

Phase I Initial Site Assessment

SR 710 North Study

Los Angeles County, California

Prepared for

Metro

Los Angeles County
Metropolitan Transportation Authority

November 2014

This page intentionally left blank.

Executive Summary

The California Department of Transportation (Caltrans), in cooperation with the Los Angeles County Metropolitan Transportation Authority (Metro), proposes transportation improvements to increase mobility and relieve congestion in the area between State Route (SR) 2 and Interstates 5, 10, 210, and 605 (I-5, I-10, I-210, and I-605, respectively) in east-northeast Los Angeles and the western San Gabriel Valley (Study Area) through implementation of the SR 710 North Study. This report presents the findings and conclusions of a Phase I Initial Site Assessment (ISA) conducted by CH2M HILL to provide Caltrans and Metro with an understanding of the environmental conditions adjacent to and within the proposed alternatives for the project. Although five alternatives were selected for the project, only four are applicable to this ISA as the remaining alternative is a No Build Alternative.

Findings and Recommendations

CH2M HILL performed a Phase I ISA for the Study Area in general conformance with the scope and limitations of ASTM International (ASTM) Practice E 1527-05 (ASTM, 2005). Any exceptions to, or deletions from, this practice are described in Section 7 of this report. The regulatory records that were reviewed for this ISA are provided in Appendix A.

The purpose of an ISA is to evaluate the presence of recognized environmental conditions (RECs) and/or activity and use limitations (AULs). The scope of this ISA was limited to review of public records and visual evidence of RECs, and did not include verifying RECs based on environmental testing. The findings of this ISA include summaries for each of the Subject Properties considered RECs as described below.

Note that some potential RECs may be considered *de minimus conditions* that “do not present a threat to public health and the environment and are not RECs.” CH2M HILL did not find any evidence of *de minimus conditions* at the Subject Properties. Based on the findings of the ISA, six sites (Subject Properties) were identified with affected media that could potentially impact the proposed study alternatives. The Subject Properties are listed in Table ES-1, followed by a discussion of the environmental impacts and recommendations for each site.

TABLE ES-1
Summary of ISA Findings for Each Study Alternative

Facility	Address	Media Affected ^a	Study Alternative(s) Affected
Subject Property 1 – Former Circle K Stores (Currently a Chase Bank)	1000 West Valley Boulevard, Alhambra	Soil	BRT
Subject Property 2 – Fashion Master Cleaners	1433 Huntington Drive, South Pasadena	Soil Vapor, Groundwater	BRT, LRT, TSM/TDM
Subject Property 3 – Railroad ROW	North of Valley Boulevard and SR 710 and immediately south of Mission Road, Alhambra	Soil	TSM/TDM
Subject Property 4 – Elite Cleaners	1310 Fair Oaks Avenue, South Pasadena	Soil Vapor, Groundwater	BRT, LRT
Subject Property 5 – Blanchard Landfill	4531 East Blanchard Street, Monterey Park	Soil Vapor	LRT
Subject Property 6 – Mercury Die/ Mission Corrugated	3201 West Mission Road, Alhambra	Soil Vapor	LRT, Freeway Tunnel, TSM/TDM

^a Media affected indicates an existing impact or a potential to impact.

BRT = Bus Rapid Transit

LRT = Light Rail Transit

ROW = Right-of-Way

TSM/TDM = Transportation System Management/Transportation Demand Management

Subject Property 1 – Former Circle K Stores (Currently a Chase Bank) is located at 1000 West Valley Boulevard, at the intersection of Valley Boulevard and Atlantic Boulevard, in the city of Alhambra. This site was previously a Mobil gas station (Mobil Station 18-MJA) with a Circle K store.

This site is immediately adjacent to the BRT Alternative footprint (within 10 to 15 feet) and is known to have soil impacted with volatile organic compounds (VOCs), mostly within 50 feet below ground surface (bgs). The California State Water Resources Control Board (SWRCB) GeoTracker Web site (database of environmental sites in California) has the case status listed as Open-Site Assessment (SWRCB, 2012). The site has elevated concentrations of VOCs, as encountered during 2012 underground storage tank (UST) removal; the extent of offsite soil impact is unknown. Reports reviewed from GeoTracker did not indicate groundwater contamination at this site. The depth to groundwater at wells within 1.5 to 2 miles of this site is mentioned to be 250 to 350 feet bgs. This depth to groundwater is consistent with what was observed in the Northwestern San Gabriel Basin. Construction activities for the BRT and TSM/TDM Alternatives are expected to be within 10 to 15 feet bgs, so groundwater impacts from this site, if any, will not be a potential issue. Therefore, a Phase II investigation for offsite soil impacts, prior to any construction activities, is recommended for Subject Property 1.

Subject Property 2 – Fashion Master Cleaners is located at 1433 Huntington Drive in the city of South Pasadena. This site is immediately adjacent to construction activities for Intersection Improvement I-10 and TSM/TDM and BRT Alternative footprints (within 10 to 15 feet) and the LRT Alternative. This site is identified in the Environmental Data Resources, Inc. (EDR) database report under various databases including Spills, Leaks, Investigations, and Cleanup (SLIC), Dry Cleaners, and GeoTracker. According to EDR and GeoTracker, the case status of this facility is listed as Open-Site Assessment (EDR, 2012; SWRCB, 2012). Review of historical reports indicates that the site has soil (vapor) and groundwater impacted with VOCs. Groundwater has been encountered at this site at approximately 63 feet bgs, which is consistent with what was observed in the Raymond Basin where the groundwater depth ranges from 50 to 60 feet bgs in the northwest area of the basin.

The LRT Alternative beneath the footprint of this site is designed to be an underground tunnel; hence, impacted groundwater, in addition to soil vapor, could be encountered during construction activities. In addition, reviewed reports indicate that based on local topography, the groundwater flow is expected to be to the east or southeast toward the center of the Main San Gabriel Basin. This groundwater flow direction is toward the LRT alignment. Because of these potential concerns, a Phase II investigation for offsite soil and groundwater impacts should be conducted at Subject Property 2 prior to any construction activities.

Subject Property 3 – Railroad ROW is located north of Valley Boulevard and I-710 and immediately south of Alhambra Avenue/Mission Road in the city of Alhambra. Portions of the LRT Alternative, TSM/TDM Alternative associated with Other Road Improvement T-1, and the Freeway Tunnel Alternative pass through a portion of the Railroad ROW. However, the LRT and Freeway Tunnel Alternatives beneath the footprint of this site are designed to be underground tunnels, and the shallowest ground impact during construction is expected to be at 60 feet bgs. Therefore, soil impacts, if any, from this property may not have an impact on the LRT and Freeway Tunnel Alternatives. The TSM/TDM Alternative is designed to be an underpass at this location, but the shallowest depth of ground disturbance during construction is anticipated to be 15 feet bgs. Although information is currently unavailable regarding environmental impacts, if any, at this location, railroads are typically anticipated to have environmental impacts from various chemical constituents present in railroad ties and wooden posts (wood-treating chemicals). A Phase II investigation is recommended for Subject Property 3 to determine whether any environmental impact is present in the soil because of the nature of the operation (railroad ROW).

Subject Property 4 – Elite Cleaners is located at 1310 Fair Oaks Avenue in the city of Alhambra. This site is immediately adjacent to the BRT Alternative footprint (within 10 to 15 feet) and the LRT Alternative. This site is identified in the EDR report under various databases including SLIC, Resource Conservation and Recovery Act – Small Quantity Generator (RCRA-SQG), Dry Cleaners, and GeoTracker. According to EDR and GeoTracker, the case status of this facility is listed as Open-Site Assessment (EDR, 2012; SWRCB, 2012).

For Elite Cleaners, a previous soil vapor investigation conducted at this site indicated the presence of VOCs at depths up to 75 feet bgs. Previous investigation also has confirmed VOC impacts to groundwater. According to the records of the Los Angeles County Hydraulic and Water Conservation Department, the depth to groundwater

encountered in the monitoring well nearest to this facility in 2006 was 178 feet bgs (Environ Phase Consulting [EPC], 2008). In addition, this site is a facility of interest for the United States Environmental Protection Agency (EPA) for its ongoing investigation of the San Gabriel Valley Area 3 Superfund Site. The Los Angeles Regional Water Quality Control Board (LARWQCB) project manager for this facility mentioned during a telephone interview that there may be impacted groundwater beneath the area (Charmley, 2013a). The LRT Alternative beneath this site footprint is designed to be an underground tunnel; hence, impacted groundwater, in addition to soil vapor, could be encountered during construction activities. Therefore, a Phase II investigation is recommended for Subject Property 4 to determine whether soil vapor and impacted groundwater have migrated beneath Fair Oaks Avenue, which is within the proposed study alternative alignment.

Subject Property 5 – Blanchard Landfill is located between Blanchard Avenue and McBride Avenue at 4531 East Blanchard Street in the city of Monterey Park, and was formerly the Blanchard Disposal Facility. Minor portions of the LRT Alternative are immediately adjacent to the former landfill boundary.

Operations at the former Blanchard Disposal Facility predate current solid waste management regulations by more than 30 years; as such, the facility did not have a liner, leachate collection and recovery system, waste acceptance and screening procedures, or record keeping substantiating waste acceptance and operational practices. Moreover, a methane gas investigation conducted in 2010 indicated methane concentrations exceeding the *California Code of Regulations* (CCR) Title 27 regulatory limit of 5 percent by volume in air in methane monitoring wells installed at the site (Kleinfelder, 2010). GeoTracker lists the facility cleanup status as Open-Verification Monitoring (SWRCB, 2012). Groundwater at this location is anticipated to be at 60 feet bgs (Kleinfelder, 2010). Because construction activities for the LRT Alternative at this area are designed to be aerial improvements and not a tunnel, the potential to encounter impacted groundwater, if any, during construction activities is minimal. However, structural reinforcements for the project in this area could reach greater depths; hence, groundwater impacts should be considered as a potential issue. Therefore, a Phase II investigation for soil, soil vapor, and groundwater, and a methane gas survey are recommended for Subject Property 5 to determine whether VOCs/methane vapors and/or impacted groundwater have migrated beneath the proposed study alternative footprint.

Subject Property 6 – Mercury Die/Mission Corrugated is located at 3201 West Mission Road in the city of Alhambra. Portions of the proposed LRT Alternative, Freeway Tunnel Alternative, and the TSM/TDM Alternative associated with Other Road Improvement T-1 run through the Mercury Die/Mission Corrugated facility. Mercury Die/Mission Corrugated has shallow soil vapor impacts beneath its footprint. Based on a conversation with the project manager for the EPA Area 3 Superfund Site remedial investigation/feasibility study (RI/FS), EPA is planning to conduct additional investigations at this facility to investigate whether deeper impacts to soil and groundwater are present (Waite, 2013). Based on hydrogeologic information for the San Gabriel Basin, depth to groundwater at this facility location could be in the range of 100 to 200 feet bgs. Therefore, a Phase II investigation is recommended for Subject Property 6 to determine whether soil vapor and/or groundwater impacts are present beneath the proposed LRT Alternative, Freeway Tunnel Alternative, or parts of the TSM/TDM Alternative alignments associated with Other Road Improvement T-1, or beneath Mission Road since a portion of proposed ROW for the TSM/TDM Alternative passes through Mission Road.

Additional Recommendations

Additional recommendations are summarized below.

- As is typical with older freeways such as those in the Study Area, the potential for encountering ADL on the sides of the freeway is high; ADL is associated with exhaust from former lead-gasoline combustion in motor vehicles. Therefore, prior to construction activities, an ADL investigation must be conducted along these areas. This investigation could be conducted during the recommended Phase II investigations. If potential ADL impacts are present within these areas, the Caltrans ADL guidance document should be followed to determine whether soil disturbed or excavated from these locations during construction can be reused or whether the soil needs to be environmentally managed and disposed as waste (Caltrans, 2007).

- Transformers located within areas where construction activities will take place should be removed or relocated. However, prior to removal, these transformers will need to be tested or investigated to determine whether polychlorinated biphenyls (PCBs) are present. If present, proper disposal measures should be adopted according to regulatory requirements.
- Yellow traffic markings, thermoplastics, and paint, if located on the SR 710 freeway within the project limits, may contain hazardous levels of lead chromate, which would be a potential danger to both the environment and human health. Typically, these materials are removed using sandblasting or air blasting equipment while adhering to applicable Occupational Safety and Health Administration (OSHA) standards, which regulate exposure to workers. These materials should be identified, characterized, and disposed of at a Class I or II disposal facility according to Caltrans and California regulatory requirements.
- Additionally, based on the potential for bridges within the Study Area to have been constructed prior to 1989 (when the federal ban on asbestos use was implemented), asbestos-containing materials (ACM) may be present in these structures. The presence of these materials would pose a potential hazardous waste risk if demolition of structures is required. An asbestos survey should be conducted in conformance with EPA National Emission Standards for Hazardous Air Pollutants (NESHAP) 40 *Code of Federal Regulations* (CFR) regulations, and South Coast Air Quality Management District (SCAQMD) Rule 1403 (EPA, 2012; SCAQMD, 1989). Furthermore, notification to SCAQMD prior to any structure renovation or demolition may be required as applicable under Rule 1403 (d)(1)(B). The potential for ACM should be identified and characterized; if present, ACM should be disposed of at a Class I or II disposal facility according to Caltrans and California regulatory requirements.
- In addition, prior to demolition of buildings, the presence of PCBs, asbestos, lead-based paints, mercury, and chlorofluorocarbon-containing equipment should be surveyed and sampled for proper disposal, if necessary. The asbestos surveys should be conducted in conformance with applicable NESHAP and SCAQMD regulations as mentioned above.
- Some areas of the study alternatives fall within the footprint of the EPA Area 3 Superfund Site. However, a review of EPA's final RI report prepared by CH2M HILL (2009) indicates that none of the alternatives are in the concentrated contaminant plume areas as depicted in the report. The alternatives are, however, adjacent to the plume areas. Therefore, during construction activities, impacted groundwater could be encountered, and dewatering measures may have to be implemented. If dewatering is needed, proper storage, handling, and disposal of extracted groundwater should be planned and adopted.
- If the tunneled alternatives are expected to pass through impacted soil or groundwater, the contractor will be required to set up a temporary stockpiling area at the construction portals so that excavated material can be sampled as it is excavated. A sampling and analysis plan would be required so that the excavated material is classified properly, correct handling methods are used, and the appropriate disposal facility is selected according to Caltrans and California regulatory requirements. Water, including construction water, groundwater, and wet weather flows, also should be sampled. If necessary, the water can be treated at the construction portal areas by the contractor prior to discharge following an appropriate approved discharge permit into the sewer system; typically, a contractor is required to have basic water treatment capabilities at the construction site. If the water cannot be treated to meet sewer discharge requirements or if the volume of water for disposal exceeds the capacity of the discharge permit, it may need to be transported to an offsite disposal location. Disposal of all materials would need to meet all federal, state, and local regulations where applicable.
- The anticipated linings of the tunnel boring machine (TBM) tunnels are expected to be water- and gas-tight, gasketed, precast concrete segmental liners, which will reduce or eliminate water or gas entry during operation. Additionally, the tunneling methods proposed for the bored tunnels are pressurized-face TBMs. These closed-face machines reduce or eliminate the potential for uncontrolled entry of groundwater during excavation due to its closed excavation face.

This Phase I Initial Site Assessment (ISA) has been prepared under the direction of the following environmental professionals.

"We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in Section 312.10 of 40 Code of Federal Regulations (CFR) 312," and

"We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Subject Property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR 312."

Introduction

This report presents the findings and conclusions of a Phase I Initial Site Assessment (ISA) conducted by CH2M HILL to provide the California Department of Transportation (Caltrans) and Los Angeles County Metropolitan Transportation Authority (Metro) with an understanding of the environmental conditions adjacent to and within four alternatives selected as part of State Route (SR) 710 North Study project (Figure 1-1). Although five alternatives were selected as part of this project, only four are applicable to this ISA as the remaining alternative is a No Build Alternative. The four alternatives applicable to this ISA are the Transportation System Management/ Transportation Demand Management (TSM/TDM) Alternative, the Bus Rapid Transit (BRT) Alternative, the Light Rail Transit (LRT) Alternative, and the Freeway Tunnel Alternative. The alternatives are described in more detail in Sections 1.1.1 through 1.1.5.

The following sections present the project background, purpose of this ISA, scope of work, significant assumptions, limitations and exceptions, and special terms and conditions.

1.1 Project Background

Caltrans, in cooperation with Metro, proposes transportation improvements to improve mobility and relieve congestion in the area between SR 2 and Interstates 5, 10, 210, and 605 (I-5, I-10, I-210, and I-605, respectively) in east-northeast Los Angeles and the western San Gabriel Valley (Study Area). To address this issue, the project team has proposed five alternatives that include the No Build Alternative, TSM/TDM Alternative, BRT Alternative, LRT Alternative, and Freeway Tunnel Alternative.

To determine the feasibility of each of these alternatives, an environmental study including the Phase I ISA, in addition to various other specific studies, is being conducted. Although the Study Area depicted in Figure 1-1 is approximately 100 square miles, this Phase I ISA is concentrated to address potential environmental hazardous concerns that could arise during project construction activities at areas that are within or adjacent to the four alternatives mentioned previously.

A summary of each of the alternatives is provided in the following subsections.

1.1.1 No Build Alternative

The No Build Alternative does not include any planned improvements to the SR 710 Corridor. Figure 1-2 illustrates the existing conditions of the No Build Alternative.

1.1.2 Transportation System Management/Transportation Demand Management Alternative

The TSM/TDM Alternative is designed to maximize the efficiency of the existing transportation system by improving capacity and reducing the effects of bottlenecks and chokepoints. Components of the TSM/TDM Alternative are shown in Figure 1-3.

1.1.2.1 Transportation System Management

TSM strategies include local street and intersection improvements, and Active Traffic Management.

1.1.2.2 Transportation Demand Management

TDM strategies focus on regional means of reducing the number of vehicle trips and vehicle miles traveled, as well as increasing vehicle occupancy. The TDM goals include reducing the demand for travel during peak periods, reducing the use of motor vehicles, shifting the use of motor vehicles to uncongested times of the day, encouraging rideshare and transit use, eliminating trips (for example, telecommuting), and improving transportation options. The TDM strategies include expanded bus service, bus service improvements, and bicycle improvements.

1.1.3 Bus Rapid Transit Alternative

The BRT Alternative would provide high-speed, high-frequency bus service through a combination of new, dedicated, and existing bus lanes, and mixed-flow traffic lanes to key destinations between East Los Angeles and Pasadena. The proposed route length is approximately 12 miles. Figure 1-4 illustrates the BRT Alternative.

1.1.4 Light Rail Transit Alternative

The LRT Alternative would include passenger rail operated along a dedicated guideway, similar to other Metro light rail lines. The LRT alignment is approximately 7.5 miles long, with 3 miles of aerial segments and 4.5 miles of bored tunnel segments. Figure 1-5 illustrates the LRT Alternative.

1.1.5 Freeway Tunnel Alternative

The alignment for the Freeway Tunnel Alternative starts at the existing southern stub of SR 710 in Alhambra north of I-10, and connects to the existing northern stub of SR 710 south of the I-210/SR 134 interchange in Pasadena. The Freeway Tunnel Alternative has two design variations: a dual-bore tunnel and a single-bore tunnel. Figure 1-6 illustrates the dual-bore and single-bore tunnel design variations for the Freeway Tunnel Alternative.

1.2 Purpose

The purpose of this ISA is to evaluate the presence of recognized environmental conditions (RECs) and/or activity and use limitations (AULs). RECs and AULs are defined as follows:

- **REC:** "...the presence or the likely presence of any hazardous substances or petroleum products on a property that indicate an existing release, a past release, or a threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, groundwater, or surface water of the property. The term includes hazardous substances or petroleum products even under conditions in compliance with laws. The term is not intended to include de minimus conditions that generally do not present a material risk of harm to public health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies."
- **AUL:** "...an explicit recognition by a federal, tribal, state, or local agency that residual levels of hazardous substances or petroleum hydrocarbons may be present on the property, and that unrestricted use of the property may not be acceptable."

1.3 Scope of Work

The scope of work for this ISA consisted of the following components, as specified in the ASTM International (ASTM) Practice E 1527-05, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process* (ASTM, 2005).

- Records review, including review of the following historical information sources:
 - Environmental Data Resources, Inc. (EDR) Database Report (EDR, 2012)
 - Aerial photographs (Appendix B1)
 - Historical topographic maps (Appendix B2)
 - Sanborn fire insurance maps (Appendix B3)
 - Oil and gas maps (California Department of Conservation, Division of Oil, Gas, and Geothermal Resources [DOGGR], 2013)
 - California State Water Resources Control Board (SWRCB) GeoTracker Web site (SWRCB, 2012)
 - California Department of Toxic Substances Control (DTSC) EnviroStor Web site (DTSC, 2013)
- Site reconnaissance
- Preparation of an ISA report

This ISA does not include the following ASTM Standard “nonscope considerations”:

- Asbestos-containing materials (ACM)
- Radon
- Lead-based paint
- Aerially deposited lead (ADL)
- Mercury
- Wood-treating chemicals
- Polychlorinated biphenyls (PCBs)
- Lead in drinking water
- Wetlands
- Regulatory compliance
- Cultural and historic resources
- Industrial hygiene
- Health and safety
- Ecological resources
- Endangered species
- Indoor air quality
- Biological agents
- Mold

However, recommendations for a future phase of this ISA (Phase II) and activities prior to construction (regarding ACM, PCBs, lead-based paint, ADL, mercury, lead chromate associated with yellow traffic markings, and wood-treating chemicals potentially present in railroad ties and wooden posts) are provided in Section 6, Findings and Conclusions.

1.4 Significant Assumptions

CH2M HILL prepared this ISA in general conformance with the scope and limitations of ASTM Practice E 1527-05 (ASTM, 2005). This is intended to be consistent with guidelines from the United States Environmental Protection Agency (EPA) as outlined in *Standard Practice for All Appropriate Inquiries and Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process (Code of Federal Regulations [CFR], 2013)*.

Based on ASTM Practice E 1527-05, this ISA has a limited viability of 180 days or up to 1 year provided certain ISA components are conducted or updated, such as the interviews with owners, operators, and occupants; searches for recorded environmental cleanup liens; reviews of federal, state, and local government records; and visual site inspections of the property and adjoining properties. Therefore, an updated or new ISA will likely be required to determine changes in site conditions prior to the time that design activities are scheduled to begin.

1.5 Limitations and Exceptions

Because of the sensitivity of the project, site visits were limited in nature. Facilities were observed from the perimeter and were not inspected inside; hence, the nature and extent of visible environmental impacts, if any exist within these sites, could not be documented. In addition, site owners were not interviewed during this ISA.

1.6 Special Terms and Conditions

Opinions given in this ISA report relative to the potential for hazardous materials or petroleum hydrocarbons to exist within the Study Area are based on information derived from the site reconnaissance and from other information sources described herein. Certain indicators of the presence of hazardous materials or petroleum hydrocarbons not readily observable during the reconnaissance may later become observable.

CH2M HILL reviewed public information sources believed to provide complete and accurate information, without independent verification. The findings and conclusions in this report are based solely on the limited scope of

an ISA, including information from a variety of sources that CH2M HILL believes to be reliable. Because the scope of an ISA is necessarily limited and based, in part, on third-party sources and significant assumptions, CH2M HILL does not warrant that the Study Area does not include hazardous material or petroleum hydrocarbon releases in areas not identified in this report.

This report has been prepared for the exclusive use of Caltrans and Metro for the specific purpose of evaluating the potential environmental conditions associated with the Study Area. No warranty, expressed or implied, is made. This report does not address whether requirements in addition to all appropriate inquiries have been met in order to qualify for the landowner liability protections, including the continuing obligation not to impede the integrity and effectiveness of AULs, the duty to take reasonable steps to prevent releases, or the duty to comply with legally required release-reporting obligations. Users also should be aware that there are likely to be other legal obligations with regard to hazardous substances or petroleum products that may have been discovered in the Study Area that are not addressed in this practice and that may pose risks of civil and/or criminal sanctions for noncompliance.

CH2M HILL is not responsible for any claims, damages, or liabilities associated with the interpretation by third parties of these findings or reuse of the analysis, associated site data, or recommendations by third parties without the express written authorization of CH2M HILL. Limitations of this assessment may not be altered or waived without the written consent of CH2M HILL.

It was outside CH2M HILL's authorized scope of work to review: (1) lead in drinking water, (2) issues associated with worker health and safety, (3) issues pertaining to compliance with environmental regulations, or (4) liabilities associated with the offsite management of solid or hazardous wastes. The exclusion of the previously listed items is not a representation of the relevance of these nonscope considerations to the Study Area.

This is a technical report and not a legal representation or an interpretation of environmental laws; rules; regulations; or policies of local, state, or federal governmental agencies.

Any opinions or recommendations presented herein apply to site conditions existing when services were performed. CH2M HILL is unable to report on or accurately predict events that may change the site conditions after the described services are performed, whether occurring naturally or caused by external forces.

No investigation is thorough enough to exclude the possibility of the presence of hazardous substances at a given site. If hazardous substances or hazardous conditions have not been identified during the assessment, such a finding should not be construed, therefore, as a guarantee of the absence of such substances or conditions, but rather as the result of the services performed within the scope and limitations of the work performed.

Study Area Description

This section provides information on the general environmental setting of the Study Area.

2.1 Location and Legal Description

The Study Area for the SR 710 North Study is approximately 100 square miles and is generally bounded by I-210 on the north, I-605 on the east, I-10 on the south, and I-5 and SR 2 on the west (Figure 1-1). However for this ISA, the assessment was focused only on areas within or adjacent to the four alternatives (TSM/TDM, BRT, LRT, and Freeway Tunnel) because these areas could be disturbed/excavated during future project construction activities.

2.2 Site and Vicinity General Characteristics

Because the extent of the study alternatives for this ISA spans many cities, specific details on the site and vicinity cannot be compiled. However, details specific to sites that are of potential concern, as identified during this ISA, are provided in Section 4 to the extent necessary and feasible.

2.3 Current Use of the Study Area

The study alternatives cover several cities within Los Angeles County; hence, general current use of the area can be described as a mix of residential, commercial, and industrial. Additional information regarding facilities that are of potential concern, as identified during this ISA, and their uses for each study alternative are provided in Section 4.

2.4 Description of Structures, Roads, and Other Site Improvements

Because the extent of the study alternatives covers many cities, specific details regarding structures, roads, and other site improvements were not compiled. However, details are provided in Section 4 to the extent necessary and feasible.

2.5 Current Use of Adjoining Properties

Because the extent of the study alternatives covers many cities, specific details regarding adjoining properties were not compiled. However, details of adjoining properties for the sites identified in the final environmental screening are provided in Section 4.

2.6 Physical Setting Sources

2.6.1 Topography

The Study Area primarily consists of the western San Gabriel Valley, the southernmost San Rafael Hills, the Repetto Hills, and the northern portion of the Central Basin between the Repetto Hills and the Merced Hills (Figure 2-1). The San Gabriel Valley includes two groundwater basins: the Raymond Basin located in the northwest portion of the San Gabriel Valley, and the San Gabriel Basin encompassing the rest of the San Gabriel Valley. These areas are within the transition zone between the northwest-southeast-trending Peninsular Ranges physiographic/geologic province on the south, and the east-west-trending Transverse Ranges province to the north.

The western part of the Study Area consists of the Repetto Hills, a group of small hills and valleys between the Santa Monica Mountains (Transverse Ranges) and the Puente Hills (Peninsular Ranges) to the southeast. The Repetto Hills include Mount Washington, Monterey Park Hills, and the Montebello Hills, as well as several unnamed hills along the western edge of the San Gabriel Valley. Within the Study Area, elevations within the Repetto Hills range from approximately 870 feet between Monterey Road and SR 110, to 200 feet at the western toe of the hills near Rosemead Boulevard. The San Rafael Hills are located between the Repetto Hills and the Verdugo Mountains, and border the Study Area on the northwest. Elevations in the San Rafael Hills portion of the

Study Area range from approximately 1,000 feet near SR 134 and Arroyo Seco to 600 feet in the vicinity of SR 110 and Arroyo Seco.

The eastern half of the Study Area is within the San Gabriel Valley, which is bordered by the Puente Hills and San Jose Hills to the south and east, by the San Gabriel Mountains to the north, and by the Repetto/Verdugo/San Rafael Hills to the west. The northern margin of the valley is characterized by a series of ancient alluvial fans emanating from the San Gabriel Mountains. The valley floor slopes gently to the south from elevations of 700 to 1,000 feet along the northern margin to approximately 300 to 400 feet in the south.

Major drainages in the Study Area are the Los Angeles River in the western portion, and the Rio Hondo and San Gabriel Rivers in the San Gabriel Valley portion to the east. Smaller intermittent drainages (from west to east) are Arroyo Seco in the Repetto and San Rafael Hills, and the Alhambra/San Pasqual Wash, Rubio Wash, Eaton Wash, Arcadia Wash, and Santa Anita Wash in the western and central parts of the San Gabriel Valley. There are numerous southwest-northeast-trending dry drainages in the Repetto Hills that are remnants (that is, antecedent drainages) of a drainage system that was active during the wetter periods of the Pleistocene geologic epoch (more than 20,000 years ago).

2.6.2 Hydrogeology

The five alternatives being evaluated in the SR 710 North Study are located mostly across three alluvial groundwater basins of the South Coast Hydrologic Region; from north to south, they are the Raymond Basin, the San Gabriel Basin, and the Central Basin. The TSM/TDM improvements also extend into the San Fernando Groundwater Basin. These basins are separated by bedrock upland areas and/or faults. The bedrock upland areas within the Study Area are generally considered non-water-bearing. However, perched groundwater may be present locally within faulted and/or fractured zones. The following provides general descriptions of the hydrogeologic conditions in each of the groundwater basins.

2.6.2.1 Raymond Basin

The northern portion of the Study Area lies within the Raymond Basin (Figure 2-1). The Raymond Basin is located in the northwest portion of the San Gabriel Valley and is sometimes considered part of the San Gabriel Valley Groundwater Basin. Groundwater in the Raymond Basin occurs in the Quaternary alluvial aquifer consisting of gravel, sand, and silt deposits derived from surface streams originating in the San Gabriel Mountains. Younger alluvium typically follows active stream channels with an estimated maximum thickness of 150 feet. Older alluvium exists throughout the basin, thickens southward and away from the mountain front, and reaches an estimated maximum thickness of 1,140 feet near Pasadena. The alluvial sediments thin further south with an estimated thickness of about 200 feet near the Raymond fault. The east-northeast-trending Raymond fault separates the Raymond Basin from the San Gabriel Basin, and restricts subsurface flow between the two basins. The fault acts as a complete barrier at its western end and becomes less restrictive to groundwater flow eastward. East of the Santa Anita Wash, the Raymond fault ceases to be an effective groundwater flow barrier, and water exchange between the two groundwater basins becomes essentially unrestricted (Figure 2-1) (California Department of Water Resources [CDWR], 2003).

The Raymond Groundwater Basin is recharged primarily by direct percolation of precipitation and percolation of surface water flowing in the ephemeral streams. The major surface streams in the Raymond Basin include the Arroyo Seco near the western border, Eaton Wash in the central portion, and Santa Anita Wash near the southeast border of the basin, all of which originate from the San Gabriel Mountains to the north. The average precipitation in the Raymond Basin is estimated to be about 21 inches annually (CDWR, 2003).

Groundwater is discharged from the Raymond Basin primarily through extraction for water supply. The Raymond Basin Management Board (RBMB) reported a total groundwater extraction rate of 40,900 acre-feet for the year 1998 (CDWR, 2003). In addition, minor discharge into the adjacent San Gabriel Basin occurs along the less restrictive sections of the Raymond fault, with an estimated discharge rate of about 5,584 acre-feet per year (CDWR, 1966). Groundwater in the Raymond Basin generally flows to the southeast toward the Raymond fault (RBMB, 2013).

Both temporal and spatial variations are reported for the water table elevation in the Raymond Basin. Historical water level monitoring data suggested depth to water in the range of about 50 to 60 feet in the northwest, 140 feet in the northeast, 80 feet in the central, and 30 feet in the southern portions of the basin (CDWR, 2003).

2.6.2.2 San Gabriel Basin

The middle portion of the Study Area is in the northwestern portion the San Gabriel Basin in the vicinity of the city of Alhambra.

San Gabriel Basin

The San Gabriel Basin is primarily a piedmont plain that covers approximately 167 square miles (Figures 2-1 and 2-2) (CDWR, 1966). The principal water-bearing formations of the San Gabriel Basin are undifferentiated alluvial sediments, which are derived mostly from erosion of the crystalline rocks of the San Gabriel Mountains and are typically relatively coarse grained. The maximum thickness of the alluvial deposits is more than 4,000 feet near the center of the basin. Along the edges of the San Gabriel Basin, the thickness of the alluvial deposits is only a few hundred feet. The water-bearing sediments are surrounded by, and underlain by, relatively impermeable rocks. The aquifer system in the San Gabriel Basin is characterized by thick deposits of interfingering and laterally discontinuous lenses of unconsolidated sediments (CH2M HILL, 1997).

The primary surface water streams in the San Gabriel Basin are the San Gabriel and Rio Hondo Rivers and their tributaries (Figure 2-1). Most of the surface streams in the San Gabriel Basin are lined with concrete for flood control, except the San Gabriel River, an approximately 3-mile reach of the Rio Hondo River, and an approximately 1.3-mile reach of San Jose Creek. Both the San Gabriel and Rio Hondo Rivers originate in the San Gabriel Mountains and exit the San Gabriel Basin at Whittier Narrows. Stream channel recharge of groundwater only occurs along the unlined stretches through the bottom of the stream channels. Other surface features include several lakes in the vicinity of Whittier Narrows and some spreading facilities within the main San Gabriel Basin, predominantly in the northern part of the Basin near Azusa (Figure 2-1). These surface water bodies and spreading basins also recharge the groundwater aquifer in the San Gabriel Basin (CH2M HILL, 2004). Subsurface flow from the San Gabriel Mountains into the San Gabriel Basin occurs across the Sierra Madre fault in the north, in addition to the Raymond fault in the northwest and the Cucamonga fault in the northeast. Infiltration of precipitation is the other major recharge component for the groundwater system in the San Gabriel Basin. Annual precipitation in the San Gabriel Basin averages approximately 19 inches.

Except where large pumping centers create depressions in the water table, groundwater generally flows from the perimeters of the basin toward Whittier Narrows in the southwest, where it exits the San Gabriel Basin and recharges the aquifer system in the Central Basin.

Northwestern San Gabriel Basin

The Study Area within the San Gabriel Basin overlaps the northwest portion of the basin where the city of Alhambra is located. This area is also referred to as the Area 3 Operable Unit of the San Gabriel Valley Superfund Site designated by EPA (CH2M HILL, 2009), and more recently, simply as Area 3 Superfund Site or Area 3. A large cone of depression has been developed in this area due to excessive pumping that occurred during the past few decades. A recent study in this area has identified a structural bedrock discontinuity that appears to restrict groundwater flow between the western and eastern portions of Area 3. Water levels measured in monitoring wells installed on either side of the bedrock discontinuity differ by approximately 100 feet (CH2M HILL, 2009).

Distinct characteristics appear to exist between the properties of the water-bearing units on either side of the structural bedrock discontinuity. The alluvium in the western portion of Area 3 primarily consists of relatively fine-grained sediments with less prevalent layers of coarse-grained sediments, compared to layers in the eastern portion of Area 3. The alluvium measures up to approximately 300 feet in thickness but is absent in areas where sedimentary bedrock outcrops (extends above the ground surface). Based on the water level measurements collected between 2003 and 2007, the depth to the water table varies greatly throughout the western portion of Area 3 and ranges from about 65 feet below ground surface (bgs) near the sedimentary bedrock outcrops to

about 200 feet bgs in the alluvium near the structural bedrock discontinuity, corresponding to a water level elevation range of approximately 270 to 430 feet above mean sea level (amsl) (CH2M HILL, 2009).

A thick sequence of coarse-grained to fine-grained sediments underlies the eastern portion of Area 3 and forms a heterogeneous alluvial aquifer. In general, this alluvium is coarser-grained than the alluvium that occurs west of the bedrock discontinuity. Three distinct groundwater zones occur in the eastern alluvial aquifer in Area 3, designated as the shallow, intermediate, and deep groundwater zones. Each groundwater zone generally dips to the southeast. The shallow groundwater zone occurs as the first-encountered groundwater in the easternmost extent of Area 3. In all other portions of eastern Area 3, the intermediate groundwater zone is the first-encountered groundwater. The deep groundwater zone occurs beneath the intermediate groundwater zone.

According to the groundwater levels measured east of the bedrock discontinuity, the depth to water ranged from less than 200 feet bgs to more than 300 feet bgs between 2003 and 2007. Groundwater elevations in 2007 for the shallow, intermediate, and deep groundwater zones range from approximately 215 to 213 feet amsl, 196 to 87 feet amsl, and 154 to 87 feet amsl, respectively (CH2M HILL, 2009).

2.6.2.3 Central Basin

The western portion of the TSM/TDM improvements extends into the Central Basin. The Central Basin is bounded on the north, northeast, and east by a series of low-lying hills including the Elysian, Repetto, Merced, and Puente Hills, as shown in Figure 2-1, which only depicts the northern portion of the Central Basin relevant to the Study Area. The southeast portion of the Central Basin borders the Orange County Groundwater Basin. The southwest boundary is formed by the Newport Inglewood Uplift fault system. The Los Angeles and San Gabriel Rivers drain inland basins and traverse the surface of the Central Basin on their way to the Pacific Ocean (CDWR, 2003).

The Central Basin is divided into forebay and pressure areas. Both the Los Angeles and Montebello forebay areas are located in the northern part of the Central Basin. The Los Angeles forebay extends southward from the Los Angeles Narrows, where the Los Angeles River enters the Central Basin from the San Fernando Groundwater Basin. The Montebello forebay extends southward from the Whittier Narrows, where the San Gabriel River encounters the Central Basin. Both forebays have unconfined groundwater conditions and relatively interconnected aquifers that extend up to 1,600 feet deep to provide recharge to the aquifer system of this basin (CDWR, 1961). Away from the forebay areas, the Central Basin aquifer is predominantly confined (pressure area) and consists of many alternating layers of permeable sands, gravel materials, and semipermeable to impermeable sandy clay to clay materials extending to about 2,200 feet below the surface (CDWR, 1961).

Groundwater enters the Central Basin through surface and subsurface flow and by direct percolation of precipitation, stream flow, and applied water, and replenishes the aquifers predominantly in the forebay areas, where permeable sediments are exposed at ground surface (CDWR, 1961). The Montebello forebay is an important recharge area for the Central Basin. Natural replenishment of the basin's groundwater supply is largely from surface inflow through Whittier Narrows (and some underflow) from the San Gabriel Valley. Imported and recycled water is artificially recharged into the aquifer in the Montebello forebay at the Rio Hondo and San Gabriel Rivers spreading grounds. Percolation into the Los Angeles forebay area is restricted due to paving and development of the surface of the forebay. Average annual precipitation throughout the basin ranges from 11 to 13 inches, with an average of around 12 inches (CDWR, 2003).

Before significant groundwater development began, groundwater moved from the forebay areas (and from the Santa Monica Mountains to the northwest) south and west toward the Santa Monica and San Pedro Bays in the Pacific Ocean. Water moved laterally outward and vertically downward to underlying confined aquifers. The water eventually discharged either in wetlands or offshore. The Newport Inglewood Uplift is a major structural feature that acts as a partial barrier to groundwater flow between the Central and West Coast Basins (United States Geological Survey, 2003).

Water levels varied over a range of about 25 feet between 1961 and 1977, and have varied through a range of about 5 to 10 feet since 1996 (CDWR, 2003).

2.6.2.4 San Fernando Basin

The southern portion of the Study Area extends into the northern portion of the San Fernando Basin in the vicinity of Los Angeles and Montebello forebay areas (Figure 2-1).

The San Fernando Valley is bounded on the north and northwest by the Santa Susana Mountains, on the north and northeast by the San Gabriel Mountains, on the east by the San Rafael Hills, on the south by the Santa Monica Mountains and Chalk Hills, and on the west by the Simi Hills (CDWR, 2003).

The water-bearing sediments consist of the lower Pleistocene Saugus Formation and Pleistocene and Holocene (Recent, deposited in the last 11,000 years) alluvium. The maximum thickness of Holocene alluvium ranges from about 100 feet in the north, to 400 feet in the east, to about 800 feet in the west, and to a maximum of about 900 feet near Burbank. In the eastern portion of the basin where the SR 710 North Study Area is located, the water table occurs in the alluvial unit, and groundwater is mostly unconfined (CDWR, 2003).

Sources of groundwater recharge in the basin include precipitation falling on pervious areas, infiltration of surface runoff containing natural stream flow from the surrounding mountains, and recharge from spreading basins containing imported water, surface runoff, reclaimed wastewater, and industrial discharges. Precipitation in the San Fernando Valley ranges from 15 to 23 inches per year and averages about 17 inches (CDWR, 2003).

The San Fernando Valley is drained by the Los Angeles River and its tributaries. Groundwater flows generally from the edges of the basin toward the central portion of the basin, then into the Central Basin through the Los Angeles River Narrows. Water levels in this basin have been fairly stable over about the past 20 years (CDWR, 2003).

Several structures restrict the flow of groundwater through the San Fernando Basin. In the vicinity of the Study Area, differences in rock type along the Raymond fault create a barrier to groundwater flow from the Eagle Rock area toward the Los Angeles River Narrows and may cause rising water conditions in that area (CDWR, 2003).

This page intentionally left blank.

User-Provided Information

3.1 Title Records

Because of the nature of this ISA, which involves assessing environmental impacts for a large area, title records were not obtained for the Study Area. If, in the future, Caltrans intends to acquire properties to support the project, then such information will be requested.

3.2 Environmental Liens or Activity and Use Limitations

Because of the nature of this ISA, which involves assessing environmental impacts for a large area, environmental liens or AULs were not obtained for the Study Area. If, in the future, Caltrans intends to acquire properties to support the project, then such information will be requested.

3.3 Specialized Knowledge

No specialized knowledge pertaining to the Study Area was identified.

3.4 Commonly Known or Reasonably Ascertainable Information

No commonly known or reasonably ascertainable information pertaining to the Study Area was identified.

3.5 Valuation Reduction for Environmental Issues

For this Phase I ISA, valuation reduction for environmental issues is not applicable at this stage.

3.6 Owner, Property Manager, and Occupant Information

The Study Area consists of a large area covering several cities; hence, no owner, property manager, or occupant information is available. However, any of this specific information, if available, is provided in the individual facility assessment in Section 4.

3.7 Reason for Performing ISA

The ISA was performed to evaluate the Study Area, specifically areas within or adjacent to the four alternatives, for the presence of RECs and/or AULs and to recommend additional studies (if needed) prior to the start of the construction phase of the proposed project.

This page intentionally left blank.

SECTION 4

Records Review

The purpose of the records review was to identify RECs and historical RECs associated with the sites within or adjacent to the proposed alternatives. Records were reviewed to obtain existing environmental information and the previous uses of the sites within the Study Area. This section provides a summary of the records review for the four build alternatives: TSM/TDM Alternative, BRT Alternative, LRT Alternative, and Freeway Tunnel Alternative.

4.1 Standard Environmental Record Sources

CH2M HILL utilized an electronic environmental database prepared by EDR to efficiently perform a records search of reasonably ascertainable environmental databases, including the standard state and federal sources, in accordance with ASTM standard practice (EDR, 2012 and 2013a through 2013j). The EDR database summary was generated on December 19, 2012; September 9, 2013; and October 10, 2013 (a copy of these reports is provided in Appendix A1). A standard records search was conducted for the Subject Properties using either a 0.5-mile buffer on either side of the corridor search, or a maximum 1-mile search area as measured from the approximate vicinity of the sites.

For the previously referenced ASTM search parameters, the database report identified more than 1,000 known sites with environmental impacts, as listed in various databases within the search distance. These identified sites were further screened based on their proximity to the proposed study alternatives and whether they had impacts to soil or groundwater. Sites that had no impacts to soil or groundwater and that were not in close proximity to the proposed build alternatives were not given further consideration. Based on this initial screening, 26 remaining sites (listed in Table 4-1) were researched in further detail using the following methods:

- Researching regulatory databases
- Perusing current status and extent of environmental impact (based on reports available from GeoTracker [SWRCB, 2012])
- Conducting file reviews at various regulatory agencies including the Los Angeles Regional Water Quality Control Board (LARWQCB), Los Angeles County Fire Department, and Los Angeles County Department of Public Works (LADPW)
- Corresponding (telephone or e-mail) with various regulatory personnel
- Performing site reconnaissance from outside the site boundaries

TABLE 4-1
Sites with Environmental Impact as Identified from Initial Screening

Site Name	Address
Pasadena Corporate Center	225 South Lake Avenue, Pasadena
Pep Boys Store # 652	256 South Atlantic Boulevard, Los Angeles
R&R Management Co	525 North Atlantic Boulevard, Alhambra
Star Cleaners	526 North Atlantic Boulevard, Alhambra
Mobil Oil Corp	603 North Atlantic Boulevard, Alhambra
BC Carburetor Auto Parts	629 South Atlantic Boulevard, Los Angeles
Former Circle K Stores (or Former Mobil 18-MJA) (Currently a Chase Bank)	1000 West Valley Boulevard, Alhambra
Pacific Telephone and Graph	1121 West Mission Road, Alhambra
Blanchard Landfill	4531 East Blanchard Street, Monterey Park
Railroad Right-Of-Way (ROW)	North of Valley Boulevard and south of Mission Road

TABLE 4-1
Sites with Environmental Impact as Identified from Initial Screening

Site Name	Address
Elite Cleaners	1310 Fair Oaks Avenue, Alhambra
Quick and Clean Dry Cleaning	1331 Huntington Drive, South Pasadena
Fashion Master Cleaners	1433 Huntington Drive, South Pasadena
Huntington Cleaners	1935 Huntington Drive, South Pasadena
76 Station # 6177	1935 South Delmar Avenue, San Gabriel
B&B Auto Electric	1985 South Delmar Avenue, San Gabriel
Chevron Station # 93162	2301 South Atlantic Boulevard, Monterey Park
Andy's Garage	3200 West Valley Boulevard, Alhambra
Arco # 6109	3201 West Valley Boulevard, Alhambra
Goodyear Tire and Rubber	3675 North Rosemead Boulevard, Rosemead
Gulf Oil	4315 North Rosemead Boulevard, Rosemead
Arco # 1880	4380 Eagle Rock Boulevard, Los Angeles
Mercury Die/Mission Corrugated	3201 West Mission Road, Alhambra
Kyle Service Station	2601 West Main Street, Alhambra
Park Cleaners	512 South Garfield Avenue, Alhambra
Scholl Canyon Landfill	7721 North Figueroa Street, Los Angeles

Based on this detailed extensive review, many of the sites were either included or eliminated in the final list based on the following criteria:

- Extent and intensity of environmental impact – localized onsite or offsite impact affecting the proposed study alternatives
- Media of impact – soil, soil vapor, and/or groundwater
- Existing environmental regulatory case status – open, closed, or awaiting closure

Based on these criteria, sites were eliminated from the final list if: (1) the site received closure approval from the lead regulatory agency, (2) the site was determined to have impacts to the soil only and was not in close proximity to the build alternatives, or (3) the site was determined to have groundwater impacts, but the location was cross gradient or downgradient with respect to the local groundwater flow direction relative to the build alternatives. Applying this final extensive detailed screening resulted in a final list of six sites that may have an impact on the proposed study alternatives based on the available information. However, additional information that could be obtained through a Phase II site investigation or site interviews could eliminate or further clarify the impact of some of these six sites. Figure 4-1 shows the location of these six sites with respect to the proposed study alternatives.

The following six sites (Subject Properties) are included in the final screening list:

1. Former Circle K Stores (currently a Chase Bank), 1000 West Valley Boulevard, Alhambra (Subject Property 1)
2. Fashion Master Cleaners, 1433 Huntington Drive, South Pasadena (Subject Property 2)
3. Railroad ROW, north of Valley Boulevard and SR 710, and immediately south of Mission Road, Alhambra (Subject Property 3)
4. Elite Cleaners, 1310 Fair Oaks Avenue, Alhambra (Subject Property 4)

5. Blanchard Landfill, 4531 East Blanchard Street, Monterey Park (Subject Property 5)
6. Mercury Die/Mission Corrugated (Subject Property 6)

Details of the sites (Subject Properties) are provided below.

Subject Property 1 – Former Circle K Stores (Currently a Chase Bank) is located at 1000 West Valley Boulevard at the southeast intersection of Valley and Atlantic Boulevard in the city of Alhambra (Figure 4-2). This site is a former Mobil gas station with a Circle K Store and is identified as either Mobil Station 18-MJA or Circle K stores in regulatory documents. Based on the records review, Mobil Station/Circle K started operation between 1959 and 1981, although the exact year could not be determined. The facility continued operation until the end of 2012, during which the site was graded for redevelopment. In early 2013, the site was redeveloped to a Chase Bank location and is currently used to conduct general banking operations.

This site is identified in the EDR database report and GeoTracker under the Leaking Underground Storage Tank (LUST) database. According to EDR, the case status of this facility is listed as completed as of February 25, 2010 (EDR, 2012). In January 2010, a low-risk closure form for the site was reviewed and approved by LARWQCB. However, based on a file reviewed from GeoTracker, LARWQCB later sent a letter, dated December 21, 2012, to Circle K indicating that LARWQCB had concerns about soil and groundwater impacts at this location, and further information and investigation should be provided to LARWQCB (LARWQCB, 2012a). GeoTracker has the case status listed as Open-Site Assessment. In addition, a low-threat closure policy (LTCP) form provided in GeoTracker indicated that the site has been classified as a soil-only issue (SWRCB, 2012).

A report prepared by Blaes Environmental Management, Inc. (Blaes) for Circle K dated February 26, 2012, indicated that case closure was granted on February 25, 2010. However, the report did not indicate any evidence of groundwater impact at the site, and indicates soil impact mostly within 50 feet bgs, although the extent of impact (offsite or onsite) cannot be determined from the existing site data (Blaes, 2012). The report also stated that underground storage tanks (USTs) were removed from this location in February 2012, and soil sampling conducted beneath the USTs indicated elevated concentrations of volatile hydrocarbon fuel, and benzene, toluene, ethylbenzene, and total xylenes (BTEX) (Blaes, 2012). This indicates that the impact identified in 2012 could have been from a later-date fuel release after the closure was granted in 2010. The Blaes report also indicated that during a previous UST removal, soil containing hydrocarbons was removed and excavated from beneath the USTs.

Subject Property 2 – Fashion Master Cleaners is located at 1433 Huntington Drive in the city of South Pasadena (Figure 4-3) and is currently used as a dry cleaning facility. The operational start date for this facility could not be determined from the records review. This site is identified in the EDR database report under various databases including Spills, Leaks, Investigations, and Cleanup (SLIC), Dry Cleaners, and GeoTracker. According to EDR and GeoTracker, the case status of this facility is listed as Open-Site Assessment (EDR, 2012; SWRCB, 2012). A letter prepared by LARWQCB dated February 2, 2012, indicates that volatile organic compounds (VOCs) in soil vapor, specifically tetrachloroethene (PCE), are present at this facility and have migrated toward the Big Lots facility located to the immediate west of Fashion Master Cleaners (LARWQCB, 2012b). This was also confirmed by the LARWQCB project manager for this facility during a telephone interview with CH2M HILL on October 7, 2013 (Charmley, 2013b). Fashion Master Cleaners installed one groundwater well in June 2008. PCE was detected in groundwater at a concentration of 490 micrograms per liter ($\mu\text{g/L}$). The groundwater well has not been sampled since June 2008, as the facility focused on installing a soil vapor extraction (SVE) system to address the contamination in the vadose zone. In a work plan dated October 2011, Athanor Environmental Services, Inc. (Athanor), on behalf of Fashion Master Cleaners, proposed conducting a second subsurface soil vapor survey in the Big Lots parking lot and sidewalk (Athanor, 2011).

Four new groundwater monitoring wells were installed in 2010. Because additional sampling in 2011 showed migration toward Big Lots, Fashion Master Cleaners proposed installation of eight permanent SVE probes in the Big Lots parking lot. The work plan for the additional vapor probes was approved by LARWQCB in February 2012 (LARWQCB, 2012b). However, it is unclear if the work plan has been implemented as there are no current data present on the GeoTracker Web site.

Subject Property 3 – Railroad ROW is located north of Valley Boulevard and the I-710 freeway and immediately south of Alhambra Avenue/Mission Road, in Alhambra (Figure 4-4). Although current information is unavailable regarding environmental impacts at this location, railroads are typically anticipated to have environmental impacts from various chemical constituents present in railroad ties and wooden posts (wood-treating chemicals).

Subject Property 4 – Elite Cleaners is located at 1310 Fair Oaks Avenue in the city of Alhambra (Figure 4-5) and is currently a dry cleaning facility. Based on the records review, this site probably started operations around 1956; however, the exact date could not be determined. This information could be obtained during a future site interview. This site is identified in the EDR database report under various databases including SLIC, Resource Conservation and Recovery Act – Small Quantity Generator (RCRA-SQG), Dry Cleaners, and GeoTracker. According to EDR and GeoTracker, the case status of this facility is listed as Open-Site Assessment (EDR, 2012; SWRCB, 2012). Based on a chemical questionnaire form reviewed during this screening, the facility stored PCE in a barrel (approximately 20 gallons). In addition, a deep soil vapor investigation, groundwater monitoring well construction work plan, and soil vapor investigation reports prepared by this facility indicated the presence of VOCs at depths up to 75 feet bgs (Environ Phase Consulting [EPC], 2008). According to the records of the Los Angeles County Hydraulic and Water Conservation Department, identified in the EPC report, the depth to groundwater encountered in the nearest monitoring well to this facility in 2006 was at 178 feet bgs. During a telephone interview with CH2M HILL on October 3, 2013, the LARWQCB project manager for this facility indicated that this facility may have impacted groundwater beneath the area (Charmley, 2013a).

Subject Property 5 – Blanchard Landfill is located between Blanchard Avenue and McBride Avenue at 4531 East Blanchard Street in the city of Monterey Park (Figure 4-6). The landfill is bordered on the north by the former Cogen Disposal Facility and the Sybil Brand Institute, on the west by Biscailuz Center, and on the east by I-710. The site was once called the Blanchard Street Dump. The property, containing the former Blanchard Disposal Facility, is currently owned by the County of Los Angeles. Currently residing on the Blanchard Landfill are County buildings, parking lots, an oval jogging track, helipad, and an auto storage yard (Kleinfelder, 2010).

The landfill opened in approximately 1935 and operated as an open burning dump until approximately 1946. Operations at the former Blanchard Disposal Facility predate current solid waste management regulations by more than 30 years; as such, the facility did not have a liner, leachate collection and recovery system, waste acceptance and screening procedures, or record keeping substantiating waste acceptance and operational practices. During the period from 1946 to 1958, the facility operated as a Class II landfill, under the ownership of Ben K. Kazarian and other family members, and under a permit issued by the Los Angeles County Department of Engineers. The facility was allowed to accept liquid, solid, chemical, and industrial wastes, with the exception of hazardous wastes such as acid sludge, brines, and tank bottoms. Historical documents indicate that the facility accepted several forms of liquid waste, which were mixed with soil prior to disposal. In 1957, the State of California condemned a small portion of the southeastern corner of the disposal facility for construction of the Long Beach Freeway (I-710). The site closed and ceased disposal activities in 1958. The structures observed today on the former disposal facility were constructed in the early 1970s. The onsite facilities were primarily used as a custody facility for male prison inmates (known as the Biscailuz Recovery Center). The site was then developed to consist of five inmate accommodation blocks, administrative offices building, visitors center, an inmate outdoor recreation area, a weapons training central pistol range, a gymnasium, a portable classroom building, two aluminum portable buildings, a carpet shop, a car wash, a carpenter shop, a kitchen/dining room building, a sheriff radio service building, and storage buildings. The site also had 180 parking spaces contained within three large parking lots located along the southern perimeter along Sheriff Road. The men's custody facility ceased operations in 2001. The site was then used as a training facility for the Los Angeles County Sheriff's Department (Kleinfelder, 2010).

Based on a review of environmental reports for this site, none of the reports identified hydrocarbon contaminant issues in soil (Kleinfelder, 2010); however, additional methane gas investigations are ongoing at this facility. A methane gas investigation conducted in 2010 indicated methane concentrations exceeding the *California Code of Regulations* (CCR) Title 27 regulatory limit of 5 percent by volume in air for methane monitoring wells installed within the site. GeoTracker lists the facility cleanup status as Open – Verification Monitoring (SWRCB, 2012).

Subject Property 6 – Mercury Die/Mission Corrugated is located at 3201 West Mission Road in the city of Alhambra (Figure 4-7). Based on the records review, this site probably started operations around 1938; however, the exact date could not be determined. This information could be obtained during a future site interview. A letter prepared by LADPW dated July 14, 1997, indicated that based on a closure request from Mercury Die, a closure status was approved by the agency, and no further action was required (see Appendix A2). However, based on a conversation with the project manager for EPA’s Area 3 project, this site has shallow soil vapor VOC impacts beneath it (Waite, 2013). EPA is also planning to conduct additional investigations at this facility to investigate whether deeper impacts to soil and groundwater are present.

4.2 Additional Environmental Record Sources

In addition to the environmental database report review, CH2M HILL reviewed available documentation from GeoTracker and EnviroStor for information related to the Subject Properties and adjoining properties (SWRCB, 2012; DTSC, 2013). Additionally, CH2M HILL contacted applicable local and state agencies for information associated with the Subject Properties and adjoining properties.

4.2.1 Subject Property 1 – Former Circle K Stores (Currently a Chase Bank)

4.2.1.1 Historical Use Information

Historical use information for the Former Circle K Stores (currently a Chase Bank), including historical aerial photographs and historical topographic maps, was obtained from EDR (Appendix B) (EDR, 2013h through 2013j).

4.2.1.1.1 Aerial Photographs

Historical aerial photographs from 1928, 1938, 1948, 1952, 1964, 1972, 1981, 1989, 1994, 2005, 2009, 2010, and 2012 were reviewed to assess historical land uses and identify evidence of hazardous substance releases. These photographs, obtained from EDR, are included in Appendix B1. Table 4-2 summarizes descriptions of the features identified in the immediate vicinity of Subject Property 1.

TABLE 4-2
**Historical Use Information – Historical Aerial Photographs
 (Subject Property 1 – Former Circle K Stores [Currently a Chase Bank])**

Map Date	Findings
1928	Subject Property 1 with a building appears to be present in the photograph. The area to the immediate east of Subject Property 1 is vacant. Developments can be noted within the vicinity of Subject Property 1, and the area appears to be zoned for residential needs. Moor Field, also identified in the photograph, is visible to the northeast.
1938	A new building is present to the immediate east of Subject Property 1. No major changes are noted at Subject Property 1.
1948	No significant changes from the previous photograph are noted at Subject Property 1.
1952	No significant changes from the previous photograph are noted at Subject Property 1.
1964	No significant changes from the previous photograph are noted at Subject Property 1.
1972	The structural configuration of the building within Subject Property 1 appears to have changed, and its footprint corresponds with that of a gas station.
1981	No significant changes from the previous photograph are noted at Subject Property 1.
1989	No significant changes from the previous photograph are noted at Subject Property 1.
1994	No significant changes from the previous photograph are noted at Subject Property 1.
2005	No significant changes from the previous photograph are noted at Subject Property 1.
2009	No significant changes from the previous photograph are noted at Subject Property 1.
2010	No significant changes from the previous photograph are noted at Subject Property 1.
2012	The building at Subject Property 1 is no longer present, and the area appears to be graded for future use.

4.2.1.1.2 Topographic Maps

In addition to the historical aerial photographs, historical topographic maps dated 1896, 1900, 1901, 1926, 1953, 1966, 1972, 1981, and 1994 were reviewed for Subject Property 1. Table 4-3 summarizes the results of the historical topographic map review. Historical maps, obtained from EDR, are included in Appendix B2.

TABLE 4-3
**Historical Use Information – Historical Topographic Maps
 (Subject Property 1 – Former Circle K Stores [Currently a Chase Bank])**

Map Date	Findings
1896	Subject Property 1 and the area surrounding it are undeveloped.
1900	No significant changes from the previous topographic map are noted at Subject Property 1.
1901	The map scale is too distant to note any significant changes from the 1900 topographic map.
1926	Subject Property 1 is visible in this topographic map, and appears to be have a building within it.
1953	Southern Pacific railroad track, running west-northeast, is located north and south of Subject Property 1. Moor Field and a hospital to the east, Romona School to the southeast, and Marguerita School to the southwest of Subject Property 1 are visible in this topographic map. I-10 is located south of Subject Property 1.
1966	No significant changes from the previous topographic map are noted at Subject Property 1.
1972	No significant changes from the previous topographic map are noted at Subject Property 1.
1981	No significant changes from the previous topographic map are noted at Subject Property 1.
1994	No significant changes from the previous topographic map are noted at Subject Property 1.

4.2.1.1.3 Sanborn Maps

Sanborn Fire Insurance Maps for Subject Property 1 were provided by EDR and were available for 1931, 1950, 1959, and 1981. A summary of the Sanborn map review is provided in Table 4-4. Copies of the Sanborn maps provided by EDR are included in Appendix B3.

TABLE 4-4
Sanborn Maps Review Summary (Subject Property 1 – Former Circle K Stores [Currently a Chase Bank])

Date	Findings
1931	Subject Property 1 is listed as a drug store.
1950	Subject Property 1 is still listed as a drug store. A gas station is located at the northwest of corner of Valley and Atlantic Boulevard.
1959	No changes are noted to Subject Property 1. Another gas station is present at the northeast corner of Valley and Atlantic Boulevard.
1981	Subject Property 1 is shown as a filling station, indicating the presence of the Circle K gas station.

4.2.1.1.4 Oil and Gas Maps

The online mapping system maintained by DOGGR was reviewed for oil- and gas-related features for Subject Property 1. Subject Property 1 is located within Map 01S-R12W (DOGGR, 2013). No oil- and gas-related features were identified on Subject Property 1 or within 500 feet of Subject Property 1. However, one well operated by Conoco Petroleum named “Monterey Park Unit 1” is located approximately within 2,000 feet south of Subject Property 1. The status of this well is indicated as plugged.

4.2.1.1.5 Flood Control Maps

A flood control map is included as part of the EDR database report (Appendix A1). The overview map in the database report showed that Subject Property 1 is not located within the 100-year flood zone.

4.2.1.2 Other Historical Use Records

No other historical use records were reviewed for this Phase I ISA.

4.2.1.3 Results of Historical Use Information Review

Based on a review of the historical use information (Appendix B), Subject Property 1 was a gas station for many years through 2012. Although the exact year when the gas station started operations is unknown from the review, reviewed information indicates that it had been a gas station from 1980 through 2012. It is currently used as a Chase Banking facility.

4.2.1.4 Site Reconnaissance

As part of the ISA, CH2M HILL conducted a site reconnaissance of the outside of Subject Property 1 and adjoining properties. The purpose of the site reconnaissance was as follows:

- Observe Subject Property 1 from outside and observe the adjoining properties.
- Identify potential RECs that may be present at Subject Property 1 and adjoining properties.
- Assess current land uses of Subject Property 1 and adjoining properties.

4.2.1.5 Methodology and Limiting Conditions

The site reconnaissance was performed by viewing Subject Property 1 from outside only because access inside the facility was not requested during this ISA due to the sensitivity of the project study. In addition, no interviews were conducted for the same reason.

4.2.1.6 Site Observations

On August 12, 2013, CH2M HILL conducted a site reconnaissance of Subject Property 1. Photographs from the reconnaissance are included in Appendix C.

4.2.1.6.1 Subject Property

Subject Property 1 is currently a Chase Banking facility; however, Subject Property 1 was a Circle K gas station until 2012. The current bank is a new building structure with a parking lot. Specific features checked during the site reconnaissance are presented below.

- **Onsite Hazardous Substance Use and Storage:** No hazardous substances were observed on Subject Property 1.
- **Onsite Hazardous Waste Disposal:** No hazardous waste disposal was observed on Subject Property 1.
- **Onsite Aboveground Storage Tanks (ASTs)/USTs:** No ASTs or USTs were observed on Subject Property 1. Prior to the facility becoming a bank, three USTs containing gasoline fuel existed at Subject Property 1. Records indicate that tanks were removed and replaced in 1987. Multiple subsurface investigations resulted from the 1987 tank removal, and the case was issued closure by the regulatory agency on February 25, 2012 (Blaes, 2012). Later, three tanks were removed on January 12, 2012.
- **Onsite Pits, Sumps, Drywells, or Catch Basins:** No evidence of current or historical onsite pits, sumps, drywells, or catch basins was observed at Subject Property 1 during the site reconnaissance.
- **Onsite Pole-Mounted Transformers:** One mounted transformer was observed adjacent to Subject Property 1 near the southeastern corner of the property. The transformer appeared to be in good condition, although it is unknown whether this transformer contains PCBs.

4.2.1.6.2 Adjoining Properties

Properties that were observed to be adjacent to Subject Property 1 are described below.

- **Starbucks:** Starbucks is located south of Subject Property 1. No potential environmental issues were observed or reported at this property.
- **Mini Mall:** A mini mall is located east and southeast of Subject Property 1. The mini mall includes a market, a laundromat, and an aquarium supply store. No potential environmental issues were observed or reported at this property.
- **Small Shops and Restaurant:** A Popeye’s Chicken restaurant and various small shops are located north of Subject Property 1 across Valley Boulevard. The small shops include an H&R Block, a fabric store, and a dry cleaner. No potential environmental issues were observed or reported at these properties.
- **Mini Mall:** Another mini mall is located west of Subject Property 1 across Atlantic Boulevard. The mini mall includes a flower shop and a small electronics store. No potential environmental issues were observed or reported at this property.

4.2.2 Subject Property 2 – Fashion Master Cleaners

4.2.2.1 Historical Use Information

Historical use information for Fashion Master Cleaners, including historical aerial photographs and historical topographic maps, was obtained from EDR (Appendix B) (EDR, 2013d through 2013f).

4.2.2.1.1 Aerial Photographs

Historical aerial photographs from 1928, 1938, 1949, 1956, 1965, 1976, 1989, 1994, 2002, 2005, 2009, 2010, and 2012 were reviewed to assess historical land uses and identify evidence of hazardous substance releases. These photographs, obtained from EDR, are included in Appendix B1. Table 4-5 summarizes descriptions of the features identified in the immediate vicinity of Subject Property 2.

TABLE 4-5

Historical Use Information – Historical Aerial Photographs (Subject Property 2 – Fashion Master Cleaners)

Map Date	Findings
1928	Subject Property 2 and its immediate vicinity appear to be undeveloped. Some buildings are present west, south, and northwest of Subject Property 2. Huntington Drive is visible further to the north, and Main Street is visible to the south.
1938	No significant changes are noted from the previous aerial photograph, except for some new buildings immediately south of Subject Property 2. Two ASTs are visible approximately 3,000 feet southeast of Subject Property 2.
1949	Subject Property 2 is present in this photograph, along with two additional buildings to the east (currently a medical building and another commercial building) and one to the west (currently a Big Lots store). Two additional ASTs are visible at the previously mentioned AST location.
1956	No significant changes from the previous photograph are noted at Subject Property 2.
1965	An AST approximately 2,550 feet west of Subject Property 2 is visible. No significant changes from the previous photograph are noted at Subject Property 2.
1976	No significant changes from the previous photograph are noted at Subject Property 2.
1989	No significant changes from the previous photograph are noted at Subject Property 2.
1994	No significant changes from the previous photograph are noted at Subject Property 2.
2002	No significant changes from the previous photograph are noted at Subject Property 2.
2005	No significant changes from the previous photograph are noted at Subject Property 2.
2009	No significant changes from the previous photograph are noted at Subject Property 2.
2010	No significant changes from the previous photograph are noted at Subject Property 2.
2012	No significant changes from the previous photograph are noted at Subject Property 2.

4.2.2.1.2 Topographic Maps

In addition to the historical aerial photographs, historical topographic maps dated 1896, 1900, 1901, 1941, 1953, 1966, 1972, 1981, and 1994 were reviewed for Subject Property 2. Table 4-6 summarizes the results of the historical topographic map review. Historical maps, obtained from EDR, are included in Appendix B2.

TABLE 4-6
Historical Use Information – Historical Topographic Maps (Subject Property 2 – Fashion Master Cleaners)

Map Date	Findings
1896	Subject Property 2 and the area surrounding it are undeveloped.
1900	No significant changes from the previous topographic map are noted at Subject Property 2.
1901	The map scale is too distant to note any significant changes from the 1900 topographic map.
1941	Subject Property 2 area appears to be undeveloped. Huntington Drive and Fair Oaks Avenue are visible north of Subject Property 2. One building to the immediate west of Fremont Avenue is visible in the topographic map. Southern Pacific railroad track is visible east of Subject Property 2, running in a north-south direction. South Pasadena High School is visible northwest of Subject Property 2.
1953	Subject Property 2 is not visible as a building in this topographic map; however, from the aerial photograph, Subject Property 2 is present during this time. Oneonta School is present to the south, and a junior high school is visible to the north of Subject Property 2.
1966	The Southern Pacific railroad track is no longer visible in this topographic map. Marengo School is visible to the north. No other significant changes from the previous topographic map are noted. A water tank is visible west of Subject Property 2.
1972	No significant changes from the previous topographic map are noted at Subject Property 2.
1981	No significant changes from the previous topographic map are noted at Subject Property 2.
1994	No significant changes from the previous topographic map are noted at Subject Property 2.

4.2.2.1.3 Sanborn Maps

Sanborn Fire Insurance Maps for Subject Property 2 were provided by EDR and were available for 1925, 1930, 1950, 1963, and 1981. A summary of the Sanborn map review is provided in Table 4-7. Copies of the Sanborn maps provided by EDR are included in Appendix B3.

TABLE 4-7
Sanborn Maps Review Summary (Subject Property 2 – Fashion Master Cleaners)

Date	Findings
1925	Subject Property 2 and its vicinity are not covered in this map.
1930	Subject Property 2 appears to be vacant to its immediate boundary.
1950	Subject Property 2 and one other building are visible in this map. Subject Property 2 is listed as S & Rest.
1963	Subject Property 2 and two other buildings to its immediate east are visible. A new building is present that is between Subject Property 2 and the previous building. In addition, a large building listed as Market and Rest is visible west of Subject Property 2.
1981	Subject Property 2 and its vicinity are not covered in this map.

4.2.2.1.4 Oil and Gas Maps

The online mapping system maintained by DOGGR was reviewed for oil- and gas-related features for Subject Property 2. Subject Property 2 is located within Map 01S-R12W (DOGGR, 2013). No oil- and gas-related features were identified on Subject Property 2 or within 500 feet of Subject Property 2.

4.2.2.1.5 Flood Control Maps

A flood control map is included as part of the EDR database report (Appendix A1). The overview map in the database report shows that Subject Property 2 is not located within the 100-year flood zone.

4.2.2.2 Other Historical Use Records

No other historical use records were reviewed for this Phase I ISA.

4.2.2.3 Results of Historical Use Information Review

Based on a review of the historical use information (Appendix B), no features were identified that appear to be of potential impact to Subject Property 2. No details about any impacted sites at this location were identified during the records review.

4.2.2.4 Site Reconnaissance

As part of the ISA, CH2M HILL conducted a site reconnaissance of the outside of Subject Property 2 and adjoining properties. The purpose of the site reconnaissance was as follows:

- Observe Subject Property 2 from outside and observe the adjoining properties
- Identify potential RECs that may be present at Subject Property 2 and adjoining properties
- Assess current land uses of Subject Property 2 and adjoining properties

4.2.2.5 Methodology and Limiting Conditions

The site reconnaissance was performed by viewing Subject Property 2 from outside only because access inside the facilities was not requested during this ISA due to the sensitivity of the project study. In addition, no interviews were conducted for the same reason.

4.2.2.6 Site Observations

On August 12, 2013, CH2M HILL conducted a site reconnaissance of Subject Property 2. Photographs from the reconnaissance are included in Appendix C.

4.2.2.6.1 Subject Property

Subject Property 2 is a dry cleaner facility named Fashion Master Cleaners. Specific features checked during the site reconnaissance are presented below.

- **Onsite Hazardous Substance Use and Storage:** Two 55-gallon drums of hazardous material containing decamethylcyclpentasiloxane were observed at the back of Subject Property 2. In addition, Subject Property 2 is a currently operating as a dry cleaner, so it is more than likely that hazardous substances are stored and used on this site.
- **Onsite Hazardous Waste Disposal:** Two 55-gallon drums of hazardous material containing decamethylcyclpentasiloxane were observed on Subject Property 2.
- **Onsite ASTs/USTs:** No ASTs or USTs were observed on Subject Property 2.
- **Onsite Pits, Sumps, Drywells, or Catch Basins:** No evidence of current or historical onsite pits, sumps, drywells, or catch basins was observed at Subject Property 2 during the site reconnaissance.
- **Onsite Pole-Mounted Transformers:** One mounted transformer was observed adjacent to Subject Property 2 near the southern border of the property. The transformer appeared to be in good condition, although it is unknown whether this transformer contains PCBs.

4.2.2.6.2 Adjoining Properties

Properties that were observed to be adjacent to Subject Property 2 are described below.

- **Big Lots:** A Big Lots store is located west of Subject Property 2. No potential environmental issues were observed or reported at this property.

- **Massage Parlor and Nail Salon:** Massage Villa and D.J. Nails & Spa are adjacent to Subject Property 2 to the east. No potential environmental issues were observed or reported at this property.
- **Offices:** Medical and law offices are located north of Subject Property 2 across Huntington Drive. No potential environmental issues were observed or reported at this property.
- **Residential Dwellings:** Residential dwellings are located south of Subject Property 2. No potential environmental issues were observed or reported at these properties.

4.2.3 Subject Property 3 – Railroad ROW

Subject Property 3 – Railroad ROW is located north of Valley Boulevard and SR 710 North and immediately south of Mission Road.

4.2.3.1 Historical Use Information

Historical use information for Railroad ROW, including historical aerial photographs and historical topographic maps, was obtained from EDR (Appendix B) (EDR, 2013a through 2013c).

4.2.3.1.1 Aerial Photographs

Historical aerial photographs from 1928, 1938, 1949, 1956, 1965, 1976, 1989, 1994, 2002, 2005, 2009, 2010, and 2012 were reviewed to assess historical land uses and identify evidence of hazardous substance releases. These photographs, obtained from EDR, are included in Appendix B1. Table 4-8 summarizes descriptions of the features identified in the immediate vicinity of Subject Property 3.

TABLE 4-8

Historical Use Information – Historical Aerial Photographs (Subject Property 3 – Railroad ROW)

Map Date	Findings
1928	Subject Property 3 is visible in this photograph. An area immediately south of Subject Property 3 appears to be vacant. Mission Road and Valley Boulevard are visible north and south of Subject Property 3, respectively.
1938	No significant changes from the previous photograph are noted at Subject Property 3.
1949	Subject Property 3 is outside the coverage of the photograph.
1956	No significant changes from the 1938 photograph are noted at Subject Property 3.
1965	No significant changes from the previous photograph are noted at Subject Property 3. However, the area immediately south of Subject Property 3, which was graded and vacant in the previous photograph, has some visible buildings in this photograph. These buildings are part of Alpha Therapeutics (currently Grifols).
1976	No significant changes from the previous photograph are noted at Subject Property 3, except for some new buildings to the southwest.
1989	No significant changes from the previous photograph are noted at Subject Property 3.
1994	No significant changes from the previous photograph are noted at Subject Property 3.
2002	No significant changes from the previous photograph are noted at Subject Property 3.
2005	Subject Property 3 is outside the coverage of the photograph.
2009	Subject Property 3 is outside the coverage of the photograph.
2010	Subject Property 3 is outside the coverage of the photograph.
2012	Subject Property 3 is outside the coverage of the photograph.

4.2.3.1.2 Topographic Maps

In addition to the historical aerial photographs, historical topographic maps dated 1896, 1900, 1901, 1926, 1953, 1966, 1972, 1981, and 1994 were reviewed for Subject Property 3. Table 4-9 summarizes the results of the historical topographic map review. Historical maps, obtained from EDR, are included in Appendix B2.

TABLE 4-9

Historical Use Information – Historical Topographic Maps (Subject Property 3 – Railroad ROW)

Map Date	Findings
1896	Subject Property 3 appears to be present, as railroad tracks are visible in the photograph in the immediate vicinity of Mission Road.
1900	No significant changes from the previous topographic map are noted at Subject Property 3.
1901	The map scale is too distant to note any significant changes from the 1900 topographic map.
1926	Subject Property 3 is present and is listed as Southern Pacific Railroad ROW. Hellman Avenue is also visible south of Subject Property 3. Additional railroad tracks are visible south of Subject Property 3 and listed as Pacific Electric.
1953	Valley Boulevard and the San Bernardino freeway (I-10) are visible south of Subject Property 3. Mission Avenue/ Alhambra Avenue is clearly visible in this photograph.
1966	SR 710 is visible in this photograph. New buildings are present to the southwest of the Subject Property 3.
1972	No significant changes from the previous topographic map are noted at Subject Property 3.
1981	No significant changes from the previous topographic map are noted at Subject Property 3.
1994	No significant changes from the previous topographic map are noted at Subject Property 3.

4.2.3.1.3 Sanborn Maps

Sanborn Fire Insurance Maps for Subject Property 3 were provided by EDR and were available for 1925, 1930, 1950, 1963, and 1981; however, the Sanborn maps provided did not have coverage for Subject Property 3. Copies of the Sanborn maps provided by EDR are included in Appendix B3.

4.2.3.1.4 Oil and Gas Maps

The online mapping system maintained by DOGGR was reviewed for oil- and gas-related features for Subject Property 3. Subject Property 3 is located within Map 01S-R12W (DOGGR, 2013). No oil- and gas-related features were identified on Subject Property 3 or within 500 feet of Subject Property 3. However, one well operated by Norman MacDonald is located within approximately 2,000 feet west of Subject Property 3. The status of this well is indicated as plugged.

4.2.3.1.5 Flood Control Maps

A flood control map is included as part of the EDR database report (Appendix A1). The overview map in the database report shows that Subject Property 3 is not located within the 100-year flood zone.

4.2.3.2 Other Historical Use Records

No other historical use records were reviewed for this Phase I ISA.

4.2.3.3 Results of Historical Use Information Review

Railroads are typically anticipated to have environmental impacts from various chemical constituents associated with railroad ties (wood-treating chemicals). Because Subject Property 3 has been used as railroad ROW for more than 100 years, potential environmental impacts could be present at this area.

4.2.3.4 Site Reconnaissance

As part of the ISA, CH2M HILL conducted a site reconnaissance of the outside of Subject Property 3 and adjoining properties. The purpose of the site reconnaissance was as follows:

- Observe Subject Property 3 from outside and observe the adjoining properties.
- Identify potential RECs that may be present at Subject Property 3 and adjoining properties.
- Assess current land uses of Subject Property 3 and adjoining properties.

4.2.3.5 Methodology and Limiting Conditions

The site reconnaissance was performed by viewing Subject Property 3 from a safe distance. No limiting conditions were present at the time of the site reconnaissance.

4.2.3.6 Site Observations

On October 11, 2013, CH2M HILL conducted a site reconnaissance of Subject Property 3. Photographs from the reconnaissance are included in Appendix C.

4.2.3.6.1 Subject Property

Subject Property 3 is a segment of an active railway that runs east-west through Alhambra, California. Specific features checked during the site reconnaissance are presented below.

- **Onsite Hazardous Substance Use and Storage:** No hazardous substances were visually observed on Subject Property 3.
- **Onsite Hazardous Waste Disposal:** No hazardous waste disposal was observed on Subject Property 3.
- **Onsite ASTs/USTs:** No ASTs or USTs were observed on Subject Property 3.
- **Onsite Pits, Sumps, Drywells, or Catch Basins:** No evidence of current or historical onsite pits, sumps, drywells, or catch basins was observed at Subject Property 3 during the site reconnaissance.
- **Onsite Pole-Mounted Transformers:** One mounted transformer was observed along the roadway near the eastern side of Subject Property 3. The transformer appeared to be in good condition, although it is unknown whether the transformer contains PCBs.

4.2.3.6.2 Adjoining Properties

Properties that were observed to be adjacent to Subject Property 3 are described below.

- **Residential Dwellings:** Residential dwellings are located southeast of Subject Property 3. No potential environmental issues were observed or reported at this property.
- **Cardboard Factory:** Mission Corrugated is located northeast of Subject Property 3. No potential environmental issues were observed or reported at this property.
- **Chemical Manufacturing Firm:** A Norchem Corporation property is located north of Subject Property 3 across Mission Road. A National Fire Protection Association (NFPA) panel indicating that hazardous materials were stored at the property was observed on the front of the building.
- **Open Lot:** An open lot is located south of Subject Property 3. No potential environmental issues were observed or reported at this property.

4.2.4 Subject Property 4 – Elite Cleaners

4.2.4.1 Historical Use Information

Historical use information for Elite Cleaners, including historical aerial photographs and historical topographic maps, was obtained from EDR (Appendix B) (EDR, 2013d through 2013f).

4.2.4.1.1 Aerial Photographs

Historical aerial photographs from 1928, 1938, 1949, 1956, 1965, 1976, 1989, 1994, 2002, 2005, 2009, 2010, and 2012 were reviewed to assess historical land uses and identify evidence of hazardous substance releases. These photographs, obtained from EDR, are included in Appendix B1. Table 4-10 summarizes descriptions of the features identified in the immediate vicinity of Subject Property 4.

**TABLE 4-10
Historical Use Information – Historical Aerial Photographs (Subject Property 4 – Elite Cleaners)**

Map Date	Findings
1928	Subject Property 4 and its immediate vicinity appear to be undeveloped. Some buildings are present west and northwest of Subject Property 4. Huntington Drive is visible further to the south, Fair Oaks Ave to the west, and Mission Road to the north.
1938	No significant changes are noted from the previous aerial photograph, except for two large field areas immediately south of Subject Property 4.
1949	Subject Property 4 still appears to be undeveloped. Additional developments are noted in the vicinity of Subject Property 4.
1956	Subject Property 4, along with some additional buildings, is visible in this photograph. A football field is visible to the west. No other significant developments are noted in the photograph.
1965	No significant changes from the previous photograph are noted at Subject Property 4.
1976	No significant changes from the previous photograph are noted at Subject Property 4.
1989	No significant changes from the previous photograph are noted at Subject Property 4.
1994	No significant changes from the previous photograph are noted at Subject Property 4.
2002	No significant changes from the previous photograph are noted at Subject Property 4.
2005	No significant changes from the previous photograph are noted at Subject Property 4.
2009	No significant changes from the previous photograph are noted at Subject Property 4.
2010	An area south of Subject Property 4, which previously had some buildings, appears to be graded for development.
2012	The graded area mentioned in the previous photograph currently consists of a parking lot and new buildings. No significant changes from the previous photograph are noted at Subject Property 4.

4.2.4.1.2 Topographic Maps

In addition to the historical aerial photographs, historical topographic maps dated 1896, 1900, 1901, 1941, 1953, 1966, 1972, 1981, and 1994 were reviewed for Subject Property 4. Table 4-11 summarizes the results of the historical topographic map review. Historical maps, obtained from EDR, are included in Appendix B2.

**TABLE 4-11
Historical Use Information – Historical Topographic Maps (Subject Property 4 – Elite Cleaners)**

Map Date	Findings
1896	Subject Property 4 and the area surrounding it are undeveloped.
1900	No significant changes from the previous topographic map are noted at Subject Property 4.
1901	The map scale is too distant to note any significant changes from the 1900 topographic map.
1941	Fair Oaks Avenue to the west and Huntington Drive to the south are visible. South Pasadena High School is visible to the west of Subject Property 4, and a Southern Pacific railroad track is visible to the east.
1953	A junior high school is visible to the south of Subject Property 4, and Marengo School is visible to the east. The field area noted in the aerial photograph appears to be associated with the junior high school. I-110 and SR 110 are visible to the north.
1966	No significant changes from the previous topographic map are noted at Subject Property 4.
1972	No significant changes from the previous topographic map are noted at Subject Property 4.
1981	No significant changes from the previous topographic map are noted at Subject Property 4.
1994	No significant changes from the previous topographic map are noted at Subject Property 4.

4.2.4.1.3 Sanborn Maps

Sanborn Fire Insurance Maps for Subject Property 4 were provided by EDR and were available for 1925, 1930, 1950, 1963, and 1981; however, the Sanborn maps provided did not have coverage for Subject Property 4. Copies of the Sanborn maps provided by EDR are included in Appendix B3.

4.2.4.1.4 Oil and Gas Maps

The online mapping system maintained by DOGGR was reviewed for oil- and gas-related features for Subject Property 4. Subject Property 4 is located within Map 01S-R12W (DOGGR, 2013). No oil- and gas-related features were identified on or within 500 feet of Subject Property 4.

4.2.4.1.5 Flood Control Maps

A flood control map is included as part of the EDR database report (Appendix A1). The overview map in the database report shows that Subject Property 4 is not located within the 100-year flood zone.

4.2.4.2 Other Historical Use Records

No other historical use records were reviewed for this Phase I ISA.

4.2.4.3 Results of Historical Use Information Review

Based on a review of the historical use information (Appendix B), no features were identified that appear to be of potential impact to Subject Property 4. No details about any impacted sites at this location were identified during the records review.

4.2.4.4 Site Reconnaissance

As part of the ISA, CH2M HILL conducted a site reconnaissance of the outside of Subject Property 4 and adjoining properties. The purpose of the site reconnaissance was as follows:

- Observe Subject Property 4 from outside and observe the adjoining properties.
- Identify potential RECs that may be present at Subject Property 4 and adjoining properties.
- Assess current land uses of Subject Property 4 and adjoining properties.

4.2.4.5 Methodology and Limiting Conditions

The site reconnaissance was performed by viewing Subject Property 4 from the outside only because access inside the facilities was not requested during this ISA due to the sensitivity of the project study. In addition, no interviews were conducted for the same reason.

4.2.4.6 Site Observations

On August 12, 2013, CH2M HILL conducted a site reconnaissance of Subject Property 4. Photographs from the reconnaissance are included in Appendix C.

4.2.4.6.1 Subject Property

Subject Property 4 is a dry cleaner facility named Elite Cleaners. There is also a nail salon located on Subject Property 4 at 1310 B Fair Oaks Avenue. The dry cleaner occupies the majority of the one structure located on the property. Specific features checked during the site reconnaissance are presented below.

- **Onsite Hazardous Substance Use and Storage:** No hazardous substances were visually observed on Subject Property 4. However, an NFPA panel located on the front of the building indicated that substances potentially hazardous to human health are stored or used within the building. In addition, Subject Property 4 is a currently operating dry cleaner, so it is more than likely that hazardous substances are stored and used on Subject Property 4.
- **Onsite Hazardous Waste Disposal:** Six 55-gallon drums labeled as hazardous waste were observed along the fence on the eastern border of Subject Property 4. The drums contain soil cuttings from a previous site investigation; however, these are not anticipated to be hazardous based on soil analytical results.

- **Onsite ASTs/USTs:** No ASTs or USTs were observed on Subject Property 4; however, it is unknown whether ASTs or USTs are present inside the building.
- **Onsite Pits, Sumps, Drywells, or Catch Basins:** No evidence of current or historical onsite pits, sumps, drywells, or catch basins was observed at Subject Property 4 during the site reconnaissance.
- **Onsite Pole-Mounted Transformers:** No mounted transformers were observed on Subject Property 4.

4.2.4.6.2 Adjoining Properties

Properties that were observed to be adjacent to Subject Property 4 are described below.

- **Towing Service and Lot:** Action Towing is adjacent to Subject Property 4 to the south. No potential environmental issues were observed or reported at this property.
- **Body Shop:** Marco's Collision Center is adjacent to Subject Property 4 to the north. No potential environmental issues were observed or reported at this property.
- **Bank:** A Chase Bank is located west of Subject Property 4 across Fair Oaks Avenue. No potential environmental issues were observed or reported at this property.
- **Residential Dwellings:** Residential dwellings are located east of Subject Property 4. No potential environmental issues were observed or reported at this property.

4.2.5 Subject Property 5 – Blanchard Landfill

4.2.5.1 Historical Use Information

Historical use information for Blanchard Landfill, including historical aerial photographs and historical topographic maps, was obtained from EDR (Appendix B) (EDR, 2013a through 2013c).

4.2.5.1.1 Aerial Photographs

Historical aerial photographs from 1928, 1938, 1949, 1956, 1965, 1976, 1989, 1994, 2002, 2005, 2009, 2010, and 2012 were reviewed to assess historical land uses and identify evidence of hazardous substance releases. These photographs, obtained from EDR, are included in Appendix B1. Table 4-12 summarizes descriptions of the features identified in the immediate vicinity of Subject Property 5.

TABLE 4-12

Historical Use Information – Historical Aerial Photographs (Subject Property 5 – Blanchard Landfill)

Map Date	Findings
1928	Subject Property 5 appears to be an undeveloped area along with its immediate surroundings to the east, west, and north. Some development can be noticed to the south.
1938	Subject Property 5 appears to be undeveloped, though a report indicated the landfill operational start date to be approximately 1935.
1949	Subject Property 5 appears to be graded for landfill use. Some development can be noticed to the northwest part of Subject Property 5. I-10, running east-west, is visible north of Subject Property 5.
1956	No significant changes from the previous photograph are noted at Subject Property 5, except for some buildings to the immediate north of Subject Property 5.
1965	Additional buildings are noted north of Subject Property 5. In addition, two ASTs are visible to the immediate west, although it is unknown whether this is part of Subject Property 5. No significant changes at Subject Property 5 are noted in the photograph. The current Monterey Park Golf Course is visible to the northeast, but as a graded area. I-710, running north-south, is now visible to the north.
1976	No significant changes from the previous photograph are noted at Subject Property 5. The construction of the golf course facility appears to be complete.
1989	No significant changes from the previous photograph are noted at Subject Property 5. However, additional buildings, which appear to be the current Los Angeles County Sheriff's facilities, are visible further north of Subject Property 5.

TABLE 4-12

Historical Use Information – Historical Aerial Photographs (Subject Property 5 – Blanchard Landfill)

Map Date	Findings
1994	No significant changes from the previous photograph are noted at Subject Property 5.
2002	No significant changes from the previous photograph are noted at Subject Property 5.
2005	Subject Property 5 is outside the coverage of the photograph.
2009	Subject Property 5 is outside the coverage of the photograph.
2010	Subject Property 5 is outside the coverage of the photograph.
2012	Subject Property 5 is outside the coverage of the photograph.

4.2.5.1.2 Topographic Maps

In addition to the historical aerial photographs, historical topographic maps dated 1896, 1900, 1901, 1926, 1953, 1966, 1972, 1981, and 1994 were reviewed for Subject Property 5. Table 4-13 summarizes the results of the historical topographic map review. Historical maps, obtained from EDR, are included in Appendix B2.

TABLE 4-13

Historical Use Information – Historical Topographic Maps (Subject Property 5 – Blanchard Landfill)

Map Date	Findings
1896	Subject Property 5 and the area surrounding it are undeveloped.
1900	No significant changes from the previous topographic map are noted at Subject Property 5.
1901	The map scale is too distant to note any significant changes from the 1900 topographic map.
1926	Subject Property 5 appears to be undeveloped in this topographic map.
1953	No noticeable changes at Subject Property 5 are visible in the topographic map.
1966	Sybil Brand Institute for Women is visible to the immediate west, Biscailuz Center (Men's Jail) and Sheriff Academy to the south, and the County Fire Department to the southwest of Subject Property 5
1972	No significant changes from the previous topographic map are noted at Subject Property 5.
1981	No significant changes from the previous topographic map are noted at Subject Property 5.
1994	No significant changes from the previous topographic map are noted at Subject Property 5.

4.2.5.1.3 Sanborn Maps

Sanborn Fire Insurance Maps for Subject Property 5 were provided by EDR and were available for 1925, 1930, 1950, 1963, and 1981; however, the Sanborn maps provided did not have coverage for Subject Property 5. Copies of the Sanborn maps provided by EDR are included in Appendix B3.

4.2.5.1.4 Oil and Gas Maps

The online mapping system maintained by DOGGR was reviewed for oil- and gas-related features for Subject Property 5. Subject Property 5 is located within Map 01S-R12W (DOGGR, 2013). No oil- and gas-related features were identified on or within 500 feet of Subject Property 5. However, one well operated by Occidental Petroleum named "Kazarian 1" is located approximately within 1,000 feet southwest of Subject Property 5. The status of this well is indicated as plugged. In addition, another oil and gas well operated by Chevron U.S.A. named "Bishop-Hellman C.H 2" is located within 1,500 feet east of Subject Property 5. The status of this well is also indicated as plugged.

4.2.5.1.5 Flood Control Maps

A flood control map is included as part of the EDR database report (Appendix A1). The overview map in the database report shows that Subject Property 5 is not located within the 100-year flood zone.

4.2.5.2 Other Historical Use Records

No other historical use records were reviewed for this Phase I ISA.

4.2.5.3 Results of Historical Use Information Review

Based on a review of the historical use information (Appendix B), Subject Property 5 was a landfill without protective liners for several years; therefore, this facility could have potentially impacted soil, soil vapor, or groundwater. In addition, stored contents of two ASTs identified in the 1965 aerial photograph are unknown, as well as whether those ASTs were within Subject Property 5.

4.2.5.4 Site Reconnaissance

As part of the ISA, CH2M HILL conducted a site reconnaissance of the outside of Subject Property 5 and adjoining properties. The purpose of the site reconnaissance was as follows:

- Observe Subject Property 5 from outside and observe the adjoining properties.
- Identify potential RECs that may be present at Subject Property 5 and adjoining properties.
- Assess current land uses of Subject Property 5 and adjoining properties.

4.2.5.5 Methodology and Limiting Conditions

The site reconnaissance was performed by viewing Subject Property 5 from outside only because access inside the facilities was not requested during this ISA due to the sensitivity of the project study. In addition, no interviews were conducted for the same reason.

4.2.5.6 Site Observations

On October 11, 2013, CH2M HILL conducted a site reconnaissance of Subject Property 5. Photographs from the reconnaissance are included in Appendix C.

4.2.5.6.1 Subject Property

Subject Property 5 is currently used by Los Angeles County Sherriff's Department. Specific features checked during the site reconnaissance are presented below.

- **Onsite Hazardous Substance Use and Storage:** No hazardous substances were visually observed on Subject Property 5.
- **Onsite Hazardous Waste Disposal:** No hazardous waste disposal was observed on Subject Property 5.
- **Onsite ASTs/USTs:** No ASTs or USTs were observed on Subject Property 5.
- **Onsite Pits, Sumps, Drywells, or Catch Basins:** No evidence of current or historical onsite pits, sumps, drywells, or catch basins was observed at Subject Property 5 during the site reconnaissance.
- **Onsite Pole-Mounted Transformers:** No mounted transformers were observed on Subject Property 5.

4.2.5.6.2 Adjoining Properties

Properties that were observed to be adjacent to Subject Property 5 are described below.

- **Sherriff's Offices:** Offices and training facilities of the Los Angeles County Sherriff's Department are located adjacent to or within Subject Property 5 to the north, west, and south. No potential environmental issues were observed or reported at this property.
- **Freeway:** I-710/SR 710 runs north-south along the eastern border of Subject Property 5. No potential environmental issues were observed or reported at this property.

4.2.6 Subject Property 6 – Mercury Die/Mission Corrugated

4.2.6.1 Historical Use Information

Historical use information for Mercury Die/Mission Corrugated, including historical aerial photographs and historical topographic maps, was obtained from EDR (Appendix B) (EDR, 2013a through 2013c).

4.2.6.1.1 Aerial Photographs

Historical aerial photographs from 1928, 1938, 1949, 1956, 1965, 1976, 1989, 1994, 2002, 2005, 2009, 2010, and 2012 were reviewed to assess historical land uses and identify evidence of hazardous substance releases. These photographs, obtained from EDR, are included in Appendix B1. Table 4-14 summarizes descriptions of the features identified in the immediate vicinity of Subject Property 6.

TABLE 4-14

Historical Use Information – Historical Aerial Photographs (Subject Property 6 – Mercury Die/Mission Corrugated)

Map Date	Findings
1928	Subject Property 6 appears to be an undeveloped area along with its immediate surroundings to the west, south, and north. Some development can be noticed to the east.
1938	Subject Property 6 is present in this photograph.
1949	Subject Property 6 is outside the coverage of this photograph.
1956	Subject Property 6 is visible in this photograph. Major development can be noticed to the surroundings of Subject Property 6.
1965	No significant changes from the previous photograph are noted at Subject Property 6.
1976	No significant changes from the previous photograph are noted at Subject Property 6.
1989	No significant changes from the previous photograph are noted at Subject Property 6.
1994	No significant changes from the previous photograph are noted at Subject Property 6.
2002	No significant changes from the previous photograph are noted at Subject Property 6.
2005	Subject Property 6 is outside the coverage of the photograph.
2009	Subject Property 6 is outside the coverage of the photograph.
2010	Subject Property 6 is outside the coverage of the photograph.
2012	Subject Property 6 is outside the coverage of the photograph.

4.2.6.1.2 Topographic Maps

In addition to the historical aerial photographs, historical topographic maps dated 1896, 1900, 1901, 1926, 1953, 1966, 1972, 1981, and 1994 were reviewed for Subject Property 6. Table 4-15 summarizes the results of the historical topographic map review. Historical maps, obtained from EDR, are included in Appendix B2.

TABLE 4-15

Historical Use Information – Historical Topographic Maps (Subject Property 6 – Mercury Die/Mission Corrugated)

Map Date	Findings
1896	Subject Property 6 and the area surrounding it are undeveloped.
1900	No significant changes from the previous topographic map are noted at Subject Property 6.
1901	The map scale is too distant to note any significant changes from the 1900 topographic map.
1926	Subject Property 6 appears to be undeveloped in this topographic map. Southern Pacific railroad track is visible south of Subject Property 6.
1953	Subject Property 6 area still appears to be vacant in this topographic map. One building east of Fremont Avenue is visible in this map.

TABLE 4-15

Historical Use Information – Historical Topographic Maps (Subject Property 6 – Mercury Die/Mission Corrugated)

Map Date	Findings
1966	Subject Property 6 is present in this topographic map, along with some buildings to its east, south, and northeast. SR 710 is visible in this map south of Subject Property 6.
1972	No significant changes from the previous topographic map are noted at Subject Property 6.
1981	No significant changes from the previous topographic map are noted at Subject Property 6.
1994	No significant changes from the previous topographic map are noted at Subject Property 6.

4.2.6.1.3 Sanborn Maps

Sanborn Fire Insurance Maps for Subject Property 6 were provided by EDR and were available for 1925, 1930, 1950, 1963, and 1981; however, the Sanborn maps provided did not have coverage for Subject Property 6. Copies of the Sanborn maps provided by EDR are included in Appendix B3.

4.2.6.1.4 Oil and Gas Maps

The online mapping system maintained by DOGGR was reviewed for oil- and gas-related features for Subject Property 6. Subject Property 6 is located within Map 01S-R12W (DOGGR, 2013). No oil- and gas-related features were identified on or within 500 feet of Subject Property 6.

4.2.6.1.5 Flood Control Maps

A flood control map is included as part of the EDR database report (Appendix A1). The overview map in the database report shows that Subject Property 6 is not located within the 100-year flood zone.

4.2.6.2 Other Historical Use Records

No other historical use records were reviewed for this Phase I ISA.

4.2.6.3 Results of Historical Use Information Review

Based on a review of the historical use information (Appendix B), Subject Property 6 has been an industrial facility since at least 1956.

4.2.6.4 Site Reconnaissance

As part of the ISA, CH2M HILL conducted a site reconnaissance of the outside of Subject Property 6 and adjoining properties. The purpose of the site reconnaissance was as follows:

- Observe Subject Property 6 from outside and observe the adjoining properties.
- Identify potential RECs that may be present at Subject Property 6 and adjoining properties.
- Assess current land uses of Subject Property 6 and adjoining properties.

4.2.6.5 Methodology and Limiting Conditions

The site reconnaissance was performed by viewing Subject Property 6 from the outside only because access inside the facilities was not requested during this ISA due to the sensitivity of the project study. In addition, no interviews were conducted for the same reason.

4.2.6.6 Site Observations

On August 12, 2013, CH2M HILL conducted a site reconnaissance of Subject Property 6. Photographs from the reconnaissance are included in Appendix C.

4.2.6.6.1 Subject Property

Subject Property 6 is currently used as a die casting and corrugated fiber manufacturer. Further details of the operations at Subject Property 6 are unknown due to lack of access to the interior of the property. Specific features checked during the site reconnaissance are presented below.

- **Onsite Hazardous Substance Use and Storage:** No hazardous substances were visually observed on Subject Property 6; however, hazardous substances may be stored within the structures on Subject Property 6.
- **Onsite Hazardous Waste Disposal:** No hazardous waste disposal was observed on Subject Property 6.
- **Onsite ASTs/USTs:** One AST was observed near the southern side of Subject Property 6. The storage tank has "corn starch" written on the exterior of the shell.
- **Onsite Pits, Sumps, Drywells, or Catch Basins:** No evidence of current or historical onsite pits, sumps, drywells, or catch basins was observed at Subject Property 6 during the site reconnaissance.
- **Onsite Pole-Mounted Transformers:** One mounted transformer was observed adjacent to Subject Property 6 near the eastern edge of the property. The transformer appeared to be in good condition, although it is unknown whether this transformer contains PCBs.

4.2.6.6.2 Adjoining Properties

Properties that were observed to be adjacent to Subject Property 6 are described below.

- **Auto Salvage:** One Way Auto is adjacent to Subject Property 6 to the east. No potential environmental issues were observed or reported at this property.
- **Railway:** An active railway is located south of Subject Property 6 across Mission Road. No potential environmental issues were observed or reported at this property.
- **Chemical Manufacturing Firm:** A Norchem Corporation property is located west of Subject Property 6. An NFPA panel indicating that hazardous materials were stored at the property was observed on the front of the building.
- **Residential Dwellings:** Residential dwellings are located north of Subject Property 6. No potential environmental issues were observed or reported at this property.

This page intentionally left blank.

SECTION 5

Interviews

5.1 Interviews with Owners

No owners were interviewed as part of this ISA.

5.2 Interviews with Occupants

No tenants or occupants were interviewed as part of this ISA.

5.3 Interviews with Local Government Officials

LARWQCB project manager, Curt Charmley, was interviewed as part of this ISA.

This page intentionally left blank.

SECTION 6

Findings and Conclusions

CH2M HILL performed a Phase I ISA of the Study Area, specifically areas within or adjacent to the four build alternatives (TSM/TDM, BRT, LRT, and Freeway Tunnel Alternatives), in conformance with the scope and limitations of ASTM Practice E 1527-05 (ASTM, 2005). Any exceptions to, or deletions from, this practice are described in Section 7 of this report.

6.1 Findings and Recommendations for Subject Properties

Based on the findings of the ISA, six sites (Subject Properties) were identified as RECs with affected media that could potentially impact the proposed study alternatives. The Subject Properties identified in the ISA are listed in Table 6-1, followed by a discussion of the findings, conclusions, and recommendations for each site.

TABLE 6-1
Summary of ISA Findings for Each Study Alternative

Facility	Address	Media Affected ^a	Study Alternative(s) Affected
Subject Property 1 – Former Circle K Stores (Currently a Chase Bank)	1000 West Valley Boulevard, Alhambra	Soil	BRT
Subject Property 2 – Fashion Master Cleaners	1433 Huntington Drive, South Pasadena	Soil Vapor, Groundwater	BRT, LRT, TSM/TDM
Subject Property 3 – Railroad ROW	North of Valley and SR 710 and immediately south of Mission Road	Soil	TSM/TDM
Subject Property 4 – Elite Cleaners	1310 Fair Oaks Avenue	Soil Vapor, Groundwater	BRT, LRT
Subject Property 5 – Blanchard Landfill	4531 East Blanchard Street, Monterey Park	Soil Vapor	LRT
Subject Property 6 – Mercury Die/Mission Corrugated	3201 West Mission Road, Alhambra	Soil Vapor	LRT, Freeway Tunnel, TSM/TDM

^a Media affected indicates an existing impact or a potential to impact one.

Some potential RECs may be considered *de minimus conditions* that “do not present a threat to public health and the environment and are not RECs.” CH2M HILL did not find any evidence of *de minimus conditions* on the Subject Properties.

The scope of this ISA is limited to review of public records and visual evidence of RECs, and does not include verifying RECs based on environmental testing.

Subject Property 1 – Former Circle K Stores (Currently a Chase Bank) is located at 1000 West Valley Boulevard at the intersection of Valley Boulevard and Atlantic Boulevard in the city of Alhambra (Figure 4-2). This site was previously a Mobil gas station (Mobil Station 18-MJA) with a Circle K store.

This site is immediately adjacent to the BRT Alternative footprint (within 10 to 15 feet) and is known to have soil impacted with VOCs, mostly within 50 feet bgs. GeoTracker has the case status listed as Open-Site Assessment (SWRCB, 2012). The site has elevated concentrations of VOCs, as encountered during the 2012 UST removal; the extent of offsite soil impact is unknown. Reports reviewed from GeoTracker did not indicate groundwater contamination at this site. The depth to groundwater at wells within 1.5 to 2 miles of this site is reported to be 250 to 350 feet bgs. This depth to groundwater is consistent with what was observed in the northwestern San Gabriel Basin (Section 2.6.2.2). Construction activities for the BRT Alternative are expected to be within 10 to 15 feet bgs; therefore, groundwater impacts from this site, if any, will not be a potential issue. Furthermore, a Phase II investigation for offsite soil impacts, prior to any construction activities, is recommended for this site.

Subject Property 2 – Fashion Master Cleaners is located at 1433 Huntington Drive in the city of South Pasadena (Figure 4-3). This site is immediately adjacent to construction activities for Intersection Improvement I-10 for the TSM/TDM Alternative and BRT Alternative footprint (within 10 to 15 feet), and the LRT Alternative. This site is identified in the EDR report under various databases including SLIC, Dry Cleaners, and GeoTracker. According to EDR and GeoTracker, the case status of this facility is listed as Open-Site Assessment (EDR, 2012; SWRCB, 2012). Review of historical reports indicated that the site has VOC-impacted soil (vapor) and groundwater. Groundwater has been encountered at this site at approximately 63 feet bgs.

The LRT Alternative beneath the footprint of this site is designed to be an underground tunnel; hence, impacted groundwater, in addition to soil vapor, could be encountered during construction activities. Reviewed reports indicate that based on local topography, the groundwater flow is expected to be to the east or southeast toward the center of the Main San Gabriel Basin. This groundwater flow direction is toward the LRT alignment. Because of these potential concerns, a Phase II investigation for offsite soil and groundwater should be conducted prior to any construction activities.

Subject Property 3 – Railroad ROW is located north of Valley Boulevard and SR 710, and immediately south of Alhambra Avenue/Mission Road, in the city of Alhambra (Figure 4-4). Portions of the proposed LRT Alternative, TSM/TDM Alternative associated with Other Road Improvement T-1, and the Freeway Tunnel Alternative pass through a portion of Railroad ROW. However, LRT and Freeway Tunnel Alternatives beneath the footprint of this site are designed to be underground tunnels; the shallowest ground impact during construction is expected to be 60 feet bgs. Therefore, soil impacts, if any, from this property may not have an impact on the LRT and Freeway Tunnel Alternatives. The TSM/TDM Alternative is designed to be an underpass at this location; the shallowest depth of ground disturbance during construction is anticipated to be 15 feet bgs. Although information is currently unavailable regarding environmental impacts at this location, if any, railroads are typically anticipated to have environmental impacts from various chemical constituents present in railroad ties and wooden posts (wood-treating chemicals).

A Phase II investigation is recommended for this location to determine whether any environmental impacts are present in the soil because of the nature of the operation (railroad ROW).

Subject Property 4 – Elite Cleaners is located at 1310 Fair Oaks Avenue in the city of Alhambra (Figure 4-5). This site is immediately adjacent to the BRT Alternative footprint (within 10 to 15 feet) and the LRT Alternative. This site is identified in the EDR report under various databases including SLIC, RCRA-SQG, Dry Cleaners, and GeoTracker. According to EDR and GeoTracker, the case status of this facility is listed as Open-Site Assessment (EDR, 2012; SWRCB, 2012).

For Elite Cleaners, a previous soil vapor investigation conducted at this site indicated the presence of VOCs at depths up to 75 feet bgs. Previous investigation also has confirmed VOC impacts to groundwater. According to the records of the Los Angeles County Hydraulic and Water Conservation Department, depth to groundwater encountered in the monitoring well nearest to this facility in 2006 was 178 feet bgs (EPC, 2008). In addition, this site is a facility of interest for EPA for its ongoing investigation within the San Gabriel Valley Area 3 Superfund Site. The LARWQCB project manager for this facility mentioned during a telephone interview that this facility may have impacted groundwater beneath the area (Charmley, 2013a). The LRT Alternative beneath this site footprint is designed to be an underground tunnel; hence, impacted groundwater, in addition to soil vapor, could be encountered during construction activities. Therefore, a Phase II investigation is recommended to determine whether soil vapor and the groundwater plume have migrated beneath Fair Oaks Avenue, which is within the proposed study alternative alignment.

Subject Property 5 – Blanchard Landfill is located between Blanchard Avenue and McBride Avenue at 4531 East Blanchard Street in the city of Monterey Park (Figure 4-6). Minor portions of the proposed LRT Alternative are immediately adjacent to the former landfill boundary.

The former Blanchard Disposal Facility had operations predating current solid waste management regulations by more than 30 years; as such, the facility did not have a liner, leachate collection and recovery system, waste acceptance and screening procedures, or record keeping substantiating waste acceptance and operational

practices. Moreover, a methane gas investigation conducted in 2010 indicated methane concentrations exceeding the CCR Title 27 regulatory limit of 5 percent by volume in air for methane monitoring wells installed at the site (Kleinfelder, 2010). GeoTracker lists the facility cleanup status as Open-Verification Monitoring (SWRCB, 2012). Groundwater at this location is anticipated to be at 60 feet bgs (Kleinfelder, 2010). Because construction activities for the LRT Alternative in this area are designed to be aerial improvements and not tunnels, the potential to encounter impacted groundwater, if any, during construction activities is minimal. However, structural reinforcements for the project at this area could reach greater depths; hence, groundwater impacts should also be considered a potential issue. Therefore, a Phase II investigation for soil, soil vapor, and groundwater, and a methane gas survey are recommended for this site to determine whether VOC/methane vapors and/or impacted groundwater have migrated beneath the proposed study alternative footprint.

Subject Property 6 – Mercury Die/Mission Corrugated is located at 3201 West Mission Road in the city of Alhambra (Figure 4-7). Segments of the Freeway Tunnel Alternative, LRT Alternative, and parts of the TSM/TDM Alternative associated with Other Road Improvement T-1 run through the Mercury Die/Mission Corrugated facility. Mercury Die/Mission Corrugated has shallow soil vapor impacts beneath its footprint. Based on a conversation with the project manager for the EPA Area 3 Superfund Site remedial investigation/feasibility study (RI/FS), EPA is planning to conduct additional investigations at this facility to investigate whether deeper impacts to soil and groundwater are present (Waite, 2013). Based on hydrogeologic information for the San Gabriel Basin (Section 2.6.2.2), the depth to groundwater at this location could be in the range of 100 to 200 feet bgs. Therefore, a Phase II investigation is recommended to determine whether soil vapor and impacted groundwater are present beneath the proposed LRT Alternative, Freeway Tunnel Alternative, or parts of the TSM/TDM Alternative alignments associated with Other Road Improvement T-1, or beneath Mission Road since a portion of proposed ROW for the TSM/TDM Alternative passes through Mission Road.

6.2 Additional Recommendations

Additional recommendations are summarized below.

- As is typical with older freeways such as those in the Study Area, the potential for encountering ADL on the sides of the freeway is high; ADL is associated with exhaust from former lead-gasoline combustion in motor vehicles. Therefore, prior to construction activities, an ADL investigation must be conducted along these areas. This investigation could be conducted during the recommended Phase II investigations. If potential ADL impacts are present within these areas, the Caltrans ADL guidance document should be followed to determine whether soil disturbed or excavated from these locations during construction can be reused, or whether the soil needs to be disposed (Caltrans, 2007).
- Transformers located within areas where construction activities will take place should be removed or relocated. However, prior to this removal, these transformers will need to be tested or investigated to determine whether PCBs are present. If present, proper disposal measures should be adopted according to regulatory requirements.
- Yellow traffic markings, thermoplastics, and paint, if located on the SR 710 freeway within the project limits, may contain hazardous levels of lead chromate, which would be a potential danger to both the environment and human health. Typically, these materials are removed using sandblasting or air blasting equipment while adhering to applicable OSHA standards, which regulate exposure to workers. These materials should be identified, characterized, and disposed of at a Class I or II disposal facility according to Caltrans and California regulatory requirements.
- Additionally, based on the potential for bridges within the Study Area to have been constructed prior to 1989 (when the federal ban on asbestos use was implemented), ACM may be present in these structures. The presence of these materials would pose a potential hazardous waste risk if demolition of structures is required. An asbestos survey should be conducted in conformance with EPA NESHAP 40 CFR regulations, and SCAQMD Rule 1403 (EPA, 2012; SCAQMD, 1989). Additionally, notification to SCAQMD prior to any structure renovation or demolition may be required as applicable under Rule 1403 (d)(1)(B). The potential for ACM

should be identified and characterized; if present, ACM should be disposed of at a Class I or II disposal facility according to Caltrans and California regulatory requirements.

- In addition, prior to demolition of buildings, the presence of PCBs, asbestos, lead-based paints, mercury, and chlorofluorocarbon-containing equipment should be surveyed, sampled, and characterized for proper disposal, if necessary. The asbestos surveys should be conducted in conformance with applicable EPA NESHAP and SCAQMD regulations as mentioned above.
- Some areas of the study alternatives fall within the footprint of the EPA Area 3 Superfund Site. However, a review of EPA's final RI report prepared by CH2M HILL (2009) indicates that none of the alternatives are in the areas of groundwater contamination characterized and shown in the report. The alternatives are, however, adjacent to the areas of impacted groundwater. Therefore, during construction activities, impacted groundwater could be encountered, and dewatering measures may have to be implemented. If dewatering is needed, proper storage and disposal of extracted groundwater should be planned and adopted.
- If the tunneled alternatives are expected to pass through impacted soil or groundwater, the contractor will be required to set up a temporary stockpiling area at the construction portals so that excavated material can be sampled as it is excavated. A sampling and analysis plan would be required so that the excavated material is classified properly, and so the correct handling methods and appropriate disposal facility are selected according to Caltrans and California regulatory requirements. Water, including construction water, groundwater, and wet weather flows also should be sampled. If necessary, the water can be treated at the construction portal areas by the contractor prior to discharge following an appropriate approved discharge permit into the sewer systems; typically, a contractor is required to have basic water treatment capabilities at the construction site. If the water cannot be treated to meet sewer discharge requirements, or if the volume of water for disposal exceeds the capacity of the discharge permit, it may need to be transported to an offsite disposal location. Disposal of all materials would need to meet all federal, state, and local regulations where applicable.
- The anticipated lining of the tunnel boring machine (TBM) tunnels are expected to be water- and gas-tight, gasketed, precast concrete segmental liners, which will reduce or eliminate entry during operation. Additionally, the tunneling methods proposed for the bored tunnels are pressurized-face TBMs. These closed-face machines reduce or eliminate the potential for uncontrolled entry of groundwater during excavation due to its closed excavation face.

SECTION 7

Deviations

Some deviations from ASTM Standard Practice E 1527-05 (ASTM, 2005) should be noted because of the nature and extent of this Phase I ISA. Due to the sensitivity of the project Study Area, site visits were limited in nature. Facilities were observed from the perimeter; hence, the nature and extent of environmental impacts, if any, at these sites could not be documented. In addition, sites owners were not interviewed during this ISA.

SECTION 9

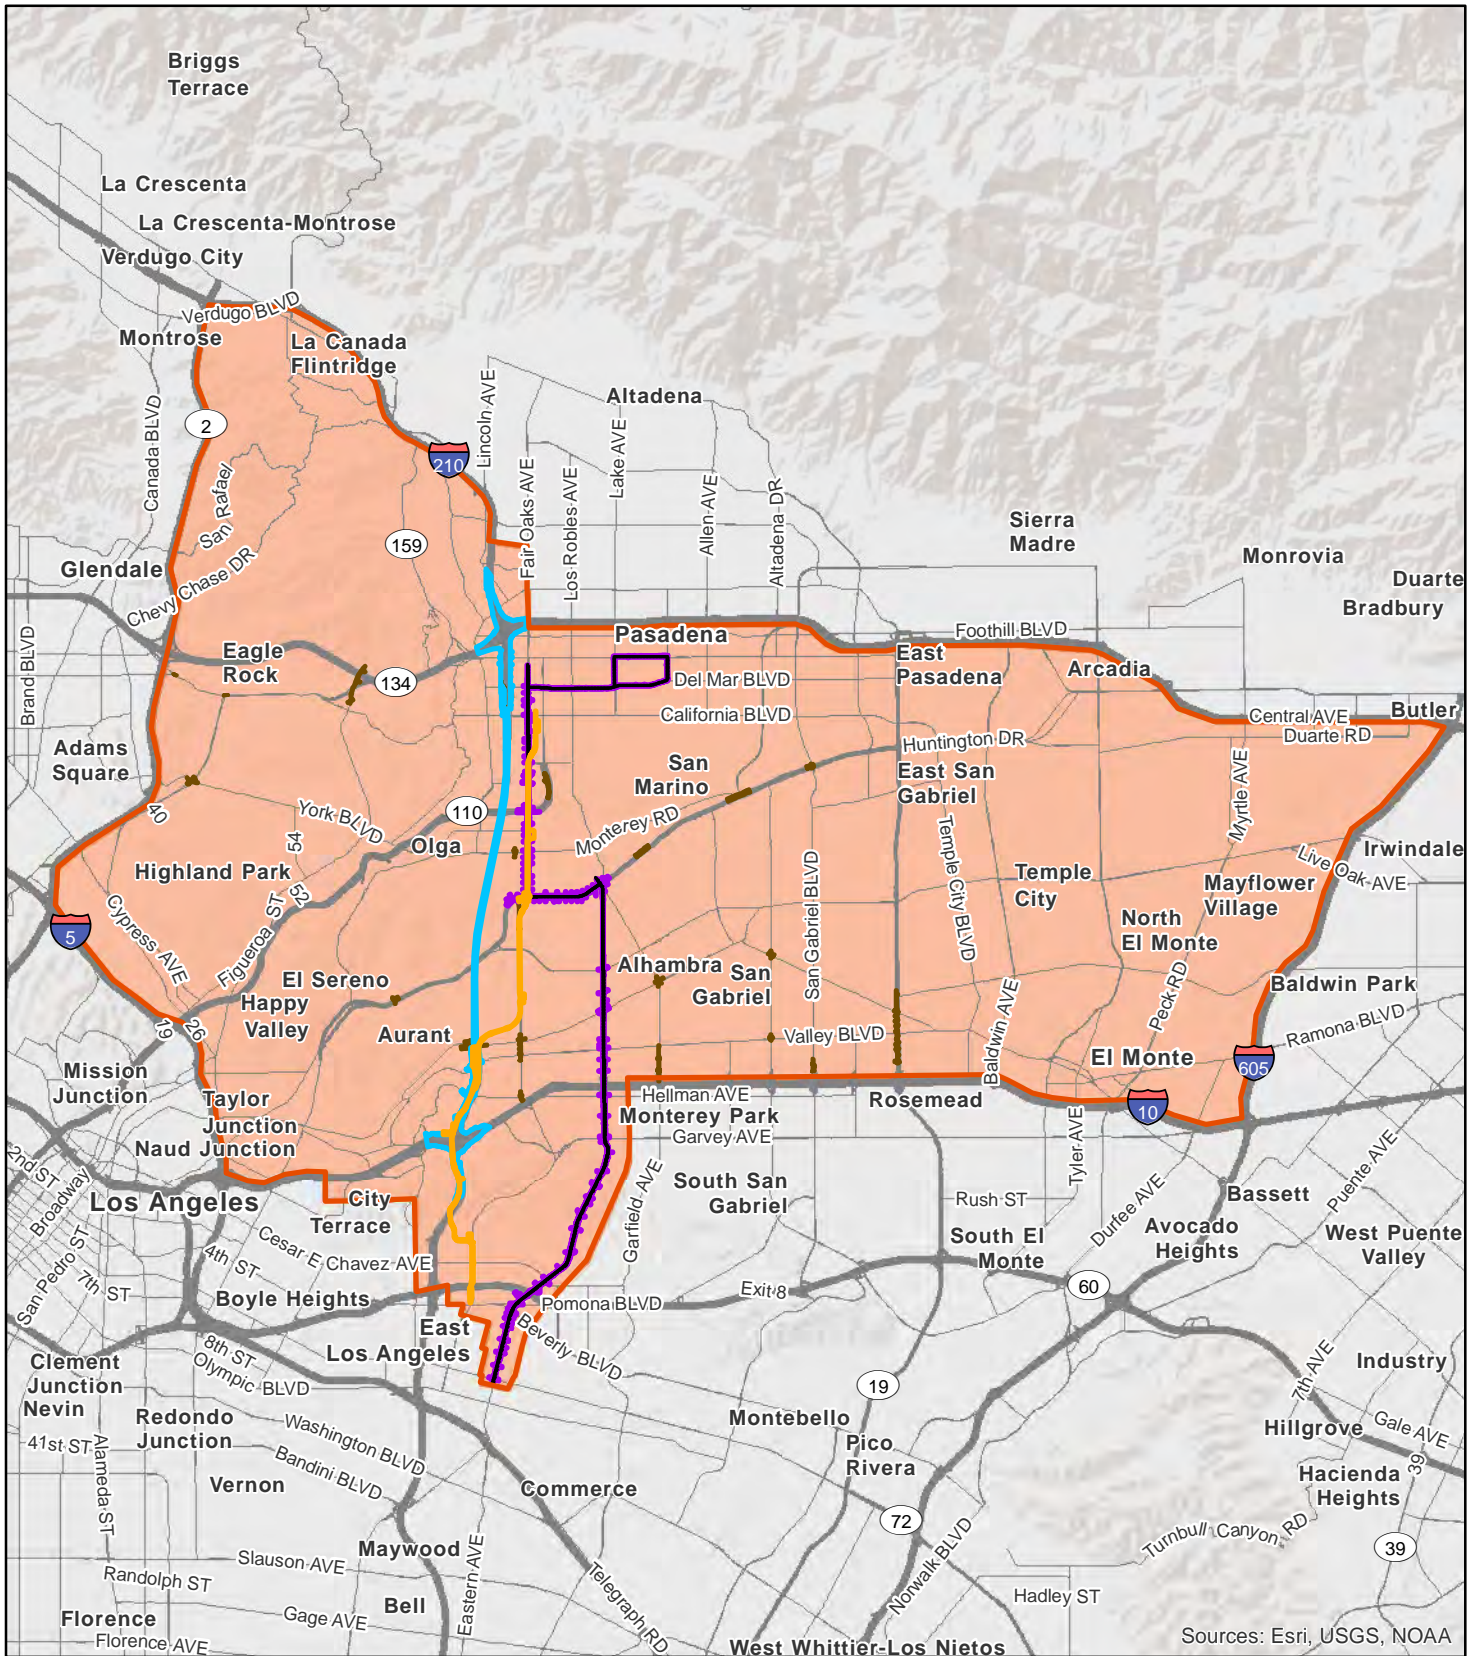

Qualifications of Environmental Professional

Soomodh Abraham has 12 years of experience in conducting Phase I and Phase II environmental site assessments and Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) remedial investigations/feasibility studies. Soomodh has been the task manager for site investigations of ADL at various Caltrans Districts 7 and 12 sites. In addition, he has worked on several Phase I and Phase II investigations for the Port of Los Angeles and for various industrial clients such as GE Transportation, NBC Universal, and Honeywell, Inc. during his career. Soomodh has also been involved in planning, budgeting, and project execution including final report preparation for many of the Phase I and Phase II projects.

Alan Bradford is a Professional Geologist (#6119) and Certified Hydrogeologist (No. HG 48) with the State of California. He has 25 years of experience in environmental consulting and has conducted numerous Phase I and II environmental site assessments. He has also supported federal and industrial clients with CERCLA remedial investigations/feasibility studies and Resource Conservation and Recovery Act (RCRA) corrective action.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified.

The Map ID column refers to the Map ID-Focus Map(s) of the listed site.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

FEDERAL RECORDS

NPL: Also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.

A review of the NPL list, as provided by EDR, and dated 06/07/2012 has revealed that there is 1 NPL site within the searched area.

<u>Site</u>	<u>Address</u>	<u>Map ID</u>
<i>SAN GABRIEL VALLEY (AREA 3)</i>	<i>MAIN ST & GAFIELD AVE</i>	<i>0-8,8,9,9,11,11,11,11,11,12,12</i>

CERCLIS: The Comprehensive Environmental Response, Compensation and Liability Information System contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the CERCLIS list, as provided by EDR, and dated 12/27/2011 has revealed that there are 5 CERCLIS sites within the searched area.

<i>A-AMERICAN ENVIRONMENTAL MISSION PLATING CO</i>	<i>3033 W MISSION RD 5416 ALHAMBRA AVE</i>	<i>350-11 362-10</i>

CERC-NFRAP: Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

A review of the CERC-NFRAP list, as provided by EDR, and dated 12/28/2011 has revealed that there are 7 CERC-NFRAP sites within the searched area.

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 08/19/2011 has revealed that there are 3 CORRACTS sites within the searched area.

RCRA-TSDF: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRA-TSDF list, as provided by EDR, and dated 09/11/2012 has revealed that there are 2 RCRA-TSDF sites within the searched area.

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 09/11/2012 has revealed that there are 24 RCRA-LQG sites within the searched area.

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 09/11/2012 has revealed that there are 2 RCRA-CESQG sites within the searched area.

RCRA-NonGen: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA-NonGen list, as provided by EDR, and dated 09/11/2012 has revealed that there are 20 RCRA-NonGen sites within the searched area.

EXECUTIVE SUMMARY

FTTS: FTTS tracks administrative cases and pesticide enforcement actions and compliance activities related to FIFRA, TSCA and EPCRA (Emergency Planning and Community Right-to-Know Act) over the previous five years. To maintain currency, EDR contacts the Agency on a quarterly basis.

A review of the FTTS list, as provided by EDR, and dated 04/09/2009 has revealed that there are 8 FTTS sites within the searched area.

HIST FTTS: A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

A review of the HIST FTTS list, as provided by EDR, and dated 10/19/2006 has revealed that there are 9 HIST FTTS sites within the searched area.

SSTS: Section 7 of the Federal Insecticide, Fungicide and Rodenticide Act, as amended (92 Stat. 829) requires all registered pesticide-producing establishments to submit a report to the Environmental Protection Agency by March 1st each year. Each establishment must report the types and amounts of pesticides, active ingredients and devices being produced, and those having been produced and sold or distributed in the past year.

A review of the SSTS list, as provided by EDR, and dated 12/31/2009 has revealed that there are 2 SSTS sites within the searched area.

EXECUTIVE SUMMARY

2020 COR ACTION: The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

A review of the 2020 COR ACTION list, as provided by EDR, and dated 11/11/2011 has revealed that there is 1 2020 COR ACTION site within the searched area.

EXECUTIVE SUMMARY

CA SWEEPS UST: Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

A review of the CA SWEEPS UST list, as provided by EDR, and dated 06/01/1994 has revealed that there are 232 CA SWEEPS UST sites within the searched area.

CA HAZNET: The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000-1,000,000 annually, representing approximately 350,000-500,000 shipments. Data from non-California manifests & continuation sheets are not included at the present time. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, & disposal method. The source is the Department of Toxic Substance Control is the agency

A review of the CA HAZNET list, as provided by EDR, and dated 12/31/2011 has revealed that there are 830 CA HAZNET sites within the searched area.

CA ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the CA ENVIROSTOR list, as provided by EDR, and dated 11/05/2012 has revealed that there

EXECUTIVE SUMMARY

EDR PROPRIETARY RECORDS

Manufactured Gas Plants: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the Manufactured Gas Plants list, as provided by EDR, has revealed that there is 1 Manufactured Gas Plants site within the searched area.

Environmental Interest/Information System

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

US EPA Risk Management Plan (RMP) database stores the risk management plans reported by companies that handle, manufacture, use, or store certain flammable or toxic substances, as required under section 112(r) of the Clean Air Act (CAA).

Completed Area Name: PROJECT WIDE
 Completed Sub Area Name: Not reported
 Completed Document Type: Preliminary Endangerment Assessment Report
 Completed Date: 02/08/2001
 Comments: PEA -SITE 3(GREASE RACK): The objective of the Site Investigation (SI) is to assess the nature and extent of contamination through soil gas sampling and soil sampling. A total of twelve soil gas samples were collected at approximately 15-feet below ground surface (bgs) from 12 borings. Data from the soil gas samples were used to select three soil boring locations for collection of subsurface soil samples. The subsurface soil samples were collected at depths of 1,5,10 and 20 feet bgs for a total of twelve samples. Based on the findings of the SI, DTSC concurred with the report's No Further Action recommendation in a letter dated February 8, 2001.

Installation Restoration Program (IRP). DTSC concurred with the decision document's NFA recommendation in a letter dated April 2, 2001. DTSC's agreement to remove this site from the IRP list does not represent certification or validation that the entire facility does not have any hazardous substance releases. Should DTSC become aware of potential hazardous substance releases, it will initiate appropriate action to correct the problem.

Completed Date:	05/07/2001
Comments:	DLIST - SITE 3 (GREASE RACK): The purpose of the decision document is to present the selected action for the Site 3 - grease rack in accordance with the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). It has been determined that the selected remedy of No Further Action (NFA) is protective of human health and the environment. The decision document describes the selected action based on the results of the Preliminary Assessment (PA) and Site investigation (SI) reports conducted under the Installation Restoration Program (IRP). DTSC concurred with the decision document's NFA recommendation in a letter dated April 2, 2001. DTSC's agreement to remove this site from the IRP list does not represent certification or validation that the entire facility does not have any hazardous substance releases. Should DTSC become aware of potential hazardous substance releases, it will initiate appropriate action to correct the problem.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D004
Waste name: ARSENIC

Waste code: D006
Waste name: CADMIUM

Waste code: D007
Waste name: CHROMIUM

Waste code: D008
Waste name: LEAD

Violation Status: No violations found

Hazardous Waste Summary:

Waste code: D001
 Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D005
Waste name: BARIUM

Waste code: D006
Waste name: CADMIUM

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:

Waste code:	D001
Waste name:	IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code:	D002
Waste name:	A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE

MAP FINDINGS
FOCUS MAP 5

Map ID Site Database(s) EPA ID Number

GENZYME GENETICS (Continued)

1000223801

FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name:

A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: F003
Waste name:

THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Violation Status: No violations found

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CERCLIS (Comprehensive Environmental Response, Compensation, and Liability Information System) is the Superfund database that is used to support management in all phases of the Superfund program. The system contains information on all aspects of hazardous waste sites, including an inventory of sites, planned and actual site activities, and financial information.

CRITERIA AND HAZARDOUS AIR POLLUTANT INVENTORY

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

POTW: Not reported
 Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
 Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D003
Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Waste code: D007
Waste name: CHROMIUM

Waste code: D008
Waste name: LEAD

Waste code: D009
Waste name: MERCURY

Waste code: F003
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Handler Activities Summary:

U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

Hazardous Waste Summary:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D018
Waste name: BENZENE

Violation Status: No violations found

FINDS:

Registry ID: 110002611184

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:

Waste code: D001

Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002

Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D003

Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Waste code: D008

Waste name: LEAD

Waste code: D009

Waste name: MERCURY

Waste code: D011

Waste name: SILVER

Waste code: D022

Waste name: CHLOROFORM

Waste code: F001

Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLOROETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE, AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: F002

Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE,

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Completed Info:

Completed Area Name: PROJECT WIDE
 Completed Sub Area Name: Not reported
 Completed Document Type: Preliminary Endangerment Assessment Report
 Completed Date: 02/27/2004
 Comments: Site Characterization complete. Chemicals of concern in soil include PAH and Lead. A Removal Action Plan is being prepared for the Site.

Completed Area Name: PROJECT WIDE
 Completed Sub Area Name: Not reported
 Completed Document Type: Preliminary Endangerment Assessment Report
 Completed Date: 08/01/1996
 Comments: DTSC completed review of the Supplemental PEA and determined "No further action is necessary, with respect to investigati and remediation of hazardous substances at the site"

Completed Area Name: PROJECT WIDE
 Completed Sub Area Name: Not reported
 Completed Document Type: Preliminary Endangerment Assessment Report
 Completed Date: 08/24/1992
 Comments: The Dept completed review of PEA and recommended for further action.

Completed Area Name: PROJECT WIDE
 Completed Sub Area Name: Not reported
 Completed Document Type: Site Screening
 Completed Date: 04/06/1992
 Comments: The site consists of 2.4 acres. The former gas plant prop- erty is presently occupied by several industrial and warehousing concerns. The surrounding area is fully developed and occupied by commercial and industrial uses. Black discolored soil was noted in the 1966 Site Recon- naissance. In the early 1900s, the site was used by gas companies for the production of 'manufactured gas,' made from coal and oil. The byproducts from this operation were tars, oils, sludges, lampblack, etc, which were sold for various industrial uses. Some of these byproduct residues have been found in soils at former towne gas plant sites. Out of these, polycyclic aromatic hydrocarbons (PAH) are hazardous. Also, elevated levels of heavy metals such as lead, arsenic, and cyanides were found at a few sites. A PEA is required at the site to determine if any emergency removal aciton is required to reduce the potential threat to public health & the environment. The Dept received a Notice of Intent dated March 20, 1992, to initiate the PEA.

Completed Area Name: PROJECT WIDE

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Removal Action Completion Report
Completed Date:	03/29/2007
Comments:	Remedial Action Completion report approved for all three parcels. Parcel 815 has been remediated to unrestricted land use standards. For Parcels 835 and 859 the accessible areas have been remediated to unrestricted land use standards however there remains some contamination beneath the existing structures. This contamination will be remediated at a later time when those soils become accessible. Institutional controls will be utilized for the remaining contamination at these two parcels to prevent inappropriate land uses.

Completed Info:

Completed Area Name: PROJECT WIDE
 Completed Sub Area Name: Not reported
 Completed Document Type: Preliminary Endangerment Assessment Report
 Completed Date: 02/27/2004
 Comments: Site Characterization complete. Chemicals of concern in soil include PAH and Lead. A Removal Action Plan is being prepared for the Site.

Completed Area Name: PROJECT WIDE
 Completed Sub Area Name: Not reported
 Completed Document Type: Preliminary Endangerment Assessment Report
 Completed Date: 08/01/1996
 Comments: DTSC completed review of the Supplemental PEA and determined "No further action is necessary, with respect to investigati and remediation of hazardous substances at the site"

Completed Area Name: PROJECT WIDE
 Completed Sub Area Name: Not reported
 Completed Document Type: Preliminary Endangerment Assessment Report
 Completed Date: 08/24/1992
 Comments: The Dept completed review of PEA and recommended for further action.

Completed Area Name: PROJECT WIDE
 Completed Sub Area Name: Not reported
 Completed Document Type: Site Screening
 Completed Date: 04/06/1992
 Comments: The site consists of 2.4 acres. The former gas plant prop- erty is presently occupied by several industrial and warehousing concerns. The surrounding area is fully developed and occupied by commercial and industrial uses. Black discolored soil was noted in the 1966 Site Recon- naissance. In the early 1900s, the site was used by gas companies for the production of 'manufactured gas,' made from coal and oil. The byproducts from this operation were tars, oils,

SO CAL GAS/PASADENA MGP (Continued)

S105557616

sludges, lampblack, etc, which were sold for various industrial uses. Some of these byproduct residues have been found in soils at former town gas plant sites. Out of these, polycyclic aromatic hydrocarbons (PAH) are hazardous. Also, elevated levels of heavy metals such as lead, arsenic, and cyanides were found at a few sites. A PEA is required at the site to determine if any emergency removal action is required to reduce the potential threat to public health & the environment. The Dept received a Notice of Intent dated March 20, 1992, to initiate the PEA.

Completed Area Name: PROJECT WIDE
 Completed Sub Area Name: Not reported
 Completed Document Type: Technical Workplan
 Completed Date: 12/20/2005
 Comments: Workplan is for some supplemental characterization at 859 Raymond Ave, Pasadena. Sample locations were previously discussed and approval was given in the form of an email.

Completed Area Name: PROJECT WIDE
 Completed Sub Area Name: Not reported
 Completed Document Type: Fieldwork
 Completed Date: 02/06/2006
 Comments: Fieldwork completed

Completed Area Name: PROJECT WIDE
 Completed Sub Area Name: Not reported
 Completed Document Type: Removal Action Completion Report
 Completed Date: 03/29/2007
 Comments: Remedial Action Completion report approved for all three parcels. Parcel 815 has been remediated to unrestricted land use standards. For Parcels 835 and 859 the accessible areas have been remediated to unrestricted land use standards however there remains some contamination beneath the existing structures. This contamination will be remediated at a later time when those soils become accessible. Institutional controls will be utilized for the remaining contamination at these two parcels to prevent inappropriate land uses.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

California Department of Toxic Substances Control EnviroStor System (DTSC-EnviroStor) is an online search and Geographic Information System (GIS) tool for identifying sites that have known contamination or sites for which there may be reasons to investigate further. The EnviroStor database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of

Environmental Interest/Information System

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN

Hazardous Waste Summary:

Waste code: 135
 Waste name: 135

Waste code: D001
 Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
 Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D005
 Waste name: BARIUM

Waste code: D006
 Waste name: CADMIUM

Waste code: D007
 Waste name: CHROMIUM

Waste code: D008
 Waste name: LEAD

Waste code: D009
 Waste name: MERCURY

Waste code: D011
 Waste name: SILVER

Waste code: F001
 Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLOROETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE, AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

	Waste code: 725 Waste name: 725		
	Waste code: 791 Waste name: 791		
	Waste code: D001 Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.		
	Waste code: D002 Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.		
	Waste code: D003 Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Biennial Reports:

Last Biennial Reporting Year: 2011

Annual Waste Handled:

Waste code:	D001
Waste name:	IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
Amount (Lbs):	73970.1
Waste code:	D002
Waste name:	A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
Amount (Lbs):	23200.2
Waste code:	D003
Waste name:	A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.
Amount (Lbs):	1021

Environmental Interest/Information System

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

US Emissions & Generation Resource Database (EGRID) contains data on emissions and resource mix for virtually every power plant and company that generates electricity in the United States.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ELECTRIC GENERATOR

HAZARDOUS WASTE BIENNIAL REPORTER

US EPA RACT/BACT/LAER Clearinghouse (RBLC) database contains case-specific information on the "Best Available" air pollution technologies that have been required to reduce the emission of air pollutants from stationary sources (e.g., power plants, steel mills, chemical plants, etc.). RACT, or Reasonably Available Control Technology, is required on existing sources in areas that are not meeting national ambient air quality standards. BACT, or Best Available Control Technology, is required on major new or modified sources in clean areas. LAER, or Lowest Achievable Emission Rate, is required on major new or modified sources in non-attainment areas.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 Pathway: GROUND WATER PATHWAY
 Scoring: 4

Summary Details:

Conditions at listing September 1983): San Gabriel Valley Area 3) is a ground water plume that runs along the axis of the west fork of the Alhambra Creek in the San Gabriel ground water basin in Alhambra, Los Angeles County, California. The plume is about 2 miles long and 1 mile wide. Ground water is contaminated with trichloroethylene (TCE) and perchloroethylene (PCE), according to analyses by State agencies and local water companies. Many public wells in the area exceed the EPA Suggested No Adverse Response Levels

SNARL) for TCE and PCE. Approximately 100,000 people are affected. Cities and public water companies in the area have tested to ensure that their water supplies contain less than 5 parts billion (ppb) of TCE, a level considered safe for human consumption. When alternative methods of reducing the TCE level below 5 ppb are not effective, wells are removed from service. Status June 1984): A supplemental sampling program of contaminated wells will begin soon to get a snapshot view of the degree of contamination. The State Department of Health Services and EPA are preparing to initiate a remedial investigation/ feasibility study to determine the aerial and vertical extent of contamination and to develop alternatives for treatment and management of the problem. EPA continues its investigation to identify sources of the contamination. This site, along with the three other San Gabriel Valley sites, was added to the NPL in May 1984 because it involves a serious problem that required taking immediate remedial action.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D018
Waste name: BENZENE

Violation Status: No violations found

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
