APTA's Vision Statement

Be the leading force in advancing public transportation.

APTA's Mission Statement

To strengthen and improve public transportation, APTA serves and leads its diverse membership through advocacy, innovation, and information sharing.

2015 PUBLIC TRANSPORTATION FACT BOOK APPENDIX A: HISTORICAL TABLES

American Public Transportation Association
Washington, DC
June 2015

Material from *2015 Public Transportation Fact Book, Appendix A: Historical Tables* may be quoted or reproduced, with proper reference, without obtaining the written permission of the American Public Transportation Association.

Suggested Identification: American Public Transportation Association: *2015 Public Transportation Fact Book, Appendix A: Historical Tables*, Washington, DC, June, 2015.

About the Fact Book

The American Public Transportation Association is a nonprofit international association of over 1,500 public and private member organizations including public transportation systems; planning, design, construction and finance firms; product and service providers; academic institutions; transit associations; and state departments of transportation. APTA members serve the public interest by providing safe, efficient, and economical transit services and products. Over ninety percent of persons using public transportation in the United States and Canada are served by APTA members.

The **Public Transportation Fact Book** (formerly the **Transit Fact Book**) was first published in 1943. This is the 66th edition of the Fact Book published by the American Public Transportation Association and its predecessor organizations.

Data in the **Public Transportation Fact Book** have been calculated following statistically rigorous procedures since the data were first accumulated. All **Fact Book** data from the beginning of its collection represent the entire transit industry for those modes for which data were collected and reported for the year of the data.

Beginning in 2008 the **Public Transportation Fact Book** has been published in three parts. This format allows greater detail in statistical content and at the same time allows data to be easier to find and access.

The **2015 Public Transportation Fact Book** presents statistics describing transit service in the entire United States in 2013.

The **2015 Public Transportation Fact Book, Appendix A: Historical Tables**, presents primary data items for the entire time period they have been reported in **Fact Books** and other statistical reports prepared by APTA and its predecessor organizations. Many data items are reported for every year beginning in the 1920s and ridership is reported from 1890.

The **2015 Public Transportation Fact Book, Appendix B: Transit Agency and Urbanized Area Operating Statistics** presents six operating statistics for 2013 for each transit agency in size order, totaled for all service modes operated by the agency and in size order for each individual mode. Data are also summed and ranked for urbanized areas, both all modes totaled and for individual modes. These lists greatly expand similar data in previous **Public Transportation Fact Books** and allow a simple method to determine comparably sized transit agencies -- a difficult task when using existing data sources. Data for Appendix B are taken from the Federal Transit Administration's National Transit Database (NTD) and include only agencies reporting to the NTD.

APTA produces additional data reports that provide detailed information about individual transit agencies that is not available from other sources. These reports, or information for obtaining these reports, are on the APTA web site at www.apta.com.

The **Public Transportation Fare Database**, published annually, report details of individual transit agency fare structures, fare collection practices, and fare collection equipment.

The **Public Transportation Vehicle Database**, published annually, lists all vehicles owned by participating agencies in fleets, that is, groups of identical vehicles manufactured in the same year. Extensive information is included on their propulsion plants, dimensions, and equipment such as communications and passenger amenities.

The **Public Transportation Infrastructure Database**, published in alternating years, lists all fixed-guideways and stations operated by participating transit agencies. Equipment in stations is detailed.

The **Public Transportation Ridership Report** is published quarterly. Each edition presents ridership for each of three months plus quarterly and year-to-date amounts for all participating transit agencies. The

reported data are used to estimate total ridership for individual modes and an aggregate total. This report presents a quick indicator of the state of the transit industry shortly after the close of the period being reported.

The **APTA Primer on Transit Funding** presents a detailed explanation of programs in federal laws authorizing funding for the transit industry. Detailed statistics report amounts of funds available and the text describes the uses to which those funds may be put and the methods by which they are distributed. A new **Primer** is prepared for each authorization of transit law and is updated annually to reflect annual appropriations of federal funds for transit.

A Profile of Public Transportation Passenger Demographics and Travel Characteristics Reported in On-Board Surveys is an extensive investigation of the demographic characteristics and travel behavior of transit passengers based on surveys conducted by transit agencies of their passengers while traveling on-board their vehicles.

Extensive data for individual transit agencies can be found at the Federal Transit Administration's National Transit Database web site at <http://www.ntdprogram.gov/ntdprogram/>.

Methodology

The procedure for estimating total data in the **2015 Public Transportation Fact Book**, and prior issues of the Fact Book, is to expand available data by standard statistical methods to estimate U.S. national totals. It includes only public transportation data and excludes taxicab, unregulated jitney, school, sightseeing, intercity, charter, military, and services not available to the general public or segments of the general public (e.g., governmental and corporate shuttles), and special application systems (e.g., amusement parks, airports operating only within the airport, and the following types of ferry service: international, rural, rural interstate, and urban park).

The Fact Book can be indirectly traced to the U.S. Bureau of Census *Report on Transportation in the United States at the Eleventh Census: 1890, Part II - Street Railway Transportation*, published in Washington, DC by the Government Printing Office in 1895. This volume listed data for individual street railways and aggregate data for the entire street railway industry. The Census was conducted again in 1902, 1907, and 1912, but a report with data for individual railways was not published during World War I. Following World War I, an APTA predecessor organization, the American Electric Railway Association (AERA), began publishing annual operating reports with data for individual member transit systems. The last APTA Public Transportation Operating Report was published in 1992. Data for individual transit agencies is now published by the Federal Transit Administration in the National Transit Database report series.

The *Census of Electrical Industries: 1917, Electric Railways*, published by the Government Printing Office in 1920, provided summary data only; no data for individual electric railways were included. Summary data were published by the Census every five years through 1937. The census of transit operations was not conducted in 1942. An APTA predecessor, by then named the American Transit Association (ATA), published **The Transit Industry of the United States: Basic Data and Trends, 1942 Edition** in March 1943. The following year the summary of transit data, titled the **Transit Fact Book 1944**, was published and dated for the year in which it was published, which has been continued as the Fact Book dating policy since then.

Federal transit data summaries from 1890 through 1937 were simple totals of data for all transit agencies reporting to each Census. Because transit agencies were required by law to report their data, it can be assumed that the data represented nearly the entire transit industry for those vehicle modes for which data were collected. When the ATA began compiling the Fact Book, data were obtained by survey from ATA member organizations. There was not, of course, a legal requirement for ATA members or non-member transit agencies to report data. In order to estimate data for the entire U.S. transit industry, the ATA expanded the sample data from their survey to represent the entire transit industry using statistical methods.

In 1984 APTA members began providing APTA with copies of their submissions to the Federal Transit Administration (FTA) National Transit Database (NTD) rather than completing special surveys. The NTD began collecting data in 1979. The NTD data then provided the basis for estimates of national data. Beginning in 1997, data in digitized formats, available directly from the FTA, were used rather than data taken from paper copies of report forms.

Amounts for the earliest years for data series beginning 1926 or earlier were first reported in the 1946 Transit Fact Book and were estimated from Operating Reports for those years and interpolated using Census data.

The definitions of specific data change over time. Data are reported on these tables using the definition that was current when they were collected. For example, prior to the collection of NTD data what is now termed "unlinked passenger trips" was defined as "total trips" and included a count of all persons boarding transit vehicles and paying a fare, using a transfer, or allowed to ride for free for a specified reason. "Unlinked passenger trip" is defined as all persons boarding a transit vehicle and is determined from various counting procedures and statistical expansions required by the federal government. Although these definitions vary, the data can be expected to be nearly identical.

All data in this Fact Book calculated by APTA and its predecessors are statistical expansions of sample data designed to represent the total activity of all transit agencies for the modes of service included for a particular year. Base data were from APTA surveys prior to the NTD. Lists were maintained from all available sources for agencies that were not in the APTA or NTD sample. Data were expanded by mode in stratified categories of similar systems based on population and other characteristics. All procedures were adapted to minimize the maximum possible error, a standard statistical method.

The number of modes included has increased over time. The year each mode was first included in the Fact Book and in estimated national totals was (year of data, not year of Fact Book title):

1890: Light Rail

1907: Heavy Rail

1922: Bus

1928: Trolleybus

1980: Commuter Rail and Other (Other included aerial tramway, automated guideway transit, cable car, inclined plane, and monorail.)

1984: Demand Response

1995: Ferry Boat and Transit Vanpool, reported separately or included in "Other" on some tables.

2000: Regulated Publico included in Bus "Other."

2007: Regulated Publico reported separately on some tables.

2011: Bus differentiated as Bus, Bus Rapid Transit, and Commuter Bus; Commuter Rail differentiated as Commuter Rail and Hybrid Rail; Light Rail differentiated as Light Rail and Streetcar (see discussion "Beginning in 2011 . . ." below). Regulated Publico, Ferry Boat, and Transit Vanpool differentiated on modal tables.

Data from 1890 through 1983 are for calendar years. NTD data, however, are collected for "Reporting Years." A Reporting Year is each transit agency's fiscal year that ends during a calendar year. Beginning in 1984 Fact Book data are for Reporting Years, not calendar years.

NTD data were first reported for agencies in Urbanized Areas (UZA). UZAs are areas defined during the Decennial Census with at least 50,000 persons including a central city. Prior to 2007, data for systems outside of urbanized areas, rural systems, were not collected or published by the NTD and were estimated by APTA based on other data sources.

Beginning in 2007 the NTD collected and made available data for rural agencies. The Federal Transit Administration Rural Transit Assistance Program also sponsored a survey of rural transit agencies. These surveys allowed APTA to more accurately assess the distribution of bus, demand response service, and transit agency vanpool service in rural areas. In association with this, APTA also conducted

a survey of other data sources to identify agencies not included in the main NTD report or the NTD rural data. The increase in data available over the Internet from state agencies which oversee transit entities also allows a more accurate estimate of data for agencies eligible for federal transit assistance which provide non-profit service to elderly persons and persons with disabilities and are, therefore, included in demand response data.

Data for "bus," "demand response," and "other" are not continuous from 2006 to 2007. Data for other modes and national aggregates are continuous from 2006 to 2007. Bus and demand response in these tables refer to a mode of service, not to a specific vehicle type. Demand response service, defined as roadway service directly from an origin to a destination determined by the rider and not following a fixed-route, is usually provided by vans but is also provided by small buses and in a limited number of cases by large buses. Bus service is a variety of roadway services that share the characteristic of being operated entirely or partially on fixed routes. Bus service data in 2007 included local service, express service, subscription service, diversionary route service, loop service, commuter bus, bus rapid transit, and other types. Although bus service is normally provided by buses, it can be provided by smaller vehicles that may be considered large vans.

When the NTD began reporting rural data it became apparent that previous estimates used in the Fact Book for rural data based on other sources were correct in the aggregate but were not correctly distributed between bus, demand response, and vanpool (a part of other on some tables). This is the reason that the data from 2006 to 2007 are labeled as discontinuous for individual modes but not for aggregate amounts.

Beginning in 2011 the NTD allowed differentiated reporting of three categories of bus service: "bus" (which is all bus service that is not commuter bus or bus rapid transit), "commuter bus," and "bus rapid transit." The NTD also allowed the differentiation of commuter rail as two modes: "commuter rail" and "hybrid rail." The Fact Book continues a summary value for these two modes beginning in 2011 called "regional railroad." A third new requirement allowed the differentiation of light rail as two modes: "light rail" and "streetcar." The Fact Book continues a summary value for these two modes called "surface rail." A further complication, that some systems now reported as hybrid rail were previously reported commuter rail and others now reported as hybrid rail were reported as light rail, is not adjusted for in previous years' Fact Book data. All three of these modal differentiations were voluntary for 2011 and 2012 NTD reporting but are required beginning with reporting of 2013 NTD data.

The inclusion of transit agencies in specific UZA population groups for data estimate purposes was also verified. Many transit agencies provide service to several UZAs, many of which were new in the 1980, 1990, 2000, and 2010 Censuses or dramatically changed size in those Censuses. When UZAs are delineated during each Decennial Census the population categories within which they are included for statistical expansion purposes may change and the growth of the area may include the service areas of agencies that had been rural agencies in the previous Census. UZAs are also combined into larger areas or split into multiple areas during each Census. The UZA data are usually not available until two to four years after the Census. For these reasons APTA does not estimate and report historical data stratified by population size groups.

Improved counting methods have resulted from increased use of automatic passenger counters and from the use of new fare media such as magnetic and smart cards, the transactions of which can be counted and summarized. This increased automatic counting is particularly important in determining transfer behavior among service modes within agencies allowing more accurate assignment of data by mode.

It is APTA policy to continually seek to improve the quality of data reported in the Fact Book. Data are sought from all available sources and statistical procedures are used to verify that the data presented in the Fact Book are the most accurate possible data.

The data source and general methodology for calculation of each table can be determined from the Statement of Scope, the second line of the right-hand heading of each page of each table. The Statements of Scope are:

(1) INCLUDES ENTIRE TRANSIT INDUSTRY: Tables identified as "Includes Entire Transit Industry" include data for each mode, subtotals, and totals for the entire transit industry for the modes with data reported for each particular year. Any mode for which data is not reported for a particular year is not included in subtotals and totals. These data are based on APTA Operating Report data until the early 1980s and on National Transit Database reports since then as described above. These data are expanded using any other available source to estimate values for transit service not included in those base sources.

(2) INCLUDES TRANSIT AGENCIES REPORTING TO NATIONAL TRANSIT DATABASE FOR URBANIZED AREAS ONLY and (3) INCLUDES TRANSIT AGENCIES REPORTING TO NATIONAL TRANSIT DATABASE FOR RURAL AREAS ONLY: These data are taken directly from each year's National Transit Database and include only those services reported to the National Transit Database. They are NOT expanded to account for transit agencies which do not report to the National Transit Database. NTD data for urbanized areas include most service in those areas and NTD data for rural areas include most service in rural areas.

(4) INCLUDES SAMPLE IN APTA PUBLIC TRANSPORTATION VEHICLE DATABASE ONLY; (5) INCLUDES SAMPLE IN APTA PUBLIC TRANSPORTATION INFRASTRUCTURE DATABASE ONLY; and (6) INCLUDES SAMPLE IN APTA PUBLIC TRANSPORTATION FARE DATABASE ONLY: These data are taken from APTA conducted surveys. They are based on the responses of APTA members that provide data on a voluntary basis. They are NOT expanded to account for transit agencies which do not participate in APTA surveys. Because they are samples and are not expanded, most data taken from these databases are presented as percentages of the sample. In cases where amounts are reported for data items, it is important to remember they represent the amounts only for the sample and may be significantly smaller than the value for the entire transit industry would be.

TABLE OF CONTENTS

PASSENGER DATA:

2013	5,190	44	97	5,330	96	223	37	27	5,714

(#) Includes only agencies reporting specific mode in 2011 and 2012; agencies were not required by the National Transit Database to differentiate these modes until 2013.

(a) Trolleybus is a fixed-guideway mode for distribution of FTA Urbanized Area Formula Funds.

(b) Included in Total Bus.

(c) Data not continuous for modes noted, see Methodology.

See Glossary following Tables for complete definitions.

(#) Includes only agencies reporting specific mode in 2011 and 2012; agencies were not required by the National Transit Database to differentiate these modes until 2013.

(d) Beginning 1980 includes aerial tramway, automated guideway transit, cable car, inclined plane, and monorail. From 1980 to 1994 includes ferryboat.

(e) Does not include Trolleybus which is a fixed-guideway mode for distribution of FTA Urbanized Area Formula Funds.

(f) Included in Light Rail.

(g) Included in Commuter Rail.

(h) Data from U.S. Census Bureau.

See Glossary following Tables for complete definitions.

(#) Includes only agencies reporting specific mode in 2011 and 2012; agencies were not required by the National Transit Database to differentiate these modes until 2013.

(a) Trolleybus is a fixed-guideway mode for distribution of FTA Urbanized Area Formula Funds.

(b) Included in Total Bus.

(c) Data not continuous for modes noted, see Methodology.

See Glossary following Tables for complete definitions.

(#) Includes only agencies reporting specific mode in 2011 and 2012; agencies were not required by the National Transit Database to differentiate these modes until 2013.

(d) Beginning 1980 includes aerial tramway, automated guideway transit, cable car, inclined plane, and monorail. From 1980 to 1994 includes ferryboat.

(e) Does not include Trolleybus which is a fixed-guideway mode for distribution of FTA Urbanized Area Formula Funds.

(f) Included in Light Rail.

(g) Included in Commuter Rail.

(h) Data from U.S. Census Bureau.

See Glossary following Tables for complete definitions.

(#) Includes only agencies reporting specific mode in 2011 and 2012; agencies were not required by the National Transit Database to differentiate these modes until 2013.

(d) Beginning 1980 includes aerial tramway, automated guideway transit, cable car, inclined plane, and monorail. From 1980 to 1994 includes ferryboat and some unidentified roadway modes.

(e) Does not include Trolleybus which is a fixed-guideway mode for distribution of FTA Urbanized Area Formula Funds.

(f) Included in Light Rail.

(g) Included in Commuter Rail.

See Glossary following Tables for complete definitions.

(#) Includes only agencies reporting specific mode in 2011 and 2012; agencies were not required by the National Transit Database to differentiate these modes until 2013.

(c) Does not include Trolleybus which is a fixed-guideway mode for distribution of FTA Urbanized Area Formula Funds.

(d) Included in Light Rail.

(e) Included in Commuter Rail.

See Glossary following Tables for complete definitions.

(#) Includes only agencies reporting specific mode in 2011 and 2012; agencies were not required by the National Transit Database to differentiate these modes until 2013.

(a) Trolleybus is a fixed-guideway mode for distribution of FTA Urbanized Area Formula Funds.

(b) Included in Total Bus.

(c) Data not continuous for modes noted, see Methodology.

See Glossary following Tables for complete definitions.

(#) Includes only agencies reporting specific mode in 2011 and 2012; agencies were not required by the National Transit Database to differentiate these modes until 2013.

(d) Beginning 1975 includes aerial tramway, automated guideway transit, cable car, inclined plane, and monorail. From 1975 to 1994 includes ferryboat and some unidentified roadway modes.

(e) Does not include Trolleybus which is a fixed-guideway mode for distribution of FTA Urbanized Area Formula Funds.

(f) Included in Light Rail.

(g) Included in Commuter Rail.

See Glossary following Tables for complete definitions.

(#) Includes only agencies reporting specific mode in 2011 and 2012; agencies were not required by the National Transit Database to differentiate these modes until 2013.

(a) Trolleybus is a fixed-guideway mode for distribution of FTA Urbanized Area Formula Funds.

(b) Included in Total Bus.

(c) Data not continuous for modes noted, see Methodology.

See Glossary following Tables for complete definitions.

(#) Includes only agencies reporting specific mode in 2011 and 2012; agencies were not required by the National Transit Database to differentiate these modes until 2013.

(d) Beginning 1980 includes aerial tramway, automated guideway transit, cable car, inclined plane, and monorail. From 1975 to 1994 includes ferryboat and some unidentified roadway modes.

(e) Does not include Trolleybus which is a fixed-guideway mode for distribution of FTA Urbanized Area Formula Funds.

(f) Included in Light Rail.

(g) Included in Commuter Rail.

See Glossary following Tables for complete definitions.

(#) Includes only agencies reporting specific mode in 2011 and 2012; agencies were not required by the National Transit Database to differentiate these modes until 2013.

(a) Trolleybus is a fixed-guideway mode for distribution of FTA Urbanized Area Formula Funds.

(b) Included in Total Bus.

(c) Data not continuous for modes noted, see Methodology.

See Glossary following Tables for complete definitions.

(#) Includes only agencies reporting specific mode in 2011 and 2012; agencies were not required by the National Transit Database to differentiate these modes until 2013.

(d) Beginning 1980 includes aerial tramway, automated guideway transit, cable car, inclined plane, and monorail. From 1975 to 1994 includes ferryboat and some unidentified roadway modes.

(e) Does not include Trolleybus which is a fixed-guideway mode for distribution of FTA Urbanized Area Formula Funds.

(f) Included in Light Rail.

(g) Included in Commuter Rail.

See Glossary following Tables for complete definitions.

(#) Includes only agencies reporting specific mode in 2011 and 2012; agencies were not required by the National Transit Database to differentiate these modes until 2013.

(a) Trolleybus is a fixed-guideway mode for distribution of FTA Urbanized Area Formula Funds.

(b) Included in Total Bus.

(c) Data not continuous for modes noted, see Methodology.

See Glossary following Tables for complete definitions.

(#) Includes only agencies reporting specific mode in 2011 and 2012; agencies were not required by the National Transit Database to differentiate these modes until 2013.

(d) Beginning 1984 includes aerial tramway, automated guideway transit, cable car, inclined plane, and monorail. From 1984 to 1994 includes ferryboat and some unidentified roadway modes. Beginning in 1995 may include some unidentified roadway modes.

(e) Does not include Trolleybus which is a fixed-guideway mode for distribution of FTA Urbanized Area Formula Funds.

(f) Included in Light Rail.

(g) Included in Commuter Rail.

See Glossary following Tables for complete definitions.

(#) Includes only agencies reporting specific mode in 2011 and 2012; agencies were not required by the National Transit Database to differentiate these modes until 2013.

(a) Trolleybus is a fixed-guideway mode for distribution of FTA Urbanized Area Formula Funds.

(b) Included in Total Bus.

(c) Data not continuous for modes noted, see Methodology.

See Glossary following Tables for complete definitions.

TABLE 21: REVENUE VEHICLES AVAILABLE FOR MAXIMUM SERVICE BY MODE PART B: FIXED-GUIDEWAY MODES AND ALL MODES TOTAL											
Year	Regional Railroad Modes			Heavy Rail	Surface Rail Modes			Ferryboat	Other Fixed-Guideway Modes (d)	Total Fixed-Guideway Modes Reported (e)	All Modes Reported Total (Parts A and B)
	Commuter Rail	Hybrid Rail (#)	Total Regional Railroad		Light Rail	Streetcar (#)	Total Surface Rail				
2012	7,059	44	7,103	10,469	1,986	324	2,310	186	381	20,449	176,728
2013	7,310	59	7,369	10,380	2,054	333	2,387	189	382	20,707	178,613

(#) Includes only agencies reporting specific mode in 2011 and 2012; agencies were not required by the National Transit Database to differentiate these modes until 2013.

(d) Beginning 1975 includes aerial tramway, automated guideway transit, cable car, inclined plane, and monorail. From 1984 to 1994 includes ferryboat and some unidentified roadway modes.

(e) Does not include Trolleybus which is a fixed-guideway mode for distribution of FTA Urbanized Area Formula Funds.

(f) Included in Light Rail.

(g) Included in Commuter Rail.

See Glossary following Tables for complete definitions.

TABLE 22: REVENUE VEHICLES AVAILABLE FOR MAXIMUM SERVICE BY MODE (PERCENT OF VEHICLES) PART A: ROADWAY MODES									
Year	Bus Modes				Trolleybus (a)	Demand Response	Transit Vanpool	Publico	Total Roadway Modes Reported
	Bus	Bus Rapid Transit (#)	Commuter Bus (#)	Total Bus					
2013	36.9%	0.1%	2.8%	39.8%	0.3%	38.4%	8.3%	1.6%	88.4%

(#) Includes only agencies reporting specific mode in 2011 and 2012; agencies were not required by the National Transit Database to differentiate these modes until 2013.

(a) Trolleybus is a fixed-guideway mode for distribution of FTA Urbanized Area Formula Funds.

(b) Included in Total Bus.

(c) Data not continuous for modes noted, see Methodology.

See Glossary following Tables for complete definitions.

(#) Includes only agencies reporting specific mode in 2011 and 2012; agencies were not required by the National Transit Database to differentiate these modes until 2013.

(a) Trolleybus is a fixed-guideway mode for distribution of FTA Urbanized Area Formula Funds.

(b) Included in Total Bus.

(c) Data not continuous for modes noted, see Methodology.

See Glossary following Tables for complete definitions.

(a) Sample data only; from annual APTA Public Transportation Vehicle Database, not projected to national total.

(b) Data are average values for all vehicles with cost provided over two-year periods. Amounts are averages for vehicle with the specific characteristics in each heading, not for all vehicles in that mode. Some cost data are contract amounts and may not be final. Data include amounts paid to manufacturer only. Data should be considered indicative only, specifications of vehicles in sample, including fuel type, vary between years.

(c) Does not include articulated, double-deck, intercity, suburban, or trolley-replica buses of any length.

See Glossary following Tables for complete definitions.

2014	20.4%	39.6%	38.2%	47.7%	47.9%	18.0%	15.0%	50.0%	

(a) Sample data only; from annual *APTA Public Transportation Vehicle Database*, not projected to national total.

(b) Includes bus rapid transit and commuter bus vehicles.

(c) Includes hybrid rail cars.

(d) Includes streetcars.

(e) Federal Transit Administration "Minimum Useful Life" determines the age at which a vehicle may be replaced with federal financial assistance. The requirements are presented in *FTA C 9300.1B Capital Investment Program Guidance and Application Instructions* at http://www.fta.dot.gov/documents/Final_C_9300_1_Bpub.pdf

(f) For large, heavy-duty transit buses. Smaller buses have shorter useful-life requirements.

See Glossary following Tables for complete definitions.

(a) Summary data from National Transit Database. Includes only systems in Urbanized Areas reporting to National Transit Database each year.

(b) Vehicles reported in each mode for which they provide service. Data cannot be added for all modes because of the double counting that results from reporting vehicles in each mode of service for which they are used.

(c) Not reported separately in 2007 or 2008.

See Glossary following Tables for complete definitions.

(a) Summary data from National Transit Database. Includes only systems in Urbanized Areas reporting to National Transit Database each year. Includes buses, articulated buses, double deck buses, over-the-road buses, and school buses.

(b) Vehicles reported in each mode for which they provide service. Data cannot be added for all modes because of the double counting that results from reporting vehicles in each mode of service for which they are used.

See Glossary following Tables for complete definitions.

2013	1,178	8	156	1,268	5	6,270	102	1

(#) Includes only agencies reporting specific mode in 2011 and 2012; agencies were not required by the National Transit Database to differentiate these modes until 2013.

(a) Trolleybus is a fixed-guideway mode for distribution of FTA Urbanized Area Formula Funds.

(b) Included in Total Bus.

(c) Prior to 1984 excludes most rural bus agencies.

(d) Data not continuous for modes noted, see Methodology.

(e) Agencies counted only once regardless of the number of bus modes operated.

See Glossary following Tables for complete definitions.

2013	26	5	31	15	24	11	35	41	16	138	6,804

(#) Includes only agencies reporting specific mode in 2011 and 2012; agencies were not required by the National Transit Database to differentiate these modes until 2013.

(f) Beginning 1980 includes aerial tramway, automated guideway transit, cable car, inclined plane, and monorail. From 1975 to 1994 includes ferryboat and some unidentified roadway modes.

(g) Each mode for multi-modal system counted individually. Does not include Trolleybus which is a fixed-guideway mode for distribution of FTA Urbanized Area Formula Funds.

(h) Multi-modal agencies counted only once regardless of number of modes operated, numbers are approximate.

(i) Included in Light Rail.

(j) Included in Commuter Rail.

See Glossary following Tables for complete definitions.

TABLE 48: RAIL TRANSIT AND BUS RAPID TRANSIT SYSTEMS CURRENTLY IN OPERATION, ALPHABETICAL ORDER BY MODE, STATE, AND URBANIZED AREA NAME AS OF MAY 1, 2015				
State	Primary City Name	Transit System Name	Reported in 2013 NTD (a,b)	Year Opened (c)
AERIAL TRAMWAY: 3 SYSTEMS				
Colorado	Mountain Village	Town of Mountain Village Gondola	Yes (g)	1996
New York	New York	Roosevelt Island Operating Corporation Tramway	No	1976
Oregon	Portland	Portland Aerial Tramway	Yes	2006
AUTOMATED GUIDEWAY TRANSIT: 10 SYSTEMS				
Arizona	Phoenix	Valley Metro PHX Sky Train	No	2013
California	San Francisco	San Francisco Bay Area Rapid Transit District (BART) Oakland Airport Connector	No (h)	2014
Florida	Jacksonville	Jacksonville Transportation Authority (JTA) Skyway	Yes	1989
Florida	Miami	Miami-Dade Transit (MDT) Metromover	Yes	1986
Florida	Miami	MIA [Miami International Airport] Mover	No (h)	2014
Indiana	Indianapolis	Indiana University Health People Mover	No	2003
Michigan	Detroit	Detroit Transportation Corporation People Mover	Yes	1987
New Jersey	New York	Port Authority of New York and New Jersey Air Train Newark	No	2000
New York	New York	Port Authority of New York and New Jersey Air Train JFK	No	2003
West Virginia	Morgantown	West Virginia University Personal Rapid Transit	Yes	1975
BUS RAPID TRANSIT: 14 SYSTEMS				
California	Los Angeles	Los Angeles County Metropolitan Transportation Authority (LACMTA)	Yes	2005
California	San Bernardino	Omnitrans	No	2014
Colorado	Fort Collins	Transfort	No (f)	2014
Colorado	Roaring Fork	VelociRFTA	Yes (g)	2013
Florida	Orlando	Central Florida Regional Transportation Authority (LYNX)	Yes	1997
Massachusetts	Boston	Massachusetts Bay Transportation Authority	No (f)	2002
Michigan	Grand Rapids	Interurban Transit Partnership (The Rapid)	No (f)	2014
Minnesota	Minneapolis	Metropolitan Council	No	2013
Missouri	Kansas City	Kansas City Area Transportation Authority	Yes	2005
Nevada	Las Vegas	Regional Transportation Commission	Yes	2004
New York	New York	MTA New York City Transit	Yes	2008

Washington	Seattle	King County Department of Transportation - Metro Transit Division (King County Metro)	Yes	1940

(a) Not all fixed-guideway agencies report data to the National Transit Database.

(b) Federal Transit Administration National Transit Database.

(c) Dates prior to 1970 may refer to predecessor agencies but may not be the earliest date rail service operated in area. Some areas with current systems had earlier systems that ceased operation several years before the current system opened.

(d) Reported in National Transit Database as a separate "Alaska Railroad" mode, not reported as commuter rail.

(e) Unconnected rail operations in separate cities or areas are counted individually even if operated by the same overall agency. Systems with suspended service not included in total number of systems.

(f) Data not reported for 2013; data have been reported to NTD "Monthly Database" beginning during 2014.

(g) National Transit Database Rural data.

(h) Not in operation long enough to provide report to NTD.

(#) Includes only agencies reporting specific mode in 2011 and 2012; agencies were not required by the National Transit Database to differentiate these modes until 2013.

(a) Included in commuter rail.

(b) Included in light rail.

See Glossary following Tables for complete definitions.

(#) Includes only agencies reporting specific mode in 2011 and 2012; agencies were not required by the National Transit Database to differentiate these modes until 2013.

(a) Trolleybus is a fixed-guideway mode for distribution of FTA Urbanized Area Formula Funds.

(b) Each mode for multi-modal system counted individually.

(c) Included in Total Bus.

(d) Data not continuous for modes noted, see Methodology.

See Glossary following Tables for complete definitions.

(#) Includes only agencies reporting specific mode in 2011 and 2012; agencies were not required by the National Transit Database to differentiate these modes until 2013.

(e) From 1992 to 1994 includes ferryboat and some unidentified roadway modes.

(f) Included in Light Rail.

(g) Included in Commuter Rail.

See Glossary following Tables for complete definitions.

(#) Includes only agencies reporting specific mode in 2011 and 2012; agencies were not required by the National Transit Database to differentiate these modes until 2013.

(a) Trolleybus is a fixed-guideway mode for distribution of FTA Urbanized Area Formula Funds.

(b) Included in Total Bus.

(c) All Modes Total reported on Table 70, Part B.

(d) Data not continuous for modes noted, see Methodology.

See Glossary following Tables for complete definitions.

(#) Includes only agencies reporting specific mode in 2011 and 2012; agencies were not required by the National Transit Database to differentiate these modes until 2013.

(c) All Modes Total reported on Table 70, Part B.

(d) Beginning 1975 includes aerial tramway, automated guideway transit, cable car, inclined plane, and monorail. From 1984 to 1994 includes ferryboat and some unidentified roadway modes.

(e) Does not include Trolleybus which is a fixed-guideway mode for distribution of FTA Urbanized Area Formula Funds.

(f) Included in Light Rail.

(g) Included in Commuter Rail.

See Glossary following Tables for complete definitions.

2013	34.5%	26.2%	7.1%	11.2%	3.1%	2.4%	13.7%	1.8%	(b) ---	100.0%

(a) Includes commuter rail, ferryboat, rural bus, other, and demand response beginning in 1984.

(b) Beginning in 2013, "expense transfers" are no longer included in operating expenses. "Expense transfers" included reclassifications of expenses from one function to another, reclassification of costs between cost centers and work orders, and capitalization of non-operating costs.

See Glossary following Tables for complete definitions.

(#) Includes only agencies reporting specific mode in 2011 and 2012; agencies were not required by the National Transit Database to differentiate these modes until 2013.

(a) Trolleybus is a fixed-guideway mode for distribution of FTA Urbanized Area Formula Funds.

(b) Each mode for multi-modal system counted individually.

(c) Included in Total Bus.

(d) Data not continuous for modes noted, see Methodology.

See Glossary following Tables for complete definitions.

2013	46.0%	0.2%	2.2%	48.5%	0.6%	12.2%	0.4%	0.1%	61.8%

(#) Includes only agencies reporting specific mode in 2011 and 2012; agencies were not required by the National Transit Database to differentiate these modes until 2013.

(a) Trolleybus is a fixed-guideway mode for distribution of FTA Urbanized Area Formula Funds.

(b) Included in Total Bus.

(c1) Included in Other Fixed Guideway Modes on Table 78, Part B.

(c2) Does not include Transit Vanpool and Publico from 2007 through 2010.

See Glossary following Tables for complete definitions.

(#) Includes only agencies reporting specific mode in 2011 and 2012; agencies were not required by the National Transit Database to differentiate these modes until 2013.

(d) Includes aerial tramway, automated guideway transit, cable car, inclined plane, and monorail, and ferryboat. From 2007 through 2010 includes Roadway Modes transit vanpool and publico.

(e) Does not include trolleybus which is a fixed-guideway mode for distribution of FTA Urbanized Area Formula Funds.

(f) Included in Light Rail.

(g) Included in Commuter Rail.

(h) Included in Other Fixed-Guideway Modes.

See Glossary following Tables for complete definitions.

(#) Includes only agencies reporting specific mode in 2011 and 2012; agencies were not required by the National Transit Database to differentiate these modes until 2013.

(d) Includes aerial tramway, automated guideway transit, cable car, inclined plane, and monorail, and ferryboat. From 2007 through 2010 includes Roadway Modes transit vanpool and publico.

(e) Does not include trolleybus which is a fixed-guideway mode for distribution of FTA Urbanized Area Formula Funds.

(f) Included in Light Rail.

(g) Included in Commuter Rail.

(h) Included in Other Fixed-Guideway Modes.

See Glossary following Tables for complete definitions.

(#) Includes only agencies reporting specific mode in 2011 and 2012; agencies were not required by the National Transit Database to differentiate these modes until 2013.

(a) Trolleybus is a fixed-guideway mode for distribution of FTA Urbanized Area Formula Funds.

(b) Included in Total Bus.

(c1) Included in Other Fixed Guideway Modes on Table 78, Part B.

(c2) Does not include Transit Vanpool and Publico from 2007 through 2010.

(i) Beginning in 2013, "expense transfers" are no longer included in operating expenses. "Expense transfers" included reclassifications of expenses from one function to another, reclassification of costs between cost centers and work orders, and capitalization of non-operating costs.

See Glossary following Tables for complete definitions.

(#) Includes only agencies reporting specific mode in 2011 and 2012; agencies were not required by the National Transit Database to differentiate these modes until 2013.

(a) Trolleybus is a fixed-guideway mode for distribution of FTA Urbanized Area Formula Funds.

(b) Included in Total Bus.

(c1) Included in Other Fixed Guideway Modes on Table 78, Part B.

(c2) Does not include Transit Vanpool and Publico from 2007 through 2010.

(i) Beginning in 2013, "expense transfers" are no longer included in operating expenses. "Expense transfers" included reclassifications of expenses from one function to another, reclassification of costs between cost centers and work orders, and capitalization of non-operating costs.

2013	46.0%	0.2%	2.2%	48.5%	0.6%	12.2%	0.4%	0.1%	61.8%

(#) Includes only agencies reporting specific mode in 2011 and 2012; agencies were not required by the National Transit Database to differentiate these modes until 2013.

(a) Trolleybus is a fixed-guideway mode for distribution of FTA Urbanized Area Formula Funds.

(b) Included in Total Bus.

(c1) Included in Other Fixed Guideway Modes on Table 78, Part B.

(c2) Does not include Transit Vanpool and Publico from 2007 through 2010.

(i) Beginning in 2013, "expense transfers" are no longer included in operating expenses. "Expense transfers" included reclassifications of expenses from one function to another, reclassification of costs between cost centers and work orders, and capitalization of non-operating costs.

See Glossary following Tables for complete definitions.

(#) Includes only agencies reporting specific mode in 2011 and 2012; agencies were not required by the National Transit Database to differentiate these modes until 2013.

(d) Includes aerial tramway, automated guideway transit, cable car, inclined plane, and monorail, and ferryboat. From 2007 through 2010 includes Roadway Modes transit vanpool and publico.

(e) Does not include trolleybus which is a fixed-guideway mode for distribution of FTA Urbanized Area Formula Funds.

(f) Included in Light Rail.

(g) Included in Commuter Rail.

(h) Included in Other Fixed-Guideway Modes.

(d) Beginning in 2013, "expense transfers" are no longer included in operating expenses. "Expense transfers" included reclassifications of expenses from one function to another, reclassification of costs between cost centers and work orders, and capitalization of non-operating costs.

(#) Includes only agencies reporting specific mode in 2011 and 2012; agencies were not required by the National Transit Database to differentiate these modes until 2013.

(d) Includes aerial tramway, automated guideway transit, cable car, inclined plane, and monorail, and ferryboat. From 2007 through 2010 includes Roadway Modes transit vanpool and publico.

(e) Does not include trolleybus which is a fixed-guideway mode for distribution of FTA Urbanized Area Formula Funds.

(f) Included in Light Rail.

(g) Included in Commuter Rail.

(h) Included in Other Fixed-Guideway Modes.

(d) Beginning in 2013, "expense transfers" are no longer included in operating expenses. "Expense transfers" included reclassifications of expenses from one function to another, reclassification of costs between cost centers and work orders, and capitalization of non-operating costs.

See Glossary following Tables for complete definitions.

(#) Includes only agencies reporting specific mode in 2011 and 2012; agencies were not required by the National Transit Database to differentiate these modes until 2013.

(e) From 1992 to 1994 includes ferryboat and some unidentified roadway modes.

(f) Included in Light Rail.

(g) Included in Commuter Rail.

See Glossary following Tables for complete definitions.

(a) Prior to 1974 government financial assistance was not separately identified from other revenues in accounting systems.

(b) Includes commuter rail, ferryboat, rural bus, other, and demand response beginning in 1984.

See Glossary following Tables for complete definitions.

(c) Sources of Directly Generated and Agency Operating Funds are reported on Table 50 for agencies reporting to the National Transit Database for urbanized areas only. Those amounts are only part of the total for the entire transit industry shown herein.

(d) Sources of Local Assistance Operating Funds are reported on Table 51 for agencies reporting to the National Transit Database for urbanized areas only. Those amounts are only part of the total for the entire transit industry shown herein.

(e) Sources of State Assistance Operating Funds are reported on Table 52 for agencies reporting to the National Transit Database for urbanized areas only. Those amounts are only part of the total for the entire transit industry shown herein.

(f) Sources of Federal Assistance Operating Funds are reported on Table 53 for agencies reporting to the National Transit Database for urbanized areas only. Those amounts are only part of the total for the entire transit industry shown herein.

(#) Includes only agencies reporting specific mode in 2011 and 2012; agencies were not required by the National Transit Database to differentiate these modes until 2013.

(a) Trolleybus is a fixed-guideway mode for distribution of FTA Urbanized Area Formula Funds.

(b) Included in Total Bus.

(c) Data not continuous for modes noted, see Methodology.

(h) Beginning in 2103 includes fare revenue used for other than operations purposes and not reported in "Table 86, Operating Funding Sources."

See Glossary following Tables for complete definitions.

(#) Includes only agencies reporting specific mode in 2011 and 2012; agencies were not required by the National Transit Database to differentiate these modes until 2013.

(a) Trolleybus is a fixed-guideway mode for distribution of FTA Urbanized Area Formula Funds.

(b) Included in Total Bus.

(c) Data not continuous for modes noted, see Methodology.

See Glossary following Tables for complete definitions.

(#) Includes only agencies reporting specific mode in 2011 and 2012; agencies were not required by the National Transit Database to differentiate these modes until 2013.

(d) Beginning 1975 includes aerial tramway, automated guideway transit, cable car, inclined plane, and monorail. From 1984 to 1994 includes ferryboat and some unidentified roadway modes.

(e) Does not include Trolleybus which is a fixed-guideway mode for distribution of FTA Urbanized Area Formula Funds.

(f) Included in Light Rail.

(g) Included in Commuter Rail.

See Glossary following Tables for complete definitions.

(a) Data expanded to entire transit industry.

(b) Sample data only; from annual *APTA Public Transportation Fare Database*, not projected to national total. Each mode of fixed-route service reported by participating systems is counted separately in these data because fare structures and fare collection equipment vary among modes of service. Does not include demand responsive service fares.

See Glossary following Tables for complete definitions.

See Glossary following Tables for complete definitions.

(a) Each mode for multi-modal system counted individually. Does not include Trolleybus which is a fixed-guideway mode for distribution of FTA Urbanized Area Formula Funds.

(b) Data from U.S. Census Bureau surveys, definitions may vary from modern usage. Vehicles are for passenger service only, does not include freight vehicles. Agencies are operating agencies only.

(a) Only service in rural areas by a rural agency. Service provided by agencies headquartered in urbanized areas but operating into surrounding rural areas is not included; such service is included in urbanized area reports by those agencies. Excludes data reported by agencies identified as "urban recipient." From 2007, the first year rural data were reported to the NTD, through 2010, some agencies were not able to report all items creating apparent discrepancies in relationships of amounts reported. The data reported on this table are the sums of amounts actually reported and are not adjusted for individual unreported or apparently over reported amounts. National totals for the entire transit industry on other tables in this report which are calculated, in part, using these data are, however, statistically adjusted to account for unreported or apparently over reported amounts.

(b) Some Indian Tribal services are not identified by state for 2007, 2008, and 2009. Those services not identified by state are not included in individual state amounts for those years but are included in the United States Total.

(c) In these instances services reported without modal identification are not included by mode but are included in state Total Number of Agencies amount.

(d) Agencies operating more than one mode of service are counted only once for the Total Number of Agencies amount.

See Glossary following Tables for complete definitions.

(a) Only service in rural areas by a rural agency. Service provided by agencies headquartered in urbanized areas but operating into surrounding rural areas is not included; such service is included in urbanized area reports by those agencies. Excludes data reported by agencies identified as "urban recipient." From 2007, the first year rural data were reported to the NTD, through 2010, some agencies were not able to report all items creating apparent discrepancies in relationships of amounts reported. The data reported on this table are the sums of amounts actually reported and are not adjusted for individual unreported or apparently over reported amounts. National totals for the entire transit industry on other tables in this report which are calculated, in part, using these data are, however, statistically adjusted to account for unreported or apparently over reported amounts.

(b) Some Indian Tribal services are not identified by state for 2007, 2008, and 2009. Those services not identified by state are not included in individual state amounts for those years but are included in the United States Total. Intercity bus financial data not included for 2007.

See Glossary following Tables for complete definitions.

TABLE 120: APTA AND PREDECESSOR ORGANIZATIONS HISTORY AND ASSOCIATION ANCESTRY

APTA ASSOCIATION DATA

The American Public Transportation Association traces its ancestry back 132 years to December 13, 1882 when 56 transit executives from across the United States and Canada met at Young's Hotel in Boston and created the American Street Railway Association. In the early years of the Association's existence, annual meetings saw technical presentations and committee reports on horse shoeing, collection of fares, track construction, removal of snow and ice, horse stables, and cable power. The Association was created during a period of rapid technological change; the "Verbatim Report" of the 1884 Annual Meeting in New York City includes the first discussion of the potential use of electricity to propel streetcars.

The changes in transit vehicle types and motive power are reflected in the name changes of the Association. In 1905, the Association changed its name to the American Street and Interurban Railway Association to reflect its members provision of local service on urban "streets" and higher speed "interurban" service between center cities and suburbs and to other more distant urban communities. A name change in 1910 to the American Electric Railway Association reflected the near universal adoption of electricity as propulsion power for transit cars. In 1912, the U.S. Census of Street and Electric Railways found that 943 out of 975 street and interurban railways were powered by electricity. The increasing use of motor buses and trolleybuses by transit systems resulted in the association changing its name in 1932 to the American Transit Association.

In 1929, members of the American Electric Railway Association created a separate organization, the Electric Railway Presidents' Conference Committee, to develop a streetcar called the PCC car. The streamlined body of the PCC car reflected the modernist design movement of the times and the mechanical systems of the car were revolutionary compared to previous designs. The committee was incorporated as the Transit Research Corporation (TRC) in 1935 to manage the use of PCC designs and continue street and rapid transit car design improvement. The changing emphasis of the TRC toward legislative matters resulted in a name change to the Institute for Rapid Transit (IRT). In 1969 the IRT moved its headquarters from Chicago to Washington, DC, reflecting the continued focus on its legislative activities. The American Transit Association had already moved its offices from New York City to Washington, DC, in 1966, for the same reasons.

Representing many of the same transit companies and striving to achieve the same improvements and growth in the transit industry, the American Transit Association and Institute for Rapid Transit merged in 1974 to create the American Public Transit Association. In 2000, the Association's name was changed to the American Public Transportation Association, reflecting the wide variety of mobility and transportation services beyond traditional transit provided by its members.

Table 120: APTA ASSOCIATION ANCESTRY

TABLE 121: APTA CHIEF EXECUTIVE OFFICERS

APTA ASSOCIATION DATA

TABLE 121: APTA CHIEF EXECUTIVE OFFICERS

Michael P. Melaniphy is president and chief executive officer of the American Public Transportation Association. His entire career has been in public transportation, with more than 26 years of both public and private sector leadership experience. Active in the industry, Melaniphy serves on the Executive Committee of the Transportation Research Board, as well as on the boards of both RailVolution and the Transportation Learning Resource Center. He is a commissioner on the Alliance to Save Energy's Commission on National Energy Efficiency Policy and president of the American Public Transportation Foundation. He also serves on the boards of the Mineta Transportation Institute at San Jose State University and the National Center for Transit Research at CUTR - University of South Florida. His biography can be found on APTA's web site at www.apta.com.

Michael P. Melaniphy, President & CEO, 2011 - Current

William W. Millar, President 1996 - 2011

Jack R. Gilstrap, Executive Vice President 1980 - 1996

B. R. Stokes, Executive Director 1974 - 1977, Executive Vice President 1977 - 1980

(a) All intercity passenger railroad service reported for FY 2000 through FY 2013 on this table is operated by Amtrak, the National Railroad Passenger Corporation. Data are taken from Amtrak Annual Reports and other Amtrak publications. These data are solely for Amtrak intercity service, termed "Amtrak Systemwide" in Amtrak publications. "Systemwide" statistics refer to Amtrak intercity passenger railroad operations; they do not include Amtrak commuter railroad services operated under contract for transit agencies. There may be a limited amount of overlap in data reported in the 2014 Public Transportation Fact Book for transit and Amtrak statistics; therefore, Amtrak and transit statistics should not be considered completely additive.

NYP = Not Yet Published.

See Glossary following Tables for complete definitions.

(a) Publicly owned transit systems include all transit systems owned by municipalities, counties, regional authorities, states, or other governmental agencies including transit systems managed by private management firms under contract to governmental agency owners. Does not include private firms with employees of the private company operating privately owned vehicles on publicly owned rights-of-way such as rail or highway tunnels, bridges, and stations.

(b) Estimated data, from 1960 through 1974 data are for Bus, Heavy Rail, Light Rail, and Trolleybus nodes only, beginning in 1974 include Commuter Rail, and beginning in 1980 includes Other Rail.

TABLE 127: MILESTONES IN PUBLIC TRANSPORTATION AND HIGH-SPEED RAIL HISTORY

**MILESTONES IN HISTORY

TABLE 127: MILESTONES IN PUBLIC TRANSPORTATION AND HIGH-SPEED RAIL HISTORY

Public transportation, except for ferryboats, was not a part of everyday life until the 19th century, since home, work, and recreation were almost always within walking distance of each other. As cities grew and distances increased, horse-pulled stagecoaches were introduced to meet the need for better transportation for the few who could afford it, and the railroad was invented. The horsecar--initially a horse-pulled stagecoach body on special wheels that ran on rails--was devised to operate on the unpaved or poorly paved streets of that era.

As technology developed, elevated steam railroads, cable-pulled cars, electric streetcars, and underground electric trains all became common. Many of these developments were pioneered in the United States. All operated on rails, and it wasn't until the 1910-1920 period that improved street pavement and internal combustion engines led to the widespread introduction of buses. These are some of the more important milestones in that history.

The 19th Century: The Invention of Modern Urban Public Transportation

- | | |
|------|--|
| 1800 | Most Americans lived in rural areas. Only 322,000 people, 6.1 percent of the total U.S. population of 5.3 million, lived in urban areas. New York City was the nation's most populous city, with 60,000 people, nearly twice as many as 10 years earlier. People still walked everywhere, but the sudden growth of cities was creating a need for transportation alternatives. By the 1830 Census, shortly after the introduction of transit service, New York City's population exceeded 200,000. |
| 1827 | Transit service was first provided in New York City, using horse-drawn carriages. Abraham Brower provided service in lower Manhattan. Brower also introduced a vehicle designed especially for transit service, the horse-drawn <i>Omnibus</i> , in 1831. For 12½ cents, about \$3.30 in today's money, the traveler could ride about two miles from the Battery north to Bond Street. |
| 1832 | A year after the Omnibus entered service, the first horse-drawn street railway began operation in New York. The New York and Harlem Railway ran along the Bowery from Prince Street to 14th Street. |
| 1855 | The first common carrier railroad in the United States was the Baltimore and Ohio Railroad, with a line from Baltimore to Ellicott's Mills, now Ellicott City, MD, which opened in 1830. Which intercity railroad, however, operated the first service intended solely for commuters is uncertain. An 1855 New York and Harlem Railway timetable, by then using steam powered trains north of 32nd Street, listed 14 trains a day to and from Williams' Bridge, and seven as far as White Plains. |
| 1861 | The growing importance of urban transportation is exemplified by senior military leaders from both the North and South who were executives of street railways before and after the Civil War. Future Union General William Tecumseh Sherman was president of the Fifth Street Railroad in St. Louis, MO, when the Civil War started. Following the Civil War, former Confederate General P.G.T. Beauregard became president of the New Orleans and Carrollton Street Railway, now the St. Charles Avenue Streetcar Line of the New Orleans Regional Transit Authority. |

**MILESTONES IN HISTORY
INCLUDES ENTIRE TRANSIT INDUSTRY**

TABLE 127: MILESTONES IN PUBLIC TRANSPORTATION AND HIGH-SPEED RAIL HISTORY

1868	The first elevated railway opened in New York City. The West Side and Yonkers Patent Railway, a cable powered railway, was not successful and ceased operation in 1870. It was replaced in 1871 by the Westside Patented Railway Company, which successfully used trains pulled by small steam engines.
1872	The Great Epizootic of 1872 killed large numbers of horses used by street railways, 18,000 in New York City alone. The desire to reduce the risk, as well as the pollution associated with horse-driven cars, would lead to increased efforts to find mechanically powered substitutes.
1873	The first successful cable-hauled street railway, the Clay Street Hill Railroad, opened in San Francisco, CA. The sole remaining cable cars in the U.S. today are operated by the San Francisco Municipal Transportation Agency, but do not follow the 1873 route. Although often visualized as a transit mode solely for hilly terrains, cable cars were used throughout the country; in 1887 the Chicago City Railway was operating 150 three-car trains in regular service.
1880	The decades after the Civil War witnessed the growth of "main line" suburbs served by commuter railroads. Frequent train service allowed upper middle class professionals and executives to maintain large households in suburbs and commute to their employment in central cities. Examples of these main lines included the Chicago and Northwestern Railway reaching north from Chicago to Evanston, Wilmette, Winnetka, and Glencoe and the Pennsylvania Railroad line west from Philadelphia to Ardmore, Haverford, Bryn Mawr, and Villanova.
1882	On November 22, delegates from five cities met to form the Ohio Street Railway Association, the first state transit association.
1882	On December 13, 56 delegates of street railways met at Young's Hotel in Boston, MA to found the American Street Railway Association, APTA's original predecessor. Hardin H. Littell, General Manager of the Louisville City Railway Company was selected President. One delegate, Frank DeHass Robison, would later become a co-owner of two National League baseball teams, the Cleveland Spiders and the St. Louis Cardinals.
1883	The Brooklyn Bridge opened between New York and Brooklyn. One way to cross it was a 6,000 foot long cable car ride. It is believed to be the earliest publicly built and operated transit service. By 1907, streetcars and elevated trains carried more than one-quarter million riders a day over the bridge.
1888	The Union Passenger Railway in Richmond, VA, began regular service on February 2. The Union Passenger Railway was the first successful electrically powered streetcar service in the United States. The system's designer, Frank J. Sprague, would receive contracts to build 113 more electric street railways in the next two years.
1888	"The Great White Hurricane," a March blizzard, left 2 to 5 feet of snow across the Northeastern United States. Officially, 21 inches of snow fell in New York City. Official records are not available from that time for Boston. The blizzard is considered to be an early and important impetus for the creation of both the New York City and Boston subway systems. A March 13, 1888 <i>New York Times</i> article stated "that a system of really rapid transit which cannot be made inoperable by storms must be straightway devised and as speedily as possible be constructed."
1892	The Amalgamated Association of Street and Electric Railway Employees, now named the Amalgamated Transit Union (ATU), was founded. The ATU has the largest membership among unions that represent transit workers throughout the United States and Canada.

**MILESTONES IN HISTORY
INCLUDES ENTIRE TRANSIT INDUSTRY**

TABLE 127: MILESTONES IN PUBLIC TRANSPORTATION AND HIGH-SPEED RAIL HISTORY

- 1892 The first transit post office was operated by the St. Louis and Suburban Railway. Similar to a railway post office car on a railroad, the transit post office car had, in addition to the streetcar crew, a postal clerk to cancel and sort mail, and another to receive and drop off mail. A letter dropped in a white mail box would be picked up by a streetcar post office. Streetcar mail service was provided in 14 of America's largest cities. The United Railways and Electric Company of Baltimore, MD, was the last operator of streetcar mail service in 1929.
- 1894 The Census Office of the Department of Interior published the 1890 Census of Street Railway Transportation. The Census found that Americans took two billion trips on street railways in 1890. Although the number of street railways using electric power had grown from zero in 1885 to 144 in 1890, most street railways remained horse powered. Of the 32,505 streetcars in service, 2,805 were electrically powered, 2,113 were steam powered, 5,089 were cable cars, and 22,408 were pulled by animals.
- 1897 The first section of the Tremont Street subway opened in Boston, MA. The first subway in the United States, it was built by the Boston Transit Commission, a public agency, to take streetcars operated by the private West End Street Railway off of the highly congested surface streets in downtown Boston.

The Early 20th Century: Subways and Infrastructure Investments Change the Urban Landscape

- 1900 The United States had become an urban nation during the 19th century. Introduction of the steel framed skyscraper, such as Chicago's 1890 Rand McNally Building and St. Louis's 1891 Wainwright Building, led to increased concentration of America's commerce in her central urban cores. Of the 76.2 million American residents, 39.6 percent or 30.2 million people lived in urban areas. New York City was the largest city, with 3.4 million people, Chicago and Philadelphia had more than one million residents, and St. Louis, Boston, and Baltimore more than 500,000. Transportation innovation and investment were vital for solving the congested transportation problems of the growing metropolises.
- 1904 The State of North Dakota Capital Car Line opens in Bismarck, ND. The Capital Car Line was the first rail transit system owned by a state government. It provided railway service from the Capitol building through downtown Bismarck.
- 1904 The first New York City subway line opened from City Hall to 145th Street. The subway was built by New York City and leased to the Interborough Rapid Transit Company for operation.
- 1904 The American Street Railway Association annual meeting was held in the Transportation Pavilion of the Louisiana Purchase Exposition in St. Louis, MO. Forty years later the Exposition would be celebrated in the movie *Meet Me in Saint Louis*, which included Judy Garland signing *The Trolley Song*.
- 1905 The first transit bus, a gasoline powered double-decker, was operated by the Fifth Avenue Coach Company in New York City. Poorly maintained streets in many cities slowed introduction of buses. By 1926 there were 14,400 transit buses in operation, compared to 62,857 streetcars. The number of vehicles in transit bus service first exceeded the number of streetcars in 1939.
- 1905 The City of New York becomes the owner and operator of the Staten Island Ferry. The takeover followed Staten Island's consolidation into New York City in 1898.

**MILESTONES IN HISTORY
INCLUDES ENTIRE TRANSIT INDUSTRY**

TABLE 127: MILESTONES IN PUBLIC TRANSPORTATION AND HIGH-SPEED RAIL HISTORY

1906	The first municipally owned and operated electric street railway opened in Monroe, LA.
1908	The first of two pairs of tubes opened under the Hudson River, a second pair would open the following year. The first crossings of the Hudson River at New York, the tubes carried trains of the Hudson and Manhattan Railroad, now the Port Authority Trans-Hudson, or, more familiarly, PATH. For the first time railroad passengers could transfer to transit cars and quickly cross from New Jersey to New York without concern about the weather conditions affecting river traffic.
1910	A great Mississippi River bridge, named after Illinois Congressman and Senator William B. McKinley, who was also chief executive of the Illinois Traction System, opened. The McKinley Bridge brought Illinois Traction suburban streetcars and interurban trains directly into the downtown St. Louis, MO, area. Only the third bridge to cross the Mississippi at St. Louis, the bridge has now been rebuilt for pedestrian, bicycle, bus, and automobile traffic.
1914	The Chief Examiner of Accounts of the Interstate Commerce Commission stated that "In the preparation of the revision of the accounting rules contained in [the Uniform System of Accounts] . . . the Commission has had the cooperation of the Committee on a Standard Classification of Accounts of the American Electric Railway Accountants' Association." APTA predecessors also developed the standard motor bus accounting system and assisted in early Bureau of the Census publications of street railway data. APTA predecessors were the sole compilers and publishers of national transit data from the 1940s until the first National Transit Database (NTD) report was published by the Federal Transit Administration. APTA was a leader in developing the Uniform System of Accounts (USOA) which led to the NTD in 1979.
1914	The American Museum of Safety authorized the American Electric Railway Association to present the Anthony N. Brady Awards for Safety. The Boston Elevated Railway Company of Boston, MA, was the first winner of the Gold Medal for outstanding safety. Other honorees were the Public Service Railway Company, Newark, NJ, and the Northern Traction and Light Company, Akron, OH. APTA continues to present Bus and Rail Safety and Security Excellence Awards annually to recognize the efforts of transit agencies to provide safe travel for their passengers and a safe workplace for their employees.
1915	The Fourth Avenue Subway in Brooklyn, first line of the Dual Contracts, opened. Subway Contracts III and IV are a joint partnership, with New York City building the subways, and private companies owning and operating the rail transit systems. The Dual Contracts were among America's greatest civic investments, allowing residents of the shockingly overcrowded lower East Side of Manhattan to access lower-cost, higher-quality housing.
1917	Responding to labor shortages during World War I, street and elevated railways in a dozen cities hired female conductors for the first time. After the war, their numbers diminished, and by the 1930 Census only 17 women were employed as streetcar conductors. Women would again be hired during World War II as conductors as well as for other transit jobs traditionally held only by men.

**MILESTONES IN HISTORY
INCLUDES ENTIRE TRANSIT INDUSTRY**

TABLE 127: MILESTONES IN PUBLIC TRANSPORTATION AND HIGH-SPEED RAIL HISTORY

1918 The impact of cost increases and fixed revenues lead to consideration of widespread public takeover of transit properties. James D. Mortimer, President of the Milwaukee Electric Railway and Light Company, introduced a motion at the Annual Conference of the American Electric Railway Association describing the recent financial difficulties faced by street railways. He proposed that the best option for private street railways to remain in operation was to seek takeover by a public agency. The recommendation concluded that, "The American Electric Railway Association recommends to its Member Companies that they facilitate in every reasonable way the public acquisition of the present electric railway properties. . .". The motion was passed by the Conference attendees and referred to the Association Executive Committee, but no further action is known to have been taken.

Following World War I: Depression, a Second World War, and Public Roads for Private Vehicles Lead to Fluctuating Transit Decline and Growth -- Electric Railways Foretell High-speed Rail

1920 From 1910 to 1920, plans had been developed for rail rapid transit subway systems in many cities. World War I and wartime inflation, construction of serviceable streets for private vehicles, and economic slowdowns caused the delay and eventual cancellation of rapid transit subway investments in St. Louis, Pittsburgh, Los Angeles, Seattle, Chicago, Providence, and Detroit. Eleven miles of subway constructed in Cincinnati by 1923 were never finished or used. Nine miles of subway entered service in Rochester in 1927, but the interurbans that used them had all stopped operating by 1931, and only a single streetcar line continued in the Rochester Subway until 1956.

1925 Transit systems in Seattle (1914), Detroit (1921), San Francisco (1912), New York (1932), and Boston (1918) came under public ownership or public control because of inflation, fixed fares, increased public investments in roads, later the economic depression, and other fiscal stresses faced by transit systems. Major infrastructure investments such as subways and elevated lines were built by municipal and state governments for operation by private companies in Philadelphia, Boston, and New York.

1928 The first "park and ride" lot allowed a commuter to park at Upper Darby, PA, and take the Philadelphia Rapid Transit Company's Market Street elevated train into downtown Philadelphia. That lot is no longer there, the space being part of the Southeastern Pennsylvania Transportation Authority's modern 69th Street Transportation Center. More than 850,000 transit agency provided parking spaces are now available to transit multimodal commuters and many more are provided in municipal parking facilities at transit stations.

1930 Among the highest-speed trains in the early 20th Century were electric transit interurbans. The Cincinnati and Lake Erie Railroad, which operated an interurban system from Cincinnati to Toledo, OH, introduced its lightweight *Red Devil* cars, which operated at 90 mph. One *Red Devil* reached 97 mph as it outran a biplane in front of the publicist's movie camera.

1936 The first delivery of an Electric Railway Presidents' Conference Committee (PCC) streetcar was made to the Pittsburgh Railways. The PCC was a light-weight, streamlined streetcar with significantly advanced design and technology compared to older vehicles. The new streetcars were intended to reduce costs and help stem ridership declines on street railways. Nearly 5,000 were built in the United States and Canada, with the last deliveries in 1952. About 20,000 vehicles based on the PCC design were also built in Belgium, Italy, Spain, Czechoslovakia, and Poland.

TABLE 127: MILESTONES IN PUBLIC TRANSPORTATION AND HIGH-SPEED RAIL HISTORY

1937	Works Project Administration (WPA) funding was provided to the Boston Transit Department to help finance the Huntington Avenue Subway and the City of Chicago to help finance the State Street Subway. These are examples of early transit investments made by the WPA and Public Works Administration as the federal government sought to stimulate the economy to end the Great Depression.
1941	Another high-speed electric transit interurban train, the streamlined articulated Chicago North Shore and Milwaukee Railroad <i>Electroliner</i> , operating between the line's namesake cities, entered service. Although the four-car trains were operated at 110 mph in tests, they were restricted to 90 mph in service.
1943	The American Transit Association published the first issue of the <i>Public Transportation Fact Book</i> , originally titled "The Transit Industry in the United States, Basic Data and Trends." The Census Bureau had not published its quinquennial transit data summary in 1942, so the ATA issued an alternative publication.
1943	The American Transit Association published the first issue of <i>Passenger Transport</i> , the newspaper of the public transportation industry. The lead story in the first issue was "New England Regional Bus Conference Deals with Wartime Problems of Transit Industry." Now published by APTA in print and electronic editions, <i>Passenger Transport</i> is "the source for public transportation news and analysis." The most recent issue and archived stories can be accessed in APTA's web page at www.apta.com .
1944	African Americans were first hired for jobs from which they had previously been excluded such as streetcar conductors and motormen. Maya Angelou, renowned author and poet, became the first African-American woman streetcar conductor in San Francisco when she was hired by the Market Street Railway Company at the age of 16. At about the same time, Mrs. Arcola Philpott became the first African-American motorman, then called a "motormanette" because she was female, on the Los Angeles Railway.
1945	Transit agencies set records for passenger use: 23.4 billion trips in 1945, the last year of World War II, and 23.5 billion trips in 1946. Sales of new automobiles to civilians had ended on New Year's Day 1942. A national speed limit of 35 miles per hour was imposed, many people had a six-day work week, gasoline was rationed until August 1945, and tires until December 1945. Returning military veterans increased travel demand sufficiently before autos again became available to make the year after the War the highest for transit travel by the smallest of margins.

The Post World War II Period: Completion of Public Ownership Movement, Social Change, and Federal Participation in Transit; Continued Development of High-Speed Rail

1946	The American Transit Association offered a prize on its national radio program, <i>Spotlight on America</i> , to determine the identity of the person who originated the expression, "Kilroy was here." That phrase and a cartoon of a long-nosed, two-eyed face peering over a wall was seen everywhere in the world that American troops went during World War II, even in ship compartments that had been sealed since the day they were built. The most credible story was given by James J. Kilroy, a shipyard inspector from Halifax, MA. His prize: a 36-year-old, 50-foot-long streetcar which, when delivered to his house, became the sleeping area for six of his nine children.
------	---

**MILESTONES IN HISTORY
INCLUDES ENTIRE TRANSIT INDUSTRY**

TABLE 127: MILESTONES IN PUBLIC TRANSPORTATION AND HIGH-SPEED RAIL HISTORY

1955	Rosa Parks, a seamstress in Montgomery, AL, refused to follow segregated bus seating laws. Her action was one of the important early symbols in the Civil Rights Movement, leading to the Montgomery Bus Boycott which brought the Rev. Martin Luther King, Jr. to national prominence. Ms. Parks was the first recipient of APTA's Lifetime Achievement Award in 1997.
1955	Cleveland, OH was the first urban area to open a new heavy rail system since Philadelphia in 1907. Heavy rail systems provide the high capacity service needed for very large urban developments. Since 1955, heavy rail systems have been built in the San Francisco, Washington, DC, Atlanta, Baltimore, Miami, Los Angeles, and San Juan urban areas.
1961	President John F. Kennedy said that mass transportation is, ". . . a distinctly urban problem and one of the key factors in shaping community development," when he signed the Housing Act of 1961 on June 30. The Act provided public transportation demonstration funding and mass transportation project loans.
1964	President Lyndon B. Johnson signed the Urban Mass Transportation Act of 1964 on July 9. The Act established a federal transit aid program under the Administrator of the Housing and Home Finance Agency. The president said, "This is by any standard one of the most profoundly significant domestic measures to be enacted by the Congress during the 1960's."
1965	The U.S. Congress passed the High-Speed Ground Transportation Act of 1965 to foster growth of high-speed rail. The law authorized \$90 million over three years to "contract for demonstrations to determine the contributions that high-speed ground transportation could make to more efficient and economical intercity transportation systems."
1967	The United States Department of Transportation (DOT), which was created by an Act of Congress and signed into law by President Lyndon B. Johnson on October 15, 1966, began operation on April 1, 1967.
1968	Hopkins Airport in Cleveland, OH became the first U.S. airport to be accessed by rail transit service when the Cleveland Transit System Rapid was extended 4 miles. Today airports in many American cities have direct rail transit service.
1968	The federal government Reorganization Plan No. 2 of 1968 transferred the transit program to the Department of Transportation effective July 30, creating the Urban Mass Transit Administration (UMTA), the original name of the Federal Transit Administration.
1969	The Penn Central Company began operation of electrical multiple unit <i>Metroliner</i> trains, developed under the provisions of the High-Speed Ground Transportation Act of 1965. In 1952, the Pennsylvania Railroad <i>Congressional</i> train had taken 3 hours 35 minutes to travel from New York City to Washington at an average speed of 63 mph. A <i>Metroliner</i> making all stops could make the same trip in 2 hours 59 minutes at an average speed of 76 mph and a non-stop trip in 2 hours 30 minutes at an average speed of 91 mph. The trains had a top speed of 125 mph.
1969	The first Automatic Vehicle Location (AVL) system for transit buses was initiated by the Chicago Transit Authority. An AVL system tracks the location of buses. It can measure schedule adherence and track operating and maintenance data. Location information from an AVL system provides data for estimating times of vehicle arrival at bus stops and stations in real time and activating next stop announcements aboard transit vehicles.

INCLUDES ENTIRE TRANSIT INDUSTRY**

TABLE 127: MILESTONES IN PUBLIC TRANSPORTATION AND HIGH-SPEED RAIL HISTORY

1969	The <i>Turbo Train</i> , a high-speed turbine powered articulated tilt-train design supported by the High-Speed Ground Transportation Act of 1965, enters service between Boston and New York City on the Penn Central Railroad. Although the highest speed they operated at in regular service was 90 to 100 mph, in tests one train reached 170 mph.
1969	Construction of the Bay Area Rapid Transit District's 6-mile-long, 3.6 miles under water, Transbay Tube was completed in August. Fifty-seven pre-made sections of tunnel were lowered to the floor of San Francisco Bay to make the tunnel. Completion of the system lay ahead before trains began running through the Transbay Tube in 1974. During this period BART's chief executive was B. R. Stokes, who would become the first head of the American Public Transit Association.
Late 20th Century: Growth and Investment Foster Modern Transit Infrastructure That Permits Rational and Sustainable Growth of Large Metropolitan Areas	
1972	President Richard M. Nixon signs the National Capital Transportation Act of 1972 to help continue funding for the Washington Metro, which the President describes as "the area wide rapid rail transit system which figures so centrally in our vision of a new Washington for the Bicentennial and beyond." The Washington Metrorail system opened in 1976.
1972	An early, federally sponsored, Dial-a-Ride demonstration program opened in Haddonfield, NJ. Dial-a-Ride service, better known as paratransit or demand response service, provides transit service directly from a transit patron's origin to their destination. Demand response service is an essential part, along with accessible fixed-route service transit vehicles, in meeting the needs of disabled transit riders. In 2012, 765 transit service providers in urbanized areas and 1,163 transit service providers in rural areas operated demand response service.
1973	The El Monte Busway in Los Angeles, CA opened. It was among the early high-occupancy vehicle roadways and the first in the Los Angeles area. Busways are a component of Bus Rapid Transit service (BRT). BRT increases the speed and capacity of bus service by using dedicated rights-of-way, fares paid in stations, signal preemption, and other means of increasing bus speed.
1974	The American Transit Association and the Institute for Rapid Transit merged on October 17 to create the American Public Transit Association, now named the American Public Transportation Association.
1974	President Gerald R. Ford signed the National Mass Transportation Assistance Act of 1974, which distributed federal funds by formula for the first time in order to ensure that funding is available to help meet the transit needs of all of America's urban areas.
1979	Speaking before 2,600 delegates at the American Public Transit Association Annual Meeting, President James E. Carter, Jr. said that "Better mass transit will help us attack a whole range of critical, interrelated problems, not just energy, but also inflation, unemployment, the health of our environment, and the vitality of our cities."

**MILESTONES IN HISTORY
INCLUDES ENTIRE TRANSIT INDUSTRY**

TABLE 127: MILESTONES IN PUBLIC TRANSPORTATION AND HIGH-SPEED RAIL HISTORY

1981	The first National Transit Database (NTD) report, with data for Report Year 1979, is published by the Federal Transit Administration in May 1981. The reporting system, which was originally called Project FARE, is the culmination of a 1971 request by the American Transit Association and Institute for Rapid Transit for the federal government to fund development of a uniform financial reporting system. The operating and financial data reporting system is among the most complete transportation data collection systems for any transportation mode in the world.
1981	APTA held its first triennial Transit Expo trade show in conjunction with its Annual Meeting at McCormick Place in Chicago, IL.
1981	The first new light rail system in 46 years opened in San Diego, CA. The San Diego Trolley, Inc., a subsidiary of the San Diego Metropolitan Transit System, now serves 53 stations over 54 miles of line. The previous entirely new light rail system was the Newark City Subway, now operated by New Jersey Transit, which opened in 1935. By 1981, only 7 surface rail systems remained in operation in the United States. There are now 35 streetcar and light rail systems, a five-fold increase since 1981.
1982	The Municipality of Metropolitan Seattle began fabricating exterior bicycle racks for buses in its own maintenance facilities to expand its bikes on buses demonstration program that had started in the late 1970s. By 2013, 74 percent of all transit buses had exterior bicycle racks.
1983	President Ronald W. Reagan signed the Surface Transportation Assistance Act of 1982, which provides for a portion of the federal motor fuel tax to be used for public transportation investments. The amount of the tax collected would be increased in the Omnibus Budget Reconciliation Act of 1990, signed by President George H. W. Bush, and by the Omnibus Budget Reconciliation Act of 1993, signed by President William J. Clinton.
1984	The Deficit Reduction Act of 1964 directed the Internal Revenue Service to treat employer payments for transit commuting up to \$15 per month as a non-taxable " <i>de minimus</i> " fringe benefit. The Commuter Benefit allows employees to receive free parking or transit fare media from their employers tax free or to receive them as part of their compensation on a pre-tax basis. The Commuter Benefit has fluctuated in value since then and until December 2014 was \$130 per month for transit media and \$250 per month for parking.
1987	Lieutenant Hikaru Sulu, Helm Officer and Tactical/Weapons Officer of the USS Enterprise – played on the television show <i>Star Trek</i> by APTA Vice President Human Resources George Takei – became the first intergalactic transit commuter to open an APTA Expo.
1990	The newly enacted Americans with Disabilities Act requires that fixed-route transit service be accessible to persons with disabilities and that transit operators provide complimentary demand response service for persons with disabilities who cannot use fixed-route service. Passenger trips on demand response services increased from 68 million in 1990 to 223 million in 2013.
1991	The Federal Transit Act Amendments of 1991, Title III of the Intermodal Surface Transportation Efficiency Act of 1991 (ISTEA) established the current format of federal transit law. This Act also changed the name of the Urban Mass Transit Administration to its current name, the Federal Transit Administration.

**MILESTONES IN HISTORY
INCLUDES ENTIRE TRANSIT INDUSTRY**

TABLE 127: MILESTONES IN PUBLIC TRANSPORTATION AND HIGH-SPEED RAIL HISTORY

- 1994 Transit Cooperative Research Program Report Number 1, *Artificial Intelligence for Transit Railcar Diagnostics*, was published. The TCRP was authorized by ISTEA as a cooperative effort by the Federal Transit Administration, the Transportation Research Board, and the Transit Development Corporation, Inc. (TDC), a nonprofit educational and research organization established by APTA. Research is necessary to solve transit operating problems, to adapt appropriate new technologies from other industries to transit use, and to introduce innovations into the transit industry. The TCRP serves as one of the principal means by which the transit industry can develop innovative near-term solutions to meet demands placed on it. TCRP publications can be accessed from www.tcrponline.org.
- 1998 The Passenger Rail Equipment Standards program was established by APTA to develop safety standards for commuter rail cars. The PRESS program has grown into the APTA Standards Program, which publishes standards that include transit operating standards and procedures, standards for inspection and maintenance of equipment and structures, and testing requirements for transit equipment. Current APTA standards can be accessed at www.apta.com.
- 1999 The Washington Metropolitan Area Transit Authority introduced 21st Century fare collection technology in the last year of the 20th Century. Called 'smart cards,' and now adopted by transit agencies across the U.S., the new fare media uses imbedded computer chips to provide for value storage to pay for fares and parking and adjust payments for distance, time of day, day of week, transfers, and discounts. Value can be added to the cards over the internet or by employers who take advantage of Internal Revenue Service commuter fare programs. A single smart card can be used on most transit agencies in large metropolitan areas. The Washington Metro card, for example, can also be used to travel on transit systems in the District of Columbia, Northern Virginia, Central Maryland, and Baltimore.

The 21st Century: Technological Change and Shared Government Commitments Lead to Increased Efficiency, Effectiveness, and Equity for Transit Agencies and Their Growing Number of Riders

- 2000 The 20th Century had witnessed continued urban concentration. In 2000, 79 percent, or 222 million out of America's 281 million people, lived in urban areas. New York City had grown to 8 million people and the New York urbanized area contained nearly 18 million people. Thirty-eight urbanized areas had populations of over 1 million.
- 2000 The American Public Transit Association was renamed the American Public Transportation Association to more fully describe the wide range of urban and rural transportation services provided by its members.
- 2000 *Acela Express* trains began providing high-speed electric railroad service in the Northeast Corridor, with some trains traveling the entire route from Washington to Boston. The tilting train sets can reach a maximum speed of 150 mph. Acela and other Amtrak service had become so popular that by 2012, 75 percent of combined rail and airplane travel between Washington and New York was via Amtrak and 54 percent of combined rail and airplane travel between New York and Boston was carried on Amtrak.
- 2000 Transit buses began adopting sophisticated technology. Four percent of buses had hybrid, natural gas, and other environmentally-friendly power in 2000, compared to 40 percent of buses by 2013. The portion of buses with automatic vehicle location (AVL) equipment increased from 19 percent in 2001 to 71 percent in 2013. AVLs are important in improving the efficiency of bus scheduling and operations, as well as allowing transit agencies to provide real-time bus arrival information to transit passengers.

INCLUDES ENTIRE TRANSIT INDUSTRY**

TABLE 127: MILESTONES IN PUBLIC TRANSPORTATION AND HIGH-SPEED RAIL HISTORY

2005	President George W. Bush signed the Safe, Accountable, Flexible, Efficient Transportation Equity Act: A Legacy for Users (SAFETEA-LU) which increased federal assistance for transit. In 2008, he would sign the Passenger Rail Investment and Improvement Act which also increased federal support for Amtrak intercity rail and the development of high-speed rail corridors.
2006	Ridership exceeded 10 billion unlinked passenger trips for the first time since 1957. In 2005, the number of commuters using public transit as their primary means of getting to work had exceed 6.2 million for the first time since 1970.
2007	The High Speed Ground Transportation Association became part of APTA, adding advocacy for high-performance intercity rail to APTA's mission.
2008	An estimated 25 transit agencies were using virtual dissemination technology to make real-time passenger information (RTIP) available to the public. Real-time bus and train arrival and departure data allow potential transit riders to make informed decisions about their travel. Five years later, in 2013, more than one-half of transit agencies surveyed by APTA provided arrival and departure times for passengers.
2008	The first "Transportation Tuesday at APTA" evening discussion event was held at the APTA offices. Robert Puentes, senior fellow and director of Brookings Institution's Metropolitan Infrastructure Initiative spoke about the economic impact of infrastructure investment. Since then APTA Transportation Tuesdays have featured Federal Transit Administration Acting Administrator Therese McMillan, Federal Highway Administrator Victor Mendez, Federal Railroad Deputy Administrator Karen Rae, National Transportation Safety Board Chairman Debbie Hersman, U.S. DOT Assistant Secretary for Policy Polly Trottenberg, and U.S. DOT Assistant Secretary for Budget and Programs Sylvia Garcia.
2009	President Barack H. Obama signed the American Recovery and Reinvestment Act which provided funding to stimulate the economy through construction of infrastructure and other investments. Federal funding for public transit and high-speed rail was a significant part of recovery policy.
2012	The Moving Ahead for Progress in the 21 st century Act (MAP-21), current federal public transportation law which connects transit performance to national policy goals, was signed into law by President Barack H. Obama.

GLOSSARY

Definitions are grouped by topic in the following categories:

- General Definitions
- American Community Survey Commuter Mode Definitions
- American Housing Survey Service Availability Definitions
- Employee and Labor Definitions
- Energy Use and Vehicle Power Definitions
- Financial - Capital Expense Definitions
- Financial - Operating Expense Definitions
- Financial - Passenger Fare Structure Definitions
- Financial - Revenue Definitions
- Infrastructure – Rights-of-Way and Maintenance Facility Definitions
- Infrastructure – Passenger Station Definitions
- Intercity Railroad Definitions
- Mode of Service Definitions
- Operating Data - Service Supplied Definitions
- Passenger Data - Service Consumed Definitions
- Vehicle Characteristics Definitions
- Vehicle Equipment Definitions

GENERAL DEFINITIONS:

Public Transportation (also called **transit**, **public transit**, or **mass transit**) is transportation by a conveyance that provides regular and continuing general or special transportation to the public, but not including school buses, charter, or sightseeing service.

Transit agency (also called **transit system**) is an entity (public or private) responsible for administering and managing transit activities and services. Transit agencies can directly operate transit service or contract out for all or part of the total transit service provided. When financial and oversight responsibility is with a public entity, it is a **public transit agency**. When more than one mode of service is operated, it is a **multimodal transit agency**.

AMERICAN COMMUNITY SURVEY COMMUTER MODE DEFINITIONS:

The U.S. Census Bureau American Community Survey includes data on the primary travel mode used by commuters. These data are summarized in the "Service Availability and Commute Mode Data" section of this report. The transit travel mode categories used in Census Bureau surveys and publications do not conform to those used by the Federal Transit Administration and APTA.

Commuters are persons travelling to work.

Means of Transportation to Work is "the principal mode of travel or type of conveyance that the worker usually used to get from home to work during the reference week. People who used different means of transportation on different days of the week were asked to specify the one they used most often, that is, the greatest number of days. People who used more than one means of transportation to get to work each day were asked to report the one used for the longest distance during the work trip." (Bureau of the Census, *American Community Survey and Puerto Rico Community Survey 2013 Subject Definitions*, Page 91)

Individual Means of Transportation to Work are described in instructions that accompany the ACS survey form. The following are quoted from the Bureau of the Census, *Your Guide for the American Community Survey*, 2014, Page 12, Question 31.

"Mark only one box to indicate the method of transportation used to travel the *longest distance* to work last week.

- Mark the "**Car, truck, or van**" box if the person drove a station wagon, company car, light truck of 1-ton capacity or less, truck cab, mini bus, or private limousine (NOT for hire).
- Mark the "**Streetcar or trolley car**" box if the person took light rail or other vehicle that operates on tracks or rails with overhead electrical wires.
- Mark the "**Subway**" box if the person took a subway, or other vehicle that operates on tracks or rails with complete separation from other vehicle and pedestrian traffic.
- Mark the "**Railroad**" box if the person took Amtrak, or any other commuter train with occasional railroad crossings for vehicle and pedestrian traffic.
- Mark the "**Taxicab**" box if the person took a limousine such as an airport limousine for which a fare is charged. (Included in "Other Means of Travel" in this report.)
- Mark the "**Motorcycle**" box if the person rode a motorbike, moped, motor scooter, or similar vehicle that is motor driven. (Included in "Other Means of Travel" in this report.)
- Mark the "**Bicycle**" box if the person rode a bicycle or other vehicle that is pedaled. (Included in "Other Means of Travel" in this report.)
- Mark the "**Walked**" box ONLY if the person walked all the way to work and used no other means of transportation.
- Mark the "**Worked at home**" box if the person worked on a farm where he/she lives, or an office or shop in the person's own home.
- Mark the "**Other method**" box if the person took an airplane, helicopter, horse, horse and buggy, boat (other than public ferries), large motor home, dog sled, large truck or truck rig, All-Terrain Vehicle (ATV), snow machine/snowmobile, Segway® or other self-balancing electric vehicle, skateboard, inline skates, or motorized chair. (Included in "Other Means of Travel" in this report.)"

The categories **Bus or Trolley Bus** and **Ferryboat**, which are on the survey form, are not included in these instructions.

Railroad is a U.S. Census transit mode name that is the same as "Commuter Rail" as used by APTA and the FTA.

Streetcar or Trolley Car is a U.S. Census Transit mode name that is the same mode as "Light Rail" as used by APTA and the FTA.

Subway or Elevated is a U.S. Census transit mode name that is the same mode as "Heavy Rail" as used by APTA and the FTA.

AMERICAN HOUSING SURVEY SERVICE AVAILABILITY DEFINITIONS

The American Housing Survey (AHS) is conducted by the Bureau of the Census in odd numbered years. It has asked, in different phraseology, if a household has access to transit service. The meaning of access is not defined and is determined by the person being surveyed.

Household is a U.S. Census term for the group of all people who occupy a particular housing unit as their usual residence, or who live there at the time of the Census interview and have no usual residence elsewhere. The usual residence is the place where the person lives and sleeps most of the time.

Public transportation. The American Housing Survey definition of public transportation varies from the definition used otherwise in the report and "includes public bus or subway, taxicabs, trains, ferryboats, or any type of transportation service that is available to the public. Also included are bus or van service provided by the management of a housing development for its residents. School buses are not included as public transportation." This definition is taken from the 2009 AHS glossary.

EMPLOYEE AND LABOR DEFINITIONS:

Capital Employee is a transit agency employee whose labor hour cost is reimbursed under a capital grant or is otherwise capitalized. Generally, only large transit agencies have such employees. Employees of contractors and suppliers of products are not included.

Employee is a person who works for a transit agency including employees of providers of purchased transportation service..

Employee Compensation is the sum of the amount of pay employees receive in salaries and wages plus the cost to the transit agency on fringe benefits to employees and employment related tax payments. Only compensation for employees of the transit agency is included, compensation for employees of purchased transportation service providers is reported in purchased transportation expense.

Fringe Benefits are payments to employees for time not actually worked and the cost of other employee benefits to the transit agency. Payment for time not actually worked includes payments to the employee for vacations, sick leave, holidays, and other paid leave. Other benefits include transit agencies payments to other organizations for retirement plans, social security, workmen's compensation, health insurance, other insurance, and other payments to other organizations for benefits to employees. Only fringe benefit payments for employees of the transit agency are included, fringe benefit payments for employees of purchased transportation service are reported in purchased transportation expense

General Administration Employee is an operating employee who is an executive, professional, supervisory, or secretarial transit system person engaged in general management and administration activities: preliminary transit system development, customer services, promotion, market research, injuries and damages, safety, personnel administration, general legal services, general insurance, data processing, finance and accounting, purchasing and stores, general engineering, real estate management, office management and services, general management, and planning.

Non-Vehicle Maintenance Employee is an operating employee who is an executive, professional, supervisory, or secretarial transit system person engaged in non-vehicle maintenance, a person providing maintenance support to such persons for inspecting, cleaning, repairing and replacing all components of: vehicle movement control systems; fare collection and counting equipment; roadway and track; structures, tunnels, and subways; passenger stations; communication system; and garage, shop, operating station, general administration buildings, grounds and equipment. In addition, it includes support for the operation and maintenance of electric power facilities.

Number of Employees is the number of actual persons directly working for a transit agency, regardless of whether the person is full-time or part-time. Persons employed by agencies contracting to the transit system are not counted.

Operating Employee is an employee engaged in the operation of the transit system. Operating employees are classified into four categories describing the type work they do: general administration, non-vehicle maintenance, vehicle maintenance, and vehicle operations.

Salaries and Wages are payments to employees for time actually worked. Only salaries and wages for employees of the transit agency are included, salaries and wages for employees of purchased transportation service providers are reported in purchased transportation expense.

Total Compensation is the sum of Salaries and Wages and Fringe Benefits. Only compensation for employees of the transit agency is included, compensation for employees of purchased transportation service providers is reported in purchased transportation expense.

Vehicle Maintenance Employee is an operating employee who is an executive, professional, secretarial, or supervisory transit system person engaged in vehicle maintenance, a person performing inspection and maintenance, vehicle maintenance of vehicles, performing servicing functions for revenue and service vehicles, and repairing damage to vehicles resulting from vandalism or accidents.

Vehicle Operations Employee is an operating employee who is an executive, professional, or supervisory transit system person engaged in vehicle operations, a person providing support in vehicle operations activities, a person engaged in ticketing and fare collection activities, or a person engaged in system security activities.

ENERGY USE AND VEHICLE POWER DEFINITIONS:

Alternate Power is fuel or electricity generated from fuel that is substantially not petroleum.

Electric Power Consumption is the amount of electricity used to propel transit vehicles, also called **propulsion power**. Does not include electricity used for lighting, heating, or any use other than propulsion power.

Fossil Fuel is any fuel derived from petroleum or other organic sources including diesel fuel, compressed natural gas, gasoline, liquefied natural gas, liquid petroleum gas or propane, and kerosene.

Generated by Transit System [electric power] is propulsion power generated in facilities owned by the transit agency of a company of which the transit system is a subsidiary. These data were last reported in 1957. Prior to that time electric railways had been owned by power generation companies.

Purchased [electric power] power is propulsion power purchased from commercial power generation companies that are not affiliated with the electric railway. These data were last reported in 1957. Prior to that time electric railways had been owned by power generation companies.

FINANCIAL - CAPITAL EXPENSE DEFINITIONS:

Capital Expenses are expenses related to the purchase of equipment. Equipment means an article of non-expendable tangible personal property having a useful life of more than one year and an acquisition cost which equals the lesser of: the capitalization level established by the government unit for financial statement purposes or \$5,000. Capital expenses do not include all expenses which are eligible uses for federal capital funding assistance; some of those expenses are included with operating expenses in the National Transit Database accounting system used herein.

Facilities capital expenses include administration, central/overhaul maintenance facilities, light maintenance and storage facilities, and equipment of any of these items.

Other capital expense includes furniture, equipment that is not an integral part of buildings and structures, shelters, signs, and passenger amenities (e.g., benches) not in passenger stations.

Rolling Stock capital expense is expense for the revenue vehicles used in providing transit service for passengers. The term revenue vehicles includes the body and chassis and all fixtures and appliances

inside or attached to the body or chassis, except fare collection equipment and revenue vehicle movement control equipment (radios). For rubber tired vehicles, it includes the cost of one set of tires and tubes to make the vehicle operational, if the tires and tubes are owned by the transit agency.

FINANCIAL - OPERATING EXPENSE DEFINITIONS:

Operating Expenses are the expenses associated with the operation of the transit agency, and classified by function or activity and the goods and services purchased. It is the sum of either the functions or the object classes listed below.

An **Operating Expense Function** is an activity performed or cost center of a transit agency. The four basic functions are:

General Administration includes all activities associated with the general administration of the transit agency, including transit service development, injuries and damages, safety, personnel administration, legal services, insurance, data processing, finance and accounting, purchasing and stores, engineering, real estate management, office management and services, customer services, promotion, market research and planning.

Non-Vehicle Maintenance includes all activities associated with facility maintenance, including: maintenance of vehicle movement control systems; fare collection and counting equipment; structures, tunnels and subways; roadway and track; passenger stations, operating station buildings, grounds and equipment; communication systems; general administration buildings, grounds and equipment; and electric power facilities.

Vehicle Maintenance includes all activities associated with revenue and non-revenue (service) vehicle maintenance, including administration, inspection and maintenance, and servicing (cleaning, fueling, etc.) vehicles.

Vehicle Operations includes all activities associated with the subcategories of the vehicle operations function: transportation administration and support; revenue vehicle operation; ticketing and fare collection; and system security.

An **Operating Expense Object Class** is a grouping of expenses on the basis of goods and services purchased. Nine Object Classes are reported as follows:

Casualty and Liability Costs are the cost elements covering protection of the transit agency from loss through insurance programs, compensation of others for their losses due to acts for which the transit agency is liable, and recognition of the cost of a miscellaneous category of corporate losses.

Employee Compensation is the sum of "Salaries and Wages" and "Fringe Benefits."

Fringe Benefits are the payments or accruals to others (insurance companies, governments, etc.) on behalf of an employee and payments and accruals direct to an employee arising from something other than a piece of work.

Materials and Supplies are the tangible products obtained from outside suppliers or manufactured internally. These materials and supplies include tires, fuel and lubricants. Freight, purchase discounts, cash discounts, sales and excise taxes (except on fuel and lubricants) are included in the cost of the material or supply.

Other Operating Expenses is the sum of taxes, miscellaneous expenses, and expense transfers:

Purchased Transportation is transportation service provided to a public transit agency or governmental unit from a public or private transportation provider based on a written contract. Purchased transportation does not include franchising, licensing operation, management services, cooperative agreements or private conventional bus service.

Salaries and Wages are the pay and allowances due employees in exchange for the labor services they render in behalf of the transit agency. The allowances include payments direct to the employee arising from the performance of a piece of work. Also called "Labor."

Services include the labor and other work provided by outside organizations for fees and related expenses. Services include management service fees, advertising fees, professional and technical services, temporary help, contract maintenance services, custodial services and security services.

Utilities include the payments made to various utilities for utilization of their resources (e.g., electric, gas, water, telephone, etc.). Utilities include propulsion power purchased from an outside utility company and used for propelling electrically driven vehicles, and other utilities such as electrical power for purposes other than for electrically driven vehicles, water and sewer, gas, garbage collection, and telephone.

Total Operating Expense is the sum of all the object classes or functions.

FINANCIAL - PASSENGER FARE STRUCTURE DEFINITIONS:

Adult Base Cash Fare is the minimum cash fare paid by an adult for one transit ride; excludes transfer charges, zone or distance charges, express service charges, peak period surcharges, and reduced fares.

Magnetic Fare Cards are a single piece of paper, cardboard, or some other material with a magnetic strip good for a limited number of trips, unlimited rides during a fixed time period, or a monetary value that is altered by machine removal of some or all of the stored value as each trip is taken.

Passenger Fares are revenue earned from carrying passengers in regularly scheduled and demand response service. Passenger fares include: the base fare; zone premiums; express service premiums; extra cost transfers; and quantity purchase discounts applicable to the passenger's ride.

Passenger Fares Received per Unlinked Passenger Trip is "Passenger Fares" divided by "Unlinked Passenger Trips."

Peak Period Surcharge is an extra fee required during peak periods (rush hours).

Smart Fare Cards are a single piece of paper, cardboard, plastic, or some other material with a small computer chip good for one or more trips that is usually not surrendered but altered by machine removal of some or all of the stored value as each trip is taken.

Transfer Surcharge is an extra fee charged for a transfer to use when boarding another transit vehicle to continue a trip.

Zone or Distance Surcharge is an extra fee charged for crossing a predetermined boundary.

FINANCIAL - REVENUE DEFINITIONS:

Directly Generated Funds are any funds generated by or donated directly to the transit agency, including passenger fare revenues, advertising revenues, concessions, donations, bond proceeds, parking revenues, toll revenues from other sectors of agency operations such as bridges and roads, and

taxes imposed by the transit agency as enabled by a state or local government. Some Directly Generated Funds are funds earned by the transit agency such as fare revenues, concessions, and advertising, while other Directly Generated Funds are Financial Assistance such as taxes imposed by the transit agency. Directly Generated Funds are listed in two categories in Operating Funding Sources:

- (1) **Agency Funds, Other** are Directly Generated Funds that do not come from taxes.
- (2) **Government Funds, Directly Generated** are Directly Generated Funds that come from taxes.

Federal Assistance is financial assistance from funds that are from the federal government at their original source that are used to assist in paying the operating or capital costs of providing transit service.

Local Assistance is financial assistance from local governments (below the state level) to help cover the operating and capital costs of providing transit service. Some local funds are collected in local or regional areas by the state government acting as the collection agency but are considered local assistance because the decision to collect funds is made locally.

Passenger Fare Revenue is revenue earned from carrying passengers in regularly scheduled and demand response service. Passenger fares include: the base fare; zone premiums; express service premiums; extra cost transfers; and quantity purchase discounts applicable to the passenger's ride. Passenger Fare Revenue is listed only for operating revenue sources.

State Assistance is financial assistance obtained from a state government(s) to assist with paying the operating and capital costs of providing transit services.

Total Government Funds is the sum of Federal assistance, state assistance, local assistance, and that portion of directly generated funds that accrue from tax collections, toll transfers from other sectors of operations, and bond proceeds.

INFRASTRUCTURE - PASSENGER STATION DEFINITIONS:

ADA Accessible Stations are public transportation passenger facilities in compliance with the Americans with Disabilities Act, which essentially means wheelchairs have an unobstructed path from the station entrance to all platforms via elevators or ramps, that equipment and amenities such as vending machines and telephones are accessible, and that the vision and hearing-impaired are accommodated with audio and visible signals or announcements and Braille alternatives.

All-day Auto Parking Space are spaces in parking facilities or on nearby streets reserved or intended for transit passenger automobiles and other personal vehicles that are available for a full normal work day, - normally 10 hours or more.

Automated Vehicle Status Displays are electronic video display equipment that automatically provides information on the status of vehicles on routes serving that station.

Bicycle Spaces are small spaces in parking facilities or on nearby streets or sidewalks reserved or intended for transit passenger bicycles. The total is the sum of the number of slots in bicycle racks (not the number of racks) and the capacity of all bicycle lockers (one bicycle per locker is assumed unless capacity was reported as two bicycles).

Concessions are officially authorized sales units such as newsstands or newspaper boxes, food stands or food vending machines, convenience stores, dry cleaners, ATM machines, or musicians performing with a permit. Concessions do not include such services in nearby locations such as those on the ground floor of an adjacent office building that are off the station property and not officially authorized.

Informational Video Displays are electronic video display equipment that provides information other than vehicle status, such as advertising, news, or public service messages. It may also provide vehicle status information.

Motorcycle Spaces are small spaces about 3 feet wide and 6 feet long in parking facilities or on nearby streets reserved or intended for transit passenger motorcycles, mopeds, and motor scooters.

Part-day Auto Parking Spaces are spaces in parking facilities or on nearby streets reserved or intended for transit passenger automobiles and other personal vehicles that are available for less than a normal work day, such as 9:00 am to 3:00 pm mid-day parking or 30-minute kiss-and-ride parking.

Passenger Stations are passenger boarding/alighting facilities with a platform, but do not include on street or curb stops. For bus and trolleybus, includes transit centers, stations on transit malls, and stations on busways.

Public Address Systems are equipment used to make announcements to passengers--either from a station attendant or from a central control facility.

Restrooms are restroom facilities officially designated for passenger use. Restrooms do not include stations with private restrooms available only to transit staff.

Security Cameras are cameras which monitor the station, bus transfer area, and/or parking facility to provide information to station and security personnel.

INFRASTRUCTURE – RIGHTS-OF-WAY AND MAINTENANCE FACILITY DEFINITIONS:

Directional Route Miles is the mileage of the route public transit vehicles traverse in revenue service measured in each direction. One mile of track(s) or Lanes with service in two directions would be two directional route miles regardless of the number of tracks or lanes of roadway. Yard and service tracks or roadways are not counted.

Directional Route Miles of Lane, Controlled Right-of-Way is directional route miles on lanes restricted for at least a portion of the day for use by transit vehicles and other high occupancy vehicles.

Directional Route Miles of Lane, Exclusive Right-of-Way is directional route miles on lanes reserved at all times for transit use and/or other high occupancy vehicles.

Directional Route Miles of Lanes, Mixed Traffic is directional route miles of lanes used for transit operations that are mixed with pedestrian and vehicle traffic.

General Purpose Maintenance Facilities are facilities used for inspecting, servicing and performing light maintenance work upon revenue vehicles such as brake adjustments, engine degreasing, tire work, minor body repairs, and painting.

Heavy Maintenance Facilities are facilities used for performing heavy maintenance work on revenue vehicles such as unit rebuilds, engine overhauls, significant body repairs, and other major repairs.

Lane Miles, Controlled Right-of-Way is miles of lanes restricted for at least a portion of the day for use by transit vehicles and other high occupancy vehicles.

Lane Miles, Exclusive Right-of-Way is miles of lanes reserved at all times for transit use and/or other high occupancy vehicles.

Maintenance Facilities are buildings maintenance activities are conducted including garages; shops such as body shops, paint shops, and machine shops; and operations centers.

Miles of Lane is a measure of the amount of roadway traversed by fixed-route bus transit systems where each lane is counted separately regardless of the number of lanes on a roadway. The term is also used for the waterway distance traversed by ferry boats.

Miles of Track is a measure of the amount of track operated by rail transit systems where each track is counted separately regardless of the number of tracks on a right-of-way.

INTERCITY RAILROAD DEFINITIONS:

Intercity Railroad is a type of passenger transportation operated between cities using railroad trains, predominately over current or former freight railroad tracks and subject to jurisdiction by the Federal Railroad Administration. Such railroad service is generally characterized by longer-distance trips with single trip tickets for specific train departures. Intercity railroad trains provide passenger amenities not associated with commuter rail rains such as more comfortable, larger seats, dining and lounge facilities, and sleeping facilities. Currently, all intercity railroad service in the continental United States is operated by the National Railroad Passenger Corporation operating as Amtrak. Intercity passenger service is operated in Alaska by the Alaska Railroad and in Canada by VIA Rail Canada, Algoma Central Railway, and the Ontario Northland Railway. Intercity Railroad data in the *2013 Public Transportation Fact Book* report only data for Amtrak and do not include data for any other Intercity Railroad operations.

Systemwide statistics refer to National Railroad Passenger Corporation (Amtrak) intercity passenger railroad operations; they do not include Amtrak commuter railroad services operated under contract for transit agencies. There may be a limited amount of overlap in data reported in the *2013 Public Transportation Fact Book* for transit agencies and Amtrak statistics; therefore, Amtrak and transit statistics should not be considered completely additive.

MODE OF SERVICE DEFINITIONS:

Mode is a system for carrying transit passengers described by specific right-of-way, technology, and operational features.

Aerial Tramway is a mode of fixed-guideway transit service where a passenger car is suspended from an overhead cable or cables and is pulled between (normally two) stations by another cable.

Automated Guideway Transit (also called **personal rapid transit**, **group rapid transit**, or **people mover**) is a mode of fixed-guideway transit service where single vehicles or short trains, electrically powered with rail, beam, or concrete guideways, provide distributor or shuttle service without an on-board operator.

Bus is a mode of roadway transit service (also called **motor bus**) characterized by roadway vehicles powered by diesel, gasoline, battery or alternative fuel engines contained within the vehicle. Vehicles operate on streets and roadways in fixed-route or other regular service. Types of bus service include **local service**, where vehicles may stop every block or two along a route several miles long. When limited to a small geographic area or to short-distance trips, local service is often called **circulator**, **feeder**, **neighborhood**, **trolley**, or **shuttle service**. Other types of bus service are **express service**, **limited-stop service**, **commuter bus**, and **bus rapid transit (BRT)**. Beginning in 2011, data for Commuter Bus and Bus Rapid Transit are shown separately from the remaining types of bus service which continue to be termed Bus. NTD reporting agencies were not required to report Bus Rapid Transit separately from

Bus until 2013. Data for all of these types of bus service are included in the "Total Bus" columns on these historical data tables.

Bus Rapid Transit is a type of bus transit service characterized by vehicles operating on separate rights-of-way with high-frequency service, low-floor vehicles, stations, traffic signal priority or pre-emption, and other operating improvements which increase their speed and passenger capacity. Portions of the service may be non-fixed-guideway. To be reported in the National Transit Database high-frequency service must operate at least 14 hours per day with 10 minute peak period and 15 minute base period headways. Only agencies identifying their service as Bus Rapid Transit are included in Bus Rapid Transit data in this report. Bus Rapid Transit data were reported separately for the first time in the 2011 National Transit Database. NTD reporting agencies are not required to report Bus Rapid Transit separately from Bus until 2013.

Cable Car is a mode of fixed-guideway rail transit service where passenger cars or short trains are pulled by a cable buried in the ground between the guide rails. The cable is continuously moving and the cable car stops by being disengaged by the vehicle operator from the cable.

Commuter Bus is a type of bus transit service that provides high-speed longer distance service to commuters for their daily journey-to-work, typically using over-the-road type buses and operating during peak periods with multi-trip ticketing.. Commuter Bus service reported in the National Transit Database must operate at least five miles with closed doors for at least one section of its route. Only agencies identifying their service as Commuter Bus are included in Commuter Bus data in this report. Commuter Bus data were reported separately for the first time in the 2011 National Transit Database. NTD reporting agencies are not required to report Bus Rapid Transit separately from Bus until 2013.

Commuter Rail is a mode of fixed-guideway transit service (also called **metropolitan rail** or **suburban rail**) characterized by an electric or diesel propelled railway for urban passenger train service consisting of local short distance travel operating between a central city and adjacent suburbs. Service must be operated on a regular basis by or under contract with a transit operator for the purpose of transporting passengers within urbanized areas, or between urbanized areas and outlying areas. Such rail service, using either locomotive hauled or self propelled railroad passenger cars, is generally characterized by multi-trip tickets, specific station to station fares, railroad employment practices and usually only one or two stations in the central business district. Intercity railroad service is excluded, except for that portion of such service that is operated by or under contract with a public transit agency for predominantly commuter services. Most service is provided on routes of current or former freight railroads.

Demand Response is a mode of roadway transit service (also called **paratransit** or **dial-a-ride**) characterized by the use of comprised of passenger automobiles, vans or small buses operating in response to calls from passengers or their agents to the transit operator, who then dispatches a vehicle to pick up the passengers and transport them to their destinations. The vehicles do not operate over a fixed route or on a fixed schedule except, perhaps, on a temporary basis to satisfy a special need; and typically, the vehicle may be dispatched to pick up several passengers at different pick-up points before taking them to their respective destinations and may even be interrupted en route to these destinations to pick up other passengers. The following types of operations fall under the above definitions provided they are not on a scheduled fixed route basis: many origins-many destinations, many origins-one destination, one origin-many destinations, and one origin-one destination.

Ferry Boat is a mode of fixed-guideway transit service provided by vessels operating over a fixed water route between terminals. To be counted as transit service on these tables the ferry must operate in or near an urban area with frequent trips that allow commuting between parts of the area on a typical work day schedule. Portions of intercity ferry boat service are included in the National Transit Database if they are operated by or under contract to a public agency with predominately commuter service where at least 50 percent of passenger trips are taken by persons going both directions on a single day.

Fixed-Guideway is a grouping of transit services that have physical fixed-guideway such a rails, concrete channels, or overhead cables or operates on a fixed-route waterway such as ferry boats. Fixed-

Guideway modes reported on the fixed-guideway tables of this report include **aerial tramway, automated guideway transit, cable car, commuter rail, ferry boat, heavy rail, hybrid rail, inclined plane, light rail, monorail, and streetcar**. Trolleybus and bus on exclusive or controlled-access rights-of-way are considered fixed-guideway in the National Transit Database for data that are used in some formulas which distribute federal financial assistance; they are included with roadway modes on the tables in this report.

Heavy Rail is a mode of fixed-guideway transit service (also called **metro, subway, rapid transit, or rapid rail**) operating on an electric railway with the capacity for a heavy volume of traffic. It is characterized by high speed and rapid acceleration passenger rail cars operating singly or in multi-car trains on fixed rails; separate rights-of-way from which all other vehicular and foot traffic are excluded; sophisticated signaling, and high platform loading.

Hybrid Rail is a mode of fixed-guideway transit service which operates on railroad tracks that are part of the national railroad system, but does not have all commuter railroad operating characteristics. Vehicles are typically light rail type or diesel multiple units which do not meet Federal Railroad Administration standards and must therefore operate with temporal separation from freight railroad traffic. Before 2011 National Transit Database data reporting, Hybrid Rail systems were included in either Commuter Rail or Light Rail at the discretion of the reporting agency. Hybrid Rail data were reported separately for the first time in the 2011 National Transit Database.

Inclined Plane is a mode of fixed-guideway transit service which is a railway operating over exclusive right-of-way on steep grades (slopes) with powerless vehicles propelled by moving cables attached to the vehicles and powered by engines or motors at a central location not on board the vehicle. The special tramway type of vehicles has passenger seats that remain horizontal while the undercarriage (truck) is angled parallel to the slope.

Light Rail is a mode of fixed-guideway transit service (also called **streetcar, tramway, or trolley**) operating lightweight passenger rail cars singly (or in short, usually two-car or three-car, trains) on fixed rails in right-of-way that is not separated from other traffic for part or much of the way. Light Rail vehicles are typically driven electrically with power being drawn from an overhead electric line via a trolley or a pantograph; driven by an operator on board the vehicle; and may have either high platform loading or low level boarding using steps.

Monorail is a mode of fixed-guideway transit service which is an electric railway of guided transit vehicles operating singly or in multi-car trains. The vehicles are suspended from or straddle a guideway formed by a single beam, rail, or tube.

Publico is a mode of roadway transit service with passenger vans or small buses operated on fixed routes but no fixed schedules. They are a privately owned and operated vehicles which regulated through a public service commission, state or local government. Only Publicos operated in San Juan, Puerto Rico, are included in the National Transit Database.

Regional Railroad is a grouping of modes of fixed-guideway transit service that totals data for two other modes: Commuter Rail and Hybrid Rail. Regional Railroad is a grouping of modes by APTA for data reporting purposes and is not a grouping used by the Federal Transit Administration or the National Transit Database.

Roadway Modes is a grouping of transit modes which operate on public streets and highways. Roadway modes include **bus rapid transit, commuter bus, demand response, fixed-route bus, publico, trolleybus, and vanpool**. Trolleybus and bus service on exclusive or limited-access roadways is considered fixed-guideway for purposes of federal funding formula distributions but is considered Roadway Modes on these tables. Roadway Modes is a grouping of modes by APTA for data reporting purposes and is not a grouping used by the Federal Transit Administration or the National Transit Database.

Streetcar is a type of light rail transit service that operates primarily in city streets rather than exclusive rights-of-way and normally provides more distributor service rather than longer-distance service when compared to regular light rail service. Beginning in 2011, Streetcar data are differentiated from other Light Rail service in these tables. Only agencies identifying their service as Streetcar are included in Streetcar data in this report. Streetcar data were reported separately for the first time in the 2011 National Transit Database.

Surface Rail is a grouping of modes of fixed-guideway transit service that totals data for two other modes: Light Rail and Streetcar. Surface Rail is a grouping of modes by APTA for data reporting purposes and is not a grouping used by the Federal Transit Administration or the National Transit Database.

Total Bus is a grouping of modes bus type service: bus, bus rapid transit, and commuter bus. Total Bus is a grouping of modes by APTA for data reporting purposes and is not a grouping used by the Federal Transit Administration or the National Transit Database.

Trolleybus is a mode of roadway transit service (also called **trolley coach**) using vehicles propelled by a motor drawing current from overhead wires via a connecting pole called a trolley pole from a central power source not on board the vehicle. Trolleybus is included in fixed-guideway service in NTD data used for the distribution of some federal funding formula programs.

Vanpool (Transit Agency Brokered Service Only) is a mode of roadway transit service with ridesharing by prearrangement using vans or small buses providing round trip transportation between the participant's homes or prearranged boarding points and a common and regular destination. Data included in this report are the sum of vanpool data reported in the National Transit Database and do not include any data for vanpools not listed in the National Transit Database. Vanpool service reported in the NTD must be operated by a public entity, or a public entity must own, purchase, or lease the vehicle(s). Vanpool included in the NTD must also be in compliance with mass transit rules including Americans with Disabilities Act (ADA) provisions, be open to the public and that availability must be made known, and use vehicles with a minimum capacity of 7 persons.

Other Fixed-Guideway Modes of transit service not listed separately on modal tables include **ferry boat, aerial tramway, automated guideway transit** (also called **personal rapid transit, group rapid transit, or people mover**), **cable car, inclined plane, and monorail**. Not all of these modes of service are included in Other Fixed-Guideway Modes on each table; note clarifications in footnotes for modes that are included. Some older Other Fixed-Guideway Modes data may include undifferentiated roadway data.

OPERATING DATA - SERVICE SUPPLIED DEFINITIONS:

Average Vehicle Speed is the average speed in miles per hour for vehicle while in revenue service; calculated by dividing vehicle revenue miles by vehicle revenue hours.

Revenue Service is the operation of a transit vehicle during the period which passengers can board and ride on the vehicle. Revenue service includes the carriage of passengers who do not pay a cash fare for a specific trip as well as those who do pay a cash fare; the meaning of the phrase does not relate specifically to the collection of revenue.

Revenue Vehicle is a transit vehicle which carries passengers.

Vehicle Revenue Hours are the hours traveled when the vehicle is in revenue service (i.e., the time when a vehicle is available to the general public and there is an expectation of carrying passengers). Vehicles operated in fare-free service are considered in revenue service. Revenue service excludes school bus service and charter service. For conventionally scheduled services, vehicle revenue hours include running time and layover/recovery time.

Vehicle Revenue Miles are the miles traveled when the vehicle is in revenue service (i.e., the time when a vehicle is available to the general public and there is an expectation of carrying passengers). Vehicles operated in fare-free service are considered in revenue service. Revenue service excludes school bus service and charter service. For conventionally scheduled services, vehicle revenue miles are comprised of running miles available to passengers only, "deadhead" miles are not included.

Vehicle Total Hours are the hours a vehicle travels from the time it pulls out from its garage to go into revenue service to the time it pulls in from revenue service, including "deadhead" miles without passengers to the starting points of routes or returning to the garage. It is often called platform time. For conventional scheduled services, it includes both revenue time and deadhead time.

Vehicle Total Miles are all the miles a vehicle travels from the time it pulls out from its garage to go into revenue service to the time it pulls in from revenue service, including "deadhead" miles without passengers to the starting points of routes or returning to the garage. It is often called platform miles. For conventional scheduled services, it includes both revenue miles and deadhead miles.

PASSENGER DATA - SERVICE CONSUMED DEFINITIONS:

Average Passenger Load is the average number of passengers aboard a vehicle for its entire time in revenue service including late night and off-peak hour service as well as peak rush hour service; calculated by dividing passenger miles by vehicle revenue miles.

Average Trip Length is the average distance ridden for an unlinked passenger trip; calculated by dividing passenger miles by unlinked passenger trips.

Boardings per Mile is the average number of persons who board a vehicle while the vehicle is in revenue service; calculated by dividing unlinked passenger trips by vehicle revenue miles.

Passenger Miles is the cumulative sum of the distances ridden by all passengers.

Unlinked Passenger Trips is the number of times passengers board public transportation vehicles. Passengers are counted each time they board vehicles no matter how many vehicles they use to travel from their origin to their destination and regardless of whether they pay a fare, use a pass or transfer, ride for free, or pay in some other way. Also called **boardings**.

VEHICLE CHARACTERISTICS DEFINITIONS:

Accessible Vehicles are transit passenger vehicles that are accessible to, are usable by, and provide allocated space and/or priority seating for individuals who use wheelchairs.

Alternate Fuel Powered Vehicles are vehicles powered by fuel that is substantially not petroleum.

Average Vehicle Age is the number of years old all revenue vehicles are divided by the number of vehicles. The years of age are counted as one-half year for the year in which a vehicle was built plus one year for each calendar year since then.

Federal Transit Administration Minimum Useful Life is the age a revenue vehicle must be before an agency can receive federal financial assistance to replace that vehicle. The useful life varies by type of vehicle and may be shorter than stated for vehicles with excess use measured by miles travelled.

Revenue Vehicle (also called a passenger **vehicle**) is a vehicle in the transit fleet that is available to operate in revenue service carrying passengers, including spares and vehicles temporarily out of service

for routine maintenance and minor repairs. Revenue vehicles do not include service vehicles such as tow trucks, repair vehicles, or automobiles used to transport employees.

Revenue Vehicles Available for Maximum Service are vehicles that a transit agency has available to operate revenue service regardless of the legal relationship through which they are owned, leased, or otherwise controlled by the transit agency. Also called **vehicles owned and leased**.

Revenue Vehicles Operated in Maximum Service is the largest number of vehicles an agency uses to provide service at any time during a typical day. Also called **peak period vehicles**.

VEHICLE EQUIPMENT DEFINITIONS:

Automated Stop Announcement is an automated system that announces upcoming stops.

Automatic Passenger Counter equipment counts passenger boardings/alightings but is not part of the farebox.

Automatic Vehicle Location or GPS equipment allows a vehicle to be electronically located or tracked by local sensors or satellites.

Exterior Bicycle Rack equipped vehicles can carry bicycles on racks outside of the vehicle such as on the front of a bus or the open deck of a ferry boat.

Passenger-Operator Intercom equipped vehicles have an intercom system that allows passengers and the vehicle's or train's operator to communicate with each other.

Public Address System equipped transit vehicles have a one-way audio announcement system that allows the vehicle operator to communicate with passengers.

Restroom is a restroom on board the transit vehicle and available for passenger use.

Security or CCTV Type Camera equipped vehicles have cameras installed inside the vehicle for security purposes.

Self-propelled vehicles have motors or engines on the vehicle that supply propulsion for the vehicle. Fuel may be carried on board the vehicle such as diesel fueled buses or supplied from a central source such as overhead wire power for light rail vehicles.

Traffic Light Preemption equipped vehicles are able to, either automatically by sensors or as a result of operator action, adjust traffic lights to provide priority or a green light.

Two-Way Radio equipped transit vehicles have a two-way radio system that allows the vehicle operator and the operating base or control center to communicate with each other.
