P R E F A C E

This publication is a compilation of traffic counts made by the Traffic Department of the City of Los Angeles during the calendar year 1970.

These counts are entirely within the physical boundaries of the City of Los Angeles and were taken on surface streets and some freeway ramps connecting to surface streets. Vehicle counts on freeways proper are not included.

Data from both manual 6-hour counts and 24-hour machine counts are included. The manual counts are identified as such and indicate an expanded 24-hour total. A single * indicates an expanded 24-hour total based on the 6-hour total.

The following information is included in the tabulation. Reading from left to right.

The alphabetical name of the street on which the count was taken and the cardinal direction from the cross street. The use of the term "at" in referring to a machine count indicates the approaches to the intersections were counted. The terms S/O, N/O, E/O and W/O in referring to a machine count indicates that the count was taken south of, north of, east of or west of the cross street mentioned.

The physical description of certain road characteristics is defined by a nine-digit code. The table on the following page defines this code.

There are two alphabetical characters which indicate the nature and origin of the request.

Day of week.

Date.

Data. The following data included:

Twenty-four hour total volume westbound or southbound.
Machine counts only.

Twenty-four hour total volume eastbound or northbound.
Machine counts only

A. M. peak hour for both directions combined and then for individual directions.

P. M. peak hour for both directions combined and then for individual directions.

The time of beginning for each of these peak hours is also included.

Any questions pertaining to the information presented in this publication may be referred to the Survey Division of the Department of Traffic, 461-3553.
