EXECUTIVE SUMMARY

URS Corporation Americas (URS) was retained by TPG Capital, L.P. care of Paul, Hastings, Janofsky & Walker (collectively PHJW) to conduct a Phase I Environmental Site Assessment (Phase I ESA) of select portions of the Los Angeles Union Station property located in Los Angeles, Los Angeles County, California (Site or subject property). This Phase I ESA was performed in general conformance with the scope and limitations of the following: 1) American Society for Testing and Materials (ASTM) Standard Practice E1527-05, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process*; and 2) the United States Environmental Protection Agency's (EPAs) standards for All Appropriate Inquiries (AAI). This Phase I ESA was also performed in conformance with URS proposal Q10-PHJW01R dated October 26, 2010. In addition, based on the preliminary findings of the Phase I ESA, URS performed limited Phase II testing at the Site to investigate potential environmental concerns identified. The Limited Phase II testing was performed in accordance with URS proposal Q10-PHJW04 dated December 1, 2010.

For descriptive purposes, the subject property has been divided into various areas. These areas include: 1) the Historic Station Area located on the western portion of the Site and outlined in blue on Figure 2; 2) the Rail Line Area running through the central portion of the Site in a north-south orientation and shaded grey on Figure 2; 3) the Gateway Area located on the eastern portion of the Site and outlined in red on Figure 2; 4) the Amtrak Use Area located west and east of the Rail Line Area in the central portion of the Site and outlined in orange on Figure 2; and 5) the CA Drop Forge Area located on the northwestern portion of the Site and outlined in light red on Figure 2.

The Site consists of numerous pieces of various assessor parcel numbers that have changed over time with redevelopment activities. The 9 parcels associated with the Site encompass approximately 41 acres of land. The main address for the subject property, which technically applies to the Historic Station Building on the western portion of the Site, is 800 N Alameda Street. The Amtrak Use Area also contains the addresses 407 and 413 Bauchet Street. The CA Drop Forge Area contains the address 203 E College Street.

The Historic Station Area is improved with two primary buildings: the Historic Station Building on the central and western portion of the area, and the Amtrak Office & Baggage Building on the eastern portion of the area. The Historic Station building was completed in 1939 and has had various restorations over time. The Amtrak Office & Baggage Building consists of a series of connected stucco buildings on three levels that were reportedly completed in the early 1990's. The buildings in this area are used for office administration and rail support activities.

The Rail Line Area is improved with ten rail lines and five concrete passenger platforms on the southern portion of the area, which combine to five rail lines on the northern portion of the area. No significant structures exist in this area.

The Gateway Area consists of a strip of land running along the western, southern, and eastern

portion of the Gateway Station Complex entrance. The Gateway Station Complex entrance is the eastern access to the rail tunnel and passenger platforms. The western and southern strips of land consist of concrete driveways and general storage areas. The eastern strip consists of an undeveloped dirt lot (southeast corner), an access ramp from N Vignes Street to the Gateway Station, and a surface and subsurface parking structure (northeast portion). The subsurface parking garage is believed to extend beneath the access ramp and onto a portion of the undeveloped lot.

The Amtrak Use Area is two strips of land: one along the eastern portion of the central Rail Line Area and one along the western portion of the central Rail Line Area. The eastern portion of this area contains three buildings and support storage structures. The buildings are occupied by Amtrak and consist of a Maintenance Building on the southern portion of the area, and a Signal Shop and Switch Building on the northern portion of the area. The Switch Building consists of a three-story concrete building constructed in the 1930's. The Signal Shop consist of a single-story metal building with two attached concrete/concrete block structures completed between 1976 and 1989 (access to the two attached structures was not available). The Maintenance Building consists of a single story concrete building constructed in the 1930's. The western portion of the area contains a newly constructed (2009) metal Amtrak Maintenance Building, and a Locker Building that was completed in the early 1940's.

The CA Drop Forge Area is named for the current occupant and exists adjacent to the west of the northern portion of the Rail Line Area. California Drop Forge uses this portion of the Site for making metal molds for aircraft parts. The area is improved with a main corrugated metal building and a support metal storage building. The exterior of this area consists of asphalt surface and equipment storage. Based on historic research during this ESA, the building was constructed prior to 1976 with expansion prior to 1989.

Based on historical research, the subject property had a wide range of previous use prior to current development including residential, commercial, and industrial activities. Except as noted in the conclusions for this ESA, this historic use was investigated during prior assessment documents or during redevelopment and the likelihood for significant environmental impairment to exist is considered low.

During this Phase I ESA, URS reviewed 75 prior assessment documents or environmental-related correspondences provided by PHJW. The prior assessment activities were generally performed to evaluate environmental conditions beneath the Site prior to construction activities, or during closure of environmentally sensitive features. The majority of these environmental features, and accordingly the assessments themselves, were performed on off-site locations.

URS has performed a Phase I ESA of select portions of the Los Angeles Union Station property located at 800 N Alameda Street, 407 & 413 Bauchet Street, and 203 E College Street in Los Angeles, California in general accordance with the scope and limitations of the ASTM Standard Practice E1527-05. This assessment revealed the following current recognized environmental conditions (RECs) for the subject property.

- Groundwater beneath the Site is impacted by volatile organic compounds (VOCs). The highest concentrations of VOCs exist on the off-site portion of the Gateway Area, near the intersection of N Vignes Street and E Cesar Chavez Avenue. The data, in conjunction with the documented groundwater flow to the south/southeast, suggests the impact is originating from off-site sources to the northeast. Numerous potential off-site sources were identified for surrounding properties during the performance of this ESA. Evidence obtained to date suggests the RWQCB has agreed with this opinion and is not requiring further action for groundwater by the Site owner. The Site monitoring well network remains on the subject property and should be appropriately managed during any planned redevelopment activities.
- The Rail Line Area is impacted by petroleum hydrocarbons, lead, and semi-VOCs (SVOCs) from historic rail operations. Based on previous testing, the impact appears primarily isolated to the upper 10 feet of soil, and does not pose a threat to groundwater. No further action is warranted under a continued rail use scenario. In the event redevelopment of a Rail Line Area is planned, specialized handling and disposal requirements will likely apply to Rail Line Area soils.
- Crude oil tanks and industrial activities were identified on the northern portion of the Rail Line Area from prior to 1888 through 1906. While this historic use poses a potential environmental concern to the subject property, given the absence of significant impact to groundwater down gradient of this location, as determined during previous testing, and current and anticipated future use for rail activities, this historic use is unlikely to pose a significant environmental concern to the subject property.

This assessment revealed the following historic REC for the subject property.

- Auto repair with gas and oil use was identified on the northeast portion of the Gateway Area from 1950 through the 1980's. The majority of these uses appear to exist on off-site portions of the Gateway Area, however some may have existed on the subject property. Given that the northern portion of the Gateway Area on the subject property was significantly excavated during development of the parking structure, the potential for this historic use to pose an ongoing environmental concern to the Site is considered low.

While not posing as RECs to the Site, URS identified the following notable condition.

- A number of abandoned and active clarifiers were observed on the subject property. Given the dilute nature of wastes entering clarifiers, the absence of reported historic use of chlorinated solvents on the Site, and testing performed on the one previously closed clarifier, the remaining clarifiers pose a low potential for significant environmental concern. Future abandonment proceedings will be required for these features and limited action to remove any potential residual industrial impact to soils may be required.
- Phase II testing performed during this ESA did not identify evidence of a release from a gasoline underground storage tank (UST) removed in 2002 from the eastern portion of the Amtrak Use Area. URS recommends tasking Amtrak with obtaining formal closure of the former UST.
- Potential hazards related to building materials and equipment were identified in the Switch Building on the eastern Amtrak Use Area. In the absence of a formal survey, the use of the Switch Building poses a potential environmental concern to the buildings occupants.
- Soils on the eastern boundary of the Gateway Area undeveloped lot could contain SVOCs. The origin for these SVOCs appears to be historic use of the eastern adjacent property for gas purification. Evidence for significant concentrations of SVOCs requiring regulatory action to be present at this location was not identified. Under a redevelopment scenario, specialized handling and disposal requirements may apply to soils on this portion of the subject property.
- Previous testing of soils, outside of areas of other influences, identified sporadic impact by petroleum hydrocarbons, lead, and SVOCs. The testing results did not identify impact warranting further action but did reveal potential soil management issues under a redevelopment scenario.
- The current housekeeping practices at the CA Drop Forge Area were observed to be poor. Significant staining was observed both on the interior and exterior of the area. While Phase II testing performed during this ESA did not identify significant impact to subsurface soils, limited access was available for the subject property, and limited localized impact could be present on this area of the property. URS recommends improved housekeeping practices on the subject property and cleanup of any residual impact encountered under a redevelopment scenario.

This Executive Summary is presented for convenience only and should not be used in lieu of information presented in the entire report.

1.0 INTRODUCTION

URS Corporation Americas (URS) was retained by TPG Capital, L.P. (TPG) care of Paul, Hastings, Janofsky & Walker (PHJW) to conduct a Phase I Environmental Site Assessment (Phase I ESA) of select portions of the Los Angeles Union Station property located in Los Angeles, Los Angeles County, California (Site or subject property). This Phase I ESA was performed in general conformance with the scope and limitations of the following: 1) American Society for Testing and Materials (ASTM) Standard Practice E1527-05, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process*; and 2) the United States Environmental Protection Agency's (EPAs) standards for All Appropriate Inquiries (AAI). This Phase I ESA was also performed in conformance with URS proposal Q10-PHJW01R dated October 26, 2010. In addition, based on the preliminary findings of the Phase I ESA, URS performed limited Phase II testing at the Site to investigate potential environmental concerns identified. The Limited Phase II testing was performed in accordance with URS proposal Q10-PHJW04 dated December 1, 2010.

1.1 Purpose

The purpose of this report is to identify *recognized environmental conditions* (RECs) in connection with the Site. The ASTM Standard Practice E1527-05 defines RECs as the following: *The presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures of the property or into the ground, groundwater, or surface water of the property. The term includes hazardous substances or petroleum products even under conditions in compliance with laws. The term is not intended to include de minimis conditions that generally do not present a material risk of harm to public health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.*

1.2 Scope of Work

The scope of work for this project included the following primary tasks:

- Performance of a reconnaissance survey of the subject property to make visual observations of existing Site conditions and activities, and a drive-by survey of the area within ¼-mile of the Site to observe types of general land use;
- Review and evaluation of a federal, state, and local database list search provided by Environmental Data Resources, Inc., (EDR) of known or potential hazardous waste sites or landfills, and properties currently under investigation for environmental violations.

- Inquiries conducted in person, by telephone, or in writing to the appropriate regulatory agencies for information regarding environmental permits, violations or incidents, and/or the status of enforcement actions at the subject property.
- Interviews conducted with a Site owner representative and occupant, contact of which was provided by PHJW.
- Review of pertinent, readily available documents and maps regarding local physiographic and hydrogeologic conditions in the Site vicinity.
- Review of background and historical information obtained by others during previous Phase I ESAs.
- Review and evaluation of prior assessment documents for the Site or neighboring properties, as provided by PHJW or obtained from local regulatory agencies.
- Limited evaluation of select non-ASTM considerations, including a visual inspection for potential asbestos-containing materials, compliance status for backup generators and related fuel storage, a visual inspection for potential mold and mildew growth from water damage, an assessment of storm water management, and an evaluation of universal waste handling and disposal.
- Limited testing of soil to investigate preliminary findings of the Phase I ESA.
- Preparation of this summary report.

In accordance with the ASTM Standard, this ESA is considered valid for 180 days from the date of the report.

1.3 User Reliance

This report has been prepared for use solely by TPG, and shall not be relied upon by or transferred to any other party, or used for any other purpose, without the express written authorization of URS.

1.4 Deletions & Deviations

It was the intent of the Phase I ESA to make all appropriate inquiry into the previous ownership and uses of the property consistent with good commercial or customary practice. Furthermore, it was the intent of this document to permit TPG to satisfy one of the requirements to qualify for the innocent landowner defense to CERCLA liability. This Phase I ESA did not deviate from general requirements set forth in the ASTM Standard Practice E1527-05 and EPA's AAI, and no significant data gaps were identified with the following exceptions:

- Access was limited in certain areas of the Site as referenced in this report;
- Minimal interview with Site occupants (Amtrak) was performed; and
- Select local regulatory agency files were not accessible in the time frame of this ESA.

Based on the balance of information obtained during this ESA, in conjunction with the findings of the limited Phase II testing, the above data gaps are not anticipated to adversely affect the findings of this ESA.

1.5 Limitations

In evaluating the Site, URS has also relied upon representations and information furnished by individuals, agencies, and companies noted in the report with respect to existing operations and property conditions and the historic uses of the property to the extent that the information obtained has not been contradicted by data obtained from other sources. Accordingly, URS accepts no responsibility for any deficiency, misstatements or inaccuracy contained in this report as a result of misstatements, omissions, misrepresentations, or fraudulent information provided by the persons interviewed or documents reviewed.

URS' objective is to perform our work with care, exercising the customary thoroughness and competence of earth science, environmental and engineering consulting professionals, in accordance with the standard for professional services for a national consulting firm at the time these services are provided. The opinions expressed are based on the probability for occurrence of environmental related liability, based on limited information and limited scope of services. It is important to recognize that even the most comprehensive scope of services may fail to detect environmental conditions and potential liability at a particular site. Therefore, URS cannot act as insurers and cannot "certify or underwrite" that a site is free of environmental contamination, and no expressed or implied representation or warranty is included or intended in this report except that the work was performed within the limits prescribed with the customary thoroughness and competence of our profession.

The passage of time, manifestation of latent conditions, or occurrence of future events may require further exploration at the Site, analysis of the data, and reevaluation of the findings, observations, conclusions, and recommendations expressed in the report.

The findings, observations, conclusions, and recommendations expressed by URS in this report are limited by the scope of services and should not be considered an opinion concerning the compliance of any past or current owner or operator of the Site with any federal, state, or local law or regulation. No warranty or guarantee, whether express or implied is made with respect to the data reported or findings, observations, conclusions, and recommendations expressed in this report.

1.6 URS Qualifications

This Phase I ESA was prepared by URS representative Scott Allin, a California Class II Registered Environmental Assessor (REA II). Mr. Allin has over 20 years of experience providing national and international environmental due diligence services, and directing environmental remedial actions for various local and state regulatory agencies. Mr. Allin meets the AAI definition of an Environmental Professional and is qualified to exercise professional judgment to develop opinions and conclusions regarding the presence of releases or threatened releases of hazardous substances.

This Phase I ESA was reviewed by URS representative Debra Stott, a California Professional Geologist (PG). She has over 19 years of project-related experience conducting environmental due diligence projects ranging from vacant land to industrial parks to multi-story office buildings. Currently, Ms. Stott is responsible for oversight of real estate related environmental auditing/assessment/site investigation work in the URS Los Angeles Office. Ms. Stott is a California licensed Professional Geologist and Registered Environmental Assessor. Ms. Stott meets the AAI definition of an Environmental Professional and is qualified to exercise professional judgment to develop opinions and conclusions regarding the presence of releases or threatened releases of hazardous substances.

2.0 SITE DESCRIPTION

Site description information was obtained from various sources during this ESA. The location of the Site is shown in Appendix A (Figure 1: *Site Location Map* and Figure 2: *Site Layout Map*). Photographic documentation is provided in Appendix B.

For descriptive purposes, the subject property has been divided into various areas. These areas include: 1) the Historic Station Area located on the western portion of the Site and outlined in blue on Figure 2; 2) the Rail Line Area running through the central portion of the Site in a north-south orientation and shaded grey on Figure 2; 3) the Gateway Area located on the eastern portion of the Site and outlined in red on Figure 2; 4) the Amtrak Use Area located west and east of the Rail Line Area in the central portion of the Site and outlined in orange on Figure 2; and 5) the CA Drop Forge Area located on the northwestern portion of the Site and outlined in light red on Figure 2.

2.1 Legal Description

The Site consists of numerous pieces of various assessor parcel numbers that have changed over time with redevelopment activities. An ALTA/ASCM Land Title Survey prepared by Mollenhauer Group (Alta Survey), which was provided by the Site owner representatives, provides a detailed description of the subject property and is included in Appendix C. According to the Alta Survey, the 9 parcels associated with the Site encompass approximately 41 acres of land. According to the Environmental Data Resources, Inc. (EDR) database report obtained during this ESA (see Appendix D), the Site resides in the general vicinity of Latitude North 34.0574 and Longitude West 118.2342. The main address for the subject property, which technically applies to the Historic Station Building on the western portion of the Site, is 800 N Alameda Street. The Amtrak Use Area also contains the addresses 407 and 413 Bauchet Street. The CA Drop Forge Area contains the address 203 E College Street. Other addresses for the subject property were not identified during this ESA. The subject property boundaries, as represented to URS, are outlined on Figure 2.

2.2 Improvements

The subject property consists of portions of the Los Angeles Union Station, which is the main passenger train station in the City of Los Angeles and surrounding area. General Site improvements are summarized by area below.

Historic Station Area

The Historic Station Area is improved with two primary buildings: the Historic Station Building on the central and western portion of the area, and the Amtrak Office & Baggage Building on the eastern portion of the area. The Historic Station building was completed in 1939 and has had various restorations over time. The central portion of the building contains a waiting room, ticket offices, and various retail businesses. The eastern portion of this building contains two story offices

with the bottom story being occupied by the Site owner (Catellus) and the top story being occupied by 30 Sixty Advertising Company. A subsurface parking garage exists beneath the eastern office area. Limited inspection of the office area was performed during this ESA. The western portion of the building consists of open and enclosed walkways.

The Amtrak Office & Baggage Building consists of a series of connected stucco buildings on three levels that were reportedly completed in the early 1990's. The bottom floor is accessed from a subsurface tunnel beneath the rail lines to the east and consists of a passenger waiting area connected to the historic waiting area. The second floor consists of an Amtrak occupied luggage handling and storage area. The third floor contains executive offices occupied by Amtrak. Limited inspection of the office areas was performed during this ESA.

The exterior of the Historic Station Area contains parking and driveways on the western portion, courtyards intermixed with the Historic Station Building on the central portion, and parking areas and concrete ramps accessing the Amtrak Office & Baggage Building. Parking areas and drive paths surround the buildings. Amtrak maintains numerous storage totes on the eastern exterior of their building (access of which was not available) that reportedly store maintenance materials in support of baggage handling. Intermittent landscaped areas exist through the area.

A Metropolitan Transit Authority (MTA) subway runs in a northwest-southeast orientation beneath the northern portion of the Historic Station Area.

Rail Line Area

The Rail Line Area is improved with ten rail lines and five concrete passenger platforms on the southern portion of the area, which combine to five rail lines on the northern portion of the area. The rail lines exist on crushed rock surface. Areas surrounding the rail lines are concrete or asphalt paved. A subsurface access tunnel runs in an east-west orientation beneath the rail platforms with access ramps and elevators to the surface. The MTA subway runs in a northwest-southeast orientation beneath the southern portion of the Rail Line Area.

Gateway Area

The Gateway Area consists of a strip of land running along the western, southern, and eastern portion of the Gateway Station Complex entrance. The Gateway Station Complex entrance is the eastern access to the rail tunnel and passenger platforms. The western and southern strips of land consist of concrete driveways and general storage areas. The eastern strip consists of an undeveloped dirt lot (southeast corner), an access ramp from N Vignes Street to the Gateway Station, and a surface and subsurface parking structure (northeast portion). The subsurface parking garage is believed to extent beneath the access ramp and onto a portion of the undeveloped lot. Vents for the subsurface MTA subway tunnel exist on the southwest portion of the undeveloped lot, and vents for the subsurface parking garage exist on the northern portion of the undeveloped lot and

parking area. The MTA subway runs in a northwest-southeast orientation beneath the southern portion of the Gateway Area.

Amtrak Use Area

The Amtrak Use Area is two strips of land: one along the eastern portion of the central Rail Line Area and one along the western portion of the central Rail Line Area. The eastern portion of this area contains three buildings and support storage structures. The buildings are occupied by Amtrak and consist of a Maintenance Building on the southern portion of the area, and a Signal Shop and Switch Building on the northern portion of the area. The Switch Building consists of a three-story concrete building constructed in the 1930's. The Signal Shop consist of a single-story metal building with two attached concrete/concrete block structures completed between 1976 and 1989 (access to the two attached structures was not available). The Maintenance Building consists of a single story concrete building constructed in the 1930's.

The western portion of the area contains a newly constructed (2009) metal Amtrak Maintenance Building, and a Locker Building that was completed in the early 1940's (access to the locker building was not available).

The exterior of the Amtrak Use Area consists of concrete and asphalt pavement. Amtrak maintains several storage containers and canopies north of the eastern Maintenance Building.

CA Drop Forge Area

The CA Drop Forge Area is named for the current occupant and exists adjacent to the west of the northern portion of the Rail Line Area. The area is improved with a main corrugated metal building and a support metal storage building. The exterior of this area consists of asphalt surface and equipment storage. Based on historic research during this ESA, the building was constructed prior to 1976 with expansion prior to 1989.

2.3 Owner

According to information obtained during this ESA, the Site is currently owned by Prologis or an associated entity.

2.4 Zoning

According the Los Angeles County Assessors website, the Site is zoned for commercial/industrial uses.

2.5 Utilities

Utilities provided to the Site include electricity, natural gas, public drinking water, telephone, and sanitary sewer services. Electricity, water, and sanitary sewer services are reportedly provided by the City of Los Angeles Department of Water and Power. Natural gas is reportedly provided by California Gas Company.

2.6 Current Use

The Site is currently used by Amtrak for non-rail car maintenance activities, passenger support services, and office uses. The station currently services both Amtrak trains and local Metropolitan Transit Authority (MTA) commuter rail lines. The Site is also used by Catellus and 30 Sixty Advertising Company for office uses. The Site also contains various retail businesses supporting passengers within the rail waiting areas. California Drop Forge uses the northwestern portion of the Site for making metal molds for aircraft parts.

3.0 REGIONAL DESCRIPTION

Regional information was obtained from sources listed below and from observations obtained during the Site reconnaissance.

3.1 Topography

Topography of the Site and immediately surrounding area is characterized as relatively flat with a slight slope to the south-southeast. Hills exist to the west and northwest. The Los Angeles, California USGS Topographic Map, dated 1994, shows that the average elevation of the Site is approximately 283 feet above mean sea level (msl).

3.2 Surface Water

According to topographic maps reviewed during this ESA, the nearest surface water body to the Site is the concrete lined Los Angeles River, which is located approximately 0.4-mile east of the central portion of the Site.

3.3 Floodplains

According to floodplain information obtained from EDR, the Site is not located within a 100-year or 500-year flood plain (Federal Emergency Management Agency's, Flood Insurance Rate Map Community Panel 06037C).

3.4 Geology

According to prior assessment documents reviewed during this ESA (see Section 4.8), geology beneath the Site consists of the following:

- Up to 30 feet of artificial fill material consisting primarily of silty sand, silt, sand, and clay, with various amounts of construction debris (concrete and brick);
- Approximately 40 to 70 feet of Holocene-age alluvium primarily consisting of sand, silty sand, and silt with varying amounts of gravel and cobbles;
- Approximately 10 to 70 feet of Pleistocene alluvium consisting of sand and silt with varying amounts of gravel; and
- Beneath these sediments is the Miocene-age Puente Formation consisting of interbedded sandstone and siltstone.

According to the book *The Last of the Great Stations, 50 Years of the Los Angeles Union Passenger Terminal* by Bill Bradley dated 1992, 400,000 cubic yards of fill material was used during construction to raise the subject property 12-16 feet above the northern and eastern roadways. The origin for this fill material was reportedly from Forte Moore Hill, which was historically used primarily for residential purposes.

According to the 2003 Munger Map Book (map page W-62) and the California Department of Oil and Gas Online Mapping System, there are no permitted oil or gas wells on the Site. However, the Site is located in a historically active oil producing region of Southern California. The mainly abandoned Downtown Los Angeles Oil Field is located approximately 1 mile to the south and the Los Angeles City Oil Field is located approximately 1.5 miles to the north and west. There are no permitted active oil and gas wells within a one-mile radius of the Site. The nearest active oil wells exist several miles to the east. The nearest abandoned oil well is identified as “Metrorail Unknown” which is located just south of the 101 Freeway near the Los Angeles River.

According to the City of Los Angeles Fire Department methane hazard zones have not been identified or delineated within the area of the subject property or within the city boundaries. Given the absence of oil production activities in the immediate vicinity of the Site, oil and gas wells and the potential presence of methane is not anticipated to pose an environmental concern for the Site.

3.5 Hydrology

According to prior assessment documents (see Section 4.6), the Site is underlain by continental stream deposits of the (unconfined) Gaspar aquifer measuring approximately 80 to 100 feet in thickness. Shallow groundwater occurs at depths ranging from approximately 28 to 58 feet below ground surface (bgs). Groundwater beneath the Site flows in a southeasterly direction.

Dewatering activities were reportedly performed in the Gateway Area during construction of the MTA Subway Tunnel and the subsurface parking garage. These dewatering activities altered groundwater flow beneath the Site during operation and, according to prior assessment documents, resulted in migration of industrial contaminants in the direction of the Site from off-site sources to the east. Further discussion regarding Site-specific groundwater quality is provided in Section 4.6.

According to EDR, no groundwater production wells exist within a one-mile radius of the central portion of the Site.

3.6 Surrounding Properties

The immediate vicinity of the Site includes commercial and industrial properties. URS observed the following uses during the Site reconnaissance.

Historic Station Area

North: The area is bordered to the north by high-density residential buildings, followed by E Cesar Chavez Avenue and the Terminal Annex Building currently occupied by Coresite Telecom.

South: The area is bordered to the south by the Metropolitan Water District (MWD) building, followed by the Santa Ana Freeway and parking areas and mixed commercial properties.

East: The area is bordered to the east by the Rail Line Area.

West: The area is bordered to the southwest by a commercial building occupied by 1st Five LA and to the northwest by high-density residential buildings. Beyond these uses is N Alameda Street, followed by mixed commercial/retail uses. Beyond N. Alameda Street to the northwest is a Chevron Service Station, and to the southwest (beyond the Santa Ana Freeway) is a federal jail.

Rail Line Area

North: The area is bordered to the north by a recycling facility.

South: The area is bordered to the south by the Santa Ana Freeway followed by parking and mixed commercial and light industrial uses.

East: The southern portion of the area is bordered by the east by the Gateway Area and Gateway Station complex.

West: The southern portion of the area is bordered to the west by the Historic Station Area and high-density residential buildings. The central portion of the area is bordered to the west by the western portion of the Amtrak Use Area, followed by the Terminal Annex Building and a US Post Office facility. The northern portion of this area is bordered to the west by an undeveloped (former industrial) property, and the CA Drop Forge Area.

Gateway Area

North: The area is bordered to the north by E Cesar Chavez Avenue followed by a parking area, Clara Street and mixed commercial uses. To the northeast (beyond N. Vignes Street) is the County Jail facility.

South: The area is bordered to the south by the Santa Ana Freeway followed by parking and mixed commercial and light industrial uses.

East: The area is bordered by the east by N. Vignes Street/Ramirez Street and a Denny's Restaurant and the Piper Tech city building.

West: The area is bordered to the west by the Rail Line Area.

Amtrak Use Area

North: The area is bordered to the north by N. Vignes Street and the Rail Line Area.

South: The area is bordered to the south by E. Cesar Chavez Avenue and other Site areas.

East: The area is bordered to the east by Avila Street and mixed commercial uses, followed by N. Vignes Street and the County Jail facility.

West: The area is bordered to the west by the Terminal Annex Building and the US Post Office facility.

CA Drop Forge Area

North: The area is bordered to the north by a recycling facility.

South: The area is bordered to the south by the Rail Line Area.

East: The area is bordered to the east by the Rail Line Area.

West: The area is bordered to the west by College Street and Alhambra Avenue, beyond which is an undeveloped former industrial facility.

While industrial activities were identified in the surrounding area, no current specific environmental concerns were noted for adjacent properties inspected by URS from the public right-of-way, with the exception of the undeveloped lot west of the CA Drop Forge Area. According to interviewees, this lot was recently demolished and reportedly received a violation for not performing an environmental

Privileged and Confidential
Attorney Work Product /
Attorney Client Communication

assessment related to historic industrial use. The interviewee indicated an environmental assessment is currently being performed on this property. Additional discussions regarding off-site environmental conditions are presented in Section 6.0 of this report.

4.0 SITE AND REGIONAL HISTORY

4.1 Historic Records Review

Historic records review consisted of obtaining readily available records from EDR. These included aerial photographs, topographic maps, and Sanborn fire insurance maps. Summary review tables for each of these sources are included in Appendix E. Copies of the documents are also provided in Appendix E. A combined summary of the information obtained from the records is provided below by Site area. Identified potential environmental concerns from historic records review is provided in Section 4.1.1.

It should be noted that the magnitude of records coverage and size of the subject property did not allow for a detailed description of each feature observed. In addition, a number of features depicted on Sanborn maps were illegible.

Historic Station Area

In the late 1800's the Historic Station Area was occupied by numerous residential dwellings, identified as *Chinese Quarters*. Intermingled with the residential dwellings were various commercial and industrial businesses including a stable/coral, a vineyard and winery/distillery, a lumber company, a paper company, and a well/water pipe manufacturing company. The majority of the commercial and industrial properties were located on the northern portion of the area, primarily off-site on the current High-Density Residential areas. By 1928, commercial/industrial activities appear to increase with east-west oriented rail lines existing on the northern portion of the area. By 1938 these historic uses are no longer present and the Historic Station Building is under construction. By 1947, the historic station is completed with the current rail baggage building along the eastern portion of the area. A blacksmith and auto repair facility are present on the off-site portion of the area (1st Five LA property) in 1950, which is replaced by parking areas by 1953. Various minor changes to the rail support structures are observed between original construction of the Historic Station Building and the late 1980's. Visual evidence (removed structures and disturbed land) for construction of the MTA subway tunnel is evident in 1989, and the current Amtrak Office & Baggage Building is present by 1994.

Rail Line Area

The Rail Line Area was consistent with the Historic Station Area in the late 1800's being occupied primarily by residential dwellings. Commercial businesses identified in the Rail Line Area included a lumber yard, warehousing, and stables. Between 1888 and 1906, the northern end of the Rail Line Area (south of the CA Drop Forge Area) contains illegible industrial activities with crude oil tanks. The existing rail lines were present from 1950 onward. Similarly to the Historic Station Area, visual evidence for the construction of the MTA subway tunnel is observed in 1989, which appears to be constructed via tunneling beneath the rail lines.

Gateway Area

The Gateway Area consisted primarily of residential dwellings from 1888 to 1920. By 1950 various small scale industrial businesses, including *Auto Repair with Gas & Oil*, occupied the northeastern portion of the area (potentially on-site but primarily off-site). These uses appear to continue into the 1980's. The central portion of the area was used as a baggage loading dock in the 1960's. The southern undeveloped Gateway Area lot was occupied by a brewing company (1950) which eventually became a beer warehouse (1968). Redevelopment of this area to current uses began in the 1980's.

Amtrak Use Area

The Amtrak Use Area was used primarily for residential purposes from 1888 to 1920. By 1938 the current Amtrak Switch building is present on the northern portion of the area. By 1947 the current Amtrak Locker Building is present on the western portion of the area. By 1950, the current Amtrak Maintenance Building is present on the southeast portion of the area. At this time, along with the Amtrak Switch Building are three other structures south of this building, including a tool house and pump house. Adjacent to the pump house is a large AST, potentially containing water. The AST is removed by 1954, and storage structures are added adjacent to the Maintenance Building around this time. By 1989 the current Amtrak Signal Shop building is present on the northeastern portion of the area.

CA Drop Forge Area

In 1888 the CA Drop Forge Area contained several small structures listed as occupied by an oil burning supply company and asphalt refining company with a number of oil tanks. By 1894 the area is occupied by a lumber company. The area was undeveloped in 1947, and contains a single structure used as a mail shed in 1956. By 1976 a new building is present, which appears to be expanded to the current sized building by 1989.

4.1.1 Identified Potential Environmental Concerns

While historic industrial activities were apparent on a numerous portions of the subject property, the following specific potential environmental concerns were identified for the Site in the historic records reviewed.

- Crude oil tanks and industrial activities were identified on the northern portion of the Rail Line Area from prior to 1888 through 1906. Historic testing in this area was not identified during prior assessment document review (see Section 4.6). While this historic use poses a potential environmental concern to the subject property, given the absence of significant impact to groundwater down gradient of this location, as determined during previous testing,

and current and anticipated future use for rail activities, this historic use is unlikely to pose a significant environmental concern to the subject property.

- Auto repair with gas and oil use was identified on the northeast portion of the Gateway Area from 1950 through the 1980's. The majority of these uses appear to exist on off-site portions of the Gateway Area, however some may have existed on the subject property. Given that the northern portion of the Gateway Area on the subject property was significantly excavated during development of the parking structure, the potential for this historic use to pose an ongoing environmental concern to the Site is considered unlikely.
- The historic use of the CA Drop Forge Area for oil burning supply and asphalt refining with a number of oil tanks was identified as a potential environmental concern warranting further testing. Limited Phase II testing performed on the CA Drop Forge Area is described in Section 8.0 of this report.

4.2 Historic Site Occupants

URS obtained a City Directory Abstract from EDR to review historic occupants of the Site and adjoining properties. The City Directory Abstract included a review of available local city directories from 1924 through 2006. A copy of the City Directory Abstract is included in Appendix E. According to EDR, the earliest listing for 800 N Alameda Street occurs in 1924 and 1933 under the names *Kuong Yee Wo & Co Chinese Mdse and Suey Kee Oriental Goods*. In 1942 the Los Angeles Union Passenger Terminal is listed. The remaining listings include rail companies (Amtrak and Southern Pacific) and various office and retail businesses.

According to prior assessment documents (see Section 4.6), Amtrak has leased the Site since 1971.

4.3 Historic Site Ownership

A chain-of-title report review was not included in this ESA. According to interviewees and prior assessment documents, the Site was historically owned by three railroad companies: Southern Pacific, Atchison-Topeka & Santa Fe, and Union Pacific. Catellus purchased the Site in 1989, and was subsequently purchased by Prologis. No other prior ownership information was obtained during this ESA.

4.4 Environmental Liens or Use Limitations

According to Mr. Tom Payne, owner representative with Prologis, no environmental related liens or use limitations exist for the subject property.

4.5 Valuation Reduction for Environmental Issues

According to Mr. Tom Payne, owner representative with Prologis, no valuation reductions for environmental issues exist for the subject property. TPG is not aware of valuation reductions for environmental issues for the subject property.

4.6 Prior Assessment(s)

During this Phase I ESA, URS reviewed 75 prior assessment documents or environmental-related correspondences provided by PHJW. A Prior Assessments Document Review Summary table is provided in Appendix F.

The prior assessment activities were generally performed to evaluate environmental conditions beneath the Site prior to construction activities, or during closure of environmentally sensitive features (e.g.: USTs). The majority of these environmental features, and accordingly the assessments themselves, were performed on off-site locations. The general location of the testing performed for each document is provided in the summary table in Appendix F. The assessments included testing of soil, soil gas, and groundwater. The media tested for each prior assessment document is also provided in the summary table in Appendix F.

The following summation, opinions and conclusions are drawn based on the balance of the information provided in the prior assessment documents.

- 1) The Rail Line Area is impacted by petroleum hydrocarbons, lead, and semi-volatile organic compounds (SVOCs) from historic rail operations. Based on previous testing, the impact appears primarily isolated to the upper 10 feet of soil, and does not pose a threat to groundwater. No further action is warranted under a continued rail use scenario. In the event redevelopment of a Rail Line Area is planned, specialized handling and disposal requirements will likely apply to Rail Line Area soils.
- 2) Groundwater beneath the Site is impacted by volatile organic compounds (VOCs). The highest concentrations of VOCs exist on the off-site portion of the Gateway Area, near the intersection of N Vignes Street and E Cesar Chavez Avenue. The data, in conjunction with the documented groundwater flow to the south/southeast, suggests the impact is originating from off-site sources to the northeast. Evidence obtained to date suggests the RWQCB has agreed with this opinion and is not requiring further action for groundwater by the Site owner. The monitoring well network remains on the subject property and should be appropriately managed during any planned redevelopment activities.

Privileged and Confidential
Attorney Work Product /
Attorney Client Communication

- 3) Soils on the eastern boundary of the Gateway Area undeveloped lot could contain SVOCs. The origin for these SVOCs appears to be historic use of the eastern adjacent property for gas purification. Evidence for significant concentrations of SVOCs requiring regulatory action to be present at this location was not identified. Under a redevelopment scenario, specialized handling and disposal requirements may apply to soils on this portion of the subject property.

- 4) Previous testing of soils, outside of areas of other influences, identified sporadic impact by petroleum hydrocarbons, lead, and SVOCs. The testing results did not identify impact warranting further action but did reveal potential soil management issues under a redevelopment scenario.

5.0 SITE INSPECTION AND INTERVIEWS

URS inspected accessible interior and exterior portions of the Site for evidence of RECs. This included features listed in ASTM Standard Practice E1527-05, but is subject to limitations specified in this report, and the ASTM Standard. Inspection activities were performed on November 2 and 11, 2010, and photographic documentation is presented in Appendix B. URS also interviewed individuals provided as knowledgeable of current and historic Site conditions.

5.1 Interviews

During this ESA Update, URS interviewed the following individuals regarding current and historic use of the subject property: 1) Mr. Tom Payne, owner representative with Catellus; 2) Ms. Roxana Ferguson, property manager and owner representative with Catellus; 3) Scott Firmian, Engineer with AMB Engineering Services (Site contractor for maintenance); 4) Carl Carrier, Plant Manager with CA Drop Forge; and 5) Mr. Wade Smith, environmental representative with Amtrak. Information obtained from interviewees is provided in various sections of this report, as referenced.

5.2 Site Features

As indicated previously, the subject property consists of portions of the Los Angeles Union Station, which is the main passenger train station in the City of Los Angeles and surrounding area. The western portion of the Site exists at street level and the rail lines and eastern portion of the Site are elevated up to 30-feet above surrounding grade. An access tunnel connects the Historic Station Area and Gateway Area, and an MTA subway tunnel runs beneath the southern portion of the Site in a northwest-southeast orientation, which connects to the passenger tunnel. Area specific features observed during URS' Site inspection are summarized below.

Historic Station Area

The Historic Station Area is improved with two primary buildings: the Historic Station Building on the central and western portion of the area, and the Amtrak Office & Baggage Building on the eastern portion of the area.

The Historic Station Building is primarily a concrete and wood framed structure with ceramic and concrete floors and ceiling tiles. The Historic Station building was completed in 1939 and has had various restorations over time. The central portion of the building contains a waiting room, ticket offices, and various retail businesses. The eastern portion of this building contains two story offices that contain gypsum wallboard, and carpet and vinyl-tiled floors. A subsurface parking garage exists beneath the eastern office area. The western portion of the building consists of open and enclosed walkways.

The Amtrak Office & Baggage Building consists of a series of connected stucco buildings on three levels that were reportedly completed in the early 1990's. The bottom floor is accessed from a subsurface tunnel beneath the rail lines to the east and consists of a passenger waiting area connected to the historic waiting area. The second floor consists of an Amtrak occupied luggage handling and storage area. The third floor contains executive offices occupied by Amtrak. The building contains concrete walls and foundation with steel support structures, and office areas contain carpet and vinyl-tiled floors and gypsum walls. The office area also includes an exercise facility.

The exterior of the Historic Station Area contains parking and driveways on the western portion, courtyards intermixed with the Historic Station Building on the central portion, and parking areas and concrete ramps accessing the Amtrak Office & Baggage Building. Parking areas and drive paths surround the buildings. Intermittent landscaped areas exist through the area.

Rail Line Area

The Rail Line Area is improved with ten rail lines and five concrete passenger platforms on the southern portion of the area, which combine to five rail lines on the northern portion of the area. The rail lines exist on crushed rock surface. Areas surrounding the rail lines are concrete or asphalt paved. A subsurface access tunnel runs in an east-west orientation beneath the rail platforms with access ramps and elevators to the surface.

Along the southern track area URS observed electrical equipment for the rail lines. A small guard shack exists near the southern boundary of this area. Areas of oil staining, commensurate with rail use, were observed at numerous locations along the rail tracks.

On the north-central portion of the Rail Line Area, near the N. Vignes Street overpass, URS observed electrical equipment and an emergency generator.

Gateway Area

The Gateway Area consists of a strip of land running along the western, southern, and eastern portion of the Gateway Station Complex entrance. The western and southern strips of land consist of concrete driveways and general storage areas. URS observed storage of various construction materials along the central portion of the western strip. An MTA subway passenger terminal exists beneath the southwestern portion of the Gateway Area.

The eastern strip consists of an undeveloped dirt lot (southeast corner), an access ramp from N. Vignes Street to the Gateway Station, and a surface and subsurface parking structure (northeast portion). The subsurface parking garage is believed to extent beneath the access ramp and onto a portion of the undeveloped lot. Vents for the subsurface MTA subway tunnel exist on the southwest portion of the undeveloped lot, and vents for the subsurface parking garage exist on the northern portion of the undeveloped lot and parking area.

During inspection of the undeveloped lot on the southeastern portion of the area, URS observed a white substance (with erosion patterns consistent with a liquid release) on the soil surface of the northwestern corner of the lot. The material was observed covering an area of roughly 10 feet by 40 feet. Interviewees were unaware of the origin for this unknown material. Limited Phase II testing performed within the stained area is described in Section 8.0 of this report.

In addition, URS observed PVC conduits penetrating the soil surface near the MTA subway vent on the southeast undeveloped lot. The purpose for these conduits was not determined. Given the absence of historic use of this lot following installation of the MTA subway, these conduits are likely related to subway construction or utilities, and are unlikely to pose an environmental concern to the subject property.

Amtrak Use Area

The Amtrak Use Area is two strips of land: one along the eastern portion of the central Rail Line Area and one along the western portion of the central Rail Line Area. The western portion of the area contains a newly constructed (2009) Amtrak Maintenance Building, and a Locker Building that was completed in the early 1940's (access to the locker building was not available). The Amtrak Maintenance Building is a metal structure on concrete foundation, and the Locker Building appeared to be concrete construction. Various maintenance materials are stored with the Maintenance Building.

The eastern portion of this area contains three buildings; the Amtrak Maintenance Building on the southern portion of the area, and the Amtrak Signal Shop and Switch Building on the northern portion of the area. The Maintenance Building is a concrete structure completed in the 1930's and stores various maintenance materials and houses a small office area and locker facility. The Signal Shop is a steel reinforced concrete structure with attached concrete block building that was completed between 1976 and 1989 and stores various signal maintenance materials. The concrete block attachment was not accessed and reportedly contains used furniture. Along the southern side of the building was a concrete structure that appeared to be an elevator from street level, although access to the structure was not available. The Switch Building consists of a three-story concrete building with basement constructed in the 1930's.

The Switch Buildings contains some active maintenance activities on the first floor but is generally not used. The basement and first floors of the building contain numerous old machinery and equipment. A floor drain was observed in the basement area, which appeared dry and filled with dirt. The second and third floors of the Switch Building contained old rail switching equipment. Signs were posted in this area to avoid dust inhalation due to hazardous materials (suspected asbestos, mercury or PCBs). Peeling paint was observed on the hallway walls of the Switch Building, which likely contains lead.

The exterior of the Amtrak Use Area consists of concrete and asphalt pavement. Along the northern exterior of the Switch Building URS observed a high voltage transmission station containing transformers. Adjacent to this was a red wooden hut labeled as containing flammable materials. Access to this hut was not available.

Amtrak maintains several storage containers and canopies north of the eastern Maintenance Building. Included in this area was a generator. No staining was observed around the generator. An electrical substation was also observed in this area. To the south of the eastern Maintenance Building, Amtrak uses a cardboard compactor. No staining was observed around the compactor, which existed on concrete.

CA Drop Forge Area

The CA Drop Forge Area exists adjacent to the west of the northern portion of the Rail Line Area. The area is improved with a main corrugated metal building and a support metal storage building. The interior of the structure contains concrete floors with numerous metal forming and machine equipment. An above ground steel hoist is also present within the facility. The interior concrete was observed to be pitted. The exterior of the Site is used to store metal molds and equipment along with material drums. The exterior asphalt was in extremely poor condition.

5.3 Storm Water

Storm water is drained by runoff into storm drains located throughout the parking areas. No significant staining was observed in or around the storm drains. No standing water or evidence of environmental concern was observed for storm water systems during the Site inspection. According to interviewees, Amtrak maintains a storm water management plan and permit for the subject property. These documents were not available for review during this ESA.

5.4 Material & Waste Storage

Municipal dumpsters were observed at various locations along the exterior of the subject property. No environmental concerns were identified for municipal waste disposal at the subject property.

Hazardous materials and wastes observed during URS' Site reconnaissance consisted primarily of maintenance chemicals related to Amtrak's operations within the Amtrak Use Area and Historic Station Area. These maintenance chemicals are used to maintain rail signals, forklifts, and baggage handling equipment, along with other rail-related features. Minimal Amtrak representatives were available to interview regarding hazardous material use at the Site, and no administrative documentation was available. According to prior assessment documents, no rail car maintenance has ever occurred at the subject property. URS observed the following specific material storage occurring.

Amtrak Use Area

- At the western portion of the Amtrak Use Area, URS observed a flammable cabinet containing various paints and thinners. Along the northern exterior of the building was a plastic secondary containment tote containing two drums of waste oil and various containers with universal wastes. This area also included a fenced storage area containing used containers, tires and 5-gallon gasoline cans.
- The first floor of the Switch Building on the eastern portion of the Amtrak Use Area remains used for small scale machining in support of the Signal Shop. Various drums of lubricating oil and other retail quantities of chemicals were being stored on the first floor. A chain hoist exists for transport of heavy equipment to the lower basement level. The basement level contained various old machine parts and appeared unused for a significant period of time. The second floor (above grade) contained old relay equipment that also appeared unused. This equipment likely contains hazardous materials such as asbestos, polychlorinated biphenyls (PCBs), or mercury.
- On the northern exterior of the Switch Building was a red wooden hut that could not be accessed. The hut was labeled as containing flammable materials and according to Amtrak representatives contained paints.
- The Signal Shop on the eastern portion of the Amtrak Use Area contained various small quantities of lubricants and maintenance chemicals. The building also houses numerous lead acid batteries used as backup for switch operation.
- The Amtrak Maintenance Building on the southern portion of the Eastern Amtrak Use Area also contained various small quantities of lubricants and maintenance chemicals. These materials were primarily stored in flammable cabinets. Batteries were also present in this building along with batter spill response kits. Electrical equipment and electrical cables were present throughout the building. On the western exterior of the building was a bin containing used brake pads. On the southern exterior of the building was a relatively new cardboard compactor and bailer.
- To the north of the eastern Amtrak Maintenance Building were various concrete pads and storage sheds. One storage shed contained a hazardous material placard but was observed to be relatively empty with general debris and one 5-gallon bucket of lubricating oil. Along the southern exterior of this building was one drum labeled as containing waste oil pads and one drum of universal waste. These drums were stored on a secondary containment pallet. A hazardous material spill response kit was also present in this area. One concrete pad was labeled as formerly containing a cardboard bailer, and a second was unlabeled but in the ALTA Survey (see Appendix C) was shown as containing fill ports for a UST. This area also contained an emergency generator with internal diesel tank.

While some staining and improper labeling or storage practices (no secondary containment) were observed for hazardous material storage, no significant environmental concerns were identified during URS' Site inspection.

Historic Station Area

- Amtrak maintains numerous storage totes on the eastern exterior of the Baggage Building (access of which was not available) that reportedly store maintenance materials in support of baggage handling. No staining was observed outside the storage containers.
- Universal wastes (electronic equipment) were observed in cardboard boxes within the Amtrak Baggage Building.
- One waste oil drum was observed on the concrete interior of the Amtrak Baggage Building, along with a hazardous material spill response kit.
- Forklifts with propane tanks were observed throughout the Amtrak Baggage Building.

No significant environmental concerns were identified for material storage in the Historic Station Area.

Rail Line Area

- On the north-central portion of the Rail Line Area, near the N. Vignes Street overpass, URS observed an emergency generator with internal diesel tank. No staining was observed beneath this emergency generator.

CA Drop Forge Area

- The interior of the CA Drop Forge facility contained numerous drums and 5-gallon containers of hydraulic oil, lubricating oil, rust inhibitor, and solvents. According to information provided by the tenant representative, the solvents used at the Site consist exclusively of QSOL 300 which does not contain chlorinated chemicals and is not a known carcinogen.
- Machining operations generate metal shavings which accumulate on concrete interior and are later transferred to drums or bins for off-site recycling.
- The exterior of the Site contains numerous drums of new and waste oils. These drums are stored on asphalt or in overhead racks and in many cases were stacked two drums high. The exterior also houses a compressor and compressor oil storage cabinet.

The housekeeping practices at the CA Drop Forge Area were observed to be poor. Significant staining was observed both on the interior and exterior of the area. Limited Phase II testing performed in the CA Drop Forge Area is described in Section 8.0 of this report.

5.5 Storage Tanks

The URS Site visit included a visual inspection of the Site for evidence of UST systems such as vents, fill pipes, fill ports, or unexplained concrete patching. Numerous areas of concrete patching were observed in the eastern Amtrak Use Area. Some of these patched areas appear to be related to abandoned clarifiers, but others were unexplained. According to the ALTA Survey (Appendix C), a concrete pad north of the eastern Amtrak Maintenance Building contains fill ports for a UST. This location corresponds with the gasoline UST referenced in a Law Crandall 1994 ESA (see Appendix F). According to information contained in Los Angeles Fire Department (LAFD) files, a 1,000-gallon gasoline UST was removed from this area in June 2002 under permit with the agency. No sampling data was included in the UST removal documentation obtained. Information related to the status of this UST was not available. Limited Phase II testing performed in proximity to this UST is described in Section 8.0 of this report.

As referenced in the prior assessment document review, numerous USTs formerly existed at the greater LA Union Station property. However, URS' review of the documents suggests the USTs were located on off-site portions of the LA Union Station. In addition, these USTs were provided closure by regulatory agencies. Based on this information these historic USTs are unlikely to pose an environmental concern to the subject property.

A number of ASTs were observed on the subject property as referenced previously. These include approximately 500-gallon propane ASTs on the eastern exterior of the Amtrak Baggage Building and the northern exterior of the CA Drop Forge area. URS also observed internal diesel tanks associated with emergency generators on the eastern Amtrak Use Area and north-central Rail Line Area. No environmental concerns were identified for Site ASTs.

5.6 Wastewater Discharges

Wastewater discharges from the Site are to the sanitary sewer from the bathroom facilities and sinks, which are discharged to the sanitary sewer system. In addition to these standard municipal wastewater discharges, the following additional wastewater discharge information was obtained during this ESA.

- On the western portion of the Amtrak Use Area, URS observed two wastewater clarifiers. Access to the interior of these clarifiers from ground level plate covers was limited. Given the recent construction of the maintenance building and features, and minimal hazardous

material use at the facility, these clarifiers are unlikely to pose an environmental concern to the Site.

- On the eastern portion of the Amtrak Use Area, URS observed evidence for numerous wastewater clarifiers. This included one active and two abandoned (concrete filled) clarifiers on the exterior of the Signal Shop Building, and one active and one abandoned clarifier on the exterior of the Maintenance Shop Building. Testing was performed previously during abandonment of one clarifier at the Signal Shop, as described in Appendix F, and industrial impact warranting further investigation was not identified. Given the dilute nature of wastes entering clarifiers, the absence of reported historic use of chlorinated solvents on the Site, and testing performed on the one clarifier, the remaining clarifiers pose a low potential for significant environmental concern. Future abandonment proceedings will be required for these features and limited action to remove any potential residual industrial impact to soils may be required.
- URS observed a sump within a boiler room beneath the office portion of the Historic Station Building. This sump receives boiler discharge and is unlikely to pose an environmental concern to the Site.
- During URS' inspection of the CA Drop Forge Area, industrial wastewater discharges were not observed. However, follow up information provided by the tenant included an Industrial Wastewater Permit (#W-505558) with the City of Los Angeles Industrial Wastewater Management Division. The address on this permit was 1033 Alhambra Avenue, which is another CA Drop Forge facility and according to interviewees does not related to the subject property.
- A drain was observed in the basement level of the Switch Building on the eastern Amtrak Use Area. The drain appeared filled with dirt. While the long historic industrial use of this building and drain poses a potential environmental concern to the Site, a monitoring well immediately down gradient of this building (on the northern exterior of the Signal Shop) did not detect significant industrial impact. Based on the previous testing, the Switch Building drain poses a low potential environmental concern to the subject property.

5.7 Air Emissions

Point sources of air emissions identified from current operations at the Site consist of heating, ventilation, and air conditioning (HVAC) exhausts, and emergency generators referenced previously. Administrative records related to the emergency generators were not available during this ESA. The Site does not fall under regulation by Title V of the Clean Air Act Amendments, which applies to facilities that are considered *major* sources.

5.8 Polychlorinated Biphenyls (PCBs)

Numerous pad-mounted electrical transformers were observed at electrical substations referenced previously. In addition, pole-mounted transformers were observed on surrounding roadways. No significant staining was observed on or around the observed transformers. The transformers are likely owned and maintained by City of Los Angeles Department of Water and Power (LADWP). No significantly aged transformers that would likely contain PCBs were observed on the subject property.

Fluorescent lights were observed throughout the Site buildings. Ballasts for these lights could not be accessed during URS' Site inspection. Given that some buildings were constructed in the 1930's, light ballasts at the subject property could contain PCBs. URS recommends proper disposal of light ballasts upon replacement.

In the Historic Station Area, elevators were observed in the passenger loading areas and in the office buildings. Select elevator equipment rooms were inspected and the equipment appeared fairly modern and in good shape. Based on these observations, hydraulic oil in elevators is unlikely to contain PCBs.

As indicated previously, a suspected elevator structure was observed near street level south of the Signal Shop on the eastern Amtrak Use Area. URS did not have access to this structure. Based on the apparent age of construction (1930's), PCB-containing equipment could be present within this structure. URS recommends proper disposal of PCB-containing equipment if present within this structure.

The Second floor of the Switch Building on the eastern portion of the Amtrak Use Area contained various relay and switching equipment. The potential exists for some of this equipment to contain PCBs.

5.9 Groundwater Wells

URS observed groundwater monitoring wells on the Historic Station Area and eastern Amtrak Use Area during our Site inspection. These monitoring well locations appeared to correspond with historic monitoring wells reported in prior assessment documents (see Appendix F). Access to the well boxes was not available during the Site inspection. Groundwater production wells were not identified on the subject property during the Site inspection, or during EDR's records search.

6.0 ENVIRONMENTAL RECORD REVIEW

6.1 Federal and State Database Review

URS retained EDR to provide a database search of federal and state environmental records. Specific databases searched and the search radius for each is identified in the EDR report. A copy of EDR's report and search radius map is included in Appendix C. The database report was reviewed to note reported releases in the vicinity of the Site that are known to have or are expected to result in an environmental condition that could adversely impact the Site. Reported release sites listed in the regulatory agency database search report were evaluated with respect to the nature and extent of a given release, the distance of the reported release from the Site, and the position of a reported release with respect to known or expected local and/or regional groundwater flow direction (southeast, see Section 3.0). Generally, reported release sites located within 0.5 mile up-gradient, 0.25 mile cross-gradient, or adjacent down-gradient were considered to have a potential to impact the Site, and are discussed below. Properties that were listed in the database search report, but were not identified as a release site (for example, a site listed as a hazardous waste generator but not as having had a release) were not considered to have a potential to impact the Site. Any non-release sites identified adjacent to the Site are not discussed. Unless indicated, information that unmapped or orphan facilities identified in the EDR report would adversely affect the Site was not identified.

It should be noted that this information is reported as URS received it from EDR, which in turn reports information as it is provided in various government databases. It is not possible for either URS or EDR to verify the accuracy or completeness of information contained in these databases. However, the use of and reliance on this information is a generally accepted practice in the conduct of environmental due diligence.

6.1.1 Site Listings

According to the EDR database report, the subject properties address 800 North Alameda Street, or references suspected to be associated with the subject property, were identified on the following databases:

- CERC NFRAP - Metro Rail – Union Station (no address), listed as not an NPL site;
- NPDES – likely related to historic dewatering activities;
- ERNS – Two listings under the name Amtrak, both for discovery of gasoline impacted soil in 1991 that were being investigated and referred to another agency (suspected to be related to historic USTs);
- Metro Rail / Union Station (no address) – listed on the SLIC database with a status of no further action required;

- CA FID UST – under the name LA Union Passenger Terminal, likely related to historic USTs on off-site portions of the subject property;
- HIST UST - under the name LA Union Passenger Terminal, likely related to historic USTs on off-site portions of the subject property;
- SWEEPS UST - under the name LA Union Passenger Terminal, likely related to historic USTs on off-site portions of the subject property;
- WDS - under the name LA Union Passenger Terminal, likely related to historic dewatering activities;
- LA CO Site Mitigation - under the name LA Union Passenger Terminal, no details provided in the database, likely related to historic UST cleanup activities;
- HAZNET – under the names Catellus and Amtrak amongst others, listed as disposing of asbestos-containing wastes, organic solids with halogens, unspecified aqueous solutions, and other organic solids; and
- EMI - under the name LA Union Passenger Terminal, lists a 1987 air emission registration.

The above listings do not contain violations for the subject property, or are consistent with historic records provided previously in this ESA. No database listings for other Site addresses (407 & 413 Bauchet Street and 203 E College Street) were identified in the EDR report.

6.1.2 Surrounding Property Listings

Given the extensive industrial history of this area, it is not surprising that over 900 listings are identified on the EDR report for surrounding properties. The number of listings makes detailed summaries impractical for this ESA, and the reader should refer to Appendix C for details. Numerous listings for contaminated site databases surround the Site. These include the historic gas manufacturing facilities north and east of the Site discussed previously in this ESA. Therefore, it is considered likely that contamination from one or more of these surrounding sites has impacted groundwater beneath the Site. Previous assessments conducted at the Site refer to the presence of VOCs identified in groundwater migrating onto the Site. This information represents an REC for the subject property. Given the historic groundwater analytical results, the impact is not expected to adversely affect current use of the subject property.

6.2 Local Agency Review

During this ESA URS made inquiries regarding the Site addresses to the following public agencies.

**GEO
TRACKER**

URS reviewed the online database maintained by the State Water Resources Control Board (Geotracker) for releases associated with the Site address. According to the database, the Site is potentially listed on two open Regional Water Quality Control Board (RWQCB) cases. These cases are identified as Metro Rail (SLT43207205), and LA to Pasadena Metro Blue Line Construction (SL204EG2409). Details on these cases are not provided in the Geotracker database. As of the date of this report, URS has not been granted access to these files at the RWQCB. Other RWQCB correspondences obtained during this ESA are summarized in Appendix F.

ENVIROSTOR

URS reviewed the online database maintained by the Department of Toxic Substance Control (DTSC) (Envirostor) for releases associated with the subject property addresses. A search of all Envirostor databases did not reveal listings for the Site addresses.

LAFD

URS reviewed files at the Los Angeles Fire Department (LAFD) on November 29, 2010. Files at the subject property consisted primarily of off-site UST related documentation that is summarized in Appendix F. Other pertinent information identified in the files included limited UST removal permit documentation for a 1,000-gallon gasoline UST on the eastern Amtrak area. The file information provided limited location information for the UST. No other significant information was identified in the LAFD files.

Other local regulatory agencies were reviewed through the EDR database as described in Section 6.1.1 and additional local agency review was not practical in the time from of this assessment.

7.0 SUPPLEMENTAL CONSIDERATIONS

The following non-ASTM components were included in the scope of work for this Phase I ESA.

7.1 Potential Asbestos-Containing Materials

The use of most asbestos in building materials was banned by NESHAP and TSCA during the years of 1973, 1978, and 1989. However, in 1991 much of the original bans were vacated and remanded by the U.S. Fifth Circuit Court of Appeals, and some non-friable products are still produced today. Therefore, care should be taken with any building material that is damaged or friable, pending laboratory confirmation that it is free of asbestos-containing materials (ACMs).

During this Phase I ESA, URS visually inspected readily accessible materials for potential ACMs (PACMs). The information provided is intended as a general screening for PACMs and should not be construed as a comprehensive visual survey. URS observed various PACMs within the Historic Station Building including ceiling tiles, gypsum wallboard, and vinyl floor tiles. It is suspected, based on the early date of construction that ACMs likely exist beneath existing building materials within this building. Spray on fireproof material was observed in the Amtrak Baggage Building on the Historic Use Area but given the buildings construction date (early 1990's) this material is unlikely to contain asbestos. Other buildings on the Amtrak Use Area also likely contain asbestos, but given the largely concrete construction, significant quantities of ACMs are not expected to exist. The exception to this is within the Switch Building on the eastern portion of the Amtrak Use Area where a number of friable PACMs were observed. In the absence of a formal asbestos survey with testing, the use of the Switch Building poses a potential environmental concern to the buildings occupants.

URS recommends performing an asbestos survey prior to disturbing suspect materials.

7.2 Generator / Fuel Storage Compliance

During this Phase I ESA, URS inspected the Site and reviewed readily available documentation regarding generator and fuel storage compliance. As indicated previously, two generators were observed on the subject property: one on the eastern portion of the Amtrak Use Area and one on the northern portion of the Rail Line Area. The generators appear in good condition. Compliance documentation for the generators was not available during this ESA.

7.3 Mold

URS inspected visually accessible building materials for evidence of mold growth during this ESA. No visible evidence of mold damaged building materials was observed during the Site

reconnaissance. URS observed one area of water damage on a concrete wall within the subway tunnel beneath the Rail Line Area, but no mold growth was apparent.

7.4 Storm Water Management

Visual observations on storm water management are provided in Section 5.3. Reportedly, Amtrak maintains a storm water management plan but access to these records was not available during this ESA.

7.5 Universal Waste Handling and Disposal

During this Phase I ESA, URS interviewed Site contacts and inspected the subject property for universal wastes and handling and disposal practices for those wastes. Universal waste storage practices are described in Section 5.4 of this report. While disposal documentation for these wastes was not obtained, the storage practices were wide spread and appeared generally in compliance with regulatory requirements.

8.0 LIMITED PHASE II TESTING

Based on the preliminary findings of URS' Phase I ESA, URS recommended and performed limited Phase II testing to investigate potential environmental concerns at the subject property. The following potential environmental concerns were included in the Phase II investigation.

- The current housekeeping practices at the CA Drop Forge Area were observed to be poor. Significant staining was observed both on the interior and exterior of the area. In addition, the historic use of the area for oil burning supply and asphalt refining with a number of oil tanks in the late 1800's also poses a potential environmental concern.
- According to the ALTA Survey reviewed during this ESA, a concrete pad north of the eastern Amtrak Maintenance Building contains fill ports for a UST. This location corresponds with the gasoline UST referenced in a 1994 ESA. According to information contained in LAFD files, a 1,000-gallon gasoline UST was removed from this area in June 2002 under permit with the agency. No sampling data was included in the UST removal documentation obtained.
- During inspection of the undeveloped lot on the southeastern portion of the area, URS observed a white substance (with erosion patterns consistent with a liquid release) on the soil surface of the northwestern corner of the lot. The material was observed covering an area of roughly 10 feet by 40 feet. Interviewees were unaware of the origin for this unknown material.

8.1 Scope of Work and Methodology

The Phase II testing was performed on December 2 and 3, 2010 and consisted of advancing a total of 13 borings (B-1 through B-6, B-8, B-9, and B-11 through B-15) for collection of soil samples. Attempts were also made to collect groundwater samples at numerous locations; however, groundwater was not encountered at the termination depth of the deeper borings (30 feet bgs). Borings B-7 and B-10, originally planned within the CA Drop Forge Area could not be completed due to access limitations or the presence of underground utilities. Borings B-5 and B-11 encountered drill rig refusal at 3 and 28 feet bgs, respectively. Boring depths, sample depths, and analyses performed for each boring are summarized in the following table.

Area	Boring(s)	Total Depth	Soil Analysis Depth(s)	Analytes Tested
CA Drop Forge Area	B-1	10	2	Metals, VOCs, PAHs, TPH & PCBs
			10	VOCs, PAHs & TPH
	B-2	10	2	Metals, VOCs, PAHs, TPH & PCBs
			10	VOCs, PAHs & TPH
	B-3	10	2	Metals, VOCs, PAHs, TPH & PCBs
			10	VOCs, PAHs & TPH
	B-4	10	2	Metals, VOCs, PAHs, TPH & PCBs
			10	VOCs, PAHs & TPH
	B-5	3	3	Metals, VOCs, PAHs, TPH & PCBs
	B-6	30	2	Metals, VOCs, PAHs, TPH & PCBs
			14	VOCs, PAHs & TPH
			30	VOCs, PAHs & TPH
	B-8	30	2	Metals, VOCs, PAHs, TPH & PCBs
			10	VOCs, PAHs & TPH
			30	VOCs, PAHs & TPH
	B-9	30	2	Metals, VOCs, PAHs, TPH & PCBs
10			VOCs, PAHs & TPH	
30			VOCs, PAHs & TPH	
B-11	28	5	Metals, VOCs, PAHs, TPH & PCBs	
		10	VOCs, PAHs & TPH	
		28	VOCs, PAHs & TPH	
B-12	30	2	Metals, VOCs, PAHs, TPH & PCBs	
		10	VOCs, PAHs & TPH	
		30	VOCs, PAHs & TPH	
Amtrak Use Area (East)	B-13	30	20	Gasoline, BTEX & Fuel Oxygenates
			30	Gasoline, BTEX & Fuel Oxygenates
Gateway Area (Und. Lot)	B-14	1	1	VOCs, PAHs & Metals
	B-15	1	1	VOCs, PAHs & Metals

During URS' limited Phase II testing, URS interviewed Amtrak representative Mr. Wade Smith, who indicated the former location of the 1,000-gallon gasoline UST. The location provided appeared relatively consistent with other information obtained regarding the UST location.

As indicated in the above table, soil samples submitted for analysis generally consisted of the shallow soil depth (1 to 2 feet bgs) in areas where surface releases are suspected, along with soil samples from 10 feet bgs to provide a vertical profile of potential impact. For the former UST in the Amtrak Use Area, soil samples were analyzed from deeper depths due to the suspected subsurface potential release. Given the absence of encountered groundwater, termination depth soil samples were analyzed in place of the groundwater samples. In some circumstances, photo-ionization detector (PID) readings encountered in the field were also used to modify the sample depths. This included borings B-6 (14 feet bgs) and B-11 (5 feet bgs).

Borings were advancing using a hydraulic-push sampling rig. Soil samples were collected in acetate sleeves or using encore sample containers, and were screened using a photo-ionization detector (PID). All samples were sealed and placed on ice and submitted under chain-of-custody documentation to Calscience Environmental Laboratories, Inc. for analysis. The methodologies used for each analysis included the following: 1) metals by EPA Method 6000/7000 Series; 2) VOCs by EPA Method 8260; 3) PAHs by EPA Method 8270; 4) PCBs by EPA Method 8082; 5) TPH carbon chain by EPA Method 3550; 6) gasoline by EPA Method 8015; and 7) BTEX and fuel Oxygenates by EPA Method 8260.

Boring locations are depicted on Figure 3 in Appendix A. Field boring logs and laboratory analytical data sheets are included in Appendix G. The findings of the Phase II ESA are provided in the following subsections. The Phase II ESA conclusions are provided at the end of the section.

8.2 Site Specific Geologic Conditions

As indicated on field boring logs included in Appendix G, the geology encountered during drilling consisted of primarily silty sand (SM) and poorly graded sand (SP) to the total depth of boring. Lenses of sandy silt (ML) or sands containing gravel were also inconsistently encountered. Concrete fragments were encountered in select borings on the CA Drop Forge Area. While some very limited wet conditions were identified in boreholes, groundwater was not encountered to the maximum depth investigated (30 feet bgs).

8.3 Soil Analytical Results

Tabulated soil analytical results for metals, PAHs, VOCs, and TPH are provided in Tables 1, 2, 3 and 4, respectively, in appendix G. The tables also provide various regulatory criteria for comparison. The regulatory criteria provided include the following: 1) EPA Region IX Regional Screening Levels (RSLs) for industrial soils (April 2009); 2) California Regional Water Quality Control Board, San Francisco Region, Environmental Screening Levels (ESLs) for Shallow Soils (<3 meters bgs), where groundwater is a current or potential drinking water source (Table A, May 2008); and 3) California Environmental Protection Agency (CalEPA), California Human Health Screening Levels (CHHSLs) (Table 1, January 2005). RSLs and CHHSLs are toxicity based criteria developed for protection of human health from contact or ingestion. ESLs are also toxicity based criteria but also include leachate potential for protection of groundwater resources. Consequently, ESLs are generally the most conservative regulatory criteria. For petroleum hydrocarbons, URS provided the Interim Site Assessment & Cleanup Guidebook for California Regional Water Quality Control Board Los Angeles and Ventura Counties Region 4 (May 1996) for comparison. The regulatory criteria are considered guidelines only and are not strict remedial requirements for soil impact. Consequently, they are provided for general evaluation only.

The following are the findings for soil testing performed at the subject property.

- Arsenic was detected in soil above the regulatory criteria in all but two of the soil samples analyzed for metals (Table 1). It is widely acknowledged that arsenic occurs naturally in California soils above regulatory guidelines. Studies performed for the Los Angeles Unified School District on the presence of arsenic in soil, which was approved by the CalEPA established a cleanup level for arsenic of 12 milligrams per kilogram (mg/kg). All analytical results for arsenic during URS' assessment were below this level and as such arsenic does not pose an environmental concern warranting further action.
- The shallow soil sample from boring location B-1 on the CA Drop Forge Area identified concentrations of lead, copper, and zinc above one or more regulatory criteria (Table 1). Cadmium, lead and zinc were also detected above one or more regulatory criteria in the shallow soil sample from boring location B-5. Analysis of underlying soil samples from boring B-1 (5 and 10 feet bgs) did not detect these metals above regulatory criteria. Based on these results, the presence of isolated metal impacted soils is not a threat to groundwater resources, and under a developed industrial setting with the presence of concrete and asphalt surfaces, does not pose a threat to Site occupants.
- Various low levels of PAHs were detected primarily in shallow soil samples on the CA Drop Forge Area and Gateway Area undeveloped lot, with some compounds present above one or more regulatory criteria (Table 2). The presence of regionally occurring PAHs in soil samples was identified during previous assessments of the Site and surrounding properties and has been shown to not pose a threat to groundwater resources. Based on the reported concentrations, documented regional conditions, and developed industrial setting; the presence of PAHs in soil does not pose a threat to Site occupants.
- VOCs were not detected above regulatory criteria in the soil samples analyzed (Table 3).
- Petroleum hydrocarbons were detected in soil above regulatory criteria in various samples collected from the CA Drop Forge Area (Table 4). The detections generally occurred in soil samples at or below 10 feet bgs within the C-11 through C-14 hydrocarbon range (between gasoline and motor oil). Total hydrocarbon concentrations are below the regulatory criteria and the hazardous constituents related to petroleum hydrocarbons (BTEX) are low or non-detect in the soil samples. Similarly to PAHs, petroleum hydrocarbons are known to exist regionally in the area. Based on the reported concentrations, depth of impact, documented regional conditions, low concentrations of BTEX compounds, and developed industrial setting; the presence of petroleum hydrocarbons in soil does not pose a threat to Site occupants.
- PCBs were not detected above the laboratory reporting limits in the soil samples analyzed. For this reason the results were not tabulated.

8.4 Phase II Testing Conclusions

The current housekeeping practices at the CA Drop Forge Area were observed to be poor. Significant staining was observed both on the interior and exterior of the area. While Phase II testing performed during this ESA did not identify significant impact to subsurface soils, limited access was available for the subject property, and limited localized impact could be present on this area of the property. URS recommends improved housekeeping practices on the subject property and cleanup of any residual impact encountered under a redevelopment scenario.

Evidence of a release of gasoline or related constituents was not identified in soil samples collected in proximity to the former Amtrak UST on the eastern portion of the Amtrak Use Area. URS recommends tasking Amtrak with obtaining formal closure of the former UST.

Evidence of a release was not identified in the area of staining on the undeveloped lot of the Gateway Area and no further assessment is warranted.

9.0 CONCLUSIONS AND RECOMMENDATIONS

URS has performed a Phase I ESA of select portions of the Los Angeles Union Station property located at 800 N Alameda Street, 407 & 413 Bauchet Street, and 203 E College Street in Los Angeles, California in general accordance with the scope and limitations of the ASTM Standard Practice E1527-05. This assessment revealed the following current RECs for the subject property.

- Groundwater beneath the Site is impacted by VOCs. The highest concentrations of VOCs exist on the off-site portion of the Gateway Area, near the intersection of N Vignes Street and E Cesar Chavez Avenue. The data, in conjunction with the documented groundwater flow to the south/southeast, suggests the impact is originating from off-site sources to the northeast. Numerous potential off-site sources were identified for surrounding properties during the performance of this ESA. Evidence obtained to date suggests the RWQCB has agreed with this opinion and is not requiring further action for groundwater by the Site owner. The Site monitoring well network remains on the subject property and should be appropriately managed during any planned redevelopment activities.
- The Rail Line Area is impacted by petroleum hydrocarbons, lead, and SVOCs from historic rail operations. Based on previous testing, the impact appears primarily isolated to the upper 10 feet of soil, and does not pose a threat to groundwater. No further action is warranted under a continued rail use scenario. In the event redevelopment of a Rail Line Area is planned, specialized handling and disposal requirements will likely apply to Rail Line Area soils.
- Crude oil tanks and industrial activities were identified on the northern portion of the Rail Line Area from prior to 1888 through 1906. While this historic use poses a potential environmental concern to the subject property, given the absence of significant impact to groundwater down gradient of this location, as determined during previous testing, and current and anticipated future use for rail activities, this historic use is unlikely to pose a significant environmental concern to the subject property.

This assessment revealed the following historic REC for the subject property.

- Auto repair with gas and oil use was identified on the northeast portion of the Gateway Area from 1950 through the 1980's. The majority of these uses appear to exist on off-site portions of the Gateway Area, however some may have existed on the subject property. Given that the northern portion of the Gateway Area on the subject property was significantly excavated during development of the parking structure, the potential for this historic use to pose an ongoing environmental concern to the Site is considered low.

While not posing as RECs to the Site, URS identified the following notable condition.

- A number of abandoned and active clarifiers were observed on the subject property. Given the dilute nature of wastes entering clarifiers, the absence of reported historic use of chlorinated solvents on the Site, and testing performed on the one previously closed clarifier, the remaining clarifiers pose a low potential for significant environmental concern. Future abandonment proceedings will be required for these features and limited action to remove any potential residual industrial impact to soils may be required.
- Phase II testing performed during this ESA did not identify evidence of a release from a gasoline UST removed in 2002 from the eastern portion of the Amtrak Use Area. URS recommends tasking Amtrak with obtaining formal closure of the former UST.
- Potential hazards related to building materials and equipment were identified in the Switch Building on the eastern Amtrak Use Area. In the absence of a formal survey, the use of the Switch Building poses a potential environmental concern to the buildings occupants.
- Soils on the eastern boundary of the Gateway Area undeveloped lot could contain SVOCs. The origin for these SVOCs appears to be historic use of the eastern adjacent property for gas purification. Evidence for significant concentrations of SVOCs requiring regulatory action to be present at this location was not identified. Under a redevelopment scenario, specialized handling and disposal requirements may apply to soils on this portion of the subject property.
- Previous testing of soils, outside of areas of other influences, identified sporadic impact by petroleum hydrocarbons, lead, and SVOCs. The testing results did not identify impact warranting further action but did reveal potential soil management issues under a redevelopment scenario.
- The current housekeeping practices at the CA Drop Forge Area were observed to be poor. Significant staining was observed both on the interior and exterior of the area. While Phase II testing performed during this ESA did not identify significant impact to subsurface soils, limited access was available for the subject property, and limited localized impact could be present on this area of the property. URS recommends improved housekeeping practices on the subject property and cleanup of any residual impact encountered under a redevelopment scenario.

MATCHLINE- SEE BELOW LEFT FOR CONTINUATION

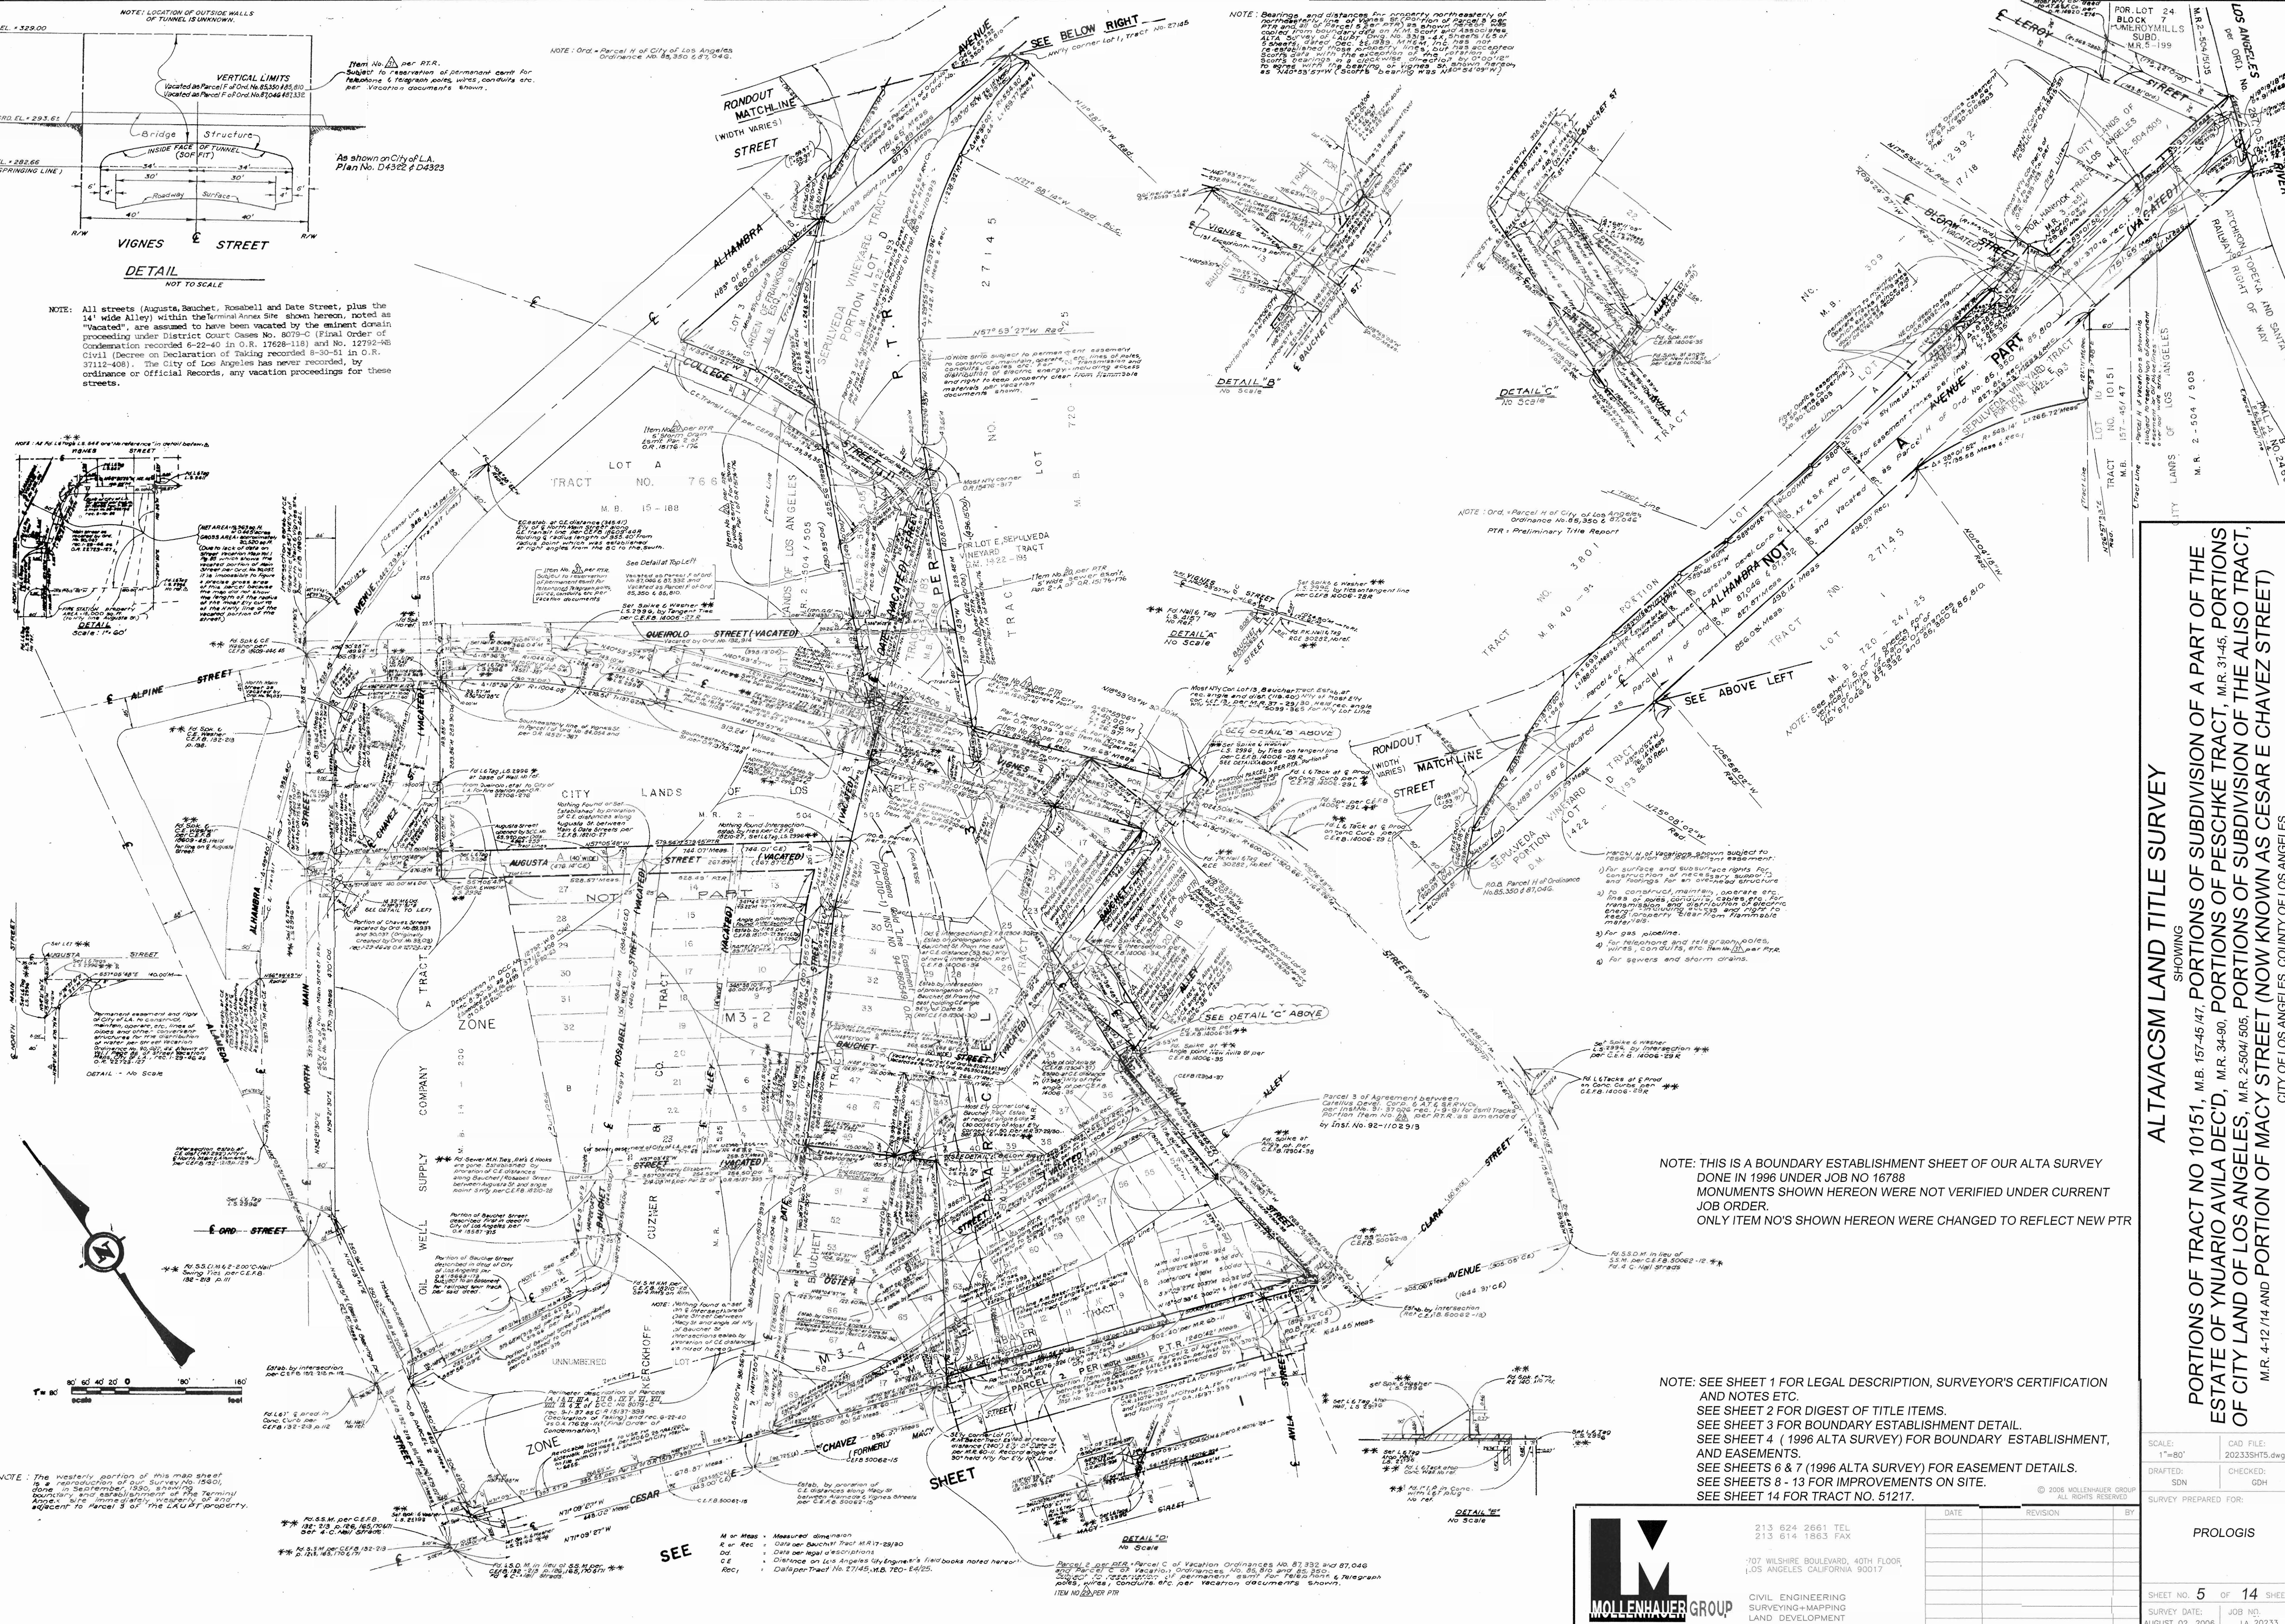

NOTE: All streets (Augusta, Baucher, Rosabell and Date Street, plus the 14' wide Alley) within the Terminal Annex Site shown hereon, noted as "vacated", are assumed to have been vacated by the eminent domain proceeding under District Court Cases No. 8079-C (Final Order of Condemnation recorded 6-22-40 in O.R. 17628-118) and No. 12792-48 Civil (Decree on Declaration of Taking recorded 9-30-51 in O.R. 37112-408). The City of Los Angeles has never recorded, by ordinance or official Records, any vacation proceedings for these streets.

NOTE: The western portion of this map sheet is a reproduction of our Survey No. 1560, done in September, 1930, showing boundaries and establishment of the Terminal Annex Site. Some improvements, including, but not limited to, the following, have since been made adjacent to Parcel 3 of the LAUPT property.

NOTE: Ord. - Parcel H of City of Los Angeles Ordinance No. 85,350 & 87,046

NOTE: Bearings and distances for property northwesterly of northwesterly line of Vignes St. as shown on Survey No. 1560, done in September, 1930, are as follows: ...

NOTE: THIS IS A BOUNDARY ESTABLISHMENT SHEET OF OUR ALTA SURVEY DONE IN 1996 UNDER JOB NO 16788 MONUMENTS SHOWN HEREON WERE NOT VERIFIED UNDER CURRENT JOB ORDER. ONLY ITEM NO'S SHOWN HEREON WERE CHANGED TO REFLECT NEW PTR

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-05) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

TARGET PROPERTY INFORMATION

TARGET PROPERTY SEARCH RESULTS

The target property was identified in the following records. For more information on this property see page 8 of the attached EDR Radius Map report:

Site	Database(s)	EPA ID
UNION STATION 800 NORTH ALAMEDA STREET LOS ANGELES, CA 90012	CERC-NFRAP	CAD983566571
NATIONAL RAILROAD PASSENGER CORP 800 NORTH ALAMEDA STREET LOS ANGELES, CA 90012	NPDES	N/A

TC2912366.2s EXECUTIVE SUMMARY 1

EXECUTIVE SUMMARY

DATABASES WITH NO MAPPED SITES

No mapped sites were found in EDR's search of available ("reasonably ascertainable") government records either on the target property or within the search radius around the target property for the following databases:

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL..... National Priority List
Proposed NPL..... Proposed National Priority List Sites
NPL LIENS..... Federal Superfund Liens

Federal Delisted NPL site list

Delisted NPL..... National Priority List Deletions

Federal CERCLIS list

FEDERAL FACILITY..... Federal Facility Site Information listing

Federal RCRA generators list

RCRA-CESQG..... RCRA - Conditionally Exempt Small Quantity Generator

Federal institutional controls / engineering controls registries

US ENG CONTROLS..... Engineering Controls Sites List
US INST CONTROL..... Sites with Institutional Controls

State and tribal landfill and/or solid waste disposal site lists

SWF/LF..... Solid Waste Information System

State and tribal leaking storage tank lists

INDIAN LUST..... Leaking Underground Storage Tanks on Indian Land

State and tribal registered storage tank lists

INDIAN UST..... Underground Storage Tanks on Indian Land
FEMA UST..... Underground Storage Tank Listing

State and tribal voluntary cleanup sites

INDIAN VCP..... Voluntary Cleanup Priority Listing

ADDITIONAL ENVIRONMENTAL RECORDS

Local Lists of Landfill / Solid Waste Disposal Sites

DEBRIS REGION 9..... Torres Martinez Reservation Illegal Dump Site Locations

TC2912366.2s EXECUTIVE SUMMARY 2

EXECUTIVE SUMMARY

Table with columns: Equal/Higher Elevation, Address, Direction / Distance, Map ID, Page. Lists various sites including LA CO HALL OF ADMINIST., WETSERB BRASSWORKS, and others.

TC29123662s EXECUTIVE SUMMARY 11

EXECUTIVE SUMMARY

Table with columns: Lower Elevation, Address, Direction / Distance, Map ID, Page. Lists sites including PIPER TECHNICAL CENTER, PBR REALTY LLC, and others.

SLIC: SLIC Region comes from the California Regional Water Quality Control Board.

A review of the SLIC list, as provided by EDR, and dated 09/20/2010 has revealed that there are 28 SLIC sites within approximately 1 mile of the target property.

Table with columns: Equal/Higher Elevation, Address, Direction / Distance, Map ID, Page. Lists sites including ALISO MANUFACTURING GAS PLANT, INTERNATIONAL BANK PROPERTY, and others.

TC29123662s EXECUTIVE SUMMARY 12

EXECUTIVE SUMMARY

Table with columns: Equal/Higher Elevation, Address, Direction / Distance, Map ID, Page. Lists sites including ALLIED KELITE WITCO, BNSF - MISSION TOWER SITE, and others.

State and tribal registered storage tank lists

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA).

A review of the UST list, as provided by EDR, and dated 09/20/2010 has revealed that there are 32 UST sites within approximately 0.75 miles of the target property.

Table with columns: Equal/Higher Elevation, Address, Direction / Distance, Map ID, Page. Lists sites including LACMTA, TWIN TOWERS CORRECTIONAL FACIL, and others.

TC29123662s EXECUTIVE SUMMARY 13

EXECUTIVE SUMMARY

Table with columns: Equal/Higher Elevation, Address, Direction / Distance, Map ID, Page. Lists sites including CHINATOWN CHEVRON - PAYLESS AU, PACIFIC ALLIANCE MEDICAL CENTE, and others.

AST: The Aboveground Storage Tank database contains registered ASTs. The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the AST list, as provided by EDR, and dated 08/01/2009 has revealed that there are 4 AST sites within approximately 0.75 miles of the target property.

Table with columns: Equal/Higher Elevation, Address, Direction / Distance, Map ID, Page. Lists sites including Not reported, 750 LAMAR ST, and others.

State and tribal voluntary cleanup sites

VCP: Contains low threat level properties with either confirmed or unconfirmed releases and the project proponents have request that DTSC oversee investigation and/or cleanup activities and have agreed to provide coverage for DTSC's costs.

A review of the VCP list, as provided by EDR, and dated 08/18/2010 has revealed that there are 9 VCP

Other Ascertainable Records

RCRA-NonGen: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA-NonGen list, as provided by EDR, and dated 02/17/2010 has revealed that there are 7 RCRA-NonGen sites within approximately 0.75 miles of the target property.

FTTS: FTTS tracks administrative cases and pesticide enforcement actions and compliance activities related to FIFRA, TSCA and EPCRA (Emergency Planning and Community Right-to-Know Act) over the previous five years. To maintain currency, EDR contacts the Agency on a quarterly basis.

A review of the FTTS list, as provided by EDR, and dated 04/09/2009 has revealed that there are 5 FTTS sites within approximately 0.5 miles of the target property.

HIST FTTS: A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

A review of the HIST FTTS list, as provided by EDR, and dated 10/19/2006 has revealed that there are 4 HIST FTTS sites within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

FINDS: The Facility Index System contains both facility information and "pointers" to other sources of information that contain more detail. These include: RCRIS; Permit Compliance System (PCS); Aesthetic Information Retrieval System (AIRS); FATES (FIFRA) (Federal Insecticide Fungicide Rodenticide Act) and TSCA Enforcement System, FTTS (FIFRA/TSCA Tracking System); CERCLIS; DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes); Federal Underground Injection Control (FURS); Federal Reporting Data System (FRDS); Surface Impoundments (SIA); TSCA Chemicals in Commerce Information System (CICS); PADS; RCRA-J (Medical waste transporters/disposers); TRIS; and TSCA. The source of this database is the U.S. EPA/NTIS.

A review of the FINDS list, as provided by EDR, and dated 04/14/2010 has revealed that there are 48 FINDS sites within approximately 0.5 miles of the target property.

TC29123662s EXECUTIVE SUMMARY 28

EXECUTIVE SUMMARY

HAZNET: The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000-1,000,000 annually, representing approximately 350,000-500,000 shipments. Data from non-California manifests & continuation sheets are not included at the present time. Data are from the manifests submitted without correction, and therefore may contain some invalid values for data elements such as generator ID, TSD ID, waste category, & disposal method. The source is the Department of Toxic Substance Control is the agency.

A review of the HAZNET list, as provided by EDR, and dated 12/31/2009 has revealed that there are 134 HAZNET sites within approximately 0.5 miles of the target property.

EDR PROPRIETARY RECORDS

EDR Proprietary Records

Manufactured Gas Plants: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (only waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the

TC2912366.2s EXECUTIVE SUMMARY 32

EXECUTIVE SUMMARY

environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the Manufactured Gas Plants list, as provided by EDR, has revealed that there are 6 Manufactured Gas Plants sites within approximately 1.5 miles of the target property.

EDR Historical Auto Stations: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc.

A review of the EDR Historical Auto Stations list, as provided by EDR, has revealed that there are 49 EDR Historical Auto Stations sites within approximately 0.75 miles of the target property.

EDR Historical Cleaners: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc.

A review of the EDR Historical Cleaners list, as provided by EDR, has revealed that there are 33 EDR Historical Cleaners sites within approximately 0.75 miles of the target property.

 Generated waste on-site: Not reported

Waste type: Lamps
 Accumulated waste on-site: No
 Generated waste on-site: Not reported

Waste type: Pesticides
 Accumulated waste on-site: No
 Generated waste on-site: Not reported

Waste type: Thermostats
 Accumulated waste on-site: No
 Generated waste on-site: Not reported

Hazardous Waste Summary:
 Waste code: D002
 Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: F006
 Waste name: WASTEWATER TREATMENT SLUDGES FROM ELECTROPLATING OPERATIONS EXCEPT FROM THE FOLLOWING PROCESSES: (1) SULFURIC ACID ANODIZING OF ALUMINUM; (2) TIN PLATING ON CARBON STEEL; (3) ZINC PLATING (SEGREGATED BASIS) ON CARBON STEEL; (4) ALUMINUM OR ZINC-ALUMINUM PLATING ON CARBON STEEL; (5) CLEANING/STRIPPING ASSOCIATED WITH TIN, ZINC AND ALUMINUM PLATING ON CARBON STEEL; AND (6) CHEMICAL ETCHING AND MILLING OF ALUMINUM.

Biennial Reports:

Last Biennial Reporting Year: 2009

Annual Waste Handled:
 Waste code: D002
 Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
 Amount (Lbs): 5199.9

Waste code: F006
 Waste name: WASTEWATER TREATMENT SLUDGES FROM ELECTROPLATING OPERATIONS EXCEPT FROM THE FOLLOWING PROCESSES: (1) SULFURIC ACID ANODIZING OF ALUMINUM;

 Environmental Interest/Information System
 RCRInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

LA COUNTY METROPOLITAN TRANSPORTATION AUTHORITY REGIONAL RE (Continued) 1000396768

Environmental Interest/Information System
 AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AIRS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.
 The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).
 California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
 RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
 ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and at Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Environmental Interest/Information System
 RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CA WDS:
 Facility ID: 4 191000504
 Facility Type: Other - Does not fall into the category of Municipal/Domestic, Industrial, Agricultural or Solid Waste (Class I, II or III)
 Facility Status: Active - Any facility with a continuous or seasonal discharge that is under Waste Discharge Requirements.
 NPDES Number: CAS000001 The 1st 2 characters designate the state. The remaining 7 are assigned by the Regional Board
 Subregion: 4
 Facility Telephone: 2139225717
 Facility Contact: Rick Hittinger
 Agency Name: LA CO METRO TRANS AUTHORITY
 Agency Address: Not reported
 Agency City,St,Zip: 0
 Agency Contact: Not reported
 Agency Telephone: Not reported
 Agency Type: Special District (Includes districts established under general acts, sanitary districts, water districts irrigation districts, etc.)
 SIC Code: 4111
 SIC Code 2: 4173
 Primary Waste: Stormwater Runoff
 Primary Waste Type: Inert/Influent or Solid Wastes that do not contain soluble pollutants or organic wastes and have little adverse impact on water quality. Such wastes could cause turbidity and siltation. Uncontaminated soils, rubble and concrete are examples of this category.
 Secondary Waste: Not reported
 Secondary Waste Type: Not reported
 Design Flow: 0
 Baseline Flow: 0
 Reclamation: No reclamation requirements associated with this facility.

L.A.C.M.T.A. (Continued)

S100944575

POTW: The facility is not a POTW.
 Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NJRDS that are found to represent no threat to water quality.
 Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

 Classification: Large Quantity Generator

Hazardous Waste Summary:
 Waste code: D001
 Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
 Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D004
 Waste name: ARSENIC

Waste code: D005
 Waste name: BARIUM

Waste code: D006
 Waste name: CADMIUM

Waste code: D007
 Waste name: CHROMIUM

Waste code: D008
 Waste name: LEAD

Waste code: D018
 Waste name: BENZENE

 Primary Waste: Stormwater Runoff
 Primary Waste Type: Inert/Influent or Solid Wastes that do not contain soluble pollutants or organic wastes and have little adverse impact on water quality. Such wastes could cause turbidity and siltation. Uncontaminated soils, rubble and concrete are examples of this category.
 Secondary Waste: Not reported
 Secondary Waste Type: Not reported
 Design Flow: 0
 Baseline Flow: 0
 Reclamation: No reclamation requirements associated with this facility.
 POTW: The facility is not a POTW.
 Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
 Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best

Hazardous Waste Summary:

Waste code: D001
 Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
 Waste code: D008
 Waste name: LEAD
 Waste code: F003
 Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
 Waste code: F005
 Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

 ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with

MAP FINDINGS

METROPOLITAN WATER DISTRICT (Continued) 1009324104

a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include: Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 Manufactured Gas Plants: The former Aliso Street manufactured Gas Plant covered approximately 52 acres in downtown Los Angeles. The site is being investigated as 5 sectors and an overall groundwater unit. The "C" sector consists of 16.4 acres south of the Hollywood (101) Freeway, bisected by Center Street and bounded by Commercial, Ducommun and Jackson Streets. Sector C is further subdivided into Blocks G, K, L, N, O, Q, and R. Contaminants suspected include petroleum hydrocarbons, volatile organic compounds, cyanide, polycyclic aromatic hydrocarbons and heavy metals

Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Completed Info:
 Completed Area Name: PROJECT WIDE
 Completed Sub Area Name: Not reported
 Completed Document Type: Removal Action Workplan
 Completed Date: 2004-01-26 00:00:00
 Comments: Notices of Determination for Aliso Street Section A West Parcel and Sector A East Parcel were hand-delivered to the Governor's Office of Planning and Research on 1/26/2004.

Completed Area Name: PROJECT WIDE
 Completed Sub Area Name: Not reported
 Completed Document Type: Remedial Investigation / Feasibility Study
 Completed Date: 2002-12-13 00:00:00
 Comments: Feasibility Study Report for Aliso Street Sector A.

Completed Area Name: PROJECT WIDE
 Completed Sub Area Name: Not reported
 Completed Document Type: Preliminary Endangerment Assessment Report
 Completed Date: 1997-06-26 00:00:00
 Comments: PEA completed. Further investigation (RI/FS) warranted for the site as PAH, VOC, TPH, metals and cyanide contamination exist in both soil and groundwater.

Completed Area Name: PROJECT WIDE
 Completed Sub Area Name: Not reported
 Completed Document Type: Removal Action Completion Report
 Completed Date: 2007-10-10 00:00:00
 Comments: DTSC provided a partial site certification letter, dated 10/10/07. Full site certification due upon investigation and remediation of groundwater.

SO CAL GAS/ALISO MGP, SECTOR A - EAST PARCEL (Continued) S102564461

Completed Area Name: PROJECT WIDE
 Completed Sub Area Name: Not reported
 Completed Document Type: CEQA - Initial Study/ Mitigated Neg. Dec. (MND)
 Completed Date: 1998-02-23 00:00:00
 Comments: Not reported

Completed Area Name: PROJECT WIDE
 Completed Sub Area Name: Not reported
 Completed Document Type: Voluntary Cleanup Agreement
 Completed Date: 2000-10-20 00:00:00
 Comments: DTSC entered into a Voluntary Cleanup Agreement (Agreement) with Southern California Gas Company (Proponent). The purpose of this Agreement is for the Proponent to conduct a Remedial Investigation/Feasibility Study to further characterize the existing soil and groundwater contamination and, if necessary, to prepare a removal action workplan and implement a removal action under the oversight of DTSC. If appropriate, the Proponent has agreed to implement a deed restriction for the Site.

Completed Area Name: PROJECT WIDE
 Completed Sub Area Name: Not reported
 Completed Document Type: Consent Order
 Completed Date: 1996-08-15 00:00:00
 Comments: On 08/15/1996 DTSC & The Gas Company executed a Consent Order for a Preliminary Endangerment Assessment for a portion (Sector A) of the former Aliso Manufactured Gas Plant Site - which is being investigated in 5 sectors or units. The "530 Ramirez" site (CalSites 19490235) is a portion of Sector A.

Completed Area Name: PROJECT WIDE
 Completed Sub Area Name: Not reported
 Completed Document Type: Amendment - Order/Agreement
 Completed Date: 1999-01-04 00:00:00
 Comments: Transition to Chapter 6.5 - Amendment to the existing Consent Order, No. 96/97-008, signed by the RP.

 Alias Type: Envirostor ID Number

Completed Info:
 Completed Area Name: PROJECT WIDE
 Completed Sub Area Name: Not reported
 Completed Document Type: Removal Action Workplan
 Completed Date: 2004-01-26 00:00:00
 Comments: Notices of Determination for Aliso Street Section A West Parcel and Sector A East Parcel were hand-delivered to the Governor's Office of Planning and Research on 1/26/2004.

Completed Area Name: PROJECT WIDE
 Completed Sub Area Name: Not reported
 Completed Document Type: Remedial Investigation / Feasibility Study
 Completed Date: 2002-12-13 00:00:00
 Comments: Feasibility Study Report for Aliso Street Sector A.

Completed Area Name: PROJECT WIDE
 Completed Sub Area Name: Not reported
 Completed Document Type: Preliminary Endangerment Assessment Report
 Completed Date: 1997-06-26 00:00:00
 Comments: PEA completed. Further investigation (RI/FS) warranted for the site as PAH, VOC, TPH, metals and cyanide contamination exist in both soil and groundwater.

Completed Area Name: PROJECT WIDE
 Completed Sub Area Name: Not reported
 Completed Document Type: Removal Action Completion Report
 Completed Date: 2007-10-10 00:00:00
 Comments: DTSC provided a partial site certification letter, dated 10/10/07. Full site certification due upon investigation and remediation of groundwater.

Completed Area Name: PROJECT WIDE
 Completed Sub Area Name: Not reported
 Completed Document Type: CEQA - Initial Study/ Mitigated Neg. Dec. (MND)
 Completed Date: 1998-02-23 00:00:00
 Comments: Not reported

Completed Area Name: PROJECT WIDE
 Completed Sub Area Name: Not reported
 Completed Document Type: Voluntary Cleanup Agreement
 Completed Date: 2000-10-20 00:00:00
 Comments: DTSC entered into a Voluntary Cleanup Agreement (Agreement) with Southern California Gas Company (Proponent). The purpose of this Agreement is for the Proponent to conduct a Remedial Investigation/Feasibility Study to further characterize the existing soil and groundwater contamination and, if necessary, to prepare a removal action workplan and implement a removal action under the oversight of DTSC. If appropriate, the Proponent has agreed to implement a deed restriction for the Site.

Completed Area Name: PROJECT WIDE
 Completed Sub Area Name: Not reported
 Completed Document Type: Consent Order
 Completed Date: 1996-08-15 00:00:00

SO CAL GAS/ALISO MGP, SECTOR A - EAST PARCEL (Continued) S102564461

Comments: On 08/15/1996 DTSC & The Gas Company executed a Consent Order for a Preliminary Endangerment Assessment for a portion (Sector A) of the former Aliso Manufactured Gas Plant Site - which is being investigated in 5 sectors or units. The "530 Ramirez" site (CalSites 19490235) is a portion of Sector A.

Completed Area Name: PROJECT WIDE
 Completed Sub Area Name: Not reported
 Completed Document Type: Amendment - Order/Agreement
 Completed Date: 1999-01-04 00:00:00
 Comments: Transition to Chapter 6.5 - Amendment to the existing Consent Order, No. 96/97-008, signed by the RP.

Manufactured Gas Plants 1008407704
 N/A

Site 5 of 19 in cluster R

Relative: Manufactured Gas Plants:
 Lower The former Aliso Street Manufactured Gas Plant covered approximately 52 acres in downtown Los Angeles. The site is being investigated as 5 sectors and an overall groundwater unit. The "B" sector consists of 14 acres south of the Cesar Chavez Avenue, west of Keller Street, east of Lyon Street and north of Ramirez Street. Contaminants suspected include petroleum hydrocarbons, volatile organic compounds, cyanide, polycyclic aromatic hydrocarbons and heavy metals. See also Sites 19490235, 19490240, 19490241, 19490242, 19490243, and 19490248. Sector D Former MGP Aliso Street Site History Sector D of the Aliso Street Towne Gas facility covers approximately 11 acres and was the sector historically used for lampblack pits, processing, and storage. An area of the sector was converted to 1,3-Butadiene production in the 1940s. The Metropolitan Transportation Authority (MTA) owns and currently uses the property for offices, storage, and maintenance of buses.

Environmental Interest/Information System
 The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:
 Waste code: D001
 Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET.

C ERWIN PIPER TECHNICAL CENTER (Continued) **1007199480**

WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
 Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D011
 Waste name: SILVER

Waste code: D018
 Waste name: BENZENE

Waste code: D039
 Waste name: TETRACHLOROETHYLENE

Waste code: D040
 Waste name: TRICHLOROETHYLENE

Waste code: F003
 Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS, AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Classification: Small Quantity Generator

Hazardous Waste Summary:

Waste code: D001
 Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
 Waste name: ALKASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D007
 Waste name: CHROMIUM

Waste code: D009
 Waste name: MERCURY

Waste code: F003
 Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYLISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS; AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: F005
 Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Summary:
 Waste code: D001
 Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
 Waste code: D006
 Waste name: CADMIUM
 Waste code: D007
 Waste name: CHROMIUM
 Waste code: D018
 Waste name: BENZENE
 Waste code: D035
 Waste name: METHYL ETHYL KETONE
 Waste code: D039
 Waste name: TETRACHLOROETHYLENE
 Waste code: F001
 Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLOROETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE, AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED

Hazardous Waste Summary:
 Waste code: D001
 Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Violation Status: No violations found

FINDS:

Registry ID: 110001153162

Environmental Interest/Information System
 NCEB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and

FANSTEEL CA DROP FORGE (Continued) 1000388388

their precursors, as well as hazardous air pollutants (HAPs).
 California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
 RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CA WDS:
 Facility ID: 4 191009415
 Facility Type: Other - Does not fall into the category of Municipal/Domestic, Industrial, Agricultural or Solid Waste (Class I, II or III)
 Facility Status: Active - Any facility with a continuous or seasonal discharge that is under Waste Discharge Requirements.
 NPDES Number: CAS000001 The 1st 2 characters designate the state. The remaining 7 are assigned by the Regional Board

 Agency Contact: Robert Groner
 Agency Telephone: 3232211134
 Agency Type: Private
 SIC Code: 3462
 SIC Code 2: Not reported
 Primary Waste: Not reported
 Primary Waste Type: Not reported
 Secondary Waste: Not reported
 Secondary Waste Type: Not reported
 Design Flow: 0
 Baseline Flow: 0
 Reclamation: No reclamation requirements associated with this facility.
 POTW: The facility is not a POTW.
 Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWO will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
 Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

 Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
 Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 Potential Media Affected: Other Groundwater (uses other than drinking water), Soil, Under Investigation
 Potential Contaminants of Concern: Benzene, Other Chlorinated Hydrocarbons, Vinyl chloride, Xylene, Heating Oil / Fuel Oil, Other Petroleum, Waste Oil / Motor / Hydraulic / Lubricating
 Site History: The site was included the street addresses 501 E. Commercial Street, 531 E. Commercial Street, and 516 Aliso Street in Los Angeles. The eastern portion of the site was occupied from approximately earlier than 1929 by the Maier Brewing Company (MBC) brewery. The areas within the brewery included a blacksmith and repair shop, copper shop, kettle and mash tubs, and a beer cellar. The western third of the site was occupied by a wire and metal works shop, truck storage and shops. In addition, an auto painting facility (existing between 1906 and 1929) was identified on this portion of the site. In 1965,

CALTRANS - COMMERCIAL STREET PROPERTY (Continued) S106485908
 the western portion of the site (former parking lot) was transformed into a beer bottling and warehouse facility. By 1957, the brewery structures occupied the majority of the site. The brewery was demolished before the removal of seven underground storage tanks (USTs) in 1988. An asphalt paved parking lot occupied the site after the brewery was demolished. The documentation is not clear with regard to the precise location of each former UST. However, the USTs included the 3,000-gallon fuel oil tank (Tank No. 4), the 550-gallon waste oil tank (Tanks No. 5), and the 6,000-gallon fuel oil tanks (Tanks No. 6 and No. 7). Tanks No. 1 (10,000-gallon), No. 2 (10,000-gallon), and No. 3 (3,000-gallon) stored barley. Depth to groundwater has ranged from 32 to 40 feet below ground surface (bgs). Groundwater flows south to southwest. The site was part of the alignment of ramps which allows ingress and egress to State Route 101. The properties at 501 and 531 E. Commercial Street are currently used by State Route 101 ramp. The property at 516 Aliso Street was graded, is an undeveloped land, and is currently not used by State Route 101 ramp.

Environmental Interest/Information System

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
 RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CERCLIS (Comprehensive Environmental Response, Compensation, and Liability Information System) is the Superfund database that is used to support management in all phases of the Superfund program. The system contains information on all aspects of hazardous waste sites, including an inventory of sites, planned and actual site activities, and financial information.

 Primary Waste: Stormwater Runoff
 Primary Waste Type: Inert/Influent or Solid Wastes that do not contain soluble pollutants or organic wastes and have little adverse impact on water quality. Such wastes could cause turbidity and siltation. Uncontaminated soils, rubble and concrete are examples of this category.
 Secondary Waste: Not reported
 Secondary Waste Type: Not reported
 Design Flow: 0
 Baseline Flow: 0
 Reclamation: No reclamation requirements associated with this facility.
 POTW: The facility is not a POTW.
 Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
 Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interests/Information System

US EPA TRIS (Toxic Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:
 Waste code: D001
 Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS

CENTRAL DISTRICT YARD - LOS ANGELES DEPT (Continued) 1000102026

CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
 Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D006
 Waste name: CADMIUM

Waste code: D007
 Waste name: CHROMIUM

Waste code: D008
 Waste name: LEAD

Waste code: D039
 Waste name: TETRACHLOROETHYLENE

Violation Status: No violations found

FINDS:

Registry ID: 110000844230

Environmental Interest/Information System
 RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:
 Waste code: D001
 Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

 Primary Waste: Stormwater Runoff
 Primary Waste Type: Inert/Influent or Solid Wastes that do not contain soluble pollutants or organic wastes and have little adverse impact on water quality. Such wastes could cause turbidity and siltation. Uncontaminated soils, rubble and concrete are examples of this category.
 Secondary Waste: Not reported
 Secondary Waste Type: Not reported
 Design Flow: 0

TEMPORARY STORAGE AREA TSA (Continued)

S106103180

Baseline Flow: 0
 Reclamation: No reclamation requirements associated with this facility.
 POTW: The POTW Does not have an approved pretreatment program. Some POTWs may have local pretreatment programs that have not been approved by the regional board and/or EPA.
 Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
 Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Site 5 of 5 in cluster AN

Relative: Manufactured Gas Plants:
Lower The former Aliso Street manufactured Gas Plant covered approximately 52 acres in downtown Los Angeles. The site is being investigated as 5 sectors and an overall groundwater unit. The "C" sector consists of 16.4 acres south of the Hollywood (101) Freeway, bisected by Center Street and bounded by Commercial, Ducommun and Jackson Streets. Sector C is further subdivided into Blocks G, K, L, N, O, Q, and R. Contaminants suspected include petroleum hydrocarbons, volatile organic compounds, cyanide, polycyclic aromatic hydrocarbons and heavy metals

 Site History: Parcel PA-018 is located at the intersection of North Spring Street and College Street in the City of Los Angeles, and across the street from the Metro Chinatown Station. The Site was previously owned by Union Pacific Railroad Company and at present is owned by the Los Angeles to Pasadena Metro Blue Line Construction Authority (Authority). The Site is about 6 acres and is surrounded by industrial and commercial use land. Historically the Site has been used for a wood and coal yard, an oil warehouse, dwellings, and for small businesses. Since 1905 it was used as a rail freight yard, but it has been vacant since about 1970. Buildings at the Site were demolished in the late 1980s. A gasoline tank was removed in April 1987 with no evidence of leakage. Reports from 1989 indicate that the Site was used for the storage of tanks and shipping containers. Several water-bearing zones underlie the Site, but there are no production wells within one mile of the property. The shallow semi-perched zone is about 30 ft below ground surface, and the groundwater flow direction is in a south-southwest direction. Groundwater in the southwestern portion of the Site has been impacted by heavy-end hydrocarbons (diesel-range and total recoverable petroleum hydrocarbons). Based on regional groundwater flow and documented historic service station operations at neighboring off-site properties, the groundwater contamination appears to be from off-site sources. The Site is planned for development of a four-story building, with commercial, retail business on the lower level, and housing on the other three floors. There are no planned underground

BLUELINE CONSTRUCTION AUTHORITY (Continued) S106087297

structures, green areas, or unpaved areas at the Site.

Hazardous Waste Summary:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D008
Waste name: LEAD

Environmental Interest/Information System

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 Alternate Address: 1300 CARDINAL STREET
 Alternate City,St,Zip: LOS ANGELES, CA 90012
 Background Info: This site south of Cardinal Street previously operated as a refinery from 1900 - 1924 by the Southern Refining Company and Amalgamated Oil Company.
 Not reported
 Historical documents indicated refining equipment and above ground storage tanks (AGST). Dark oily materials were discovered during construction activities in the playground area. Areas were covered to prevent contact with potential contaminants.
 DTSC entered into a Voluntary Cleanup Program Agreement with the RP for oversight of a Preliminary Endangerment Assessment.
 Not reported
 AREA NORTH OF CARDINAL STREET
 This Site is divided into two areas, the area South of Cardinal Street is designated by the letter "S" following the commitment description, and the DTSC LEAD ACTIVITIES area North of Cardinal Street is designated by the letter "N" following each description.

Environmental Interest/Information System
 California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
 RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
 Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

 Environmental Interest/Information System
 California Department of Toxic Substances Control EnviroStor System (DTSC-EnviroStor) is an online search and Geographic Information System (GIS) tool for identifying sites that have known contamination or sites for which there may be reasons to investigate further. The EnviroStor database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response,

MAP FINDINGS

RICHARDSON CHEM CO (Continued) 1000239795
 including Military Facilities and State Superfund; Voluntary Cleanup; and School sites.
 NCEB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.
 US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.
 RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 Completed Sub Area Name: Not reported
 Completed Document Type: Voluntary Cleanup Agreement
 Completed Date: 1995-05-16 00:00:00
 Comments: DTSC entered into a Voluntary Cleanup Agreement with Witco Corporation to complete a Preliminary Endangerment Assessment (PEA) for the Witco Corporation site.

Completed Area Name: PROJECT WIDE
 Completed Sub Area Name: Not reported
 Completed Document Type: Preliminary Endangerment Assessment Report
 Completed Date: 1995-10-24 00:00:00
 Comments: DTSC completed its review of the PEA Report for the Witco Corporation, Allied Kelite Division Site. Based on the information provided, DTSC determined that the residual contamination observed in the Site's soil does not pose a threat to human health via the inhalation and ingestion routes of exposure. Accordingly, DTSC concurs with the "No Further Action" recommendation for the soil with respect to the aforementioned routes of exposure. DTSC has determined that the groundwater beneath the Site has been impacted by Site operations and possibly other regional sources. The groundwater beneath the Site is not a potable source of drinking water and does not pose an imminent and substantial endangerment. However, the groundwater should be investigated. DTSC reserves the right to require additional work in the future should the Site's conditions differ from those described in the PEA

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

NCEB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 Primary Waste: Stormwater Runoff
 Primary Waste Type: Designated/Influent or Solid Wastes that pose a significant threat to

JALISCO AUTO WRECKING (Continued)

1004678468

water quality because of their high concentrations (E.G., BOD, Hardness, TRF, Chloride). 'Manageable' hazardous wastes (E.G., inorganic salts and heavy metals) are included in this category.

Secondary Waste:

Secondary Waste Type: Not reported

Design Flow: 0

Baseline Flow: 0

Reclamation: No reclamation requirements associated with this facility.

POTW: The facility is not a POTW.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.

Complexity:

Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Environmental Interests/Information System
 RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and at Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Hazardous Waste Summary:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Environmental Interest/Information System

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interests/Information System

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CALTRANS EQUIPMENT SHOP (Continued)

1009216546

Handler Activities Summary:
 U.S. importer of hazardous waste: No
 Mixed waste (haz. and radioactive): No
 Recycler of hazardous waste: No
 Transporter of hazardous waste: No
 Treater, storer or disposer of HW: No
 Underground injection activity: No
 On-site burner exemption: No
 Furnace exemption: No
 Used oil fuel burner: No
 Used oil processor: No
 Used oil refiner: No
 Used oil fuel marketer to burner: No
 Used oil Specification marketer: No
 Used oil transfer facility: No
 Used oil transporter: No
 Off-site waste receiver: Commercial status unknown

Hazardous Waste Summary:

Waste code: D001
 Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
 Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D006
 Waste name: CADMIUM

Waste code: D008
 Waste name: LEAD

Waste code: F003
 Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: F005

CALTRANS EQUIPMENT SHOP (Continued)

1009216546

Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Environmental Interest/Information System

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

LOS ANGELES TIMES - LOS ANGELES (Continued) 1000102051

Description: Handler: generates more than 100 and less than 1000 kg of hazardous waste during any calendar month and accumulates less than 6000 kg of hazardous waste at any time; or generates 100 kg or less of hazardous waste during any calendar month, and accumulates more than 1000 kg of hazardous waste at any time

Handler Activities Summary:

U.S. importer of hazardous waste: No
 Mixed waste (haz. and radioactive): No
 Recycler of hazardous waste: Unknown
 Transporter of hazardous waste: Unknown
 Treater, storer or disposer of HW: No
 Underground injection activity: Unknown
 On-site burner exemption: Unknown
 Furnace exemption: Unknown
 Used oil fuel burner: Unknown
 Used oil processor: Unknown
 User oil refiner: Unknown
 Used oil fuel marketer to burner: Unknown
 Used oil Specification marketer: Unknown
 Used oil transfer facility: Unknown
 Used oil transporter: Unknown
 Off-site waste receiver: Commercial status unknown

Hazardous Waste Summary:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D018
Waste name: BENZENE
Waste code: D039
Waste name: TETRACHLOROETHYLENE
Waste code: D040
Waste name: TRICHLOROETHYLENE

Violation Status: No violations found

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport,

PARSEC (Continued) 1000409096

and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interests/Information System
 The NEI (National Emissions Inventory) database contains information

WESTERN BRASS WORKS (Continued)

1000403052

on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 Completed Document Type: Site Screening
 Completed Date: 1994-04-15 00:00:00
 Comments: The Department received a Notice of Intent to Commence Action Under RCRA and CERCLA dated June 22, 1993. On July 30, 1993, the Department mailed the Information Request to all PRPs. The information received from the PRPs indicates that in 1945 the Empire Chemical Co. moved to the subject location. The current owner is Jerry Elkind. The company was involved in the sale of janitorial products and insecticides. It did some packing in the premises as part of their operation. One 5000-gallon UST was installed in 1947-1950 to store kerosene. Soil around the area of the UST is contaminated with TPH and the groundwater is also suspected to be contaminated. The Department's contact with the Los Angeles City Fire Department, UG Tank Plan Check indicates that they are the lead agency. Therefore, the Department's involvement is unnecessary.

 Completed Sub Area Name: Not reported
 Completed Document Type: Preliminary Endangerment Assessment Report
 Completed Date: 1995-05-02 00:00:00
 Comments: The Department completed review of the PEA report. Based on the information provided in the PEA, the site does not constitute an immediate threat that would require an expedited response action. However, DTSC recommends further action, in that the current asphalt must be maintained and a deed restriction notification be placed on the site. DTSC considers the PEA complete.

Completed Area Name: PROJECT WIDE
 Completed Sub Area Name: Not reported
 Completed Document Type: Site Screening
 Completed Date: 1993-10-28 00:00:00
 Comments: The Department received a notice of intent to initiate a PEA dated September 27, 1993. Manufactured Gas Plant (MGP) was operated at the site from approximately 1906 to 1919??? The MGP operations ceased at the site on 1919? when the Southern California Gas Company acquired the MGP properties. In 1922 Los Angeles City Water and Power acquired the property and dismantled the gas plant. The hazardous wastes found at the former MGP sites includes PAHs, Cyanides, TPHs, BTEX, Sulphides/sulfates, and Metals. Due to the evidence of hazardous wastes in the other MGP sites, the Department recommends a PEA. The Department completed review of the sampling plan. RP is investigating the site.

Hazardous Waste Summary:
 Waste code: D001
 Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
 Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D003
 Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Waste code: D007
 Waste name: CHROMIUM

Waste code: D008
 Waste name: LEAD

Waste code: D009
 Waste name: MERCURY

Waste code: D011
 Waste name: SILVER

 Waste name: PYRIDINE

Waste code: D039
 Waste name: TETRACHLOROETHYLENE

Waste code: F001
 Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLOROETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE, AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: F002
 Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROETHYLENE, TRICHLOROFLUOROMETHANE, AND 1,1,2-TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE LISTED IN F001, F004, OR F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: F003
 Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: F005
 Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: U188
 Waste name: PHENOL

MAP FINDINGS

LA DEPARTMENT OF WATER & POWER (Continued) 1000102032

Biennial Reports:
 Last Biennial Reporting Year: 2009

Annual Waste Handled:
 Waste code: D001
 Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
 Amount (Lbs): 50885

Waste code: D002
 Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
 Amount (Lbs): 5390

Corrective Action Summary:
Event date: 04/22/1993
Event: CA049PA

Event date: 04/22/1993
Event: RFA Completed

Event date: 07/12/1993
Event: CA Prioritization, Facility or area was assigned a medium corrective action priority.

Event date: 07/12/1993
Event: Stabilization Measures Evaluation, This facility is amenable to stabilization activity based on the status of corrective action work at the facility, technical factors, the degree of risk, timing considerations and administrative considerations.

 Facility Status: Active facility - RCRA units undergoing Closure: A hazardous waste facility permit, issued to LADWP on August 10, 1983, allowed the facility to store up to 60 55-gallon drums of hazardous waste. The site was first acquired by LADWP in 1915 which was used as the service maintenance for several LADWP operations. Prior to the acquisition, the site was for residential use with exception of the northeastern portion of the facility which was occupied by a former manufactured gas company. LADWP did not renew the permit and requested the closure of the hazardous waste storage unit. Closure plan was implemented and investigation detected up to 2,900 ppb of PCB and 1,740 ppb of arsenic in the concrete chip and core samples, 1,320 mg/kg of TEPH, 114 ug/kg of PCE, 70.8 ug/kg of DCE, and 20,000 ug/kg of PCB in the soil. Several metals (As, Ba, Cd, Co, Pb, Ni, Se, Ti, V, Hg) exceeding the clean up criteria were also detected. Small

LA DEPARTMENT OF WATER & POWER (Continued)

1000102032

amount of VOCs was also detected in soil gas samples. Based on the soil sample results, it is likely the hazardous waste storage unit cannot meet the clean closure criteria. LADWP is currently preparing a closure certification report for the hazardous waste storage unit.

Environmental Interest/Information System

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

CERCLIS (Comprehensive Environmental Response, Compensation, and Liability Information System) is the Superfund database that is used

ENTERPRISE SALES (Continued)

1006371512

to support management in all phases of the Superfund program. The system contains information on all aspects of hazardous waste sites, including an inventory of sites, planned and actual site activities, and financial information.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and at Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include: Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Completed Info:

Completed Area Name: PROJECT WIDE
 Completed Sub Area Name: Not reported
 Completed Document Type: * Discovery
 Completed Date: 1992-10-22 00:00:00
 Comments: Known as the I T E Circuit Breaker Company, Inc. facility identified from L.A. Chamber of Commerce Directory 1963-1964. Electrical Distribution Equipment. On 05/31/1983, a facility drive-by was conducted. Now Trufflex Rubber. Office in front; no waste visible from rear.

Completed Area Name: PROJECT WIDE
 Completed Sub Area Name: Not reported
 Completed Document Type: Site Screening
 Completed Date: 1993-06-30 00:00:00
 Comments: The Department received a complaint dated December 29, 1992 relates to alleged unlawful disposal or releases of hazard-ous wastes and hazardous substances, including PCE, TCE, 1,1,1-TCA and toluene at the site and neighboring property. Due to the evidence of on-site contamination, the Dept recommends a PEA.

 Site name: TRUFLEX RUBBER CO
 Classification: Small Quantity Generator

Hazardous Waste Summary:
 Waste code: D001
 Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
 Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D006
 Waste name: CADMIUM

Waste code: D008
 Waste name: LEAD

Waste code: D009
 Waste name: MERCURY

Waste code: D018

Environmental Interests/Information System

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
 RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
 AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and its Headquarters. A future release of ICIS will replace the Permit

SMILAND PAINT COMPANY (Continued)

1000277287

Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

 Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTW will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.

Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Case Type: Cleanup Program Site
 Case Worker: S
 Local Agency: Not reported
 RB Case Number: 1185
 File Location: Regional Board
 Potential Media Affected: Aquifer used for drinking water supply, Soil, Soil Vapor
 Potential Contaminants of Concern: * Solvents, Acetone, Arsenic, Chromium, Heating Oil / Fuel Oil
 Site History: The Site is a vacant building complex owned by Lamar Plaza LLC, which purchased the property from Smiland Land Company (SLC) on October 31, 2007. The property is approximately 3.4 acres in size and was a former paint manufacturing facility. Smiland Paint Company (SPC), predecessor to SLC, occupied and operated the paint manufacturing facility from approximately 1986 to 2004. SPC stopped its paint manufacturing operations in 2004 and leased the facility to Moreware Paint Company (MPC). MPC operated the facility until November 2007. After MPC discontinued its operations, the machinery, ASTs, raw materials, etc have been removed from the property. Similar operations were conducted at the Site by North American Paint Company and Valspar Corporation from approximately 1937 to 1985. The Site was occupied by residences and horse stables prior to 1937. Site investigations were initiated at the Site in 1985 in conjunction with the abandonment-in-place of two 7,500-gallon solvent/thinner underground storage tanks (USTs). Expanded site assessments were conducted onsite and offsite in 1999, 2007, 2008 and 2009. The subsurface investigations detected low level volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs) and heavy metals at varying background concentrations in soil and groundwater. Total petroleum hydrocarbons (TPH) were detected in soil samples collected near the water table. Free product was also encountered floating on the water table in the onsite and offsite soil borings. The results of the site assessments indicate that the residual VOC contaminants in soil are localized, limited in mass and extent and are below the SCLs established by the Regional Board in the Interim Site Assessment & Cleanup Guidebook, May 1996. All other potential contaminants, such as SVOCs and heavy metals, are below the United States Environmental Protection Agency (U.S. EPA) Region IX Regional Soil Screening Levels (SLSs) for the protection of human health and groundwater or at background concentrations. The TPH contamination in the soil is mostly confined to a smear zone approximately between 15 feet and 20 feet bgs and is likely resulted from the free product floating on the water table. The free product appears to be the result of a natural condition, rather than attributed to onsite releases. Based on the results of the site investigations, the Regional Board determined no further requirements (NFR) are needed with respect to soil and groundwater beneath the Site. The case has been closed.

CA BOND EXP. PLAN S105960450
Cortese N/A

Site 1 of 3 in cluster DD
Relative: Higher
Actual: 310 ft.
 CA BOND EXP. PLAN:
 Responsible Party: DETAILED SITE EXPENDITURE PLAN
 Project Revenue Source Company: Not reported
 Project Revenue Source Addr: Not reported
 Project Revenue Source City,ST,Zip: Not reported
 Project Revenue Source Desc: The responsible parties have been found to be in noncompliance with an order issued by the Department. Therefore, it will be necessary to utilize Bond funds to remediate this site. DHS will undertake appropriate cost recovery actions. This has not been identified as a NPL site, nor does it appear, to be a likely NPL candidate in the future. Therefore, it appears unlikely that federal funds are a viable source of revenue for this site.
 Site Description: Bortz Oil was a petroleum products blending and packaging facility. The packaging warehouse was destroyed by fire in 1984. During reconstruction, pervasive subsurface contamination was detected. The site now operates only as a warehouse for storage of chemical products.
 Hazardous Waste Desc: Subsurface exploration has revealed that the soil and ground water are contaminated with acetone, toluene, xylene, benzene, methyl ethyl ketone (MEK), methylene chloride and 1,2-dichloroethane (DCE).
 Threat To Public Health & Env: Major routes of concern for human and animal exposure are soils, surface water and ground water. The Los Angeles River Channel is 100 feet from the site. Contamination of the soil and ground water was documented in January, 1986. The shallow and deeper aquifers are believed to be hydraulically connected. Soil gas vapors could pose an explosive threat; no threat has been identified to date.
 Site Activity Status: A remedial action order was issued April 13, 1987 directing the RPs to mitigate the site. A remedial investigation work plan was submitted and approved with modifications by DHS. Implementation of the remedial investigation commenced August 10, 1987. Routine monitoring of the ground water monitoring wells and vapor collection system is being conducted. The responsible parties were found in non-compliance with the order on April 28, 1988. Completion of the RIFS is projected for January, 1990.

BORTZ OIL COMPANY (Continued)

S10083375

Alternate Address: PO BOX 60368
 Alternate City,St,Zip: LOS ANGELES, CA 90012
 Alternate Address: 1746 NORTH SPRING STREET
 Alternate City,St,Zip: LOS ANGELES, CA 90012
 Background Info: The Bortz Oil Company (BOC) was a petroleum products blending and packaging facility. The site produced various petroleum products (i.e. kerosene, paint, acetone, methyl ethyl ketone (MEK), lacquer thinners, and denatured alcohol). High levels of hydrocarbons and chlorinated solvents have been identified in the soil, while 1,1-dichloroethane (DCE), vinyl chloride, petroleum hydrocarbons, and benzene have been detected in the groundwater.
 On August 9, 1984, a fire broke out in one of the metal and concrete warehouse facilities on the North Spring Street property. Undetermined amounts of chemicals were consumed by the fire and spilled on the ground, which has since percolated into the soil. The Department's inspection in December 1985, and January 1986, revealed that there were numerous uncontrolled chemical spills, leaking valves and drums, and illegal disposal of chemicals at the site. Since the groundwater is not being used as a drinking water source, the potential impact of the contaminated groundwater is not an immediate concern. The groundwater investigation will be conducted after the Spring Street property is sold. Direct contact with the contaminated soil, inhalation, and dermal absorption are the potential routes of exposure.
 On April 14, 1987, the Department issued a Remedial Action Order (RAO) to BOC to develop and implement the Remedial Investigation/Feasibility Study (RI/FS), Remedial Action Plan (RAP) and remediation. On July 6, 1988, the RAO was modified to include additional property (1726 N. Naud Street) owned by (BOC). Although remedial activities have been slowed due to the death of the owner in March 1990, the Department approved the Focused Feasibility Study Report for the Naud Street property. The Probate Court has determined that BOC's assets will be used towards the remediation of the Naud Street Property. On October 23, 1992, the Dept. negotiated a Consent Order with the Executor of the BOC estate.
 In August 1996, DTSC completed a removal action on the North Spring Street property. Bortz removed above-ground tanks and structures and near surface piping.
 Comments Date: 06302000
 Comments: former Bortz Oil site. Bortz will implement a soil vapor extraction technology to achieve the remedial goals set forth in the RAW. DTSC has determined and filed a CEQA Notice of Exemption for the Site.
 Comments Date: 06302000
 Comments: The Removal Action Workplan (RAW) for the above site was approved on June 30, 2000. As indicated in the RAW, Soil Vapor Extraction will be implemented at the area designated as AOPC-2.

Comments Date: 06302000
 Comments: Not reported
 Comments Date: 07071993
 Comments: The CEQA documents (negative declaration) for the Bortz Oil Company are submitted to the State Clearinghouse. The only comment received was from Caltrans who requested that transportation be conducted on off-peak hours.
 Comments Date: 07081993
 Comments: The Final RAP for the Bortz Oil Company is approved. The alternative selected is to excavate and dispose of contaminated soil. The Final RAP also contains the Remedial Design Workplan which was approved concurrent with the adoption of the Final RAP.
 Comments Date: 07251991
 Comments: Petroleum products blending and packaging facility. During production of petroleum products, various hazardous substances were used, including mineral spirits & kerosene.
 Comments Date: 07251991
 Comments: High levels of hydrocarbons and chlorinated solvents have been identified in the soil while 1,1-dichloroethane (DCE), vinyl chloride, petroleum hydrocarbons, and benzene have been detected in the groundwater.
 Comments Date: 08021996
 Comments: DTSC approves the Removal Action Workplan and Neg. Dec. for Bortz Oil-Spring Street property. The Removal Action involves removal of above-ground tanks and structures.
 Comments Date: 08192002
 Comments: A deed restriction to restrict use of the property was recorded on August 19, 2002. The deed restriction prohibits sensitive uses of the property including, but not limited to residential, hospital, public or private school uses for persons under 21 years of age, and daycare uses for children.
 Comments Date: 08192002
 Comments: Not reported
 Comments Date: 08292002
 Comments: DTSC certified that the soil cleanup has been completed in accordance with the provisions of the approval RAW. A deed

Completed Info:
 Completed Area Name: PROJECT WIDE
 Completed Sub Area Name: Not reported
 Completed Document Type: * Cost Recovery Settlements/Decreases
 Completed Date: 2004-12-08 00:00:00
 Comments: DTSC signed an acceptance of Allowance of Creditors Claim with the Bortz Estate in December 8th, 2004. The Estate settled past costs.

Completed Area Name: PROJECT WIDE
 Completed Sub Area Name: Not reported
 Completed Document Type: Consent Order
 Completed Date: 1998-12-21 00:00:00
 Comments: Transition to Chapter 6.5. Amendment to the existing Consent Order No. 86/87-039RA signed by the RP.

Completed Area Name: PROJECT WIDE
 Completed Sub Area Name: Not reported
 Completed Document Type: Land Use Restriction
 Completed Date: 2002-08-19 00:00:00
 Comments: A deed restriction to restrict use of the property was recorded on August 19, 2002. The deed restriction prohibits sensitive uses of the property including, but not limited to residential, hospital, public or private school uses for persons under 21 years of age, and daycare uses for children.

BORTZ OIL COMPANY (Continued) S100833375

Completed Area Name: PROJECT WIDE
 Completed Sub Area Name: Not reported
 Completed Document Type: CEQA - Notice of Exemption
 Completed Date: 2000-06-30 00:00:00
 Comments: DTSC approves the Soil Removal Action Workplan (RAW) for the former Bortz Oil site. Bortz will implement a soil vapor extraction technology to achieve the remedial goals set forth in the RAW. DTSC has determined and filed a CEQA Notice of Exemption for the Site. The Removal Action Workplan (RAW) for the above site was approved on June 30, 2000. As indicated in the RAW, Soil Vapor Extraction will be implemented at the area designated as AOPC-2.

Completed Area Name: PROJECT WIDE

 Background Info: The Naval and Marine Corps Reserve Center, Los Angeles (NMCRC-LA) consists of approximately 6 acres of land, approximately 1 mile northeast of downtown Los Angeles. This site is a closed reserve center where Naval or Marine Corps activities are no longer conducted. NMCRC-LA was constructed from 1938 to 1940 by the Works Progress Administration and was commissioned in 1940 to provide administrative, training, and logistics support to reserve units. The facility has one Installation Restoration site, identified as Site 1, the former Service Station and Vehicle Lube Rack. The former service station was built in 1943 and was used for fueling g vehicles on site. The aboveground portion of the station has been removed. Adjacent to the former Service Station, the Vehicle Lube Rack was used for vehicle maintenance and drained directly to a waste of oil underground storage tank(UST). Between 1987 to 1989, hazardous substances (including used oil, solvents, hydraulic fluid, and other new and used vehicle maintenance products) were stored in 55-gallon drums on the Vehicl Lube Rack. In November 1994, the waste oil UST was removed in 1994 under supervision of the Los Angeles Fire Department. Soil with detected levels of total recoverable petroleum hydrocarbons was excavated and disposed

NAVAL MARINE COMILITARYS RESERVE CENTER, LOS ANGEL (Continued)

S101584386

ed off site. In 1995, an Environmental Baseline Study (EBS) was conducted. The EBS identified the Vehicle Lube Rack and the former Service Station gasoline UST as areas requiring further investigation. In 1996, a subsurface soil investigation conducted for Site 1 indicated the presence of gasoline-range hydrocarbons, benzene, toluene, ethylbenzene, total xylenes, and 1,2-dichloroethane.
 Comments Date: 01182005
 Comments: The SI included Geophysical survey; soil sampling and analysis; groundwater sampling and analysis; assessing the nature and extent of contamination; assessing the fate and transport of contaminants and assessing potential risk to human health. Based on the results, it is recommended that the site no longer considered a CERCLA IR site, and should fall under State of California UST program.
 Comments Date: 01182005
 Comments: am. DTSC concurs with this recommendation.

 Alternate Address: 590 SOUTH SANTA FE AVENUE
 Alternate City,St,Zip: LOS ANGELES, CA 90013
 Background Info: The site is located at 590 South Santa Fe Avenue, Los Angeles, California. The site consists of two land parcels totaling approximately 2.68 acres of land and is located within an industrial portion of the City of Los Angeles. Historically the site has been used for chemical or paint manufacturing. Not reported
 The site was formerly under the oversight of the California Regional Water Quality Control Board (CRWQCB). (CRWQCB) has overseen the site investigation and remediation since approximately 1986.
 Not reported
 Previous sampling activities have confirmed both soil and groundwater contamination. Contaminants of concern identified in the groundwater and soil include benzene, ethyl benzene, 1,1-dichloroethane, 1,1-dichloroethene, 4-methyl-2-pentanone (MIBK), toluene, and total xylene. The toluene, and xylene appear to be primarily located within the groundwater beneath the northern portion of the site whereas MIBK has been identified in the groundwater along the southwest corner of the site and may extend beyond the site boundary.

Facility Status: Unique Premium Metals, Inc. is a precious metal recycler. A new Standardized Hazardous Waste Facility Permit, Series C was issued to Unique Premium Metals, Inc. on April 13, 2006 and became effective on May 23, 2006. The Permit will expire on May 22, 2016. Unique Premium Metals is located in a suite within the St. Vincent Jewelry Center Building, in the downtown Los Angeles Jewelry District. Unique Premium Metals Inc. accepts jewelry polishing dust ("sweeps") from jewelry manufacturers, processes it, and then assays for precious metal content. The sweeps contain precious metals, and are regulated as hazardous waste in California because they are a fine powder containing metals (copper, barium, nickel, zinc, silver) that typically exceed the regulatory levels. The Series C Standardized Permit authorizes Unique Premium Metals to store and treat the jewelry sweeps.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include: Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Voluntary Cleanup Agreement
Completed Date: 1995-03-29 00:00:00
Comments: The Responsible Party recorded a Deed Restriction notification with the County of Los Angeles on March 27, 1995 and a copy has been provided to the Department. The Department has reviewed the Covenant and recommended that "No Further Action" is warranted provided the current cap is in place. Based on the Covenant, the Department should be notified prior to any soil disturbance at the site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Screening
Completed Date: 1994-03-16 00:00:00
Comments: The Department received a referral dated March 8, 1994 from the County of Los Angeles, Fire Department. The site was previously a battery recycler whose owner, Victor Pena, was under investigation by LA County and the LA City Attorney's Office for the illegal discharge of hazardous waste onto the subject property. The waste materials were being discharged into an unlined pit in the rear of the property and the driveway. The RP was subsequently convicted of illegal discharge of hazardous waste, sentenced and ordered to remediate the site. The "Subsurface Investigation Report" indicates that the maximum concentration of lead in the soil is 30,000 mg/kg and minimum pH is 0.48. RP has not been complied with the County's directives. Therefore, the site was referred to the Department. Due to the evidence of onsite contamination, the Department recommends a PEA. The RP will be notified of this recommendation.

Database(s)

ORPHAN SUMMARY

Table with columns: City, EDR ID, Site Name, Site Address, Zip, Database(s). Lists various orphan sites across California and other states.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List
National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program.

Date of Government Version: 07/02/2010
Date Data Arrived at EDR: 07/14/2010
Date Made Active in Reports: 10/04/2010
Number of Days to Update: 82

Source: EPA
Telephone: N/A
Last EDR Contact: 10/13/2010
Next Scheduled EDR Contact: 01/24/2011
Data Release Frequency: Quarterly

NPL Site Boundaries

Sources: EPA's Environmental Photographic Interpretation Center (EPIC)
Telephone: 202-564-7333

Table listing EPA Regions 1 through 10 with their respective telephone numbers.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 07/02/2010
Date Data Arrived at EDR: 07/14/2010
Date Made Active in Reports: 10/04/2010
Number of Days to Update: 82

Source: EPA
Telephone: N/A
Last EDR Contact: 10/13/2010
Next Scheduled EDR Contact: 01/24/2011
Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991

Federal Delisted NPL site list

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425 (e), sites may be deleted from the NPL where no further response is appropriate.

Federal CERCLIS list

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned
Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
 Included in the listing are brownfields properties addresses by Cooperative Agreement Recipients and brownfields properties addressed by Targeted Brownfields Assessments. Targeted Brownfields Assessments-EPA's Targeted Brownfields Assessments (TBA) program is designed to help states, tribes, and municipalities--especially those without EPA Brownfields Assessment Demonstration Pilots--minimize the uncertainties of contamination often associated with brownfields. Under the TBA program, EPA provides funding and/or technical assistance for environmental assessments at brownfields sites throughout the country. Targeted Brownfields Assessments supplement and work with other efforts under EPA's Brownfields initiative to promote cleanup and redevelopment of brownfields. Cooperative Agreement Recipients-States, political subdivisions, territories, and Indian tribes become Brownfields Cleanup Revolving Loan Fund (BCRLF) cooperative agreement recipients when they enter into BCRLF cooperative agreements with the U.S. EPA. EPA selects BCRLF cooperative agreement recipients based on a proposal and application process. BCRLF cooperative agreement recipients must use EPA funds provided through BCRLF cooperative agreement for specified brownfields-related cleanup activities.

Local Lists of Hazardous waste / Contaminated Sites

US CDL: Clandestine Drug Labs
 A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Date of Government Version: 05/07/2010

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

HIST FTTS: FIFRATSCA Tracking System Administrative Case Listing
 A complete administrative case listing from the FIFRATSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.
 Date of Government Version: 10/19/2006 Source: Environmental Protection Agency
 Date Data Arrived at EDR: 03/01/2007 Telephone: 202-564-2501

RAATS: RCRA Administrative Action Tracking System
 RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.
 Date of Government Version: 04/17/1995 Source: EPA
 Date Data Arrived at EDR: 07/03/1995 Telephone: 202-564-4104

HAZNET: Facility and Manifest Data
 Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method.

Most Recent Revision: 1994
West Map: 34118-A3 HOLLYWOOD, CA
Most Recent Revision: 1994

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SSE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Target Property County: LOS ANGELES, CA FEMA Flood Electronic Data
YES - refer to the Overview Map and Detail Map
Flood Plain Panel at Target Property: 06037C - FEMA DFIRM Flood data
Additional Panels in search area: Not Reported

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property: LOS ANGELES NWI Electronic Data Coverage
YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data:

Search Radius: 1.25 miles
Location Relative to TP: 1/8 - 1/4 Mile ENE
Site Name: MOGUL CORP
Site EPA ID Number: CAD056437460
Groundwater Flow Direction: West-Northwest
Inferred Depth to Water: 20 feet to 50 feet.
Hydraulic Connection: The site is located in a groundwater recharge area.
Sole Source Aquifer: No information about a sole source aquifer is available
Data Quality: Information is inferred from the CERCLIS investigation report(s)

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
2	1/2 - 1 Mile ESE	Not Reported

For additional site information, refer to Physical Setting Source Map Findings.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era: Cenozoic
System: Quaternary
Series: Quaternary
Code: Q (decoded above as Era, System & Series)

GEOLOGIC AGE IDENTIFICATION

Category: Stratified Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information

Layer	Boundary		Soil Texture Class	Classification		Permeability Rate (in/hr)	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: sandy loam
gravelly - sandy loam
silt loam
clay
fine sand
gravelly - sand
sand
fine sandy loam

Surficial Soil Types: sandy loam
gravelly - sandy loam
silt loam
clay
fine sand
gravelly - sand
sand
fine sandy loam

Shallow Soil Types: fine sandy loam
gravelly - loam
sandy clay
sandy clay loam
clay
silty clay
sand

Deeper Soil Types: gravelly - sandy loam
sandy loam
very gravelly - sandy loam
stratified
very fine sandy loam
weathered bedrock
sand
gravelly - fine sandy loam
silty clay loam
clay loam

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.
