Registry ID: 110013830373

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and its Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:

Waste code: 223  
 Waste name: 223

Waste code: D001  
 Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

**Hazardous Waste Summary:**

Waste code: D001  
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D018  
Waste name: BENZENE

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Alias Name:	SAN GABRIEL VALLEY (AREA 1)
Alias Address:	PECK RD & REAL EL MONTE, CA 91733

Site Description: The San Gabriel Valley has been the subject of environmental investigation since 1979 when groundwater contaminated with volatile organic compounds (VOCs) was first identified. Subsequent investigation by EPA and others revealed the extent of groundwater contamination in the aquifers of the San Gabriel Valley (the San Gabriel Valley groundwater system is known as the San Gabriel Basin). In May 1984, four broad areas of contamination within the basin were listed as San Gabriel Areas 1 through 4 on EPA's National Priorities List (NPL). The WNOU is officially part of the San Gabriel Valley Area 1 Superfund Site. EPA

subsequently divided the basin into eight operable units (OUs) to provide a means of planning remedial activities in the basin. The term "Operable Unit" (OU) is used to define a discrete action that is an incremental step toward a comprehensive site remedy. Operable units may address certain geographic areas, specific site problems, initial phases of a remedy, or a set of actions over time. The WNOU is one of eight OUs within the San Gabriel Valley Superfund Site. The other OUs identified by EPA are Alhambra, Baldwin Park, El Monte, Puente Valley, Richwood, South El Monte and Suburban. The groundwater contamination in the San Gabriel Basin results from the historic use and improper handling and disposal of tetrachloroethene (PCE), trichloroethene (TCE), and other chemicals. These chemicals were used in large quantities at industrial facilities across much of the San Gabriel Valley as early as the 1940s, and by hundreds of businesses in the 1960s, 1970s and 1980s for degreasing, metal cleaning, and other purposes. The chemicals were probably released to the ground by a combination of disposal, careless handling, leaking tanks and pipes, and other means. EPA conducted Remedial Investigation/Feasibility Study (RI/FS) activities in the WNOU beginning in the late 1980s. The RI/FS approach is a methodology that the Superfund program has established for characterizing the nature and extent of risks posed by uncontrolled hazardous waste sites to evaluate potential remedial options. The RI serves as a mechanism to collect data for site characterization. The FS serves as the mechanism for development, screening, and evaluation of potential remedial alternatives. An Operable Unit Feasibility Study (OUFS) Report for the WNOU was completed and issued for public review in September 1992 (EPA, 1992b). At that time, contaminant concentrations were low and posed a minimal threat to human health and groundwater supplies in the Central Basin. In March 1993, EPA issued a ROD that called for installation of wells and additional sampling to supplement the existing groundwater monitoring program. For several years, contaminant concentrations were relatively low throughout Whittier Narrows and groundwater resources in the Central Basin were not threatened. However, in the last few years, contaminated groundwater from upgradient areas has been migrating into the western side of Whittier Narrows causing significant increases in contaminant concentrations. The increases in contaminant concentrations suggest an imminent threat to groundwater resources in the Central Basin. This threat prompted EPA to initiate additional data collection activities and evaluation of active remedial actions. In 1997, EPA initiated additional groundwater monitoring and further characterization of the hydrogeology in western Whittier Narrows. Since then, nineteen new monitoring wells were installed. In addition, large-scale aquifer tests were conducted using City of Whittier, Pico Rivera, and Texaco production wells (EPA, 1997b). Results of EPA's recent investigations in Whittier Narrows are presented in the Site Characterization Report for Whittier Narrows (EPA, 1998a). An FS Addendum was performed for the WNOU in 1998. The FS identified remedial action objectives, assembled remedial alternatives, and provided an evaluation of the alternatives with nine evaluation criteria that EPA established. EPA issued the Final FS Addendum Report (EPA, 1998b) and a Proposed Plan in October 1998. Groundwater contamination in the San Gabriel Valley was discovered in 1979. In 1984, the EPA added four portions of the San Gabriel Valley to the national Superfund list. The El Monte OU is officially part of the San Gabriel Valley Area 1 Superfund site. Investigations by the EPA and others revealed the large extent of groundwater contamination in the El Monte OU and the San Gabriel Valley. During the past 20 years, numerous water supply wells throughout the San Gabriel Valley have been found to be contaminated with chlorinated solvents and other VOCs. In response to the contamination, water companies have shut down contaminated wells, installed new treatment facilities, and taken other steps to ensure that they can continue to supply water meeting State and Federal drinking water standards for VOCs. In 1998, the

Northwest El Monte Community Task Force ("NEMCTF"), a group of fifteen parties considered potentially responsible for contamination of groundwater (Potentially Responsible Parties or "PRPs") in the El Monte area, completed the remedial investigation/feasibility study ("RI/FS") for the El Monte OU of the San Gabriel Valley Superfund sites. The remedial investigation determined that PCE, TCE, and other volatile organic compounds were contaminating the shallow and deep groundwater aquifers in a ten-square-mile area of the San Gabriel Valley around El Monte. Businesses in El Monte and surrounding areas had used these chemicals for degreasing, metal cleaning, and other purposes, and had probably released them to the ground through a combination of on-site disposal, careless handling, leaking pipes, and other means. The study found that the uppermost, or shallow, aquifer includes most of the known sources of the groundwater contamination. VOC contaminant concentrations in portions of the shallow aquifer are hundreds of times drinking water standards. In the deep aquifer, VOC contaminant concentrations are lower but still exceed drinking water standards. The NEMCTF has since continued to install and sample monitoring, extraction, and compliance wells, model the groundwater aquifers, and evaluate options for discharging treated groundwater, all in order to prepare for the implementation of cleanup work. The San Gabriel Valley encompasses a basin that is approximately 170 square miles. Groundwater in the San Gabriel Basin is the primary drinking water source for more than one million people. Regional groundwater contamination by volatile organic compounds (VOCs) prompted the Environmental Protection Agency (EPA) to place the San Gabriel Valley on the National Priorities List (NPL) in 1984.

EPA has identified several Operable Units (OUs) at the San Gabriel Valley Superfund Site. These are the El Monte OU, Baldwin Park OU, Alhambra OU, Puente Valley OU, Richwood OU, South El Monte OU, Suburban OU, and Whittier Narrows OU. El Monte Operable Unit (OU1): The El Monte OU is part of the San Gabriel Valley Superfund Site Area 1, located in eastern Los Angeles County, California. The OU covers approximately 10 square miles in the south central portion of the San Gabriel Basin. The El Monte OU is generally bounded by the San Bernardino Freeway on the south, Rosemead Boulevard on the west, and Santa Anita Avenue and the Rio Hondo on the east. The El Monte OU is highly developed and lies within the cities of El Monte, Rosemead, and Temple City. Most of the area is zoned for residential use and is likely to remain residential. Industrial activity in the El Monte OU is primarily concentrated in the central portion of the OU. EPA began its enforcement efforts in the El Monte OU in 1985 by searching historical federal, state, and local records for evidence of chemical usage, handling, and disposal in the El Monte OU area. At approximately the same time, the Regional Water Quality Control Board (RWQCB) initiated its Well Investigation Program (WIP) to identify sources of groundwater contamination. In 1989, EPA entered into a cooperative agreement with the RWQCB to expand the WIP program, to assist EPA in determining the nature and extent of the sources of groundwater contamination in the San Gabriel Valley, and to identify responsible parties. From 1990 to 1994, EPA sent General Notice of Liability letters to approximately 40 entities in and around the El Monte OU area. In October 1994, EPA sent Special Notice letter to potentially responsible parties (PRPs), requesting that these parties present a good faith offer to perform the remedial investigation/feasibility study (RI/FS) for the El Monte OU. Fifteen of these PRPs formed the Northwest El Monte Community Task Force (NEMCTF) and in March 1995 entered into an Administrative Order on Consent (AOC) with EPA to conduct the RI/FS. In May 1995, EPA issued a Unilateral Administrative Order (UAO) to one PRP, Crown City Plating, that failed to present a good faith offer. Crown City Plating completed the activities that the UAO required in 1997, and the NEMCTF completed the RI/FS in July 1998. An Interim Record of Decision (ROD) addressing the El Monte OU was completed in June 1999. This ROD calls for

MAP FINDINGS

Map ID Site Database(s) EPA ID Number

**SAN GABRIEL VALLEY (AREA 1) (Continued)**

**1000114959**

pumping the VOC-contaminated groundwater from two aquifers beneath the El Monte OU and treating it to remove the contaminants. More specifically, the plan calls for the construction and operation of groundwater extraction wells, treatment facilities, and conveyance facilities capable of pumping and treating approximately 1,325 and 330 gallons per minute of VOC-contaminated groundwater from the deep and shallow aquifers, respectively. The plan will require construction of new wells and treatment facilities for the shallow aquifer. For the deep aquifer, the plan allows for the use of existing water supply wells, treatment systems, and pipelines if possible, and the construction of new facilities where needed. Final decisions on extraction rates and locations will be made during the remedial design phase of the project. After the discovery in 1997 and 1998 of perchlorate, NDMA, and 1,4-dioxane in the Baldwin Park area, and hexavalent chromium in the San Fernando Valley approximately 10 miles northeast of the San Gabriel Valley, the Los Angeles Regional Water Quality Control Board requested that facilities in several areas of the San Gabriel Valley, including the El Monte OU, sample their groundwater monitoring wells for these "emergent chemicals." In 2000 - 2001, the NEMCTF and its members sampled selected shallow groundwater monitoring wells within areas of VOC contamination as part of the pre-design activities in the El Monte OU and tested for emergent chemicals. Perchlorate, hexavalent chromium, NDMA, and 1,4-dioxane were detected in shallow groundwater in the El Monte OU. Maximum concentrations of perchlorate and NDMA exceed the State drinking water action levels of 4 ppb and 0.010 ppb, respectively. The maximum concentration of 1,4-dioxane is more than 20 times the State drinking water action level of 3 ppb. The maximum concentration of hexavalent chromium does not pose a risk to human health but exceeds the Federal standard for protection of freshwater aquatic life in inland surface waters and is of concern if treated water is discharged to surface water. Sampling of groundwater in the deep aquifer of the El Monte OU shows that perchlorate is the only one of the four constituents that has exceeded the State drinking water action level. Perchlorate was detected at a concentration of 5.9 ppb in a well that was subsequently destroyed. Perchlorate was not detected in wells downgradient of the destroyed well and thus additional treatment processes for groundwater extracted from the deep aquifer in the El Monte OU are not anticipated to be necessary at this time, but may be required in the future. EPA amended the Record of Decision to address these additional contaminants by issuing an Explanation of Significant Differences (ESD) in August 2002. After the discovery in 1997 and 1998 of perchlorate, NDMA, and 1,4-dioxane in the Baldwin Park area, and hexavalent chromium in the San Fernando Valley approximately 10 miles northeast of the San Gabriel Valley, the Los Angeles Regional Water Quality Control Board requested that facilities in several areas of the San Gabriel Valley, including the El Monte OU, sample their groundwater monitoring wells for these "emergent chemicals." In 2000 - 2001, the NEMCTF and its members sampled selected shallow groundwater monitoring wells within areas of VOC contamination as part of the pre-design activities in the El Monte OU and tested for emergent chemicals. Perchlorate, hexavalent chromium, NDMA, and 1,4-dioxane were detected in shallow groundwater in the El Monte OU. Maximum concentrations of perchlorate and NDMA exceed the State drinking water action levels of 4 ppb and 0.010 ppb, respectively. The maximum concentration of 1,4-dioxane is more than 20 times the State drinking water action level of 3 ppb. The maximum concentration of hexavalent chromium does not pose a risk to human health but exceeds the Federal standard for protection of freshwater aquatic life in inland surface waters and is of concern if treated water is discharged to surface water. Sampling of groundwater in the deep aquifer of the El Monte OU shows that perchlorate is the only one of the four constituents that has exceeded the State drinking water action level. Perchlorate was detected at a concentration of 5.9 ppb in a well that was subsequently destroyed. Perchlorate was not

**1000114959**

detected in wells downgradient of the destroyed well and thus additional treatment processes for groundwater extracted from the deep aquifer in the El Monte OU are not anticipated to be necessary at this time, but may be required in the future. In July 2001, EPA sent Special Notice letters to 27 PRPs to begin formal EPA-PRP negotiations to obtain a binding commitment from the PRPs to carry out the El Monte cleanup plan for the design, construction, and operation of the groundwater extraction, treatment, and discharge facilities specified in the El Monte OU ROD. EPA is currently negotiating this commitment, called a Consent Decree, including provisions for treatment of emergent chemicals, if warranted, with a group of El Monte OU PRPs. Because the emergent chemicals were discovered after EPA issued the El Monte OU ROD, EPA is now modifying the cleanup decision to address the emergent chemicals. The emergent chemicals may require treatment, and if so, one or more of the treatment technologies described below will be required. To the extent treatment is required for the emergent chemicals, the groundwater has to be treated to achieve the treatment levels. An Explanation of Significant Differences (ESD) was completed August 22, 2002 in order to modify the selected remedy of the ROD to include these additional treatment technologies. Operable Unit 03: Currently, there are three mutual water companies - Richwood, Rurban Homes, and Hemlock - that have no alternative water supply and have been providing their customers with water that is contaminated with PCE at concentrations above the DOHS Action Level. At present, no other organics have been found at levels above the DOHS action limits in the mutuals' wells. Mutual water companies are cooperatively owned water companies; in other words, the customers own shares in the company. Of all the water purveyors in the basin, only the three mutual water companies mentioned above (located in San Gabriel Area 1) are currently unable to supply water that has contamination levels below the EPA SNARL levels, due to lack of any alternative water supply. Consequently, EPA and the State have identified a need for initial remedial measures (IRM) to assist these water purveyors in mitigating their water contamination problem. Richwood Mutual Water Company serves approximately 204 households with water from two wells. PCE was first detected in October 1980, and since that time has been found in concentrations ranging from 12 to 92 ppb, greatly exceeding the SNARL level of 4 ppb. The most current data show PCE levels of 62 ppb for Well No. 1 (6/1/83) and 92 ppb for Well No. 2 (5/17/83). In addition to a PCE contamination problem, Richwood suffers from potential bacteriological problems and a severely deteriorated distribution system. Well No. 2 was temporarily taken out of service in May 1983, so that bacteriological problems could be eliminated by chlorination. Hemlock Mutual Water Company owns two wells and provides water to approximately 199 households. PCE was first detected in May 1982. The South Well was taken out of service in 1982, on the order of the Los Angeles County Department of Health Services (LACDHS) when a PCE level of 184 ppb was detected. The latest test results showed PCE levels of 50 ppb in the South Well (12/14/82) and 38 ppb in the North Well (4/12/83). Hemlock has considered using an activated carbon treatment system to lower PCE levels. Pilot tests of the system were performed from February through April 1983; the tests showed that PCE will be removed. Hemlock has bought the system from a vendor, but it is not yet in operation. At EPA's Region IX's request, the design of the Hemlock carbon filter system reviewed; the analysis concluded that the system was under-designed and did not include a margin of safety normally included in these systems. Rurban Homes Mutual Water Company serves approximately 290 households with water from two wells. PCE was detected first in October 1980. The latest sampling data (5/17/83) showed PCE concentrations of 1.7 and 3.7 ppb for Wells No. 1 and 2, respectively. In the past, however, PCE concentrations have ranged as high as 16 ppb for Well No. 1 and 54 ppb for Well No. 2. This latest sampling is the first time the PCE concentration in both wells has been lower than 4 ppb since contamination was detected. However, results of sampling

MAP FINDINGS  
FOCUS MAP 12

Map ID Site Database(s) EPA ID Number

**SAN GABRIEL VALLEY (AREA 1) (Continued)**

**1000114959**

over time have shown significant fluctuations that do not indicate either an increasing or decreasing trend and the average concentration of PCE has remained above the DOHS action level. Therefore, the recent sampling cannot be considered sufficient evidence that the PCE SNARL level has been and will continue to be; met in the near future. Because these two contaminated wells are Rurban's only water supply, EPA and the State have determined that a solution to Rurban's contamination problem should also be included in initial remedial measures for San Gabriel Area 1. At the request of EPA Region IX, the Field Inspection Team (FIT) prepared a list of potentially responsible parties (PRP's) in the San Gabriel basin, for use in preparing RCRA Section 3007/CERCLA Section 104 letters. This list was based on the results of the 1980 RWQCB investigation, cited above, which identified several industries as warranting further investigation, and a review of records and the history of development in the San Gabriel basin. EPA Region IX sent 16 section 3007/104 letters to PRP's on August 19, 1983, based on an initial list provided by FIT. This initial list was based primarily on the 1980 RWQCB study which focused on San Gabriel Area 2. Consequently, only two of these initial 16 PRP's are located in the San Gabriel Area 1. After FIT provided its final list of PRP's, Region IX sent 72 additional section 3007/104 letters to PRP's in the San Gabriel basin on January 12, 1984; 31 of these PRP's were located in San Gabriel Area 1. Since no responsible parties have been identified yet in San Gabriel Area 1, it is recommended that the Trust Fund be used to finance initial remedial measures at the San Gabriel Area 1 site. Immediate action must be taken to provide an uncontaminated water source for residents of El Monte served by the three mutual water companies. If parties responsible for contamination of the mutual water companies' wells are identified through the source investigation, a cost recovery action can be taken to recover Trust Fund monies used for the implementation of initial remedial measures in San Gabriel Area 1. A ROD addressing Operable Unit 03 was completed in May of 1984. OU5: Groundwater contamination in the San Gabriel Valley was discovered in 1979. In 1984, the EPA added four portions of the San Gabriel Valley to the national Superfund list. The South El Monte Operable Unit (OU) is officially part of the San Gabriel Valley Area 1 Superfund site. Investigations by the EPA and others revealed the large extent of groundwater contamination in the South El Monte OU and the San Gabriel Valley. During the past 20 years, numerous water supply wells throughout the San Gabriel Valley have been found to be contaminated with chlorinated solvents and other volatile organic compounds (VOCs). In response to the contamination, water companies have shut down contaminated wells, installed new treatment facilities, and taken other steps to ensure that they can continue to supply clean drinking water to the public. The remedial investigation/feasibility study (RI/FS) for the South El Monte OU of the San Gabriel Valley Superfund sites was funded by a group of potentially responsible parties (PRPs) for contamination of groundwater in the South El Monte area and was completed in 1999. The remedial investigation determined that tetrachloroethene (PCE), trichloroethene (TCE), and other VOCs were contaminating the shallow and intermediate depth groundwater aquifers in a fifteen-square-mile area of the San Gabriel Valley around South El Monte. Businesses in South El Monte and surrounding areas had used these chemicals for degreasing, metal cleaning, and other purposes, and had probably released them to the ground through a combination of on-site disposal, careless handling, leaking pipes, and other means. The study found that the upper most, or shallow aquifer includes most of the known sources of the groundwater contamination. VOC contaminant concentrations in portions of the shallow aquifer are hundreds of times the drinking water standards. In the intermediate aquifer, VOC contaminant concentrations are generally lower, but still exceed drinking water standards. On September 29, 2000, the EPA adopted a cleanup plan for the South El Monte OU known as the South El Monte Operable Unit Interim Record of

Decision (ROD). The plan addresses the contamination described in the RI/FS. The goals of the 2000 cleanup plan are to prevent exposure of the public to VOC-contaminated groundwater, limit the movement of VOC-contaminated groundwater into clean or less contaminated areas and depths of the intermediate zone, reduce the impact of continued contaminant migration on downgradient water supply wells in the intermediate zone, and protect future uses of uncontaminated areas. In the South El Monte OU, nearly all of the shallow zone groundwater and a portion of the intermediate zone groundwater migrate south towards Whittier Narrows. As part of a separate cleanup plan (identified in the Whittier Narrows OU Interim Record of Decision Amendment, issued by EPA in November 1999), EPA has already constructed a groundwater remedy in the Whittier Narrows OU that is anticipated to capture any shallow zone and intermediate zone VOC contamination in the South El Monte OU that is migrating to the south. This leaves only the portion of the intermediate-zone VOC contamination in the northwest half of the South El Monte OU that migrates towards the west to be addressed in the South El Monte OU cleanup plan. The South El Monte OU (SEMOU) 2000 cleanup plan calls for pumping the VOC-contaminated groundwater from a portion of the intermediate aquifer beneath the South El Monte OU and treating it to remove the contaminants. More specifically, the plan allows for the use of existing water supply wells, treatment systems, and pipelines if possible, and the construction of new facilities where needed, to pump and treat approximately 10,000 gallons per minute (gpm) of VOC-contaminated groundwater from the intermediate aquifer. Final decisions on extraction rates and locations will be made during the remedial design phase of the project. The 2000 Interim ROD selected a remedy that "is an interim action and is focused on controlling the migration of contamination". The EPA has installed and sampled monitoring wells and modeled the groundwater aquifers to prepare for the implementation of cleanup work for the intermediate aquifer. Water purveyors' facilities in the SEMOU have been proposed as part of the SEMOU VOC containment remedy. These facilities are: 1) San Gabriel Valley Water Company's Plant 8 production Wells b, c, and d and their associated VOC treatment facility, 2) City of Monterey Park (MP) Wells 12 and 15 and their associated VOC treatment facility, 3) MP Well 5 and its associated VOC treatment facility, and 4) Southern California Water Company (SCWC) San Gabriel Wells 1 and 2 and their associated VOC treatment facility. In addition to VOC treatment, perchlorate treatment may be required at the two MP facilities and the SCWC facility listed above. After the discovery in 1997 and 1998 of perchlorate, n-nitrosodimethylamine (NDMA), and 1,4-dioxane in the Baldwin Park area of the San Gabriel Valley, the Los Angeles Regional Water Quality Control Board requested that facilities in several areas of the San Gabriel Valley sample their groundwater monitoring wells for these newly-discovered "emergent chemicals." During the same time period, widespread testing for perchlorate was conducted in the San Gabriel Valley by water suppliers. EPA also began testing for the emergent chemicals in several areas of the San Gabriel Valley, including the South El Monte OU. Perchlorate and 1,4-dioxane were detected in the groundwater in the South El Monte OU. 1,4-dioxane was detected at concentrations more than 20 times the State drinking water advisory level of 3 ppb in the shallow aquifer in the northern and southern portions of the South El Monte OU. Concentrations of 1,4-dioxane detected in the intermediate aquifer were generally less than the State drinking water advisory level. Perchlorate detected in the groundwater in the South El Monte OU did not exceed the State drinking water advisory level of 18 micrograms per liter (ug/l) established in 1997. In early 2002 and 2004, the State issued new drinking water advisory levels for perchlorate of 4 ppb and 6 ppb respectively. Subsequently, perchlorate was detected at concentrations above the State drinking water advisory level of 6 ppb during testing of groundwater in the intermediate aquifer of the South El Monte OU. Some water

purveyors' wells were impacted by perchlorate contamination, and consequently, intermediate zone groundwater pumped from these wells has to be treated for perchlorate. In some cases where the perchlorate concentration in water purveyor wells is just slightly above the State drinking water advisory level, water purveyors may be able to blend perchlorate contaminated water with clean water to meet the State drinking water advisory level. Concentrations of perchlorate in the shallow aquifer were generally less than the State drinking water advisory level and shallow zone perchlorate treatment is not needed at this time. If EPA determines containment and treatment for perchlorate in the shallow zone is necessary, this decision will be addressed in a subsequent decision document. The need for containment of 1,4-dioxane detected above State drinking water advisory level in the shallow aquifer is currently being evaluated by EPA using groundwater modeling. If EPA determines containment for 1,4-dioxane in the shallow zone is necessary, this decision will be documented in a subsequent decision document. In the intermediate aquifer, concentrations of 1,4-dioxane in the South El Monte OU are generally less than the State drinking water advisory level. Treatment for 1,4-dioxane in the intermediate aquifer is not included as part of the remedy at this time. NDMA and hexavalent chromium have also been detected in groundwater in the South El Monte OU, but do not exceed Federal or State water quality regulatory levels. Thus, additional treatment processes for NDMA and hexavalent chromium are not needed at this time. In March 2002, EPA sent Special Notice letters to 67 PRPs to begin formal EPA-PRP negotiations to obtain a binding commitment from the PRPs to carry out the South El Monte OU cleanup plan for the design, construction, and operation of the groundwater extraction, treatment, and discharge facilities specified in the South El Monte OU Interim ROD. EPA is currently negotiating this commitment, called a Consent Decree, with a group of South El Monte OU PRPs. Because perchlorate at concentrations above the State drinking water advisory level was discovered after EPA issued the South El Monte OU Interim ROD, EPA is now modifying the cleanup decision to address the need to potentially treat perchlorate at those portions of the Interim ROD remedy that are operating in the intermediate zone. In some cases, where the perchlorate concentration is close to the State drinking water advisory level, there may be an opportunity to blend perchlorate contaminated water with clean water to meet the State drinking water advisory level, under the purview of the California Department of Health Services. An Explanation of Significant Differences (ESD) addressing Operable Unit 5 (South El Monte) at the San Gabriel Valley - Area 1 Superfund Site was completed in November 2005.

**FINDS:**

Other Pertinent Environmental Activity Identified at Site

Registry ID: 110009329538

CERCLIS (Comprehensive Environmental Response, Compensation, and Liability Information System) is the Superfund database that is used to support management in all phases of the Superfund program. The system contains information on all aspects of hazardous waste sites, including an inventory of sites, planned and actual site activities, and financial information.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and its Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Scoring:                      2

Summary Details:

Conditions at listing September 1983): San Gabriel Valley Area 1) is a ground water plume that runs along the axis of the Rio Hondo Wash and the Salt Pit Wash in the San Gabriel ground water basin in El Monte, Los Angeles County, California. The plume also parallels the San Gabriel River to the east. It is approximately 4 miles long and 1.5 miles wide. Ground water is contaminated with trichloroethylene (TCE), perchloroethylene (PCE), and carbon tetrachloride (CTC) according to analyses by State agencies and local water companies. Many public wells in this area exceed the EPA Suggested No Adverse Response Levels (SNARL) for TCE and PCE. Approximately 200,000 people are affected. Cities and public water companies in the area have tested to ensure that their water supplies contain less than 5 parts per billion (ppb) of TCE and 4 ppb PCE, levels considered safe for human consumption. When alternative methods of reducing the TCE and PCE levels below such levels are not effective, wells are removed from service. Currently, three small mutual water companies have no alternate water supply and have advised their customers to use bottled water. Status June 1984): As a result of EPA's analysis of initial remedial measures, completed in December 1983, EPA will install water treatment systems to provide clean water to two of the three companies that have no alternate supply. The third company has already purchased a treatment system and will begin operation of the system soon. A supplemental sampling program of contaminated wells will begin soon to get a snapshot view of the degree of contamination. The State Department of Health Services and EPA are preparing to initiate a remedial investigation/feasibility study to determine the aerial and vertical extent of contamination and to develop alternatives for treatment and management of the problem. EPA continues its investigation to identify sources of contamination. This site, along with the three other San Gabriel Valley sites, was added to the NPL in May 1984 because it involves a serious problem that required taking immediate remedial action.

EPA Region:	09
Land type:	Facility is not located on Indian land. Additional information is not known.
Classification:	Small Small Quantity Generator
Description:	Handler: generates more than 100 and less than 1000 kg of hazardous waste during any calendar month and accumulates less than 6000 kg of hazardous waste at any time; or generates 100 kg or less of hazardous waste during any calendar month, and accumulates more than 1000 kg of hazardous waste at any time

Handler Activities Summary:

U.S. importer of hazardous waste:	No
Mixed waste (haz. and radioactive):	No
Recycler of hazardous waste:	Unknown
Transporter of hazardous waste:	Unknown
Treater, storer or disposer of HW:	No
Underground injection activity:	Unknown
On-site burner exemption:	Unknown
Furnace exemption:	Unknown
Used oil fuel burner:	No
Used oil processor:	No
User oil refiner:	No
Used oil fuel marketer to burner:	No
Used oil Specification marketer:	No
Used oil transfer facility:	No
Used oil transporter:	No
Off-site waste receiver:	Commercial status unknown

Universal Waste Summary:

Waste type:	Batteries
Accumulated waste on-site:	Unknown
Generated waste on-site:	Unknown

Waste type:	Lamps
Accumulated waste on-site:	Unknown
Generated waste on-site:	Unknown

Waste type:	Pesticides
Accumulated waste on-site:	Unknown
Generated waste on-site:	Unknown

Waste type:	Thermostats
Accumulated waste on-site:	Unknown
Generated waste on-site:	Unknown

Primary Waste Type: Not reported  
Secondary Waste: Not reported  
Secondary Waste Type: Not reported  
Design Flow: 0  
Baseline Flow: 0  
Reclamation: Not reported  
POTW: Not reported  
Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.  
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

California - Hazardous Waste Tracking System - Datamart

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.  
 Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

 EPA Region: 09  
 Classification: Small Small Quantity Generator  
 Description: Handler: generates more than 100 and less than 1000 kg of hazardous waste during any calendar month and accumulates less than 6000 kg of hazardous waste at any time; or generates 100 kg or less of hazardous waste during any calendar month, and accumulates more than 1000 kg of hazardous waste at any time

Owner/Operator Summary:

Owner/operator name: ELIO E SALVO  
 Owner/operator address: 12318 LOWER AZUSA RD  
 ARCADIA, CA 91006  
 Owner/operator country: Not reported  
 Owner/operator telephone: (626) 443-6433  
 Legal status: Private  
 Owner/Operator Type: Owner  
 Owner/Op start date: Not reported  
 Owner/Op end date: Not reported

Handler Activities Summary:

U.S. importer of hazardous waste: Unknown  
 Mixed waste (haz. and radioactive): Unknown  
 Recycler of hazardous waste: No  
 Transporter of hazardous waste: No  
 Treater, storer or disposer of HW: No  
 Underground injection activity: No  
 On-site burner exemption: Unknown  
 Furnace exemption: Unknown  
 Used oil fuel burner: No  
 Used oil processor: No  
 User oil refiner: No  
 Used oil fuel marketer to burner: No  
 Used oil Specification marketer: No  
 Used oil transfer facility: No  
 Used oil transporter: No  
 Off-site waste receiver: Commercial status unknown

Historical Generators:

Date form received by agency: 07/07/2000  
 Facility name: MIRACLE SEALANT  
 Classification: Small Quantity Generator

Hazardous Waste Summary:

Waste code: D001

Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Violation Status: No violations found

California - Hazardous Waste Tracking System - Datamart

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and its Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

SIC Code 2: Not reported  
 Primary Waste: Stormwater Runoff  
 Primary Waste Type: Nonhazardous Solid Wastes/Influent or Solid Wastes that contain nonhazardous putrescible and non putrescible solid, semisolid, and liquid wastes (E.G., garbage, trash, refuse, paper, demolition and construction wastes, manure, vegetable or animal solid and semisolid waste).  
 Secondary Waste: Not reported  
 Secondary Waste Type: Not reported  
 Design Flow: 0  
 Baseline Flow: 0  
 Reclamation: No reclamation requirements associated with this facility.  
 POTW: The facility is not a POTW.  
 Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.  
 Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Other Pertinent Environmental Activity Identified at Site

Registry ID: 110000609869

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CERCLIS (Comprehensive Environmental Response, Compensation, and Liability Information System) is the Superfund database that is used to support management in all phases of the Superfund program. The system contains information on all aspects of hazardous waste sites, including an inventory of sites, planned and actual site activities, and financial information.

**PLASTIC MATERIALS INC (Continued)**

**1000388760**

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and its Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

 POTW: Not reported  
 Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.  
 Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

**MISSION CORRUGATOR (Continued)**

**S100939919**

CA WDS:  
 Facility ID: 4 19I006344  
 Facility Type: Industrial - Facility that treats and/or disposes of liquid or semisolid wastes from any servicing, producing, manufacturing or processing operation of whatever nature, including mining, gravel washing, geothermal operations, air conditioning, ship building and repairing, oil production, storage and disposal operations, water pumping.  
 Facility Status: Active - Any facility with a continuous or seasonal discharge that is under Waste Discharge Requirements.  
 NPDES Number: CAS000001 The 1st 2 characters designate the state. The remaining 7 are assigned by the Regional Board  
 Subregion: 4  
 Facility Telephone: 6262849524  
 Facility Contact: STEVE NELSON  
 Agency Name: SUNCLIPSE  
 Agency Address: 3201 W Mission Rd  
 Agency City,St,Zip: Alhambra 918031113

 Primary Waste Type: Not reported  
 Secondary Waste: Not reported  
 Secondary Waste Type: Not reported  
 Design Flow: 0  
 Baseline Flow: 0  
 Reclamation: Not reported  
 POTW: Not reported  
 Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.  
 Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

FINDS:

Other Pertinent Environmental Activity Identified at Site

Registry ID:                                110002143797

TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

**Hazardous Waste Summary:**

Waste code: D001

Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D018

 Classification: Small Quantity Generator

Hazardous Waste Summary:

Waste code: D001  
 Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D018  
 Waste name: BENZENE

Violation Status: No violations found
