UNITED STATES CENSUS - LOS ANGELES COUNTY

Comparison of the Population of Each Census Tract  
Census of April 1, 1940 and April 1, 1930

On the following six pages are shown the actual and relative change in the population of each census tract of the County of Los Angeles according to the United States Census of April 1, 1940, and April 1, 1930, together with the total population of the City of Los Angeles, the City of Long Beach, and the remainder of the County of Los Angeles.

Method and Source

The tract by tract population of the City of Los Angeles for the year 1940 has been listed first in the numerical order of the tract numbers. Against each tract has been listed the 1930 census population and the actual and relative difference computed. Subsequently and by the same method the tract by tract population of the City of Long Beach and the remainder of the County has been shown.

The tract by tract population for the year 1940 was obtained by courtesy of the Los Angeles Times Research Department, and the 1930 population by courtesy of the Regional Planning Commission.

City and County Totals

The totals shown at the head of each section for the City of Los Angeles, the City of Long Beach, and the remainder of the County of Los Angeles are in all cases the official census population for the respective areas for the year 1940 and for the year 1930.

In the year 1940 these totals agree with the sum of the tract by tract population listed beneath the totals, but in the year 1930 the sum of the tract by tract population does not agree with the census total. The apparent discrepancy is due to the fact that since 1930 there have been changes in the boundaries of the City of Los Angeles and City of Long Beach with the result that in a tract by tract comparison it has been necessary to list under the City of Los Angeles or the City of Long Beach tracts which in 1930 were not incorporated in these cities.
