SUBJECT: Identification of Bus Lines Serving Specific Stop(s)

Identification of bus lines serving specific stop(s) can be very laborious and time consuming. Frequent routing changes can make the matter worse. Fortunately, Customer Information Department maintains a very accurate file of bus lines and stops along these lines. Service Analysis has developed a series of computer programs to query this CCIS database. This memorandum describes how a user can retrieve bus lines serving a stop of interest.

Data retrieval is very straightforward. The user should first consult the attached Master Stop Directory to identify the Stop-ID of bus stop in question. This is shown as an eleven (11) digit field. Other entries in the directory show: (1) Street on which the stop is located (2) Street direction (EB - eastbound, WB - westbound, NS - northbound, SB - southbound) (3) Cross street(s) where stop is located (4) Location of stop relative to cross street (FS - farside, NS - nearside, MB - midblock, OP - opposite the cross street address, AT - at the address shown, etc.) (5) Community where the stop is located.

After identifying the 11 digit Stop-Id, the user should logon to the mainframe computer and after receiving the READY prompt should type SVP and press the enter key. On the Main Service Analysis Menu, select Option No. 11, that is, Systemwide Reports. On the Systemwide Reports Sub-menu, select Option No. 12, that is, Identify Bus Routes Serving Specific Stop(s). On the Data Entry Panel, which should next appear, specify 11 digit Stop-Id. Up to forty-five (45) stops can be specified on this panel. After completing the data entry, enter key should be pressed. The report containing desired information will get printed on the RMT72 Laser Printer located in the Planning Systems Area.

Example - A user wishes to identify all the bus lines serving the far side stop located on W 1st street eastbound at N Broadway and

near side stop located on W 1st street westbound at N Broadway. Using the Master Stop Directory, on page 397, Stop-Ids are identified as 13938068003 and 13938068002. The user follows the sequence of steps outlined above to generate the attached sample report. It should be noted that in the output report non-RTD lines are preceded by a two letter company code (CO - County bus line, LA - City of LA bus line, etc.).

It is also possible to retrieve stoplists for desired lines by using the CCIS database. These stoplists provide information on sequence of stops along selected bus lines, distances between stops, census tracts where stops are located, etc. Instructions to generate these stoplists are documented in a separate memo dated February 7, 1989.
