TPHg	total petroleum hydrocarbons as gasoline
USGS	United States Geological Survey
UST	underground storage tank
VCP	Voluntary Cleanup Priority listing
VOC	volatile organic compound

# Executive Summary

---

This report presents the results of a limited Environmental Site Assessment (ESA) conducted by CH2M HILL for the California Department of Transportation (Caltrans), District 7, within Zones 1, 2, 3, 4 and 5 associated with the State Route (SR-) 710 Tunnel Technical Study project. These five zones (the Subject Property) are located in Los Angeles County, California (Figure 1-1).

The purpose of the Tunnel Technical Study is to build upon the 2006 Los Angeles County Metropolitan Transportation Authority SR-710 Tunnel Feasibility Study and provide a more detailed evaluation of the geotechnical feasibility of a tunnel alternative to extend the SR-710 with consideration given to all practical routes. To satisfy the requirements of route-neutral analyses, five potential tunnel zones (Zones 1 through 5) are under consideration. The first step in the SR-710 Tunnel Technical Study was to perform geotechnical and geological exploration to determine preliminary geologic conditions along all five Zones. Based on discussion with Caltrans, an investigation program was developed, consisting of 25 deep borings and 17 geophysical lines. The data collected from this geotechnical investigation program will be used for screening the zones.

The geotechnical investigation program has been divided between Caltrans and CH2M HILL. Thirteen borings were drilled by Caltrans, and 12 borings were drilled by CH2M HILL. Prior to the initiation of the investigation program, CH2M HILL, at the request of Caltrans, conducted initial site assessments (ISA) (CH2M HILL, 2008, 2009a, 2009b) of these proposed boring locations to identify any environmental concerns that might exist at these sites with possible impact to the geotechnical investigation program.

This report provides an environmental screening of Zones 1, 2, 3, 4, and 5 to identify potential hazardous contamination issues that might be encountered in these zones.

Based on the results from this limited ESA, a summary of findings for the Subject Property is provided in Table ES-1.

TABLE ES-1  
Summary of Findings Associated with the Subject Property

Zone	Description of Findings
1	<p>Ten sites (including the San Fernando Valley [Area 4] Pollock NPL Site) with localized groundwater or soil contamination are located within Zone 1 as summarized below. See Table 4-1 for a detailed description of each site<sup>1</sup>.</p> <p>Portions of this NPL site are known to be contaminated with chlorinated VOCs including TCE, PCE, MTBE, perchlorate, nitrate, hexavalent chromium, manganese, and thallium.</p> <p>In addition to the NPL site described above, six sites that have impacted groundwater were identified by EDR within Zone 1. These sites are considered open cases by DTSC or California RWQCB.</p> <p>Six sites that have impacted soil and are considered open cases by the lead regulatory agencies were identified by EDR within Zone 1.</p> <p>A review of oil and gas maps identified two oil exploration wells that have been plugged and abandoned within Zone 1.</p>

**TABLE ES-1**  
**Summary of Findings Associated with the Subject Property**

<b>Zone</b>	<b>Description of Findings</b>
2	<p>Eight sites with localized groundwater contamination or soil contamination are located within Zone 2 as summarized below. See Table 4-2 for a detailed description of each site.</p> <p>Six sites that have impacted groundwater were identified by EDR within Zone 2. These sites are considered open cases by the RWQCB.</p> <p>Two sites that have impacted the soil and are considered open by the lead regulatory agencies were identified by EDR within Zone 2.</p> <p>A review of oil and gas maps identified one oil exploration well that has been plugged and abandoned within Zone 2.</p>
3	<p>Twelve sites with localized groundwater contamination, soil contamination, or where the media impacted is under investigation, are located within Zone 3 as summarized below. See Table 4-3 for a detailed description of each site.</p> <p>Four sites that have impacted groundwater were identified by EDR within Zone 3. These sites are considered open cases by the DTSC or RWQCB.</p> <p>Seven sites that have impacted the soil considered open by the lead regulatory agencies were identified by EDR within Zone 3.</p> <p>One site where the media impacted is under investigation and that is considered open by the lead regulatory agencies was identified by EDR.</p> <p>A review of oil and gas maps identified one oil exploration well that has been plugged and abandoned within Zone 3.</p>
4	<p>Fourteen sites (including the San Gabriel Valley OU Area 3 [Alhambra] NPL Site) with localized groundwater contamination or soil contamination are located within Zone 4 as summarized below. See Table 4-4 for a detailed description of each site.</p> <p>The San Gabriel Valley NPL Site OU Area 3 (Alhambra) is located within portions of Zone 4. This NPL site is known to be contaminated with chlorinated VOCs including TCE and PCE.</p> <p>In addition to the NPL site described above, two sites that have impacted groundwater were identified by EDR within Zone 4. These sites are considered open cases by the RWQCB.</p> <p>Eleven sites that have impacted soil and are considered open by the lead regulatory agencies were identified by EDR within Zone 4.</p> <p>A review of Oil and Gas maps identified no oil exploration wells within Zone 4.</p>
5	<p>Thirty-nine sites with localized groundwater contamination, soil contamination, or where the media impacted is under investigation, are located within Zone 5 as summarized below. See Table 4-5 for a detailed description of each site.</p> <p>The San Gabriel Valley NPL Sites OU Area 1 (El Monte) and OU Area 3 (Alhambra) are located within portions of Zone 5. These two NPL sites are known to be contaminated with chlorinated VOCs including TCE and PCE.</p> <p>In addition to the two NPL site described above, seven sites that have impacted groundwater were identified by EDR within Zone 5. These sites are considered open cases by the DTSC or RWQCB.</p> <p>Twenty-seven sites that have impacted soil were identified by EDR within Zone 5. These sites are considered open by the lead regulatory agencies</p> <p>Three sites where the media impacted are under investigation were identified by EDR. These sites are considered open by the lead regulatory agencies.</p> <p>A review of oil and gas maps identified four oil exploration wells that have been plugged and abandoned within Zone 5.</p>

Note: 1. The total number of sites within Zone 1 includes some sites that have both soil and groundwater contamination. Sites with both soil and groundwater contamination are counted once when determining the total number of sites located within this zone.

The scope of this ESA is limited to the review of public records and does not include verification sampling. Based on the above findings, 3 regional groundwater contamination sites (NPL sites), 26 groundwater sites, 53 sites with soil contamination, 4 sites where the media impacted are under investigation, and 8 plugged and abandoned oil exploration wells were identified in Zones 1, 2, 3, 4, and 5.

It is recommended that drill cuttings, excavated soils, and/or water generated during tunneling in the vicinity of these areas where soil and/or groundwater concerns are present should be sampled and profiled in accordance with regulatory requirements prior to disposal.

This Environmental Assessment has been prepared under the direction of the following environmental professionals.

*"We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in Section 312.10 of 40 Code of Federal Regulations (CFR) 312," and*

*"We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Subject Property."*

# 1. Introduction

---

This report presents the results of a limited Environmental Site Assessment (ESA) conducted by CH2M HILL for the California Department of Transportation (Caltrans), District 7, within Zones 1, 2, 3, 4 and 5 associated with the State Route (SR-) 710 Tunnel Technical Study project. These five zones (the Subject Property) are located in Los Angeles County, California (Figure 1-1). The following sections provide the project background, purpose of this assessment, scope of work, significant assumptions, and special terms and conditions.

## 1.1 Project Background

The purpose of the Tunnel Technical Study is to build upon the *2006 Los Angeles County Metropolitan Transportation Authority Route 710 Tunnel Feasibility Study* (Parsons Brinkerhoff, 2006) and to provide a more detailed evaluation of the geotechnical feasibility of a tunnel alternative to extend SR-710 with consideration given to all practical routes. To satisfy the requirements of route-neutral analyses, five potential tunnel alignment zones (Zones 1 through 5) are under consideration. The first step in the SR-710 Tunnel Technical Study was to perform geotechnical and geological exploration to determine preliminary geologic conditions. Based on discussion with Caltrans, an investigation program was developed consisting of 25 deep borings and 17 geophysical lines. The data collected from this geotechnical investigation program will be used for screening of the zones.

The geotechnical investigation program was divided between Caltrans and CH2M HILL. Thirteen borings were drilled by Caltrans, and 12 borings were drilled by CH2M HILL. Prior to the initiation of the investigation program, CH2M HILL at the request of Caltrans conducted initial site assessments (ISAs) of these proposed boring locations to identify any environmental concerns that might exist at these sites, and that might impact the geotechnical investigation program. The findings of the ISA are provided in the following three reports:

- *Final ISA for Proposed Boring Locations Z1-B1, Z1-B8, Z2-B4, Z3-B2, and Z3-B9*, December 2008.
- *Final ISA for Proposed Boring Locations Z1-B3, Z1-B4, Z2-B2, Z2-B3, Z3-B6, Z3-B7, Z3-B8, Z3-B10, and Z3-B11*, January 2009a.
- *Final ISA for Proposed Boring Locations Z1-B1 (revised location), Z2-B5, and Z3-B5*, March 2009b.

This ESA investigated all areas of Zones 1, 2, 3, 4, and 5 and builds upon the ISAs conducted for boring locations in Zones 1, 2, and 3.

## 1.2 Purpose

The purpose of this limited ESA is to evaluate the presence of potential hazardous contamination issues that might exist within the Subject Property.

## 1.3 Scope of Work

The scope of work for this ESA consists of the following two tasks:

- Records Review
  - Includes review of the following historical information sources:
    - Applicable federal, state, and local environmental databases for identifying hazardous waste issues related to the Subject Property and properties that has the potential to impact the Subject Property. The list of databases and the minimum search distances were based on the American Society for Testing and Materials (ASTM) E-1527-05 standard.
    - Regulatory Agency Databases (Geotracker from Regional Water Quality Control Board [RWQCB] and Envirostor from the Department of Toxic Substances Control [DTSC])
    - Oil and gas maps
- Preparation of the Environmental Assessment Report

## 1.4 Significant Assumptions

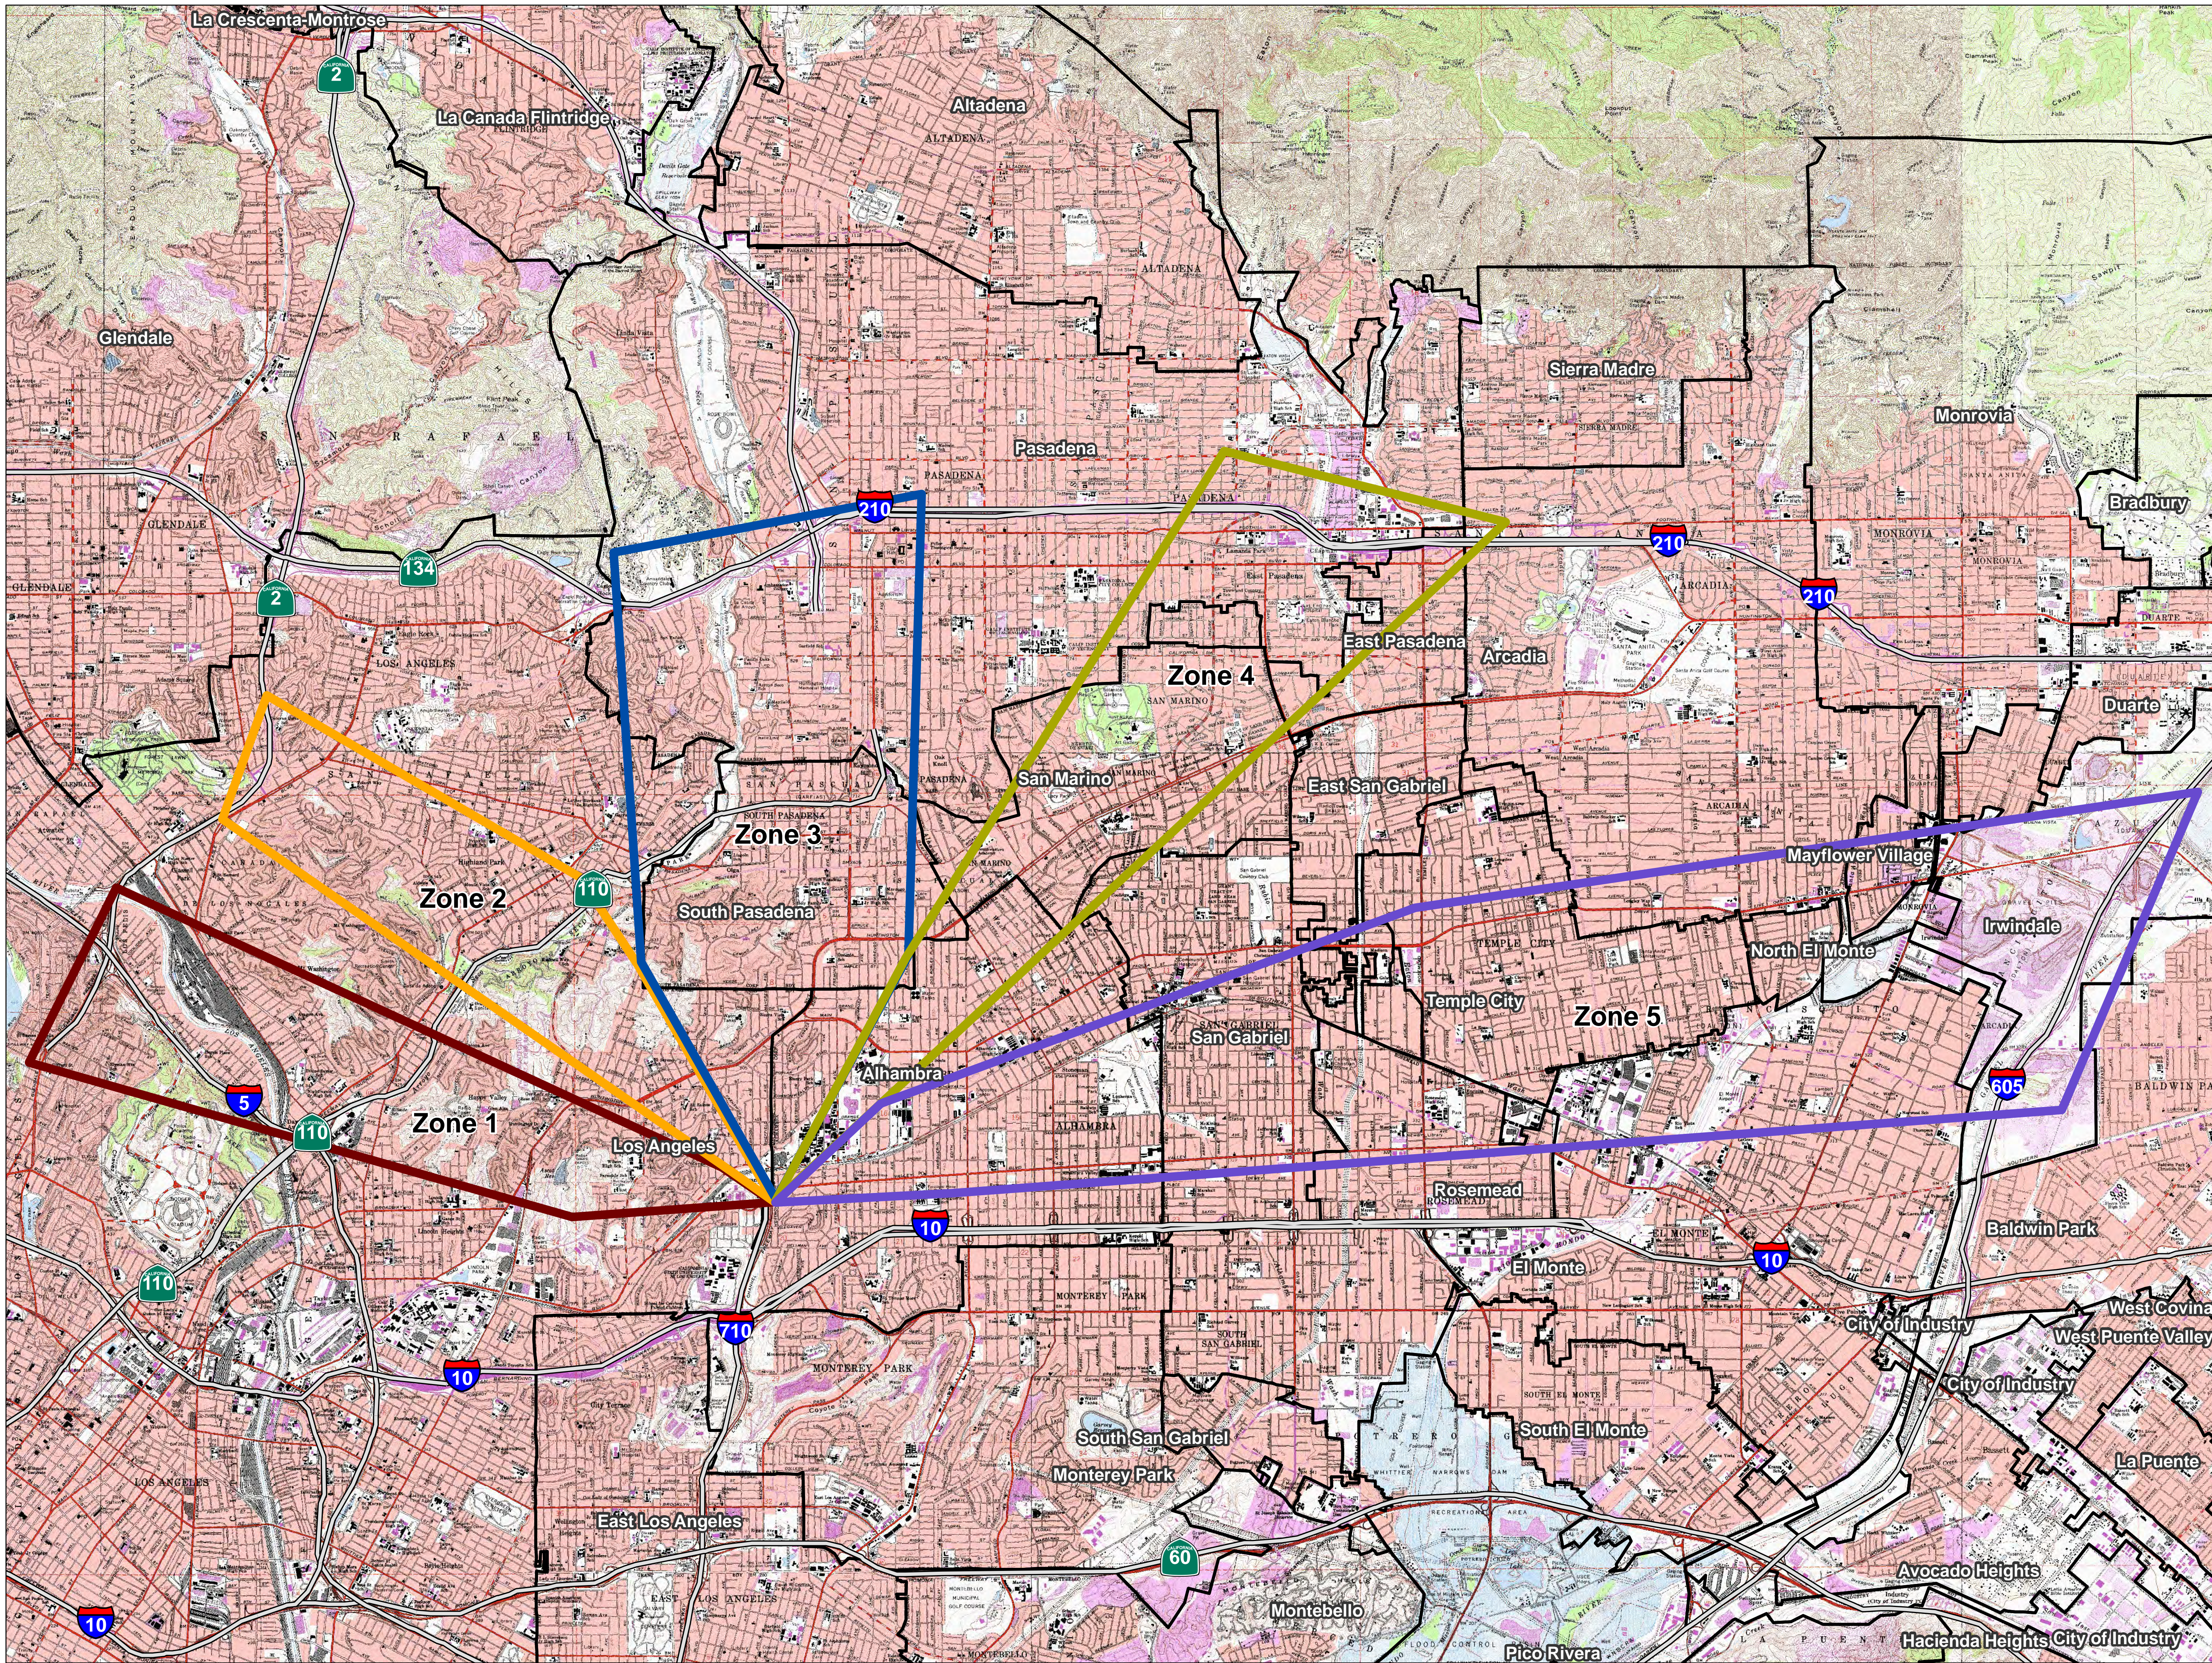

This ESA is not intended to fulfill the requirements of Caltrans guidance on ISAs or requirements of the United States Environmental Protection Agency (EPA) “Standard Practice for All Appropriate Inquiries” and “Standard Practice for Environmental Site Assessments: Phase I ESA Process.” This limited ESA is to be used to identify hazardous contamination areas that have the potential to impact the right-of-way (ROW) associated with the proposed alternatives within Zones 1, 2, 3, 4, and 5.

## 1.5 Special Terms and Conditions

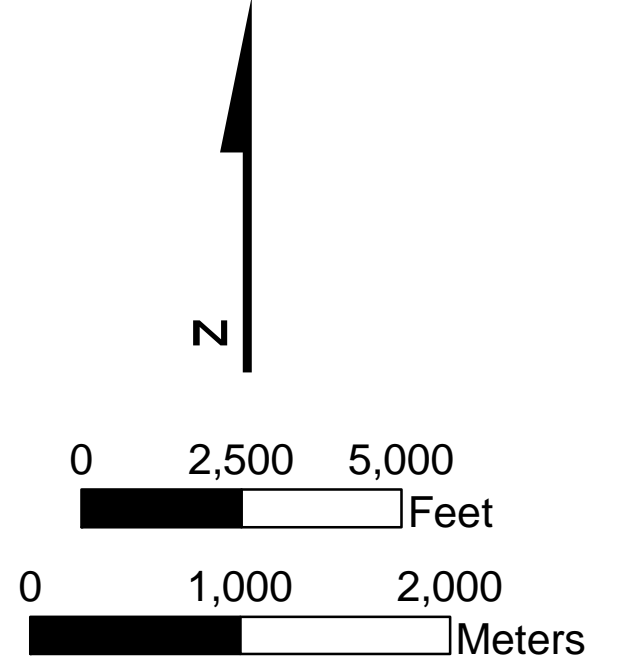

Opinions given in this ESA relative to the potential for hazardous substances or petroleum hydrocarbons to exist within the Subject Property are based upon information derived from the environmental database review summary provided by Environmental Data Resources, Inc. (EDR), and from other information sources described herein.

CH2M HILL reviewed the public information sources as providing complete and accurate information, without independent verification. The findings and conclusions in this report are based solely on the limited scope of this ESA including information from a variety of sources that CH2M HILL believes to be reliable. Because the scope of this ESA is necessarily limited and based, in part, on third-party sources and significant assumptions, CH2M HILL does not warrant that the Subject Property does not include hazardous substances or petroleum hydrocarbon releases in areas not identified in this report.

## 2. Subject Property and Site Setting

---

This section provides general environmental setting information for the Subject Property.

### 2.1 Location

The Subject Property is located in Los Angeles County, California. Table 2-1 lists the cities within the boundaries of Zones 1, 2, 3, 4, and 5.

TABLE 2-1  
Site Location and Description

Zone	Cities
1	Los Angeles
2	Los Angeles
3	Alhambra, Los Angeles, South Pasadena, Pasadena
4	Alhambra, Los Angeles, Pasadena, East Pasadena, South Pasadena, and San Marino
5	Alhambra, Arcadia, El Monte, North El Monte, Irwindale Los Angeles, Rosemead, San Gabriel, and Temple City

### 2.2 Site and Vicinity General Characteristics

**Zone 1:** From the terminus of SR-710 at Valley Boulevard, this zone extends westerly and ends near the southern terminus of SR-2. Zone 1 is approximately 5.0 to 5.5 miles long and about 1.5 miles wide at the western end, encompassing 3,529 acres (Figure 2-1). I-5 crosses Zone 1 on the southwest and SR 110 transects Zone 1 from north to south. Zone 1 is located entirely within the city of Los Angeles. The primary streets that intersect Zone 1 include Alhambra Avenue, Figueroa Street, Pasadena Avenue, Riverside Drive, San Fernando Road, and Valley Boulevard.

**Zone 2:** From the terminus of SR-710 at Valley Boulevard, the zone extends northwesterly and connects to SR-2 near the midpoint between I-5 and SR-134. Zone 2 is approximately 5.0 to 5.5 miles long and about 1 mile wide at the northwestern terminus at SR-2, encompassing 2,328 acres (Figure 2-2). Zone 2 is located entirely within the city of Los Angeles. The primary streets that intersect Zone 2 include Alhambra Avenue, Eagle Rock Boulevard, Figueroa Street, and Huntington Drive.

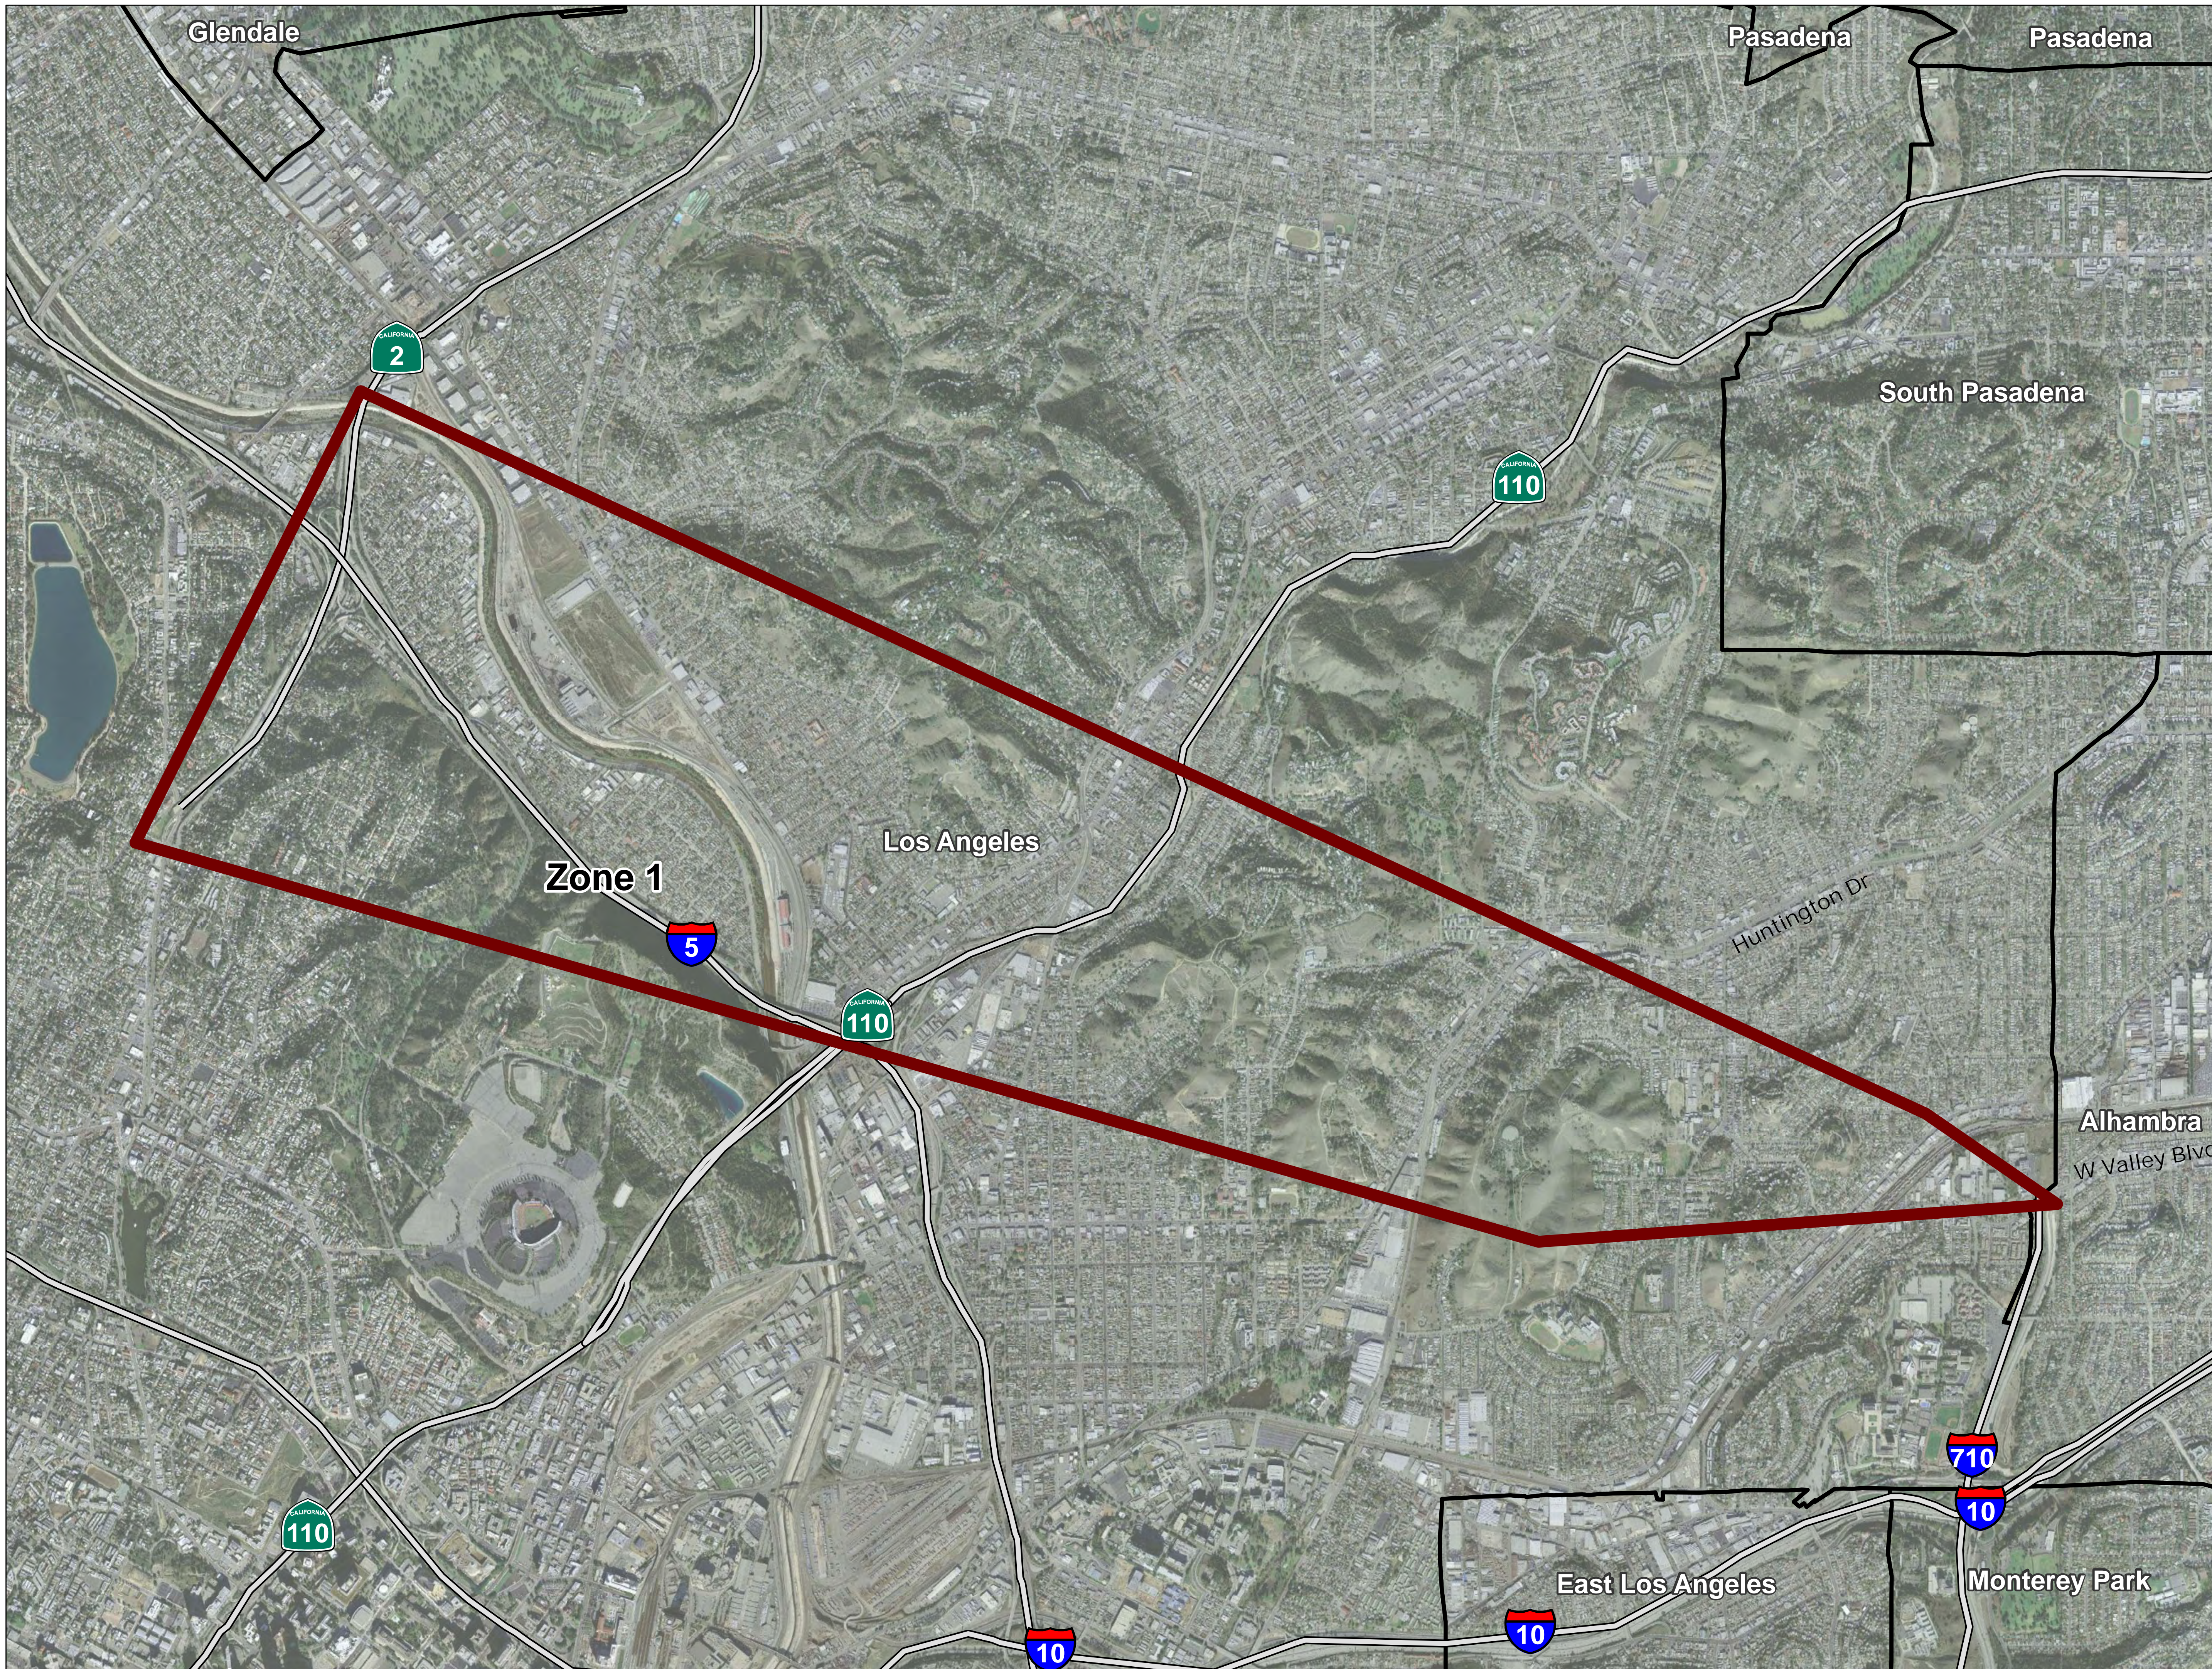

**Zone 3:** From the terminus of SR-710 at Valley Boulevard, the study zone extends north and terminates along SR-134 and I-210. Zone 3 is approximately 4.5 to 5.0 miles long and about 2.5 miles wide at the northern terminus, encompassing 5,720 acres (Figure 2-3). The cities of Los Angeles, Alhambra, South Pasadena, and Pasadena are partially located within the boundary of Zone 3. The primary streets that intersect Zone 3 include Alhambra Avenue,

Colorado Boulevard, Huntington Drive, Fair Oaks Avenue, Figueroa Street, Mission Road, Orange Grove Boulevard, and Valley Boulevard.

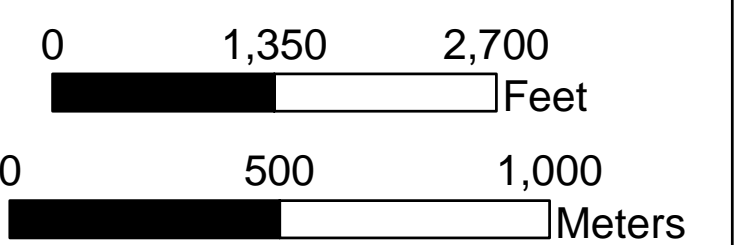

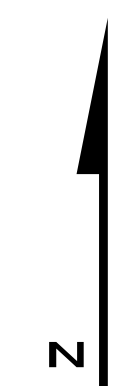

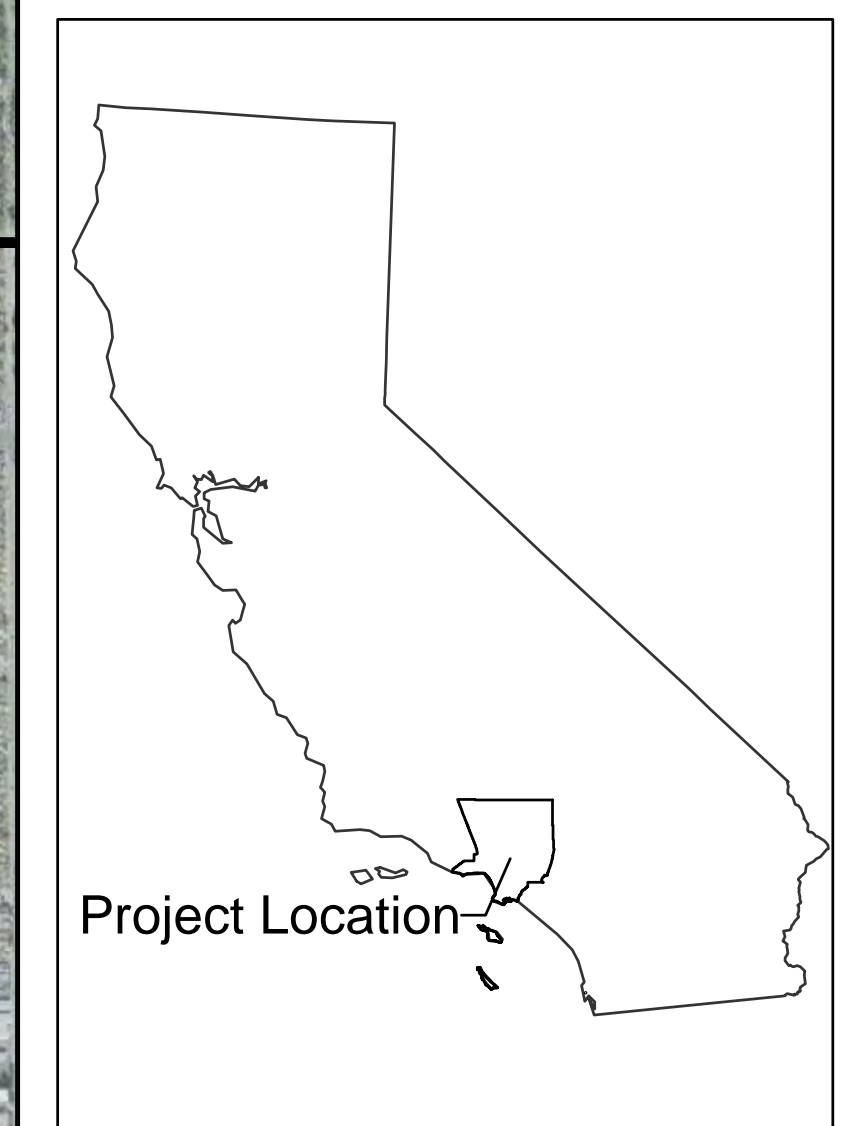

**Zone 4:** From the terminus of SR-710 at Valley Boulevard, the study zone extends in a northeasterly direction and terminates at I-210 between SR-134 and I-605. The study zone is approximately 6.0 to 7.5 miles long and about 2.2 miles wide at its terminus at I-210, encompassing 4,649 acres (Figure 2-4). Zone 4 is located within the cities of Los Angeles, Alhambra, South Pasadena, Pasadena, San Marino, and East Pasadena. The primary streets that intersect Zone 4 include Colorado Boulevard, Del Mar Boulevard, San Gabriel Boulevard, Sierra Madre Boulevard, Huntington Drive, Garfield Avenue, Atlantic Boulevard, and Valley Boulevard.

**Zone 5:** From the terminus of SR-710 at Valley Boulevard, the study zone extends easterly and ends at I-605. The study zone is approximately 9.5 to 11.0 miles long and about 2.5 miles wide at the eastern terminus, encompasses 10,967 acres (Figure 2-5). The cities of Los Angeles, Alhambra, San Gabriel, Rosemead, Arcadia, Temple City, El Monte, North El Monte, and Irwindale are partially located within the boundary of Zone 5. The primary streets that intersect Zone 5 include Valley Boulevard, Atlantic Boulevard, Mission Road, Garfield Avenue, Del Mar Avenue, San Gabriel Boulevard, Rosemead Boulevard, Baldwin Avenue, Santa Anita Avenue, Peck Road, Live Oak Avenue, and Lower Azusa Road.

### 3. Caltrans Information

---

CH2M HILL is conducting a limited ESA for the Subject Property. Therefore, parcel-level information such as title documentation, property appraisal, or Activity Use Limitations (AUL) have not been requested from Caltrans or researched by EDR. In the future, when the proposed alignment has been selected, and if Caltrans intends to acquire properties along the proposed alignment ROW, then such information will be requested.

## 4. Records Review

---

To identify areas that have potential soil and groundwater contamination concerns, public records were reviewed to obtain existing environmental information and the history of previous uses of the Subject Property. The following subsections summarize the results of the record reviews that were performed.

### 4.1 Standard Environmental Record Sources

CH2M HILL conducted an environmental database search of standard federal, state, local, and tribal government environmental public records for the Subject Property. For this report, two database searches were used. The first database search was ordered from EDR on October 20, 2008, for ISAs that were completed for Zones 1, 2, and 3. Two additional database searches were ordered from EDR on April 21, 2009, to perform environmental screening for sites with potential soil or groundwater contamination concerns that might be present within Zones 4 and 5.

The database search for Zones 1, 2, and 3 was polygon shaped, encompassing all of Zones 1, 2, and 3, with a 1-mile buffer. The database search reports for Zones 4 and 5 used customized search areas that conformed to the shape Zones 4 and 5. A 1-mile buffer was not used for these database searches because the environmental screening was focused only on the study area.

Sites identified on lists that EDR searched and that were determined to have the following characteristics were not considered further:

1. No reported impacts to soil or groundwater
2. Designated as “Closed” by the lead regulatory agency

Appendix A contains a copy of the Executive Summary from each of the three EDR reports and a compact disc (CD) containing each report. Summaries of sites with soil or groundwater contamination based on the records reviews for Zones 1, 2, 3, 4, and 5 are provided in the following subsections. An oversize figure showing all of the Zones and these sites is provided in a map pocket at the end of this report (see Plate 1).

Sites identified in the EDR reports include a description of whether the site has impacted the “soil” or “groundwater” as indicated by the lead regulatory agency of the DTSC or RWQCB. In the cases where the DTSC or RWQCB has indicated a site to be a “groundwater” case, it is likely that the soil at this site has also been impacted.

#### 4.1.1 Zone 1

A review of the search results for Zone 1 identified 59 individual sites within the search area where hazardous substances or hazardous waste handling, storage, transportation, or potential releases were reported. Using the screening criteria described above, 10 of these 59 sites were identified as being active cases with potential impacts to soil or groundwater

(note: some sites have both soil and groundwater contamination). The 10 sites are described below and listed in Table 4-1.

- The EDR database search report identified portions of the San Fernando Valley (Area 4) Pollock Wellfield NPL Site located in Zone 1 (see Figure 4-1). This NPL site is part of the San Fernando Valley Basin, a natural underground reservoir that is a source of drinking water for 3 million residents. A portion of this groundwater basin is currently contaminated with chlorinated volatile organic compounds (VOCs) (trichloroethylene [TCE] and tetrachloroethylene [PCE]), methyl tertiary butyl ether (MTBE), perchlorate, nitrate, chromium VI, manganese, and thallium. Concentrations of PCE and TCE within Zone 1 range from greater than detection limit to approximately 7.5 micrograms per liter ( $\mu\text{g/L}$ ) (CH2M HILL, 2007). The corresponding groundwater contaminant concentrations are shown in Table 4-1.
- In addition to the NPL site described above, the EDR database search report identified six known sites within the boundaries of Zone 1, as shown in Table 4-1, that are considered open cases and that have impacted groundwater. The corresponding groundwater contaminants and their concentrations are shown in Table 4-1, if available.
- The EDR database search report identified six active sites within the boundaries of Zone 1 with potential impacts to the soil as shown in Table 4-1. The locations of these sites are shown in Figure 4-1.

TABLE 4-1

#### 4.1.2 Zone 2

A review of the search results for Zone 2 identified 39 individual sites within the search area where hazardous materials or hazardous waste handling, storage, transportation, or potential release were reported. Using the screening criteria described above, 8 of these 39 sites were identified as being active cases with potential impacts to the soil or groundwater. The eight sites are described below and listed in Table 4-2.

- The EDR database search report identified six known sites within the boundaries of Zone 2, as shown in Table 4-2, that are considered open cases and that have impacted groundwater. The corresponding groundwater contaminants and their concentrations are shown in Table 4-2, if available. The locations of these sites are shown in Figure 4-2.

- The EDR database search report identified two active sites within the boundaries of Zone 2 with potential impacts to the soil, as shown in Table 4-2. The locations of these sites are shown in Figure 4-2.

### 4.1.3 Zone 3

A review of the search results for Zone 3 identified 108 individual sites within the search area where hazardous materials or hazardous waste handling, storage, transportation, or potential release were reported. Using the screening criteria described above, 12 of these 108 sites were identified as being active cases with potential impacts to the soil or groundwater. The 12 sites are described below and listed in Table 4-3.

- The EDR database search report identified 4 known sites within the boundaries of Zone 3, as shown in Table 4-3, that are considered open cases and that have impacted groundwater. The corresponding groundwater contaminants and their concentrations are shown in Table 4-3, if available. The locations of these sites are shown in Figure 4-3.
- The EDR database search report identified 7 active sites within the boundaries of Zone 3 where potential impacts to the soil are under investigation as shown in Table 4-3. The locations of these sites are shown in Figure 4-3.
- The EDR database search report identified 1 active site within the boundaries of Zone 3 where the media impacted are under investigation, as shown in Table 4-3. The location of this site is shown in Figure 4-3.

#### 4.1.4 Zone 4

A review of the search results for Zone 4 identified 207 individual sites within the search area where hazardous materials or hazardous waste handling, storage, transportation, or potential release was reported. Using the screening criteria described above, 14 of these 207 sites were identified as being active cases with potential impacts to the soil or groundwater. The 14 sites are described below and listed in Table 4-4.

- The EDR database search report identified one of the San Gabriel Valley NPL Sites located in Zone 4. The San Gabriel Valley NPL Sites are comprised of four Operable Units (OUs) (Areas 1 through 4); however, only OU Area 3 (Alhambra) is located within Zone 4. Groundwater wells located within portions of the OU Area 3 (Alhambra) with detections of the potential contaminants of concern above the maximum contaminant limits (MCLs) are shown in Figure 4-4. A groundwater plume has not been delineated yet for the San Gabriel Valley Area 3 (Alhambra) Superfund Site in Zone 4 due to the current information available.
  - Portions of the OU Area 3 (Alhambra) within Zone 4 are known to be contaminated with chlorinated VOCs including PCE, and TCE, cis-1,2-dichloroethene (cis-1,2-DCE), 1,2,3-trichloropropane (1,2,3-TCP), carbon tetrachloride (CCl<sub>4</sub>), perchlorate, and nitrate as NO<sub>3</sub> (CH2M HILL, 2009c). The corresponding groundwater contaminant concentrations are shown in Table 4-4.
- In addition to the NPL site described above, the EDR database search report identified two known sites within the boundaries of Zone 4 that are considered open cases and have impacted the groundwater, as shown in Table 4-4. The corresponding groundwater contaminants and their concentrations are shown in Table 4-4, if available. The locations of these sites are shown in Figure 4-4. One of these sites (Arco Station) is also located within Zone 5 because the boundaries of Zones 4 and 5 overlap at their southwest terminus.

- The EDR database search report identified 11 active sites within the boundaries of Zone 4 with potential impacts to the soil, as shown in Table 4-4. The locations of these sites are shown in Figure 4-4.

TABLE 4-4  
List of Environmentally Significant Sites in Zone 4

Site Name	EDR Map ID/ Focus Map	Record Source	Media Impacted	Chemical of Potential Concern (COPC)	Recent Max. Conc. (Approx. GW Depth)	Current Status

#### 4.1.5 Zone 5

A review of the search results for Zone 5 identified 356 individual sites within the search area where hazardous materials or hazardous waste handling, storage, transportation, or potential releases were reported. Using the screening criteria described above, 39 of these 356 sites were identified as being active cases with potential impacts to the soil or groundwater. These 39 sites are described below and listed in Table 4-5.

- The EDR database search report identified portions of two San Gabriel Valley NPL Sites identified as Area 1 (El Monte) and Area 3 (Alhambra) located in Zone 5. The San Gabriel Valley NPL Sites are comprised of four OUs (Areas 1 through 4); however, only OU Area 1 (El Monte) and OU Area 3 (Alhambra) are located within Zone 5. The approximate plume boundaries for OU Area 1 (El Monte) and groundwater wells located within portions of the OU Area 3 (Alhambra) with detections of these potential contaminants of concern above the MCLs are shown in Figure 4-5. A groundwater plume has not been delineated yet for the San Gabriel Valley Area 3 (Alhambra) Superfund Site in Zone 4 due to the current information available.
  - Portions of the OU Area 1 (El Monte) within Zone 5 are known to be contaminated with chlorinated VOCs including 1,4-Dioxane, 1,1-Dichloroethene (1,1-DCE), 1,2-Dichloroethane (1,2-DCA), 1,2-Dichloroethene (1,2-DCE), Benzene, Hexachrome (Cr<sup>6+</sup>), Perchlorate (ClO<sub>4</sub>), n-Nitrosodimethylamine (NDMA), nitrate (NO<sub>3</sub>), TCE, and PCE (CDM, 2008). Concentrations of these VOCs are highest in the shallow groundwater zone (upper 50 to 100 feet of the aquifer) near the source areas where

releases occurred. VOCs have also migrated into the deep zone (representing the interval from the base of the shallow zone down to approximately 400 feet below ground surface (bgs) and towards drinking water production wells (EPA, 1999). The corresponding groundwater contaminant concentrations are shown in Table 4-5.

- Portions of the OU Area 3 (Alhambra) within Zone 5 are known to be contaminated with VOCs including PCE, and TCE, cis-1,2-DCE, 1,2,3-TCP, CCl<sub>4</sub>, perchlorate, and nitrate as NO<sub>3</sub> (CH2M HILL, 2009c). The corresponding groundwater contaminant concentrations are shown in Table 4-5.
- In addition to the NPL site described above, the EDR database search report identified 7 known sites within the boundaries of Zone 5 that are considered open cases and that have impacted the groundwater, as shown in Table 4-5. The corresponding groundwater contaminant concentrations are shown in Table 4-5, if available. The locations of these sites are shown in Figure 4-5.
- The EDR database search report identified 27 active sites within the boundaries of Zone 5 that have potential impacts to the soil or that are under investigation, as shown in Table 4-5. The locations of these sites are shown in Figure 4-5.
- The EDR database search report identified three active sites within the boundaries of Zone 5 where the media impacted are under investigation, as shown in Table 4-5. The locations of these sites are shown in Figure 4-5.

## 4.2 Additional Environmental Record Sources

In addition to the environmental database report from EDR, records from state agencies were reviewed to obtain information on the Subject Property.

CH2M HILL accessed agency files from the DTSC (Envirostor) and RWQCB (Geotracker) Web sites. Findings of this review are provided in Section 4.1.

## 4.3 Historical Use Information

Historical use information for the Subject Property includes review of oil and gas maps only. For this limited ESA, standard historical use information sources, such as aerial photographs and topographical maps, were not utilized.

### 4.3.1 Oil and Gas Maps

Oil and gas maps were obtained from the California Department of Conservation, Division of Oil, Gas, and Geothermal Resources to determine whether oil and/or gas wells are present within Zones 1, 2, 3, 4 and 5. The results of the oil and gas map review are summarized in Table 4-6. The oil and gas maps reviewed as part of this ESA are provided in Appendix B1.

# 5. Findings and Conclusions

---

This report presents results of a limited Environmental Site Assessment conducted by CH2M HILL for Zones 1, 2, 3, 4, and 5 associated with the Caltrans SR-710 Tunnel Technical Study project.

Based on the results from this Environmental Site Assessment, a summary of findings for the Subject Property is provided in Table 5-1.

TABLE 5-1  
Summary of Findings Associated with the Subject Property

Zone	Description of Findings
1	<p>Ten sites (including the San Fernando Valley [Area 4] Pollock NPL Site) with localized groundwater or soil contamination are located within Zone 1 as summarized below. See Table 4-1 for a detailed description of each site<sup>1</sup>.</p> <p>Portions of this NPL site are known to be contaminated with chlorinated VOCs including TCE, PCE, MTBE, perchlorate, nitrate, hexavalent chromium, manganese, and thallium.</p> <p>In addition to the NPL site described above, six sites that have impacted groundwater were identified by EDR within Zone 1. These sites are considered open cases by DTSC or California RWQCB.</p> <p>Six sites that have impacted soil and are considered open cases by the lead regulatory agencies were identified by EDR within Zone 1.</p> <p>A review of oil and gas maps identified two oil exploration wells that have been plugged and abandoned within Zone 1.</p>
2	<p>Eight sites with localized groundwater contamination or soil contamination are located within Zone 2 as summarized below. See Table 4-2 for a detailed description of each site.</p> <p>Six sites that have impacted groundwater were identified by EDR within Zone 2. These sites are considered open cases by the RWQCB.</p> <p>Two sites that have impacted the soil and are considered open by the lead regulatory agencies were identified by EDR within Zone 2.</p> <p>A review of oil and gas maps identified one oil exploration well that has been plugged and abandoned within Zone 2.</p>
3	<p>Twelve sites with localized groundwater contamination, soil contamination, or where the media impacted is under investigation, are located within Zone 3 as summarized below. See Table 4-3 for a detailed description of each site.</p> <p>Four sites that have impacted groundwater were identified by EDR within Zone 3. These sites are considered open cases by the DTSC or RWQCB.</p> <p>Seven sites that have impacted the soil considered open by the lead regulatory agencies were identified by EDR within Zone 3.</p> <p>One site where the media impacted is under investigation and that is considered open by the lead regulatory agencies was identified by EDR.</p> <p>A review of oil and gas maps identified one oil exploration well that has been plugged and abandoned within Zone 3.</p>

TABLE 5-1  
Summary of Findings Associated with the Subject Property

Zone	Description of Findings
4	<p>Fourteen sites (including the San Gabriel Valley OU Area 3 [Alhambra] NPL Site) with localized groundwater contamination or soil contamination are located within Zone 4 as summarized below. See Table 4-4 for a detailed description of each site.</p> <p>The San Gabriel Valley NPL Site OU Area 3 (Alhambra) is located within portions of Zone 4. This NPL site is known to be contaminated with chlorinated VOCs including TCE and PCE.</p> <p>In addition to the NPL site described above, two sites that have impacted groundwater were identified by EDR within Zone 4. These sites are considered open cases by the RWQCB.</p> <p>Eleven sites that have impacted soil and are considered open by the lead regulatory agencies were identified by EDR within Zone 4.</p> <p>A review of Oil and Gas maps identified no oil exploration wells within Zone 4.</p>
5	<p>Thirty-nine sites with localized groundwater contamination, soil contamination, or where the media impacted is under investigation, are located within Zone 5 as summarized below. See Table 4-5 for a detailed description of each site.</p> <p>The San Gabriel Valley NPL Sites OU Area 1 (El Monte) and OU Area 3 (Alhambra) are located within portions of Zone 5. These two NPL sites are known to be contaminated with chlorinated VOCs including TCE and PCE.</p> <p>In addition to the two NPL site described above, seven sites that have impacted groundwater were identified by EDR within Zone 5. These sites are considered open cases by the DTSC or RWQCB.</p> <p>Twenty-seven sites that have impacted soil were identified by EDR within Zone 5. These sites are considered open by the lead regulatory agencies</p> <p>Three sites where the media impacted are under investigation were identified by EDR. These sites are considered open by the lead regulatory agencies.</p> <p>A review of oil and gas maps identified four oil exploration wells that have been plugged and abandoned within Zone 5.</p>

Note:

1. The total number of sites within Zone 1 includes some sites that have both soil and groundwater contamination. Sites with both soil and groundwater contamination are counted once when determining the total number of sites located within this zone.

The scope of this Environmental Site Assessment is limited to review of public records and does not include verification sampling. Based on the above findings, 3 regional groundwater contamination sites (NPL sites), 26 groundwater sites, 53 sites with soil contamination, 4 sites where the media impacted are under investigation, and 8 plugged and abandoned oil exploration wells were identified in Zones 1, 2, 3, 4, and 5.

It is recommended that drill cuttings, excavated soils, and/or water generated during tunneling in the vicinity of these areas where soil and/or groundwater concerns are present should be sampled and profiled in accordance with regulatory requirements prior to disposal.

## 6. Qualifications of Environmental Professionals

---

Mr. Partha Bora is a project manager in CH2M HILL's Southern California office with over 16 years of engineering and consulting experience, working for clients ranging from the federal government to private sector industries. Projects include environmental investigation (Phase I and Phase II environmental site assessments) and remediation, environmental footprint audits, developing applications of information management systems, and civil infrastructure projects.

Mr. Dave Golles is a project environmental consultant with over 20 years of experience in managing and performing Phase I and Phase II environmental site assessments and initial site assessments. He has completed numerous site assessments for municipal, government, and private industry clients. He also performs environmental evaluations and prepares environmental compliance documents (Environmental Impact Statements, Environmental Assessments, and Environmental Impact Reports) under the National Environmental Policy Act and California Environmental Quality Act. He is a California Registered Environmental Assessor (REA I - 08243).

### TRIBAL RECORDS

INDIAN RESERV..... Indian Reservations  
INDIAN ODI..... Report on the Status of Open Dumps on Indian Lands  
INDIAN LUST..... Leaking Underground Storage Tanks on Indian Land  
INDIAN UST..... Underground Storage Tanks on Indian Land  
INDIAN VCP..... Voluntary Cleanup Priority Listing

## SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified.

## EXECUTIVE SUMMARY

The Map ID column refers to the Map ID-Focus Map(s) of the listed site.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

### **FEDERAL RECORDS**

NPL: Also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.

A review of the NPL list, as provided by EDR, and dated 08/13/2008 has revealed that there are 2 NPL sites within the searched area.

<u>Site</u>	<u>Address</u>	<u>Map ID</u>
<b><i>SAN FERNANDO VALLEY (AREA 4)</i></b>	<b><i>POLLOCK WELLFIELD</i></b>	<b><i>0-5,11,12,13,19,20</i></b>
<b><i>SAN GABRIEL VALLEY (AREA 3)</i></b>	<b><i>MAIN ST &amp; GAFIELD AVE</i></b>	<b><i>0-16,17,23,24</i></b>

CERCLIS: The Comprehensive Environmental Response, Compensation and Liability Information System contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the CERCLIS list, as provided by EDR, and dated 07/09/2008 has revealed that there are 9 CERCLIS sites within the searched area.

CERC-NFRAP: Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

A review of the CERC-NFRAP list, as provided by EDR, and dated 12/03/2007 has revealed that there are

## EXECUTIVE SUMMARY

7 CERC-NFRAP sites within the searched area.

**RCRA-TSDF:** RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRA-TSDF list, as provided by EDR, and dated 09/10/2008 has revealed that there are 2 RCRA-TSDF sites within the searched area.

<b><i>PLASTIC MATERIALS INC</i></b>	<b><i>3033 W MISSION RD</i></b>	<b><i>562-22,23</i></b>

**RCRA-LQG:** RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 09/10/2008 has revealed that there are 12 RCRA-LQG sites within the searched area.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 09/10/2008 has revealed that there are 195 RCRA-SQG sites within the searched area.

## EXECUTIVE SUMMARY

RCRA-NonGen: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA-NonGen list, as provided by EDR, and dated 09/10/2008 has revealed that there are 15 RCRA-NonGen sites within the searched area.

Not reported	4921 BARSTOW STREET	531-22

US CDL: A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

A review of the US CDL list, as provided by EDR, and dated 09/01/2007 has revealed that there is 1 US CDL site within the searched area.

## EXECUTIVE SUMMARY

HIST FTTS: A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

A review of the HIST FTTS list, as provided by EDR, and dated 10/19/2006 has revealed that there are 9 HIST FTTS sites within the searched area.

SSTS: Section 7 of the Federal Insecticide, Fungicide and Rodenticide Act, as amended (92 Stat. 829) requires all registered pesticide-producing establishments to submit a report to the Environmental Protection Agency by March 1st each year. Each establishment must report the types and amounts of pesticides, active ingredients and devices being produced, and those having been produced and sold or distributed in the past year.

A review of the SSTS list, as provided by EDR, and dated 12/31/2006 has revealed that there are 4 SSTS sites within the searched area.

## EXECUTIVE SUMMARY

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the UST list, as provided by EDR, and dated 07/10/2008 has revealed that there are 61 UST sites within the searched area.

AST: The Aboveground Storage Tank database contains registered ASTs. The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the AST list, as provided by EDR, and dated 11/01/2007 has revealed that there is 1 AST site within the searched area.

<u>Site</u>	<u>Address</u>	<u>Map ID</u>
CITY OF PASADENA WATER & POWER	45 E. GLENARM ST.	79-9

SWEEPS UST: Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

A review of the SWEEPS UST list, as provided by EDR, and dated 06/01/1994 has revealed that there are 253 SWEEPS UST sites within the searched area.

CDL: A listing of drug lab locations. Listing of a location in this database does not indicate that any illegal drug lab materials were or were not present there, and does not constitute a determination that the location either requires or does not require additional cleanup work.

A review of the CDL list, as provided by EDR, and dated 09/30/2008 has revealed that there are 11 CDL sites within the searched area.

## EXECUTIVE SUMMARY

**RESPONSE:** Identifies confirmed release sites where DTSC is involved in remediation, either in a lead or oversight capacity. These confirmed release sites are generally high-priority and high potential risk.

A review of the RESPONSE list, as provided by EDR, and dated 08/25/2008 has revealed that there are 6 RESPONSE sites within the searched area.

<u>Site</u>	<u>Address</u>	<u>Map ID</u>
<b>HUNTINGTON MEDICAL PLAZA</b>	<b>N.W. CORNER OF FAIR OAK</b>	<b>53-9</b>
<b>DIGITRAN CO</b>	<b>855 S ARROYO PKWY</b>	<b>60-9</b>

<b>SO CAL GAS/ALHAMBRA MGP</b>	<b>FRONT ST. / EDITH</b>	<b>519-23</b>

**HAZNET:** The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000-1,000,000 annually, representing approximately 350,000-500,000 shipments. Data from non-California manifests & continuation sheets are not included at the present time. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, & disposal method. The source is the Department of Toxic Substance Control is the agency

A review of the HAZNET list, as provided by EDR, and dated 12/31/2006 has revealed that there are 554 HAZNET sites within the searched area.

CALIFORNIA SUPERBIKE SCHOOL, I	940 NORTH SAN FERNANDO	422-20
SAMANO TIRES	3316 EDLOFT AVENUE	522-21

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 08/25/2008 has revealed that there are 32 ENVIROSTOR sites within the searched area.

# EXECUTIVE SUMMARY

## **EDR PROPRIETARY RECORDS**

Manufactured Gas Plants: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the Manufactured Gas Plants list, as provided by EDR, has revealed that there is 1 Manufactured Gas Plants site within the searched area.

A total of twelve soil gas samples were collected at approximately 15-feet belowDLIST - SITE 3 (GREASE RACK): The purpose of the decision document is to present the selected action for the Site 3 - grease rack in accordance with the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). It has been determined that the selected remedy of No Further Action (NFA) is protective of human health and the environment. The decision document describes the selected action based on the results of the Preliminary Assessment (PA) and Site investigation (SI) reground surface (bgs) from 12 borings. Data from the soil gas samples were used to select three soil boring locations for collection of subsurface soil samples. The subsurface soil samples were collected at depths of 1,5,10 and 20 feet bgs for a total of twelve samples. Based on the findings of the SI, DTSC concurred with the report's No Further Action recommendation in a letter dated February 8, 2001.ports conducted under the Installation Restoration Program (IRP). DTSC concurred with the decision document's NFA recommendation in a letter dated April 2, 2001. DTSC's agreement to remove this site from the IRP list does not represent certification or validation that the entire facility does not have any hazardous substance releases. Should DTSC become aware of potential hazardous substance releases, it will initiate appropriate action to correct the problem.</p>	ENVIROSTOR	S103393786 N/A

Hazardous Waste Summary:

Waste code: D001

Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002

Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: F003

Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Violation Status: No violations found

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Other Pertinent Environmental Activity Identified at Site

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans

to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CERCLIS (Comprehensive Environmental Response, Compensation, and Liability Information System) is the Superfund database that is used to support management in all phases of the Superfund program. The system contains information on all aspects of hazardous waste sites, including an inventory of sites, planned and actual site activities, and financial information.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and its Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CAS #: 79-01-6  
Pathway: GROUND WATER PATHWAY  
Scoring: 2

Summary Details:

Conditions at proposal October 15, 1984): San Fernando Valley Area 4) is an area of contaminated ground water in the Pollock Well Field area in the City of Los Angeles, Los Angeles County, California. The area is part of the San Fernando Valley Basin, a natural underground reservoir that represents an important source of drinking water for at least 3 million people in the Los Angeles metropolitan area. The contaminated ground water, which underlies an area of approximately 5,860 acres, contains perchloroethylene (PCE), according to tests conducted by the California Department of Health Services, as well as numerous local government agencies. The State's recommended drinking water guideline for PCE (4 parts per billion) is exceeded in a number of public wells in this area. To alleviate this contamination, wells are either taken out of service or blended with water from clean sources to ensure that the public receives water with concentrations below the State's guideline. Status June 10, 1986): EPA and the Los Angeles Department of Water and Power are entering into a cooperative agreement for a remedial investigation of the San Fernando Valley Basin and a feasibility study targeted at Area 1, the most contaminated area. The RI is scheduled to begin in early 1986.

 Background Info:

The San Fernando Valley Ground Water Basin (SFVGWB) is located within the Upper Los Angeles River Area and consists of the eastern portion of the San Fernando Valley and the entire Verdugo Basin. The SFVGWB encompasses approximately 112,000 acres of alluvial valley fill deposits and provides enough water to serve approximately 600,000 residents. The Basin is bounded on the north and the northwest by the Santa Susana Mountains, on the northeast by the San Gabriel Mountains, on the west by the Simi Hills and on the south by the Santa Monica Mountains.

The San Fernando Valley Study area includes four National Priorities List (NPL) sites. They are:

Area #1 - North Hollywood NPL Site covers 9336 acres in the eastern part of the San Fernando Valley. The site has been divide into the North Hollywood Operable Unit (OU) and the Burbank OU

Area #2 - Crystal Springs NPL Site covers 3975 acres southeast of the North Hollywood NPL Site and is located in the cities of Glendale and Los Angeles.

Area #3 - Verdugo NPL Site covers 2673 acres in the eastern part of the San Fernando Valley and is located in and adjacent to La Crescenta in the Verdugo Mountains.

Area #4 - the Pollock NPL Site covers 1635 acres in the southeastern part of the San Fernando Valley and is located in and adjacent to the cities of Los Angeles and Glendale.

Groundwater contamination in the SFVGWB is linked to prewar, postwar, and current industrialization in the San Fernando Valley.

The contaminants of concern are volatile organic compounds (VOCs), trichloroethylene (TCE) and tetrachloroethylene (PCE) which have been and/or are being used in many San Fernando Valley industries, such as aeronautical, automotive, dry cleaning, and metal plating. These solvents have found their way to the groundwater basin as a result of both past and improper use, storage and disposal practices. The SFVGWB Superfund sites, added to the NPL in 1986, are areas where groundwater from wells have been found to contain VOCs above the state and federal drinking water standards. Groundwater contamination at numerous wells have been so severe with TCE and PCE that these wells have essentialput out of commission.

Exposure of receptors to contaminants can possibly occur through ingestion of contaminated drinking water, inhalation of VOCs released from the contaminated water as in taking showers, and dermal exposure as in washing or bathing. However, with the

strict regulatory control over water quality by the State's Department of Health, Office of Drinking Water (ODW), the RWQCB, and other agencies, residents are assured that the water they consume is safe and that no one is drinking water which contains concentrations of contaminants above regulatory standards. Federal, state, and local agencies have been conducting investigation and cleanup of contaminated groundwater in the SFVGB since contamination was discovered in 1979. These activities involve measuring the extent of contamination, developing & implementing cleanup remedies, and identifying responsible parties.

EPA provided oversight of the basinwide Remedial investigation (RI) of groundwater contamination conducted by the Los Angeles Department of Water and Power (LADWP). The RI objectives were to collect lithological and water quality data and information regarding basin operations for the eastern SF and Verdugo basins; develop a regional characterization of geology, hydrology, and the nature and extent of groundwater contamination within the eastern and Verdugo basins; study fate and transport of compounds in the environment; identify ARARs; and evaluate the potential risk to human health and the environment. The Remedial Investigations of the SFVGB were divided into two phases:

Phase I activities have included vertical profile borings and installation of monitoring wells to obtain preliminary contaminant information. Monitoring wells have been installed as follows: 34 in North Hollywood (Area #1); 29 in Crystal Springs (Area #2); 7 in Verdugo (Area #3); and 17 in Pollock (Area #4). Information obtained from Phase I investigation activities identified the need for several operable units. Operable Unit is a federal term which is similar to the State's definition of a removal action.

Phase II activities consist of a basinwide remedial investigation conducted by LADWP.

Remedial Actions (RAs):

North Hollywood (Area #1) -- Two RAs were identified for Area #1, the North Hollywood OU and the Burbank OU.

A Record of Decision (ROD) for the North Hollywood RA was signed in September 1987, selecting groundwater extraction and treatment (air stripping) of 2,000 gallons per minute (gpm) of contaminated water as an interim remedy. This RA was constructed with funding from EPA and the State and has been treating contaminated groundwater since March 1989. This facility is located at 11845 Vose Street in the N. Hollywood section of Los Angeles.

A ROD for the Burbank OU was signed in June 1989, again selecting groundwater extraction and treatment of about 12,000 gpm of contaminated water. Negotiations are continuing with PRPs for the design and construction of this RA.

Crystal Springs (Area #2) -- LADWP has completed a focused RI/FS for this proposed RA. The Glendale OU was separated into a North OU and a South OU based on the amount of contamination and the facilities contributing to the GW contamination. A ROD for each OU was signed on June 18, 1993 designating groundwater extraction and treatment as the interim remedy. The PRPs formed a group and combined the RA efforts for each OU into one document. The selected alternative is GW

	<p>extractio and treatment. Verdugo and Pollock (Areas #3 and #4) -- Currently no RAs have been identified for Area #3 or for Area #4. In October 2003, US EPA proposed No Remedial Action for Verdugo Basin (Area #3). EPA and the RWQCB are identifying potential sources of contamination and pursuing PRPs that may be responsible for contaminating groundwater. As these PRPs are identified, individual site investigations and mitigation activities will be pursued. Enforceable agreements and orders have been implemented at numerous specific potential source sites within the Basin by RWQCB and the Department.</p> <p>Comments Date: 01011984 Comments: This is the date the site was first listed AWP pursuant to Comments Date: 01011984 Comments: Section 25356. California - Hazardous Waste Tracking System - Datamart

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:

Waste code:                                D001  
Waste name:                                IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code:                                D018  
Waste name:                                BENZENE

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

California - Hazardous Waste Tracking System - Datamart

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code:                    D018  
Waste name:                    BENZENE

California - Hazardous Waste Tracking System - Datamart

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Facility name: SHELL OIL CO  
Classification: Small Quantity Generator

Hazardous Waste Summary:

Waste code: D001  
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D018  
Waste name: BENZENE

Used oil transporter: No  
Off-site waste receiver: Commercial status unknown

Hazardous Waste Summary:

Waste code: D000  
Waste name: Not Defined

Waste code: D001  
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D018  
Waste name: BENZENE

Waste code: D039  
Waste name: TETRACHLOROETHYLENE

Waste code: D040  
Waste name: TRICHLOROETHYLENE

Violation Status: No violations found

**Hazardous Waste Summary:**

Waste code: D001  
 Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002  
 Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Violation Status: No violations found

Description:	Neighbors have placed 2 5-gallon containers in their driveway. There is an oily residue where the containers are and there is an odor emitting from the containers. It appears that the neighbors have tried to wash it down, unknown if the release went into the storm drain. The caller will also call the local fire department to request response.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

California - Hazardous Waste Tracking System - Datamart

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:

Waste code:      D001  
Waste name:      IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code:      D002  
Waste name:      A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code:      D003  
Waste name:      A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Waste code:      D008  
Waste name:      LEAD

Waste code:      D009  
Waste name:      MERCURY

Waste code:      D011  
Waste name:      SILVER

Waste code:      D022

Other Pertinent Environmental Activity Identified at Site

California - Hazardous Waste Tracking System - Datamart

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Date form received by agency: 09/01/1996  
 Facility name: SHELL OIL CO  
 Classification: Small Quantity Generator

Hazardous Waste Summary:

Waste code: D001  
 Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D018  
 Waste name: BENZENE

Violation Status: No violations found

	AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.		
	The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

California - Hazardous Waste Tracking System - Datamart

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.  
 Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

California - Hazardous Waste Tracking System - Datamart

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 Off-site waste receiver: Commercial status unknown

Hazardous Waste Summary:

Waste code: D001  
 Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002  
 Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Violation Status: No violations found

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Other Pertinent Environmental Activity Identified at Site

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Summary Details:

Conditions at proposal October 15, 1984): San Fernando Valley Area 4) is an area of contaminated ground water in the Pollock Well Field area in the City of Los Angeles, Los Angeles County, California. The area is part of the San Fernando Valley Basin, a natural underground reservoir that represents an important source of drinking water for at least 3 million people in the Los Angeles metropolitan area. The contaminated ground water, which underlies an area of approximately 5,860 acres, contains perchloroethylene (PCE), according to tests conducted by the California Department of Health Services, as well as numerous local government agencies. The State's recommended drinking water guideline for PCE (4 parts per billion) is exceeded in a number of public wells in this area. To alleviate this contamination, wells are either taken out of service or blended with water from clean sources to ensure that the public receives water with concentrations below the State's guideline.

Status June 10, 1986): EPA and the Los Angeles Department of Water and Power are entering into a cooperative agreement for a remedial investigation of the San Fernando Valley Basin and a feasibility study targeted at Area 1, the most contaminated area. The RI is scheduled to begin in early 1986.

Background Info: The San Fernando Valley Ground Water Basin (SFVGWB) is located within the Upper Los Angeles River Area and consists of the eastern portion of the San Fernando Valley and the entire Verdugo Basin. The SFVGWB encompasses approximately 112,000 acres of alluvial valley fill deposits and provides enough water to serve approximately 600,000 residents. The Basin is bounded on the north and the northwest by the Santa Susana Mountains, on the northeast by the San Gabriel Mountains, on the west by the Simi Hills and on the south by the Santa Monica Mountains.

The San Fernando Valley Study area includes four National Priorities List (NPL) sites. They are:

Area #1 - North Hollywood NPL Site covers 9336 acres in the eastern part of the San Fernando Valley. The site has been divide into the North Hollywood Operable Unit (OU) and the Burbank OU

Area #2 - Crystal Springs NPL Site covers 3975 acres southeast of the North Hollywood NPL Site and is located in the cities of Glendale and Los Angeles.

Area #3 - Verdugo NPL Site covers 2673 acres in the eastern part of the San Fernando Valley and is located in and adjacent to La Crescenta in the Verdugo Mountains.

Area #4 - the Pollock NPL Site covers 1635 acres in the southeastern part of the San Fernando Valley and is located in and adjacent to the cities of Los Angeles and Glendale.

Groundwater contamination in the SFVGWB is linked to prewar, postwar, and current industrialization in the San Fernando Valley.

The contaminants of concern are volatile organic compounds (VOCs), trichloroethylene (TCE) and tetrachloroethylene (PCE) which have been and/or are being used in many San Fernando Valley industries, such as aeronautical, automotive, dry cleaning, and metal plating. These solvents have found their way to the groundwater basin as a result of both past and improper use, storage and disposal practices. The SFVGWB Superfund sites, added to the NPL in 1986, are areas where groundwater from wells have been found to contain VOCs above the state and federal drinking water standards. Groundwater contamination at numerous wells have been so severe with TCE and PCE that these wells have essentialput out of commission.

Exposure of receptors to contaminants can possibly occur through ingestion of contaminated drinking water, inhalation of VOCs released from the contaminated water as in taking showers, and dermal exposure as in washing or bathing. However, with the

MAP FINDINGS  
FOCUS MAP 11

Map ID Site Database(s) EPA ID Number

**SAN FERNANDO VALLEY (AREA 4) (Continued)**

**1000710135**

strict regulatory control over water quality by the State's Department of Health, Office of Drinking Water (ODW), the RWQCB, and other agencies, residents are assured that the water they consume is safe and that no one is drinking water which contains concentrations of contaminants above regulatory standards. Federal, state, and local agencies have been conducting investigation and cleanup of contaminated groundwater in the SFVGB since contamination was discovered in 1979. These activities involve measuring the extent of contamination, developing & implementing cleanup remedies, and identifying responsible parties.

EPA provided oversight of the basinwide Remedial investigation (RI) of groundwater contamination conducted by the Los Angeles Department of Water and Power (LADWP). The RI objectives were to collect lithological and water quality data and information regarding basin operations for the eastern SF and Verdugo basins; develop a regional characterization of geology, hydrology, and the nature and extent of groundwater contamination within the eastern and Verdugo basins; study fate and transport of compounds in the environment; identify ARARs; and evaluate the potential risk to human health and the environment. The Remedial Investigations of the SFVGB were divided into two phases:

Phase I activities have included vertical profile borings and installation of monitoring wells to obtain preliminary contaminant information. Monitoring wells have been installed as follows: 34 in North Hollywood (Area #1); 29 in Crystal Springs (Area #2); 7 in Verdugo (Area #3); and 17 in Pollock (Area #4). Information obtained from Phase I investigation activities identified the need for several operable units. Operable Unit is a federal term which is similar to the State's definition of a removal action.

Phase II activities consist of a basinwide remedial investigation conducted by LADWP.

Remedial Actions (RAs):

North Hollywood (Area #1) -- Two RAs were identified for Area #1, the North Hollywood OU and the Burbank OU.

A Record of Decision (ROD) for the North Hollywood RA was signed in September 1987, selecting groundwater extraction and treatment (air stripping) of 2,000 gallons per minute (gpm) of contaminated water as an interim remedy. This RA was constructed with funding from EPA and the State and has been treating contaminated groundwater since March 1989. This facility is located at 11845 Vose Street in the N. Hollywood section of Los Angeles.

A ROD for the Burbank OU was signed in June 1989, again selecting groundwater extraction and treatment of about 12,000 gpm of contaminated water. Negotiations are continuing with PRPs for the design and construction of this RA.

Crystal Springs (Area #2) -- LADWP has completed a focused RI/FS for this proposed RA. The Glendale OU was separated into a North OU and a South OU based on the amount of contamination and the facilities contributing to the GW contamination. A ROD for each OU was signed on June 18, 1993 designating groundwater extraction and treatment as the interim remedy. The PRPs formed a group and combined the RA efforts for each OU into one document. The selected alternative is GW

Summary Details:

Conditions at proposal October 15, 1984): San Fernando Valley Area 4) is an area of contaminated ground water in the Pollock Well Field area in the City of Los Angeles, Los Angeles County, California. The area is part of the San Fernando Valley Basin, a natural underground reservoir that represents an important source of drinking water for at least 3 million people in the Los Angeles metropolitan area. The contaminated ground water, which underlies an area of approximately 5,860 acres, contains perchloroethylene (PCE), according to tests conducted by the California Department of Health Services, as well as numerous local government agencies. The State's recommended drinking water guideline for PCE (4 parts per billion) is exceeded in a number of public wells in this area. To alleviate this contamination, wells are either taken out of service or blended with water from clean sources to ensure that the public receives water with concentrations below the State's guideline.

Status June 10, 1986): EPA and the Los Angeles Department of Water and Power are entering into a cooperative agreement for a remedial investigation of the San Fernando Valley Basin and a feasibility study targeted at Area 1, the most contaminated area. The RI is scheduled to begin in early 1986.

Background Info: The San Fernando Valley Ground Water Basin (SFVGWB) is located within the Upper Los Angeles River Area and consists of the eastern portion of the San Fernando Valley and the entire Verdugo Basin. The SFVGWB encompasses approximately 112,000 acres of alluvial valley fill deposits and provides enough water to serve approximately 600,000 residents. The Basin is bounded on the north and the northwest by the Santa Susana Mountains, on the northeast by the San Gabriel Mountains, on the west by the Simi Hills and on the south by the Santa Monica Mountains.

The San Fernando Valley Study area includes four National Priorities List (NPL) sites. They are:

Area #1 - North Hollywood NPL Site covers 9336 acres in the eastern part of the San Fernando Valley. The site has been divide into the North Hollywood Operable Unit (OU) and the Burbank OU

Area #2 - Crystal Springs NPL Site covers 3975 acres southeast of the North Hollywood NPL Site and is located in the cities of Glendale and Los Angeles.

Area #3 - Verdugo NPL Site covers 2673 acres in the eastern part of the San Fernando Valley and is located in and adjacent to La Crescenta in the Verdugo Mountains.

Area #4 - the Pollock NPL Site covers 1635 acres in the southeastern part of the San Fernando Valley and is located in and adjacent to the cities of Los Angeles and Glendale.

Groundwater contamination in the SFVGWB is linked to prewar, postwar, and current industrialization in the San Fernando Valley.

The contaminants of concern are volatile organic compounds (VOCs), trichloroethylene (TCE) and tetrachloroethylene (PCE) which have been and/or are being used in many San Fernando Valley industries, such as aeronautical, automotive, dry cleaning, and metal plating. These solvents have found their way to the groundwater basin as a result of both past and improper use, storage and disposal practices. The SFVGWB Superfund sites, added to the NPL in 1986, are areas where groundwater from wells have been found to contain VOCs above the state and federal drinking water standards. Groundwater contamination at numerous wells have been so severe with TCE and PCE that these wells have essentialput out of commission.

Exposure of receptors to contaminants can possibly occur through ingestion of contaminated drinking water, inhalation of VOCs released from the contaminated water as in taking showers, and dermal exposure as in washing or bathing. However, with the

MAP FINDINGS  
FOCUS MAP 12

Map ID Site Database(s) EPA ID Number

**SAN FERNANDO VALLEY (AREA 4) (Continued)**

**1000710135**

strict regulatory control over water quality by the State's Department of Health, Office of Drinking Water (ODW), the RWQCB, and other agencies, residents are assured that the water they consume is safe and that no one is drinking water which contains concentrations of contaminants above regulatory standards. Federal, state, and local agencies have been conducting investigation and cleanup of contaminated groundwater in the SFVGB since contamination was discovered in 1979. These activities involve measuring the extent of contamination, developing & implementing cleanup remedies, and identifying responsible parties.

EPA provided oversight of the basinwide Remedial investigation (RI) of groundwater contamination conducted by the Los Angeles Department of Water and Power (LADWP). The RI objectives were to collect lithological and water quality data and information regarding basin operations for the eastern SF and Verdugo basins; develop a regional characterization of geology, hydrology, and the nature and extent of groundwater contamination within the eastern and Verdugo basins; study fate and transport of compounds in the environment; identify ARARs; and evaluate the potential risk to human health and the environment. The Remedial Investigations of the SFVGB were divided into two phases:

Phase I activities have included vertical profile borings and installation of monitoring wells to obtain preliminary contaminant information. Monitoring wells have been installed as follows: 34 in North Hollywood (Area #1); 29 in Crystal Springs (Area #2); 7 in Verdugo (Area #3); and 17 in Pollock (Area #4). Information obtained from Phase I investigation activities identified the need for several operable units. Operable Unit is a federal term which is similar to the State's definition of a removal action.

Phase II activities consist of a basinwide remedial investigation conducted by LADWP.

Remedial Actions (RAs):

North Hollywood (Area #1) -- Two RAs were identified for Area #1, the North Hollywood OU and the Burbank OU.

A Record of Decision (ROD) for the North Hollywood RA was signed in September 1987, selecting groundwater extraction and treatment (air stripping) of 2,000 gallons per minute (gpm) of contaminated water as an interim remedy. This RA was constructed with funding from EPA and the State and has been treating contaminated groundwater since March 1989. This facility is located at 11845 Vose Street in the N. Hollywood section of Los Angeles.

A ROD for the Burbank OU was signed in June 1989, again selecting groundwater extraction and treatment of about 12,000 gpm of contaminated water. Negotiations are continuing with PRPs for the design and construction of this RA.

Crystal Springs (Area #2) -- LADWP has completed a focused RI/FS for this proposed RA. The Glendale OU was separated into a North OU and a South OU based on the amount of contamination and the facilities contributing to the GW contamination. A ROD for each OU was signed on June 18, 1993 designating groundwater extraction and treatment as the interim remedy. The PRPs formed a group and combined the RA efforts for each OU into one document. The selected alternative is GW

Land type: Facility is not located on Indian land. Additional information is not known.  
Classification: Small Small Quantity Generator  
Description: Handler: generates more than 100 and less than 1000 kg of hazardous waste during any calendar month and accumulates less than 6000 kg of hazardous waste at any time; or generates 100 kg or less of hazardous waste during any calendar month, and accumulates more than 1000 kg of hazardous waste at any time

Handler Activities Summary:

U.S. importer of hazardous waste: Unknown  
Mixed waste (haz. and radioactive): Unknown  
Recycler of hazardous waste: Unknown  
Transporter of hazardous waste: Unknown  
Treater, storer or disposer of HW: No  
Underground injection activity: Unknown  
On-site burner exemption: Unknown  
Furnace exemption: Unknown  
Used oil fuel burner: Unknown  
Used oil processor: Unknown  
User oil refiner: Unknown  
Used oil fuel marketer to burner: Unknown  
Used oil Specification marketer: Unknown  
Used oil transfer facility: Unknown  
Used oil transporter: Unknown  
Off-site waste receiver: Commercial status unknown

Corrective Action Summary:

Event date: 03/15/1991  
 Event: CA029EP

Event date: 03/15/1991  
 Event: CA049PA

Event date: 03/15/1991  
 Event: CA074ME

Event date: 03/15/1991  
 Event: CA Prioritization, Facility or area was assigned a medium corrective action priority.

Event date: 09/19/1994  
 Event: Stabilization Measures Evaluation, This facility is not amenable to stabilization activity because of a lack of technical data. An evaluation has been completed, but further data is necessary to determine stabilization measures, feasibility or appropriateness. This status should be changed when data becomes available.

Event date: 09/19/1994  
 Event: CA Prioritization, Facility or area was assigned a medium corrective action priority.

Facility Has Received Notices of Violations:

**FINDS:**

Other Pertinent Environmental Activity Identified at Site

TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CERCLIS (Comprehensive Environmental Response, Compensation, and Liability Information System) is the Superfund database that is used to support management in all phases of the Superfund program. The system contains information on all aspects of hazardous waste sites, including an inventory of sites, planned and actual site activities, and financial information.

248	<b>SOUTHERN PACIFIC TRANSPORTATION COMPANY - TAYLOR Y 2800 KERR STREET LOS ANGELES, CA 90039</b>	<b>CA BOND EXP. PLAN RESPONSE ENVIROSTOR HIST Cal-Sites</b>	<b>S100833299 N/A</b>
	<p>CA BOND EXP. PLAN:</p> <p>Responsible Party: RESPONSIBLE PARTY-LEAD SITE CLEANUP WORKPLAN</p> <p>Project Revenue Source Company: Not reported</p> <p>Project Revenue Source Addr: Not reported</p> <p>Project Revenue Source City,St,Zip: Not reported</p> <p>Project Revenue Source Desc: The responsible party is Southern Pacific Transportation Company. DHS will be issuing a remedial action order or entering into an enforceable agreement with the responsible party. DHS has budgeted \$75,000 for oversight/monitoring of the IRM cleanup efforts. DHS will recover 100 percent of direct costs plus staff costs and overhead related to the project. The responsible party will pay all costs associated with the remedial investigation and site remediation activities.</p> <p>Site Description: Southern Pacific Transportation Company, Taylor Yard, is a diesel engine repair yard.</p> <p>Hazardous Waste Desc: The major contaminants are oil and grease, and small amounts of heavy metals. Solvents are suspected contaminants. The site area requiring immediate remediation (IRMs) contains railroad ballast which was excavated when new ties were placed. The contaminated ballast is piled on concrete pads onsite awaiting treatment (a method of soil-washing). A preliminary assessment/site investigation must be conducted to characterize the nature and general extent of the contamination of the entire site.</p> <p>Threat To Public Health &amp; Env: The site is located near the Los Angeles River which is not used for drinking water supplies. Contaminant migration is possible via airborne emissions and ground water. Ground water contamination is suspected but has not yet been verified.</p> <p>Site Activity Status: DHS is acting in an advisory role for the interim remedial measures. The responsible party requested a variance for the soil-washing treatment process (the interim remedial measure). DHS granted the variance and Southern Pacific Transportation Company has commenced the soil-washing treatment.</p> <p>AWP:</p> <p>AWP Facility ID: 19470006</p> <p>Region Code: 3</p> <p>Region: GLENDALE</p> <p>SMBR Branch Code: SA</p> <p>SMBR Branch Unit: SO CAL - GLENDALE</p> <p>Site Name.: Not reported</p> <p>Current Status Date: 04231996</p> <p>Current Status: ANNUAL WORKPLAN - ACTIVE SITE</p> <p>Lead Agency Code: DTSC</p> <p>Lead Agency: DEPT OF TOXIC SUBSTANCES CONTROL</p> <p>Facility Type: responsible party</p> <p>Awp Site Type: RESPONSIBLE PARTY</p> <p>NPL: Not Listed</p> <p>Tier Of AWP Site: Not reported</p> <p>Source Of Funding: F</p> <p>Responsible Staff Member: MISKAROU</p> <p>Supervisor Responsible: Not reported</p> <p>SIC Code: 47</p> <p>Facility SIC: TRANSPORTATION SERVICES</p> <p>RWQCB Code: LA</p> <p>RWQCB Associated With Site: LOS ANGELES</p> <p>Site Access Controlled: Not reported</p> <p>Site Listed HWS List: Not reported</p>

APN Description: Not reported  
 Comments: DTSC completed review of the Remedial Investigation Summary Report and provided comments. DTSC granted conditional approval for groundwater monitoring modifications. DTSC reviewed and approved a Removal Action Workplan for Parcel G1. Parcel G1 encompasses the northern 19 acres of parcel G. This subdivision was performed in order to support the sale of parcel G1 to State Parks. Several phases of investigation have DTSC reviewed and approved the IRM report. Facility identified. Local inspection found leaking rinse tank. Now corrected. A Prospective Purchaser Agreement was signed between DTSC and Media Tech Center, LLC, a Delaware Limited Liability Company, which intends to redevelop approximately 50 acres into media/ technical related use projected to include up to 12 new build in Fact sheet DTSC reviewed the revised health risk assessment report and provided comments Sale Parcel: The OU was listed in Cal Sites as a separate site because it was thought that there was no groundwater impact at the site. We decided in June 1997 that in fact there was sufficient contamination to warrant cleanup work at the OU. Cons Twenty thousand (20,000) cubic yards of lead contaminated soil were treated by chemical fixations to reduce the level of soluble lead. The soil was generated from the excavation of the debris pile. The debris pile was excavated to allow for the co Site Screening Done: Site listed in BEP. RWQCB lead site. Preliminary Assessment Done (RCRA 3012): Cleaning locomotive parts with caustic solutions (CERCLA notification). In operation since 1980. Generated forty tons/year of hazardous wastes and disposed at BKK, West Covina. Facility Drive-By: Abandoned Si Sale Parcel: DTSC reviewed the preliminary results of the sampling performed for evaluation of the Soil Gas Vapor Extraction System (SGVES). DTSC has determined that the SGVES has been effective in remediation of the coarse grain soils along the North Removal Action: Rubbish pile removal. Sale Parcel: Removal Action: Removal/Stockpile of TPH-contaminated soil. Design (NPB): Northeast property boundary design of vapor extraction system for chlorinated solvents. Majority of soil excavated during Sale Parcel: Design (HUMP): Design of lead area. Sale Parcel: Design (STOCK): Design of stockpile removal action. gs and 2,200 jobs. heast Property Boundary. DTSC recommends the continued on-off cyclical operation of the SGVES. nstruction of the access road onto Taylor Yard and Metrolink. The treated soil was used as fill on the Sale Parcel. Between the access road and the soil pile storage area, four (4) acres were released for reuse. removal action came from active yard. equently, we decided in April 1996 to recombine the two sites because the OU required GW work. te Assessment Program staff. been completed at parcel G1. The results of the investigation have identified four separate areas with elevated levels of lead and arsenic. These hot spots will be removed to ensure that post-removal do not exceed industrial based standards.

Basin and partially within Pollock NPL site U.S. EPA. The groundwater underlying the site is contaminated.

Not reported

This site is the active or operational portion of a 243-acre rail yard. Routine maintenance and major diesel locomotive service and repair have been conducted at this site for nearly 100 years. Areas of concern include large holding ponds, several former aboveground and underground tank locations and a rubbish pile. Contaminants are principally oil, grease, and diesel from fueling areas, spills, or as a result of derailments. In addition, solvents that were used as cleaning agents or in metal work are potential contaminants in maintenance areas. Wastewater treatment ponds and rubbish piles are potential sources of groundwater contamination.

Possible exposure pathways include direct contact, groundwater, and possible surface runoff into the Los Angeles River. Possible receptors include workers and visitors to the site and downgradient groundwater users. There are also potential environmental impacts to wetland areas adjacent to the Los Angeles River.

Past activities at the site include a Hydrological Assessment Report (HAR) conducted for the RWQCB, ballast removal, soil analysis of contaminated areas underlying track in the maintenance yard, and treatability studies. An Enforceable Agreement was entered into in April 1990.

WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002

Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D040

Waste name: TRICHLOROETHYLENE

Violation Status: No violations found

**FINDS:**

Other Pertinent Environmental Activity Identified at Site

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Handler Activities Summary:

U.S. importer of hazardous waste: Unknown  
Mixed waste (haz. and radioactive): Unknown  
Recycler of hazardous waste: No  
Transporter of hazardous waste: No  
Treater, storer or disposer of HW: No  
Underground injection activity: No  
On-site burner exemption: Unknown  
Furnace exemption: Unknown  
Used oil fuel burner: No  
Used oil processor: No  
User oil refiner: No  
Used oil fuel marketer to burner: No  
Used oil Specification marketer: No  
Used oil transfer facility: No  
Used oil transporter: No  
Off-site waste receiver: Commercial status unknown

Hazardous Waste Summary:

Waste code: D001  
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Violation Status: No violations found

EPA Region:	09
Land type:	Private
Classification:	TSDF
Description:	Handler is engaged in the treatment, storage or disposal of hazardous waste
TSD commencement date:	Not reported
Classification:	Large Quantity Generator
Description:	Handler: generates 1,000 kg or more of hazardous waste during any calendar month; or generates more than 1 kg of acutely hazardous waste

Handler Activities Summary:

U.S. importer of hazardous waste: No  
Mixed waste (haz. and radioactive): No  
Recycler of hazardous waste: No  
Transporter of hazardous waste: Yes  
Treater, storer or disposer of HW: Yes  
Underground injection activity: No  
On-site burner exemption: No  
Furnace exemption: No  
Used oil fuel burner: No  
Used oil processor: No  
User oil refiner: No  
Used oil fuel marketer to burner: No  
Used oil Specification marketer: No  
Used oil transfer facility: Yes  
Used oil transporter: Yes  
Off-site waste receiver: Commercial status unknown

Universal Waste Summary:

Waste type: Batteries  
Accumulated waste on-site: No  
Generated waste on-site: No

Waste type: Lamps

Hazardous Waste Summary:

Waste code: D001  
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

	POTW: Not reported Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality. Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 Comments: Response to DTSC comments dated 9/15/2006 is adequate and no revision is needed. DTSC determines that the report dated 8/23/2006 is adequate and does not require revision. DTSC determines that the report dated 12/04/06 does not require revision. The report dated 2/22/2007 is adequate and does not require revision. The SVE System Expansion Workplan was submitted to DTSC on 4/24/2007. DTSC determines the Soil Vapor Extraction System Operation and Maintenance Report, first Quarter 2007, dated June 12, 2007 is adequate and does not require revision. A Voluntary Cleanup Agreement was executed between DTSC and Weiland Automotive Industry. DTSC determines that the report dated May 23, 2008 is adequately prepared, and requires no revision. DTSC concurs with the SVE System Modification. The modification of the SVE System include the installation of Three (3) Additional well-pairs at the project site. DTSC determines that the Soil Vapor Extraction System Operation and Maintenance Report, Second Quarter 2007, dated September 17, 2007 is adequate and does not require revision. DTSC determines the Soil Vapor Extraction System Operation and Maintenance Report Third Quarter 2007 dated December 10, 2007 is adequate and requires no revision. A Notice of Exemption (NOE) was completed for this project. DTSC determined that the Soil Vapor Extraction System Operation and Maintenance Report, Fourth Quarter 2007 dated February 19, 2008 is adequate and does not require revision.

Waste code:                    D001  
Waste name:                    IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code:                    D006  
Waste name:                    CADMIUM

Waste code:                    D007  
Waste name:                    CHROMIUM

Waste code:                    D008  
Waste name:                    LEAD

Waste code:                    D039  
Waste name:                    TETRACHLOROETHYLENE

Waste code:                    F001  
Waste name:                    THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLOROETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE, AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

California - Hazardous Waste Tracking System - Datamart

NCES (National Center for Education Statistics) is the primary federal entity for collecting and analyzing data related to education in the United States and other nations and the institute of education sciences.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 Secondary Waste Type: Not reported  
 Design Flow: 0  
 Baseline Flow: 0  
 Reclamation: Not reported  
 POTW: Not reported  
 Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.  
 Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

California - Hazardous Waste Tracking System - Datamart

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

**Hazardous Waste Summary:**

Waste code: 221  
Waste name: 221

Waste code: 352  
Waste name: 352

Waste code: D002  
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: F006  
Waste name: WASTEWATER TREATMENT SLUDGES FROM ELECTROPLATING OPERATIONS EXCEPT FROM THE FOLLOWING PROCESSES: (1) SULFURIC ACID ANODIZING OF ALUMINUM; (2) TIN PLATING ON CARBON STEEL; (3) ZINC PLATING (SEGREGATED BASIS) ON CARBON STEEL; (4) ALUMINUM OR ZINC-ALUMINUM PLATING ON CARBON STEEL; (5) CLEANING/STRIPPING ASSOCIATED WITH TIN, ZINC AND ALUMINUM PLATING ON CARBON STEEL; AND (6) CHEMICAL ETCHING AND MILLING OF ALUMINUM.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

California - Hazardous Waste Tracking System - Datamart

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Other Pertinent Environmental Activity Identified at Site

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Handler Activities Summary:

U.S. importer of hazardous waste: No  
Mixed waste (haz. and radioactive): No  
Recycler of hazardous waste: No  
Transporter of hazardous waste: No  
Treater, storer or disposer of HW: No  
Underground injection activity: No  
On-site burner exemption: No  
Furnace exemption: No  
Used oil fuel burner: No  
Used oil processor: No  
User oil refiner: No  
Used oil fuel marketer to burner: No  
Used oil Specification marketer: No  
Used oil transfer facility: No  
Used oil transporter: No  
Off-site waste receiver: Commercial status unknown

Historical Generators:

Date form received by agency: 12/15/1992  
Facility name: SOL AZTECA  
Site name: GOLDENSTATE TRANS  
Classification: Small Quantity Generator

Hazardous Waste Summary:

Waste code: D001  
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D008  
Waste name: LEAD

Violation Status: No violations found

FINDS:

Other Pertinent Environmental Activity Identified at Site

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.  
 Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.  
 Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

CERCLIS (Comprehensive Environmental Response, Compensation, and Liability Information System) is the Superfund database that is used to support management in all phases of the Superfund program. The system contains information on all aspects of hazardous waste sites, including an inventory of sites, planned and actual site activities, and financial information.

CAS #: 79-01-6  
Pathway: GROUND WATER PATHWAY  
Scoring: 2

Summary Details:

Conditions at proposal October 15, 1984): San Fernando Valley Area 4) is an area of contaminated ground water in the Pollock Well Field area in the City of Los Angeles, Los Angeles County, California. The area is part of the San Fernando Valley Basin, a natural underground reservoir that represents an important source of drinking water for at least 3 million people in the Los Angeles metropolitan area. The contaminated ground water, which underlies an area of approximately 5,860 acres, contains perchloroethylene (PCE), according to tests conducted by the California Department of Health Services, as well as numerous local government agencies. The State's recommended drinking water guideline for PCE (4 parts per billion) is exceeded in a number of public wells in this area. To alleviate this contamination, wells are either taken out of service or blended with water from clean sources to ensure that the public receives water with concentrations below the State's guideline. Status June 10, 1986): EPA and the Los Angeles Department of Water and Power are entering into a cooperative agreement for a remedial investigation of the San Fernando Valley Basin and a feasibility study targeted at Area 1, the most contaminated area. The RI is scheduled to begin in early 1986.
