TRANSPORTATION FIRE SAFETY
SUMMARY OF REGULATIONS

As a result of the multiplicity of regulatory efforts by the Department of Transportation in the area of fire safety, it is difficult to obtain a clear sense of the scope and depth of the regulations and what commonalities or differences exist.

Federal regulations pertaining to transportation fire safety are promulgated by each of the modal agencies which form the components of the federal Department of Transportation. Within the body of regulations for a single modal agency there are often distinct categories of vehicles, aircraft, or vessels, each of which is covered by a subset of the regulations. In some cases separate regulations are issued by the various bureaus or administrative entities within one of the modal agencies. The regulations themselves appear under many different subject headings, and references to fire safety are often scattered through diverse subchapters, parts, subparts, and paragraphs.

The summaries presented here provide an overview of these regulations. They were compiled through a careful reading of the Code of Federal Regulations, extracting material that directly or indirectly refers to transportation fire safety. Certain types of references are abbreviated or are excluded from this survey; namely, those relating to military equipment or cargoes, and all hazardous materials or dangerous bulk cargoes. Throughout this compilation of regulations, the focus is on those regulations pertaining to the safety of personnel, passengers and crew, rather than on freight or cargoes. The annotations indicate the principal

MTA LIBRARY

matters that are covered in each citation. The actual citation, which is here condensed into a sentence or a phrase, may consist of several paragraphs or several pages, depending upon the subject matter. There may also be subordinate matters incorporated in the actual citation that are not referred to in the annotation.

FEDERAL AVIATION ADMINISTRATION
CFR TITLE 14-AERONAUTICS & SPACE
TITLE 49-TRANSPORTATION

FAA REGULATIONS

Code of Federal Regulations
Title 14 - Aeronautics and Space

| <u>Citation</u> | <u>Subject</u> | <u>Content</u> |
|--|-----------------------------------|--|
| <u>Subchapter A - Definitions</u> | | |
| Part I | Definitions | List of definitions including fireproof, fire resistant, flammable and flash resistant (see attached list) |
| <u>Subchapter C - Aircraft</u> | | |
| <u>Part 23 - Airworthiness Standards; Normal, Utility and Acrobatic Category Airplanes</u> | | |
| §SFAR No. 32 | Emergency doors and exits | Must meet provisions of 23.783 and 23.807 a3, b, c, and additional specified requirements |
| §Subpart D - Design and Construction | | |
| §23.783 (a) | Doors | Requirement that each passenger area in enclosed cabin must have access to at least one external door |
| §23.787 (d) | Cargo compartment | Requirement that construction be of flame resistant material |
| §23.807 | Emergency Exits | Specifications for number, location, size, markings, operation, accessibility, tests as proof of compliance |
| §23.853 | Compartment interiors | Use of fire resistant materials, regulation of smoking, and shielding of fuel lines and tanks |
| §23.859 | Combustion heater fire protection | Construction in compliance with regulations on fuel tanks, lines and exhaust systems; automatic shutoff mechanism in case of overheating |

| <u>Citation</u> | <u>Subject</u> | <u>Content</u> |
|----------------------------------|--|---|
| § 23.865 | Fire protection of flight controls and other flight structures | Construction using fireproof materials or using shielding to withstand effect of fire |
| Subpart E - Power Plant | | |
| § 23.903 (c), (e2), (e4) | Engines | (c)Provision that power-plants be isolated from each other so that malfunction (including due to fire) will not affect the other (e2)Provision of means to stop engine combustion and rotation, with components involved being at least fire resistant (e4)Provision that restarting engine in flight will not create a fire hazard due to accumulated fuel |
| § 23.954 | Fuel system lightning protection | Design of fuel system to prevent ignition of fuel vapor by lightning |
| § 23.973 (b) | Fuel tank filler connection | Prevention of spilled fuel from entering fuel tank compartment or other part of airplane |
| § 23.1001 | Fuel jettisoning system | Provision that fuel jettisoning will not present a fire hazard |
| § 23.1017 | Oil lines | Provision that oil breather lines not constitute a fire hazard if foaming occurs |
| § 23.1061 | Radiators of engines cooled with flammable coolant | Design of air intake duct such that flames from nacelle will not strike duct |
| § 23.1091 (b1), (b2), (c1) | Air induction system | Provision that air intakes be located in sheltered positions to prevent emergence of backfire flames within the cowling Provision for turbine engine that hazardous quantities of flammable fluids from drains, |

| <u>Citation</u> | <u>Subject</u> | <u>Content</u> |
|--------------------------------------|---|---|
| | | vents or other components not be allowed to enter the air intake system |
| §23.1103 (a) | Induction system ducts | Provision that each induction system duct have a drain to prevent accumulation of fuel, with drain discharging where it will not cause a fire hazard |
| §23.1121 (a), (b), (c), (d) | Exhaust system | Provision that all exhaust system gases be disposed of so as not to ignite any flammable fluids, vapors or parts, including design to separate fuel system components from exhaust |
| §23.1123 | Exhaust manifold | Provision that each exhaust manifold be fireproof |
| §23.1141 (f) | Powerplant | Provision that powerplant components required to operate in case of fire be at least fire resistant |
| §23.1157 (b) | Powerplant accessories | Provision that electrical equipment subject to sparking be located so as to minimize probability of contact with flammable fluids or vapors |
| §23.1182 | Nacelle areas behind firewalls | Provision that components, lines and fittings located behind the engine firewall be able to withstand damage if the engine-side of the firewall is subjected to a flame temperature of not less than 2000°F for 15 minutes. |
| §23.1183 | Powerplant lines, fittings and components | Provision that all lines, fittings and components carrying flammable fluids, gas or air to any area subject to engine fire conditions be at least fire resistant or, if part of and attached to the engine, be fire proof |

| <u>Citation</u> | <u>Subject</u> | <u>Content</u> |
|------------------------------|--|---|
| §23.1189 (a1), (a5) | Shutoff means | Provision that each engine have means to shutoff the flow of hazardous quantities of flammable fluids with no hazardous amount of flammable fluid flowing into the engine compartment after shutoff |
| §23.1191 (a-h) | Firewalls | Requirement that all combustion equipment be protected by firewalls constructed such that flammable fluids can not pass to other parts of the plane, with all openings in the firewall adequately sealed, and each firewall to be fireproof and constructed either of certain materials (listed) or able to meet certain specific test standards (listed) |
| §23.1192 | Engine accessory compartment diaphragm | Provision that all air-cooled engines have a firewall separating the engine power section and all portions of the exhaust system from the engine accessory compartment |
| §23.1193 (c), (d), (d) | Cowling | Provision that all cowling be at least fire resistant, that each part behind an opening in the engine compartment cowling be at least 24 inches and each part of the cowling subjected to high temperatures be fireproof |
| Subpart F - Equipment | | |
| §23.1351 (e) | Electrical equipment | Design of electrical equipment to withstand damage if the engine-side of the firewall is subjected to a temperature of 2000° F for 5 minutes |
| §23.1353 (d) | Storage batteries | Design of batteries such that explosive gases will |

| <u>Citation</u> | <u>Subject</u> | <u>Content</u> |
|--|------------------------------------|---|
| | | not be emitted and allowed to accumulate in hazardous quantities |
| §23.1365 (b) | Electric cables and equipment | Provision that all cables and equipment that would be subjected to overheating in the case of circuit overload be at least fire resistant |
| §23.1385 (e) | Position light system installation | Provision that light covers and color filters be at least flame resistant |
| <u>Part 25 - Airworthiness Standards: Transport Category Airplanes</u> | | |
| Subpart D - Design and Construction | | |
| §25.772 | Emergency Exits | Design so that either crew or passengers have access to emergency exit without using pilot-passenger separating door |
| §25.791 | No smoking signs | Provision for signs prohibiting smoking, legible to passengers that are controlled by crew |
| §25.803 (a) (b) (c) | Emergency exits | Requirement that both passenger and crew areas have means for rapid evacuation in crash landing with landing gear down. Exits must meet provisions of this section, 25.807, 25.813 and show compliance by demonstration |
| §25.805 | Emergency exits | Size and location of exits for flight crew |
| §25.807 | Emergency exits | Type, location, accessibility and distribution of exits for passengers |
| §25.809 | Emergency exits | Requirement that emergency door be movable with self-supporting slide, automatically deployed |

| <u>Citation</u> | <u>Subject</u> | <u>Content</u> |
|---------------------|-----------------------|---|
| §25.811 (a-e) | Emergency exits | Provision that markings for exits meet specifications to indicate access, location, means of opening, and meet specifications for visibility. |
| §25.812 (a-j) | Emergency lighting | Requirement for independently powered emergency lighting system as well as specifications for size, location, etc. |
| §25.813 (a-f) | Emergency exits | Provision for access to exits from different passenger areas, no obstructions to exits and that exits have room for crew to assist passengers in evacuation. Other specifications. |
| §25.815 | Aisles | Specifications for width of aisle |
| §25.817 | Seating | Specifications for maximum seats abreast |
| §25.851 (a), (b) | Fire extinguishers | Criteria for the type of fire extinguishers to be installed |
| §25.853 | Compartment interiors | Requirement that various materials used on interiors be self-extinguishing when tested in accordance with applicable portions of Appendix F of this part or other approved equivalent methods and that the average burn length must not exceed a certified number of inches Requirement that motion picture film be a safety film meeting the Standard Specifications for Safety Photographic Film PH 1.2 Regulations relating to smoking and the presence of hand fire extinguishers |

| <u>Citation</u> | <u>Subject</u> | <u>Content</u> |
|-----------------------|---|--|
| §25.855 (a) | Cargo and baggage compartments | Requirement that materials used in the construction of cargo and baggage compartments at least meet the requirements set forth in 25.853 (b). Requirement that no compartment contain any controls, wiring, lines, equipment or accessories unless these items are protected as further specified Requirement that there be means to prevent cargo and baggage from interfering with the function of fire-protection features of the cargo compartment |
| §25.857 (a-e) | Cargo compartment classification | Classification of cargo compartments as A,B,C or D according to the degree of fire protection that they provide |
| §25.859 (a-h) | Combustion heater fire protection | Specification of fire measures required for combustion heaters |
| §25.863 (a), (b), (c) | Flammable fluid fire protection | Criteria for prevention of leakage of flammable fluids and for prevention of ignition of leaked flammable fluids |
| §25.865 | Fire protection of flight controls, engine mounts and other flight structures | Provision that flight controls, engine mounts and other flight structure located in or adjacent to fire zones be constructed of fire-proof materials or shielded from the effects of fire intake system |
| §25.867 | Fire protection: other components | Provision that surfaces to the rear of the nacelle within one nacelle diameter of the nacelle centerline be at least fire-resistant |

| <u>Citation</u> | <u>Subject</u> | <u>Content</u> |
|--------------------------------|--|--|
| Subpart I - Power Plant | | |
| §25.903 (c), (d1) | Engines | Requirement that each engine have a system to stop the rotation of the engine and to restart the engine; components of this system to be at least fire resistant |
| §25.929 (b) | Propeller deicing | Provision that if combustion fluid is used for propeller deicing, §25.1181-25.1185 and 25.1189 are applicable |
| §25.954 | Fuel system lightning protection | Design of fuel system to minimize the probability of ignition of fuel vapors by lightning |
| §25.963 (d) | Fuel tanks | Design of fuel tanks in order to prevent rupture during emergency landings and such that scraping action with the ground is unlikely |
| §25.965 | Fuel tank tests | Specifications for testing fuel tanks with regard to pressure and vibration |
| §25.975 (a), (b), (i) | Fuel tank vents and carburetor vapor vents | Provision that vents and drains not end at a point which would create a fire hazard |
| §25.981 (b) | Fuel tank temperature | Provision that no temperature in any part of any fuel tank may be such as to allow autoignition |
| §25.1017(b2) | Oil lines and fittings | Provision that oil breather lines not constitute a fire hazard if foaming occurs |
| §25.1091(c1), (c2), (d1) | Air induction | Provision that air intakes be located in sheltered positions to prevent emergence of backfire flames within the cowling |

| <u>Citation</u> | <u>Subject</u> | <u>Content</u> |
|--|----------------------------------|--|
| | | Provision for turbine engines that hazardous quantities of flammable fluids from drains, vents and other components not be allowed to enter the air intake system |
| §25.1103 (a), (b) | Induction system ducts | Provision that each induction system duct have a drain to prevent accumulation of fuel, with drain discharging where it will not cause a fire hazard Provision that each duct be fire-resistant if it is located in a fire zone for which a fire-extinguishing system is required |
| §25.1121 (a), (b), (c), (d), (g) | Exhaust system | Provision that all exhaust system gases be disposed of so as not to ignite any flammable fluids, vapors or parts, including design to separate fuel system components from exhaust |
| §25.1125 (a4) | Exhaust heat exchangers | Provision that exhaust heat exchangers not have stagnant areas which might trap flammable fluids in the case of a malfunction of components carrying flammable fluids |
| §25.1161 | Fuel jettisoning system controls | Provision that fuel jettisoning system controls have guards to prevent inadvertent operation and that no such control be located near any fire extinguisher control |
| §25.1163 (b) | Powerplant accessories | Provision that electrical equipment subject to sparking be located so as to minimize probability of contact with flammable fluids or vapors |

| <u>Citation</u> | <u>Subject</u> | <u>Content</u> |
|-----------------|--|---|
| §25.1165 (e) | Engine ignition systems | Provision that no ground wire for any engine be routed through a fire zone of another engine unless each part of that wire within that zone is fire-proof |
| §25.1181 | Designated fire zones | Listing of all designated fire zones, which are all to meet the requirements of §25.1185-25.1205 |
| §25.1182 | Nacelle areas behind firewalls | Provision that nacelle areas behind firewalls meet requirements of §25.1103(b), §25.1165(d), (e), 25.1183, §25.1185(c), §25.1187, §25.1189 and §25.1195-25.1203 |
| §25.1183 | Flammable fluid-carrying components | Requirement that each line, fitting and other component carrying flammable fluid in any area subject to engine fire or in a designated fire zone be fire resistant |
| §25.1185 | Flammable fluids | Requirement that no tank or reservoir that is part of a system containing flammable fluid may be in a designated fire zone unless the degree of safety provided equals that which would exist if the tank were outside such a zone; requirement of at least one-half inch between tank and firewall; absorbent materials next to potential flammable fluid leaks must be covered or treated to prevent absorption |
| §25.1187 | Drainage and ventilation of fire zones | Requirement for safe drainage and ventilation of fire zones |

| <u>Citation</u> | <u>Subject</u> | <u>Content</u> |
|------------------------------|------------------------------------|---|
| §25.1189 (a), (d), (e) | Shutoff means | Provision that each engine have means to shutoff the flow of hazardous quantities of flammable fluids, that the shutoff means be fireproof and no hazardous amount of flammable fluids flow into the engine compartment after shutoff |
| §25.1191 | Firewalls | Requirement that all combustion equipment be isolated from the rest of the airplane by firewalls which are fireproof, impermeable to air, fluid and flame and with each opening in the firewall sealed adequately |
| §25.1192 | Engine accessory section diaphragm | Provision that the engine power section and the exhaust system be isolated from the engine accessory section by a firewall |
| §25.1193 (c), (d), (e) | Cowling and nacelle skin | Requirements on fireproof properties of cowling to prevent the spread of fire through cowling from fire zones to other areas |
| §25.1195 | Fire extinguishing systems | Designation of areas required to have fire extinguishing systems and certain requirements for the design of these systems |
| §25.1197 | Fire extinguishing agents | Requirement that extinguishing agents must be methyl bromide, carbon dioxide or any other agent with equal extinguishing action and provisions to prevent harmful concentrations of these substances |
| §25.1199 | Extinguishing agent containers | Provisions to prevent extinguishing agent containers from bursting and discharging prematurely |

| <u>Citation</u> | <u>Subject</u> | <u>Content</u> |
|-----------------------|---|--|
| §25.1201 | Fire extinguishing system materials | Provision that no material in any fire extinguishing system react chemically with any extinguishing agent so as to create a hazard and that each system component in an engine compartment be fireproof |
| §25.1203 | Fire-detector system | Requirement that fire-detector systems be installed in each designated fire zone and in the combustion, turbine and tailpipe sections of turbine engine installations and that these systems be designed in specified ways |
| Subpart F - Equipment | | |
| §25.1305 (a7) | Powerplant instruments | Requirement of fire-warning indicators as part of powerplant instruments |
| §25.1307 (h) | Miscellaneous equipment | Requirement of portable fire extinguishers, with at least one in the pilot compartment and a minimum specified number, depending on the passenger capacity |
| §25.1337 (a) | Powerplant instruments | Requirement that powerplant instrument lines meet the standards of §25.993 (fuel system lines and fittings) and §25.1183 (flammable fluids or gases under pressure have restricted orifices or equivalent safety devices) |
| §25.1351 (b4) | Electrical systems and equipment, general | Requirement that system transients not cause a smoke or fire hazard |
| §25.1353 (c3) | Electrical equipment and installations | Design of storage batteries such that explosive gases will not be emitted and allowed to accumulate in hazardous quantities |

| <u>Citation</u> | <u>Subject</u> | <u>Content</u> |
|-------------------|---|---|
| §25.1359 | Electrical system fire and smoke protection | <p>Requirement that main power cables be isolated from flammable fluid lines or be shrouded by means of electrically insulated flexible conduit</p> <p>Requirement that the insulation of any electrical wire or cable in the fuselage be self-extinguishing when tested at an angle of 60° in accordance with the applicable portions of Appendix F of Part 23 or other approved equivalent methods. The average burn length may not exceed 3 inches and the average flame time after removal of the flame source may not exceed 30 seconds. Dripings from the test specimen may not continue to flame for more than an average of 3 seconds after falling</p> |
| §25.1385 (d) | Position light system installations | Provision that light covers and color filters be at least fire resistant |
| §25.1433 (b), (c) | Vacuum systems | Requirement that any vacuum air system line and fitting on the discharge side of the pump which might contain flammable vapors or fluids and which is located in a designated fire zone must meet the standards of §25.1183 (flammable fluid-carrying components) |
| §25.1435 (c) | Hydraulic systems | Requirement that hydraulic systems using flammable fluid must meet the standards of §25.863 (flammable fluid fire protection), §25.1185 (flammable fluids) and §25.1189 (shutoff means) |

| <u>Citation</u> | <u>Subject</u> | <u>Content</u> |
|--|--------------------------------------|--|
| §25.1451 | Fire protection for oxygen equipment | Requirement that oxygen equipment and lines may not be in any designated fire zone, that equipment and lines be protected from heat that might escape from any designated fire zone and that equipment and lines be installed so that escaping oxygen will not ignite grease, fluid or vapor accumulations |
| §25.1561 (b) | Safety equipment | Requirement that all locations, lockers, or compartments that carry any fire extinguishers or other life saving equipment be marked accordingly |
| §25.1561 (a), (c), (d), (e) | Safety equipment | Requirements that emergency controls be marked for crew and that other emergency and survival provisions with operating instructions be identified. |
| Subpart G - Operating Limitations and Information | | |
| §25.1557 | Markings | Requirement that each emergency exit placard meet provisions of §25.811 |
| §25.1585 (a4) | Operating procedures | Requirement that information and instructions regarding fire, decompression and other emergencies be provided in the airplane flight manual |
| Part 33 - <u>Airworthiness Standards: Aircraft Engines</u> | | |
| Subpart B - Design and Construction; General | | |
| §33.17 | Fire prevention | Requirements for the design and construction of engines to prevent fires, including use of fire resistant materials for lines, fittings and other components carrying flammable fluids (fire-proof for |

| <u>Citation</u> | <u>Subject</u> | <u>Content</u> |
|---|---|---|
| | | turbine engines in super-sonic aircraft); use of fire-proof materials or shields for flammable fluid tanks and supports and use of draining or venting to prevent accumulation of hazardous fluid and vapor. |
| Subpart E - Design and Construction; Turbine Aircraft Engines | | |
| §33.73 | Safety analysis | Requirement that analysis show no single or multiple malfunction will cause the engine to catch fire |
| §33.77 (a-1) | Foreign object ingestion | Requirement that ingestion of foreign objects will not cause the engine to catch fire |
| Subpart F - Block Tests: Turbine Aircraft Engines | | |
| §33.92 (a-1) | Windmilling tests | Requirement that engine rotors must either seize or be capable of rotation for 3 hours at the limiting windmilling rotational r.p.m. with no oil without the engine catching fire |
| Part 35 - <u>Airworthiness Standards: Propellers</u> (This part contained nothing applicable to fire safety) | | |
| Part 36 - <u>Noise Standards: Aircraft Type and Airworthiness Certification</u> (This part contained nothing applicable to fire safety) | | |
| Part 37 - <u>Technical Standard Order Authorizations</u> | | |
| Subpart A - General | | |
| §37.17 | Reporting of Failures, malfunctions and defects | Requirement that each manufacturer holding a Technical Standard Order Authorization report any failure, article manufactured which causes any of a series of incidents to occur, including among others, fire caused by a system or equipment failure, malfunction or |

| <u>Citation</u> | <u>Subject</u> | <u>Content</u> |
|---------------------------------------|---|--|
| | | defect and flammable fluid leakage in areas where an ignition source normally exists |
| Subpart B - Technical Standard Orders | | |
| §37.111 | Cargo and baggage compartment smoke detection instruments | Description of minimum performance standards required of smoke detection instruments in order to obtain TSO marking; testing includes such factors as minimum level of smoke concentration which system must detect, minimum response time and required performance under varying environmental conditions |
| §37.121 | Fire detectors (thermal sensing and ionization sensing types) | Requirement that fire detectors of this type meet the standards specified in the FAA's "Fire Detectors (Thermal Sensing and Ionization Sensing Types)" |
| §37.127 | Fire resistant aircraft sheet and structural material | Requirement that fire resistant aircraft materials must meet the standards set forth in the SAE (Society of Automotive Engineers) Specification AMS-3851A, "Fire Resistant Properties for Aircraft Materials" |
| §37.129 | Portable water-solution type fire extinguishers | Requirement that portable water-solution type fire extinguishers manufactured on or after the effective date of this order must comply with sections 5 and 6 and subsections 4.1.1, 4.1.4, 4.1.5, 4.2.3, 4.3.1 and 4.3.2 of SAE Specification AS-245A |
| §37.130 | Technical Standard Order C20: "Combustion Heaters" | Requirement that combustion heaters comply with SAE Aeronautical Standard AS143B: Heaters, Airplane, Internal Combustion Heat Exchanger Type (note: con - |

| <u>Citation</u> | <u>Subject</u> | <u>Content</u> |
|-----------------|---|---|
| | | tents of standard are included in text) |
| §37.140 | Propeller feathering hose assemblies (rubber and wire braid construction) | Requirement that propeller feathering hose assemblies manufactured on or after March 1, 1957 meet the "performance" section of Military Specification MIL-H-8795 (ASG) or MIL-H-8790 and also meet appropriate fire tests (listed in text) |
| §37.152 | Fuel and engine oil system hose assemblies (rubber or tetrafluoroethylene tube and wire braid construction) | Classification of hose assemblies into Types A, B, C, and D according to their location inside or outside fire zones and according to the maximum temperatures they will be subjected to. Type A hoses must meet standards set forth in "3.3 Performance" section of Specification MIL-H-8795A, Type B hoses standards of "3.6 Performance" section of MIL-H-25579 (USAF), Type C same as Type A and in addition must pass fire test specified in FAA "Standard Fire Test Apparatus and Procedure" (Power Plant Engineering Report No. 3), and Type D hoses same as Type B and in addition must pass FAA fire test mentioned above. |
| §37.178 | Individual floatation devices | Requirement that new models of floatation devices (manufactured on or after May 1, 1972) must meet the requirements of the "Federal Aviation Administration Standard, Individual Floatation Devices;" contents of the standard are given in text and include testing of materials for flame resistance |
| §37.185 | Fire detectors (radiation sensing type) | Requirement that new models, manufactured on or after the effective date of this sec- |

| <u>Citation</u> | <u>Subject</u> | <u>Content</u> |
|--|-----------------------------------|---|
| | | tion, must meet the FAA's Standard "Fire Detectors Radiation Sensing Type)" |
| Subchapter F - <u>Air Traffic and General Operating Rules</u> | | |
| Part 91 - <u>General Operating and Flight Rules</u> | | |
| Subpart D - Large and Turbine-Powered Multiengine Airplanes | | |
| §91.193 (c) | Emergency equipment | Requirement that fire extinguishers be provided which are suitable for the type of fire likely to occur in a compartment; at least one hand extinguisher must be provided for the flight crew, and at least one hand extinguisher must be located in the passenger compartment (two extinguishers if the airplane carries over 30 passengers) |
| §91.197 | Smoking and safety belt signs | Requirement that airplane be equipped with signs, visible to passengers and cabin attendants, notifying them when smoking is prohibited; crew must be able to turn signs off and on |
| Subchapter G - <u>Air Carriers, Air Travel Clubs and Operations for Compensation or Hire: Certification and Operations</u> | | |
| Subpart J - Special Airworthiness Requirements | | |
| §121.221 | Fire precautions | Classification of cargo and baggage compartments as A,B, C,D or E according to ease of access to a fire in compartment in aircraft and other factors; required precautions are listed for each compartment classification |
| §121.223 | Proof of compliance with §121.221 | Requirement that compartment accessibility, the entry of hazardous quantities of smoke or extinguishing agents into compartments occupied by crew or pas- |

| <u>Citation</u> | <u>Subject</u> | <u>Content</u> |
|-----------------|--|--|
| | | sengers and the dissipation of the extinguishing agent must be shown in tests in flight |
| §121.225 | Propeller deicing fluid | Requirement that if combustible fluid is used, the certificate holder must comply with §121.253 (Power-plant fire protection) |
| §121.227 | Pressure cross-fed arrangements | Requirement that cross-fed lines not pass through parts of the airplane used for carrying persons or cargo unless there is a means to allow the crewmembers to shut off the fuel supply to these lines or the lines are enclosed in a fuel and fume-proof enclosure that is ventilated and drained to the exterior of the airplane |
| §121.229 | Location of fuel tanks | Requirement that fuel tanks be located in accordance with §121.255 (Flammable fluids), that the engine nacelle skin not be used as a fuel tank wall, and that fuel tanks be isolated from personnel compartments by means of fume- and fuel-proof enclosures |
| §121.231 | Fuel system lines and fittings | Requirement that fuel lines be flexible and able to withstand vibration |
| §121.235 | Fuel lines and fittings in designated fire zones | Requirement that fuel lines and fittings in each designated fire zone comply with §121.259 (Lines and fittings) |
| §121.235 | Fuel valves | Requirement that fuel valves comply with §121.257 (Shut-off means), have adequately marked "on" and "off" positions and be supported so as not to transmit stress to fuel lines |

| <u>Citation</u> | <u>Subject</u> | <u>Content</u> |
|-----------------|---|--|
| §121.237 | Oil lines and fittings in designated fire zones | Requirement that oil lines and fittings in designated fire zones comply with §121.259 (Lines and fittings) |
| §121.239 | Oil valves | Requirement that oil valves comply with §121.257 (Shut-off means), have adequately marked "on" and "off" positions and be supported so as not to transmit stress to fuel lines |
| §121.243 | Engine breather lines | Requirement that engine breather lines discharge in a location that does not constitute a fire hazard in case foaming occurs |
| §121.245 | Fire walls | Requirement that each engine, auxiliary power unit, fuel-burning heater or other combustion equipment be isolated from the rest of the airplane by fire-walls or shrouds |
| §121.247 | Fire-wall construction | Requirement that fire walls and shrouds prevent the passage of hazardous quantities of air, fluids or flames, that all openings in the firewalls be adequately sealed, that fireproof materials be used and that firewalls be protected against corrosion |
| §121.249 | Cowling | Requirement that cowling be constructed to withstand vibration, that cowling be adequately drained in a manner that does not create a fire hazard, and that materials used in cowling be fire resistant (fire-proof in areas subject to high temperatures) |
| §121.251 | Engine accessory section diaphragm | Requirement that a diaphragm, complying with §121.247 (Fire-wall construction), be provided on air-cooled en- |

| <u>Citation</u> | <u>Subject</u> | <u>Content</u> |
|-----------------|----------------------------|---|
| | | gines to isolate the engine power section and all parts of the exhaust system from the engine accessory compartment |
| §121.253 | Powerplant fire protection | Requirement that designated fire zones comply with §121.255 thru §121.261; that designated fire zones include engine accessory sections, installations where there is no isolation between the engine and accessory compartment and areas that contain auxiliary power units, fuel-burning heaters and other combustion equipment |
| §121.255 | Flammable fluids | Requirement that no tanks or reservoirs that are part of a system containing flammable fluids may be located in designated fire zones unless the design of the system, the materials used in the tank, the shutoff means, and the connections, lines and controls provide equivalent safety; requirement that there be at least one-half inch clear air-space between any tank or reservoir and a firewall or shroud isolating a designated fire zone |
| §121.257 | Shutoff means | Requirement that each engine have a shutoff means to prevent the flow of fuel or other flammable fluids into any designated fire zone; such shutoff means must be compatible with the emergency operation of other equipment, must be located outside designated fire zones and must be safeguarded against inadvertent operation |

| <u>Citation</u> | <u>Subject</u> | <u>Content</u> |
|-----------------|---|---|
| §121.259 | Lines and fittings | Requirement that lines and fittings carrying flammable fluids through fire zones, directly attached to engine or subject to relative motion must be flexible and fire resistant |
| §121.261 | Vent and drain lines | Requirement that all vent and drain lines carrying flammable fluids through a designed fire zone must comply with §121.259 (Lines and fittings) |
| §121.263 | Fire-extinguishing systems | Requirement that fire-extinguishing systems must be provided for all designated fire zones unless equivalent protection can be provided through the use of fireproof materials |
| §121.265 | Fire-extinguishing agents | Requirement that only methyl bromide, carbon dioxide or other proven extinguishing agent may be used; requirement that precaution be taken to prevent toxic or suffocating agents from endangering passengers |
| §121.267 | Extinguishing agent container pressure relief | Requirement that extinguishing agent containers be provided with a pressure relief system, which discharges outside the airplane, to prevent bursting of the container due to excessive internal pressures |
| §121.269 | Extinguishing agent container compartment temperature | Requirement that extinguishing agent containers be located where reasonable temperatures can be maintained for effective use of the extinguishing system |
| §121.271 | Fire-extinguishing system materials | Requirement that fire-extinguishing system components located in a designated fire zone be fireproof and that connections |

| <u>Citation</u> | <u>Subject</u> | <u>Content</u> |
|---|--|---|
| | | between components subject to relative motion be flexible and fire resistant |
| § 121.273 | Fire-detector systems | Requirement that there be enough quick-acting fire detectors in each fire zone to detect any fire within that zone |
| § 121.275 | Fire detectors | Requirement that fire detectors be designed to resist vibration and other stresses, as well as exposure to fumes, oil, water and other fluids |
| § 121.277 | Protection of other airplane components against fire | Requirement that airplane surfaces aft of the nacelles in the area of one nacelle diameter on both sides of the nacelle center line must be made of material that is at least fire resistant |
| §121.285 (b-6) | Carriage of cargo in passenger compartments | Requirement that if cargo is carried in a passenger compartment, the cargo bin must be made of material that is at least fire resistant |
| §121.287 | Carriage of cargo in cargo compartments | Requirement that when cargo compartments are designed to allow crewmembers to enter and extinguish fires, cargo must be loaded so as to allow a crew-member to effectively reach parts of the compartment with a hand fire extinguisher |
| Subpart K - Instrument and Equipment Requirements | | |
| §121.309 | Emergency equipment | Requirement that all airplanes carry readily accessible regularly inspected emergency equipment including hand fire extinguishers for use in crew, passenger and cargo compartments |

| <u>Citation</u> | <u>Subject</u> | <u>Content</u> |
|----------------------------------|-------------------------------------|---|
| § 121.310 (a-j) | Emergency evacuation | Specifications for exits that are marked with signs, emergency lighting for exits and operation thereof, marking on exterior exit, by type of exit, marking of handles and access route |
| § 121.312 | Materials for compartment interiors | Requirement that materials used in crew and passenger compartments must meet the standards of § 25.853 of this chapter for airplanes with type certificates filed prior to May 1, 1972; for airplanes with type certificates filed on or after this date, materials are specified under the type certificate |
| § 121.317 | No smoking signs | Provision for signs prohibiting smoking that are legible to passengers, that are controlled by crew |
| Subpart N - Training Program | | |
| § 121.417 | Crewmember emergency training | Requirement that crewmembers be trained in the use of portable fire extinguishers with emphasis on the type of extinguisher suitable for different types of fires, that crewmembers be instructed in handling the situation of fire in flight and on the surface and that crewmember participate in fire extinguishing and smoke control drills |
| Subpart V - Records and Reports | | |
| § 121.703(a-1) (a-2) (a-3) | Mechanical reliability | Requirement that each certificate holder report the following events: fire in flight and whether appropriate fire-warning systems functioned properly, fires in flight not protected by a warning system and false |

| <u>Citation</u> | <u>Subject</u> | <u>Content</u> |

Content

§159.133

Fueling operations

room or building and that no person engage in this operation unless wearing spark-proof shoes

Prohibition of fueling or defueling operations while the engine is running or is being warmed by applying external heat; prohibition of fueling in a hanger or enclosed space or within 50 ft. of any hangar or other building; prohibition of fueling with passengers on the airplane unless the door is open and the ramp is in place; prohibition of any person other than those fueling (and passengers) being within 100 ft. of the airplane; prohibition of starting the airplane if there is any fuel on the ground beneath it; prohibition of smoking within 50 ft. of a fueling operation; requirement that aircraft and dispensing apparatus be grounded during fueling; requirement that care be taken during fueling to prevent overflow of fuel; requirement that hoses, funnels or appurtenances used in fueling operations be maintained in safe, nonleaking condition and be properly grounded

Subpart F - Obligations of Tenants

§159.159

Fire apparatus

Requirement that each tenant or lessee of airport property supply and maintain adequate fire extinguishers that the manager considers necessary

FAA Definition of Terms (from Subchapter A, Part I)

Fireproof - (1) With respect to materials and parts used to confine fire in a designated fire zone, fireproof means the capacity to withstand at least as well as steel in dimensions appropriate for the purpose for which they are used, the heat produced when there is a severe fire of extended duration in that zone; and

(2) With respect to other materials and parts fireproof means the capacity to withstand the heat associated with fire at least as well as steel in dimensions appropriate for the purpose for which they are used.

Fire resistant - (1) With respect to sheet or structural members means the capacity to withstand the heat associated with fire at least as well as aluminum alloy in dimensions appropriate for the purpose for which they are used; and

(2) With respect to fluid-carrying lines, fluid system parts, wiring, air ducts, fittings, and powerplant controls, means the capacity to perform the intended functions under the heat and other conditions likely to occur when there is a fire at the place concerned

Flame resistant - Means not susceptible to combustion to the point of propagating a flame, beyond safe limits, after the ignition source is removed

Flammable - With respect to a fluid or gas, flammable means susceptible to igniting readily or to exploding

Flash resistant - Means not susceptible to burning violently when ignited

CHAPTER 3 - FEDERAL HIGHWAY ADMINISTRATION

SUBCHAPTER B - FEDERAL MOTOR CARRIER SAFETY REGULATIONS

Part 329 - Driving of Motor Vehicle

Subpart A - General

| | | |
|---------|---|---|
| § 392.8 | Inspection and use of emergency equipment | Provision that no motor vehicle shall be driven unless the driver has satisfied himself that all emergency equipment, including fire extinguishers are in place and ready for use |
|---------|---|---|

Subpart F - Fueling Precautions

| | | |
|----------|-----------------------------|---|
| § 392.50 | Prevention of fuel ignition | Requirement that when fueling a vehicle, the engine may not be running, no smoking or open flame be allowed in the vicinity and the nozzle of the hose must be in continuous contact with the intake pipe |
|----------|-----------------------------|---|

| | | |
|----------|--------------|--|
| § 392.51 | Reserve fuel | Requirement that no supply of fuel be carried in the motor vehicle other than in properly mounted fuel tanks |
|----------|--------------|--|

| | | |
|----------|------------------|---|
| § 392.52 | Fueling of buses | Provision that no bus be fueled in a closed building with passengers aboard |
|----------|------------------|---|

Subpart G - Prohibited Practices

| | | |
|----------|---|---|
| § 392.67 | Flame-producing heater on vehicle in motion | Prohibition of use of open flame heaters while vehicle is in motion |
|----------|---|---|

| <u>Citation</u> | <u>Subject</u> | <u>Content</u> |
|---|---------------------------------|--|
| <u>Part 393 - Parts and Accessories Necessary for Safe Operations</u> | | |
| § 393.28 | Protection of wiring | Provision that insofar as possible, wiring not be adjacent to any part of the fuel system |
| <u>Subpart E - Fuel Systems</u> | | |
| § 393.65 | All fuel systems | Specifications for design of fuel system including provision that fuel spilled vertically from tank while it is being filled will not contact any part of the exhaust or electrical system and that fill pipe openings be located outside of passenger and cargo compartments |
| § 393.67 | Liquid fuel tanks | Provision that fill pipe be constructed to minimize the risk of fuel spillage during fueling or in case of a crash |
| § 393.69 | Liquefied petroleum gas systems | Requirement that all liquefied petroleum gas systems conform to the "Standards for the Storage and Handling of Liquefied Petroleum Gases" of the National Fire Protection Association |
| <u>Subpart G - Miscellaneous Parts and Accessories</u> | | |
| § 393.76 (g) | Sleeper berths | Provision that sleeper berths be located such that leaks in the fuel system will not cause fuel to enter the sleeper berth |
| § 393.77 | Heaters | Prohibition of use of unenclosed flame heaters except to heat cargo of tank motor vehicles; prohibition of any heaters likely to spill or leak fuel; requirement of protective enclosures to prevent ignition of parts of vehicle; provision that electric heaters be designed |

| <u>Citation</u> | <u>Subject</u> | <u>Content</u> |
|--|-------------------------|---|
| | | to prevent overheating; requirement that heater fuel tanks be located outside of and lower than the passenger space; requirement that heaters be equipped with automatic fuel shutoff means in case of overturn of vehicle |
| § 393.83 (a) | Exhaust system location | Provision that no part of the exhaust system be located where it might ignite the fuel supply or burn any combustible part of the vehicle |
| § 393.84 | Floors | Provision that floors be constructed to minimize entrance of fumes, exhaust gases or fire; provision that floors not be permeated with oil or gasoline |
| § 393.91 | Bus aisle | Seating in aisle prohibited |
| § 393.91 | Emergency doors | Provision for marking emergency doors on bus |
| § 393.96 | Emergency equipment | Specifications for first aid kit on bus |
| Subpart H - <u>Emergency Equipment</u> | | |
| § 393.95 (a), (g) | Emergency Equipment | Provision that all buses, trucks, truck-tractors and all vehicles involved in driveaway-towaway operations carry a fire extinguisher in operating order; vehicles must carry one extinguisher with an Underwriters' Laboratories rating of 5 B:C or two extinguishers with a 4 B:C rating or more Provision that vehicles transporting liquids or flammable compressed gas or using flammable compressed gas as a fuel not carry any flame producing devices such as flares, fuses or oil lanterns |

| <u>Citation</u> | <u>Subject</u> | <u>Content</u> |
|-----------------|---|--|
| Part 397 - | <u>Transportation of Hazardous Materials; Driving and Parking Rules</u> | |
| §397.11 | Fires | Requirement that a motor vehicle containing hazardous materials not be operated or parked near an open fire |
| §397.13 | Smoking | Requirement that smoking not be allowed within 25 feet of any motor vehicle containing hazardous materials |
| §397.15 | Fueling | Requirement that when fueling a motor vehicle containing hazardous materials, its engine not be operating and the person fueling the vehicle remain at the point where fuel is entering the tank |

Part 225 - Railroad Accidents/Incidents: Reports, Classification and Investigations

| <u>Citation</u> | <u>Subject</u> | <u>Content</u> |
|---|---|---|
| §225.5(b) | Definition of accident/incident | Defined as any collision, derailment, fire, explosion, act of God or other event involving operation of railroad on-track equipment (standing or moving) which results in more than \$1750 in damages to railroad on-track equipment, signals, track, track structures and roadbed. |
| §225.11(a) | Reports of accidents/incidents | Requirement that each railroad must submit to FRA a monthly report of all railroad accidents/incidents |
| Part 230 - <u>Locomotive Inspection</u> | | |
| §230.221(b) | Frames and parts | Requirement that underframe, trucks, fuel tanks and brake rigging be kept free of accumulations of oil, grease and debris that would constitute a fire hazard |
| §230.255(a), (b) | Fuel tanks and piping; safety cut-out valve | Requirement that fuel tanks and related piping be maintained free from leaks Requirement of a safety cut-out valve which will automatically close when tripped |
| §230.257 | Ground fuel tanks | Requirement that fuel tanks and related piping be electrically grounded |
| §230.327 | Oil burning fire boxes | Provision of means for expelling accumulated gases from fire box of oil-burning boilers before fire is lighted |

URBAN MASS TRANSPORTATION
ADMINISTRATION

UMTA REGULATIONS

In the past each rail rapid transit system had regulated and enforced its own safety program. On April 6, 1978 the federal Department of Transportation approved four recommendations concerning rapid rail transit (RRT) as follows:

1. UMTA is to be given complete program responsibility for RRT safety. Adjustments in current delegations of authority and controls on the exercise of that authority are to be made as necessary and properly coordinated.
2. UMTA is to immediately require RRT systems receiving federal financial assistance to submit accident reports in accordance with current FRA regulations.
3. A task force is to be established to review RRT accident data, make recommendations on a RRT safety program plan to UMTA, and design new RRT accident reporting requirements.
4. The UMTA administrator is to report the task force recommendations and the final RRT safety program plan to the Secretary.

Current assignments of other transit modes, such as light rail, commuter rail or intracity buses are not affected by the approval of these recommendations.

*Memorandum of Chester Davenport, Assistant Secretary for Policy and International Affairs, February 2, 1978, with attachment, and memorandum of Alan Butchman, Deputy Secretary.

| <u>SUBCHAPTER E - LOAD LINES</u> - This subchapter contained nothing applicable to fire safety. | | |
| <u>SUBCHAPTER F - MARINE ENGINEERING</u> | | |
| Subpart 58.01-General Requirements | | |
| §58.01-10 | Fuel for internal combustion engines on passenger vessels | Requirement that all internal combustion engines on passenger vessels use fuel with a flashpoint exceeding 110° F (Pensky-Martens Closed Cup Method, ASTM-D93) |
| §58.01-15 | Fuel oil for boilers | Requirement that oil used as fuel to be burned under boilers shall have a flashpoint of not less than 140° F (Pensky-Martens Closed Cup Method, ASTM-D93) |
| Subpart 58.03 - Adoption of Standards and Specifications | | |
| §58.03-20 | National Fire Protection Association | Provision that the standards of the NFPA are adopted and form part of this subchapter (Marine-Engineering) |
| Subpart 58.10 | Internal Combustion Engine Installations | Design of internal combustion engines to include fire safety-related elements such as fuel drip collectors in the carburetor and backfire flame control for all gasoline engines; and dampers to prevent backflow of exhaust gases through the turbine, an automatic shutdown mechanism in case of overheating and a local fire extinguishing system for all gas turbine engines |

| <u>Citation</u> | <u>Subject</u> | <u>Content</u> |
|---|---|---|
| Subpart 58.16 | Liquefied Petroleum Gases for Cooking and Heating | Requirement that all gas-consuming appliances, gas cylinders, safety relief devices, valves, regulators and vaporizers be tested and approved at an acceptable laboratory; that leak tests be conducted periodically; that certain procedures be followed in operating cylinders and that cylinders be marked in specified ways |
| Subpart 58.30 - Fluid Power and control systems | | |
| §58.30-10 | Hydraulic fluid | Requirement that fluid used in hydraulic power transmission systems have a flashpoint of not less than 200° F for pressures below 150 pounds per square inch and 315° F for pressures 150 pounds per square inch and above as determined by ASTM D92-57, Cleveland "Open Cup" test method and that the recommendations of the system component manufacturers and ANSI-B93.5 (Recommended Practice for The Use of Fire Resistant Fluids for Fluid Power Systems) be considered in the selection and use of hydraulic fluid |
| Subpart 58.50 - Independent Fuel Tanks | | |
| 58.50-1 | General Requirements | Provision that passenger vessels may not carry more than 40 gallons of gasoline and that the fuel must have a flashpoint exceeding 110° F |

| <u>Citation</u> | <u>Subject</u> | <u>Content</u> |
|-----------------|---|--|
| §58.50-5 | Gasoline fuel tanks | Specifications for the construction, installation and testing of gasoline fuel tanks |
| 58.50-10 | Diesel fuel tanks | Specifications for the construction, installation and testing of diesel fuel tanks |
| Subpart 63.05 | Large automatic auxiliary heating system | Specifications for the construction of auxiliary heating systems including fire safety-related features such as automatic shutoff mechanisms, flame safe guard controls and fuel supply controls |
| Subpart 63.10 | Small automatic auxiliary heating systems | Specifications for the construction of auxiliary heating systems including fire safety-related features such as flame safe guard controls and fuel supply controls Requirement that unit be inspected during construction and tested during operation |

SUBCHAPTER H - PASSENGER VESSELS

Part 70 - General Provisions

Subpart 70.05 - Applications

| | | |
|-----------|----------------------------------|--|
| §70.05-30 | Combustible liquid cargo in bulk | Provision that vessels certified under this subchapter may carry limited quantities of combustible liquid cargo provided the tanks are of a type approved under this chapter |
|-----------|----------------------------------|--|

Part 71 - Inspection and Certification

| | | |
|-----------|--|---|
| §71.25-20 | Fire-detecting and extinguishing equipment | Requirement that at each annual inspection portable and fixed fire extinguishers be checked using specific tests (listed) and all fire detecting and extin- |
|-----------|--|---|

| | | |
|---------------|---|---|
| | | guishing systems be checked to ascertain that they are in operating conditions (testing conditions specified) |
| §71.25-45 | Fire hazards | Requirement that at each annual inspection tank tops and bilges in machinery spaces be checked to ascertain that there is no hazardous accumulation of oil which might present a fire hazard |
| §71.60-1 | Inspection required for repairs | Provision that no alterations, repairs or other such operations involving riveting, welding, burning or like fire-producing actions shall be made around fuel tanks unless an inspection is first made and a certificate issued using as a guide National Fire Protection Association publication No. 306 |
| §71.65-5 | Plans and specifications required for new construction | Requirements that plans include diagrams of fire screen insulation, ventilation systems, alarm systems, detecting systems, extinguishing systems and supervised patrol route |
| §72.01-10 | Vessel using fuel having a flashpoint of 110°F or lower | Provision that when such fuel is carried to supply machinery on board that such machinery and fuel tanks be separated from each other and from the remainder of the vessel in vapor tight containers |
| Subpart 72.03 | General Fire Protection | Provisions for general fire safety including insulation of woodwork from heated surfaces and metal construction of lamp, paint and oil lockers |

| <u>Citation</u> | <u>Subject</u> | <u>Content</u> |
|-----------------|--|--|
| Subpart 72.02 | Structural Fire Protection | |
| §72.05-10 | Type, location and construction | Classification of bulkheads according to degree of fire safety provided with table specifying which class bulkheads must be used in each area Specification of materials to be used in certain deck areas |
| §72.05-15 | Ceilings, linings, trim and decorations in accommodation spaces and safety areas | Description of the kind of surface materials permitted for ceilings, linings, trim and decorations |
| §72.05-20 | Stairways, ladders and elevators | Detailed specification for the construction of stairways, ladders and elevators to promote fire safety |
| §72.05-25 | Doors, other than watertight | Specifications for the construction of doors to promote fire safety and facilitate escape in case of a fire |
| §72.05-30 | Windows and airports | Requirement that glass of a certain thickness and wire inserted glass be used in specified areas |
| §72.05-35 | Hatch covers and shifting boards | Specifications for types of hatch covers and shifting boards to be used to promote fire safety |
| §72.05-40 | Insulation, other than for structural fire protection | Requirement that all insulation be of approved Incombustible Materials |
| §72.05-45 | Paint | Requirements that certain highly flammable paints not be used and that excessive layers of paint be discouraged |

| <u>Citation</u> | <u>Subject</u> | <u>Content</u> |
|--|--|---|
| §72.05-50 | Ventilation | Requirement that dampers be used in ventilation ducts for fire safety purposes |
| §72.05-55 | Furniture and furnishings | Requirement that furniture and furnishings be constructed of fire resistant or incombustible materials |
| §Subpart 72.10 | Means of Escape | Requirement that at least two means of escape be provided from all general areas with specification of what constitutes a means of escape |
| §Subpart 72.15 - Ventilation | | |
| §72.15-10 | Vessels using fuel having a flashpoint of 110°F or lower | Detailed specification of ventilation system required for vessels carrying fuel of this type |
| §72.15-15 (b) | Ventilation for closed spaces | Requirement of means to stop all ventilation fans in case of fire |
| §Part 75 - <u>Life Saving Equipment</u> | | |
| This section contains various and detailed specifications for type and contents of lifeboats, including number of fire extinguishers; other requirements for liferafts and preservers etc. | | |
| Part 76 - <u>Fire Protection Equipment</u> | | |
| §76.01 - §76.60 | | |
| Specification of types of fire protection equipment to be used in which areas and detailed description of the following systems: fire main, steam smothering, carbon dioxide extinguishing, foam extinguishing, manual sprinkling, automatic sprinkling, electric fire detecting, pneumatic fire detecting, smoke detecting, manual alarm and hand portable and semi-portable fire extinguishers | | |

| <u>Citation</u> | <u>Subject</u> | <u>Content</u> |
|---|--|--|
| <u>Part 77 - Vessel Control and Miscellaneous Systems and Equipment</u> | | |
| §77.35-10 | Fireman's Outfit | Required contents of fireman's outfit plus minimum number of outfits required based on gross tonnage of vessel |
| <u>Part 78 - Operations</u> | | |
| §78.13-10 (b) | Emergency signals, fire alarm stations | Description of fire alarm signals |
| §78.13-15 | Emergency squad | Provision that for crews above a certain size an emergency squad must be formed and specially trained in the use of all emergency equipment |
| <u>Subpart 78.17 - Test, Drills and Inspections</u> | | |
| §78.17-50 | Fire and boat drills | Requirement that fire and boat drills be conducted periodically with a description of drill procedure |
| §78.17-65 | Smoke detecting systems | Requirement that tests of smoke detecting systems be conducted every 3 months |
| §78.17-80 | Firefighting equipment, general | Requirement that owner be responsible for maintaining of all firefighting equipment and that at least every 12 months all equipment be tested and inspected |
| §78.33-10 | Notice required before repairs | Requirement that no repairs or alterations to any fire detecting or extinguishing equipment be made without advance notice to the Officer in Charge, Marine Inspection |

| <u>Citation</u> | <u>Subject</u> | <u>Content</u> |
|-------------------------|--|--|
| §78.40-10 | No smoking permitted | Provision that "No smoking" signs be posted in deck areas assigned to automobiles or other vehicles |
| §Subpart 78.47 | Markings for fire and emergency equipment | Provision for the marking of fire and emergency equipment |
| Subpart 78.47-37, 40 | Marking of exits and doors | Provision for marking of emergency exits and doors |
| §Subpart 78.75 | Motion picture film and equipment | Provision that only acetate or slow-burning film may be used. Nitrocellulose film is prohibited. |
| §78.80-10 (b), (c) | Use of power-operated industrial trucks in various locations | Provision that only approved power-operated industrial trucks may be used for handling cargo in areas where flammable liquids flammable solids or oxidizing materials are stored |
| §78.80-15 (h), (j), (k) | Special operating conditions | Conditions relating to fire safety under which power-operated industrial trucks may be used aboard the vessel |
| §78.80-20 | Refueling | Conditions relating to fire safety under which power-operated industrial trucks may be refueled in the hold of a vessel or on the deck |

SUBCHAPTER I - CARGO AND MISCELLANEOUS VESSELS

Part 90 - General Provisions

| | | |
|-----------|--|--|
| §90.05-35 | Flammable and combustible liquid cargo in bulk | Conditions under which vessels inspected and certified under this chapter may carry limited quantities of flammable and combustible liquid cargo in bulk |
|-----------|--|--|

| <u>Citation</u> | <u>Subject</u> | <u>Content</u> |
|---|---|---|
| Part 91 - <u>Inspection and Certification</u> | | |
| §91.25-20 | Fire-extinguishing equipment | Provision that at each inspection for certification all hand portable and fixed fire-extinguishing systems shall undergo tests specified |
| §91.25-45 | Fire hazards | Provision that at each inspection for certification tank tops and bilges in the machinery spaces shall be examined for possible oil accumulation |
| §91.50-1 | Inspection and testing required when making alterations, repairs or other such operations involving riveting, welding, burning or like fire-producing actions | Requirement that no such actions shall be taken until an inspection has been made and a certificate has been issued by the Officer in Charge, Marine Inspection, using as guidelines the provisions of "Standards for the Control of Gas Hazards on Vessel to be Repaired. NFPA No. 306 |
| §91.55-5 | Plans and specifications required for new construction | Plans and specifications for fire control systems are to be included in overall plans and specifications for new construction |
| Part 92 - <u>Construction and Arrangement</u> | | |
| §Subpart 92.05 | General Fire Protection | Provisions for general fire safety including insulation of woodwork from heated surfaces, metal construction of lamp, pain and oil lockers and insulation of spaces containing the emergency sources of electric power |
| Subpart 92.07 - Structural Fire Protection | | |

| <u>Citation</u> | <u>Subject</u> | <u>Content</u> |
|--|---|--|
| §92.07-5 | Definitions | Definition of standard fire test and classification of bulkheads according to the degree of fire protection they provide |
| §92.07-10 | Construction | Specification of types of materials permitted in various parts of the vessel |
| §Subpart 92,10 | Means of escape | Requirement that at least two means of escape be provided from all general areas and specification of what constitutes an adequate means of escape |
| Subpart 92.15 - Ventilation | | |
| §92.15-5(a) | Vessels using fuel having a flashpoint of 110° or lower | Requirement that spaces where fuel with a flashpoint of 110° or lower is being used be ventilated as specified |
| §92.15-10(b) | Ventilation for closed spaces | Requirement of means to stop all ventilation fans in case of fire |
| §Part 94 - <u>Lifesaving Equipment</u> | | This section contains various and detailed specifications and type and contents of lifeboats, including number of fire extinguishers; other requirements for life rafts and preservers etc. |
| Part 95 - <u>Fire Protection Equipment</u> | | |
| §95.01-§95.60 | | Specification of types of fire protection equipment to be used in which areas and detailed description of the following systems: fire main, steam smothering, carbon dioxide extinguishing, foam extinguishing and hand portable fire extinguishers, axes, pumps |

| <u>Citation</u> | <u>Subject</u> | <u>Content</u> |
|---|--|---|
| Part 96 - <u>Vessel Control and Miscellaneous Systems and Equipment</u> | | |
| §96.35-10 | Fireman's outfit | Requirement that each vessel carry at least two firemen's outfits with specified contents |
| Part 97 - <u>Operations</u> | | |
| §Subpart 97.15 - Tests, drills and inspections | | |
| 97.15-35 | Fire and boat drills | Requirement that a fire and boat drill must be conducted on board at least once every week; procedures for fire and boat drills specified |
| §97.15-60 | Firefighting equipment, general | Requirement that vessel's owner be responsible for maintenance of all firefighting equipment and that all equipment be tested and inspected at least every 12 months |
| §Subpart 97.37 | Marking for fire and emergency equipment, etc.. | Provisions for the marking of fire and emergency equipment |
| §Subpart 97.60 | Motion picture film | Provision that only acetate or slow-burning film may be used. Nitrocellulose film is prohibited. |
| Subpart 97.70 - Power-operated industrial trucks | | |
| §97.70010 | Use of power-operated industrial trucks in various locations | Provision that only approved power-operated industrial trucks may be used for handling cargo in areas where flammable liquids, flammable solids or oxidizing materials are stored |
| §97.70-15 | Special operating conditions | Conditions relating to fire safety under which power-operated industrial trucks may be used aboard the vessel |

| <u>Citation</u> | <u>Subject</u> | <u>Content</u> |
|-----------------|------------------------------|--|
| §97.70-15 | Special operating conditions | Conditions relating to fire safety under which power-operated industrial trucks may be used aboard the vessel |
| §97.70-20 | Refueling | Conditions relating to fire safety under which power-operated industrial trucks may be refueled in the hold of a vessel or on the deck |

SUBCHAPTER J - ELECTRICAL ENGINEERING

Part 111 - Electrical System; General Requirements

| | | |
|-----------------------------|------------------------|--|
| §111.05-10 | Testing and inspection | Requirement that fire detecting systems be tested as specified on a regular basis (at least 25 percent of those installed should be tested annually) |
| §111.05-15(a-2) | General considerations | Provision that apparatus likely to arc should be ventilated to prevent the accumulation of hazardous vapors |
| §111.10-15(h) | Generator construction | Provision that propulsion generators be fitted with suitable fire extinguishers |
| §Subpart §111.60-25(o-2) | Ship's service cables | Requirement that distribution systems be such that fire in any main fire zone will not interfere with essential services in any other main fire zone |

Subpart 111.80 - Special Requirements for Certain Locations and Systems

| | | |
|-----------|--|--|
| §111.80-5 | Wiring methods and materials for hazardous locations | Listing of hazardous materials and classification of locations based on the kind and condition of hazardous materials present; description of the kinds of equipment permit- |
|-----------|--|--|

| <u>Citation</u> | <u>Subject</u> | <u>Content</u> |
|-----------------|---|---|
| | | ted in each classification area |
| §111.80-10 | Ventilation systems | Requirement of means to stop ventilation fans in case of fire |
| §111.80-13 | Remote shutdown requirements | Requirement of remote shutdown controls for fans and fuel pumps in case of fire |
| §111.80-20 | Hospital operating rooms | Standards for use of electrical equipment in locations where combustible anesthetic or disinfecting agents are present (refers to NFPA standards) |
| §111.80-25 | Locations where gasoline or other highly volatile motor fuel is carried in vehicles | Requirement for type of electrical equipment installed in locations where such fuel is present |
| §111.80-30 | Motion picture projection | Requirement that only certain kinds of motion picture equipment be used and that only acetate or slow-burning film may be used |
| §111.80-50 | Firescreen door holding and release system | Description of required firescreen door holding and release systems |
| §111.80-60(b) | Electric air heaters | Required design of electric air heaters including measures to reduce the risk of fire |
| §111.80-65(a-6) | Electric cooking equipment and motor-driven commissary equipment | Requirement that each equipment unit have a disconnecting means which will be accessible in case of fire on the cooking surface |
| §111.85-10 | Special requirements for tank vessels contracted for on or after November 19, 1955 | Special requirements include fire safety measures such as prohibition of storage batteries in cargo handling rooms |

| <u>Citation</u> | <u>Subject</u> | <u>Content</u> |
|---|--|--|
| §111.85-90 | Special requirements for tank vessels constructed prior to November 19, 1955 | Special requirements include fire safety measures such as prohibition of portable electrical equipment in and around bulk cargo tanks |
| §Part 112 - | <u>Emergency Lighting and Power System</u> | Various specifications providing for automatic operation of system, sources of power, levels of illumination Requirement that rooms containing emergency generators be made fire resistant by lining them with asbestos board |
| Part 113 - <u>Communication and Alarm Systems and Equipment</u> | | |
| §Subpart 113.10 | Automatic fire detecting and alarm systems | Electrical standards for automatic fire detecting and alarm systems |
| §Subpart 113.15 | Manual fire alarm systems | Electrical standards for manual fire alarm systems |
| §Subpart 113.20 | Automatic sprinkler systems | Electrical standards for automatic sprinkler systems |
| §Subpart 113.70 | Smoke detector systems | Electrical standards for smoke detector systems |

SUBCHAPTER N - DANGEROUS CARGOES - This subchapter deals with safety in the handling, stowage, storage and transportation of military explosives; it was not included because the emphasis was on explosives rather than flammability and because it dealt only with military vessels.

SUBCHAPTER O - CERTAIN BULK DANGEROUS CARGOES - This subchapter deals with safety regulations for unmanned tank barges transporting dangerous bulk cargoes; it was not included because there were no personnel involved.

SUBCHAPTER P - MANNING OF VESSELS - This subchapter contained nothing applicable to fire safety.

| <u>Citation</u> | <u>Subject</u> | <u>Content</u> |
|--|---|---|
| <u>SUBCHAPTER Q - SPECIFICATIONS</u> | | |
| Part 160 - <u>Lifesaving equipment</u> | | |
| §Subpart 160.021 | Signals, distress, hand red flare, for merchant vessels | Specifications for manufacture and performance of flares including provision that they not ignite spontaneously when held at 75°C for 48 consecutive hours |
| §Subpart 160.022 | Signals, distress, floating orange smoke (5 minutes) for merchant vessels | Same as for Subpart 160.021 |
| §Subpart 160.024 | Signals, distress, pistol-projected parachute red flare, for merchant vessels | Same as for Subpart 160.021 |
| §Subpart 160.036 | Signals, distress, hand-held rocket-propelled parachute red flare, for merchant vessels | Same as for Subpart 160.021 |
| §Subpart 160.037 | Signals, distress, hand, orange smoke, for merchant vessels | Same as for Subpart 160.021 |
| §Subpart 160.057 | Signals, distress, orange smoke (15 minutes), for merchant vessels | Same as for Subpart 160.021 |
| §Subpart 161.002 | Fire-protective systems | Specifications for automatic fire detecting systems, fire detecting thermostats, manual fire alarms, watchman's supervisory systems and smoke detecting systems |
| §Subpart 162.016 | Flame arresters for tank vessels | Specifications for design and construction of flame arresters for use in venting systems on tank vessels |
| §Subpart 162.017 | Valves, pressure-vacuum relief and spill, for tank vessels | Specifications for design and construction of pressure-vacuum relief valves and spill valves for use |

| <u>Citation</u> | <u>Subject</u> | <u>Content</u> |
|-------------------|--|--|
| | | in venting systems on tank vessels |
| § Subpart 162.018 | Safety relief valves, liquefied compressed gas | Specifications for design, construction and testing of safety relief valves for use on unfired pressure vessels containing liquefied compressed gases |
| § Subpart 162.027 | Nozzles, firehose combination solid stream and water spray | Specifications for design, construction and testing of combination solid stream and water spray fire hose nozzles |
| § Subpart 162.039 | Fire extinguishers, semi-portable, marine type | Specifications for design, construction and testing of semi-portable, marine fire extinguishers |
| § Subpart 152.041 | Backfire flame control, gasoline engines; flame arresters for merchant vessels and motorboats | Specifications for design and construction of backfire flame arresters intended for installation on carburetor air intakes of internal combustion engines |
| § Subpart 162.042 | Backfire flame control, gasoline engines; engine air and fuel induction systems, for merchant vessels and motorboats | Specifications for design and construction of those engines whose method of introducing air and fuel into the engine provides protection equivalent to that of an effective backfire flame arrester as specified in Subpart 162.041 above |
| § Subpart 162.043 | Backfire flame control, gasoline engines; engine air induction system, for merchant vessels and motorboats | Specifications for design and construction of backfire flame control measures in those vessels with an integrated engine-vessel design; such engines utilize carburetor attachments or air intake ducts to disperse engine backfire to the atmosphere outside the vessel |

| <u>Citation</u> | <u>Subject</u> | <u>Content</u> |
|-------------------|---|---|
| § Subpart 164.006 | Deck coverings for merchant vessels | Specifications for materials used as deck coverings to ensure incombustibility and low smoke emission when subjected to high temperatures |
| § Subpart 164.007 | Structural insulations | Specifications of testing procedures for structural insulations to insure that average temperature rise of a steel bulkhead will not exceed 139°C (250°F) at the end of a 60-minute standard fire test |
| § Subpart 164.008 | Bulkhead panels | Specifications for materials to be used for bulkhead panels and testing required to ensure that a standard temperature curve is followed with temperatures not rising above 927°C (1700°F) at the end of 60 minutes |
| § Subpart 164.009 | Noncombustible materials for merchant vessels | Specifications for non-combustible materials allowed for use in merchant vessel construction and required testing of such materials |
| § Subpart 164.012 | Interior finishes for merchant vessels | Specifications for type and thickness of materials which may be used as coating, overlay or veneer to any bulkhead surface |
| § Subpart 164.015 | Plastic foam, unicellular, buoyant, sheet and molded shapes | Specifications for testing of such materials for various properties, including fire retardance |

SUBCHAPTER R - NAUTICAL SCHOOLS

Part 116 - Designation and Approval of Nautical School Ships

| | | |
|---------|---|--|
| §116.15 | Training for maintenance of discipline; | Requirement that all students be trained in opera- |
|---------|---|--|

| <u>Citation</u> | <u>Subject</u> | <u>Content</u> |
|--|---|--|
| | ship sanitation; fire and lifeboat drills | tions incident to fire drills in port and at sea |
| <u>Part 167 - Public Nautical School Ships</u> | | |
| § Subpart 167.45 | Special firefighting and fire prevention requirements | Specifications of type and design of fire extinguishing systems and equipment re- quired on nautical school ships, including steam and inert-gas extinguishing systems, foam smothering systems, fixed water spray systems, emergency breath- ing apparatus and flame safety lamps, portable fire extinguishers, fire extin- guishers for emergency powerplants and fire axes |

| | | |
|------------------|------------------------------|--|
| § Subpart 167.55 | Special markings required | Requirements for marking of general alarm bell switch and bells; steam foam and CO ₂ fire smother- ing apparatus, fire hose stations, emergency squad equipment and fire extin- guishers |
|------------------|------------------------------|--|

SUBCHAPTER T - SMALL PASSENGER VESSELS (UNDER 100 GROSS TONS)

| | | |
|--|---------------------------------|--|
| § Subpart 176.25 - <u>Material Inspections</u> | | |
| § 176.25-10(b) | Machinery | Provision that all inspec- tions shall insure that no fire hazards exist |
| § 176.25-15(a-6) | Electrical | Provision that at each in- spection for certification, the electrical component of fire protection devices be tested for proper oper- ation |
| § 176.25-25 | Fire extinguishing equipment | Provision that at each in- spection for certification all fire extinguishing equip- ment shall undergo specified tests |

| <u>Citation</u> | <u>Subject</u> | <u>Content</u> |
|--|------------------------------------|---|
| <u>Part 177 - Construction and Arrangement</u> | | |
| § 177.10-5 | Fire protection for hull structure | Provision that fiberglass construction be of a type fabricated with fire retardant resins; that sources of ignition be kept clear of woodwork and other combustible materials and that lamp, paint and oil lockers be of metal construction |
| § Subpart 177.15 | Means of escape | Requirement that at least two means of escape be provided from all general areas with specification of what constitutes a means of escape |
| § 177.30-1 (b), (c) | Seating | Provision that seating be arranged to facilitate escape in case of fire |
| <u>Part 181 - Fire Protection Equipment</u> | | |
| § 181.01-§ 181.35 | | Detailed description of required fire protection devices including fire pumps, fire main system, fixed fire extinguishing system, manual sprinkling system and portable fire extinguishers, axes; description of where these devices are required |
| § 183.415 | Grounding | Requirement for a boat with more than one gasoline engine that the grounded cranking motor circuit be connected with each other |
| § 183.420 | Batteries | Provisions to insure proper grounding of battery and to prevent contact with the fuel system |
| § 183.425- 183.460 | Conductors | Provisions to insure proper grounding and insulation of conductors |

| <u>Citation</u> | <u>Subject</u> | <u>Content</u> |
|---------------------------------|--|--|
| Subpart J - <u>Fuel Systems</u> | | |
| §183.510 | Fuel tanks | Provisions to insure that fuel tanks will not leak |
| §183.512 | Fuel tanks: prohibited materials | Prohibition of the use of specific materials and specific combinations of materials in the construction of fuel tanks |
| §183.514 | Fuel tanks: labels | Requirement that each fuel tank be labelled with manufacturer's name, date of manufacture, capacity, material of construction, maximum pressure, model number and statement, "This tank has been tested under 33 CFR.183.580" |
| §183.516 | Cellular plastic used to encase fuel tanks | Specific performance requirement for metallic fuel tanks encased in cellular plastic |
| §183.518 | Fuel tank opening | Requirement that each opening into a fuel tank must be at or above the topmost surface of the tank |
| §183.520 | Fuel tank vent systems | Requirement that each fuel tank have a vent system to prevent pressure from exceeding 80 percent of pressure marked on the tank label and requirement that each vent have a flame arrester and that it not allow a fuel overflow over and above a certain rate |

Part 182 - Machinery Installation

| | | |
|-----------------|----------------------------------|--|
| §Subpart 182.15 | Machinery using gasoline as fuel | Details of machinery installation and maintenance including fire safety measures, such as carburetor fuel drip collectors, back-fire flame arresters on air intake, etc. |
|-----------------|----------------------------------|--|

| <u>Citation</u> | <u>Subject</u> | <u>Content</u> |
|--|-------------------------------------|---|
| §Subpart 182.20 | Machinery using dies diesel fuel | Details of machinery in- stallation and maintenance including fire safety measures |
| Part 183 - Electrical Installation §183.01-§183.10 | | Details of electrical in- stallation and equipment to provide minimum stan- dards for the prevention of electrical fires and electrical shock to per- sonnel, including measures such as separation of bat- teries from gasoline tanks, adequate insulation of wiring, etc. |
| Part 184 - <u>Vessel Control and Miscellaneous Systems and Equipment</u> | | |
| §184.05-1 | Restrictions | Prohibition of use of li- quefied petroleum gas and gasoline for cooking, heat- ing and other purposes on all vessels |
| §Subpart 184.30- 1,5 | Emergency lighting | Provision for portable battery powered lights and the automatic operation of emergency lighting in lounge areas and routes leading to escape |
| Part 185 - <u>Operations</u> | | |
| §185.20-20 | Vessels carrying vehicles | Provision that vehicles be stored in a manner to allow escape of passengers and operators in case of fire and that no smoking be allowed in the area |
| §185.20-25 | Fueling of vessels | Provision that vessels us- ing fuel having a flash- point of 110°F or lower shall not take on fuel when passengers are on board |
| §Subpart 185-25 (c) | Preparations for emergencies | Required emergency proce- dures for fire at sea |

| <u>Citation</u> | <u>Subject</u> | <u>Content</u> |
|---|---------------------------|---|
| Subpart 185.30 - Markings Required | | |
| §185.30-20 | Fuel shutoff valves | Required markings of all fuel shutoff stations in 1-inch letters |
| Subpart 187.20 - <u>Specific Requirements of Operators on Other Than Ocean and Coastwise Waters</u> | | |
| §187.20-20, §187.20-15, §187.20-17 | Examination for operators | Requirement that exams for the following positions contain questions on fire protection and extinguishment: operators of mechanically-propelled vessels, sailboat operators and barge operators |
| Subpart 187.25 - Specific Requirements for Ocean Operators | | |
| §187.25-15, §187.25-20, §187.25-21 | Examination for operators | Requirement that exams for the following positions contain questions of fire protection and extinguishment: operators of ocean mechanically-propelled vessels, sail-propelled vessels and auxiliary sailing vessels |
| <u>SUBCHAPTER U - OCEANOGRAPHIC VESSELS</u> | | |
| Part 188 - <u>General Provisions</u> | | |
| §Subpart 188.10 - Definition of Terms Used in this Subchapter | | |
| §188.10-17 | Combustible liquid | Any liquid whose flash-point, as determined by an open cup tester is above 80°F |
| §188.10-27 | Flammable liquid | Any liquid whose flash-point, as determined by an open cup tester is 80°F or below |
| §188.10-43 | Liquified flammable gas | Any flammable gas having a Reid vapor pressure exceeding p.s.i. which has been liquified |

| <u>Citation</u> | <u>Subject</u> | <u>Content</u> |
|--|---|---|
| Part 189 - <u>Inspection and Certification</u> | | |
| Subpart 189.25 - Inspection for Certification | | |
| §189.25-20 | Fire-extinguishing equipment | Provision that at each inspection for certification all hand portable and fixed fire extinguishing systems shall undergo tests specified |
| §189.25-45 | Fire hazards | Provision that at each inspection for certification all tank tops and bilges in the machinery spaces shall be examined for possible oil accumulation |
| §189.50-1 | Inspection and testing required when making alterations, repairs or other such operations involving riveting, welding, burning or like fire-producing actions | Requirement that no such actions shall be taken until an inspection has been made and a certificate has been issued by the Officer in Charge, Marine Inspection using as guidelines the provisions of "Standards for the Control of Gas Hazards on Vessel to be Repaired," NFPA No. 306 |
| §189.55-5 | Plans and specifications required for new construction | Plans and specifications for fire control systems are to be included as part of overall plans for new construction |
| Part 190 - <u>Construction and Arrangement</u> | | |
| §Subpart 190.05 | General fire protection | Provision for general fire safety including insulation of woodwork from heated surfaces, metal construction of lamp, paint and oil lockers and insulation of spaces containing the emergency sources of electric power |

| <u>Citation</u> | <u>Subject</u> | <u>Content</u> |
|---|--|--|
| Subpart 190.07 - Structural Fire Protection | | |
| §190.07-5 | Definitions | Definition of Standard fire test and classification of bulkheads according to the degree of fire protection they provide |
| §190.07-10 | Construction | Specification of types of materials permitted in various parts of the vessels |
| Subpart 190.10 Means of escape | | Requirement that at least two means of escape be provided from all general areas and specification of what constitutes an adequate means of escape |
| Subpart 190.15 - Ventilation | | |
| §190.15-5 | Vessels using fuel having a flashpoint of 110 degrees or lower | Requirement that spaces where fuel with a flashpoint of 110° for lower is being used by ventilated as specified |
| §190.15-10 | Ventilation for closed spaces | Requirement of means to stop all ventilation fans in case of fire |
| Part 192 - <u>Lifesaving Equipment</u> | | This section contains various and detailed specifications for type and content of lifeboats, including number of fire extinguishers; other requirements for life rafts and preservers, etc. |
| Part 193 - <u>Fire Protection Equipment</u> | | |
| (§193.01-§193.60) | | Specification of types of fire protection equipment to be used in which areas and detailed descriptions of the following systems: fire main, carbon dioxide extinguishing, hand portable extinguishers and fire axes |

| <u>Citation</u> | <u>Subject</u> | <u>Content</u> |
|-----------------|---|--|
| Part 194 - | <u>Handling, Use and Control of Explosives and Other Dangerous Articles</u> (§194.01 - §194.90) | Provision for storage and labeling of explosive and dangerous articles, including flammable liquids, flammable solids and combustible liquids |
| Part 195 - | <u>Vessel Control and Miscellaneous Systems and Equipment</u> | |
| §196.11-30 (b) | Emergency signals | Description of required fire alarm signals |
| §196.15-35 | Fire and boat drills | Requirement that fire and boat drills be conducted periodically with a description of required drill procedure |
| §196.15-55 | Requirements for fuel oil | Requirement that each supply of fuel oil taken aboard be logged as to quantity, vendor, producer and flashpoint and a half-pint sample taken of each lot |
| §196.15-60 | Firefighting equipment, general | Requirement that the owner be responsible for maintaining of all firefighting equipment and that at least every 12 months all equipment be tested and inspected |
| §196.30-10 | Notice required before repair | Requirement that no repairs or alterations to any fire detecting or extinguishing equipment be made without advance notice to the Officer in Charge, Marine Inspection |
| §Subpart 196.37 | Markings for fire and emergency equipment | Provision for the marking of fire and emergency equipment |
| <u>Citation</u> | <u>Subject</u> | <u>Content</u> |
| §Subject 196.60 | Motion picture film and equipment | Provision that only acetate or slow-burning film may be used; nitrocellulose film is prohibited |

USCG Definition of Terms (from §30.10)

Flammable'inflammable - The words "flammable" and "inflammable" are interchangeable or synonymous terms for the purpose of the regulations in this chapter

Flammable liquids - Any liquid which gives off flammable vapors (as determined by flashpoint from an open-cup tester, as used for test of burning oils) at or below a temperature of 80°F. Flammable liquids having lethal qualities are those having the characteristics of class "B" or "C" poisons as defined in §146,25-10 and §146.25-15, of Subchapter N (Dangerous Cargoes) of this chapter. Flammable liquids are referred to by grades as follows:

- (a) Grade A. Any flammable liquid having a Reid¹ vapor pressure of 14 pounds or more
- (b) Grade B. Any flammable liquid having a Reid¹ vapor pressure under 14 pounds and over 8 1/2 pounds
- (c) Grade C. Any flammable liquid having a Reid¹ vapor pressure of 8 1/2 pounds or less and a flashpoint of 80° F. or below

Flame arrester - Any device or assembly of a cellular, tubular, pressure, or other type used for preventing the passage of flames into enclosed spaces

Flame screen - A fitted single screen of corrosion-resistant wire of at least 30 by 30 mesh, or two fitted screens, both of corrosion resistant wire, of at least 20 by 20 mesh, spaced not less than 1/2 inch or more than 1 1/2 inches apart

Flashpoint - The temperature in degrees Fahrenheit at which a liquid gives off a flammable vapor when heated in an open-cup tester. For the purpose of the regulations in this subchapter, flashpoints determined by other testing methods will be equivalent to those determined with an open-cup tester, as follows:

Table 30.10-27
Equivalent Flashpoints

| Open-cup tester | Tab closed-cup | Pensky-Martens closed tester |
|-----------------|----------------|------------------------------|
| °F | °F | °F |
| 80 | 75 | -- |
| 150 | -- | 140 |

¹American Society for Testing Materials Standard D-323 (most recent). Method for test for Vapor Pressure of Petroleum Products (Reid Methos).

SUBCHAPTER B - MILITARY PERSONNEL

Part 33 - Appointment of Civilians as Commissioned Officers, Chief Warrant Officers and Warrant Officers

Subpart 33.05 - Appointments of Licensed Officers of the United States Merchant Marine as Commissioned Officers

| | | |
|-------------|----------------------|--|
| §33.05 - 15 | Written examinations | Requirement that all applicants take a written examination and that the exam include a section of fire prevention and safety, including use of fire equipment, methods of fire fighting and fire prevention and required equipment for merchant vessels. |
|-------------|----------------------|--|

SUBCHAPTER N - ARTIFICIAL ISLANDS AND FIXED STRUCTURES ON THE OUTER CONTINENTAL SHELF

Part 145 - Fire-fighting Equipment

| | | |
|---------|--------------------------------------|--|
| §145.01 | Portable and semi-portable equipment | Requirement that approved able and/or semi-portable fire extinguishers be installed and maintained on all platforms where crews are regularly working. |
| §145.05 | Classification of fire extinguishers | Classification of portable and semi-portable fire extinguishers using letters to indicate the type of fire the unit will extinguish and numbers to indicate the relative size of the unit. Requirement that all extinguishers can be labelled as to type, capacity, approving firm or individual and manufacturing firm |

| <u>Citation</u> | <u>Subject</u> | <u>Content</u> |
|--|--|---|
| §145.10 | Locations and number of fire extinguishers required. | Specification of type, quantity and location of fire extinguishers required in various parts of the vessel |
| SUBCHAPTER NN - <u>DEEPWATER PORTS</u> | | |
| Part 149 - <u>Design, Construction and Equipment</u> | | |
| §149.451 - §149.479 | Fixed Fire Main System for Water | Requirement that each PPC (pumping platform complex) have a fixed fire main system |
| | | Specifications for components of fire main system including fire pumps, fire hydrants, fire hoses spray applicators and international shore connections |
| §149.481 | Other fire extinguishing systems | Requirement that each PPC must have, in addition to the fire main system, a manually or automatically operated fire extinguishing system which meets National Fire Protection Association Standards |
| | | Specification of the locations where extinguishers are required and the type of systems required |
| §149.483 | Firefighting systems for helicopter pads | Requirement that each PPC helicopter landing pad have a foam producing fire extinguishing system and specifications for the performance of such a system |
| §149.491 | Fire detection and alarm system | Requirement that each PPC have various fire detecting systems for various locations within the vessel |

| <u>Citation</u> | <u>Subject</u> | <u>Content</u> |
|-----------------|---|---|
| §149.501 | Portable and semi-portable fire extinguishers | Requirement that each PPC have portable and semi-portable fire extinguishers approved by the coast Guard under CFR 162.028 or 162.039 |
| §149.503 | Location of extinguishers | Requirement that fire extinguishers be installed in accordance with Table 145.10 in §145.10 |
| §149.505 | Spare charges | Requirement that spare charges be carried for at least 50 percent of each size and variety of hand portable fire extinguishers required in Table 145.10 |
| §149.507 | Marking | Requirement that each hand portable extinguisher and its station be numbered in accordance with 46 CFR 97.37-23. |
| §149.511 | Landing area with no fueling facility | Requirement that each helicopter landing area with no fueling facility have at least two USCG type B:C, size IV dry chemical extinguishers |
| §149.515 | Fire axes | Requirement that each PPC have at least 8 fire axes distributed so as to be readily available |
| §149.517 | Fireman's outfit | Requirement that each PPC have at least 2 fireman's outfits with description of required contents |

| <u>Citation</u> | <u>Subject</u> | <u>Content</u> |
|--|-----------------------------------|---|
| Part 150 - <u>Operations</u> | | |
| §150.504 | Firemain system | Requirement that fire main system be used only for firefighting and deck-washing |
| §150.505 | Fire pump | Requirement that one fire pump be kept ready for use at all times |
| §150.507 | Firehouse: connection and storage | Requirements for the stowage of firehoses, including the requirement that at least one length of firehose in combination with nozzle be connected to each fire hydrant at all times |
| Part 183 - <u>Boats and Associated Equipment</u> | | |
| Subpart I - Electrical Systems | | |
| §183.410 | Ignition protection | Provisions to insure that electrical components when operated will not ignite a propane gas and air mixture unless it is isolated from fuel sources |
