# Transportation Planning Data for Urbanized Areas Based on the 1980 Census

---

Final Report  
January 1985

Prepared by  
Carlos G. Rodriguez, James J. McDonnell,  
Robert W. Draper, and Edward McGarry  
Federal Highway Administration  
Washington, D.C. 20590

Prepared for  
Urban Planning and Transportation Management Division  
Office of Highway Planning  
Federal Highway Administration  
Washington, D.C. 20590

Distributed in Cooperation with  
Technology Sharing Program  
Office of the Secretary of Transportation

DOT-I-85-20

## PREFACE

This report, the third in the transportation planning series, provides 1980 decennial census for all urbanized areas to transportation planners.

## URBANIZED AREA DATA TABULATIONS

### Introduction

The following urbanized area data tabulations present summarized information which is useful to the transportation planner and others concerned with urban development. The data is based on the 1980 Census and is organized by urbanized area as defined by the Bureau of the Census.

Data is displayed alphabetically by State then alphabetically by each urbanized area within the State.

Chapter 1 contains variables calculated from census data, such as autos per household, trucks or vans per household, percent of workers by means of transportation to work, percent of workers in carpools, average traveltime to work, etc.

Chapter 2 contains the actual numbers from the 1980 Census reports for each urbanized area, such as total population, number of autos owned, number of trucks or vans owned, number of workers using each means of transportation to work, etc.

### Use of Data

Tabulations are presented in a form to maximize the usefulness of the data. For example, the number of households and population both have a direct bearing on total trip-making activity within the study area. Likewise, median income and auto ownership can both be readily translated into trip making activity at the household level. The data should be used as a base from which growth can be measured. With similar information from the 1960 and 1970 Census, and other independent sources, trends can be identified and rates of change established. In addition to establishing estimates of growth, tabulations can be used to cross-check other information sources.

### Data Source

The two Census publications from each State used were the General Social and Economic Characteristics, PC-1-C, and the Detailed Housing Characteristics, HC-1-B.

VMT Data - The data source for vehicle miles of travel (VMT) is the Highway Performance Monitoring System (HPMS). (See Page 9 for more detail).

The following table shows the location of the data used in compiling the statistics presented in this publication.

## Locator Tables

<u>Item</u>	<u>Description</u>	<u>Location</u>
1.	Total persons	Table 56, PC-1-C
2.	Occupied households	Table 74, HC-1-B
3.	Total year-round households	Table 74, HC-1-B
4.	Renter-occupied households	Table 74, HC-1-B
5.	Persons 16 years and over, Armed Forces	Table 120, PC-1-C
6.	Persons 16 years and over, civilian employed	Table 120, PC-1-C
7.	Households with 0 vehicles	Table 74, HC-1-B
8.	Households with 1 vehicle	Table 74, HC-1-B
9.	Households with 2 vehicles	Table 74, HC-1-B
10.	Households with 3 or more vehicles	Table 74, HC-1-B
11.	Households with 0 autos	Table 74, HC-1-B
12.	Households with 1 auto	Table 74, HC-1-B
13.	Households with 2 autos	Table 74, HC-1-B
14.	Households with 3 or more autos	Table 74, HC-1-B
15.	Households with 0 trucks or vans	Table 74, HC-1-B
16.	Households with 1 truck or van	Table 74, HC-1-B
17.	Households with 2 trucks or vans	Table 74, HC-1-B

<u>Item</u>	<u>Description</u>	<u>Location</u>
18.	Households with 3 or more trucks or vans	Table 74, HC-1-B
19.	Workers 16-years and over	Table 118, PC-1-C Means of Transportation
20.	Drive alone car	Table 118, PC-1-C Means of Transportation
21.	Drive alone truck or van	Table 118, PC-1-C Means of Transportation
22.	Carpool - Car	Table 118, PC-1-C Means of Transportation
23.	Carpool - Truck or van	Table 118, PC-1-C Means of Transportation
24.	Bus or streetcar	Table 118, PC-1-C Means of Transportation
25.	Subway or elevated train	Table 118, PC-1-C Means of Transportation
26.	Railroad	Table 118, PC-1-C Means of Transportation
27.	Worked at home	Table 118, PC-1-C Means of Transportation
28.	Workers 16-years using private vehicles	Table 118, PC-1-C Private vehicle occupied
29.	Drive alone	Table 118, PC-1-C Private vehicle occupied
30.	Two-person carpool	Table 118, PC-1-C Private vehicle occupied

<u>Item</u>	<u>Description</u>	<u>Location</u>
31.	Three-person carpool	Table 118, PC-1-C Private vehicle occupied
32.	Four-person carpool	Table 118, PC-1-C Private vehicle occupied
33.	Five-or more person carpool	Table 118, PC-1-C Private vehicle occupied
34.	Persons per private vehicle	Table 118, PC-1-C Private vehicle occupied
35.	Workers 16 years who did not work at home	Table 118, PC-1-C Travel time to work
36.	Less than 10 minutes	Table 118, PC-1-C Travel time to work
37.	10-19 minutes	Table 118, PC-1-C Travel time to work
38.	20-29 minutes	Table 118, PC-1-C Travel time to work
39.	30-44 minutes	Table 118, PC-1-C Travel time to work
40.	45 minutes or more	Table 118, PC-1-C Travel time to work
41.	Mean	Table 118, PC-1-C Travel time to work
42.	Mean for workers traveling 45 minutes or more	Table 118, PC-1-C Travel time to work
43.	Families	Table 124, PC-1-C Income families

<u>Item</u>	<u>Description</u>	<u>Location</u>
44.	Less than \$5,000	Table 124, PC-1-C Income families
45.	\$5,000-\$7,499	Table 124, PC-1-C Income families
46.	\$7,500-\$9,999	Table 124, PC-1-C Income families
47.	\$10,000-\$14,999	Table 124, PC-1-C Income families
48.	\$15,000-\$19,999	Table 124, PC-1-C Income families
49.	\$20,000-\$24,999	Table 124, PC-1-C Income families
50.	\$25,000-\$34,999	Table 124, PC-1-C Income families
51.	\$35,000-\$49,999	Table 124, PC-1-C Income families
52.	\$50,000 or more	Table 124, PC-1-C Income families
53.	Median Income	Table 124, PC-1-C Income families
54.	Land Area	Table 34, PC-1-A

The following are formulas used to derive the statistics placed in Chapter 1 of this booklet. Numbers in parentheses are the item numbers from the preceding locator table. These statistics compare to the 1960 and the 1970 planning data summaries. (A one-page example of the 1960 and 1970 data is shown in the Appendix. The full report is available from FHWA - HHP-21.)

<u>Heading</u>	<u>Equation</u>
o Total population	(1)
o Land area (sq. mi)	(54)
o Population density	(1) / (54)
o Total number households	(2)
o Total housing units	(3)
o Percent renter occupied households	(4) / (3)
o Workers as percentage of population	((5) + (6)) / (1)
o Autos per household	((12) + 2 × (13) + 3.3 × (14)) / (2)
o Trucks/vans per household	((16) + 2 × (17) + 3.3 × (18)) / (2)
o Vehicles per household	((8) + 2 × (9) + 3.3 × (10)) / (2)
o Persons per auto	(1) / ((12) + 2 × (13) + 3.3 × (14))
o Persons per truck/van	(1) / ((16) + 2 × (17) + 3.3 × (18))
o Persons per vehicle	(1) / ((8) + 2 × (9) + 3.3 × (10))
o Workers per auto	((5) + (6)) / ((12) + 2 × (13) + 3.3 × (14))
o Workers per truck/van	((5) + (6)) / ((16) + 2 × (17) + 3.3 × (18))
o Workers per vehicle	((5) + (6)) / ((8) + 2 × (9) + 3.3 × (10))
o Persons per household	(1) / (2)
o Workers per household	((5) + (6)) / (2)
o Percentage of workers by auto	((20) + (22)) / ((19) - (27))
o Percentage of workers by rail	((25) + (26)) / ((19) - (27))

<u>Heading</u>	<u>Equation</u>			
o Percentage of workers by bus	$(24) / ((19) - (27))$			
o Percentage of workers by truck/van	$(21) / ((19) - (27))$			
o Percentage of workers by others	$1 - ((20) + (21) + (22) + (23) + (24) + (25) + (26)) / ((19) - (27))$			
o Percentage of workers by carpool auto	$(22) / ((19) - (27))$			
o Percentage of workers by carpool truck/van	$(23) / ((19) - (27))$			
o Vehicle occupancy by percent of workers using private vehicle				
Drive alone	$(29) / (28)$			
2-person carpool	$(30) / (28)$			
3+person carpool	$((31) + (32) + (33)) / (28)$			
o Persons per private vehicle	$(34)$			
o Travel time to work by percent of workers who did not work at home				
Less than 10	$(36) / (35)$			
10-19	$(37) / (35)$			
20-29	$(38) / (35)$			
30-44	$(39) / (35)$			
45 or more	$(40) / (35)$			
o Travel Time				
mean	$(41)$			
mean for 45 or more	$(42)$			
o Percentage of Households with 0, 1, 2, and 3 or more vehicles, autos, or trucks/vans				
		<u>Autos</u>	<u>Trucks/vans</u>	<u>Vehicles</u>
0		$(11) / (2)$	$(15) / (2)$	$(7) / (2)$
1		$(12) / (2)$	$(16) / (2)$	$(8) / (2)$
2		$(13) / (2)$	$(17) / (2)$	$(9) / (2)$
3		$(14) / (2)$	$(18) / (2)$	$(10) / (2)$

<u>Heading</u>	<u>Equation</u>
o Percent of families earning Less than \$10,000	$((44) + (45) + (46)) / (43)$
\$10-20,000	$((47) + (48)) / (43)$
\$20-35,000	$((49) + (50)) / (43)$
More than \$35,000	$((51) + (52)) / (43)$
o Median Income	(53)

### Observations about the Data

#### 1. Three or More Vehicles

When figuring the total for autos, vehicles, and trucks/vans 3.3 was used as the factor for the 3+ category.

This factor should be different for trucks/vans (but none was available).

The 3.3 factor for autos was obtained from the 1977 Nationwide Personal Transportation Study (NPTS).

When using the factor of 3.3 for all three categories the sum total of autos and truck/vans differs from the total of vehicles by approximately 1-3%.

The 1980 census does not count trucks and vans over one-ton capacity. Therefore, the category vehicles, includes only automobiles and trucks/vans of one-ton capacity or less.

The NPTS includes van-bus/minibus in counting automobiles. These would be counted as trucks/vans in the census. The category vehicles, includes trucks and vans over one-ton capacity, motorcycles and mopeds, vehicles which are not included in the census.

Thus, the NPTS method allows more households into the 3+ range for each category than the census method.

In both 1960 and 1970 data, the factor used was 3.1. However, in the documentation for 1960, no mention is made as to how this was determined. Also, in both years, only autos were counted.

#### 2. SMSA Level Data

Data shown for Standard Metropolitan Statistical Areas (SMSAs) includes entries of "0" and "1."

The focus of this publication is to present data at the urbanized area level, in addition some entries for the entire SMSA have been included (e.g. SMSA Place of Work, SMSA Housing Units). Using the Census definitions for urbanized areas and SMSAs, it is possible to have either an urbanized area that is not within an SMSA, or several urbanized areas within one SMSA. In cases where an urbanized area is not part of an SMSA, a "0" was used in the SMSA data

fields. If more than one urbanized area is in an SMSA, the SMSA level data are placed in the urbanized area containing the major central city. The remaining urbanized areas within that SMSA have an entry of "1" to indicate that the data are listed elsewhere.

### 3. VMT Data

The only non-Census data presented in this publication are the Vehicle Miles of Travel (VMT) data in Chapter 2 (1980 Daily Total VMT, 1980 Total Mileage, Daily VMT per capita). The data source for the VMT data is the HPMS, a major data collection system of the Federal Highway Administration. The VMT data shown are updated annually as part of the ongoing HPMS program. The VMT for the urbanized area are derived from traffic counts made within the urbanized area. It should be noted that "VMT per Capita" reflects an estimate of total travel in the urbanized area (including travel by both residents and nonresidents of the area) divided by the population of the urbanized area.

A "0" entry for VMT data indicates data are not available for that urbanized area.

### 4. Puerto Rico

In Puerto Rico, no fix rail or subway exists, but the data under this subject "percent of workers making work trips by" rail is data related to the form of transportation called "Publicos" (only in Puerto Rico.)

The Urban Mass Transportation Administration (UMTA) for its work combines publicos data with bus transportation data.

### 5. Use of Census Sample Data

Most of the data in this publication are based on a sample and factored up to 100 percent. They may differ somewhat from complete count figures that would have been obtained if all housing units, persons within those housing units, and persons living in group quarters had been enumerated using the same questionnaires, instructions, enumerators, etc.

### 6. Availability of the Data on Disk

This data is on the Lotus 1, 2, 3 program on two diskettes; one diskette contains Chapter 1 and the other diskette holds Chapter 2 (raw data). Chapter 2 is also on another diskette using a DBase III program.

7. Comparison of Transportation Planning Data for Urbanized Areas based on the totals from their respective publications of summary 1960, 1970, and 1980:

<u>URBANIZED AREA DATA</u>	<u>1960</u>	<u>1970</u>	<u>1980</u>
Total number of areas	202	248	366
Total population	91,322,864	118,440,006	139,182,696
Total number of households	28,107,216	37,791,508	50,549,711
Total housing units	29,756,224	39,557,589	53,824,097
Percent renter occupied housing	43.7	41.1	39.2
Workers as percent of population	38.5	40.3	45.7
Autos per household	1.0	1.2	1.3
Persons per auto	3.3	2.6	2.1
Workers per auto	1.3	1.1	0.9
Persons per household	3.2	3.1	2.8
Workers per household	1.3	1.3	1.3
Percent of workers making work trip by			
Auto**	73.4	77.3	83.4
Rail	8.2	4.9	3.4
Bus	16.4	8.7	6.1
Percent of households with			
0 Autos	25.3	20.1	16.7
1 Auto	54.6	45.5	44.6
2 Autos	17.8	29.0	30.3
3+Autos	2.3	5.4	8.4
Percent of families earning *			
Less than \$5,000	32.6	16.1	18.6
\$5,000-8,000	34.0	16.4	27.6
\$8,000-15,000	27.3	42.1	34.5
More than \$15,000	6.1	25.4	19.3
Median income	\$ 6,415	\$ 10,618	\$ 21,243

\* NOTE: The 1980 groupings are:  
Less than \$10,000  
\$10,000-20,000  
\$20,000-35,000  
More than \$35,000

\*\* In 1980 private vehicle includes  
truck/van (9.6%) and auto (73.8%) = 83.4%

8. The data for this report was verified by comparing totals with the totals found in the United States summary publications such as Table 101 from PC 80-1-C1.

**Table 101. Geographical Mobility and Commuting: 1980**

[Data are estimates based on a sample; see Introduction. For meaning of symbols, see Introduction. For definitions of terms, see appendices A and B.]

United States Urban and Rural and Size of Place Inside and Outside SMSA's	Urban						Rural					
	United States	Total	Inside urbanized areas			Outside urbanized areas		Total	Places of 1,000 to 2,500	Rural farm	Inside SMSA's	Outside SMSA's
			Total	Central cities	Urban fringe	Places of 10,000 or more	Places of 2,500 to 10,000

### Definition

The major objective of the Census Bureau in delineating urbanized areas is to separate the urban and rural population in the vicinity of large cities. An urbanized area consists of a central city or cities, and surrounding closely settled territory ("urban fringe").

The following criteria are used in determining the eligibility and definition of the 1980 urbanized areas:<sup>1</sup>

An urbanized area comprises an incorporated place<sup>2</sup> and adjacent densely settled surrounding area that together have a minimum population of 50,000.<sup>3</sup> The densely settled surrounding area consists of

1. A contiguous incorporated or census designated places having:
  - a. A population of 2,500 or more; or,
  - b. A population of fewer than 2,500 but having either a population density of 1,000 persons per square mile, or a closely settled area containing a minimum of 50 percent of the population, or a cluster of at least 100 housing units.

2. A contiguous unincorporated area which is connected by road and has a population density of at least 1,000 persons per square mile.<sup>4</sup>
3. Other contiguous unincorporated area with a density of less than 1,000 persons per square mile, provided that it:
  - a. Eliminates an enclave of less than 5 square miles which is surrounded by built-up area.
  - b. Closes an indentation in the boundary of the densely settled area that is no more than 1 mile across the open end and encompasses no more than 5 square miles.

---

<sup>1</sup>All references to population figures and densities relate to data from the 1980 census.

<sup>2</sup>In Hawaii, incorporated places do not exist in the sense of functioning local governmental units. Instead, census designated places are used in defining a central city and for applying urbanized area criteria.

<sup>3</sup>The rural portions of extended cities, as defined in the Census Bureau's extended city criteria, are excluded from the urbanized area. In addition, for an urbanized area to be recognized, it must include a population of at least 25,000 that does not reside on a military base.

<sup>4</sup>Any area of extensive nonresidential urban land use, such as railroad yards, airports, factories, parks, golf courses, and cemeteries, is excluded in computing the population density.

- c. Links an outlying area of qualifying density, provided that the outlying area is:
- (1) Connected by road to, and is not more than 1 1/2 miles from, the main body of the urbanized area.
  - (2) Separated from the main body of the urbanized area by water or other undevelopable area, is connected by road to the main body of the urbanized area, and is not more than 5 miles from the main body of the urbanized area.
4. Large concentrations of nonresidential urban area (such as industrial parks, office areas, and major airports), which have at least one-quarter of their boundary contiguous to an urbanized area.

A map of each urbanized area in each State appears in the PC80-1-A report for the State.

#### Urbanized Area Titles

1. The titles of urbanized areas existing prior to the 1980 Census of Population and Housing are retained unchanged except for mergers and for those areas meeting items 4 and/or 5 of the titling criteria.
2. The titles of new urbanized areas qualifying as the result of the 1980 census are determined as follows:
  - a. The name of the incorporated place with the largest population in the urbanized area is always listed.

- b. The names of up to two additional incorporated places may be listed, with eligibility determined by
  - (1) those with a population of at least 250,000.
  - (2) those with a population of 15,000 to 250,000 provided that they are at least one-third the population of the largest place in the urbanized area.
3. Area titles that include the names of more than one incorporated place start with the name of the largest and list the others in descending order of their population.
4. In addition to incorporated place names, the titles contain the name of each State into which the urbanized area extends.
5. Regional titles may be used to identify urbanized areas with population over one million, in which case only the largest city of the urbanized area is included in the title.

#### Urbanized Area Central Cities

The central cities of urbanized areas are those named in the titles except where regional titles are used. In such cases, the central cities are those that have qualified under items 1 or 2 of the titling criteria. Data for central cities of urbanized areas refer to the urban portion of these cities, thus excluding the rural portions of extended cities, as discussed above.

## Standard Metropolitan Statistical Areas

### Definition

The general concept of a metropolitan area is one of a large population nucleus, together with adjacent communities which have a high degree of economic and social integration with that nucleus. The standard metropolitan statistical area (SMSA) classification is a statistical standard, developed for use by Federal agencies in the production, analysis, and publication of data on metropolitan areas. The SMSA's are designated and defined by the Office of Management and Budget, following a set of official published standards developed by the interagency Federal Committee on Standard Metropolitan Statistical Areas.

Each SMSA has one or more central counties containing the area's main population concentration: an urbanized area with at least 50,000 inhabitants. An SMSA may also include outlying counties which have close economic and social relationships with the central counties. The outlying counties must have a specified level of commuting to the central counties and must also meet certain standards regarding metropolitan character, such as population density, urban population, and population growth. In New England, SMSA's are composed of cities and towns rather than whole counties.

The population living in SMSA's may also be referred to as the metropolitan population. The population is subdivided into "inside central city (or cities)" and "outside central city (or cities)." The population living outside SMSA's constitutes the nonmetropolitan population tables designed "... for areas and places." Thus, a central city with a population between 10,000 and 50,000 will not appear in the tables for places of 10,000 to 50,000.

### New SMSA Standards

New standards for designating and defining metropolitan statistical areas were published in the Federal Register on January 3, 1980. The SMSA's recognized for the 1980 census comprise (1) all areas as defined on January 1, 1980, except for one area which was defined provisionally during the 1970's on the basis of population estimates but whose qualification was not confirmed by 1980 census counts; and (2) a group of 36 new areas defined on the basis of 1980 census counts and the new standards that were published on January 3, 1980.

When the data on commuting flows become available from 1980 census tabulations, the new standards will be applied to the areas existing on January 1, 1980, and the boundaries, definitions, and titles for all SMSA's will be reviewed.

To aid users who want to become familiar with the SMSA standards and how they are applied, documents are available from the Office of Management and Budget, Washington, D.C. 20503.

## Standard Consolidated Statistical Areas

In some parts of the country, metropolitan development has progressed to the point that adjoining SMSA's are themselves socially and economically inter-related. These areas are designated standard consolidated statistical areas (SCSA's) by the Office of Management and Budget, and are defined using standards included as part of the new SMSA standards described above.

### Relationship Between Urbanized Areas and SMSA

Although urbanized areas and SMSA's are closely related in concept, there are important differences. The urbanized area consists of the contiguous built-up territory around each larger city and thus corresponds generally to the core of the SMSA. The SMSA definitions use counties as building blocks (in New England, cities and towns are used). SMSA's are generally larger than their core urbanized area because they include discontinuous urban and suburban development beyond the periphery of the continuously built-up territory. SMSA's may also include rural territory, while urbanized areas do not.

The new SMSA standards provide that each SMSA must include an urbanized area. SMSA's with separate large urban concentrations may include two or more urbanized areas. Occasionally, a portion of an urbanized area extends across the SMSA boundary into a nonmetropolitan county or another SMSA. Such portions are usually quite small in area and population. While each SMSA must include an urbanized area, urbanized areas may be defined outside the boundaries of any SMSA.

## Place of Work

The data on place of work were derived from answers to question 23, which was asked only of persons who indicated in question 22 that they had worked at any time during the reference week (see below for definition of reference week). Data are tabulated for workers 16 years and over; that is, members of the Armed Forces and civilians who were at work during the reference week. Place of work refers to the geographic location at which workers carried out their occupational activities during the reference week. The exact address (number and street) of the place of work was asked, as well as the place (city, town, village, borough, etc); whether or not the place of work was inside or outside its incorporated (legal) limits; and the county, State, and zip code. If the person's employer operated in more than one location, the exact address of the location or branch where the respondent worked was requested. When the number and street name could not be given, the building name or other physical location description was to be entered. Persons who worked at more than one location were asked to report the one at which they worked the greatest number of hours during the reference week. Persons who regularly worked in several locations during the reference week were requested to give the address at which they began work each day. For cases in which daily work was not begun at a central place each day, the person was asked to provide as much information as possible which described the area in which he or she worked most during the reference week.

For purposes of this report, place-of-work locations are defined as "in area of residence" and "outside area of residence." Area of residence refers to the particular tabulation area or areas shown in each table. For example, in a table that provides data for counties, the place-of-work data for each of these areas pertain to the number of workers living in the area who worked inside or outside its boundaries.

Persons were tabulated as working in an incorporated place if they reported working inside its legal limits, or reported an incorporated place as their place of work without specifying whether or not they worked inside its legal boundaries. Persons who reported working outside the limits of an incorporated place were tabulated as working outside the place. In contrast, persons who reported a census designated place (CDP)-a place with no legal boundaries-as their place of work were tabulated as working in that place regardless of their response on the incorporated limits question. The accuracy of place-of-work data for certain CDP's may be affected by the extent to which their census names were familiar to respondents, and by coding problems caused by similarities between the CDP name and the names of other geographic jurisdictions in the same vicinity.

Place-of-work data are given for minor civil divisions (townships and towns) in the nine Northeastern States, based on the responses to the place-of-work question. Many towns and townships are regarded locally as equivalent to a place and were, therefore, reported as the place of work. When a respondent reported a locality or incorporated place that forms part of a township or town, the coding and tabulating procedure was designed to include the response in the total for the township or town. It is believed that the accuracy of the place-of-work data for minor civil divisions is greatest for the New England States. However, the data for some New England towns, for towns in New York, and for townships in New Jersey and Pennsylvania may be affected by coding problems resulting from unfamiliarity of the respondent with the minor civil division in which the workplace was located, or that resulted when a township and a city or borough of the same or similar name are located close together.

Data on place of work are based on approximately one-half of the full census sample (see Appendix D). Therefore, figures in tabulations involving place of work may differ from tabulations based on the full sample. For example, the number of workers 16 years old and over from place-of-work tabulations may not agree with the same category shown for means of transportation to work tabulations.

### Means of Transportation to Work

The data on means of transportation to work were derived from answers to questions 24b, 24c, and 24d which were asked only of persons who indicated in question 22 that they had worked at any time during the reference week (see below for definition of reference week). Means of transportation to work refers to the principal mode of travel or type of conveyance that the person usually used to get from home to work during the reference week. Persons who used different days of the week were asked to specify the one they used most often. Persons who used more than one means of transportation to get to work each day were asked to report the one used for the longest distance during the work trip. The category "private vehicle" includes workers using a car (including company cars but excluding taxicabs), a truck of one-ton capacity or less, or a van. The category "public transportation" includes workers who used a bus or streetcar, subway or elevated train, railroad, or taxicab.

A question on carpooling (question 24c) was asked of all workers who reported their means of transportation to work as "car," "truck," or "van." The category "drive alone" includes persons who usually drove alone to work, as well as persons who were driven to work by someone who then drove back home or to a nonwork destination. The category "carpool" includes workers who reported that they usually shared driving, drove others, or rode as a passenger during the reference week.

The means of transportation data for some areas in this report may show workers using modes of public transportation that are not available in those areas (e.g., subway or elevated riders in an SMSA where there actually is no subway or elevated service).

This result is largely attributable to persons who worked during the reference week at a location that was different from their usual place of work (such as persons away from home on business in an area where subway service was available), and persons who used more than one means of transportation each day but whose principal means was not available where they lived (for example, residents of nonmetropolitan areas who drove to the fringe of an SMSA and took the commuter railroad most of the distance to work).

### Private Vehicle Occupancy

The data on private vehicle occupancy were derived from answers to question 24d, which was asked of persons who indicated in question 22 that they had worked at any time during the reference week (see below for definition of reference week), and who reported in question 24c that they usually shared driving, drove others, or rode as a passenger in a car, truck, or van. Private vehicle occupancy refers to the number of persons who usually rode to work in the vehicle during the reference week. The measure "persons per private vehicle" is

obtained by dividing the number of persons who reported using a car, truck, or van to get to work by the number of such vehicles that they used. The number of vehicles used is derived by counting each person who drove alone as one vehicle, each person who reported being in a three-person carpool as one-third vehicle, and so on, and then summing all the vehicles.

### **Travel Time to Work**

The data on travel time to work were derived from answers to question 24a, which was asked of persons who indicated in question 22 that they had worked at any time during the reference week (see below for definition of reference week). Travel time to work refers to the total number of minutes that it usually took the person to get from home to work during the reference week. The elapsed time includes time spent waiting for public transportation, picking up passengers in carpools and time spent in other activities related to getting to work.

### **Reference Week**

The data on labor force status and journey to work relate to the calendar week preceding the date on which the respondents completed their questionnaires or were interviewed by enumerators. This week is not the same for all respondents since the enumeration was not completed in one week. However, for the majority of persons the reference week for the 1980 census was the last week in March 1980. Passover and Good Friday occurred in the following week (the first week of April 1980).

Many workers presumably took time off for these observances. These holidays could have affected the data on hours worked for some areas if the first week in April was the reference week for a significant number of persons. The holidays probably did not affect the overall measurement of labor force status since labor force data are based on work activity during the entire reference week.

### **Labor Force Status**

The data on labor force status were derived from answers to questions 22, 25, and 26.

The series of questions on labor force status was asked of all persons 15 years old and over and was designed to identify, in this sequence: (a) persons who worked at any time during the reference week; (b) persons who did not work during the reference week but who had jobs or businesses from which they were temporarily absent (excluding lay-off); (c) persons on layoff; and (d) persons who did not work during the reference week, but who were looking for work during the last four weeks and were available for work during the reference week.

The labor force status data shown in this and other 1980 census reports relate to persons 16 years old and over. In 1940, 1950, and 1960, labor force status data were presented for persons 14 years old and over. The change in the universe was made in 1970 to agree with the official measurement of the labor force as revised in January 1967. Selected labor force status data were shown in 1970 to agree with the official measurement of the labor force as revised in January 1967. Selected labor force status data were shown in 1970 for persons 14 and 15 years old, but are not presented for 1980.

### Employed

Employed persons include all civilians 16 years old and over who were either (a) "at work" - those who did any work at all during the reference week as paid employees or in their own business or profession, or on their own farm, or who worked 15 hours or more as unpaid workers on a family farm or in a family business; or (b) were "with a job but not at work" - those who did not work during the reference week but had jobs or businesses from which they were temporarily absent due to illness, bad weather, industrial dispute, vacation, or other personal reasons. Excluded from the employed are persons whose only activity consisted of work around the house or volunteer work for religious, charitable, and similar organizations.

### Unemployed

Persons are classified as unemployed if they were civilians 16 years old and over and (a) were neither "at work" nor "with a job but not at work" during the reference week, (b) were looking for work during the last 4 weeks, and (c) were available to accept a job. Examples of jobseeking activities are: (1) registering at a public or private employment office, (2) meeting with prospective employers, (3) investigating possibilities for starting a professional practice or opening a business, (4) placing or answering advertisements, (5) writing letters of application, and (6) being on a union or professional register.

Also included as unemployed are persons who did not work at all during the reference week and were waiting to be called back to a job from which they had been laid off.

### Civilian Labor Force

The civilian labor force consists of persons classified as employed or unemployed in accordance with the criteria described above.

### Experienced Unemployed Unemployed

persons who have worked at any time in the past are classified as the "experienced unemployed."

### Experienced Civilian Labor Force

The "experienced civilian labor force" comprises the employed and the experienced unemployed.

### Labor Force

The labor force includes all persons classified in the civilian labor force plus members of the Armed Forces (persons on active duty with the United States Army, Air Force, Navy, Marine Corps, or Coast Guard).
