

Terminal Area Forecast Summary

**Fiscal Years
2003-2020**

March 2004

**U.S. Department of Transportation
Federal Aviation Administration
FAA-APO-04-1**

Preface

This publication provides aviation data users with summary historical and forecast statistics on passenger demand and aviation activity at U.S. airports. The summary level forecasts are based on individual airport projections. The forecasts include the impact of the terrorist events of September 11, 2001 as well as the ongoing structural changes occurring within the aviation industry.

The Terminal Area Forecast (TAF) includes forecasts for active airports in the National Plan of Integrated Airport Systems (NPIAS). The Federal Aviation Administration's (FAA) Statistics and Forecast Branch, Office of Aviation Policy and Plans, develops the TAF. As its primary input, the TAF initially used the national forecasts of aviation activity contained in *FAA Aerospace Forecasts, Fiscal Years 2003-2014 (March 2003)*. The final TAF considers the forecasts and assumptions contained in *FAA Aerospace Forecasts, Fiscal Years 2004-2015 (March 2004)*. The tables for the national forecasts can be found at <http://apo.faa.gov/pubs.asp>.

The TAF can be accessed from the Internet. The TAF model and TAF database are located at <http://www.apo.data.faa.gov/>. The TAF model allows users to create their own forecast scenarios. The TAF database, which contains a query data application, allows the public to access and print historical (1976 to 2002) and forecast (2003 to 2020) aviation activity data by individual airport, state, or FAA region.

The FAA welcomes public comment on the forecasts, as well as suggestions for improving the usefulness of the TAF.

A handwritten signature in black ink, reading "Robert L. Bowles", is written over a horizontal line.

Robert L. Bowles
Manager, Statistics and Forecast Branch
Office of Aviation Policy and Plans

Acknowledgments

This document was prepared by the Statistics and Forecast Branch of the FAA Office of Aviation Policy and Plans under the direction of Robert L. Bowles, Manager, Statistics and Forecast Branch. Daniel E. Taylor and Peter LeBoff have primary responsibility for the development of the forecasts. Roger Schaufele and Cheryl Miner, industry economists, also contributed their valuable support in the development of forecasts for the 35 Operational Evolution Plan (OEP) airports.

The software support was executed under the direction of Carlton R. Wine, Manager, Information Systems Branch. Mr. Wine and his staff organize and manage the data bases used to produce the forecasts, update the computer programs, and carry out the computer operations necessary to produce the

individual airport forecasts. We extend a special thanks to Philip Sperry who provided valuable programming support for the TAF software and made accessing and analyzing this airport data so much more efficient.

Special acknowledgments are made to FAA Regional and District Office staff, particularly Airports and Air Traffic personnel, for their assistance in coordinating the regional reviews, state input, and forecast recommendations. The reviews and comments of the regional offices were extremely important and useful in guiding the Statistics and Forecast Branch in making adjustments to the preliminary version of the forecasts. Undoubtedly, their effort has enhanced the accuracy and credibility of the final product.

Summary Historical and Forecast Highlights

- A total of 630.2 million passengers were enplaned at U.S. airports in 2002; FAA and Federal contract towered airports accounted for 627.0 million enplanements.
- The top 100 air carrier airports accounted for 595.5 million enplanements in 2002, or 95 percent of total enplanements at FAA and contract towered airports.
- FAA towers handled 48.6 million operations (takeoffs and landings) in 2002, including 22.5 million commercial aircraft operations.
- Towers operated under Federal contract by FAA handled 16.7 million operations in 2002, including 1.8 million commercial operations.
- The 35 Operational Evolution Plan (OEP) airports enplaned 462.7 million passengers in 2002. These airports are projected to enplane 833.3 million passengers in 2020, an 80.1 percent increase over the forecast period (or 3.3 percent annually).
- The 31 large hub airports¹ enplaned 439.0 million passengers in 2002. These airports are projected to enplane 793.4 million passengers in 2020, an 80.7 percent increase over the 18-year period (or 3.3 percent annually).
- The 37 medium hub airports² recorded 124.6 million enplanements in 2002. These airports are projected to enplane 213.7 million passengers in 2020, a 71.5 percent increase over the 18-year period (or 3.0 percent annually).
- Atlanta (36.4 million enplanements), Chicago O'Hare (31.0 million), Los Angeles (26.3 million), Dallas/Ft. Worth (24.4 million), and Phoenix (16.8 million) led U.S. commercial airports in passenger enplanements, accounting for 21.4 percent of enplanements at U.S. airports.
- Atlanta is projected to remain the country's busiest airport, as measured by passenger enplanements, through the forecast period with a projected 67.8 million enplaned passengers in 2020. Chicago O'Hare is projected to enplane 58.4 million passengers in 2020, followed by Los Angeles with 47.9 million enplanements.
- Enplanements at Washington Dulles, Chicago Midway, and Minneapolis-St. Paul airports are projected to grow fastest among large hub airports. The annual growth rates at these airports are forecast to increase by 5.3, 4.7, and 4.3 percent per year, respectively, over the forecast period.
- In terms of total operations, Chicago O'Hare was the busiest U.S. airport in 2002 with 901,000 aircraft operations. Atlanta and Dallas/Ft. Worth were the second and third busiest airports with 882,000 and 762,000 operations, respectively.
- By 2020, Atlanta is expected to lead the nation in total operations with a projected 1.5 million operations. Chicago O'Hare (1.4 million operations) is projected to

¹ Airports enplaning one percent or more of total enplanements.

² Airports enplaning 0.25 to 0.99 percent of total enplanements.

drop into second place with Dallas/Ft. Worth (1.3 million operations) remaining in third place.

- The FAA's Southern region airports enplaned more passengers than any other region with 143.6 million passengers in 2002, or 23 percent of U.S. enplanements. The Western Pacific region followed with 129.1 million enplanements, or 20 percent of the total.
- The Southern region is expected to maintain its lead in passenger enplanements, reaching 253.8 million by 2020. The Western Pacific region is projected to

remain in second place with 230.2 million enplanements.

- The Southern region also led all FAA regions in the number of aircraft operations with 26.0 million in 2002. The Southern region is expected to remain first in 2020 with 30.3 million operations. The Great Lakes and Western Pacific regions ran second and third in aircraft operations in 2002 with 20.7 and 20.3 million, respectively. In 2020, the Western Pacific region is projected to move into second place with 24.4 million operations and the Great Lakes region is projected to drop to third place with 23.4 million operations.

Forecast Process

Introduction

The Terminal Area Forecast (TAF) contains historical and forecast data for enplanements, airport operations, instrument operations, and based aircraft. The data cover the 266 FAA towered airports, 218 Federal contract tower airports, 180 radar approach control facilities, and 2,976 non-FAA airports. Data in the TAF are presented on a U.S. Government fiscal year basis (October through September).

The TAF is available on the Internet. The TAF model and TAF database are located at <http://www.apo.data.faa.gov/>. The TAF model allows users to create their own forecast scenarios. The TAF database allows public access to historical and forecast aviation activity data by individual airport, state, or FAA region.

The TAF is prepared to assist the FAA in meeting its planning, budgeting, and staffing requirements. In addition, state aviation authorities and other aviation planners use the TAF as a basis for planning future airport improvements.

Data presented in the TAF show historical information from 1976 through 2002 and forecasts for 2003 to 2020.³ The forecasts include the impact of the terrorist events of September 11, 2001 and the ongoing structural changes occurring within the aviation industry.

³ Operations data for FAA towers and Federal contract towers for 2003 are actual.

This document presents a set of summary tables on airport activity statistics. The airport activity data contained in the TAF consist of the following:

- ◆ *enplanements* (sum of originating and connecting) for air carriers and commuters;
- ◆ *itinerant operations* for air carriers, commuters and air taxis, general aviation (GA), and military aircraft;
- ◆ *local operations* for GA and military aircraft; and
- ◆ *total instrument operations* for aircraft operations under radar control.

Appendix A provides a detailed description of the activity data elements in the TAF. Appendix B provides a list of FAA airports by hub size and a list of FAA contract towers.

Forecast Method

Aviation activity forecasts for FAA-towered and Federal contract towered airports are developed using historical relationships between airport passenger demand and/or activity measures and local and national factors that influence aviation activity. Each estimate is examined for its reasonableness and consistency by comparisons with historical trends of airport activity. If forecasts deviate from their expected trend, FAA employs other statistical techniques to reforecast the series. Other methods may include use of regression analysis and the use of growth rates developed separately from the TAF. The TAF may incorporate estimates prepared by local authorities and/or recent

FAA-approved airport master plan forecasts, when FAA forecast staff concludes that the methods used to develop these forecasts are acceptable.

In addition, the 35 Operational Evolution Plan (OEP) airports as well as 8 secondary commercial service airports in the large hub cities receive a more in-depth review by FAA economists. The analyses of these hub city airports include additional consideration for the effect of local economic variables (such as income, employment, etc.) and the growth of originating and connecting traffic as well as the price of flying from that airport. The hub forecasts also include assumptions regarding the seating capacity and load factors for aircraft operating out of the airport. The recent substantial changes in aviation activity necessitated increased efforts to develop the near-term forecasts for the large hub airports. These efforts included the use of airport authority statistics to estimate baseline passenger levels; the use of future Official Airline Guide (OAG) schedules to project near-term departures and seats; and the use of month-over-month trends in enplanements per departure to project near-term enplanement and activity levels.

The TAF assumes an unconstrained demand for aviation services based upon local and national economic conditions as well as conditions within the aviation industry. In other words, an airport's forecast is developed independent of the ability of the airport and the air traffic control system to furnish the capacity required to meet demand. However, if the airport historically functions under constrained conditions, the FAA forecast may reflect those constraints since they are embedded in historical data. In statistical terms, the relationships between economic growth data and data representing growth in aviation activity reflect those constraints.

Because military operations forecasts often have national security implications, the Department of Defense (DOD) provides only limited information on future aviation activity. Hence, the TAF projects military activity at its present level except when FAA has specific knowledge of a change. For instance, DOD may announce a base closing or may shift an Air Force wing from one base to another.

For all FAA towered airports and non-FAA facilities with air carrier or commuter passenger service, the TAF corresponds to prevailing local and national trends. For non-FAA facilities, which rely solely on Form 5010 data for general aviation activity levels, operations levels are held constant unless otherwise specified by a local or regional FAA official.

Forecast Review Process

Initially, FAA headquarters staff and management review FAA and Federal contract tower airport forecasts. These preliminary estimates are then submitted to FAA regional and district offices for review. Suggested changes made by the FAA regional staff are reviewed and, if determined reasonable by APO staff economists, are incorporated into the TAF. Significant increases in commercial activity are normally incorporated into the TAF only where APO receives verifiable evidence of a firm commitment by an air carrier or commuter airline to initiate new service.

Summary statistics presented in the TAF differ marginally from the national totals contained in *FAA Aerospace Forecasts: Fiscal Years 2004-2015 (March 2004)*. Reasons for the differences are threefold. First, the TAF forecast methods rely, in part, upon an airport's historical national share of aviation

activity, but also consider airport specific trends. In particular, large hub airport forecasts are based, in part, on the projected local economic activity and airport specific airline fares. Second, the TAF includes facilities not serviced by the FAA in its totals. These facilities make up a large share of the general aviation operations activity shown in the summary tables. Finally, individual forecasts are not scaled to force aggregates to equal national totals.

Data Sources

The development of the TAF begins with an update of the latest historical passenger and aircraft activity, using information derived from several sources. FAA's National Flight Data Center provides general airport information such as the airport name, location, and location identifier. Airport operations and instrument (radar assisted) operations data for airports with FAA and Federal contract air traffic control services are reported by FAA air traffic and Federal contract tower staff. Operations at non-FAA airports are taken from FAA Form 5010 reports on aviation activity at the airport as estimated by FAA inspectors or information provided by airport managers, state aviation activity surveys, and other sources.

U.S. domestic and international (U.S. and foreign flag carriers) enplanements are derived from the Department of Transportation's (DOT) T-3 and T-100 databases. Commuter enplanements are derived from DOT T-100 and 298-C data.⁴

Based aircraft data are supplied by state aviation officials and reported on FAA Form

5010. These data show numbers of aircraft, mostly general aviation aircraft, permanently based at an airport.

The TAF contains actual historical operations data through fiscal year 2003 for FAA and Federal contract tower airports. Enplanement data for fiscal year 2003 are estimates. Appendix A contains a detailed description of each TAF data element.

⁴ In October 2002, DOT began collecting data for all airlines using the T-100 format. This change provides more detail on commuter and regional airlines, who previously reported on Form 298-C.

TAF and National Forecast Totals

Recovery of Commercial Activity

The dual impact of the 2001 recession and terrorist events of September 11, 2001 put the airline industry into a tailspin from which it is just pulling out. The following table shows the year each of the 35 OEP airports is projected to return to its 2000 level of commercial operations. (FAA has designated the OEP airports as those airports most important to the commercial capacity of the national airspace system.)

35 OEP Airports by Year Level of Commercial Operations Returns to 2000 Level			
Airport	Year	Airport	Year
FLL	2001	PHL	2005
LAS	2001	PHX	2005
MEM	2001	BWI	2006
MDW	2002	MCO	2008
MSP	2002	HNL	2009
SLC	2002	JFK	2009
CVG	2003	PDX	2010
LGA	2003	SFO	2011
ORD	2003	IAD	2012
ATL	2004	SEA	2012
CLT	2004	TPA	2012
DEN	2004	LAX	2013
DTW	2004	PIT	2013
IAH	2004	MIA	2015
SAN	2004	BOS	2020
DCA	2005	CLE	after 2020
DFW	2005	STL	after 2020
EWR	2005		

The aviation industry downturn has resulted in significant structural changes that have affected several large hubs. For instance, US Airways and American Airlines have pulled down their respective hubs in Pittsburgh and St. Louis. Forty-three percent of the OEP airports are projected to return to their 2000 level after 2005. In two cases, Cleveland and St. Louis, commercial operations are not expected to return to their 2000 level during the forecast period.

National Forecast Trends

Trends at individual airports reflect to varying degrees national aviation trends as well as the dynamics at individual airports. The national forecasts contained in *FAA Aerospace Forecasts Fiscal Years 2004 – 2015 (March 2004)* show aircraft operations at FAA tower airports growing at an average annual rate of 2.0 percent over the 12-year forecast period. Average annual growth rates for this period by user group are as follows: air carrier, 2.8 percent; air taxi/commuter, 2.8 percent; and general aviation, 1.2 percent. The projected average annual rate of increase for enplanements on U.S. air carriers from the national forecast is 3.8 percent over the 12-year forecast period. Regional/commuter enplanements are projected to increase 6.3 percent annually.

Data Summary and Comparisons

In fiscal year 2002, the FAA served 266 towers and 218 Federal contract towers. California had the most FAA towers with 33, followed by Texas with 19 and Florida with

18. Regions with the most FAA towers were Southern with 51 and Western Pacific and Great Lakes, with 48 each. Table S-3 presents the number of FAA and Federal contract towers by region and state.

The 31 large hub airports enplaned 439.0 million passengers in 2002 while the 37 medium and 68 small hub airports enplaned 124.6 and 46.8 million passengers, respectively. The 348 non-hub airports enplaned 16.5 million passengers. Table S-5 presents passenger enplanements and airport operations by hub size. Appendix B contains a list of hub airports classified by size (large, medium, small, and non-hub) as well as a list of Federal contract towers.

Operations at large hub airports totaled 13.9 million compared to levels of 7.7 and 8.5 million at medium and small hub airports, respectively.

Operations at large hub airports are forecast to increase 48 percent from 2002 to 2020, growing to 20.6 million. Operations at all FAA and Federal contract tower airports are projected to increase from 65.3 to 82.0 million, an increase of 26 percent.

Non-hub airports accounted for 35.2 million operations or 54 percent of total operations at FAA and Federal contract towers. General aviation aircraft operations accounted for the majority of operations at these smaller airports.

Tables S-6 through S-11 summarize aircraft operations, enplanements, and based aircraft by region from 1998 through 2020. The Southern (26.0 million operations), Great Lakes (20.7 million), and Western Pacific (20.3 million) regions ranked as the top three FAA regions in airport operations in 2002. Operations for all TAF airports totaled 122.6 million. The Northwest Mountain and

Southwest regions are projected to be the fastest growing FAA regions from 2002 to 2020 in terms of airport operations, increasing 25 percent and 21 percent, respectively.

The Southern region led FAA regions in passengers enplaned with 143.6 million in 2002, followed by the Western Pacific region with 129.1 million passengers. Enplanements in the Great Lakes region are projected to increase the most in percentage terms increasing 89 percent from 2002 to 2020. Enplanements in the Eastern and Western Pacific regions are projected to increase the next fastest over the forecast period with each region increasing 78 percent.

In 2002, there was a national total of 196.9 thousand based aircraft. Western Pacific (38.1 thousand aircraft), Southern (34.3 thousand), and Great Lakes (33.3 thousand) ranked as the top 3 FAA regions.

Large, Medium, and Small Hubs

This section reports historical data and forecast aviation activity summaries for the nation's hub airports. An airport qualifies as a **large** hub with one percent or more of total U.S. passenger enplanements. A **medium** hub airport enplanes from 0.25 to 0.99 percent of total U.S. passenger enplanements while **small** and **non**-hub airports enplane from 0.05 to 0.249 percent and less than 0.05 percent, respectively.

Table S-5 shows enplanements and operations for FAA towered airports by hub size. Enplanements at large hubs are expected to increase at an annual rate of 3.3 percent over the 2002 to 2020 forecast period. Medium and small hub airports are forecast to increase 3.0 percent and 2.5 percent annually, respectively, during the forecast period.

Forecasts

Table S-1 presents enplanement forecast summaries for large hub airports. Atlanta was the busiest airport in 2002 (36.4 million enplanements), followed by Chicago O'Hare (31.0 million), Los Angeles (26.3 million), and Dallas/Ft. Worth (24.4 million). Dallas/Ft. Worth and Chicago O'Hare are forecasted to have the strongest growth in enplanements among the top 4 airports, increasing at annual rates of 3.7 percent and 3.6 percent, respectively, over the 2002 to 2020 forecast period. Atlanta is forecast to increase at an annual rate of 3.5 percent and Los Angeles at 3.4 percent. Graph S-1 shows relative enplanements growth over the next 18 years. The five airports with the fastest projected increase are Washington Dulles, Chicago Midway, Minneapolis-St. Paul, Ft. Lauderdale, and John F. Kennedy.

Washington Dulles and Chicago Midway are projected to make the largest upward movements in ranking of enplanements. Washington Dulles moves up from 27th to 18th and Chicago Midway moves up from 30th to 23rd position. Hub airports with the largest drop in hub rankings are St. Louis (from 17th to 30th) and Pittsburgh (from 24th to 31st).

Table S-2 presents operations forecast summaries for the 31 large hub airports. In 2002, FAA controllers at Chicago O'Hare handled 901,000 landings and takeoffs, a workload slightly higher than Atlanta, which totaled 882,000 operations. The next busiest airports were Dallas/Ft. Worth and Los Angeles with 762,000 and 637,000 airport operations, respectively.

In 2020, Atlanta is projected to have the largest number of operations with 1.5 million followed by Chicago O'Hare with 1.4 million. Dallas/Ft. Worth is projected to remain in 3rd place in 2020 with 1.3 million operations.

Graph S-2 shows that the three airports projected to grow the fastest in operations are Houston Intercontinental, Minneapolis-St. Paul, and Atlanta. Houston Intercontinental is expected to move into the list of the top 10 busiest airports replacing Las Vegas.

The 37 medium hubs enplaned 124.6 million passengers in 2002. Enplanements at these airports are forecast to increase 3.0 percent annually over the forecast period. At the 68 small hubs, enplanements are projected to grow 2.5 percent per year.

Operations at the medium hubs are forecast to rise at an annual rate of 1.8 percent from 2002 to 2020; aircraft operations at small hub airports are forecast to grow only 0.8 percent per year.

*Enplanements include air carrier, commuter and international.

**Percent is of national total enplanements.

***Operations include intinerant air carrier and air taxi only.

**Table S-5.
Summary of Enplanements and
Airport Operations at FAA Towers and Contract Towers**

Enplanements at Towered Airports

	Count	2002	2010	2020	Annual Compound Growth Rate	
					2002-2010	2010-2020
Large Hubs	31	439,024,850	592,266,503	793,441,235	3.81	2.97
Medium Hubs	37	124,638,758	162,417,579	213,701,603	3.36	2.78
Small Hubs	68	46,793,153	57,834,903	72,585,640	2.68	2.30
Non Hub Towers	348	16,526,236	19,458,652	23,374,156	2.06	1.85
Total	484	626,982,997	831,977,637	1,103,102,634	3.60	2.86

Operations at Towered Airports

	Count	2002	2010	2020	Annual Compound Growth Rate	
					2002-2010	2010-2020

*Includes both tower and non-tower airports.

Appendix A

Description of Activity Measures

Air Carrier Enplanements

These data summarize domestic enplaned passengers (originations and connections) of U.S. commercial air carriers and international enplanements for both U.S. and foreign flag carriers submitted to the U.S. Department of Transportation (DOT), Bureau of Transportation Statistics (BTS) on T-100 reports. Estimates include both scheduled and non-scheduled enplaned passengers.

Commuter Enplanements

Starting in FY 2003, FAA includes in the commuter category enplanements for those airlines whose primary function is to feed mainline carriers, regardless of aircraft size. As of October 2002, all scheduled and non-scheduled commuter operations using aircraft with 10 or more seats must report on T-100.

Historic enplanement data includes originating passengers on scheduled commuter or regional carriers as reported on DOT Form 41 and 298-C; where possible, adjustments were made to include connecting passengers. Historically, Form 298-C included carriers operating at least five scheduled round trips per week whose entire fleet consists of aircraft having 60 seats or less.

Aircraft Operations

FAA air traffic controllers count landings and takeoffs at FAA towered airports. Controllers employed by an FAA contractor count

operations at FAA contract towers. The reported FAA and contract tower operation counts are evaluated for consistency and adjustments are made to the distribution by user category if needed. At non-FAA facilities, operations counts represent an estimate.

Air carrier operations represent either takeoffs or landings of commercial aircraft with seating capacity of more than 60 seats.

Commuter operations include takeoffs and landings by aircraft with 60 or fewer seats conducting scheduled commercial flights. Air taxi operations include takeoffs and landings by aircraft with 60 or fewer seats conducted on non-scheduled or for-hire flights.

General aviation operations represent all civil aviation aircraft takeoffs and landings not classified as commercial or military. Military operations represent takeoffs and landings by military aircraft. GA and military operations are further subdivided into itinerant or local flights.

Local Operations

Aircraft operating in the traffic pattern or within sight of the tower, or aircraft known to be departing or arriving from flight in local practice areas, or aircraft executing practice instrument approaches at the airport.

Itinerant Operations

FAA reports all aircraft operations other than local operations as itinerant. Essentially, these data represent takeoffs and land-

ings of aircraft going from one airport to another.

Instrument Operations

These data include arrivals, departures, and overflights conducted by an FAA approach control facility for aircraft with an Instrument Flight Rule (IFR) flight plan or special Visual Flight Rule procedures. They also contain operations where a terminal control facility provides IFR aircraft separation. The FAA classifies these operations into the following three types.

Primary Instrument Operations

These data consist of aircraft arrivals and departures at a primary airport, normally the airport with the approach control facility.

Secondary Instrument Operations

These data show arrivals and departures at secondary airports.

Overflights

These data include operations of aircraft in transit through the approach control facility airspace.
