EXECUTIVE SUMMARY

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR US Hist Auto Stat: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Auto Stat list, as provided by EDR, has revealed that there are 14 EDR US Hist Auto Stat sites within approximately 0.25 miles of the target property.

EDR US Hist Cleaners: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Cleaners list, as provided by EDR, has revealed that there are 6 EDR US Hist Cleaners sites within approximately 0.25 miles of the target property.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Classification: Large Quantity Generator

Hazardous Waste Summary:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D018
Waste name: BENZENE

NPL Status: Currently on the Final NPL
Substance ID: U228
Substance: TRICHLOROETHYLENE (TCE)
CAS #: 79-01-6
Pathway: GROUND WATER PATHWAY
Scoring: 4

Summary Details:

Conditions at listing September 1983): San Gabriel Valley Area 3) is a ground water plume that runs along the axis of the west fork of the Alhambra Creek in the San Gabriel ground water basin in Alhambra, Los Angeles County, California. The plume is about 2 miles long and 1 mile wide. Ground water is contaminated with trichloroethylene (TCE) and perchloroethylene (PCE), according to analyses by State agencies and local water companies. Many public wells in the area exceed the EPA Suggested No Adverse Response Levels (SNARL) for TCE and PCE. Approximately 100,000 people are affected. Cities and public water companies in the area have tested to ensure that their water supplies contain less than 5 parts per billion (ppb) of TCE, a level considered safe for human consumption. When alternative methods of reducing the TCE level below 5 ppb are not effective, wells are removed from service. Status June 1984): A supplemental sampling program of contaminated wells will begin soon to get a snapshot view of the degree of contamination. The State Department of Health Services and EPA are preparing to initiate a remedial investigation/ feasibility study to determine the aerial and vertical extent of contamination and to develop alternatives for treatment and management of the problem. EPA continues its investigation to identify sources of the contamination. This site, along with the three other San Gabriel Valley sites, was added to the NPL in May 1984 because it involves a serious problem that required taking immediate remedial action.

Environmental Interest/Information System

CERCLIS (Comprehensive Environmental Response, Compensation, and Liability Information System) is the Superfund database that is used to support management in all phases of the Superfund program. The system contains information on all aspects of hazardous waste sites, including an inventory of sites, planned and actual site activities, and financial information.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

SO CAL GAS/ALHAMBRA MGP (Continued)

S100714930

Comments: Enforceable agreement was signed between DSTC and SOCALGAS to implement Chapter 6.85.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Voluntary Cleanup Agreement
Completed Date: 05/05/1994
Comments: Not reported

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: * Remedial Action Completion or Implementation
Completed Date: 02/11/1998
Comments: RMDL -- THE FINAL REMEDIAL ACTION REPORTS FOR THE SITE DESCRIBED IN DETAIL THE EXCAVATION AND REMOVAL ACTIVITIES THAT OCCURRED AT EACH RESIDENTIAL LOT. THE REPORT ALSO PRESENTED THE RESULTS OF THE CONFIRMATION SAMPLING AND THE STATISTICAL ANALYSIS CONDUCTED FOR EACH SITE SHOWING THAT THE ESTABLISHED CLEANUP VALUE WAS ACHIEVED.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: * Remedial or Removal Design
Completed Date: 07/14/1997
Comments: DES/SOIL -- Approved the Engineering Design Report for the Alhambra MGP Site. The Design provides technical specifications for the excavation and removal of contaminated soil at the site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Action Plan
Completed Date: 05/30/1997
Comments: RAP -- The Remedial Action Plan was approved for the project. The project will involve the relocation of affected residents and the excavation and removal of contaminated soil. All impacted residential properties will be returned to a safe use. It is anticipated that the project will begin on July 1 and take roughly 6 months to complete. ALLOC -- The allocation of liability was completed in conjunction with approval of the RAP. The allocation of liability apportioned 82% to the Gas Company and 18% to orphan share. The allocation of liability was mailed to the Gas Company, and affected community and the public. CEQA -- The negative declaration for the Alhambra MGP was finalized in conjunction with approval of the remedial action plan.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Investigation / Feasibility Study
Completed Date: 08/23/1996
Comments: RI/FS -- The Department approved the RI/FS for the Alhambra Manufactured Gas Plant Site. The RI/FS identified wide- spread PAH and lead contamination in the surface and subsurface soils. The RI/FS characterized the lateral and vertical extent of the PAH and lead contamination at the site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Endangerment Assessment Report

CA WDS:

Facility ID: 4 19I013251
Facility Type: Other - Does not fall into the category of Municipal/Domestic, Industrial, Agricultural or Solid Waste (Class I, II or III)
Facility Status: Active - Any facility with a continuous or seasonal discharge that is under Waste Discharge Requirements.
NPDES Number: CAS000001 The 1st 2 characters designate the state. The remaining 7 are assigned by the Regional Board
Subregion: 4
Facility Telephone: 6263022149
Facility Contact: David W Kay
Agency Name: SOUTHERN CALIFORNIA EDISON CO.
Agency Address: 2244 Walnut Grove Avenue
Agency City,St,Zip: Rosemead 91770
Agency Contact: Not reported
Agency Telephone: Not reported
Agency Type: Private
SIC Code: 4911
SIC Code 2: Not reported
Primary Waste: Stormwater Runoff
Primary Waste Type: Designated/Influent or Solid Wastes that pose a significant threat to water quality because of their high concentrations (E.G., BOD, Hardness, TRF, Chloride). 'Manageable' hazardous wastes (E.G., inorganic salts and heavy metals) are included in this category.
Secondary Waste: Not reported
Secondary Waste Type: Not reported
Design Flow: 0
Baseline Flow: 0
Reclamation: No reclamation requirements associated with this facility.
POTW: The facility is not a POTW.
Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Background Info: The site was the location of a pole treating facility from 1922 until 1957. Since 1957 the 32.55 acre property was used by Southern California Edison Company as a salvage center for metals recycling, storage of new and used electrical transformers, employee training facilities, and maintenance of fleet vehicles. A Preliminary Endangerment Assessment (PEA) conducted in 1999, determined that past uses of the site have resulted in the contamination of onsite soils with various metals, volatiles, polycyclic aromatic hydrocarbons, polychlorinated biphenyls, and pentachlorophenol. Soil contamination has not impacted groundwater therefore the main threat is from direct contact. To expedite cleanup efforts the site was divided into three Areas of Concern (AOC). Currently AOC-2 where the former pole treatment area was located is undergoing remediation. The selected remedy for AOC-2 is In Situ Thermal Desorption The other AOC's still require further investigation.

Waste name: 792

Waste code: D001

Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D003
Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Waste code: D004
Waste name: ARSENIC

Waste code: D035
Waste name: METHYL ETHYL KETONE

Waste code: F003
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: P030

Completed Area Name: PROJECT WIDE
 Completed Sub Area Name: Not reported
 Completed Document Type: Site Screening
 Completed Date: 07/15/1991
 Comments: The site is a former gasoline station now owned and redeveloped by City. Soil is contaminated with petroleum products from the leak of underground tanks. L.A. County Dept of Public Works is overseeing site clean-up under Alhambra Redevelopment Agency lead. DTSC provided clean-up guidelines to the Agency.

Environmental Interest/Information System

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that

Map ID
Direction
Distance
Elevation

these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CRITERIA AND HAZARDOUS AIR POLLUTANT INVENTORY

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

inorganic salts and heavy metals) are included in this category.

Secondary Waste: Not reported

Secondary Waste Type: Not reported

Design Flow: 0

Baseline Flow: 0

Reclamation: No reclamation requirements associated with this facility.

POTW: The facility is not a POTW.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.

Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Count: 7 records.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 04/26/2013	Source: EPA

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 04/26/2013	Source: EPA

Federal CERCLIS list

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 04/26/2013	Source: EPA
Date Data Arrived at EDR: 05/29/2013	Telephone: 703-412-9810

	Data Release Frequency: Varies

Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 07/11/2013

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 07/11/2013
Date Data Arrived at EDR: 08/08/2013

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

Date of Government Version: 07/11/2013
Date Data Arrived at EDR: 08/08/2013

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Date of Government Version: 07/11/2013
Date Data Arrived at EDR: 08/08/2013

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal institutional controls / engineering controls registries

US ENG CONTROLS: Engineering Controls Sites List

A listing of sites with engineering controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

Date of Government Version: 06/17/2013	Source: Environmental Protection Agency
Date Data Arrived at EDR: 06/21/2013	Telephone: 703-603-0695
Date Made Active in Reports: 10/03/2013	Last EDR Contact: 09/10/2013
Number of Days to Update: 104	Next Scheduled EDR Contact: 12/23/2013
	Data Release Frequency: Varies

US INST CONTROL: Sites with Institutional Controls

A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

Date of Government Version: 06/17/2013	Source: Environmental Protection Agency

State- and tribal - equivalent CERCLIS

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

Local Lists of Hazardous waste / Contaminated Sites

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006

HIST FTTS INSP: FIFRA/TSCA Tracking System Inspection & Enforcement Case Listing

A complete inspection and enforcement case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

SSTS: Section 7 Tracking Systems

Section 7 of the Federal Insecticide, Fungicide and Rodenticide Act, as amended (92 Stat. 829) requires all registered pesticide-producing establishments to submit a report to the Environmental Protection Agency by March 1st each year. Each establishment must report the types and amounts of pesticides, active ingredients and devices being produced, and those having been produced and sold or distributed in the past year.

	Data Release Frequency: Quarterly

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR US Hist Auto Stat: EDR Exclusive Historic Gas Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR US Hist Cleaners: EDR Exclusive Historic Dry Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 07/30/2013	Source: Department of Energy & Environmental Protection
Date Data Arrived at EDR: 08/19/2013	Telephone: 860-424-3375

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Electric Power Transmission Line Data

Source: Rextag Strategies Corp.
Telephone: (281) 769-2247

U.S. Electric Transmission and Power Plants Systems Digital GIS Data

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.
Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services

Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Source: National Institutes of Health

Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools

East Map:	34118-A1 EL MONTE, CA
Most Recent Revision:	1994

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

<u>Target Property County</u> LOS ANGELES, CA	<u>FEMA Flood Electronic Data</u> YES - refer to the Overview Map and Detail Map
Flood Plain Panel at Target Property:	06037C - FEMA DFIRM Flood data
Additional Panels in search area:	Not Reported

NATIONAL WETLAND INVENTORY

<u>NWI Quad at Target Property</u> LOS ANGELES	<u>NWI Electronic Data Coverage</u> YES - refer to the Overview Map and Detail Map
---	---

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data:*

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

<u>MAP ID</u>	<u>LOCATION FROM TP</u>	<u>GENERAL DIRECTION GROUNDWATER FLOW</u>
3	1/2 - 1 Mile South	S

For additional site information, refer to Physical Setting Source Map Findings.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era: Cenozoic
System: Tertiary
Series: Miocene
Code: Tm (decoded above as Era, System & Series)

GEOLOGIC AGE IDENTIFICATION

Category: Stratified Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Scanned Digital USGS 7.5' Topographic Map (DRG)

Source: United States Geologic Survey

A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

LTCP CHECKLIST AS OF 8/9/2013

General Criteria - The site satisfies the policy general criteria	NO
a. Is the unauthorized release located within the service area of a public water system? <div style="border: 1px solid black; padding: 2px; width: fit-content;">Name of Water System : City of Alhambra</div>	YES
b. The unauthorized release consists only of petroleum (info) .	YES
c. The unauthorized ("primary") release from the UST system has been stopped.	YES
d. Free product has been removed to the maximum extent practicable (info) .	FP Not Encountered
e. A conceptual site model that assesses the nature, extent, and mobility of the release has been developed (info) . <div style="border: 1px solid black; padding: 2px; width: fit-content;"> Description: - GW Not Evaluated - Soil Assessment Incomplete - Areal Extent Not Defined </div>	NO
f. Secondary source has been removed to the extent practicable (info) .	YES
g. Soil or groundwater has been tested for MTBE and results reported in accordance with Health and Safety Code Section 25296.15.	YES
h. Does a nuisance exist, as defined by Water Code section 13050 .	NO
1. Media-Specific Criteria: Groundwater - The contaminant plume that exceeds water quality objectives is stable or decreasing in areal extent, and meets all of the additional characteristics of one of the five classes of sites listed below.	YES
EXEMPTION - Soil Only Case (Release has <u>not</u> Affected Groundwater - Info)	YES
2. Media Specific Criteria: Petroleum Vapor Intrusion to Indoor Air - The site is considered low-threat for the vapor-intrusion-to-air pathway if site-specific conditions satisfy items 2a, 2b, or 2c	YES
EXEMPTION - Active Commercial Petroleum Fueling Facility	YES
3. Media Specific Criteria: Direct Contact and Outdoor Air Exposure - The site is considered low-threat for direct contact and outdoor air exposure if it meets 1, 2, or 3 below.	NO
EXEMPTION - The upper 10 feet of soil is free of petroleum contamination	NO
Does the site meet any of the Direct Contact and Outdoor Air Exposure criteria scenarios?	NO
ADDITIONAL QUESTIONS - The following conditions exist that do not meet the policy criteria: Exposure Type :	

¿ Commercial

Petroleum Constituents in Soil :

¿ Unknown

Soil Concentrations of Benzene :

¿ > 14 mg/kg

Soil Concentrations of EthylBenzene :

¿ > 89 mg/kg and ≤ 134 mg/kg

Soil Concentrations of Naphthalene :

¿ Unknown

Soil Concentrations of PAH :

¿ Unknown

Additional Information

Should this case be closed in spite of NOT meeting policy criteria?

NO

1.0 INTRODUCTION

This report summarizes the procedures and findings of an underground storage tank (UST) removal and soil overexcavation remediation program conducted at Circle K Store #2211264, located at 1000 West Valley Boulevard in Alhambra, California. The program was conducted in January and February 2012 by a tank removal team at the request of Circle K Stores, Inc. (Circle K). A list of the program team members, and each team member's project responsibilities, are shown in Table 1.

The objectives of the UST closure program were to: (1) remove three gasoline USTs and the associated dispensers and product piping; (2) evaluate the presence or absence of petroleum hydrocarbons in the soil below the UST system; (3) close the USTs in accordance with the requirements of the City of Alhambra and the Los Angeles Department of Public Works; and (4) restore the site to grade. The objective of the soil overexcavation program was to remove residual stained pea gravel and soil (associated with a previous hydrocarbon release) down to a depth of approximately 13-14 feet below the ground surface on the eastern half of the underground storage tank zone.

Blaes Environmental Management, Inc. (Blaes Environmental) was retained by Circle K in January 2012 to provide program management services and soil sampling as part of the UST closure program. The tank removal contracting team members of TCM Consulting and TLM Petro Labor Force, were contracted directly by Circle K. The following sections present the site background and the details of the UST closure program and the soil overexcavation programs.

2.0 SITE BACKGROUND

2.1 SITE DESCRIPTION

The following sections describe the surface and subsurface features of the subject property and the surrounding area. This information was obtained from public records; information supplied by Circle K, and from a site visit by Blaes Environmental.

2.1.1 Site Location and Layout

The property is located at the southeast corner of the intersection of Valley Boulevard and Atlantic Boulevard in Alhambra, California. The property lies at a latitude of approximately 34° 04' 39.2" North and a longitude of approximately 118° 08' 02.69" West. The former retail gasoline station property consisted of a predominantly asphalt-paved lot with two existing single-story buildings (the former Circle K Store), overhead canopy covering the fuel islands, and six product dispensers. The site features are shown on the Site Plan (Figure 1). The area surrounding the site consists of a mixture of commercial businesses and residential development. Commercial properties are located immediately adjacent to the major north-south and east-west streets near the site. Residential developments generally form the interior of the area grid.

2.1.2 Site Physiography

The property lies at an elevation of approximately 400-feet above mean sea level (amsl). Natural surface drainage in the area is principally towards the southwest but has been altered by development of the property. On-site drainage is predominantly towards the north and west away from the building structure and into the respective Boulevards.

2.1.3 Local Lithology and Depth to Groundwater

The site is located in the San Gabriel Valley approximately two miles northeast of the Repetto Hills (USGS, 1991). Surface waters in the vicinity of the site drain as part of the San Gabriel River Watershed (CRWQCB-LAR, 1994). As reported in previous investigations for the site, no surface bodies of water are located within one mile of the subject property. Based on data from wells located approximately 1.5 to 2 miles from the site, the depth to groundwater in the site area ranges from approximately 250 to 350 feet below the ground surface.

Soil below the site consists of recent alluvial deposits up to 2,000 feet thick underlain by the Tertiary Topanga and Puente formations (CDWR, 1966). Soil borings drilled at the site during historical site

investigations have indicated that the subsurface soils consist of a mixture of interbedded sand and silt with some clay and gravel from the surface to approximately 100 feet below the ground surface. Based on observations during the tank removal program, the soils from the ground surface to a depth of approximately 13-14 feet consist of silty sand and poorly graded sand.

2.2 UNDERGROUND STORAGE TANKS

The former Circle K #2211264 facility contained three Owens Corning double-walled fiberglass underground storage tanks (one 12,000-gallon tank and two 10,000-gallon tanks). The USTs were located under a concrete pad near the west-central part of the property immediately adjacent to the western edge of the former Circle K gasoline station building. All three tanks were oriented in an approximate east-west direction parallel with Valley Boulevard. The approximate positions of the tanks, canopy and product dispenser islands are shown in Figure 2. General tank information is summarized in Table 2.

2.3 PREVIOUS SUBSURFACE INVESTIGATIONS AND DOCUMENTED RELEASE

Prior to the underground storage tank removal program discussed in this report, several previous subsurface site investigations were completed around the UST system at the site. The first investigation was completed in 1987 during a UST removal program. Additional assessments were completed from 1987 to 1991 and further subsurface evaluation was conducted in 2002, 2004, and 2005. Following all of these investigations (including documented residual hydrocarbons in the soil), the previous hydrocarbon release was granted closure in February 2010 by the regulatory agency. A description of each event and the findings from the investigation programs are presented as follows. Additional information is transmitted in the report entitled *Site Assessment Report*, prepared by Holquin Fahan & Associates Inc., dated May 18, 2005 (Appendix A).

2.3.1 Previous UST Removal and Soil Overexcavation Remediation

In June 1987, three USTs were removed from the site and replaced with the current double-walled fiberglass tanks in the same general location on the property. During the UST removal program, petroleum hydrocarbons were reportedly detected around the USTs and piping. Approximately 735 cubic yards of soil containing hydrocarbons was removed from the site at that time. Soil sample results from below the USTs indicated a maximum concentration of Total Petroleum Hydrocarbons in the gasoline range of 1,200 mg/kg (parts per million).

2.3.2 Additional Drilling and Site Assessment

Three additional site investigations were conducted between 1987 and May 1991 which included drilling 12 soil borings near the USTs and former piping to assess the extent of the hydrocarbon release found during the tank removal program. The analytical results from the investigations found no detections of TPH as gasoline or benzene at the site except for a concentration of 290 ppm near the USTs and 7.1 parts per million near the product piping at a depth of approximately 16 feet below the ground surface. On July 31, 1991, the Los Angeles County Department of Public Works issued a "no further action" letter for the site.

In August 2001, during a system upgrade program, soil samples were collected from various locations beneath the dispensers and product piping. In March 2002, a baseline site investigation was conducted at the site including the drilling and sampling of five soil borings (B1 to B5) to depths of approximately 40 feet. Laboratory results indicated hydrocarbons below the UST area with a maximum of 12.1 mg/kg (parts per million) Total Petroleum Hydrocarbons - gasoline range (TPH-g) and 8.55 mg/kg of MTBE in the soil at a depth of approximately 30 feet below the ground surface.

In June 2004, four additional soil borings (B6 to B9) were advanced to a maximum depth of approximately 100 feet near the existing UST zone. Petroleum hydrocarbon concentrations were not found below a depth of approximately 60 feet during that investigation. Soil sample analyses indicated a maximum of 0.012 mg/kg of MTBE. TPH-g and benzene were not detected above their respective detection limits in any of the samples analyzed for that assessment. In March 2005, direct push borings (B10 to B15) were drilled to further define the lateral extent of hydrocarbon impacted soil at the site. Laboratory analytical samples collected from these borings indicated no detections of TPH-g, benzene, toluene, ethylbenzene, or MTBE. Even though petroleum hydrocarbon concentrations remained immediately below and around the UST area, the impacted soil appeared to be limited in lateral and vertical extent and the hydrocarbon release did not migrate to groundwater.

2.3.3 Regulatory Closure documents for Past Hydrocarbon Release

In January 2010, a low-risk closure form for the site was reviewed by the regulatory agency and approved. Case closure was granted on February 25, 2010. Documentation of the "Case Closure" status for the previous release from the Geotracker website is presented in Appendix B.

3.0 UNDERGROUND STORAGE TANK CLOSURE PROGRAM

In January-February 2012, Circle K completed an underground storage tank removal/closure program at the site. The underground storage tank closure program involved a five-step process consisting of the following: (1) Tank Closure Permitting, (2) Tank System Removal and Destruction, (3) Soil Sampling, (4) Soil Overexcavation and (5) Laboratory Analysis. Each step is described in the following sections.

3.1 TANK CLOSURE PERMITTING

Tank closure permitting was performed by TLM Petro Labor Force personnel on behalf of Circle K. In January 2012, the City of Alhambra issued the notice to proceed with the closure of the USTs at the site. A copy of the permit documentation for the UST removal program is included in Appendix C.

3.2 TANK SYSTEM REMOVAL AND DISPOSAL

On January 10-11, 2012, prior to UST removal, the three underground storage tanks (Tank #1, Tank #2, and Tank #3) were triple rinsed and purged in accordance with applicable State and local regulations. On January 11, 2012, TLM Petro Labor Force inerted each tank in accordance with requirements and utilized a trackhoe to remove the concrete and asphalt surface cover and expose the top of the USTs. Once the tanks were sufficiently exposed, each tank was checked again prior to removal. The location of each tank relative to surrounding structures and the approximate UST excavation boundaries is shown in Figure 1.

On January 12, 2012, TLM Petro Labor Force utilized the trackhoe and a crane to lift the tanks from the excavation. Following removal from the excavation, the USTs were inspected, and loose soil was removed from the sides of the tanks. The USTs were secured on flatbed tractor-trailers the day of removal and transported from the site for destruction. Copies of the tank disposal certificates are included in Appendix D.

During excavation and removal of the tanks, Blaes Environmental noted that the pea gravel on the eastern side of the UST area (surrounding Tank #1 and Tank #2) appeared to be stained with petroleum hydrocarbons. The tanks were dry, in good condition, and did not have any visual signs of leakage. The stained pea gravel was removed from the excavation as discussed in Section 4.1.

3.3 SOIL SAMPLING

On January 12, 2012, a Blaes Environmental representative collected soil samples from beneath the USTs. On January 18, 2012, Blaes Environmental came back to the site to complete the soil sampling program for the product and vent piping. On February 1, 2012, Blaes Environmental completed the soil sampling program by sampling the soil below a section of former product piping uncovered during the demolition of the site.

A total of 21 soil samples were collected at the site during the UST closure program, including seven samples collected below the former USTs, six samples below the dispensers, three samples below product piping, two samples below the old vent lines, two samples below the old product piping, and one sample below the existing vent lines. The approximate location of each sample is shown in Figure 2. A description of the sampling procedures is presented in the following sections.

3.3.1 Underground Storage Tank Soil Sampling

Soil samples were collected on January 12, 2012 beneath each end of the two 10,000-gallon tanks and beneath each end and the approximate center of the 12,000-gallon tank at a depth of approximately 13-feet bgs. The UST soil samples were collected using the bucket-end of the trackhoe excavator for retrieval. Each soil sample was collected near the teeth of the trackhoe bucket by driving a sampling cylinder (provided by the laboratory for methanol extraction procedures) into the native soil contained in the bucket. A measured amount of each sample was transferred into VOA vials preserved with methanol. In addition to the sample cylinder, a separate soil sample from each sample location was collected in a glass jar for laboratory analyses.

Each soil sample was properly sealed, labeled, and placed in a cooler containing ice for preservation. The soil samples were subsequently delivered, under proper chain-of-custody documentation, to Test America analytical laboratory in Irvine, California.

3.3.2 Dispenser and Piping Soil Sampling

On January 17-18, 2012, the product dispensers and associated product piping at the site were removed as part of the tank removal activities. Twelve soil samples were collected beneath the dispensers, piping runs, and old vent lines, at depths of approximately three feet bgs on January 18, 2012. In addition, two soil samples were collected on February 1, 2012 from beneath older product piping associated with the previous UST system. The soil samples were collected using the same

sampling procedures as described in Section 3.3.1. The locations of the sample locations are shown in Figure 1.

3.4 FIELD OBSERVATIONS

During the UST closure program, Blaes Environmental noted that the three USTs were in good condition with no visible holes or corrosion. A hole was deliberately placed near the bottom of the end of Tank #3 during removal activities to drain the interstitial brine. Photographs from the tank removal project are included in Appendix E. Blaes Environmental observed noticeable hydrocarbon staining and odors in the pea gravel on the eastern side of the UST basin, primarily under and adjacent to Tank #1 and Tank #2. Native soil below the pea-gravel was noted to be a very coarse, well graded sand and gravel mixture.

3.5 LABORATORY ANALYSES AND RESULTS

Soil samples collected from the site were transported on ice to Test America analytical laboratory in Irvine, California. The 21 soil samples were analyzed for Volatile Fuel Hydrocarbons (VFHs) [Carbon Range C4-C12] by GC/MS using Method EPA 5035/CA LUFT and Volatile Organic Compounds (VOCs) with Oxygenates by GC/MS using Method EPA 5035/8260B. VOC compounds included Benzene, Toluene, Ethylbenzene, and Xylenes (BTEX) as well as oxygenate compounds Di-isopropyl Ether (DIPE), Ethyl tert-Butyl Ether (ETBE), Methyl tert butyl Ether (MTBE), tert-Amyl Methyl Ether (TAME), and tert-Butanol (TBA). The analytical laboratory reports are included in Appendix F. A summary of the laboratory results is shown in Table 3. Analytical laboratory results indicated the following:

- Concentrations of VFHs were detected above laboratory reporting limits in soil samples T1-W, T2-W, T2-E, T3-W, and PP-3, ranging from a detected low of 0.130 mg/kg in sample T2-E to a high of 14,000 mg/kg in sample T3-W.
- Concentrations of VOCs, including BTEX, were detected above laboratory reporting limits or laboratory detection limits in soil samples T1-W, T1-C, T1-E, T2-W, T2-E, and PP-3. Benzene concentrations ranged from a detected low of 0.002 mg/kg in sample T3-E to a high of 69 mg/kg in sample T3-W.
- Concentrations of Fuel Oxygenates MTBE and/or TBA were detected above laboratory reporting limits or laboratory detection limits in soil samples T1-W, T2-W, and T2-E. MTBE concentrations ranged from a detected low of 0.020 mg/kg in sample T1-W to a high of 0.087 in sample T2-W.

4.0 SOIL OVEREXCAVATION REMEDIATION PROGRAM

4.1 SOIL OVEREXCAVATION

Based on field observations of stained pea-gravel on the eastern side of the UST basin, Circle K decided to overexcavate the impacted pea-gravel down to the native soil below the eastern part of the UST basin. It was suspected that field observations of stained pea-gravel and elevated PID readings were likely related to the previously closed release at the site discussed in Section 2.3.

4.1.1 Overexcavation of Soil on Eastern Half of Former UST Area

On January 12, 2012, Blaes Environmental and TLM Petro Labor Force began the overexcavation program. The trackhoe was used to excavate stained pea-gravel from the bottom of the tank pit to the native soil interface at a depth of approximately 13 feet below the ground surface on the eastern section of the former tank excavation. The overexcavated section of the UST basin measured approximately 27 feet wide by 45 feet long by 13 to 14 feet deep. Approximately 63 tons of stained pea-gravel was removed from the excavation. No additional soil samples were collected following excavation activities. The approximate extent of the excavated area is shown in Figure 2.

4.1.2 Temporarily Store Stockpiled Soil On Site

The excavated pea-gravel was temporarily stockpiled adjacent to the UST basin pending profile acceptance for transport and disposal at a state-licensed facility.

4.1.3 Soil Stockpile Sampling

On January 18, 2012, Blaes Environmental collected one soil sample labeled "stockpile" from the soil stockpile to profile the hydrocarbon impacted material for acceptance at a state licensed facility. The soil sample was collected from the stockpile using the same methanol extraction procedures as described previously. The sample was submitted along with the other tank removal samples for analyses at Test America. The stockpile sample laboratory report is included in Appendix G.

4.2 SOIL TRANSPORT AND DISPOSAL

On January 27, 2012, American Integrated Services, Inc. transported three loads of hydrocarbon impacted soil from the site to Soil Safe of California, Inc. located at 12328 Hibiscus Avenue in Adelanto, California for disposal. Approximately 62.86 tons of soil was removed and disposed of at

the landfill during the overexcavation program. A copy of each transport manifest is included in Appendix M.

4.3 BACKFILL AND SITE RESTORATION

TLM Petro Labor Force backfilled the excavation at the site with imported fill material following all soil sampling activity. The area was resurfaced and site restoration activities were completed.

5.0 CONCLUSIONS

Based on the results of the January-February 2012 UST removal program, hydrocarbon concentrations detected in soil samples collected in January and February 2012 appear to be consistent with the concentrations from the previously closed release at the site, with the exception of soil sample T3-W. It is not clear if the concentrations detected in sample T3-W are representative of the historic release since the results from previous assessment activities were located between approximately 20 to 30 feet laterally from Tank #3, and the highest concentrations from the historic release would be expected directly beneath the tanks in question. Blaes Environmental recommends drilling a soil boring at the location of sample T3-W to confirm the vertical extent of elevated hydrocarbon concentrations and to verify that the residual concentrations are still within the parameters that met the previous case closure standards.

INTRODUCTION

Holguin, Fahan & Associates, Inc. (HFA) was contracted by ExxonMobil Oil Corporation (ExxonMobil) to perform a site assessment at ExxonMobil Service Station #18-MJA, located at 1000 West Valley Boulevard, Alhambra, California (see Figure 1 - Site Location Map). The assessment was performed to define the lateral extent of shallow adsorbed-phase hydrocarbons at the above-referenced site. The site assessment was conducted in accordance with HFA's work plan for site assessment activities dated January 17, 2005. Due to nonresponse from the agency, the LACDPW was notified in accordance with the 60-day policy in HFA's letter dated March 10, 2005 that the work plan would be implemented as written (see Appendix 1 for the notification letter) (SWRCB, 2004).

The responsible party contact is Mr. Greg Barton, ExxonMobil Oil Corporation, 3700 West 190th Street, TPT #2, Torrance, California 90504, (310) 212-2826. The environmental consultant contact is Mr. James Anderson, Holguin, Fahan & Associates, Inc., 143 South Figueroa Street, Ventura, California, 93001, (805) 585-6371. The lead agency contact is Mr. John Awujo, Los Angeles County Department of Public Works, 900 South Fremont Avenue, Annex Building, Third Floor, Alhambra, California 91803-1331, (626) 458-3512.

BACKGROUND

SITE DESCRIPTION

ExxonMobil Service Station #18-MJA is located at 1000 West Valley Boulevard, on the southeastern corner of the intersection of West Valley Boulevard and Atlantic Boulevard, in Alhambra, California (see Figure 1 and Figure 2 - Site Vicinity Map). The surrounding areas consist of light commercial and residential properties. The site is an active Mobil brand service station that includes one 12,000-gallon gasoline UST; two 10,000-gallon gasoline USTs; three dispenser islands; associated product and vent piping; and a service station building (see Figure 3 - Plot Plan).

SITE HYDROGEOLOGY

The site lies at an elevation of 400 feet above MSL, in an area of southwestward-sloping topography. The site is located in the San Gabriel Valley, two miles northeast of the Repetto Hills and eight miles south of the San Gabriel Mountains (USGS, 1991). Surface waters in the site vicinity drain as part of the San Gabriel River Watershed (CRWQCB-LAR, 1994). No surface bodies of water are located within 1 mile of the site (USGS, 1991).

Soil beneath the site consists of Recent alluvial deposits up to 2,000 feet thick underlain by the Tertiary Topanga and Puente formations (CDWR, 1966). Assessment activities indicate that the alluvium beneath the site consists of interbedded sand and silt, with some clay and gravel, from the surface to 100 fbg, the maximum depth investigated (see Appendix 2 for the logs of exploratory borings) (HFA, 2004).

The site is located at the western end of the Main San Gabriel Groundwater Basin (Main San Gabriel Basin Watermaster, 2002). Groundwater within the basin has existing beneficial use for municipal, industrial, and agricultural purposes (CRWQCB-LAR, 1994). No groundwater production wells were identified within one mile of the site. The nearest groundwater production wells (LACDPW Wells #2881A and #2880D) are located 1.5 miles northeast of the site. The depth to groundwater in the production wells ranged from 280 to 360 fbg on November 11, 2004 (see Figure 1 for the well locations) (LACDPW, 2005).

PREVIOUS WORK

In June 1987, three underground storage tanks were removed from the site and replaced with the current three double-walled, fiberglass USTs in the same locations. A total of 735 cubic yards of hydrocarbon-containing soil was excavated from around the USTs and piping, and transported off-site for recycling. Laboratory analytical results of soil samples collected from immediately beneath the USTs indicated maximum concentrations of TPH as gasoline of

1,200 mg/kg. The soil samples were not analyzed for BTEX or MTBE (Alton Geoscience [Alton], 1991a).

Multiple phases of assessment were conducted from 1987 to 1991, which included the drilling of twelve soil borings near the USTs and former product piping. Laboratory analytical results of the soil samples indicated no detections of TPH as gasoline or benzene, except for TPH as gasoline of 290 mg/kg near the USTs at 15 fbg and 7.1 mg/kg near the product piping at 16 fbg. The soil samples collected from the borings near the USTs were not analyzed for benzene (Alton, 1987, 1991b and 1991c). In its letter dated July 31, 1991, the LACDPW issued a no-further-action directive for the site.

In August 2001, an SB989 fueling system upgrade was conducted at the site, which included the installation of double-walled product piping and new under-dispenser containment and liquid-tight sumps. Compliance soil samples were collected from beneath the dispensers and product piping from 4 fbg. Laboratory analytical results indicated maximum concentrations of TPH as gasoline of 5.7 mg/kg, benzene of 0.0084 mg/kg and MTBE of 35.0D mg/kg (see Figure 4 - Plot Plan Showing 2001 Compliance Soil Sample Results) (Frey Environmental, Inc., 2001).

Multiple phases of assessment were conducted from 2002 to 2004, which included the drilling of nine soil borings to a maximum of 100 fbg (borings B-1 through B-9). Laboratory analytical results of soil samples indicated maximum concentrations of TPH as gasoline of 12.1 mg/kg (soil boring B-1, 30 fbg) and MTBE of 8.55 mg/kg (soil boring B-1, 30 fbg). Benzene was not detected. Results of the assessment indicated that adsorbed-phase hydrocarbons were located in the vicinity of the USTs from 20 to 60 fbg, and had been defined vertically by 40 feet of non-hydrocarbon-containing soil (see Figure 5 - Adsorbed-Phase Hydrocarbon Concentrations for Soil Borings, and Table 1 - Summary of Soil Sample Analytical Results) (HFA, 2002 and 2004).

SITE EVALUATION METHODS AND RESULTS

ASSESSMENT STRATEGY

Due to the detection of adsorbed-phase hydrocarbons in shallow soil during previous assessment, six soil sampling locations were advanced to define the lateral extent of the residual adsorbed-phase hydrocarbons (see Figure 3 for the locations).

PRE-FIELD ACTIVITIES

A geophysical survey was conducted to identify substructures in the vicinity of the proposed monitoring well locations. Underground Service Alert of Southern California was notified at least 48 hours prior to conducting the work.

SOIL CHARACTERIZATION AND SAMPLING RESULTS

On March 22, 23, and 24, 2005, HFA advanced six soil sampling locations (B-10 through B-15) using a direct-push rig. The sampling locations were advanced to 35 fbg, except for boring B-12, where refusal was encountered at 34 fbg (see Figure 3 for the boring locations, Appendix 2 for the logs of exploratory borings, and Appendix 3 for the procedures).

Soil samples were collected at 5-foot intervals for geologic logging to the total depth of the soil sampling locations. The subsurface soils encountered during this investigation consisted of interbedded sand and silt, with gravel from 0 to 35 fbg, the maximum depth investigated (see Appendix 2).

Soil samples were collected in accordance with EPA Method 5035 and submitted to a California State certified hazardous material testing laboratory, where they were analyzed for TPH as gasoline using EPA Method CA-LUFT and for BTEX, MTBE, TBA, TAME, DIPE, ETBE using EPA Method 8260B/8260. The analytical data will be electronically reported to the GeoTracker information system in accordance with AB2886 requirements.

Laboratory analytical results for soil samples collected from borings B-10 through B-15 indicated no detections of TPH as gasoline, BTEX, or MTBE. The lateral extent of adsorbed-phase hydrocarbons has been defined (see Figure 5, Table 1, and Appendix 4 for the laboratory reports).

WASTE MANAGEMENT

No soil was generated during this assessment. Decontamination water was temporarily stored on-site in a 55-gallon DOT-approved drum. The waste was transported off-site by Phillip Services Corporation (PSC Industrial Outsourcing Group) for recycling at Crosby & Overton, Inc. (see Appendix 5 for the waste manifest - PENDING).

SUMMARY AND CONCLUSIONS

Soil beneath the site consists of interbedded sand and silt with gravel and some clay, from 0 to 100 fbg, the maximum depth investigated. Groundwater has not been encountered during site activities and is expected to be greater than 250 fbg beneath the site.

A review of sensitive receptors indicates that no municipal or domestic production wells are located within 1 mile of the site. No surface bodies of water are located within 1 mile of the site.

Results of the current assessment indicate no detections of TPH, BTEX, or MTBE. Previous assessment activities have indicated that adsorbed-phase TPH as gasoline is localized to less than 10 fbg beneath the product piping and dispenser islands, with the exception of 12.1 mg/kg in boring B-1 at 30 fbg. MTBE is localized to less than 10 fbg beneath the product piping and dispenser islands and above 40 fbg in the vicinity of the USTs, with the exception of 0.012 mg/kg in boring B-6 at 60 fbg. Benzene has not been detected in soil samples collected from any of the borings. The vertical and lateral extent of adsorbed-phase hydrocarbons has been defined.

AGENCY NOTIFICATION LETTER

March 10, 2005

Mr. John Awujo
Los Angeles County Department of Public Works
900 South Fremont Avenue, Annex Building, Third Floor
Alhambra, California 91803-1131

Subject: **IMPLEMENTATION OF WORK PLAN FOR SITE ASSESSMENT ACTIVITIES FOR
EXXONMOBIL OIL CORPORATION SERVICE STATION #18-MJA
1000 WEST VALLEY BOULEVARD, ALHAMBRA, CALIFORNIA
(LACDPW FILE #009599-9425)**

Dear Mr. Awujo:

On behalf of ExxonMobil Oil Corporation (ExxonMobil), Holguin, Fahan & Associates, Inc. (HFA) submitted a work plan for site assessment dated January 17, 2005, to conduct an assessment for the above-referenced site. As of this date, the Los Angeles County Department of Public Works (LACDPW) has not issued a written response to the work plan. HFA hereby notifies the LACDPW of its intent to invoke the "60-day policy" per California Code of Regulations 23, Division 3, Chapter 16, Article 11, Section 2722(e), and implement the work plan if a written response is not received by March 18, 2005. In accordance with the work plan, the LACDPW will be notified at least 72 hours prior to beginning on-site activities.

Holguin, Fahan & Associates, Inc. trusts that this notification provides you with the information you require. If you have any questions or require additional information, please contact me at (909) 422-8988, extension 15, or Lorien_Sanders@hfa.com.

Respectfully submitted,

Lorien B. Sanders, REA
Associate Hydrogeologist
Holguin, Fahan & Associates, Inc.

APPENDIX 3.

SOIL BORING, DIRECT-PUSH SAMPLING, AND WELL CONSTRUCTION PROCEDURES

SOIL BORING, DIRECT-PUSH SAMPLING, AND WELL CONSTRUCTION PROCEDURES

PRE-DRILLING PROTOCOL

Planning

Prior to the start of drilling, necessary permits, site access agreements, and/or encroachment permits are obtained. As-built drawings are obtained if possible. At least 2 weeks in advance of drilling, notifications are made to the property owner, client representative, on-site facility manager, regulatory agency, and/or other appropriate parties. At least 48 hours prior to drilling, Underground Service Alert of Southern California, Arizona Blue Stake, or an equivalent utility locating service is notified. A geophysical survey may be conducted to locate subsurface utilities. Site plans and/or as-built drawings are compared to actual conditions observed at the site. The property owner/retailer is interviewed to gain information about locations of former UST systems (including dispensers, product lines, and vent lines). A visual inspection is made of the locations of the existing UST system, and scars and patches in pavement are noted. The critical zone, which is defined as 10 feet from any part of the UST system as well as the area between the dispensers and USTs, is identified, and any proposed drilling locations within the critical zone may be subject to special hole clearance techniques. Drilling locations within the critical zone are avoided if possible.

A site-specific, worker health and safety plan, including a JSA and traffic control plan for all soil sampling locations for the site, is available at all times during drilling activities. Prior to commencing field activities, a health and safety meeting is held among all on-site personnel involved in the operations, including subcontractors and visitors, and is documented with a health and safety meeting sign-in form. The emergency shut-off switch for the service station is located prior to the start of the drilling activities. A fire extinguisher and "No Smoking" signs (and Proposition 65 signs in California) are present at the site prior to the start of the drilling activities.

In order to determine the natural subsurface conditions, better recognize fill conditions, and prevent cross contamination, the first sampling location is generally located the furthest from any suspected underground improvement.

When drilling a soil boring in asphalt or concrete, a minimum 10-inch round cut is made. When advancing a direct-push location, a minimum 3.5-inch round cut is made.

Hole Clearance

The minimum hole clearance depths are 5 feet below grade (fbg) outside the critical zone and 8 fbg within the critical zone and are conducted as follows:

- 0 to 5 fbg: The area to be cleared exceeds the diameter of the largest tool to be advanced and is large enough to allow for visual inspection of any obstructions encountered. The first 1 to 2 feet of soil or fill is removed by hand digging, then the borehole is probed using a blunt-tipped tool to ensure that no obstructions exist anywhere near the potential path of the drill auger or push-type sampler. Probing is extended laterally as far as possible. Hand augering or post-hole digging then proceeds, but only to the depth that has been probed. If subsurface characteristics prohibit effective probing, a hand auger is carefully advanced past the point of probing. In this case, sufficient hand augering or post-hole digging is performed to remove all the soil in the area to be delineated. For soil borings located outside of the critical zone, an attempt should be made to probe an additional 3 feet.
- 5 to 8 fbg: For the soil borings located inside the critical zone, probing and handclearing an additional 3 feet is performed. If probing is met with refusal, then trained personnel advance a hand auger without excessive force.

Alternate or additional subsurface clearance procedures may also be employed, as required by clients, permit conditions, and/or anticipated subsurface conditions (for example, near major utility corridors or in hard soils). Alternate clearance techniques may include performing a geophysical investigation or using an air knife or water knife. If subsurface conditions prevent adequate subsurface clearance, the field activities cease until the client gives written approval of a procedure for continuation.

When pea gravel, fill sand, or other non-indigenous material is encountered, the sampling location is abandoned unless the absence of subsurface facilities can be demonstrated and client approval to proceed is obtained. If hole clearance activities are conducted prior to the actual day of drilling, the holes are covered with plates and/or backfilled.

If any portion of the UST system is encountered, or if there is any possibility that it has been encountered, the work ceases, and the client is notified immediately. If there is reason to believe that the product system has been damaged, the emergency shut-off switch is activated. The client will decide if additional uncovering by hand is required. If it is confirmed that the UST system has been encountered, tightness tests are performed as required by the client. The hole is backfilled only with client approval.

SOIL SAMPLING PROCEDURES

Soil samples are collected using one of the following methods:

- **Manual drilling:** Manual drilling utilizes a hand auger. Soil samples are collected with a drive sampler outfitted with steel or brass sleeves. The specific equipment used is noted on a log of exploratory boring.
- **Truck-mounted, powered drilling:** Truck-mounted, powered drilling utilizes hollow-stem flight auger drilling, air rotary drilling, percussion hammer drilling, or similar technologies. Soil samples are collected in steel or brass sleeves with a California-modified, split-spoon sampler or, for specific projects, a continuous sampler. The specific equipment used is noted on a log of exploratory boring.
- **Direct push sampling:** Direct push sampling utilizes Geoprobos, cone penetrometer testing rigs, or similar technologies. Soil samples are collected with a drive sampler outfitted with steel, acetate or brass sleeves. The specific equipment used is noted on a log of soil sample descriptions.

Before each soil sampling episode, the sampling equipment is decontaminated using a non-phosphate soap and water wash, and two tap-water rinses. The drill augers or direct-push rods are decontaminated with a steam cleaner between each soil boring (truck-mounted rigs).

Soil samples that are collected in sample sleeves are covered with aluminum foil or Teflon tape followed by plastic caps. If EPA Method 5035 is required, then 5 to 20 grams of soil is extracted from the sample and placed in methanol-preserved containers supplied by the laboratory, or subsamples are collected using Encore samplers. During the sampling process, soil samples and cuttings are field screened for VOCs using a photoionization detector calibrated to an isobutylene or hexane standard. The calibration information is recorded on an equipment calibration log. Any soil staining or discoloration is visually identified. Soils are classified according to the Unified Soil Classification System. Specific geologic and hydrogeologic information collected includes grading, plasticity, density, stiffness, mineral composition, moisture content, soil structure, grain size, degree of rounding, and other features that could affect contaminant transport. All data are recorded on a soil boring log under the supervision of a geologist registered in the state in which the site is located. The samples are labeled, sealed, recorded on a chain-of-custody record, and chilled to 4°C in accordance with the procedures outlined in the California State Water Resources Control Board's Leaking Underground Fuel Tank Field Manual or the Arizona Department of Environmental Quality's (ADEQ's) Leaking Underground Storage Tank Site Characterization Manual. Sample preservation, handling, and transportation procedures are consistent with Holguin, Fahan & Associates, Inc.'s quality assurance/quality control procedures. The samples are transported in a chilled container to a state-certified, hazardous waste testing laboratory.

Cuttings from the soil borings are stored in 55-gallon, Department of Transportation (DOT) approved drums, roll-off bins, or other appropriate containers, as approved by the client. Each container is labeled as waste material or non-hazardous waste, with the number of the soil boring(s) from which the waste was derived, the date the waste was generated, the generator name, and other pertinent information. The drums are stored at the site of generation, or at another location approved by the client until sample laboratory analytical results are obtained, at which time the soil is disposed of appropriately.

A soil boring log is completed for each soil sampling location and includes the following minimum information:

- date of drilling;
- project name and location;
- soil sample names and depths;
- soil descriptions and classifications;
- standard penetration counts (rigs);
- photoionization detector readings;
- drilling equipment;
- soil boring diameter;
- sampling equipment;
- depth to groundwater in soil boring;
- name of person performing logging;
- name of supervising registered geologist; and
- name of drilling company (rigs and direct push).

HYDROPUNCH GROUNDWATER SAMPLING PROCEDURES

Hydropunch sampling of groundwater is designed for collecting discrete, one-time samples of groundwater for analysis during the drilling or direct-push operations. The Hydropunch sampler consists of a 5-foot long, 1.5-inch diameter screen sheathed by a 2-inch diameter, steel barrel. A disposable point is connected to the bottom of the screen. The Hydropunch assembly is lowered through the hollow-stem auger and driven into the undisturbed soils below the base of the hole, or is pushed into the soil using a direct push rig. The outer sheath is then retracted to expose the screen. A bailer is then lowered into the Hydropunch assembly and retrieves a sample of the groundwater within the assembly.

The extracted groundwater is collected in chilled, 40-milliliter, volatile organic analysis vials having Teflon-lined caps, or other appropriate containers as required by the respective analytical method. For organic compound analyses, hydrochloric acid preservative is added to all containers by the laboratory to lower sample pH. Samples are held at 4°C while in the field

and in transit to the laboratory. Analysis is performed by a state-certified, hazardous waste testing laboratory.

Documentation requirements include:

- sample identification number;
- borehole identification number;
- time and date of sample collection;
- depth at which Hydropunch sample was collected;
- name of person collecting sample;
- number and types of sample containers; and
- type of preservative used, if any.

BOREHOLE COMPLETION PROCEDURES

All sampling locations are either properly abandoned or completed as a well.

Abandonment

Each borehole/sample location that is not completed as a well is backfilled with bentonite grout, neat cement, concrete, or bentonite chips with a permeability less than that of the surrounding soils, and/or soil cuttings, depending on local regulatory requirements or client instructions. Grout is placed by the tremie method. Backfilling is performed carefully to avoid bridging. The type of backfill material is noted on the log.

Well Installation

Wells are designed according to applicable state and local regulations as well as project needs. Details of the well design and construction are recorded on the log and include the following minimum information (in addition to the items noted above for soil borings):

- detailed drawing of well;
- type of well (groundwater, vadose, or air sparging);
- casing diameter and material;
- screen slot size;
- well depth and screen length (± 1 foot);
- filter pack material, size, and placement depths;
- annular seal material and placement depths; and
- surface seal design/construction.

Groundwater monitoring wells are generally designed with 30 feet of slotted casing that crosses the water table, unless site conditions, project needs, or local regulations dictate a different well design. Vadose wells are designed with slotted casing appropriate for the project needs, e.g.

slotted in hydrocarbon-containing intervals for vapor extraction. Air sparging wells are typically designed with 5 feet of slotted casing placed 15 feet below the water table. The sand pack is placed at least two feet above the top of the screen, and at least 3 feet of low permeability seal material is placed between the sand pack and the surface seal, unless shallow groundwater conditions exist (less than 5 fbg). The sand pack and low permeability seal material are placed in the annular space from the bottom up using the tremie method.

When drilling in asphalt, a 24-inch round cut is made for the well pad. When drilling on concrete, a 2 x 2-foot square or 24-inch circle is sawcut. The well cover is traffic-rated and has a white lid with a black triangle painted on it (3 inches per side) or a black lid with a white triangle (3 inches per side). The well pad is completed using concrete of a color matching the existing surface. The well number is labeled on the outside of the well box/pad and the inside of the well box. The number on the outside is painted on with a stencil, stamped, or attached to the well with a metal plate. The number on the inside is written on the well cap with waterproof ink. The casing has a notch or indication on its north side indicating a unique measuring/surveying point. Well casings are capped with a locking or slip well cap.

Well Development

Well development is conducted by the use of surge blocks, ballers, pumps, or other appropriate methods in accordance with the requirements of the California Department of Water Resources Bulletin #74-81 dated December 1981, or ASTM International 4448-85a (as required by the ADEQ). Only formation water is used for surging the well. Well development continues until non-turbid groundwater is produced or turbidity stabilizes. The method of development and the volume of groundwater produced is recorded in the field log. All purged groundwater is held on-site, or at another location approved by the client, in sealed, 55-gallon DOT approved drums or other appropriate containers pending transport to an approved recycling facility.

Well Elevation Survey

The elevation of the north side of the top of well casing (or other appropriate reference point from which the depth to groundwater can be measured) is surveyed to an accuracy of ± 0.01 foot. All measurements are reproduced to assure validity. Surveying may be performed by a state-licensed surveyor if required by state or local regulations. In the state of California, wells are surveyed in accordance with AB2886.

DATA REDUCTION

The data compiled from the soil borings are summarized and analyzed. A narrative summary of the soil characteristics is also presented. The logs are checked for the following information:

- correlation of stratigraphic units among sampling locations;
- identification of zones of potentially high hydraulic conductivity;
- identification of the confining layer;
- indication of unusual/unpredicted geologic features (fault zones, fracture traces, facies changes, solution channels, buried stream deposits, cross-cutting structures, pinchout zones, etc.); and
- continuity of petrographic features such as sorting, grain-size distribution, cementation, etc.

Soil boring/well locations are plotted on a properly scaled map. If appropriate, soil stratigraphy of the site is presented in a scaled cross section. Specific features that may impact contaminant migration, e.g., fault zones or impermeable layers, are discussed in narrative form and supplemented with graphical presentations as deemed appropriate.

This report includes the analytical certificates of analysis for all samples listed below. These samples relate to your project identified below:

Project Name: EXXONMOBIL 18-MJA
Project Number: .
Laboratory Project Number: 410795.

An executed copy of the chain of custody, the project quality control data, and the sample receipt form are also included as an addendum to this report. Any QC recoveries outside laboratory control limits are flagged individually with an #. Sample specific comments and quality control statements are included in the Laboratory notes section of the analytical report for each sample report. If you have any questions relating to this analytical report, please contact your Laboratory Project Manager at 1-800-765-0980. Any opinions, if expressed, are outside the scope of the Laboratory's accreditation.

410795

Client Name : HFA

Cooler Received/Opened On: 3/26/05 Accessioned By: Shawn Gracey

[Signature]
Log-in Personnel Signature

1. Temperature of Cooler when triaged: 014 Degrees Celsius
2. Were custody seals on outside of cooler?..... YES...NO...NA
 a. If yes, how many, and where: 1 if root
3. Were custody seals on containers?..... NO...YES...NA
4. Were the seals intact, signed, and dated correctly?..... YES...NO...NA
5. Were custody papers inside cooler?..... YES...NO...NA
6. Were custody papers properly filled out (ink, signed, etc)?..... YES...NO...NA
7. Did you sign the custody papers in the appropriate place?..... YES...NO...NA
8. What kind of packing material used? Bubblewrap Peanuts Vermiculite Other None
9. Cooling process: Ice Ice-pack Ice (direct contact) Dry ice Other None
10. Did all containers arrive in good condition (unbroken)?..... YES...NO...NA
11. Were all container labels complete (#, date, signed, pres., etc)?..... YES...NO...NA
12. Did all container labels and tags agree with custody papers?..... YES...NO...NA
13. Were correct containers used for the analysis requested?..... YES...NO...NA
14. a. Were VOA vials received?..... YES...NO...NA
 b. Was there any observable head space present in any VOA vial?..... NO...YES...NA
15. Was sufficient amount of sample sent in each container?..... YES...NO...NA
16. Were correct preservatives used?..... YES...NO...NA

If not, record standard ID of preservative used here _____

17. Was residual chlorine present?..... NO...YES...NA

18. Indicate the Airbill Tracking Number (last 4 digits for Fedex only) and Name of Courier below:

5681, J670

Fed-Ex UPS Velocity DHL Route Off-street Misc.

19. If a Non-Conformance exists, see attached or comments below:

UNDERGROUND STORAGE TANK PROGRAM – AB 681 PRE-CLOSURE NOTIFICATION REQUIREMENTS
MOBIL OIL CORPORATION SERVICE STATION #18-MJA
1000 WEST VALLEY BLVD., ALHAMBRA
(CASE NO. I-09425A) (GLOBAL ID T10000000560) (PRIORITY D-1 SITE)

The California Regional Water Quality Control Board, Los Angeles Region is the public agency with primary responsibility for the protection of ground and surface water for all beneficial uses within Los Angeles and Ventura counties. As such, we are the lead agency for overseeing corrective action and cleanup of releases from leaking underground storage tank systems at the site located at **1000 West Valley Boulevard, Alhambra**. We have completed our review and evaluation of the information provided to this agency for the underground storage tank release(s) at the above-described location and have determined that this case meets the Regional Board's low risk criteria for case closure.

Pursuant to recent changes of the California Health and Safety Code Section 25296.20(a) and Division 7 of the Porter Cologne Water Quality Control Act under Assembly Bill 681 (AB 681), the Regional Board is required to notify all current fee title holders for the subject site prior to considering corrective action or granting case closure. You have been identified as a fee titleholder for the subject site and we are notifying you of our plan to close this low risk underground storage tank case. In order to expedite the review and approval process we are requesting that you provide us with any comments on the proposed plan to close this case in writing by **February 11, 2010**. If you do not wish to participate, you need not respond. If we do not receive a written response by **February 11, 2010**, the case will be closed and you will be notified of our action.

If you wish to obtain additional information, you may arrange to review the case file for this site by mailing in a written request to the address in the letterhead above or by faxing in a written request to (213) 576-6707. Regional Board staff will then contact you and arrange a time and date to visit the Regional Board and review the files requested.

California Environmental Protection Agency

Our mission is to preserve and enhance the quality of California's water resources for the benefit of present and future generations.

If you have any questions regarding this matter, please contact me at (213) 576-6706 or via email at jluera@waterboards.ca.gov.

Sincerely,

JOE F. LUERA
Water Resource Control Engineer

BUILDING PERMIT APPLICATION

OWNER-BUILDER DECLARATION

I hereby affirm under penalty of perjury that I am exempt from the Contractor's License Law for the following reason (Section 7031.5 of the Business and Professions Code):

I, as owner of the property, or my employees with wages as their sole compensation, will do the work, and the structure is not intended or offered for sale (Section 7044 of the Business and Professions Code).

I, as owner of the property, am exclusively contracting with licensed contractors to construct the project (Section 7044 of the Business and Professions Code).

I am exempt under Section _____, Business and Professions Code for the following reason: _____

Signature: _____ Date: _____

LICENSED CONTRACTOR'S DECLARATION

I hereby affirm that I am licensed under provisions of Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code; and my license is in full force and effect.

Signature: _____ Date: _____

WORKERS' COMPENSATION DECLARATION

I hereby affirm under penalty of perjury one of the following declarations:

I have and will maintain a certificate of consent to self-insure for workers' compensation, as provided for by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued.

I have and will maintain workers' compensation insurance, as required by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued. My workers' compensation insurance carrier and policy number are listed in the left column of this application.

I certify that in the performance of the work for which this permit is issued, I shall not employ any person in any manner so as to become subject to the workers' compensation laws of California, and I agree that if I should become subject to the workers' compensation provisions of Section 3700 of the Labor Code, I shall forthwith comply with those provisions.

**UNDERGROUND STORAGE TANK
CLOSURE INFORMATION**

1. This application is for authorization to temporarily or permanently close an underground storage tank (UST) pursuant to Los Angeles County Code, Title 11, Division 4 and California Code of Regulations, Title 23, Division 3, Chapter 16. This application may also be used for product piping removal associated with an existing or removed USTs.
2. This application will not be approved unless a valid Hazardous Material Underground Storage Permit (HMUSP) or Unified Program (UP) Permit application is on file with the Department of Public Works (DPW).
3. Additional fees may be imposed for closure of USTs that were not in compliance with December 22, 1998, standards for upgrade or temporary closure.
4. USTs closed on site by removal or cleaning and filling with an inert solid material prior to January 1, 1984, need not comply with current closure requirements, however, contamination related to these USTs must be reported and cleaned up.
5. This application must be accompanied by a UP UST FACILITY INFORMATION form for each site and UP UST TANK INFORMATION form for each UST to be removed or closed.
6. All work shall be carried out in full compliance with all applicable Federal, State and local laws, ordinances, rules and regulations.
7. All fees due to DPW and/or to the Certified Unified Program Agency (CUPA) for the operation and/or maintenance of the facility subject to closure through the date of closure shall be paid in full.
8. All closure applications are site specific and may be subject to additional sampling and site characterization requirements as necessary to protect the public health and safety, underground and surface water supplies, and may include requirements, requested by Federal, State or other regulatory agencies.
9. All inspection notification(s) shall be made as directed by the attached conditions of this approval.
10. Within 30 days after closure, the applicant shall furnish to the DPW a closure report per the DPW Closure Report Requirements and Supplements, describing all work completed, results of any required sampling, disposition of any contaminated soils or materials found and any other requirements made part of the closure application.
11. In all cases, closure permits expire 180 days from the date of issue unless otherwise specified. It is the responsibility of the owner or operator to make sure that the final report contains the required information and is submitted to the DPW within 30 days from the sampling date or 180 days from the date of the permit issuance, whichever is earlier. The total number of tanks listed on the HMUSP or UP Permit and the yearly annual permit maintenance billing will remain unchanged until the closure report is received by the DPW. Only one copy of the closure report needs to be submitted unless otherwise directed.
12. If an unauthorized release has occurred, reporting requirements must comply with the California Health and Safety Code Division 20, Chapter 6.7.
13. All correspondence related to this closure authorization shall include the SITE-FILE number listed on the front of this document, found in the upper right box and be addressed to the following location:

**COUNTY OF LOS ANGELES DEPARTMENT OF PUBLIC WORKS
ENVIRONMENTAL PROGRAMS DIVISION**

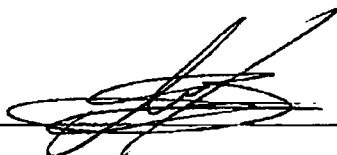

CLOSURE REPORT REQUIREMENTS

A closure report shall be submitted to the County of Los Angeles Department of Public Works, Environmental Programs Division, P.O. Box 1460, Alhambra, California 91802-1460, containing:

1. File number of facility and closure permit number.
2. Plot plan to scale showing locations of tanks, sampling points, buildings, adjacent streets, and north arrow.
3. Description of methods for obtaining, handling, and transporting samples.
4. Time and date samples were obtained.
5. Soil sampling certification (including but not limited to soils classification, boring logs, sample procedures, sample locations, initiating chain-of-custody, and groundwater location) for Underground Storage Tank closure shall be certified by a California registered geologist, a California certified engineering geologist, or a California registered civil engineer with sufficient experience in soils. The certification must clearly state that all work was performed under the supervision of the person signing.
6. Chain-of-custody documentation initiated by person obtaining sample through person at a California Department of Health Services certified laboratory.
7. Disposal destination of tanks and evidence of legal disposal.
8. Analysis results by a State certified laboratory submitted on laboratory letterhead showing analysis date, methods of extraction, and methods of analysis.
9. Documentation as to depth of groundwater at facility.
10. Manifests to document hazardous waste disposal of any removed soil and tank rinsate.
11. Evidence of legal disposal of soils designated as nonhazardous.
12. Any observations of site contamination.
13. Remedial action plan to mitigate contamination.
14. Report to be signed by a California registered geologist, a California certified engineering geologist, or a California registered civil engineer with sufficient experience in soils.

CLOSURE - UNDERGROUND STORAGE TANKS

CONDITIONS A - GENERAL

1. Closures shall be carried out such that all applicable regulations from the following agencies are complied with: Los Angeles County, Department of County Engineer - Facilities; Los Angeles County Fire Department, Fire Prevention Division or the appropriate City Fire Department; South Coast Air Quality Management District; and Los Angeles County Department of Health Services.
2. The County Engineer and Fire Departments shall be notified in advance of any closure in accordance with the following:

- a. Removal of tank shall require a three (3)-business day advance notification.
- b. Permanent closure of a tank in place or a temporary closure shall require a 30-written notification.

3. Consist current fee schedule for costs.

4. All abandoned wells shall be destroyed in such a way that they will not produce water or act as a channel for interchange of water, when such interchange may result in deterioration of the quality of water in any or all water bearing formations penetrated, or present a hazard to the safety and well-being of people and animals.

5. A well destruction permit issued by the Los Angeles Department of Health Services shall be required for all wells requiring a permit for their initial construction.

6. Well destruction shall be accomplished according to methods described in the latest "Water Well Standards: State of California" by the Department of Water Resources, contained in Bulletin 74 - 81, December, 1981, or any other methods that will provide equivalent or better protection.

7. Plans for the decontamination of a facility shall be submitted to the County Engineer for approval no later than 30 days before the commencement of such operations. Other agencies having jurisdiction shall also be notified. These agencies are the California Regional Water Quality Board, the Los Angeles County Department of Health Services, and the South Coast Air Quality Management District.

8. Decontamination shall require the following, as a minimum:

- a. Cleaning operation shall be done under the supervision of persons who understand the hazardous potential of the original liquid stored and its components.
- b. The personnel shall be sufficiently skilled to safely carry out such operation.
- c. Contaminated materials removed from such facility shall be disposed of at legal point of discharge.
- d. The operation shall be carried out in a manner that will not endanger the health of the public and the environment.

CONDITIONS B - TEMPORARY

1. All temporary closures shall be carried out as indicated in Los Angeles County Fire Department, Fire Prevention Division, Supplement #A - Inspection Guide #6, "Abandonment or Removal of Underground Tanks." Part A and any other applicable Parts.
2. A temporary closure shall not exceed 180 days.

CONDITION C - PERMANENT TANK (S) REMOVAL

1. All tank removals shall be carried out as indicated in Los Angeles County Fire Department, Fire Prevention Division, Supplement #A - Inspection Guide #6, Part D and any other applicable Parts.

2. Owners/operators shall notify the Building Department having jurisdiction at the place of removal if a grading permit is necessary.

3. Removed tanks shall not be transported away from the site until an inspection to establish site integrity is carried by the County Engineer.

4. If an appointment has been arranged with a County Engineer Inspector to inspect the removal of a tank, the inspector will only wait at the site a reasonable amount of time (approximately one hour) after arriving for the removal to commence. Another closure fee may be charged if the inspector has to return to the site.

5. After inspection, tank shall be transported to a legal disposal point.

6. If the tank has stored materials other than motor fuel, fuel oil or waste oil, site integrity shall be demonstrated using the soil sampling and analysis procedures described in CONDITIONS D below.

7. The site shall be filled and re-compacted to a relative compaction of 90%.

CONDITIONS D - PERMANENT

1. All permanent closures of tanks in place shall comply with Los Angeles County Fire Department, Fire Prevention Division, Supplement #A - Inspection Guide #6, Parts B or C, and any other applicable Parts.

2. Owners/operators shall demonstrate post site integrity as follows:

- a. Test borings shall be slant drilled to intercept a point beneath the center of the tank, if possible. If slant drilling is not feasible, the test boring may be drilled vertically and the reason stated in the report in 2.h. below.
- b. For single tanks, a minimum of two test borings will be required, each located on opposite sides of the tank along the major axis of the tank.
- c. For multiple tanks, as a minimum, boring shall be placed at 20-foot intervals around the tank cluster. The actual number and location of borings shall be evaluated on a case-by-case basis. Tanks separated by 20 feet or more shall be considered single tanks for the purposes of test location and placement.
- d. Soil samples shall be taken at depths of 5, 10, 20, 30 and 40 feet below grade level.
- e. A Shelby Tube or a Modified California Sampler shall be utilized for taking all soil samples.
- f. Soil samples shall not be extruded in the field but are to be immediately placed in a refrigerated ice chest and transported to a state certified laboratory for analysis, using suitable methods.
- g. A report containing the results of the above analysis shall be submitted to the County Engineer.

3. If the soil analysis in 2. above indicates the presence of contaminants, the County Engineer shall require a site investigation as defined in Chapter V of the County's "Underground Storage of Hazardous Materials - Guidelines."

4. A report shall be submitted to the County Engineer containing the results of the site investigation.

STATE OF CALIFORNIA
California Regional Water Quality Control Board
Los Angeles Region
(Underground Storage Tank Program)

General Laboratory Testing Requirements for Petroleum Hydrocarbon Impacted Sites

The purpose of this document is to supplement the Regional Board's Laboratory Report Form (6/00) in order to update obsolete testing requirements and set forth the new requirements for fuel oxygenates and natural attenuation testing. Each analytical method used must be certified by the California Environmental Accreditation Laboratory Program (ELAP).

1. General Laboratory QA/QC Requirements

Conform to the Regional Board's Laboratory Report Form (6/00) in general, except for items specified below.

2. Compounds to be Tested

Total petroleum hydrocarbons in gasoline range (TPHg) (C4 – C12); Total petroleum hydrocarbons in diesel range (TPHd) (C13 – C22); benzene, toluene, ethylbenzene, xylenes (BTEX); methyl tertiary butyl ether (MTBE); di-isopropyl ether (DIPE); ethyl tertiary butyl ether (ETBE); tertiary amyl methyl ether (TAME); tertiary butyl alcohol (TBA). If the gasoline tanks historically or currently contain methanol or ethanol, these compounds are also to be tested.

3. Analytical Test Methods and Detection Limits

Conform to Table 1 below. Report any concentration detected between the method detection limit (MDL) and estimated quantitation limit (EQL) (or reporting limit (RL)) in a numerical value with a "J" flag indicator. All "Non-Detect" (ND) shall be reported in the format with "< (numerical MDL)." Integrate all fuel oxygenate additive concentrations into total petroleum hydrocarbons (TPH) and report it as TPH. EPA Method 8021B may be used to substitute EPA Method 8260B at the sites where all fuel oxygenates have not been identified by EPA Method 8260B in soil and/or groundwater.

Table 1: Analytical Requirements

<u>Analyte</u>	<u>Analytical Method</u>	<u>Required MDL (Method detection limit)</u>	
		<u>Soil (µg/kg)</u>	<u>Water (µg/L)</u>
BTEX	EPA Method 8260B(8021B)	1	0.5
MTBE	EPA Method 8260B	2	1
DIPE	EPA Method 8260B	2	1
ETBE	EPA Method 8260B	2	1
TAME	EPA Method 8260B	2	1
TBA	EPA Method 8260B	20	10
TPHg	Cal-LUFT GC/FID or GC/MS	100-200	50-100
TPHd	Cal-LUFT GC/FID	1000	500
Methanol	Cal-LUFT GC/FID	1000	500
Ethanol	Cal-LUFT GC/FID(EPA8260B)	500	250

General Laboratory Testing Requirements for Petroleum Hydrocarbon Impacted Sites

4. Use of EPA Method 5035 for Soil Samples

Apply EPA Method 5035A specified in the USEPA SW-846, (7/2002) for soil sample preparation and preservation in order to minimize volatile organic losses. Use the sample collection devices, or equivalent, specified in the method (e.g., the Encore™ sampler). If the Encore™ sampler is used, analyze sample within 48 hours from the collection. Analyze sample within 14 days for soil samples stored under frozen conditions.

5. Natural Attenuation Parameters

Natural attenuation processes include dispersion, dilution, sorption, volatilization, biodegradation, and chemical or biological transformation. A carefully controlled monitoring program for the natural attenuation can be used to confirm site-specific mass reduction and achieve remedial objectives. In order to test parameters to confirm the occurrence of natural attenuation, site characterization must be complete first.

5.1 Primary Natural Attenuation Criteria

Meet the following conditions prior to testing for the secondary natural attenuation parameters:

- Groundwater contaminant plume must be fully defined.
- Groundwater monitoring program on a quarterly basis must be completed for at least two years including data of MTBE and other oxygenates.
- Groundwater concentration has consistently decreased or been stable.
- Determination of site-specific hydraulic conductivity must be conducted: Refer the ASTM D4044-91 for the slug test procedures. Other field methods (e.g., pumping test) are also acceptable to determine hydraulic conductivity.
- Characterization of MTBE and other oxygenates plume vertical extent must be completed with discrete multi-depth groundwater sampling at all groundwater vulnerable areas designated by the Board.

5.2 Secondary Natural Attenuation Parameters

Analyze the secondary natural attenuation parameters only after the primary natural attenuation criteria are met. Analyze the secondary natural attenuation parameters at all groundwater monitoring wells inside and outside of the plume. Conform to Table 2 below for parameters and testing methods.

Table 2: Analytical Requirements for Secondary Natural Attenuation Parameters

<u>Parameters</u>	<u>Test Method</u>	<u>Required MDL</u>
pH	EPA Method 150.2 or Field instrument	n/a
Dissolved oxygen (DO)	EPA Method 360.1 or Field instrument	n/a
Redox potential (ORP)	Field instrument	n/a
Sulfate (SO ₄)	EPA Method 300	5 mg/L
Nitrate (NO ₃)	EPA Method 300	0.1 mg/L
Ferrous iron (Fe ²⁺)	EPA Method 200	0.1 mg/L
Methane (CH ₄)	EPA Method 8015(M)	5 µg/L

6. Electronic Submittal of Data Reporting

All analytical results shall be uploaded in an electronic format to the State GeoTracker Database.

CLOSURE APPLICATION SUPPLEMENT
 HAZARDOUS MATERIALS UNDERGROUND STORAGE
 LOS ANGELES COUNTY
 DEPARTMENT OF PUBLIC WORKS
 ENVIRONMENTAL PROGRAMS DIVISION
 900 S. FREMONT AVENUE
 ALHAMBRA, CA 91803

PART 1 OF 3

DPW USE ONLY:
SITE-FILE NO. <u>9599-56168</u>
APPLICATION NO. <u>698898</u>

To satisfy the permanent closure requirements for underground storage tanks storing hazardous materials, site integrity must be demonstrated by the analysis of soil samples and, if applicable, groundwater samples as outlined below. These requirements are in addition to the conditions listed on the Application for Closure or contained in an approved Closure Plan.

*** Soil sampling will be required for Vent and Vapor Recovery piping for UST systems installed after July 1, 2003. ***

1. Samples shall be obtained at the sampling points (SP) indicated on the attached plot plan.
2. For each SP, samples shall be obtained at the following depths:

SP	Depth(s)	Compounds	Analysis Method
1A, 1B, 1C	2-4 feet below	TPHg & TPHd	→ 8015 M
2A, 2B	tank invert	BTEX, MTBE	→ 8260 B
3A, 3B		Fuel Oxigenates	
		Ethanol	
		* Organic Lead	→ DOHS Method
1 sample	2-4 feet below	Same as above	Same as
	each UDC		Above
1 sample	2-4 feet below	Same as above	Same as
	piping, every 20 feet		as
	starting at UDC's		Above

Apply EPA Method 5035 for soil sample collection, preparation and preservation

* Organic Lead → Test for organic lead if past UST contents were leached.

CLOSURE APPLICATION SUPPLEMENT

PART 2 OF 3

3. All soil samples obtained shall be discrete, undisturbed and unexposed prior to analysis. The method used to obtain the samples and the date/time of sampling shall be included in the final report.
4. Conform to the analytical requirements table below for petroleum hydrocarbon sites. Apply EPA Method 5035 specified in the USEPA SW-846, version III (12/1996) for soil sample preparation and preservation in order to minimize volatile organic losses. Use the sample collection devices, or equivalent, specified in the method (e.g., the Encore™ sampler). If the Encore™ sampler is used, analyze sample within 48 hours from the collection. Analyze sample within 10 days for soil samples stored under frozen conditions.

UST CONTENTS	Analyte	Analytical Method	Required MOL	
			Soil (ug/kg)	Water (ug/L)
GASOLINE OR DIESEL	Total Petroleum Hydrocarbons(TPH) - Gasoline	EPA Method 8015 (M)	100-200	50-100
	Total Petroleum Hydrocarbons (TPH) - Diesel	EPA Method 8015 (M)	1000	500
	Benzene	EPA Method 8260B (8021B)	1	0.5
	Toluene	EPA Method 8260B (8021B)	1	0.5
	Ethylbenzene	EPA Method 8260B (8021B)	1	0.5
	Xylenes (Total)	EPA Method 8260B (8021B)	1	0.5
	Methyl Tertiary Butyl Ether (MTBE)	EPA Method 8260B	2	1
	Di-isopropyl ether (DIPE)	EPA Method 8260B	2	1
	Ethyl tertiary butyl ether (ETBE)	EPA Method 8260B	2	1
	Tertiary amyl methyl ether (TAME)	EPA Method 8260B	2	1
	Tertiary butyl alcohol (TBA)	EPA Method 8260B	20	10
	Ethanol	EPA Method 8260B	500	250
	Methanol	EPA Method 8015 (M)	1000	500
WASTE OIL	Total Recoverable Petroleum Hydrocarbons (TRPH) - Waste Oil	EPA Method 418 + EPA Method 8260B	1000	500
OTHER, UNKNOWN	UST Permitted Contents, all VOC's (EPA Method 8260) + To Be Determined

PLANS PREPARED BY

CLOSURE APPLICATION SUPPLEMENT

PART 3 OF 3

5. All soil/groundwater samples shall be analyzed by a laboratory approved by the California Environmental Accreditation Laboratory Program (ELAP).
6. Analytical results shall be reported on laboratory letterhead and shall include the following information: a) The date the analysis was conducted; b) The method of extraction (if applicable); c) Detection limits for each analytical procedure and determination; d) The method of analysis; e) Signature of chemist certifying results.
7. All soil/groundwater samples obtained shall be handled and transported to laboratory in strict accordance with applicable EPA regulations utilizing chain-of-custody procedures. Chain-of-custody documentation shall be included in the final report.
8. If the soil/groundwater analysis indicates undefined contamination at the facility, additional sampling shall be required to define the vertical and lateral extent present.
9. If groundwater is encountered during sampling, a groundwater monitoring well shall be established at the most downgradient sampling point. The well shall be developed by removing a minimum of four well volumes and a groundwater sample shall be obtained and analyzed.
10. A final report that contains all of the above required information shall be submitted to the office above within one (1) month from the sampling date or 180 days from the date of this permit, whichever is earlier.
11. All electronic data shall be submitted to the State Water Resources Control Board Geotracker database.

NOTICE TO CLOSURE PERMIT APPLICANTS

The South Coast Air Quality Management District (SCAQMD) has adopted Rule 1166 regulating emissions of Volatile Organic Compounds (VOC) from decontamination of soil effective **August 5, 1988**.

In addition to the requirements of your Closure Permit, persons excavating any underground storage tank that previously contained VOCs must:

- ! Notify the SCAQMD by telephone at (909) 396-2326 or by fax at (909) 396-3342 using the SCAQMD notification form 24 hours prior to tank excavation. 1166(c)(1)(A)
- ! Monitor the excavated material during the excavation for VOC contamination. 1166(c)(1)(B)
- ! When VOC contamination is detected:
 - * Cease excavation.
 - * Cover the contaminated soil until implementation of approved mitigation measures. 1166(c)(1)(C)
 - * Notify the SCAQMD at (909) 396-2326 within 24 hours of detection of VOC contaminated soil. 1166(c)(2)(A)
- ! A person shall not engage in or allow any on- or off-site spreading of VOC contaminated soil which results in uncontrolled evaporation of VOC to the atmosphere. 1166(c)(3)

Exemptions

- ! Treatment of less than one (1) cubic yard of contaminated soil. 1166(d)(1)(A)
- ! Decontamination of soil containing organic compounds that have an initial boiling point of 302°F or greater, Reid Vapor Pressure less than 80 mm Hg or Absolute Vapor Pressure less than 36 mm Hg at 20°C. 1166(d)(1)(B),(F)
- ! Removal of soil for sampling purposes pursuant to Environmental Protection Agency methods. 1166(d)(1)(C)
- ! Accidental spillage of five (5) gallons or less of VOC. 1166(d)(1)(D)
- ! Documentation of soil which is contaminated through natural seepage of VOC from oil and gas wells or other natural sources. 1166(d)(1)(E)

SPECIFIC QUESTIONS ON RULE 1166 SHOULD BE REFERRED TO THE SOUTH COAST AIR QUALITY MANAGEMENT DISTRICT (909) 396-2326

ATTENTION CONTRACTOR
NOTIFICATION/PERMIT REQUIREMENTS

This Closure Authorization is issued subject to compliance with all applicable laws and regulations relating to the performance of work including, but not limited to, business license requirements, Building Codes, Fire Codes, Air Quality regulations, Health and Safety Codes, Water Codes, and Transportation regulations.

Pursuant to Los Angeles County Code, Section 11.78.045, and the Conditions and Limitations of the attached Hazardous Materials Underground Storage Closure Authorization, you are required to complete **ALL** of the agency notifications indicated below within the time period specified prior to commencement of work on this closure.

- 72 HOUR-DEPARTMENT OF PUBLIC WORKS WASTE CONTROL ENGINEERING INSPECTOR:

>>>Unless otherwise noted, Public Works inspectors are available at the following offices, Monday through Friday, between 8 a.m. and 9:30 a.m. **ONLY.**<<<

ADDITIONAL CONDITIONS FOR UST CLOSURE/SITE ASSESSMENT

TITLE 23: CALIFORNIA CODE OF REGULATIONS - WATERS
DIVISION 3: STATE WATER RESOURCES CONTROL BOARD (SWRCB)
CHAPTER 30: ELECTRONIC SUBMITTAL OF INFORMATION

Article 1 – GENERAL PROVISIONS

Section 3890. General Intent, Content, and Applicability of Regulations

(a) The regulations in this Chapter are intended to provide electronic access to reports, including soil, vapor, and water data, prepared for the purpose of subsurface investigation or remediation of: (1) an unauthorized discharge or deposit of waste as defined in section 13050 of the Water Code, (2) an unauthorized release of a hazardous substance as defined in section 25281 of the Health and Safety Code, or (3) a discharge of waste to land subject to Division 2 of Title 27 or Division 3, Chapter 15, of Title 23 of the California Code of Regulations (CCR).

(b) The regulations in this Chapter require persons responsible for submitting certain reports to the State Board, a regional board, or a local agency to submit these reports electronically over the Internet to the State Board's Geotracker system.

(c) The requirements of this Chapter are in addition to, and not superseded by, any other applicable reporting requirements.

(d) Except as provided in Section 3895(b), the electronic reporting requirements of this Chapter are intended to replace requirements for the submittal of paper copies of reports, beginning July 1, 2005.

Authority cited: Sections 13196 and 13198(c), Water Code.

Reference: Sections 13196 and 13198, Water Code.

Article 2. - ELECTRONIC SUBMITTAL OF INFORMATION

Section 3891. Definition of Terms

"COELT" is the United States Army Corps of Engineers Loading Tool program. It is a relational database application that is designed to run with the Microsoft Windows operating system. COELT places laboratory data into the standardized Electronic Deliverable Format (EDF). The program can accept data from Laboratory Information Management System (LIMS) or manually entered data. COELT is an optional software application that is intended to help laboratories that require new software to produce the EDF data deliverable. COELT includes a report utility that allows hard copy laboratory reports to be printed that match the actual electronic data. For purposes of the requirements of this chapter, version 1.2a of COELT may be used. The program (coelt12i.exe) and documents (coelt 1.2i manual.zip) for version 1.2i of COELT are available through links provided at <http://www.waterboards.ca.gov/ust> "CSRS-H" is the California Spatial Reference System-Horizontal, which includes the High Precision Geodetic Network (HPGN), the High Precision Geodetic Network-Densification (HPGN-D) and other geodetic control positions. These control positions have been determined by Global Positioning System survey methods in accordance with first order or better standards and specifications from the Federal Geodetic Control Subcommittee (FGCS) of the Federal Geographic Data Committee. These control positions are published by the National Geodetic Survey, California Spatial Reference Center or its successor.

“EDCC” is the Electronic Deliverable Consistency Checker program, which was developed for the EDF1.2i format, described below. The EDCC program is run upon completion of an EDF report and produces an error report. This error report identifies problems within the given data set based upon the EDF database structure, guidelines, restrictions, and valid values. The error report also indicates the nature of each problem, so that the submitter can correct them. For purposes of the requirements of this chapter, the interactive web-version 1.2i or personal computer version 1.2i of EDCC shall be used. Programs (edcc.zip and edccservicepac1.zip) for version 1.2i of EDCC are available through links provided at <http://www.waterboards.ca.gov/ust>.

“EDF” is the Electronic Deliverable Format, originally developed for the United States Army Corps of Engineers. It is a data standard designed to facilitate transfer of electronic data files from analytical laboratories to end-users. It is a relational database whose files are related to one another through key fields. Laboratories can produce electronic EDF files by using their own LIMS or COELT software. The data components include chain-of custody information, laboratory results, and quality assurance information. For purposes of the requirements of this chapter, version 1.2i of EDF shall be used. Specifications for version 1.2i of EDF (The Electronic Deliverable Format [EDF] Version 1.2i data dictionary are available in Title 27, Division 3, Subdivision 2, Chapter 1 (Laboratory Results) CCR, through links provided at <http://www.waterboards.ca.gov/ust>.

“Geotracker” is the State Board’s Internet-accessible database system used by the State Board, regional boards, and local agencies to track and archive compliance data from authorized or unauthorized discharges of waste to land, or unauthorized releases of hazardous substances from underground storage tanks. This system consists of a relational database, on-line compliance reporting features, a geographical information system (GIS) interface and other features that are utilized by the State Board, regional boards, local agencies, regulated industry and the public to input, manage, or access compliance and regulatory tracking data. Geotracker, initially known as the Geographical Environmental Information Management System (GEIMS) database, is available at <http://geotracker.swrcb.ca.gov/>.

“PDF” means Portable Document Format. “PDF” files are self-contained and cross-platform documents. A PDF file will look the same on the screen and in print, regardless of what type of computer or printer a person uses or which software package originally created the file. Although PDF files contain the complete formatting of the original document, including fonts and images, they are highly compressed, allowing efficient transfer of complex information.

“Permanent monitoring well” means any artificial excavation by any method made for the purpose of monitoring fluctuations in groundwater levels, the quality of groundwater, or the concentration of contaminants in groundwater and which is used for at least thirty days.

“Report” means any document or item that is required for submittal in order for a person to comply with a regulation, directive, or order issued by the State Board, a regional board, or a local agency, including but not limited to, any analysis of material by a laboratory that has accreditation or certification pursuant to Article 3 (commencing with Section 100825) of Chapter 4 of Part 1 of Division 101 of the Health and Safety Code.

Authority cited: Sections 13196 and 13198 (c), Water Code.

Reference: Sections 13195 (b) and 13196, Water Code.

Section 3892. Reports

The following reports are subject to the requirements of this Chapter, when those reports are required for the purpose of subsurface investigation or remediation of: (1) an unauthorized discharge or deposit of waste as defined in section 13050 of the Water Code, (2) an unauthorized release of a hazardous substance as defined in section 25281 of the Health and Safety Code, or (3) a discharge of waste to land subject to Division 2 of Title 27 or Division 3, Chapter 15 of Title 23 of the California Code of Regulations (CCR).

- (a) Reports submitted pursuant to Division 3, Chapter 16, Article 11 of Title 23 of the CCR.
- (b) Reports submitted pursuant to Division 2 of Title 27 or Division 3, Chapter 15 of Title 23 of the CCR.
- (c) Reports submitted pursuant to section 13304 of the Water Code.
- (d) Reports submitted pursuant to section 13267 of the Water Code.
- (e) Reports submitted pursuant to any order or directive of the State Board, a regional board or a local agency.
- (f) Reports submitted pursuant to the Two-year Joint Cooperative Agreement Execution Plans under the Defense / State Memorandum of Agreement and Navy Cost Recovery Cooperative Agreement, for the State of California.

Authority cited: Sections 13196 and 13198 (c), Water Code.

Reference: Sections 13196 (a) and 13198 (c), Water Code.

Section 3893. Electronic Submittal of Reports

(a) Persons responsible for submitting reports pursuant to this Chapter shall submit the following information described in subdivision (b) electronically over the Internet to the State Board's Geotracker system in conformance with data dictionaries found in Title 27, Division 3, Subdivision 2 (Monitoring and Release Information) and specifications contained in the State Water Resources Control Board EDF Guidelines and Restrictions (version 1.2i) and Survey XYZ Guidelines and Restrictions (Version 6). These data dictionaries and documents are available through links provided at <http://www.waterboards.ca.gov/ust>.

(b) Data generated after the effective date of the regulations by chemical analysis of soil, vapor, or water samples (including surface water, groundwater and influent/effluent water samples from remediation systems), shall be submitted in EDF format. All data submitted in EDF format shall be checked for errors prior to and during submittal using the EDCC software consistency-checking tool. All data submitted in EDF format must pass this error-checking tool as well as meet normal regulatory requirements in order to be considered valid data. In addition, when required for reports subject to this Chapter, the following shall also be submitted electronically:

- (1) The latitude and longitude of any permanent monitoring well for which data is reported in EDF format, accurate to within 1 meter and referenced to a minimum of two reference points from the California Spatial Reference System (CSRS-H), if available.
 - (2) The surveyed elevation relative to a geodetic datum of any permanent monitoring well.
 - (3) The elevation of groundwater in any permanent monitoring well relative to the surveyed elevation.
 - (4) A site map or maps showing the location of all sampling points referred to in the report.
 - (5) The depth to the screened interval and the length of screened interval for any permanent monitoring well.
 - (6) Boring logs, in PDF format.
 - (7) A complete copy of the report, in PDF format, which includes the signed transmittal letter and professional certification.
- (c) All deadlines and timeframes for submittals of reports are applicable to the information submitted electronically pursuant to this Chapter.

Authority cited: Sections 13196 and 13198 (c), Water Code.

Reference: Sections 13196 and 13198 (c), Water Code.

Section 3894. Timing of Electronic Reporting Requirements

(a) Electronic submittals of information for sites subject to the requirements of Title 23, Division 3, Chapter 16, Article 11 of the California Code of Regulations, shall begin on December 16, 2004.

(b) Unless otherwise specifically noted, all other electronic submittals required pursuant to this Chapter shall begin January 1, 2005.

(c) Until July 1, 2005, the electronic reporting requirements of this Chapter are in addition to any existing paper or other reporting requirements.

Authority cited: Sections 13196 and 13198 (c), Water Code.

Reference: Sections 13196 (a) and 13198 (c), Water Code.

Section 3895. Submittal of Alternate Forms of Reports

(a) Beginning July 1, 2005, the successful submittal of electronic information in accordance with this Chapter shall replace the requirement for the submittal of a paper copy, except as provided in subdivision (b).

(b) In addition to the electronic submittal of reports required pursuant to this Chapter, a regulatory agency may require the submittal of a report, or portions thereof, in diskette, compact disc or other form if the agency determines that the alternative form is necessary. The burden, including cost, of these alternative forms shall bear a reasonable relationship to the need for alternative form and benefits to be obtained from the alternative form.

Authority cited: Sections 13196 and 13198 (c), Water Code.

Reference: Sections 13196 (a) and 13198 (c), Water Code

NOTICE: Original paper reports with wet ink signature and seal must continue to be submitted to this office pursuant to CCR Title 23, Division 3, Chapter 30, Article 2, Section 3895 (b), regardless if such report is required by regulation to be electronically uploaded to Geotracker.

Report Number: IVA1143

Sampled: 01/12/12
Received: 01/12/12

DATA QUALIFIERS AND DEFINITIONS

- ID** Due to the low levels of analyte found in the sample, the analyte was qualitatively identified based on the compound's retention time and the presence of a single mass ion.
- J** Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
- L** Laboratory Control Sample and/or Laboratory Control Sample Duplicate recovery was above the acceptance limits. Analyte not detected, data not impacted.
- MNRI** There was no MS/MSD analyzed with this batch due to insufficient sample volume. See Blank Spike/Blank Spike Duplicate.
- R** The RPD exceeded the method control limit due to sample matrix effects. The individual analyte QA/QC recoveries, however, were within acceptance limits.
- ND** Analyte NOT DETECTED at or above the reporting limit or MDL, if MDL is specified.
- RPD** Relative Percent Difference

ADDITIONAL COMMENTS

For 8260 analyses:

Due to the high water solubility of alcohols and ketones, the calibration criteria for these compounds is <30% RSD. The average % RSD of all compounds in the calibration is 15%, in accordance with EPA methods.

For Volatile Fuel Hydrocarbons (C4-C12):

Volatile Fuel Hydrocarbons (C4-C12) are quantitated against a gasoline standard. Quantitation begins immediately before TBA-d9.

Phoenix, AZ 85003
Attention: Dan Blaes

Project: circle K Alhambra
Circle K Alhambra, CA

Sampled: 01/18/12
Received: 01/18/12
Issued: 01/26/12 18:13

NELAP #01108CA California ELAP#2706 CSDLAC #10256 AZ #AZ0671 NV #CA01531

The results listed within this Laboratory Report pertain only to the samples tested in the laboratory. The analyses contained in this report were performed in accordance with the applicable certifications as noted. All soil samples are reported on a wet weight basis unless otherwise noted in the report. This Laboratory Report is confidential and is intended for the sole use of TestAmerica and its client. This report shall not be reproduced, except in full, without written permission from TestAmerica. The Chain of Custody, 1 page, is included and is an integral part of this report.

This entire report was reviewed and approved for release.

DATA QUALIFIERS AND DEFINITIONS

- J** Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
- MNR1** There was no MS/MSD analyzed with this batch due to insufficient sample volume. See Blank Spike/Blank Spike Duplicate.
- ND** Analyte NOT DETECTED at or above the reporting limit or MDL, if MDL is specified.
- RPD** Relative Percent Difference

ADDITIONAL COMMENTS

For 8260 analyses:

Due to the high water solubility of alcohols and ketones, the calibration criteria for these compounds is <30% RSD.
The average % RSD of all compounds in the calibration is 15%, in accordance with EPA methods.

For Volatile Fuel Hydrocarbons (C4-C12):

Volatile Fuel Hydrocarbons (C4-C12) are quantitated against a gasoline standard. Quantitation begins immediately before TBA-d9.

The test results in this report meet all 2003 NELAC and 2009 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

TestAmerica Job ID: 440-1204-1

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☉	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CNF	Contains no Free Liquid
DL, RA, RE, IN	Indicates a Dilution, Reanalysis, Re-extraction, or additional Initial metals/anion analysis of the sample
EDL	Estimated Detection Limit
EPA	United States Environmental Protection Agency
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RL	Reporting Limit
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Creator: Kim, Will

Question	Answer	Comment
Radioactivity either was not measured or, if measured, is at or below background	N/A	
The cooler's custody seal, if present, is intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	N/A	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

ANALYTICAL LABORATORY REPORTS – SOIL STOCKPILE

LABORATORY REPORT

Prepared For: Blaes Environmental
1433 North Third Avenue
Phoenix, AZ 85003
Attention: Dan Blaes

Project: circle K Alhambra
circle K Alhambra, CA

Sampled: 01/18/12
Received: 01/18/12
Issued: 01/24/12 19:04

NELAP #01108CA California ELAP#2706 CSDLAC #10256 AZ #AZ0671 NV #CA01531

The results listed within this Laboratory Report pertain only to the samples tested in the laboratory. The analyses contained in this report were performed in accordance with the applicable certifications as noted. All soil samples are reported on a wet weight basis unless otherwise noted in the report. This Laboratory Report is confidential and is intended for the sole use of TestAmerica and its client. This report shall not be reproduced, except in full, without written permission from TestAmerica. The Chain of Custody, 1 page, is included and is an integral part of this report.

This entire report was reviewed and approved for release.

Report Number: IVA1731

Sampled: 01/18/12
Received: 01/18/12

DATA QUALIFIERS AND DEFINITIONS

- J** Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
- M2** The MS and/or MSD were below the acceptance limits due to sample matrix interference. See Blank Spike (LCS).
- MNR1** There was no MS/MSD analyzed with this batch due to insufficient sample volume. See Blank Spike/Blank Spike Duplicate.
- ND** Analyte NOT DETECTED at or above the reporting limit or MDL, if MDL is specified.
- RPD** Relative Percent Difference

ADDITIONAL COMMENTS

For 8260 analyses:

Due to the high water solubility of alcohols and ketones, the calibration criteria for these compounds is <30% RSD.
The average % RSD of all compounds in the calibration is 15%, in accordance with EPA methods.

For Volatile Fuel Hydrocarbons (C4-C12):

Volatile Fuel Hydrocarbons (C4-C12) are quantitated against a gasoline standard. Quantitation begins immediately before TBA-d9.

Los Angeles Regional Water Quality Control Board

December 21, 2012

Ms. Trisha Yahner
Circle K Stores, Incorporated
255 East Rincon Avenue, Suite 100
Corona, CA 92879-1368

Underground Storage Tank Program – Directive to Take Corrective Action in Response to Unauthorized Underground Storage Tank Release Pursuant to Health and Safety Code Section 25296.10 and Title 23, California Code of Regulations, Sections 2720-2727

Request for Additional Information

Circle K Store #2211264

1000 West Valley Boulevard, Alhambra (Case No. I-09425B) (Priority D-1 Site)

Dear Ms. Yahner:

Pursuant to Health and Safety Code section 25296.10, you are required to take corrective action (i.e., Preliminary Site Assessment, Soil and Water Investigation, Corrective Action Plan Implementation, and/or Verification Monitoring) to ensure protection of human health, safety, and the environment. Corrective action requirements are set forth in California Code of Regulations (CCR), title 23, sections 2720 through 2727.

On **November 8, 2012**, the County of Los Angeles Department of Public Works transmitted this case to our agency due to concerns of soil and groundwater impacts from the subject site. The California Regional Water Quality Control Board, Los Angeles Region (Regional Board), is the public agency with primary responsibility for the protection of ground and surface water quality for all beneficial uses within the Los Angeles and Ventura counties. As such, we are the lead regulatory agency for overseeing corrective action (assessment and/or monitoring activities) and cleanup of releases from leaking underground storage tank (UST) systems at the subject site (Site).

To facilitate our review and allow us to identify further required actions, please provide the following information regarding the referenced Site:

1. Facility mailing address, contact person's name, phone number, and e-mail address, if any;
2. Your telephone number and e-mail address;
3. A list of all historical and existing USTs, as well as their contents, capacities, dates of use, dates of removal, and a figure showing their location;
4. Contaminant release information (e.g., copy of Site Assessment Report);
5. UST removal and/or repair information (include tank size and contents, removal and/or repair date);
6. Tank disposal documentation, as well as soil disposal documentation (if any);

MARIA MEHRANIAN, CHAIR | SAM UNGER, EXECUTIVE OFFICER

320 West 4th St., Suite 200, Los Angeles, CA 90013 | www.waterboards.ca.gov/losangeles

7. Copies of all previous site assessment and/or remediation report(s);
8. Reports of all previous soil and groundwater sample analytical results, if any;
9. Name, telephone number, and e-mail address of your environmental consultant, if any;
10. Copies of all correspondence regarding environmental assessment for the subject Site;
11. Current site use;
12. Property Owner Information:

Pursuant to the California Health and Safety Code Section 25296.20(a) and Division 7 of the Porter Cologne Water Quality Control Act under AB 681, the Regional Board is required to notify all current fee title holders for the subject site or sites impacted by releases from underground storage tanks prior to considering corrective action and cleanup or case closure. If corrective action data from the site indicate that release(s) from the underground storage tank systems have impacted offsite property, we are also required to notify offsite property owners. Therefore, you are required to provide to this Regional Board the name, mailing address, and phone number for any record fee title holders for the subject site, as well as any offsite property(ies) impacted by releases from the subject site, together with a copy of county record of current ownership (grant trust deed), available from the County Recorder's Office, for each property affected. Or as an alternative, you can complete this Regional Board's "Certification Declaration for Compliance with Fee Title Holder Notification Requirements" (available at http://www.waterboards.ca.gov/losangeles/publications_forms/forms/ust/ab681_form.pdf).

Copies of future technical reports shall also be sent directly to any other property owner(s) impacted by contamination from the Site. You are also responsible to provide new contact information if the property owner(s) changes. The new owner shall comply with the requirement stated above.

The above requested information is due to this Regional Board no later than **February 15, 2013**.

CCR, title 23, sections 3890-3895 require persons to submit electronic laboratory analytical data (i.e., soil, soil gas, or water chemical analysis) and locational data (i.e., location and elevation of groundwater monitoring wells), via the Internet to the SWRCB's GeoTracker database. The regulations and other background information are available at <http://geotracker.waterboards.ca.gov>.

Therefore, you are required to submit all laboratory data obtained after September 1, 2001 to the GeoTracker database. This includes any sampling completed for underground storage tank system removal, site assessment activities, periodic groundwater monitoring, and post cleanup verification sampling. Per the same regulations, you are also required to submit locational data obtained after January 1, 2002 for all groundwater monitoring wells (i.e., latitude, longitude, and elevation survey data), groundwater well information (e.g., depth to free product, monitoring well status), and a site map. A complete copy of all clean-up and monitoring reports since January 1, 2005, must also be submitted to GeoTracker in PDF format.

Effective November 1, 2011, the Los Angeles Regional Water Quality Control Board (Regional Board) implemented a Paperless Office system. Interested parties were notified of this intent in a letter dated October 20, 2011 (the announcement can be seen at <http://www.waterboards.ca.gov/losangeles/resources/Paperless/>).

For all parties who upload electronic documents to State Database GeoTracker, it is no longer necessary to email a copy of these documents to losangeles@waterboards.ca.gov or submit hard copies to our office. The Regional Board will no longer accept documents (submitted by either hard copy or email) already uploaded to GeoTracker."

If you have any questions regarding this matter, please contact me at (213) 576-6706 or jluera@waterboards.ca.gov.

Sincerely,

Joe Luera
Water Resource Control Engineer

SUBJECT: WORKPLAN APPROVAL – ADDENDUM TO CONDUCT SUBSURFACE SOIL VAPOR SURVEY WEST OF FASHION CLEANERS, PURSUANT TO CALIFORNIA WATER CODE (CWC) SECTION 13267 ORDER

CASE/FILE: FASHION CLEANERS, 1433 HUNTINGTON DRIVE, SOUTH PASADENA, CALIFORNIA (SCP FILE NO. 115.0094; SITE ID NO. 2040371)

Dear Mr. Lin:

The Los Angeles Regional Water Quality Control Board (Regional Board) staff has completed the review of the “*Workplan to Conduct Subsurface Soil Vapor Investigation Big Lots Parking Lot West of Fashion Cleaners*” (*Workplan*) dated October 5, 2011 and a revised supplement to the Workplan (Addendum) dated November 8, 2011. The Workplan and Addendum were submitted by your consultant, Athanor Environmental Services, Inc. (Athanor) on your behalf in response to a Regional Board Order (Water Code Section 13267 Order) dated July 20, 2011.

The results of soil vapor investigations conducted to-date indicate that the contamination of volatile organic compounds (VOCs), specifically tetrachloroethylene (PCE), has emanated from your property (Site) onto the adjacent parking lot area that is owned by the Big Lots retail store. The most recent soil vapor sampling event conducted in April 2011, detected concentrations of PCE at levels ranging from 0.14 micrograms per liter ($\mu\text{g/L}$) up to 60.48 $\mu\text{g/L}$, collected from probe BL-8-10, at 10 feet below ground surface (bgs).

The California human health screening level (CHHSL) comparison value for PCE in soil vapor for an industrial/commercial land use scenario for the shallow soils less than or equal (\leq) to 3 meters bgs is 0.603 $\mu\text{g/L}$. The purpose of this phase of work is to further delineate the PCE soil vapor contamination in the parking lot area and to propose and implement VOC source removal.

Your Workplan and Addendum propose the following scope of work for this phase of the investigation:

- The installation and sampling of eight semi-permanent, nested soil vapor probes placed at 5 feet bgs and 10 feet bgs in the parking lot area between the cleaners and the Big Lots store.

California Environmental Protection Agency

- The expansion and retrofit of an existing soil vapor extraction system (VES) that is currently in operation at the dry cleaners facility (Proposed Remediation System). The retrofit primarily includes the installation of two additional 2-inch diameter horizontal VES wells located immediately west of the Big Lots store at a depth of approximately 5 feet bgs.

Based upon the site information in our files and the proposed Work Plan, the Workplan and Addendum are approved with the following requirements and additions:

1. Soil Sample Collection – A representative number of soil samples should be collected to support the soil vapor sample results, including but not limited to samples with elevated photoionization detector (PID) measurements. The soil samples selected for analysis shall be analyzed for VOCs using United States Environmental Protection Agency (USEPA) Method 8260B. The soil samples shall be prepared using USEPA Method 5035.
2. Report Submittal – You shall prepare and submit a subsurface Soil Vapor Investigation Report (Investigation Report) to document and summarize the field activities and findings of the completed work. The investigation Report summarizing the field work shall be developed following the Regional Board's "Guidelines for Report Submittals" (March 1991, Revised June 1993) and shall be submitted as an electronic Adobe® "pdf" format and uploaded to Geotracker in accordance to the "Guidelines for Electronic Submittal of Documents" dated October 20, 2011. In addition, laboratory Quality Assurance/Quality Control (QA/QC) data shall be included with each final report. A copy of the guidelines can be found at the following URL:

http://www.waterboards.ca.gov/losangeles/water_issues/programs/ust/guidelines/la_county_guidelines_93.pdf

3. The investigation should be conducted in accordance with the "Quality Assurance Project Plan (QAPP) for the San Fernando Valley/San Gabriel Valley Cleanup Program" guidance document, located at the following URL Website:

http://www.waterboards.ca.gov/losangeles/water_issues/programs/remediation/

4. The California Business and Professions Code, Sections 6735, 7835, and 7835.1 require that engineering and geologic evaluations and judgments be performed by or under the direction of registered professionals. Please refer to the State Water Resources Control Board Resolution No. 92-49, Policies and Procedures for Investigation and Cleanup and Abatement of Discharges under California Water Code Section 13304 (amended on April 21, 1994 and October 2, 1996). Therefore, all work must be performed by or under the direction of a California professional geologist, a California registered certified specialty geologist or a California registered civil engineer with at least five years hydrogeologic experience. A statement is required in the report that an appropriately registered professional actually supervised or personally conducted all the work associated with the project. The documents must also bear a stamp reflecting the registered professional's credentialed specialty and an expiration date of the relevant license.

5. To verify the adequacy of the system design and coverage, the radius of influence of the interim SVE system shall be determined during the startup period. The data can be used to modify or finalize the proposed soil remediation after the VOC plumes in soil and soil vapor are adequately delineated laterally and vertically. Additional soil remediation efforts may be required pending on the results of the continuing soil and soil vapor investigations and the effectiveness of the proposed interim SVE system.

6. The quarterly VES progress reports shall continue and include the initial start-up parameters for the newly modified system. The quarterly soil remediation progress reports shall be submitted to the Regional Board according to the following schedule:

<u>Report Period</u>	<u>Report Due date</u>
January - March	April 15
April - June	July 15
July - September	October 15
October - December	January 15

Please inform the Regional Board staff at least five working days prior to the commencement of the work in order that we may have a representative present. Regional Board staff recommends that two copies of the investigative report be submitted to this Regional Board approximately three weeks prior to completion of the field work. The above technical report is required to be submitted under the CWC section 13267 Order. The Regional Board requires you to include a perjury statement in all reports submitted under the 13267 orders. The perjury statement shall be signed by a senior authorized representative (and not by a consultant). The statement shall be in the following format:

"I [NAME], do hereby declare under penalty of perjury under the laws of California, that I am [JOB TITLE] for the Fashion Cleaners property located at 1433 Huntington Drive, that I am authorized to attest to the veracity of the information contained in the reports described herein, and that the information contained [NAME AND DATE OF REPORT] is true and correct, and that this declaration was executed at [PLACE], [STATE], on [DATE].

Pursuant to section 13267 of the CWC, you are required to implement the approved Work Plan, and submit the required investigative report results to the Regional Board by **March 30, 2012** for our review and approval. **The technical report is required to be submitted under the CWC section 13267 Order.** The new due date above is an amendment to the existing CWC section 13267 Order dated July 20, 2011.

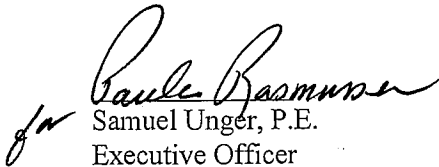

Mr. Te Ming Lin
Fashion Cleaners

17011 Beach Blvd., Suite 900
Huntington Beach, Ca 91030

SUBJECT: TIME EXTENSION REQUEST FOR EXTENDING THE TECHNICAL REPORT DUE DATE - PURSUANT TO CALIFORNIA WATER CODE (CWC) SECTION 13267 ORDER DATED JULY 20, 2011

SITE/CASE: FASHION CLEANERS, 1433 HUNTINGTON DRIVE, SOUTH PASADENA, CALIFORNIA (SCP FILE NO. 115.0094; SITE ID NO. 2040377)

Dear Mr. Lin:

The California Regional Water Quality Control Board, Los Angeles Region (Regional Board) staff has reviewed your request, dated July 20, 2011, submitted on your behalf by Athanor Environmental Services, Inc. (AES Inc.) for the above referenced site. Your letter requests a due date extension for the submittal of the technical report (Workplan). The initial due date for the Workplan as required in the Regional Board's California Water Code (CWC) section 13267 Order issued on July 20, 2011 (attached).

The Regional Board understands that you require additional time to coordinate field work with your environmental contractor and to resolve property access issues with the adjacent property to the South of your facility.

After reviewing your request, the additional information and file documents for this site, the Regional Board approves your extension request from August 30, 2011 to **September 30, 2011** to submit the Workplan. The due date extension is an amendment to the existing CWC section 13267 Order issued by this Regional Board on July 20, 2011.

The technical report is required to be submitted under the CWC section 13267 Order. Pursuant to section 13268(b)(1) of the CWC, failure to submit the required technical report described above by September 30, 2011 may result in civil liability penalties administratively imposed by the Regional Board in an amount up to one thousand dollars (\$1,000) per day for each day the technical report is not received after the specified due date. These civil liabilities may be assessed by the Regional Board for failure to comply, beginning with the date that the violations first occurred, and without further warning.

REQUIREMENT FOR TECHNICAL REPORT, PURSUANT TO CALIFORNIA WATER CODE
(CWC) SECTION 13267, - FASHION CLEANERS, 1433 HUNTINGTON DRIVE, SOUTH
PASADENA, CALIFORNIA (SCP FILE NO. 115.0094; SITE ID NO. 204371)

Dear Mr. Te Ming Lin:

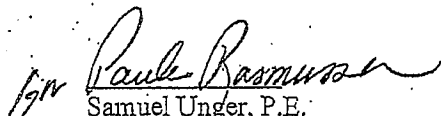

Enclosed is a Regional Board Order for technical report requirements pursuant to California Water Code section 13267. The subsurface investigations that have been conducted at the above referenced property (Site) indicate that further subsurface delineation and interim source removal are required. Additional efforts are necessary to further determine the extent of the impacted soil and to mitigate and/or remove the tetrachloroethylene (PCE) contamination beneath the parking lot area, west of the Site.

The State Water Resources Control Board (State Water Board) adopted regulations requiring the electronic submittals of information over the Internet using the State Water Board GeoTracker database. You are required not only to submit hard copy reports required in this Order but also to comply by uploading all reports and correspondence prepared to date and additional required data formats to the GeoTracker system. Information about GeoTracker submittals, including links to text of the governing regulations, can be found on the Internet at the following link:

http://www.waterboards.ca.gov/water_issues/programs/ust/electronic_submittal

Should you have any questions related to this project, please contact Mr. Curt M. Charmley, case manager, at (213) 576-6774 or ccharmley@waterboards.ca.gov.

Sincerely,

Samuel Unger, P.E.
Executive Officer

ORDER TO PROVIDE A TECHNICAL REPORT FOR
SUBSURFACE SOIL INVESTIGATION/SOURCE REMOVAL ACTION

CALIFORNIA WATER CODE SECTION 13267

DIRECTED TO "FASHION CLEANERS"

FASHION CLEANERS
1433 HUNTINGTON DRIVE, SOUTH PASADENA, CALIFORNIA
(SCP FILE NO. 115.0094; SITE ID NO. 204371)

The Regional Water Quality Control Board, Los Angeles Region (Regional Board) makes the following findings and issues this Order pursuant to California Water Code section 13267.

1. Fashion Cleaners (Site) is located at 1433 Huntington Drive, South Pasadena, California. The Site has been occupied by a dry cleaning business since 1988. Regional Board file information does not indicate what kind of business occupied the site prior to 1988. The business has used tetrachloroethylene (PCE) over most of its operational lifetime. However, since 2002, it has been using a non chlorinated detergent [the Greenerth™ cleaning system that uses dimethylcyclopoly-siloxane a non-chlorinated cleaning solution.] The Site is currently owned by Mr. Te Ming Lin and managed by Ideal Management. The Site was first inspected by Regional Board staff on December 19, 1999. The first 13267 Order requiring an investigation was issued on January 29, 2000.
2. California Water Code section 13267(b)(1) states, in part: In conducting an investigation..., the regional board may require that any person who has discharged, discharges, or is suspected of having discharged or, discharging, or who proposes to discharge waste within its region . . . shall furnish, under penalty of perjury, technical or monitoring program reports which the regional board requires. The burden, including costs, of these reports shall bear a reasonable relationship to the need for the report and the benefits to be obtained from the reports. In requiring those reports, the regional board shall provide the person with a written explanation with regard to the need for the reports, and shall identify the evidence that supports requiring that person to provide the reports.
3. The Regional Board has evidence (data) presented in the previously submitted reports: *Shallow Soil Vapor Well/Probe Installation, Soil and Soil Vapor Sampling Laboratory Analysis* dated May 17, 2011; and the *Soil Vapor Probe Installation, Soil Vapor Sampling, Laboratory Analysis* dated February 17, 2010, both prepared by Athanor Environmental Service, Inc. (Athanor). These data demonstrates that discharge(s) of PCE to the soils and consequently to the groundwater beneath the Site were a result of the dry cleaning operations. The data indicates the following:

California Environmental Protection Agency

- a. The results of these investigations have detected concentrations of PCE in the soil vapor beneath the parking lot that is adjacent to the dry cleaning facility (Figure 2. Soil/Soil Vapor Sampling Location Map)
 - b. The PCE concentrations detected in the shallow soil vapor indicates the need for additional subsurface characterization and cleanup efforts. The concentrations of PCE detected in the soil vapor samples collected from nested probes at 5 feet below ground surface (bgs) and 10 feet bgs ranged from 0.14 micrograms per liter ($\mu\text{g/L}$) to 197.9 $\mu\text{g/L}$.
4. This Order identifies Mr. Te Ming Lin as the person responsible for the discharges of waste identified in paragraph 3, because Mr. Te Ming Lin owns the property on which the waste is or was discharged.
 5. This Order requires the persons named herein to prepare and submit a work plan to determine the extent of the soil vapor contamination encountered during the most recent soil vapor sampling event. Also, an addendum shall be submitted to compliment the previously submitted Remedial Action Plan (RAP), dated May 14, 2010, which needs to address the contamination located along the northern boundary of the parking lot area that extends from the cleaners to the area where borings BL-1 and BL-8 are located (Figure 2. Soil Vapor Sampling Location Map).
 6. The Regional Board needs this information in order to determine the subsurface soil condition at the above named site prior to implementing additional remedial activity.
 7. The burdens, including costs, of these reports bear a reasonable relationship to the need for the reports and the benefits to be obtained from the reports. The information is necessary to assure adequate cleanup of the Fashion Masters site, which as described in the May 14, 2010 RAP incorporated herein by reference, poses significant threats to public health and the environment. The technical report required by this Order is a reasonable and effective approach to determine the level of threat to public health and the environment?
 8. The issuance of this Order is an enforcement action by a regulatory agency and is categorically exempt from the provisions of the California Environmental Quality Act (CEQA) pursuant to section 15321(a) (2), Chapter 3, Title 14 of the California Code of Regulations. This Order requires submittal of technical and/or monitoring reports and work plans. The proposed activities under the work plans are not yet known. It is unlikely that implementation of the work plans associated with this Order could result in anything more than minor physical changes to the environment. If the implementation may result in significant impacts on the environment, the appropriate lead agency will address the CEQA requirements prior to implementing any work plan.
 9. Any person aggrieved by this action of the Regional Water Board may petition the State Water Resources Control Board (State Water Board) to review the action in accordance with Water Code section 13320 and California Code of Regulations, title 23, sections 2050 and following. The State Water Board must receive the petition by 5:00 p.m., 30 days after the date of this Order, except that if the thirtieth day following the date of this Order falls on a Saturday, Sunday,

Mr. Te Ming Le
Fashion Cleaners

- 3 -

July 20, 2011

or state holiday, the petition must be received by the State Water Board by 5:00 p.m. on the next business day. Copies of the law and regulations applicable to filing petitions may be found on the Internet at: http://www.waterboards.ca.gov/public_notices/petitions/water_quality or will be provided upon request.

~~THEREFORE, IT IS HEREBY ORDERED~~ that Te Ming Lin pursuant to section 13267(b) of the California Water Code (CWC) is required to submit the following:

1. By August 30, 2011, a work plan shall be submitted for additional subsurface characterization in the vicinity of borings BL-1, BL-2, BL-7, and BL-8 (Figure 2. Soil Vapor Sampling Location Map).
2. By August 30, 2011, submit an addendum to the previously submitted RAP, dated May 14, 2010. The addendum shall address the contamination located along the northern boundary of the parking lot from the cleaners to the area where borings BL-1, BL-2, BL-7, and BL-8 are located (Figure 2. Soil Vapor Sampling Location Map).

Each of the above items shall be submitted to Mr. Curt Charmley, Engineering Geologist, 320 West 4th Street, Los Angeles, California 90013, ccharmley@waterboards.ca.gov, (213) 576-6774 and submitted by you under penalty of perjury.

The technical report is required to be submitted under the CWC section 13267 Order. Pursuant to 13267(a) of the CWC, any person who fails to submit reports in accordance with the Order is guilty of a misdemeanor. Pursuant to section 13268(b) (1) of the CWC, failure to submit the required technical report described above by the specified due date(s) may result in the imposition of administrative civil liability by the Regional Board in an amount up to one thousand dollars (\$1,000) per day for each day the technical report is not received after the above due date. These civil liabilities may be assessed by the Regional Board for failure to comply, beginning with the date that the violations first occurred, and without further warning.

The Regional Board, under the authority given by California Water Code (CWC) section 13267, subdivision (b)(1), requires you to include a perjury statement in all reports submitted under the 13267 Order. The perjury statement shall be signed by a senior authorized Fashion Cleaners representative (not by a consultant). The perjury statement shall be in the following format:

"I, [NAME], certify under penalty of law that this document and all attachments were prepared by me, or under my direction or supervision, in accordance with a system designed to assure that qualified personnel properly gathered and evaluated the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."

The State Water Board adopted regulations requiring the electronic submittals of information over the internet using the State Water Board GeoTracker data management system. You are required not only to

Mr. Te Ming Le
Fashion Cleaners

- 4 -

July 20, 2011

submit hard copy reports required in this Order, but also to comply by uploading all reports and correspondence prepared to date on to the GeoTracker data management system. The text of the Regulations can be found at the URL:

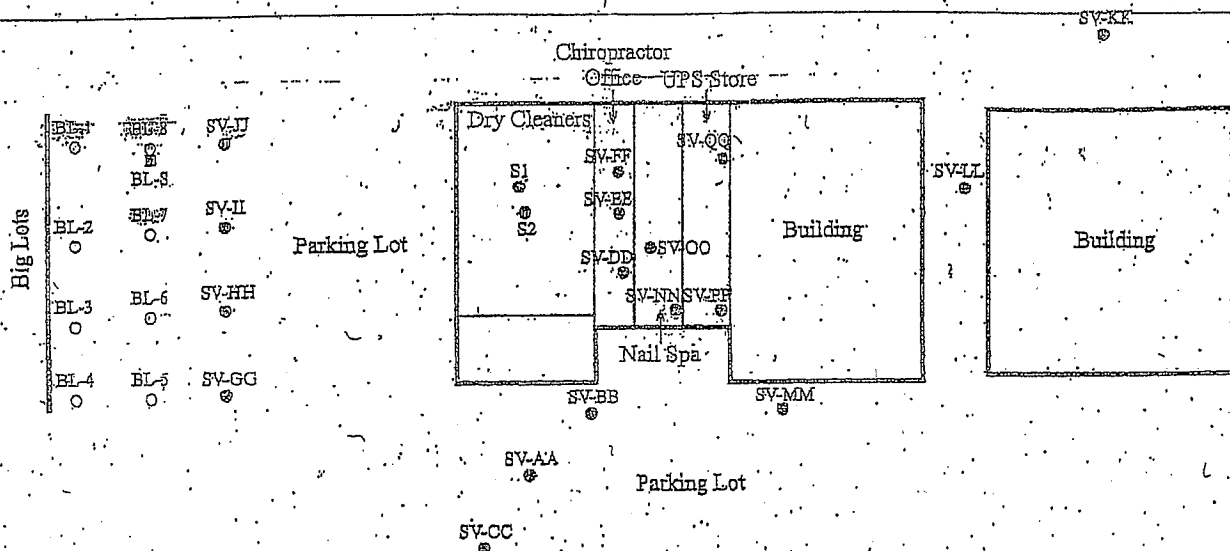

http://www.waterboards.ca.gov/ust/cleanup/electronic_reporting/docs/final_electronic_regs_dec04.pdf

Subject: Workplan for a Deep Soil Vapor Investigation
Address: 1310 Fair Oaks Avenue, South Pasadena, CA 91030
File No.: 115.0524

Dear Mr. Curt Charmley:

On behalf of Mr. Kab Yong Moon, Environ Phase Consulting Company (EPC) is pleased to submit this "Workplan for a Deep Soil Vapor Investigation (the Workplan)" at the described subject site: This workplan was prepared to define vertical delineation of VOCs around exploratory soil/vapor boring location (SV-11) of the subject site. This workplan consists of deep soil boring, vapor sampling, VOCs analysis, and groundwater monitoring plans based on the LA-RWQCB's letter dated on December 27, 2007.

If you have any questions, please feel free to contact Jeff Lee at (213) 738-6003.

Best Regards,

Jeff Lee
Project Manager

Chung J. Kim, P.E
California State Registered Civil Engineer

cc: Mr. Kab Yong Moon, Property Owner

1.0 INTRODUCTION

At the request of the California Regional Water Quality Control Board, Los Angeles Region (CRWQCB-LA), Environ Phase Consulting Company (EPC Co.) was retained by Mr. Kab Yong Moon for a "Deep Soil Vapor Investigation and Groundwater Well Construction" locate at 1310 Fair Oaks Avenue, South Pasadena, California (Figure 1 and 2). The purpose of this subsurface exploration is to fully define the lateral extent of the contamination plume. The purpose of this workplan is to present in detail and advance, proposed scope of work to the California Regional RWQCB-LA for their approval for the work to be performed.

EPC Co. proposes to:

1. A deep soil boring	Drilling one (1) soil boring at exploratory boring location (SV-11) to depth of approximately 110 feet below ground surface (bgs);
2. Vapor Probes Installation	Installing nested soil vapor probes, and collect a soil vapor samples at every 15 feet (See Figure 3);
3. Soil Vapor Sampling (See 4.2)	Collecting soil vapor samples at approximately 75-foot, 90-foot, 105-foot, and 120-foot bgs for oxygenated VOCs analysis, logging subsurface conditions, and field screening of organic vapor using a photo-ionization detector (PID) calibrated to standard isobutylene gas. Soil vapor samples will be collected from the soil boring immediately above the soil/groundwater interface (capillary fringe);
4. Groundwater Sampling (See 4.2)	Collecting hydropunch groundwater sample from boring SV-11 using hydropunch groundwater sampling techniques;
5. Soil Vapor Analysis (See 4.3)	Analyzing collected soil vapor for oxygenated VOCs (e.g., PCE, TCE, DCE, and other VOCs) following EPA Methods 8260B;
6. Groundwater Monitoring Well Construction (See 4.4)	If groundwater is encountered during this investigation, a groundwater well (See Figure 4) will be installed near the exploratory boring location SV-11; and
7. Report	Preparing and submitting this report documenting the results and findings of this investigation.

2.0 BACKGROUND

2.1 Site Description

The subject property is situated along eastern side of Fair Oaks Avenue between Landon Street to the north and Bank Street to the south in the City of South Pasadena at approximately 0.60 miles south of the 110 Freeway. A Site Location Map is presented as Figure 1.

The subject property consists of one large rectangular building, which extends across the southern boundary of the property. This is the primary building that houses the drycleaners. The drycleaners, Elite Cleaners, occupies the southern half of the building. The northern half of the building was vacant and under construction at the time of inspection.

An additional building was observed at the southeastern corner of the subject property that appeared to be older than the primary building. This building was utilized for storage purposes at the time of site reconnaissance. A Plot Plan is depicted in Figure 2.

2.2 Findings of the Previous Environmental Assessments

Previous "Subsurface Investigation" and "Active Soil Gas and Soil Matrix Investigation" were performed on August 2006 (ENCON) and August 2007 (EPC Co.), respectively:

- a. Total of 19 soil vapor samples were collected to meet "Active Soil Gas Investigations (Cal/EPA DTSC in January 28, 2003)." These investigations included the installation and sampling of soil vapor probes at eleven locations using a direct-push rig and a hollow stem augur. Soil vapor samples were collected from the borings and analyzed on-site by a mobile lab for oxygenated volatile organic compounds (VOCs). Results are summarized in Table 1.
- b. Concentrations of Tetrachloroethene (PCE) were revealed ranging from 45.3 µg/l to 3,843.1 µg/l in soil vapor samples. Also, concentrations of TCE and 1,2-DCE were indicated in the soil vapor samples.
- c. 190 ug/l of PCE concentration was detected in soil vapor the deepest sampling interval at 75 feet bgs exceeding Regional Board Soil Cleanup Screening Levels.
- d. Total of four soil matrix samples collected from SV-8, SV-9, SV-10, and SV-11 were indicated below the detection limits for VOCs.
- e. Groundwater was not encountered at the depth of boring location SV-11 at approximately 77 feet bgs.

- f. Based on available test results, CRWQCB-LA required that a workplan for a deep soil vapor investigation with the purpose of vertical delineation of VOCs to the depth of the regional groundwater aquifer.

Table 1. Analytical Results of Soil Vapor & Soil Matrix Samples (Unit; µg/l)

Sample ID No.	Depth (feet)	PCE (µg/l)	TCE (µg/l)	1,2-DCE (µg/l)

(ND): Analytical Results of Soil Matrix Samples

3.0 GEOLOGY AND HYDROGEOLOGY

3.1 Geological Condition

The subject property is located in San Gabriel Valley, part of the Transverse Range Geomorphic Province of California, approximately 0.5 miles south of the Raymond Hill Fault zone and 1 mile east of the Alhambra Wash. According to the Geologic Map of the Los Angeles Quadrangle, the site is underlain with Holocene alluvium primary consisting of unconsolidated floodplain deposits silt, sand and gravel derived mostly from the San Gabriel Mountains. The site is an elevation of approximately 620 feet with a gradual slope to the south.

3.2 Groundwater Condition

The subject property is located within the Monk Hill Sub basin of the Raymond Groundwater Basin. The regional groundwater flow in the area is generally toward the southeast. Groundwater in the region of the site is expected to occur at approximately 200 to 400 feet below ground surface (bgs).

Based on the records of the Los Angeles County Hydraulic and Water Conservation Department, the nearest monitoring well is #4069, located at the intersection of West McLean Street and North 1st Street at approximately 1.14 miles to the southeast from the subject site. The last groundwater measurement was obtained on April 20, 2006, and depths to groundwater on that date was 178 feet below ground surface (bgs), and the ground surface elevation of well #4069 is 535.4 feet above mean sea level (MSL).

3.3 Reference Groundwater Information

Based on the CRWQCB-LA letter dated on December 27, 2007, the occurrence of groundwater at a depth of 110 feet bgs is well documented at a reference location approximately 2,000 feet to the northwest of the subject site. The lithologic record indicates that the subsurface is predominantly comprised of sands, including fine-grained to course-grained sands, silty sand, and gravelly sands. Therefore, the transmissive properties of this type of soil make vertical migration of VOCs from a surface source to groundwater highly possible.

4.0 GENERAL FIELD PROCEDURES

4.1 Pre-drilling Activities

- a. A Site-specific Health and Safety Plan, Boring Plan and Work-Schedule will be prepared.
- b. This workplan and safety & health plan must be sufficiently detailed so that no decision left to the subcontractors (i.e., drilling company and mobile lab.) or their workers.

4.2 Soil Vapor Probe Installation

- a. Exploratory boring location SV-11 will be re-drilled up to 110 feet bgs, install nested soil vapor probes, and collect soil vapor samples at every 15-foot interval as well as a groundwater sample at approximately 110 feet bgs.
- b. Analyze up to seven (7) soil vapor and one (1) hydropunch groundwater sample for Volatile Organic Compounds (VOCs) using EPA Methods 8260B.
- c. A groundwater grab sample was obtained using a Hydropunch II™ - type of sampler. The sampler was a 36 inch long x 2.0 inch diameter split barrel tube containing a retracted and shielded stainless steel well screen with a drop-off expendable point. The sampler was threaded onto a 1.5 inch out side diameter (OD) heavy duty probe rod and advanced directly into the aquifer in the shielded position with a direct push system or a hollow stem augur. When desired depth was reached, the probe rod was retracted approximately 24 inches. The expendable point drops off and the stainless steel sample screen was exposed. Groundwater flows past the screen and into the void space of the sampler. Groundwater grab samples were then obtained using inert tubing with a check valve.
- d. Chain-of-custody form will be filed to document the handling, and delivery of samples to a California State Certified Mobile Laboratory onsite.
- e. All sampling equipment and sampling tubes will be decontaminated prior to each sampling by repeated washing using a brush and Liquinox solution, a tap water rinse, and finally a deionized water rinse. The sampler and sampling tubes will be either air-dried or dried with a clean towel. Clean augers will be used for each boring.
- f. Monitor the headspace of each sample for the presence of volatile organic compounds using a photo-ionization detector (PID).

- g. The soil boring will be logged using the Unified Soils Classification System under the supervision of the Registered Civil Engineer.

4.3 Vapor Samples Collection Procedure

Soil vapor survey will be conducted by **Environmental Support Technologies, INC (EST)**, located at 360 Goddard, Irvine, California (☎ 949-679-9500).

- a. Pre-punch hole or set 1" casing with disposable tip to desired depth;
- b. Place filter on end on ¼" polyethylene tubing;
- c. Lower polyethylene tubing to pre-determined depth;
- d. Place No.3 sand around filter;
- e. Fill remaining hole with bentonite chips with water; and
- f. Place vapor valve on end of polyethylene tubing.

All vapor samples from the borehole (SV-11) will be collected after approximately 2 weeks of vapor probes installation. SV-11 will have nested soil vapor probes in different colors matching corresponding depth installed at 15' interval to 105' bgs to vertically define the extent of the attenuation of the VOCs.

4.4 Groundwater Well Construction

If a groundwater monitoring well is constructed at the subject site, quarterly groundwater monitoring and sampling will be performed at the well in accordance with "Regional Board's Requirements for Groundwater Investigations, Revised July 2000". Groundwater samples will be analyzed for a minimum of four consecutive quarters for the presence of VOCs using USEPA Method 8260B. In addition, groundwater will be screened for 1,2,3-trichloropropane (1,2,3-RCP) and 1,4-dioxane using USEPA Method 551.1 and USEPA Method 8270C, respectively. Initially, a proposed monitoring well location is shown in Figure 2. The well will be located near the exploratory boring location SV-11.

- a. **Borehole Drilling:** A hollow-stem auger drill rig will be used to drill the groundwater boring. Groundwater boring will be drilled approximately 3 feet but not penetrate the clay layers underlying its monitored water bearing zone. Borehole cuttings will be stored in DOT approved steel drums. The proper method for disposal of the cuttings will be determined from the results of the laboratory analysis of the soil samples. If the laboratory results indicate that the cuttings are contaminated, then the drums will be properly labeled in accordance with the Title 22, California Code of Regulations (CCR), section 66508 (c), and properly disposed.
- b. **Boring Sampling:** The boring will be logged and sampled from ground surface to total depth. The soil will be logged using the Unified Soils Classification System.

Soil samples will be collected at 5 foot intervals minimum. The samples will be analyzed in the field for the presence of hydrocarbons using an Organic Vapor Analyzer (OVA). The sample descriptions, depths, and the OVA readings will be recorded on the field logs. Soil samples will be obtained using a split-barrel modified California sampler, which is lowered through the center of the hollow-stem auger to the desired sampling depth and driven into the soil using a 140-pound drop hammer. This and other sampling equipment will be washed with Alconox solution, rinsed with tap water, and rinsed again with distilled water before each soil sample is collected. The soil samples will be collected in six-inch long, 2.5 inch diameter, brass-lined tubes that have been cleaned with Alconox solution. The samples will be numbered sequentially with increasing depth from the top of the boring. Auger will be steam-cleaned between each boring to prevent cross contamination.

- c. **Groundwater Monitoring Well Installation:** Groundwater monitoring well will be installed to obtain groundwater sample and measure fluid level. The monitoring wells will be drilled with a hollow-stem auger drill rig, and completed in 8-inch diameter boreholes. The well casing and screen will be composed of 4-inch diameter Schedule 40 PVC (Figure 4). The well will have approximately 105 feet of solid casing and 15 feet of screen casing with slot size 0.02-inch. 5-foot long screen will be extended above the initially observed water level of the monitored water bearing zone to accommodate water level fluctuations. A graded filter pack composed of a mixture of two or three well-sorted coarse to fine fractions of sands (No. 3 sand pack) will be selected based on grain size distribution of the water bearing zone material. The graded filter pack selected will be poured into the annular space between the outer surface of the well screen and the borehole wall to a depth of approximately 2 feet above the screened interval. An approximately 2-foot thick bentonite seal will be placed in the annular space above the filter pack to prevent liquid from infiltrating the sand pack from above. A cement/bentonite grout (5% of bentonite) will then be used to fill the remainder of the annulus to the surface. The surface completion for each monitoring well will include a flush-mounted traffic cover. After completion of well installation, the top of each well casing will be surveyed for elevation by California State licensed surveyor. An existing benchmark or points with known elevation nearby the site will be used to conduct the well casing survey.
- d. **Well Development:** The monitoring well will be developed using a clean bailer within 24 hours after the well construction is completed. Prior to collecting groundwater samples, free product thickness (if present) will be determined and the depth to water will be measured in all wells to be sampled. Well development procedure is required prior to sampling in order to obtain groundwater sample that is representative of the in-situ conditions. The well will be bailed and properly purged until the temperature, conductivity, and pH

stabilize, and the water is free of suspended sand, silt, and settable matter, before sample is collected for analysis. Well development water will be stored in drums in a secured area on site. The proper method of disposal for the water will be determined from the results of the laboratory analyses of the groundwater sample. If the laboratory results indicate that the water is contaminated, then the drums will be properly labeled in accordance with Title 22 of the California Code of Regulations, Section 66508 (c), and properly disposed.

- e. **Groundwater Sampling:** Groundwater in the monitoring well will be examined and tested in the field for the presence of odor, pH, temperature, and specific conductivity. Representative groundwater sample will be taken from the groundwater monitoring well at least three days after the well is completely developed. One water sample from the monitoring well will be submitted to a state-certified laboratory. Groundwater sampling will follow the procedures in accordance with Title 23 of the California Code of Regulations, Section 2555 and included; well measurements and evacuation, sample collection, sample preservation and shipment, analytical procedures, and chain-of-custody documentation.

4.5 Data Evaluation & Reporting

- a. Prepare a report to document the methods used and present the results of our investigation. Based on the results, present our conclusions and provided recommendations for further investigation and/or remediation.
- b. Report shall be reported by State Registered Civil Engineer.
- c. Report shall contain boring log, site plot plan, the location map, regional hydrogeology, laboratory reports & chain of custody and specific boring location with field measurement from points of interest or fixed building components, as well as constituents of concern in proper concentration units.

5.0 Proposed Contractors' Schedule of Work

EPC Co. proposes to complete "A Deep Soil Vapor Investigation & Groundwater Monitoring Well Construction" in twenty-seven (27) working days. The following is a list of activities that will probably be involved with this effort:

Table 2. Work Schedule

Procedures	Schedule Days
Drilling Activity: Mobilization/Drilling/Demobilization	2
Soil Vapor Sampling and Analysis using mobile Lab	1
Waiting Time for coordination, well development, purging, and interval, and etc.	14
Groundwater Sampling and Analysis using a stationary Lab	5
Report Preparation	5
Estimated Total Time	27

SOIL VAPOR INVESTIGATION REPORT RESPONSE AND TECHNICAL REPORT REQUIREMENT PURSUANT TO CALIFORNIA WATER CODE SECTION 13267 - ELITE CLEANERS, 1310 FAIR OAKS AVENUE, SOUTH PASADENA, CALIFORNIA (FILE NO. 115.0524)

Dear Mr. Moon:

Los Angeles Regional Water Quality Control Board (Regional Board) staff have received the *Active Soil Gas and Soil Matrix Investigation* (Report) dated August 28, 2007, which was submitted by your consultant Environ Phase Consulting Company (EPC). The Report describes an investigation that included: the installation of one new soil vapor monitoring well; sampling of the newly installed and existing probes; and soil matrix sampling at 1310 Fair Oaks Avenue, South Pasadena, California (Site).

FINDINGS

This Report documents a subsurface investigation performed from July 31 through August 22, 2007 which consisted of soil vapor probe installation, soil vapor sampling, soil matrix sampling, and analysis. This work was conducted in general accordance with the July 12, 2007 *Work Plan for Active Soil Gas and Soil Matrix Investigation* that was approved in a Regional Board letter dated July 25, 2007. Regional Board staff has reviewed the Report and has come to the determination as follows.

Three shallow soil vapor probes and one deep soil vapor probe were installed at the site as part of this investigation. On July 31, 2007, soil vapor probe SV-11 was installed to a depth of 75 feet below ground surface (bgs) using a hollow-stem auger drill rig. A total of 4 soil gas probes were installed at 15, 30, 45, and 75 feet bgs. On August 10, 2007, 3 soil probes (SV-8, SV-9, and SV-10) were installed to a depth of 20 feet bgs using direct push, and soil vapor probes were installed at 10 feet and 20 feet bgs in each of the three shallow boreholes.

One soil matrix sample was collected from the bottom of each borehole using EPA Method 5035. All soil matrix samples were analyzed for volatile organic compounds (VOCs). All laboratory results for soil matrix samples were below the detection limits for VOCs.

After the soil vapor probes were allowed to equilibrate, additional soil vapor samples were collected on August 22, 2007. Perchloroethylene (PCE), ranging from 190 micrograms per liter ($\mu\text{g/l}$) up to 2,400 $\mu\text{g/l}$, was detected in all soil vapor samples. Trichloroethylene (TCE) was also detected in soil vapor samples. Results of soil vapor sampling are summarized in the table below.

California Environmental Protection Agency

Recycled Paper

Our mission is to preserve and enhance the quality of California's water resources for the benefit of present and future generations.

Table 1: August 22, 2007, Soil Vapor Analytical Results

Vapor Sample	Depth (feet bgs)	PCE (µg/l)	TCE (µg/l)
SV-8	10	660	2.0
	20	480	5.1
SV-9	10	2,400	72
	20	2,100	130
SV-10	10	810	Non-detect
	20	1,100	Non-detect
SV-11	15	2,400	35
	30	300	5.4
	45	270	4.1
	75	190	3.0
California Human Health Screening Levels³		0.603 µg/l	1.77 µg/l

1. feet bgs - feet below ground surface
2. µg/l - micrograms per liter
3. Values for Industrial/Commercial Use shallow soil gas (µg/l)

Groundwater was not encountered during the drilling of the deepest soil boring which extended to approximately 77 feet bgs. However, the occurrence of groundwater at a depth of 110 feet bgs is well documented at a site approximately 2000 feet to the northwest of the Site. The lithologic record indicates that the subsurface is predominantly comprised of sands, including fine-grained to coarse-grained sands, silty sand, and gravelly sands. Therefore, the transmissive properties of these types of soil make vertical migration of VOCs from a surface source to groundwater highly possible.

CONCLUSIONS AND REQUIREMENTS

PCE was detected in soil vapor the deepest sampling interval at 75 feet bgs (190 µg/l) exceeding Regional Board Soil Cleanup Screening Levels, as calculated by EPC in their August 28, 2007 report. None of the VOCs detected in soil vapor were detected in the soil matrix samples. All of the soil matrix samples were collected from sandy intervals. Soil samples that contain appreciable amounts of sand may not provide representative analytical results.

Upon review of the findings of the subject Report, the Regional Board concludes that since soil vapor VOC contamination is present at depths throughout the soil column (i.e. from near surface to 75 feet bgs), the following requirements are warranted to determine if groundwater has been impacted beneath the Site:

- You must submit a technical workplan which proposes a deep soil vapor investigation with the purpose of vertical delineation of VOCs to the depth of the regional groundwater aquifer. The workplan must include the contingency for the drilling and construction of a groundwater monitoring well should VOC concentrations be detected in the soil vapor above the piezometric level of groundwater.

California Environmental Protection Agency

Our mission is to preserve and enhance the quality of California's water resources for the benefit of present and future generations

- If a groundwater monitoring well is constructed at the site, quarterly groundwater sampling shall be implemented at the well in order to better understand whether the VOC concentrations increase, decrease, or remain static after seasonal fluctuations. The groundwater data will be evaluated to determine the magnitude and impact of contamination beneath the site. Groundwater should be analyzed for a minimum of four consecutive quarters for the presence of VOCs using USEPA Method 8260B. In addition, groundwater must be screened for 1, 2, 3-trichloropropane (1,2,3 TCP) and 1,4-dioxane using the following methods:

<u>Chemical</u>	<u>Acceptable Test Method</u>	<u>Reporting Limit</u>
1,2,3-TCP	USEPA Method 551.1	0.005 µg/l
1,4-dioxane	USEPA Method 8270C	2 µg/l

- All work must be performed under the responsible charge of a professional geologist in the State of California, Certified Engineering Geologist, Registered Civil Engineer or Registered Geotechnical Engineer. A statement is required in the report that the licensed professional in responsible charge actually supervise or personally conduct all work associated with the project as defined in the Professional Engineers Act or the Professional Geologist Act of California Code of Regulations.
- Groundwater monitoring and sampling must be conducted in accordance with Regional Board's *Requirements For Groundwater Investigations, Revised July 2000* (see attached). The groundwater monitoring reports must be submitted by the fifteenth day following the end of the three-month period as shown in the following schedule:

<u>Reporting Period</u>	<u>Report Due Date</u>
January - March	April 15 th 2008
April - June	July 15 th 2008
July - September	October 15 th 2008
October - December	January 15 th 2009

Pursuant to Section 13267(b) of the California Water Code, you are hereby directed to submit a groundwater investigative work plan to this Regional Board by **January 28, 2008**. The work plan shall include a schedule for implementing the investigative activities, report preparation, and report submittal to the Regional Board. The work plan should address the applicable required information as outlined in the *County of Los Angeles Department of Public Works Guidelines For Report Submittals, March 1991, Revised 1993, Section VII. Site Assessment Reports* (see attachment) and also incorporate applicable provisions of the *State Of California Requirements for Groundwater Investigations, Work Plan, revised July 2000*. Failure to submit the required technical report by the due-date specified may result in the imposition of civil liability penalties by this Regional Board of up to \$ 1,000.00 per day for each day the report is not received pursuant to Section 13268 of the California Water Code. These civil liabilities can be assessed by the Regional Board any time after **January 28, 2007** and without further warning.

Re: Workplan to Conduct Second Subsurface Soil Vapor Survey in Big Lots Parking Lot and Sidewalk West of Fashion Cleaners, 1433 Huntington Drive, South Pasadena, CA 91030 (File No. 115.0094)

Dear Mr. Charmley:

Introduction

Athanor Environmental Services, Inc. (Athanor) is pleased to submit this workplan to the California Regional Water Quality Control Board, Los Angeles Region (RWQCB) to install soil vapor probes and conduct a second subsurface soil vapor investigation of the Big Lots parking lot and sidewalk west of Fashion Cleaners, 1433 Huntington Drive, South Pasadena, CA 91030. A Local Vicinity Map is attached.

Background

On April 21, 2011, Athanor's subcontractor, Strongarm Environmental Field Services (Strongarm), installed eight semi-permanent soil vapor wells, with nested soil vapor probes at depths of five and 10 feet below grade surface (bgs) in each well. The wells were laid out in a grid with two rows of

Page two
Mr. Curt M. Charmley
October 5, 2011

four probe locations each from south to north, at 30-foot intervals, using a track-mounted Geoprobe (Geoprobe), in the Big Lots parking lot immediately west of the Fashion Cleaners west parking lot. After first coring through the asphalt, the borings were advanced into the subsurface soil with the Geoprobe. Each boring was advanced to depths of 11 feet bgs. Two nested probes were installed inside each well.

On April 21, 2011, Athanor's subcontractor, Optimal Technology (Optimal), collected soil vapor samples from the the new nested soil vapor probe wells in the Big Lots parking. Samples were delivered to an Optimal's onsite state-certified mobile analytical laboratory.

On April 21, 2011, a soil sample was collected from one boring, BL-S, located next to the soil vapor well location where the soil vapor probe with the highest laboratory detection of PCE, BL-8-10, was located. After first penetrating the asphalt, the boring was advanced by Strongarm and an undisturbed soil sample was collected with the Geoprobe at a depth of 10 feet bgs.

Soil vapor samples were analyzed in a state-certified mobile analytical laboratory. PCE concentrations detected were as follows, in micrograms per liter (ug/L):

<u>Sample</u>	<u>Concentration</u>
BL-1-5	0.72
BL-1-10	47.89
BL-2-5	2.71
BL-2-10	12.54
BL-3-5	0.52
BL-3-10	4.61
BL-4-5	0.41
BL-4-10	0.14
BL-5-5	0.18
BL-5-10	1.48
BL-6-5	0.16
BL-6-10	0.91
BL-7-5	0.72
BL-7-10	33.75
BL-8-5	3.40
BL-8-10	60.48

Page three

Mr. Curt M. Charmley

October 5, 2011

The soil sample collected was analyzed by a state-certified analytical laboratory, American Analytics by full screen EPA Method 8260B for aromatic and chlorinated hydrocarbon volatile organic compounds (VOCs), including PCE. No concentration of PCE or any other VOC was detected.

Review of the data in this investigation suggests the presence of elevated concentrations of VOCs in the vapor phase at many of the locations where samples were collected and tested. The highest concentrations are associated with samples collected from the deeper (10' bgs) probes. Those locations and the concentrations of PCE detected in each are: BL-1-10 (47.89 ug/L); BL-2-10 (12.54 ug/L); BL-7-10 (33.75 ug/L); and BL-8-10 (60.48 ug/L). It is noteworthy that the soil matrix sample collected from boring BL-8 at 10-feet showed no detectable PCE, suggesting that the bulk of the PCE in the subsurface at the site exists in the vapor phase rather than the liquid phase.

Comparison of the results to applicable 2005 California Human Health Screening Levels (CHHSLs) shows the following for the compound PCE:

Shallow Soil Gas Human Health Screening Levels:

Residential Land Use: 0.18 ug/L

Commercial/Industrial Land Use: 0.603 ug/L

Many of the detected concentrations therefore exceed the above values for shallow soil gas screening.

Based on the July 20, 2011 letter from RWQCB to Mr. Quyen Hoang, Fashion Cleaners property owner, c/o Mr. Quyen Hoang, attorney for Mr. Lin, and order to provide a technical report requiring further characterization of perchloeroethylene (PCE) concentrations in the soil vapor beneath the Big Lots property, RWQCB staff has determined that the site must be further characterized by installing shallow soil vapor probes in the Big Lots parking lot and the sidewalk, collecting soil vapor samples, and performing laboratory analysis. Athanor proposes the following:

- (1) Install eight permanent, nested 5' and 10' soil vapor probes in the Big Lots parking area to the west of Fashion Cleaners and the sidewalk to the immediate north.
- (2) Collect soil vapor samples from the soil vapor probes for laboratory analysis with an onsite state-certified mobile analytical laboratory.

Geology and Hydrogeology

Regional Physiographic and Geologic Conditions

The subject site and vicinity are located in the west portion of the San Gabriel Valley within the Transverse Ranges geomorphic province. The San Gabriel Valley is bounded by the San Gabriel Mountains on the north, the Chino Valley on the east, the San Jose Hills on the southeast, the Puente Hills on the south, the La Merced Hills on the southwest, and the Verdugo Hills on the northwest. The site is located at an approximate elevation of 585 feet above mean sea level on terrain that slopes gently downward to the south-southeast (USGS, 1991).

The San Gabriel Valley is underlain by several hundred feet of alluvium and associated deposits of Recent or Pleistocene age. The surficial unit underlying the site is Pleistocene nonmarine sedimentary deposits of the Harold Formation (California Division of Mines and Geology, 1969). These sediments are “older” alluvium in dissected alluvial fan deposits and consist of interbedded gravel, sand, silt, and gypsiferous clay.

Site Geologic Conditions

Soils in the area of the subject property are mapped as the Ramona-Placentia association (USDA, 1969). The soils of this association occur on gently sloping terraces in the Los Angeles basin. The Ramona soils are over 60 inches deep, well drained, and have slow subsoil permeability. In a typical profile, the Ramona soils have a heavy loam, loam, or sandy loam surface layer about 18 inches thick underlain by a dense clay loam or clay subsoil approximately 30 inches thick. The substratum is loam or light clay loam, occasionally stratified with beds of silt to sand and containing up to 60 percent stones and cobbles.

The Placentia soils are over 48 inches deep, moderately well drained, and have very slow subsoil permeability. They consist of a loam or sandy loam surface layer underlain by a clay loam subsoil at about 18 inches. A loam substratum occurs at about 48 inches below ground surface (bgs).

Site Hydrogeology

The subject site is located within the west portion of the Main San Gabriel Basin approximately 0.5 mile east of the non-water bearing La Merced Hills. The Los Angeles County Department of Public Works, Hydraulic/Water Conservation Division has not mapped groundwater contours in the

Page five

Mr. Curt M. Charmley
October 5, 2011

vicinity of the Site (LACDPW, 1995), and the county has no observation wells within one mile of the Site. The historical high groundwater level was measured at 103 feet bgs in Los Angeles County observation well No. 4069, located approximately one mile east of the Site at North Atlantic Boulevard (LACDPW, 2005). The direction of the groundwater gradient is not mapped, but based on local topography is expected to be to the east or southeast toward the center of the Main San Gabriel Basin.

Scope of Work

Athamor will install eight permanent, nested 5' and 10' soil vapor probes in the Big Lots parking area to the west of Fashion Cleaners and in the sidewalk to the immediate north with a track-mounted Geoprobe direct-push sampling device (Geoprobe). Athamor will collect soil vapor samples from the abovementioned soil vapor probes, as shown in the attached Proposed Sampling Diagram.

The soil vapor samples collected will be analyzed by an onsite state-certified mobile analytical laboratory, employing a gas chromatograph (GC), by EPA Method 8260B for aromatic and chlorinated volatile organic compounds (VOCs), including oxygenates.

All field activities and report submission will conform to the following RWQCB guidelines:

Page six

Mr. Curt M. Charmley

October 5, 2011

- Advisory for Active Soil Gas Investigation, January 28, 2003
- Guidelines for Report Submittals, Remedial Action Plan, March, 1993

Quality assurance and quality control (QA/QC) measures will be implemented for laboratory analysis in order to produce data of known quality. The laboratory performing the analysis will have internal QA/QC procedures, including method blanks, surrogates, matrix spike and matrix spike duplicates, laboratory duplicates, and initial and continuing calibration checks.

Arrangements will be made in advance, including scheduling of the work and bringing equipment on the property. The RWQCB will be given five days advance notice of field work.

The investigation will consist of the following scope of work:

- (1) Obtain site mapping of buried utility lines from Underground Service Alert's Digalert service.
- (2) Obtain City of South Pasadena permit to locate probes in the sidewalk.
- (3) Penetrate asphalt with coring machine.
- (4) Advance eight borings, as specified above, with Geoprobe to depths of 11 feet below grade (bgs).
- (5) Borings logged by Athanor's professional geologist.
- (6) Insert neoprene tubing inside and screened probe tips into borings.
- (7) Remove sampling probes, leaving neoprene tubing and screened probe tips.
- (8) Backfill borings with sand at sampling depths and bentonite pellets.
- (9) Install well boxes and traffic-rated well covers.
- (10) Seal to grade with concrete.
- (11) Clean site of all boring activity refuse.

Page seven
Mr. Curt M. Charmley
October 5, 2011

- (12) Collect soil vapor samples from soil vapor neoprene tubing with vapor pump into syringes.
- (13) Analyze soil vapor samples collected by EPA Method 8260B for VOCs with gas chromatograph in onsite mobile laboratory.
- (14) Assess distribution of resulting PCE vapor concentrations based on laboratory results.
- (15) Submit report assessing site conditions, together with appropriate conclusions and recommendations for further action, if any. It will include sampling diagram, boring logs, discussion of local and regional geology and hydrogeology, and laboratory report. It will be signed and stamped by Athanor's professional geologist.

If you have any questions, please give George Johnson a call.

Please advise.

Sincerely,

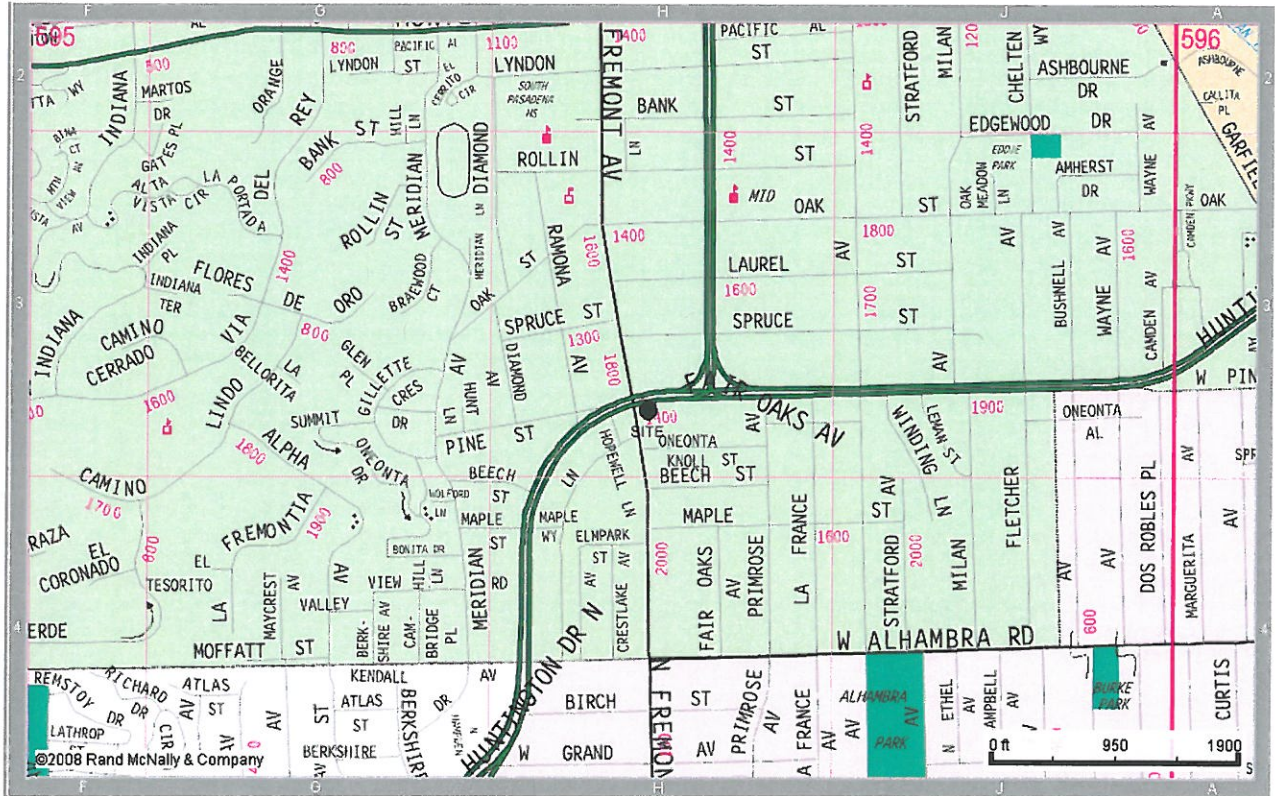

George A. Johnson

1.0 EXECUTIVE SUMMARY

This report has been prepared by GC Environmental, Inc. (GCE), under a contract with Kleinfelder, and documents the installation of twelve (10) landfill gas (LFG) and one (1) groundwater monitoring wells, and the abandonment of four (4) existing LFG monitoring wells at the Former Blanchard Disposal Facility, herein referred to as the “Landfill,” located at 4537 East Blanchard Street in the City of Monterey Park, California (**Figure 1 – Site Location Map**).

Kleinfelder prepared a Workplan, that was included in the Post Closure Landfill Use Plan dated February 5, 2010 submitted by the Los Angeles County (County) CEO office to the County of Los Angeles Public Health, Solid Waste Management Program, the Local Enforcement Agency (LEA) for the site. In a letter dated February 11, 2020, the LEA conditionally approved the Workplans. Subsequent modifications to the depths of the SB probes were agreed between the LEA and the County CEO office in early April.

The Workplan included installation of seven (7) multi-depth completion LFG monitoring wells (LFG#1 through LFG#3, and LFG#5 through LFG#8) outside the known perimeter of the refuse, and one (1) single depth completion LFG monitoring well (LFG#4) to a depth of 66 feet below ground surface in the middle area between the two sections of the waste. The Workplan also included the abandonment of the 4 existing 100 feet deep LFG monitoring wells (SB-1 through SB-4), and replacement of these wells with new LFG wells (SBR-1 through SBR-4) with proper well design construction, as well as the installation of one groundwater monitoring well near the southern extent of the Landfill, near the confluence to two pre-landfill drainage channels. The purpose of the installation of LFG and groundwater monitoring wells was to provide information to assist the County in addressing on-going stewardship and maintenance responsibilities associated with the former Blanchard Disposal Facility.

GCE prepared a schedule of field activities for approval prior to the commencement of fieldwork. The installation of the LFG and groundwater wells, and abandonment of the 4 existing LFG wells were completed, ahead of schedule, between May 3 and 13, 2010. As-built drilling and well installation schedule is shown on **Table 1- As-Built Schedule**. Wells were installed at the approved locations shown on **Figure 2 – LFG and Groundwater Monitoring Well Location Map**. As-built construction designs for the LFG and groundwater monitoring wells are shown on **Table 2 – As-Built Well Construction Design**

The multi-depth LFG monitoring wells LFG#1, LFG#2, LFG#3, and LFG#6, and LFG-7 were drilled to the proposed depths and constructed per the approved construction design. During the drilling of LFG monitoring wells LFG#5 and LFG#8 refuse was encountered in the boreholes. Therefore, the boreholes were backfilled, and LFG wells LFG#5 and LFG#8 were not installed. The single-depth well LFG#4 was planned to a depth of 80 feet below ground surface between the two sections of the Blanchard Landfill. Purpose of this well was to evaluate the thickness and composition of the top deck, and the gas generation potential of the Landfill. During the drilling at the location of well LFG#4, liquid was encountered in the borehole at 72 feet below ground surface. Therefore, the borehole was backfilled to a depth of 70 feet below ground surface, and the well was constructed to a total depth of 66 feet below ground surface. Abandonment and

replacement of the LFG wells SBR-1 through SBR-4 were completed per the approved Workplan.

The groundwater monitoring well was proposed to a depth of 70 feet, approximately ten (10) below the expected depth to the first encountered groundwater, which was anticipated to be 60 feet below ground surface. The boring was completed to 70 feet below ground surface; the borehole was dry. At Kleinfeder's direction, the boring was backfilled, and the well was installed to a depth of 19 feet below ground, with a 10-foot screened section between 8-18 feet below ground surface. The purpose of this well will be to monitor the alluvium bedrock contact for any future occurrences of seasonal groundwater.

The initial monitoring of the LFG wells was conducted on May 14, 2010. The replacement LFG monitoring well SBR-3 was not monitored because of a parked vehicle on the well. Monitoring results are shown on **Table 3 – LFG Well Monitoring Results**. Based on the results methane concentrations in the LFG monitoring wells installed outside of the refuse footprint ranged between 0.4% and 53% by volume in air. Based on the initial monitoring results, methane concentrations in LFG wells LFG#1, and LFG#6 exceed the California Code of Regulation (CCR) Title 27 regulatory limit of 5% by volume in air for monitoring wells installed outside the refuse footprint. Methane concentration at 61% was detected in the well LFG#4, which was set in refuse between the two sections of the Blanchard Landfill. Upon completion of initial monitoring, results were reported to Kleinfelder.

The following sections provide an overview of the site background, site geologic/ hydrogeologic conditions, a brief description of the field activities conducted, and the monitoring results of the initial LFG wells.

2.0 SITE BACKGROUND

The following sections discuss site background information provided by Kleinfelder.

2.1 Site Setting

The Former Blanchard Disposal Facility is Located between Blanchard Avenue and McBride Avenue at the address of 4537 East Blanchard Street in the City of Monterey Park, California. The Landfill is bordered to the north by the former Cogen Disposal Facility and the Sybil Brand Institute, to the west by Biscailuz Center, and to the east by Interstate 710 (also known as the Long Beach Freeway). The site was once called the Blanchard Street Dump. Based on the information by LeRoy Crandall and Associates [LCA], 1989, the previous owners include Frank and Norma Kepner (1935 - 1946) and Ben K. Kazarian and et al. (1946 - 1958). The property containing the former Blanchard Disposal Facility is currently owned by the County. Currently residing on the Blanchard Landfill are the County buildings, parking lots, an oval jogging track, helipad, and an auto storage yard (LAW Environmental [LAW], 1990).

2.2 Operational History

The landfill opened in approximately 1935 and operated as an open burning dump until approximately 1946 (LCA, 1989). Operations at the former Blanchard Disposal Facility predate current solid waste management regulations by more than 30 years; as such, the facility did not have a liner, leachate collection and recovery system (LCRS), waste acceptance and screening procedures, or recording keeping substantiating waste acceptance and operational practices. A summary of operational practices based on review historic documents follows.

The approximate size of fill area for the Blanchard Disposal Facility was approximately 21 acres, with varying thickness of refuse between 10 feet and 100 feet thick.

During the period of 1946 to 1958, the facility operated as a Class II landfill, under the ownership of Ben K. Kazarian and other family members, and under a permit issued by the Los Angeles County Department Engineers (Industrial Waste Disposal [IWD] Permit # 43 issued November 3, 1948) (County of LA, 1948 and 1949a). The facility was allowed to accept liquid, solid, chemical, and industrial wastes; with the exception of hazardous waste such as acid sludge, brines, and tank bottoms. A review of historical documents indicates the facility accepted several forms of liquid waste, which were mixed with soil prior to disposal (LCA, 1989).

The IWD permit did require that a 2-foot thick dirt cover be placed over the waste at the end of each day (County of LA, 194913). Based on correspondence in 1949 from J. J. Dower [Los Angeles County, Industrial Waste Division] to H. W. Symmonds [Los Angeles County, Industrial Waste Division], efforts to place 2-feet of cover at the end of each day was not always conducted and several smoldering fires observed to occur along the north, south and southeast edges of refuse fill are believed to have resulted from insufficient daily cover soil (County of LA, 1949). In 1957, the State of California condemned a small portion of the southeast corner of

the disposal facility for construction of the Long Beach Freeway (I-710). The site closed and ceased disposal activities in 1958.

The structures observed today on the former disposal facility were constructed in the early 1970s (David Evans and Associates, 2004). The onsite facilities were primarily used as a custody facility for male inmates (known as the Biscailuz Recovery Center) with capacity of up to 1,647 inmates. The site was then developed to consist of five inmate accommodation blocks, administrative offices building, visitors center, an inmate outdoor recreation area, a weapons training central pistol range, a gymnasium, a portable classroom building, two aluminum portable buildings, a carpet shop, car wash, a carpenter shop, a kitchen/ dining room building, a sheriff radio service building and storage buildings (David Evans and Associates, 2004). The site also had 180 parking spaces contained within three large parking lots located along the southern perimeter along Sheriff Road. The men's custody facility ceased operations in 2001. The site was then used as a training facility for the Los Angeles County Sheriff's Department, utilized by approximately 81 staff and 55 officers.

2.3 Gas Collection System

In approximately March 1970, an active methane gas collection system was installed near the southwestern border of the former Blanchard Disposal facility (LAW, 1990). The gas control system consisted of a gravel filled trench at the original grade with vertical vent wells extending to the fill surface (Brisley Jr., C.G., 1971). The system consisted of approximately 900-foot long gas pipe with nine vertical wells (six of which have associated surface vents). The system was originally designed to operate by natural ventilation. During the original monitoring event, gas concentrations were above explosive limit concentrations.

2.4 Landfill Fires

From December 1951 to November 1952, four recorded fires occurred at the Blanchard Landfill: December 17, 1951, September 12, 1952, October 29, 1952, and November 10, 1952 (County of LA, 1952). It was reported that improper fire controls were located onsite; water was utilized to extinguish the fires. The incidents resulted in violations cited by the County of Los Angeles, Air Pollution Control District.

3.0 GEOLOGY AND HYDROGEOLOGY

3.1 Geology

Description of geologic and other subsurface materials in this section is based on information provided by Kleinfelder. Documents reviewed by Kleinfelder for the compilation of this information are included in the Reference section of this report.

The geologic units below are generally described from youngest to oldest.

3.1.1 *Artificial Fill*

Based on review of the supplied consultant reports, artificial fill (not related to landfill activity) is located throughout the site. The main areas of fill appear to be concentrated along the southern border, and within limited areas along the eastern slope face of the Blanchard Landfill (URS, 2006; MACTEC, 2003). Fill thickness ranging from approximately a few feet to 25 feet were encountered along the southern slope of the Blanchard disposal facility, and up to 50 feet along the eastern edge by URS (2006). In many cases, the fill is considered to be undocumented because certification or other reports documenting placement and compaction of the fill was not available for review. The fill material described generally consisted of sandy clay to clayey sand and often contains fragments of brick, as well as gravel and asphalt. It is not clear as to the quality or degree of compaction of the existing artificial fill, but is likely variable across the site. It should be noted that deeper and/or poorer quality fill could exist between exploration locations on other portions of the site. Delineation of all locations of artificial fill within the Eastern Hill Complex was beyond the scope of this study.

3.1.2 *Refuse*

Large portions of the site are underlain by refuse or "trash" materials placed during previous landfill operations. MACTEC (2003) encountered refuse at depths of at least 68 feet below ground surface within the northeastern portion of the Blanchard Landfill under the "Proposed Parking Lot" for the Sheriffs Special Enforcement Bureau. URS (2006) describes refuse at the Blanchard Landfill as consisting of very dark gray, damp to moist, highly plastic "fat" clay with abundant trash, including glass, rubber, aluminum cans and large pieces of metal debris. The material also emits a strong gaseous odor.

3.1.3 *Terrace Deposits*

Both Dibblee (1989) and Lamar (1970) describe portions of the site as being underlain by late Pleistocene-age "Terrace Deposits" comprised of silt, sand and gravel. These Terrace Deposits have been mapped within and immediately southeast of the Sheriffs Facility, and east and down slope of the Sybil Brand Institute. Based on review of the supplied consultant's reports, there is little or no indication that terrace deposits remain at the surface within the Eastern Hill Complex. It is likely that on most of the site, the terrace deposits have since been removed by excavation or buried by artificial fill related to building construction or landfill activities.

3.1.4 *Fernando Formation*

Bedrock directly below and exposed at the site consists of Pliocene-age marine deposits of the Fernando Formation (Lamar, 1970). As mapped by Lamar, the Fernando Formation on site consist of two units, a conglomerate located on the southern portion of the site and a siltstone unit below the central and northern portions of the site. Mapping completed by URS (2006, 2007) indicates similar lithologies along the southern portion of the site, south of the Sheriffs facility.

3.1.5 *Geology of Eastern Hill Complex Facilities*

A limited number of third-party geotechnical reports prepared for various Los Angeles County projects were reviewed for many of the individual facilities within the Eastern Hill Complex. These facilities include: the Sybil Brand Institute, the Sheriffs Special Enforcement Bureau, the Internal Services Department Facility, the Proposed County Fire Department Headquarters, and the Proposed Biscailuz Center Expansion. Based on review of these reports, we have summarized geologic conditions at these facilities in the sections below. It should be emphasized the summarized geologic conditions and conclusions drawn are based on the limited data from third-party technical reports that have not been independently verified or validated with in-field investigations or measurements. Additional subsurface work and analysis may necessary prior to potential development or redevelopment within the Eastern Hills Complex.

Sybil Brand Institute: Review of GeoLogic Associates (GLA) reports (1997, 1998) indicate the eastern slope descending from the Sybil Brand Institute (SBI) has undergone downhill creep, most likely caused by placement of fill over poorly benched bedrock of the Repetto (sic) Formation (Page 8, GLA, 1997). The underlying geologic conditions discussed in the report indicate that limited bedding-plane measurements within bedrock are dipping to the northeast, ranging from 20 to 33 degrees. This is counter to the mapped regional data from Lamar (1970), which shows bedding dipping to the south from approximately 35 to 55 degrees, and Dibblee (1989) which indicates bedding dipping at 22 degrees south.

The resulting-fill creep-has caused-distress to the-concrete-walkway and security fence along the eastern top of slope at the facility. In addition, several mature trees are leaning down slope from presumed slope creep. GLA indicated the distress to the walkway, fence and asphalt road along the top of slope may also be related to poorly compacted fill and expansive subgrade soils (GLA, 1997).

3.2 **Hydrogeology**

Groundwater was not encountered in borings as presented on boring logs provided in the geotechnical consultant reports reviewed for this study. Nearby specific historic groundwater depth was not available from the CGS, but is reported to be greater than 150 feet below the surface of the site (CGS, 2001, Plate 2 this report). Research with the County of Los Angeles DPW Hydrologic Records indicates that the closest well to the site (#2847-C) had a depth to

water of 85.1 feet on 10/1/1939. This well is located approximately 2.0 miles southeast of the site near the intersection South Atlantic Boulevard and Whittier Boulevard within alluvial deposits.

Fluctuations of the groundwater level, localized zones of perched water, and soil moisture content should be anticipated during and following the rainy season. Irrigation of landscaped areas on or adjacent to the site can also cause a fluctuation of local groundwater levels.

4.0 FIELD ACTIVITIES

The following will provide a brief description of field activities.

4.1 Pre-field Activities

Prior to commencing field activities Site visits were conducted on March 16, and April 28, 2010, to confirm and mark the proposed boring/well location, evaluate drill rig accessibility considerations, and identify potential overhead utility hazards. GCE contacted Underground Services Alert (USA; formerly “Dig-Alert”) at 4:30 pm on April 28, 2010 to identify and mark subsurface utilities that may be crossing the proposed boring locations. Work was completed under ticket number A1181384. Underground utilities were not encountered during the installation of the LFG wells.

Prior the drilling at each location, the drilling area was hand augered to a depth of 5 feet. below ground surface as a precautionary measure to avoid damaging previously unidentified subsurface utilities.

GCE obtained a well installation permit from the County of Los Angeles prior to the installation of the groundwater monitoring well. A copy of the permit is provided in **Attachment A – Well Permit**.

4.2 Health and Safety Plan

A brief Health and Safety Plan was prepared for the site. All project and GCE field personnel were provided with a copy of the Health and Safety Plan, and were briefed on safety procedures to be observed during the field activities. In addition to the initial onsite meeting, daily tailgate meetings were held prior to the start of work. A copy of the Health and Safety Plan including signed meeting sheets is included in **Appendix B – Health and Safety Plan**.

4.3 LFG Monitoring Well Installation

During May 3, to May 13, 2010, twelve single- and multi-depth LFG monitoring wells (LFG #1 to LFG #8, and SB-1 through SB-4) were attempted but only 10 installed. Monitoring wells LFG #5 and LFG#8 were not installed because refuse was encountered in the boreholes. Of the 10 wells installed, one well (LFG#4) was installed in the middle of the Blanchard Landfill between the two sections of the waste, and four wells (SBR-1 through SBR-4) were installed adjacent to the Cogan Disposal Facility.

GCE contracted TestAmerica, Inc., a C-57 State-licensed drilling company located in Anaheim, California, for the use of a truck-mounted drilling rig; the borings were completed using 8¼-inch hollow-stem augers (*Photograph 1: Attachment C – Photographic Log*). The wells were installed at the location shown on **Figure 2– LFG Monitoring Well Location Map**. Logs of the subsurface soils encountered are included as **Attachment D – Boring Logs**.

4.3.1 LFG Monitoring Well Construction

GCE installed 9 of the 10 LFG wells as multi-depth monitoring wells as described in the Workplan (wells LFG #1, LFG #2, LFG #3, LFG #6, LFG #7, and SBR-1 through SBR-4). Each of the wells was completed with shallow, intermediate, and deep monitoring intervals per the approved Workplan.

These wells were constructed using 1/2" SCH 80 PVC flush-threaded casing, the screened intervals were completed using 0.020-inch slot. The annulus around the screen was filled with #1 pea gravel; the gravel was extended above the screen interval by at least 1 foot. A transition sand was placed above the gravel pack (Monterey #3). A minimum of a 5-foot seal was placed between screened intervals. The seal was medium-sized bentonite chips that were thoroughly hydrated with potable water.

The single-depth well LFG#4 was planned to a depth of 80 feet below ground surface between the two sections of the Blanchard Landfill. Purpose of this well was to evaluate the thickness and composition of the top deck, and the gas generation potential of the Landfill. During the drilling at the location of well LFG#4, refuse was encountered a depth of 60 feet, and liquid was encountered at 72 feet below ground surface. Therefore, the borehole was backfilled to a depth of 69 feet below ground surface, and the well was constructed to a total depth of 66 feet below ground surface. The well was constructed using 2" SCH 80 PVC flush-threaded casing, the screened intervals were completed using 0.020-inch slot. The annulus around the screen was filled with #1 pea gravel; the gravel was extended above the screen interval by at least 1 foot. A transition sand layer was placed above the gravel pack (Monterey #3). An approximately 14 feet thick bentonite seal was placed above the transition sand later.

Refuse was encountered in the boreholes for wells LFG #5 and LFG #8 at depths of 19 and 13 feet below ground surface, respectively. The purpose for the installation of these well was to evaluate the potential limit of the waste at these locations. Therefore, the boreholes were backfilled with bentonite and the wells were not installed.

The well heads were completed with labcocks placed within a flush-mounted well box.

4.4 Groundwater Well Installation

One groundwater monitoring well was planned near the southern extent of the Blanchard Landfill to initiate groundwater monitoring consistent with the direction agreed to in meetings between Kleinfelder and LA RWQCB to enroll Blanchard in General Order No. R4-2002-022. The boring was to be drilled to ten (10) below first encountered groundwater, which was anticipated to be in the alluvium at 60 feet below ground surface.

The groundwater monitoring well was installed at the location shown on **Figure 2**. Drilling was conducted using a hollow-stem auger drill rig equipped with nominal ten-inch outside diameter (OD) augers. The boring was completed to 70 feet below ground surface. Groundwater was not encountered to the depth of 70 feet, and the contact between the alluvium and underlying

bedrock was encountered at 12 feet below ground surface. Kleinfelder decided to monitor the alluvium bedrock contact for any future occurrences of seasonal groundwater. The boring was backfilled with bentonite and hydrated using potable water to a depth of 19 feet bgs, and the groundwater monitoring well was installed in the borehole.

During drilling, soil samples were collected at 5-foot depth intervals beginning at ten feet bgs. Samples were collected with a split spoon sampler lined with brass tubes and were screened in the field with a photoionization detector (PID) calibrated with 50 parts per million (ppm) as hexane. Samples selected to be analyzed will be sealed, labeled, placed on ice, and transported to a California-certified laboratory. Sample handling and chain-of-custody procedures will be performed consistent with United States Environmental Protection Agency (US EPA) SW-846 protocols. Samples will be analyzed for total petroleum hydrocarbons gasoline-range (TPH-g) and diesel-range (TPH-d) by Department of Health Services Leaking Underground Fuel Tank (DHS LUFT) method; for benzene, toluene, ethyl benzene, xylenes (BTEX), MtBE, and other fuel oxygenates by US EPA Method 8260B; and ethanol by US EPA Method 8015 modified.

A Registered Geologist logged the borehole. The soils were classified with visual procedures consistent with the Unified Soils Classification System (USCS) in the American Society for Testing and Materials (ASTM) Standard ASTM D-2488-93.

4.4.1 Well Construction

The monitoring well was constructed with nominal 4-inch (outside diameter) flush-threaded Schedule-40 polyvinyl chloride (PVC) blank casing and 0.020-inch slotted PVC casing. The monitoring well was constructed with 10-foot screened section centered on the estimated elevation of the alluvium bedrock contact. Blank casing was extended from the top of the screen interval to 3 feet above ground surface. Screen-washed No. 3 sand was placed from total depth to approximately two feet above the screen interval. Approximately five feet of hydrated bentonite chips was placed on top of the sand pack.

Surface completion of the monitoring well consisted of a well stand of 10-inch diameter cold steel casing with locking cover surrounded by four bollards. A locking water-tight plug was used to seal the top of the casing. The top of the well casing (TOC) will be surveyed at such time when groundwater is encountered in the well. The TOC will be surveyed by a state-licensed surveyor to establish latitude, longitude and elevation relative to mean sea level, consistent with AB-2886 reporting requirements. However, the TOC will only be surveyed

4.5 Decontamination

Downhole drilling equipment for the installation of groundwater well was steam cleaned before starting drilling. Decontamination of the soil sampling equipment took place before each sample was collected. Soil sampling equipment were cleaned by scrubbing in a detergent solution and rinsed twice with clean potable water and a third time in deionized water.

4.6 Waste Disposal

Drill cuttings, as well as wash, development, and purge waters were placed in Department of Transportation (DOT)-approved, 55-gallon drums and temporarily stored on-site (maximum of 90 days), pending laboratory analyses for profiling. Following profiling, Kleinfelder will coordinate with Los Angeles County Department of Public Works personnel for the appropriate disposal of investigation-derived waste.

4.7 LFG Well Abandonment

GCE abandoned the existing LFG monitoring wells SB-1 through SB-4 on May 13, 2010. GCE contracted Test America drilling company of Anaheim, California, to abandon the existing LFG wells. The existing probes appeared to have been constructed by drilling to a specified depth and placing a short-screened interval at the desired depth. The screened intervals were connected to the surface by 1/8-inch diameter polypropylene tubing. The tubes were contained within a 2-inch diameter PVC conduit casing.

Probes were abandoned by initially pressure grouting the tubing using a thin volclay bentonite slurry; grout was added until the probe maintained pressure for at least 30 seconds. It was noted that each probe required about 1 to 3 gallons of grout to seal.

4.8 LFG Well Monitoring Parameters

The monitoring wells are intended to assess the presence of methane in the subsurface soil. In addition to methane, additional parameters were monitored and noted on field reports. Soil gas pressures were measured; positive pressure indicates that gas may be moving from the subsurface soils to the atmosphere.

To assess the effect of aerobic attenuation on the combustible gases in the soil, oxygen (O₂) in the soil was monitored. Low O₂ in the soil may indicate the past presence of combustible gases in the soil. Similarly, carbon dioxide (CO₂) was also monitored. Elevated concentrations of CO₂ may also indicate elevated combustible gases that have been converted aerobically to CO₂ or there is ongoing decomposition of organic matter in the soil.

4.9 Subsurface Soil Gas Sampling Procedures

The LFG monitoring wells were monitored on May 14 and 17, 2010. The monitoring equipment was calibrated prior to each of the field monitoring events; copies of the calibration logs are included in **Attachment E – Calibration Logs**.

Soil gas pressure was measured using either the internal pressure device associated with the GEM™ and/or a hand-held magnehelic pressure gauge. All well pressure readings were allowed to stabilize prior to being recorded on field monitoring sheet

The wells were purged using a Thomas Industries, Inc., (Model 007DC, 1/32-horsepower, 12V, 0.60 cfm @ 0 inches of mercury (“Hg); 20”Hg maximum vacuum). During the monitoring on

May 14, 2010 more than three well volumes of air were purged to evacuate any air that may have been introduced to the subsurface soil during drilling operations; this included the well casing and the surrounding gravel pack. The purge times and monitoring results are reflected on **Table 3 – LFG Well Monitoring Results**.

5.0 RESULTS AND RECOMMENDATIONS

5.1 Subsurface Geology Encountered

The materials encountered at the site were mostly artificial fill – most soils were present as part of engineered fills. Bedrock was encountered in well LFG#3 at a depth of 84 feet bgs; the bedrock consisted of sandstone and siltstone.

5.2 Site Groundwater Condition

Groundwater was not encountered at the site. Groundwater monitoring and sampling will be conducted by Kleinfelder.

5.3 LFG Monitoring Well Results

GCE monitored the wells on May 14 and 17, 2010. The following are the results from the monitoring events:

5.3.1 Soil Gas Pressure Readings

GCE monitored the soil gas pressure prior to monitoring gas levels. Soil gas pressure ranged from –0.21 inches of water column (w.c.) to 0.45 inches w.c. in the monitoring wells. However, the majority of LFG wells had little or not vacuum/pressure.

5.3.2 Soil Gas Composition Readings

The following are the findings from the sampling events on May 14 and 17, 2010:

Methane:

Methane was detected in the LFG monitoring wells LFG-1, LFG-4, LFG-6 and the replacement wells SBR-1 and SBR-2 at concentrations ranging between 0.4% and 61% by volume in air. For equipment detection limits see **Attachment F; Table F1 – Field Monitoring Instruments**. Based on the results methane concentrations in the LFG monitoring wells ranged between 0.4% and 61% by volume in air.

Carbon Dioxide:

Carbon dioxide was detected at concentrations that ranged between 0.0 to 23.6% bv on May 14 and 17, 2010.

Oxygen:

Oxygen was detected at concentrations between 0.0 to 19.5% bv on May 14 and 17, 2010.

Monitoring results are summarized on **Table 1**.

5.3 Recommendations

Based on the results, methane concentrations in the LFG monitoring wells installed outside of the refuse footprint ranged between 0.4% and 53% by volume in air. Both methane and carbon

dioxide are asphyxiant gases, and methane gas is explosive at concentrations between the lower explosive limit (LEL) of 5% in volume by air and the upper explosive limit (UEL) of 15% by volume in air. To protect the health and safety of the public, the California Code of Regulation (CCR) Title 27 has established the following regulatory limits for methane:

- Methane concentration shall not exceed the LEL (<5% by volume in air) at property boundary; and,
- Methane concentration shall not exceed 25% of LEL (1.25% by volume in air) in the structures, vaults, basements, and confined spaces on or around the landfill.

Therefore, GCE recommends that a site specific health and safety plan be prepared and provided to all onsite workers that may potentially be exposed to landfill gas. The health and safety plan should, at a minimum, address the chemical nature of the landfill gas, the potential health and safety hazard it may pose to the public and the environment, and to establish safety procedures to be followed for all worker who would work in the spaces that landfill gas may potentially accumulate. In addition, GCE recommends compliance with Title 27 regulations as they apply to the landfills.

6.0 LIMITATIONS

This report was prepared in general accordance with the accepted standard of care that existed in southern California at the time the report was written. It should be recognized that estimating possible emission scenarios and chemicals is difficult. Judgments leading to conclusions and recommendations are generally made with an incomplete knowledge of the property.

Sampling was performed over a limited time period. Conditions on-site or off-site may affect the results included in this report. GC Environmental, Inc., should be notified for additional consultation if Kleinfelder wishes to reduce the uncertainties beyond the level associated with this report. No warranty, expressed or implied, is made.

This report may be used only by Kleinfelder and only for the purposes stated, within a reasonable time from its issuance. Land use, site conditions (both on site and off site) or other factors may change over time, and additional work may be required with the passage of time.

Any party other than Kleinfelder who wishes to use this report shall notify GC Environmental, Inc., of such intended use. Based on the intended use of the report, GC Environmental, Inc., may require that additional work be performed and that an updated report be issued. Non-compliance with any of these requirements by Kleinfelder or anyone else will release GC Environmental, Inc., from any liability resulting from the use of this report by any unauthorized party.

ATTACHMENT C

PHOTOGRAPHIC LOG

Photograph 1: Typical probe location showing Underground Service Alert (USA) markings. In view is probe LFG #1.

Photograph 2: Drilling LFG #1 using a hollow-stem truck-mounted drilling rig. This is a north facing view of the drilling operations associated with probe LFG #1.

Photograph 3: Drilling and setting probe LFG #2. The probe was completed in the green belt between Sheriff Road (left) and the parking lot (right).

Photograph 4: East-facing view of the completed probe LFG#2. The drums in view were taken to a central collection point for characterization and disposal.

Photograph 5: A typical probe completion prior to the installation of the wellhead. This is the completed probe LFG #3. The probe casings are arranged with the deepest probe to the north and the shallowest probe to the south.

Photograph 6: Completed views of probe LFG #3. Note that the wellhead has been set high—this is at the request of the client. This parking lot is scheduled to have approximately 2 inches of asphalt added as a repaving project.

Photograph 7: Drilling activities for probe LFG #4. This probe is located near the site's helopad.

Photograph 8: Close-up of refuse encountered in probe LFG #4. Material was black and saturated with a very strong LFG odor.

Photograph 9: Close up of the 2-inch SCH80 PVC screened section installed in probe LFG #4.

Photograph 10: Completed wellhead for probe LFG #4.

Photograph 11: Location of LFG #5.

Photograph 12: Refuse encountered in LFG #5. Probe location was backfilled and sealed with bentonite chips.

Photograph 13: Typical probe completion showing labcocks. In view is completed probe LFG #7.

Photograph 14: View of completed probe in the Sybil Brand Institute. In view is the completed probe SB-(R)-2.

Photograph 15: View of typical probe abandonment system. The valve system was attached to the drilling rig pressure pump; the tube to the old probe was attached than grout was placed until it would not accept any more. The top of the probe was drilled out to 5 feet bgs and backfilled with bentonite. The surface was capped with concrete.

Photograph 16: Completed wellhead for well MW-1.

GCE used the following procedure for monitoring of the wells:

GEM 500™ AND RKI Well Monitoring:

1. GCE calibrated a Landtec[®] Gas Extraction Monitor Model 500 (“GEM™”) and the RKI Eagle (RKI) using the calibration gas whose composition is 1.0% oxygen (O₂), 40% carbon dioxide (CO₂) and 45% methane (CH₄) gas mixtures (see **Table D1 – Field Monitoring Instruments**). Copies of the calibration logs are included in **Attachment A – Calibration Logs**.
2. GCE connected the GEM™ or a magnehelic pressure gauge to each well sample port and checked and recorded static pressure in the well at the time of the sampling.
3. GCE turned on the GEM™ or RKI pump and evacuated at least three well volumes.
4. GCE measured gas concentrations during the evacuation using the RKI or GEM™. GCE noted the lowest and highest CH₄ concentrations including corresponding CO₂ and O₂ during evacuation as well as the final CH₄, CO₂ and O₂ after a minimum of three (3) well volumes are evacuated.
5. GCE record the highest methane concentration observed along with the corresponding oxygen and CO₂ readings.
6. GCE shut off the extraction pump and closed the port on well. GCE then directly connect the OVA or RKI to the well, opened the sample port and permitted the reading to stabilize on each well. This reading was recorded as methane in the parts per million (ppm) range.
7. GCE closed the port on the well and moved to the next well. GCE repeated steps 2-7 at each well location.

TABLE F1 - FIELD MONITORING INSTRUMENTS

GAS	INSTRUMENT	DETECTION LEVEL
Pressure	Pressure gauge	±0.01 "H ₂ O
	GEM™ 500	±0.01 "H ₂ O
Combustible Vapors	GEM™ 500	0.1%bv or 1,000 ppm as Methane (CH ₄)
	RKI Eagle	500 ppm as Methane (CH ₄)
Oxygen (O ₂)	GEM™ 500	0.1%bv
	RKI Eagle	0.1%bv
Carbon Dioxide (CO ₂)	GEM™ 500	0.1%bv
	RKI Eagle	0.1%bv

**Subject: Monthly Landfill Gas (LFG) Monitoring Report - June 2010
Former Blanchard Disposal Facility
4537 East Blanchard Street, Monterey Park, California
SWIS Number: 19-AA-0580**

Dear Mr. Aldern:

This report has been prepared by GC Environmental, Inc. (GCE), under a contract with Kleinfelder, and documents the results of June 2010 monitoring of ten (10) landfill gas (LFG) monitoring probes at the Former Blanchard Disposal Facility, herein referred to as the "Landfill," located at 4537 East Blanchard Street in the City of Monterey Park, California (**Figure 1 – Site Location Map**).

1.0 Executive Summary

The LFG monitoring wells (probes) LFG #1, LFG #2, LFG #3, LFG #6, LFG #7, and SBR-1 through SBR-4, were installed outside of the refuse footprint in May 2010. The initial monitoring of the LFG probes was conducted on May 14 and 17, 2010. The monitoring probe SBR-3 was not accessible for monitoring. Based on the results methane concentrations in the LFG monitoring wells installed outside of the refuse footprint ranged between 0.4% and 53% by volume in air. Methane concentrations in LFG wells LFG#1, and LFG#6 exceeded the California Code of Regulation (CCR) Title 27 regulatory limit of 5% by volume in air for monitoring wells installed outside the refuse footprint. Methane concentration at 61% was detected in the well LFG#4, which was set in refuse between the two sections of the Blanchard Landfill. Upon completion of initial monitoring, results were reported to Kleinfelder. Subsequently, Kleinfelder initiated a monthly LFG probe monitoring program at the Landfill, for a period of 5 months.

With the exception of probe SBR-3, which was not accessible again, the remaining nine (9) probes were monitored on June 28, 2010. Based on the June monitoring results, methane concentrations were detected in some of the probes at concentrations ranging between 8.2% and 47.4% bv in air. These concentrations are above the regulatory limit concentration of 5% by volume (%bv) in air. LFG well LFG#4, which completed in refuse, had methane concentrations of 60.1%bv.

The following sections provide a brief summary of site background and the results of the June 2010 monitoring event.

2.0 Background

The following sections discuss site background information provided by Kleinfelder.

2.1 Site Setting

The Former Blanchard Disposal Facility is Located between Blanchard Avenue and McBride Avenue at the address of 4537 East Blanchard Street in the City of Monterey Park, California. The Landfill is bordered to the north by the former Cogen Disposal Facility and the Sybil Brand Institute, to the west by Biscailuz Center, and to the east by Interstate 710 (also known as the Long Beach Freeway). The site was once called the Blanchard Street Dump. Based on the information by LeRoy Crandall and Associates [LCA], 1989, the previous owners include Frank and Norma Kepner (1935 - 1946) and Ben K. Kazarian and et al. (1946 - 1958). The property containing the former Blanchard Disposal Facility is currently owned by the County. Currently residing on the Blanchard Landfill are the County buildings, parking lots, an oval jogging track, helipad, and an auto storage yard (LAW Environmental [LAW], 1990).

2.2 Operational History

The landfill opened in approximately 1935 and operated as an open burning dump until approximately 1946 (LCA, 1989). Operations at the former Blanchard Disposal Facility predate current solid waste management regulations by more than 30 years; as such, the facility did not have a liner, leachate collection and recovery system (LCRS), waste acceptance and screening procedures, or recording keeping substantiating waste acceptance and operational practices. A summary of operational practices based on review historic documents follows.

The approximate size of fill area for the Blanchard Disposal Facility was approximately 21 acres, with varying thickness of refuse between 10 feet and 100 feet thick.

During the period of 1946 to 1958, the facility operated as a Class II landfill, under the ownership of Ben K. Kazarian and other family members, and under a permit issued by the Los Angeles County Department Engineers (Industrial Waste Disposal [IWD] Permit # 43 issued November 3, 1948) (County of LA, 1948 and 1949a). The facility was allowed to accept liquid, solid, chemical, and industrial wastes; with the exception of hazardous waste such as acid sludge, brines, and tank bottoms. A review of historical documents indicates the facility accepted several forms of liquid waste, which were mixed with soil prior to disposal (LCA, 1989).

The IWD permit did require that a 2-foot thick dirt cover be placed over the waste at the end of each day (County of LA, 194913). Based on correspondence in 1949 from J. J. Dower [Los Angeles County, Industrial Waste Division] to H. W. Symmonds [Los Angeles County, Industrial Waste Division], efforts to place 2-feet of cover at the end of each day was not always conducted and several smoldering fires observed to occur along the north, south and southeast edges of refuse fill are believed to have resulted from insufficient daily cover soil (County of LA, 1949). In 1957, the State of California condemned a small portion of the southeast corner of

the disposal facility for construction of the Long Beach Freeway (I-710). The site closed and ceased disposal activities in 1958.

The structures observed today on the former disposal facility were constructed in the early 1970s (David Evans and Associates, 2004). The onsite facilities were primarily used as a custody facility for male inmates (known as the Biscailuz Recovery Center) with capacity of up to 1,647 inmates. The site was then developed to consist of five inmate accommodation blocks, administrative offices building, visitors center, an inmate outdoor recreation area, a weapons training central pistol range, a gymnasium, a portable classroom building, two aluminum portable buildings, a carpet shop, car wash, a carpenter shop, a kitchen/ dining room building, a sheriff radio service building and storage buildings (David Evans and Associates, 2004). The site also had 180 parking spaces contained within three large parking lots located along the southern perimeter along Sheriff Road. The men's custody facility ceased operations in 2001. The site was then used as a training facility for the Los Angeles County Sheriff's Department, utilized by approximately 81 staff and 55 officers.

2.3 Gas Collection System

In approximately March 1970, an active methane gas collection system was installed near the southwestern border of the former Blanchard Disposal facility (LAW, 1990). The gas control system consisted of a gravel filled trench at the original grade with vertical vent wells extending to the fill surface (Brisley Jr., C.G., 1971). The system consisted of approximately 900-foot long gas pipe with nine vertical wells (six of which have associated surface vents). The system was originally designed to operate by natural ventilation. During the original monitoring event, gas concentrations were above explosive limit concentrations.

2.4 LFG Probe Installation and Monitoring

Kleinfelder prepared a Workplan, that included installation of seven (7) multi-depth completion LFG monitoring wells (LFG#1 through LFG#3, and LFG#5 through LFG#8) outside the known perimeter of the refuse, and one (1) single depth completion LFG monitoring well (LFG#4) to a depth of 66 feet below ground surface in the middle area between the two sections of the waste. The Workplan also included the abandonment of the 4 existing 100 feet deep LFG monitoring wells (SB-1 through SB-4), and replacement of these wells with new LFG wells (SBR-1 through SBR-4) with proper well design construction, as well as the installation of one groundwater monitoring well near the southern extent of the Landfill, near the confluence to two pre-landfill drainage channels. The purpose of the installation of LFG and groundwater monitoring wells was to provide information to assist the County in addressing on-going stewardship and maintenance responsibilities associated with the former Blanchard Disposal Facility.

The installation of the LFG probes, and abandonment of the 4 existing LFG wells were completed between May 3 and 13, 2010. Probes were installed at the approved locations shown on **Figure 2**.

The multi-depth LFG monitoring wells LFG#1, LFG#2, LFG#3, and LFG#6, and LFG-7 were drilled to the proposed depths and constructed per the approved construction design. During the drilling of LFG monitoring wells LFG#5 and LFG#8 refuse was encountered in the boreholes. Therefore, the boreholes were backfilled, and LFG wells LFG#5 and LFG#8 were not

installed. The single-depth well LFG#4 was planned to a depth of 80 feet below ground surface between the two sections of the Blanchard Landfill. Purpose of this well was to evaluate the thickness and composition of the top deck, and the gas generation potential of the Landfill. During the drilling at the location of well LFG#4, liquid was encountered in the borehole at 72 feet below ground surface. Therefore, the borehole was backfilled to a depth of 70 feet below ground surface, and the well was constructed to a total depth of 66 feet below ground surface. Abandonment and replacement of the LFG wells SBR-1 through SBR-4 were completed per the approved Workplan.

The initial monitoring of the LFG wells was conducted on May 14, 2010. The replacement LFG monitoring well SBR-3 was not monitored because of a parked vehicle on the well. Based on the results methane concentrations in the LFG monitoring wells installed outside of the refuse footprint ranged between 0.4% and 53% by volume in air. Based on the initial monitoring results, methane concentrations in LFG wells LFG#1, and LFG#6 exceed the California Code of Regulation (CCR) Title 27 regulatory limit of 5% by volume in air for monitoring wells installed outside the refuse footprint. Methane concentration at 61% was detected in the well LFG#4, which was set in refuse between the two sections of the Blanchard Landfill. Upon completion of initial monitoring, results were reported to Kleinfelder. Monitoring results were documented in a report entitled "Installation of Landfill Gas and Groundwater Monitoring Wells", dated June 23, 2010.

3.0 LFG Probe Monitoring

The following are the procedures used by GCE to monitor the Landfill:

3.1 LFG Probe Monitoring

There are ten (10) LFG probes that are monitored for methane gas. The locations of the probes are shown on **Figure 2**. Currently, these probes are monitored monthly for methane, carbon dioxide, and oxygen using a GEM 500 monitoring equipment. The GEM unit is calibrated prior to monitoring. The vacuum/ pressures of the probes are measured in the beginning of monitoring using a Magnehelic gauge.

Prior to measuring gases in the monitoring probes, with the exception of the 2" diameter LFG well LFG#4 which is located in the landfill, at least two probe casing volumes of gas were evacuated from each probe using the GEM 500. The well LFG#4 was purged one probe volume using a pump. The data recorded include the date; probe number, pressure and gas component concentrations for each probe. A list of instruments, calibration, and monitoring procedures is included in **Attachment A** of this report. The calibration log for monitoring equipment is included in **Attachment B**.

3.2 Monitoring Results

The monthly monitoring was conducted at the Landfill on June 28, 2010. Results are shown on **Table 1**.

Results of June 2010 monitoring event indicated that similar to the initial monitoring in May, several probe intervals had elevated methane concentrations. Methane concentrations in several LFG monitoring probes installed outside of the refuse footprint exceeded the 5.0%bv in air regulatory limit.

For comparison purposes, the May and June 2010 methane concentrations in the probes outside of the refuse footprint are summarized in the following table. Based on the results, methane concentrations in the probes in June are higher than the concentration detected in May 2010. This, in part, may be due to the effect of barometric pressure on the Landfill. Additional data will be required to establish the methane concentration trends in the probes.

LFG Monitoring Well⁽¹⁾ & Probe Number	Initial Methane Readings May 2010⁽³⁾	June 2010 Methane Readings
LFG#1 P1	11.2%bv ⁽²⁾	18.2%bv
LFG#1 P2	10.2%bv	47.4%bv
LFG#1 P3	53.9%bv	61.2%bv
LFG#6 P2	22.2%bv	28.3%bv
LFG#6 P3	27.0%bv	29.5%bv
SBR-2 P2	0.4%bv	8.2%bv
SBR-2 P3	1.3%bv	10.0%bv

Notes:

- 1) This table excluded the readings from LFG#4; this well was set in refuse (methane @ 60.1%bv)
- 2) %bv = percent by volume
- 3) May 2010 monitoring occurred on May 14, 2010

In addition to these probe intervals there were several other probes that had detectable methane concentrations that were less than 5.0%bv. These included; LFG#2 P2 (0.3%bv), LFG#3 P3 (0.8%bv), LFG#6 P3 (0.1%bv), SBR-1 P2 (4.7%bv), and SBR-4 P2 (0.1%bv).

4.0 Recommendations

Based on the results, methane concentrations in the LFG monitoring wells installed outside of the refuse footprint ranged between 0.4% and 47% by volume in air. Both methane and carbon dioxide are asphyxiant gases, and methane gas is explosive at concentrations between the lower explosive limit (LEL) of 5% in volume by air and the upper explosive limit (UEL) of 15% by volume in air. To protect the health and safety of the public, the California Code of Regulation (CCR) Title 27 has established the following regulatory limits for methane:

- Methane concentration shall not exceed the LEL (<5% by volume in air) at property boundary; and,
- Methane concentration shall not exceed 25% of LEL (1.25% by volume in air) in the structures, vaults, basements, and confined spaces on or around the landfill.

Therefore, GCE recommends that a site-specific health and safety plan be prepared and provided to all onsite workers that may potentially be exposed to landfill gas. The health and safety plan should, at a minimum, address the chemical nature of the landfill gas, the potential health and safety hazard it may pose to the public and the environment, and to establish safety procedures to be followed for all worker who would work in the spaces that landfill gas may potentially accumulate. In addition, GCE recommends compliance with Title 27 regulations as they apply to the landfills.

5.0 Limitations

This report was prepared in general accordance with the accepted standard of care that existed in southern California at the time the report was written. It should be recognized that estimating possible emission scenarios and chemicals is difficult. Judgments leading to conclusions and recommendations are generally made with an incomplete knowledge of the property.

Sampling was performed over a limited time period. Conditions on-site or off-site may affect the results included in this report. GC Environmental, Inc., should be notified for additional consultation if Kleinfelder wishes to reduce the uncertainties beyond the level associated with this report. No warranty, expressed or implied, is made.

This report may be used only by Kleinfelder and only for the purposes stated, within a reasonable time from its issuance. Land use, site conditions (both on site and off site) or other factors may change over time, and additional work may be required with the passage of time.

Any party other than Kleinfelder who wishes to use this report shall notify GC Environmental, Inc., of such intended use. Based on the intended use of the report, GC Environmental, Inc., may require that additional work be performed and that an updated report be issued. Non-compliance with any of these requirements by Kleinfelder or anyone else will release GC Environmental, Inc., from any liability resulting from the use of this report by any unauthorized party.

Should you have any questions regarding this report, please call us at 714-632-9969.

Sincerely,
GC Environmental, Inc.

MONITORING PROCEDURE AND EQUIPMENT
SPECIFICATIONS

MONITORING PROCEDURE AND EQUIPMENT SPECIFICATIONS

MONITORING PROCEDURE

The following is a list of the monitoring equipment that may be used at the site:

Landtec[®] GEM500[™]/GEM 2000[™]

RKI[®] Eagle (RKI)

Foxboro[®] Organic Vapor Analyzer (OVA) Model 128

TSI[®] VelociCalc[™] Plus Anemometer (TSI)

MiniRAE 2000 Photoionization Detector (PID) (Non-Methane Organic Compound (NMOC) Detector)

Thomas Sample Pump

The GEM and RKI units are calibrated prior to monitoring; the calibration gases used for the equipment are listed below. Specifications for the monitoring units are included below.

The perimeter gas monitoring probes and LFG extraction wells are located around the landfill perimeter as shown on Figure 2. The probes and wells are monitored semi-weekly for methane, carbon dioxide and oxygen using both the GEM and the RKI. The pressure in both the wells and probes are measured using the GEM500. The flow in the wells is measured using a TSI.

The OVA may also be used to assess methane and volatile organic compounds (VOCs).

The pressure readings in the probes are measured; the readings are permitted to stabilize. The final readings are recorded on the field notes. Prior to measuring gases in the perimeter gas migration monitoring probes at least two probe casing volumes of gas are evacuated using the field pump. The GEM500 is attached to the probe to measure methane, oxygen, and carbon dioxide. The probe is capped and the wellhead is re-sealed.

The extraction wells, where accessible, are monitored using the GEM 500. The GEM is attached to line from the well and pressure, methane, oxygen and carbon dioxide readings, once stabilized, are recorded.

GCE also monitors the gas exiting the blower at the sample outlet. The airflow, and concentrations of methane, carbon dioxide, oxygen, and NMOCs are recorded using the GEM and the PID.

MONITORING EQUIPMENT SPECIFICATIONS

LandTec GEM 500™/ GEM 2000™

	Sensor Range	Resolution
Methane	0 to 100%	0.1%
Carbon dioxide	0 to 75%	0.1%
Oxygen	0 to 100%	0.1%

Typical accuracy of GEM unit at 5% methane concentration is +0.3% methane by volume and +1.9% methane by volume at 75% methane concentration.

Calibration Gas Utilized:	Methane	45%bv
	Carbon Dioxide	40%bv
	Oxygen	1.0%bv

Foxboro Organic Vapor Analyzer (OVA) Model 128

Range:	0 to 10,000 ppmv
Minimum detectable limit	1 ppmv
Sensitivity	0.1 ppmv methane
Response time	Less than 2 seconds
Flame out indicator	Audible alarm plus visual meter
Accuracy	$\pm 5\%$ of individual scale
Operating temperature	10 to 40 deg. Centigrade

Calibration Gas Utilized:	Methane (Lower Range)	100 ppmv
	Methane (Upper Range)	1,000 ppmv

RKI Eagle

	Sensor Range	Resolution
Methane (IR)	0 to 60%	500 ppmv
Carbon dioxide	0 to 60%	0.1%
Oxygen	0 to 60%	0.1%

Calibration Gas Utilized:	Methane	45%bv
	Carbon Dioxide	40%bv
	Oxygen	1.0%bv

MiniRAE 2000 Photoionization Detector (PID) (Non-Methane Organic Vapor Detector)

Range	0 to 10,000 ppmv
Minimum detectable limit	0.1 ppmv
Sensitivity	0.1 ppmv AVOCs
Response time	Less than 2 seconds
Accuracy	± 0.3 ppmv
Operating temperature	10 to 40 deg. Centigrade

Calibration Gas Utilized: Isobutylene 100 ppmv

TSI Anemometer

Flow rates = ± 0.3 cu ft/min.

**Subject: Monthly Landfill Gas (LFG) Monitoring Report - July 2010
Former Blanchard Disposal Facility
4537 East Blanchard Street, Monterey Park, California
SWIS Number: 19-AA-0580**

Dear Mr. Aldern:

This report has been prepared by GC Environmental, Inc. (GCE), under a contract with Kleinfelder, and documents the results of July 2010 monitoring of ten (10) landfill gas (LFG) monitoring probes at the Former Blanchard Disposal Facility, herein referred to as the "Landfill," located at 4537 East Blanchard Street in the City of Monterey Park, California (**Figure 1 – Site Location Map**).

1.0 Executive Summary

The LFG monitoring wells (probes) LFG #1, LFG #2, LFG #3, LFG #6, LFG #7, and SBR-1 through SBR-4, were installed outside of the refuse footprint in May 2010. The initial monitoring of the LFG probes was conducted on May 14 and 17, 2010. The monitoring probe SBR-3 was not accessible for monitoring. Based on the results, methane concentrations in the LFG monitoring wells installed outside of the refuse footprint ranged between 0.4% and 53% by volume in air. Methane concentrations in LFG wells LFG#1, and LFG#6 exceeded the California Code of Regulation (CCR) Title 27 regulatory limit of 5% by volume in air for monitoring wells installed outside the refuse footprint. Methane concentration at 61% was detected in the well LFG#4, which was set in refuse between the two sections of the Blanchard Landfill. Upon completion of initial monitoring, results were reported to Kleinfelder. To evaluate the methane concentration trends in the probes, a 5-month duration, monthly probe monitoring program was initiated at the site in June 2010. This report documents the monitoring results for July 2010 monitoring event.

With the exception of probe SBR-1, which was not accessible due a vehicle parked on it, the remaining nine (9) probes were monitored on July 26, 2010. Based on the July monitoring results, methane was detected in some of the probes at concentrations ranging between 0.5% and 60.6% bv in air. Methane concentrations in probes LFG #1, LFG#6, and SBR-2 are above the

regulatory limit concentration of 5% by volume (%bv) in air. LFG well LFG#4, which was completed in refuse, had methane concentrations of 59.9 %bv.

The following sections provide a brief summary of site background and the results of the July 2010 monitoring event.

2.0 Background

The following sections discuss site background information provided by Kleinfelder.

2.1 Site Setting

The Former Blanchard Disposal Facility is located between Blanchard Avenue and McBride Avenue at the address of 4537 East Blanchard Street in the City of Monterey Park, California. The Landfill is bordered to the north by the former Cogen Disposal Facility and the Sybil Brand Institute, to the west by Biscailuz Center, and to the east by Interstate 710 (also known as the Long Beach Freeway). The site was once called the Blanchard Street Dump. Based on the information by LeRoy Crandall and Associates [LCA], 1989, the previous owners include Frank and Norma Kepner (1935 - 1946) and Ben K. Kazarian and et al. (1946 - 1958). The property containing the former Blanchard Disposal Facility is currently owned by the County. Currently residing on the Blanchard Landfill are the County buildings, parking lots, an oval jogging track, helipad, and an auto storage yard (LAW Environmental [LAW], 1990).

2.2 Operational History

The landfill opened in approximately 1935 and operated as an open burning dump until approximately 1946 (LCA, 1989). Operations at the former Blanchard Disposal Facility predate current solid waste management regulations by more than 30 years; as such, the facility did not have a liner, leachate collection and recovery system (LCRS), waste acceptance and screening procedures, or recording keeping substantiating waste acceptance and operational practices. A summary of operational practices based on review historic documents follows.

The approximate size of fill area for the Blanchard Disposal Facility was approximately 21 acres, with varying thickness of refuse between 10 feet and 100 feet thick.

During the period of 1946 to 1958, the facility operated as a Class II landfill, under the ownership of Ben K. Kazarian and other family members, and under a permit issued by the Los Angeles County Department Engineers (Industrial Waste Disposal [IWD] Permit # 43 issued November 3, 1948) (County of LA, 1948 and 1949a). The facility was allowed to accept liquid, solid, chemical, and industrial wastes; with the exception of hazardous waste such as acid sludge, brines, and tank bottoms. A review of historical documents indicates the facility accepted several forms of liquid waste, which were mixed with soil prior to disposal (LCA, 1989).

The IWD permit did require that a 2-foot thick dirt cover be placed over the waste at the end of each day (County of LA, 194913). Based on correspondence in 1949 from J. J. Dower [Los Angeles County, Industrial Waste Division] to H. W. Symmonds [Los Angeles County, Industrial Waste Division], efforts to place 2-feet of cover at the end of each day was not always

conducted and several smoldering fires observed to occur along the north, south and southeast edges of refuse fill are believed to have resulted from insufficient daily cover soil (County of LA, 1949). In 1957, the State of California condemned a small portion of the southeast corner of the disposal facility for construction of the Long Beach Freeway (I-710). The site closed and ceased disposal activities in 1958.

The structures observed today on the former disposal facility were constructed in the early 1970s (David Evans and Associates, 2004). The onsite facilities were primarily used as a custody facility for male inmates (known as the Biscailuz Recovery Center) with capacity of up to 1,647 inmates. The site was then developed to consist of five inmate accommodation blocks, administrative offices building, visitors center, an inmate outdoor recreation area, a weapons training central pistol range, a gymnasium, a portable classroom building, two aluminum portable buildings, a carpet shop, car wash, a carpenter shop, a kitchen/ dining room building, a sheriff radio service building and storage buildings (David Evans and Associates, 2004). The site also had 180 parking spaces contained within three large parking lots located along the southern perimeter along Sheriff Road. The men's custody facility ceased operations in 2001. The site was then used as a training facility for the Los Angeles County Sheriff's Department, utilized by approximately 81 staff and 55 officers.

2.3 Gas Collection System

In approximately March 1970, an active methane gas collection system was installed near the southwestern border of the former Blanchard Disposal facility (LAW, 1990). The gas control system consisted of a gravel filled trench at the original grade with vertical vent wells extending to the fill surface (Brisley Jr., C.G., 1971). The system consisted of approximately 900-foot long gas pipe with nine vertical wells (six of which have associated surface vents). The system was originally designed to operate by natural ventilation. During the original monitoring event, gas concentrations were above explosive limit concentrations.

2.4 LFG Probe Installation and Monitoring

Kleinfelder prepared a Workplan, that included installation of seven (7) multi-depth completion LFG monitoring wells (LFG#1 through LFG#3, and LFG#5 through LFG#8) outside the known perimeter of the refuse, and one (1) single depth completion LFG monitoring well (LFG#4) to a depth of 66 feet below ground surface in the middle area between the two sections of the waste. The Workplan also included the abandonment of the 4 existing 100 feet deep LFG monitoring wells (SB-1 through SB-4), and replacement of these wells with new LFG wells (SBR-1 through SBR-4) with proper well design construction, as well as the installation of one groundwater monitoring well near the southern extent of the Landfill, near the confluence to two pre-landfill drainage channels. The purpose of the installation of LFG and groundwater monitoring wells was to provide information to assist the County in addressing on-going stewardship and maintenance responsibilities associated with the former Blanchard Disposal Facility.

The installation of the LFG probes, and abandonment of the 4 existing LFG wells were completed between May 3 and 13, 2010. Probes were installed at the approved locations shown on **Figure 2**.

The multi-depth LFG monitoring wells LFG#1, LFG#2, LFG#3, and LFG#6, and LFG#7 were drilled to the proposed depths and constructed per the approved construction design. During the drilling of LFG monitoring wells LFG#5 and LFG#8 refuse was encountered in the boreholes. The boreholes were backfilled, and LFG wells LFG#5 and LFG#8 were not installed. The single-depth well LFG#4 was planned to a depth of 80 feet below ground surface between the two sections of the Blanchard Landfill. Purpose of this well was to evaluate the thickness and composition of the top deck, and the gas generation potential of the Landfill. During the drilling at the location of well LFG#4, liquid was encountered in the borehole at 72 feet below ground surface. Therefore, the borehole was backfilled to a depth of 70 feet below ground surface, and the well was constructed to a total depth of 66 feet below ground surface. Abandonment and replacement of the LFG wells SBR-1 through SBR-4 were completed per the approved Workplan.

The initial monitoring of the LFG wells was conducted on May 14, 2010. The replacement LFG monitoring well SBR-3 was not monitored because of a parked vehicle on the well. Based on the results methane concentrations in the LFG monitoring wells installed outside of the refuse footprint ranged between 0.4% and 53% by volume in air. Based on the initial monitoring results, methane concentrations in LFG wells LFG#1, and LFG#6 exceed the California Code of Regulation (CCR) Title 27 regulatory limit of 5% by volume in air for monitoring wells installed outside the refuse footprint. Methane concentration at 61% was detected in the well LFG#4, which was set in refuse between the two sections of the Blanchard Landfill. Upon completion of initial monitoring, results were reported to Kleinfelder. Monitoring results were documented in a report entitled "Installation of Landfill Gas and Groundwater Monitoring Wells", dated June 23, 2010.

Subsequently, to evaluate the methane concentration trends in the probes, a monthly probe monitoring program was initiated at the site starting June 2010 for a 5-month duration. This report documents the monitoring results for July 2010 monitoring event.

3.0 LFG Probe Monitoring

The following are the procedures used by GCE to monitor the Landfill:

3.1 LFG Probe Monitoring

There are ten (10) LFG probes that are monitored for methane gas. The locations of the probes are shown on **Figure 2**. Currently, these probes are monitored monthly for methane, carbon dioxide, and oxygen using a GEM 500 monitoring equipment. The GEM unit is calibrated prior to monitoring. The vacuum/ pressures of the probes are measured in the beginning of monitoring using a Magnehelic gauge.

Prior to measuring gases in the monitoring probes, with the exception of the 2" diameter LFG well LFG#4 which is located in the landfill, at least two probe casing volumes of gas were evacuated from each probe using the GEM 500. The well LFG#4 was purged one probe volume using a pump. The data recorded include the date; probe number, pressure and gas component concentrations for each probe. A list of instruments, calibration, and monitoring

procedures is included in **Attachment A** of this report. The calibration log for monitoring equipment is included in **Attachment B**.

3.2 Monitoring Results

The monthly monitoring was conducted at the Landfill on July 26, 2010. Results are shown on **Table 1**.

Results of July 2010 monitoring event indicated that similar to the May and June monitoring, several probe intervals had elevated methane concentrations. Methane concentrations in probes LFG#1, LFG#6, and SBR-2 were above the regulatory limit concentration of 5% by volume in air. Graph of monitoring data for probes LFG#1, LFG#6, and SBR-2 are shown on **Figure 3**, **Figure 4**, and **Figure 5**, respectively.

4.0 Recommendations

Based on the results, methane concentrations in some of the LFG monitoring probes installed outside of the refuse footprint ranged between 0.5% and 60.6% by volume in air. Both methane and carbon dioxide are asphyxiant gases, and methane gas is explosive at concentrations between the lower explosive limit (LEL) of 5% in volume by air and the upper explosive limit (UEL) of 15% by volume in air. To protect the health and safety of the public, the California Code of Regulation (CCR) Title 27 has established the following regulatory limits for methane:

- Methane concentration shall not exceed the LEL (<5% by volume in air) at property boundary; and,
- Methane concentration shall not exceed 25% of LEL (1.25% by volume in air) in the structures, vaults, basements, and confined spaces on or around the landfill.

Therefore, GCE recommends that a site-specific health and safety plan be prepared and provided to all onsite workers that may potentially be exposed to landfill gas. The health and safety plan should, at a minimum, address the chemical nature of the landfill gas, the potential health and safety hazard it may pose to the public and the environment, and to establish safety procedures to be followed for all worker who would work in the spaces that landfill gas may potentially accumulate. In addition, GCE recommends compliance with Title 27 regulations as they apply to the landfills.

5.0 Limitations

This report was prepared in general accordance with the accepted standard of care that existed in southern California at the time the report was written. It should be recognized that estimating possible emission scenarios and chemicals is difficult. Judgments leading to conclusions and recommendations are generally made with an incomplete knowledge of the property.

Sampling was performed over a limited time period. Conditions on-site or off-site may affect the results included in this report. GC Environmental, Inc., should be notified for additional consultation if Kleinfelder wishes to reduce the uncertainties beyond the level associated with this report. No warranty, expressed or implied, is made.

This report may be used only by Kleinfelder and only for the purposes stated, within a reasonable time from its issuance. Land use, site conditions (both on site and off site) or other factors may change over time, and additional work may be required with the passage of time.

Any party other than Kleinfelder who wishes to use this report shall notify GC Environmental, Inc., of such intended use. Based on the intended use of the report, GC Environmental, Inc., may require that additional work be performed and that an updated report be issued. Non-compliance with any of these requirements by Kleinfelder or anyone else will release GC Environmental, Inc., from any liability resulting from the use of this report by any unauthorized party.

Should you have any questions regarding this report, please call us at 714-632-9969.

Sincerely,
GC Environmental, Inc.

MONITORING PROCEDURE AND EQUIPMENT
SPECIFICATIONS

MONITORING PROCEDURE AND EQUIPMENT SPECIFICATIONS

MONITORING PROCEDURE

The following is a list of the monitoring equipment that may be used at the site:

Landtec[®] GEM500[™]/GEM 2000[™]

RKI[®] Eagle (RKI)

Foxboro[®] Organic Vapor Analyzer (OVA) Model 128

TSI[®] VelociCalc[™] Plus Anemometer (TSI)

MiniRAE 2000 Photoionization Detector (PID) (Non-Methane Organic Compound (NMOC) Detector)

Thomas Sample Pump

The GEM and RKI units are calibrated prior to monitoring; the calibration gases used for the equipment are listed below. Specifications for the monitoring units are included below.

The perimeter gas monitoring probes and LFG extraction wells are located around the landfill perimeter as shown on Figure 2. The probes and wells are monitored semi-weekly for methane, carbon dioxide and oxygen using both the GEM and the RKI. The pressure in both the wells and probes are measured using the GEM500. The flow in the wells is measured using a TSI.

The OVA may also be used to assess methane and volatile organic compounds (VOCs).

The pressure readings in the probes are measured; the readings are permitted to stabilize. The final readings are recorded on the field notes. Prior to measuring gases in the perimeter gas migration monitoring probes at least two probe casing volumes of gas are evacuated using the field pump. The GEM500 is attached to the probe to measure methane, oxygen, and carbon dioxide. The probe is capped and the wellhead is re-sealed.

The extraction wells, where accessible, are monitored using the GEM 500. The GEM is attached to line from the well and pressure, methane, oxygen and carbon dioxide readings, once stabilized, are recorded.

GCE also monitors the gas exiting the blower at the sample outlet. The airflow, and concentrations of methane, carbon dioxide, oxygen, and NMOCs are recorded using the GEM and the PID.

MONITORING EQUIPMENT SPECIFICATIONS

LandTec GEM 500™/ GEM 2000™

	Sensor Range	Resolution
Methane	0 to 100%	0.1%
Carbon dioxide	0 to 75%	0.1%
Oxygen	0 to 100%	0.1%

Typical accuracy of GEM unit at 5% methane concentration is +0.3% methane by volume and +1.9% methane by volume at 75% methane concentration.

Calibration Gas Utilized:	Methane	45%bv
	Carbon Dioxide	40%bv
	Oxygen	1.0%bv

Foxboro Organic Vapor Analyzer (OVA) Model 128

Range:	0 to 10,000 ppmv
Minimum detectable limit	1 ppmv
Sensitivity	0.1 ppmv methane
Response time	Less than 2 seconds
Flame out indicator	Audible alarm plus visual meter
Accuracy	\pm 5% of individual scale
Operating temperature	10 to 40 deg. Centigrade

Calibration Gas Utilized:	Methane (Lower Range)	100 ppmv
	Methane (Upper Range)	1,000 ppmv

RKI Eagle

	Sensor Range	Resolution
Methane (IR)	0 to 60%	500 ppmv
Carbon dioxide	0 to 60%	0.1%
Oxygen	0 to 60%	0.1%

Calibration Gas Utilized:	Methane	45%bv
	Carbon Dioxide	40%bv
	Oxygen	1.0%bv

MiniRAE 2000 Photoionization Detector (PID) (Non-Methane Organic Vapor Detector)

Range	0 to 10,000 ppmv
Minimum detectable limit	0.1 ppmv
Sensitivity	0.1 ppmv AVOCs
Response time	Less than 2 seconds
Accuracy	±0.3 ppmv
Operating temperature	10 to 40 deg. Centigrade

Calibration Gas Utilized: Isobutylene 100 ppmv

TSI Anemometer

Flow rates = ±0.3 cu ft/min.

Dear Mr. Piggin:

**HAZARDOUS MATERIALS UNDERGROUND STORAGE
CLOSURE CERTIFICATION**

FACILITY LOCATION: 3201 West Mission Road., Alhambra
CLOSURE APPLICATION NUMBER 186679

This office has reviewed the final closure report dated April 16,
1997 required as a part of the subject closure permit.
Based on the information submitted, we find that all closure
requirements have been completed. With the provision that the
information provided to this agency was accurate and representative
of existing conditions, it is our position that no further action
is required at this time.

Please be advised that this letter does not relieve you of any
liability under the California Health and Safety Code or Water Code
for past, present, or future operations at this site. Nor does it
relieve you of the responsibility to clean up existing, additional,
or previously unidentified conditions at the site which cause or
threaten to cause pollution or nuisance or otherwise pose a threat
to water quality or public health.

Additionally, be advised that changes in the present or proposed
use of the site may require further site characterization and
mitigation activity. It is the property owner's responsibility to
notify this agency of any changes in report content, future
contamination findings, or site usage.

If you have any questions regarding this matter, please contact
Mr. John Awujo of this office at (626) 458-3507, Monday
through Thursday, 7:00 a.m. to 5:30 p.m.

Very truly yours,

HARRY W. STONE

Subject: File Review Request/Tracking No. 2013092027

******* Please submit future file review requests to the LARWQCB via e-mail to RB4-publicrecords@waterboards.ca.gov.*******

Thank you for your request to review Regional Board records on

- 225 S. Lake Avenue, Pasadena, CA (no files)
- 1985 S. Del Mar Avenue, San Gabriel, CA
- 512 S. Garfield Avenue, CA

The Regional Board has determined that it has documents that are responsive to your request and disclosable.

To ensure that the records you wish to examine are available in the Regional Board's File Review Room and that you have sufficient desk space to review them, [please call Ms. Cindy Flores at 213.576.6633 to request files and schedule an appointment](#). The File Review Room is found on the second floor of the Regional Board's Office, located at 320 West Fourth Street in Los Angeles, California.

You may make a copy of any document provided by utilizing one of the self-serve photocopying machines in the File Review Room. For your convenience, the Regional Board provides coin-operated copiers for public use. Copies can be made at a cost of \$0.15 per page. Please be advised, however, that the Regional Board cannot make any change. Therefore, please bring plenty of coins and small bills if you intend on using the copy machines. Alternatively, you can bring a photocopying machine or arrange to have a bonded photocopying service come to the Regional Board and make the desired copies. In that the items being provided are official records, the Regional Board requests that appropriate care be taken when reviewing documents and making copies.

EDR Aerial Photo Decade Package

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

When delivered electronically by EDR, the aerial photo images included with this report are for ONE TIME USE ONLY. Further reproduction of these aerial photo images is prohibited without permission from EDR. For more information contact your EDR Account Executive.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

Disclaimer - Copyright and Trademark Notice

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, Inc. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. **NO WARRANTY EXPRESSED OR IMPLIED, IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, INC. SPECIFICALLY DISCLAIMS THE MAKING OF ANY SUCH WARRANTIES, INCLUDING WITHOUT LIMITATION, MERCHANTABILITY OR FITNESS FOR A PARTICULAR USE OR PURPOSE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, INC. BE LIABLE TO ANYONE, WHETHER ARISING OUT OF ERRORS OR OMISSIONS, NEGLIGENCE, ACCIDENT OR ANY OTHER CAUSE, FOR ANY LOSS OF DAMAGE, INCLUDING, WITHOUT LIMITATION, SPECIAL, INCIDENTAL, CONSEQUENTIAL, OR EXEMPLARY DAMAGES. ANY LIABILITY ON THE PART OF ENVIRONMENTAL DATA RESOURCES, INC. IS STRICTLY LIMITED TO A REFUND OF THE AMOUNT PAID FOR THIS REPORT.** Purchaser accepts this Report AS IS. Any analyses, estimates, ratings, environmental risk levels or risk codes provided in this Report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction or forecast of, any environmental risk for any property. Only a Phase I Environmental Site Assessment performed by an environmental professional can provide information regarding the environmental risk for any property. Additionally, the information provided in this Report is not to be construed as legal advice.

EDR Historical Topographic Map Report

EDR Historical Topographic Map Report

Environmental Data Resources, Inc.s (EDR) Historical Topographic Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topographic Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the early 1900s.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.
